- intellectual and cultural property rights of Aboriginal and/or Torres Strait Islander people
- principles of free, prior, and informed consent of Aboriginal and/or Torres Strait Islander people in decision-making processes
- gender roles of local Community members in respect to land management practices.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - legislation/codes of practice relevant to traditional customs and land rights
 - organisation's policies and procedures relevant to traditional customs and land rights
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

AHCOCM401 Protect places of cultural significance

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to protect places of cultural significance.

This unit applies to those whose work includes protecting Aboriginal and/or Torres Strait Islander Peoples' places of culture in co-operation with stakeholders and protecting places of cultural significance with reference to local Aboriginal and/or Torres Strait Islander Communities or line management. A high level of cultural awareness and the need to observe cultural protocols are important in the process.

Commonwealth and/or state/territory and Local Community legislation, regulations and codes of practice apply to conservation work on Aboriginal and/or Torres Strait Islander sites. Requirements vary between jurisdictions.

Pre-requisite Unit

Nil

Unit Sector

On Country Management (OCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Communicate with stakeholders	1.1 Develop working relationships with stakeholders that support the management of culturally significant places 1.2 Develop communication approaches that accommodate cultural views and observe cultural protocols

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Obtain and record views on the way in which the cultural significance and resources can be conserved and used</p> <p>1.4 Convey views obtained into an organisational and park planning process</p>
2. Conserve significance	<p>2.1 Consult with stakeholders to plan ongoing conservation and sustainability actions</p> <p>2.2 Develop operational activities to implement the conservation and sustainability strategies and plans in a culturally sensitive manner</p> <p>2.3 Ensure strategies and plans comply with legislation and codes of practice</p> <p>2.4 Make submissions to the organisational budget process to implement conservation and restoration activities</p> <p>2.5 Obtain resources for conservation and restoration activities</p> <p>2.6 Organise staff to implement conservation actions that minimise deterioration and damage</p> <p>2.7 Supervise staff during restoration projects</p>
3. Manage incidents	<p>3.1 Develop operational plans to manage incidents consistent with an emergency plan of management and risk management analysis</p> <p>3.2 Assign staff responsibilities to manage types of incidents</p> <p>3.3 Obtain and maintain equipment and supplies to enable effective response to incidents</p> <p>3.4 Train staff in the appropriate response to incidents, that incorporate related work health and safety and environmental sustainability procedures</p> <p>3.5 Make submissions to the organisational budget process to support incident management activities</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCOCM401 Protect places of cultural significance

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has protected at least one Aboriginal and/or Torres Strait Islander culturally significant site, including:

- developed working relationships with stakeholders in cultural sites
- canvassed views in a culturally sensitive way to determine the heritage value and preservation issues of a cultural site
- observed local cultural protocols in dealing with stakeholders and land managers
- applied legislation and codes of practice requirements in relation to protecting places of cultural significance
- developed emergency plans to mitigate and manage the risk of damaging incidents or loss of heritage value
- documented submissions to implement conservation and restoration activities and support the incident management activities
- assisted with the development and implementation of a budget for the protection of places of cultural significance
- supervised and trained staff in performing restoration and conservation activities
- included work health and safety procedures in operational plans and training to manage incidents
- planned and documented environmentally sustainable practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Aboriginal and/or Torres Strait Islander protocols, consultation processes and networks
- organisation policies and procedures for conservation of places of cultural significance
- key principles of legislation and codes of practice, including:

- environmental sustainability
- Burra Charter
- work health and safety
- National Parks and Wildlife Service legislation
- operational planning activities engaged for conservation, restoration and risk management
- supervision and training of staff
- organisational policies and procedures, including:
 - budgets and financial approvals
 - preservation and heritage value of cultural sites
 - risk management
 - report submission requirements
- communication methods used to accommodate cultural views and observe cultural protocols, including:
 - verbal and non-verbal cues
 - appropriate questioning
 - eye contact
 - silences.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country or a place of cultural significance and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - legislation and codes of practice relevant to protecting places of cultural significance
 - workplace documents such as organisation's policies and procedures relevant to protecting places of cultural significance
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

Assessment Requirements for AHCOCM402 Report on place of potential cultural significance

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has reported on a place of potential cultural significance on at least one occasion and has:

- surveyed an area for landforms and sites that may hold cultural significance
- assessed any physical signs, and sourced appropriate information about previous activity in the area, to indicate culturally significant sites
- followed local Community cultural protocols
- maintained field notes on the location and details of sites in accordance with organisational procedures or guidelines
- implemented protection measures pending further investigation
- developed and documented an assessment report for places of cultural significance according to organisational and legislative standards
- applied work health and safety practices in the context of own work.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- appropriate communication with local Communities, including:
 - verbal and non-verbal
 - appropriate eye contact
 - using names of people and places
 - seeking permissions from authorised Community members and authorities
- types of cultural places in land-based or coastal zones and marine parks or protected waterways
- research methods used to investigate places of potential cultural significance including:
 - surveys and historical data

- communication with local Community members and authorities
- methods for recording and reporting information, including:
 - electronic means
 - field notes for collecting data on Country
 - photography and video equipment
 - recording voice communication
- threats to cultural places from both natural causes and human activity
- application of state or territory and Commonwealth legislation relevant to Aboriginal and/or Torres Strait Islander land management
- landforms, including caves and potential sites for rock art, flora, fauna and settings
- organisational procedures for reporting places of potential significance
- relevant protection measures for significant sites
- methods of locating position of site
- workplace health and safety procedures relevant to working on Country and reporting on places of cultural significance.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - legislation/codes of practice relevant to reporting on places of cultural significance
 - organisation's policies and procedures relevant to reporting on places of cultural significance
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

Assessment Requirements for AHCOCM403 Contribute to a proposal for a negotiated outcome related to Country

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has contributed to a proposal for a negotiated outcome related to Country on at least one occasion and has:

- participated in culturally appropriate consultation with local Aboriginal and/or Torres Strait Islander Communities and Cultural Authorities
- gathered and recorded information to support a proposal for a negotiated outcome related to Country
- complied with relevant local Aboriginal and/or Torres Strait Islander Community protocols
- determined the relevance and implications of applicable acts and legislation
- developed alternative plans where conflicts between legislation and local cultural protocols may occur
- developed a proposal in the required format
- provided feedback on the development of a proposal in an appropriate format.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- local Community cultural protocols including:
 - greetings
 - appropriate dress
 - questioning
 - non-verbal communication
 - verbal communication
- the principles of free, prior and informed consent
- methods for researching and recording information for proposal development, including:

- historical data collection
- communicating with local Community members and authorities
- electronic means of note taking
- photography and video recording
- relevant Commonwealth, state and local government land, waterways and maritime legislation
- roles of local organisations in land, waterways and sea management
- providing feedback in the required format including:
 - written communication
 - digital communication
 - verbal and non-verbal communication
- the existence of alternative forms of input and control in land, waterways and sea management.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - specific legislation/codes of practice relevant to developing a proposal related to Country
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

Assessment Requirements for AHCOCM404 Record and document Aboriginal and/or Torres Strait Islander Community history

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has recorded and documented a piece of Aboriginal and/or Torres Strait Islander Community history and has:

- recorded and documented Community history according to local Community protocols and permissions
- discussed sensitive topics with Cultural Authorities to avoid distressing Community members
- prepared for interviews by identifying topics, people to be interviewed, questions and interview processes and equipment to be used
- complied with principles of Indigenous Cultural and Intellectual Property (ICIP) and copyright requirements
- identified appropriate individuals or groups for interviews and obtained necessary permissions
- set up all recording equipment according to procedures and to accommodate the needs for interviews
- conducted individual or group interviews to elicit a wide range of information
- provided feedback to participants and organisation following interviews
- taken detailed notes of conversations for further reference and to help source supporting information
- transcribed and edited information, using supporting documentation where possible
- stored recorded media and transcripts to maintain recording quality and accuracy, and security and privacy requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- objectives of the cultural research
- background and context of subject areas covered in the interviews/sessions
- sensitive topics in Aboriginal and/or Torres Strait Islander histories including:
 - British colonisation
 - Stolen Generations
 - displacement
 - historical and current injustices
- necessary permissions required for collection of information including:
 - recording of information
 - storage of information
 - use of information
 - sharing of information
- methods for recording and reporting consultations and interviews including:
 - note taking
 - formal documentation
 - electronic recording
 - formal and informal presentations
- relevant cultural protocols, including principles of free, prior and informed consent
- principles of ICIP and copyright relevant to the cultural rights and responsibilities of the local Aboriginal and/or Torres Strait Islander Community
- organisation procedures relating to the recording, management and storage of oral and community information
- recording techniques and use of media devices, including:
 - digital recording
 - cameras
 - video cameras
 - microphones
- operating instructions for set-up and use of microphones, still cameras and video cameras
- Community protocols, and appropriate Cultural Authorities for recording cultural knowledge and history.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - recording equipment relevant to documenting Aboriginal and/or Torres Strait Islander Community history

- specifications:
 - specific legislation/codes of practice relevant to recording and documenting Aboriginal and/or Torres Strait Islander Community history
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

Assessment Requirements for AHCOCM405 Develop work practices to accommodate cultural identity

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed work practices to accommodate cultural identity for a workplace on at least one occasion and has:

- communicated with Aboriginal and/or Torres Strait Islander People to determine current work-related issues for Communities and individuals
- determined the impacts of competing factors on cultural identity
- designed work practices to accommodate cultural identity
- established culturally safe workspaces
- incorporated elements to review the culturally safe workplace and organisation
- responded to workplace issues where work practices are poorly aligned to cultural identity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Aboriginal and/or Torres Strait Islander Communities with whom the organisation works, and their cultural protocols
- principles of self-determination
- methods of communication with Aboriginal and/or Torres Strait Islander Communities including:
 - verbal and non-verbal
 - listening
 - appropriate questioning
- methods of documenting information gathered from Aboriginal and/or Torres Strait Islander Community members including:
 - formal written documentation

- recording via electronic means
- developing organisational procedures and processes
- connection between local Community and the working environment
- Aboriginal and/or Torres Strait Islander history in local Communities
- legislation and policies impacting Aboriginal and/or Torres Strait Islander Communities and organisations
- strategies to support development of workers' self-determination and cultural identity.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:

specific legislation/codes of practice relevant to gathering and documenting information on Aboriginal and/or Torres Strait Islander Communities and organisations

- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

AHCOCM501 Conduct field research into natural and cultural resources

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to conduct field research into natural resource and cultural areas for resource management and related purposes.

The unit applies to Aboriginal and/or Torres Strait Islander people who have responsibility to gather appropriate research information to assist in the management of natural and cultural resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

On Country Management (OCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review existing knowledge	1.1 Examine existing information gathered through previous investigation to determine key features 1.2 Identify information, records and places previously destroyed or damaged or under threat and report to management 1.3 Assess scope of information for adequacy against the requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>of legislation, codes of practice, guidelines and cultural protocols</p> <p>1.4 Identify and access appropriate electronic and manual recording systems for data collection</p> <p>1.5 Identify and access sources of expertise in research environments</p> <p>1.6 Identify and record areas of inadequate information</p>
2. Identify appropriate stakeholders	<p>2.1 Consult with local Aboriginal and/or Torres Strait Islander Communities and authorised individuals</p> <p>2.2 Conduct interviews under the direction of a relevant cultural reference group and according to organisational requirements</p> <p>2.3 Investigate and record the current and relevant past land tenure for the site</p> <p>2.4 Investigate Aboriginal and/or Torres Strait Islander Peoples' interests with regard to regional and Community organisations</p> <p>2.5 Apply cultural protocols and conduct key consultations with regional and local Community organisations and individuals</p> <p>2.6 Comply with privacy requirements according to the directions of stakeholders and legislative and organisation requirements</p>
3. Develop research approach	<p>3.1 Determine objectives of the field research in conjunction with key stakeholders</p> <p>3.2 Use objectives to identify specific types of investigation, techniques to be used, and physical areas of investigation</p> <p>3.3 Assess the types of investigation to be utilised</p> <p>3.4 Review existing information and data records to determine the starting points for the fieldwork</p> <p>3.5 Ensure research methodology is consistent with the research objectives</p> <p>3.6 Identify and access required resources to establish and maintain the research program</p> <p>3.7 Select appropriate research personnel and identify stakeholders to be included in the consultation process</p> <p>3.8 Identify research techniques and safe operations within expected environmental and cultural conditions</p> <p>3.9 Estimate and submit costs of field research for approval</p> <p>3.10 Establish sampling and recording processes for research</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	information according to best practice and scientific standards 3.11 Ensure investigations comply with guidelines and other legislative requirements
4. Develop process for involving decision-makers	4.1 Use information on stakeholders to determine interests held by organisations, groups and individuals, and cultural dimensions 4.2 Define and document issues to be addressed with interest groups 4.3 Develop consultation and decision-making process to address the issues with individuals, groups and organisations using appropriate cultural protocols 4.4 Provide appropriate time for consultative processes within groups and between individuals to occur and to obtain feedback on issues 4.5 Form a decision-making group, to assist in direct investigation, accessing information to address issues and/or review the significance of place or area
5. Conduct field investigations	5.1 Follow work health and safety, environmental sustainability and biosecurity policies and procedures when working in field 5.2 Inspect sites to assess condition and availability of further information 5.3 Adjust previously determined methodology considering progressive results and stakeholder feedback 5.4 Coordinate observations, records and monitoring in accordance with scientific practice and to meet research objectives 5.5 Determine ecological, biological and geological, microbiological and entomological diversity within specified area 5.6 Source appropriate equipment and skills for the capture, management and sampling of animal species 5.7 Identify and record evidence of culturally significant resources in area using appropriate recording equipment 5.8 Identify and record impacts from areas external to natural and cultural resources in area under investigation 5.9 Deploy equipment, techniques and people to carry out investigations 5.10 Document and approve each field operation according to legislative and organisation requirements for work in the research environment

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
6. Report on the field investigation outcomes	<p>6.1 Analyse and record information for impact since previous report and other resources</p> <p>6.2 Document outcomes according to legislative requirements, the organisation's policies and practices, and international and national processes</p> <p>6.3 Brief stakeholders and record draft findings</p> <p>6.4 Develop and submit a determination of significance report to the organisation and its external review processes as required by legislation and codes of practice</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret, analyse and extract information from a range of sources, including complex legal documents, policies and procedures
Oral communication	<ul style="list-style-type: none"> Use culturally appropriate verbal and non-verbal communication

Assessment Requirements for AHCOCM501 Conduct field research into natural and cultural resources

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted field research into a natural and cultural resource on at least one occasion and has:

- used a range of electronic and manual recording systems to support research
- identified stakeholders, including current tenure, local Aboriginal and/or Torres Strait Islander history and community interest
- sought permission from local Aboriginal and/or Torres Strait Islander Communities and/or Cultural Authorities where required
- reviewed existing knowledge of national and cultural resources and sites using literature reviews, site inspections, consultation and expert advice
- developed research objectives and research design
- coordinated staff and resources for research project
- conducted field investigations to research impacts on fauna, flora and natural resources of the site
- facilitated a consultation and decision-making process
- reported on the field investigation to organisation and legislative requirements
- applied safe and humane animal handling techniques
- applied work health and safety practices in field investigations
- applied biosecurity measures in the context of own work
- applied appropriate sustainability practices in the context of own work.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- application of conservation legislation, charters, codes of practice relating to natural and cultural resource areas

- principles of free, prior and informed consent when consulting with Aboriginal and/or Torres Strait Islander Peoples and Communities
- communication techniques used for consulting with Aboriginal and/or Torres Strait Islander People including:
 - verbal and non-verbal communication
 - active listening
 - appropriate questioning
- organisational recording processes
- assessment of hazards and risks in designated environment
- workplace health and safety requirements relevant to conducting field research
- access issues
- management of research in a range of weather and area conditions
- organisational policies and procedures for carrying out investigations, consultations and development of policies
- appropriate database and geographic information system
- identification of pollution, degradation and disturbance
- relevant legislation in relation to the safe, humane treatment and handling of animals
- methods for the safe, humane treatment and handling of animals
- equipment used for the safe and humane handling of animals in field research, including:
 - magnifying glass
 - tape measures
 - animal handling gloves
 - measuring calipers
 - live traps and tagging
- impacts from areas external to natural and cultural resources in area under investigation
- differences between native title and land rights legislation
- research techniques, including:
 - tracking
 - identification of species
 - sampling of plants and animals
 - historical data
- systems and processes for assessing cultural significance
- organisational reporting processes, strategies and plans
- biological diversity of the area under assessment, including aspects of living organisms, habitats and local communities, and interactions between species
- geological diversity of the area under assessment, including aspects of stratigraphy, palaeontology, paedology, and soil classification
- sustainability and conservation processes
- major impacts on natural resources, such as geological settings, ecological processes, and interaction between natural and cultural processes
- monitoring requirements, including fabric deterioration, damage and likely causes of deterioration and damage

- relevant legislation and agreements that apply to area, including a good understanding of the concepts and potential operation of the Burra Charter
- legislation under which organisation operates and research is commissioned.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - specific legislation/codes of practice relevant to conducting field research and communicating with Aboriginal and/or Torres Strait Islander Community members
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

AHCOCM502 Develop conservation strategies for cultural resources

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to develop conservation strategies for cultural resources.

This unit applies to those who develop conservation strategies and management policies for cultural resources as part of the overall park management and planning process. These individuals take responsibility for their own work and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

On Country Management (OCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define components of cultural heritage significance	1.1 Define and record geographic and operational boundaries for conservation policy 1.2 Review and collate results of studies of cultural significance for places and areas within the boundaries to develop park, reserve or

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	region significance 1.3 Develop limits of acceptable change in the form of deterioration and damage to the places of cultural significance according to legislative and organisational requirements
2. Review past strategies, plans and activities	2.1 Compare and document previous strategies and plans with collated assessment of significance to determine compatibility 2.2 Review current activities in the area to assess their compatibility with the collated assessment of significance 2.3 Document areas of incompatibility
3. Review current and potential resource uses	3.1 Assess and document impact of current uses of the cultural resources against the set limits of acceptable change to determine success of conservation approach 3.2 Assess feasible uses of resources against client requirements and report to management 3.3 Develop possible changes to resource use to ensure sustainability of cultural values and environment and record
4. Identify threats to cultural places	4.1 Identify and record threats to cultural significance and the environment both external and internal to the area under consideration 4.2 Conduct and document a risk assessment of all threats to determine potential impact on strategies 4.3 Document policy changes required to address the threats
5. Develop strategies for management of cultural resource	5.1 Develop draft policy to address the cultural significance that meets any shortfalls in previous strategies, allows for compatible resource uses and addresses risks associated with any threats to the cultural values of the area 5.2 Review policy to ensure compliance with Burra Charter guidelines 5.3 Conduct consultations with stakeholders on draft policy in accordance with legislative, organisational and good practice requirements 5.4 Ensure consultations comply with cultural protocols and organisational approaches to stakeholders 5.5 Finalise management strategies to reflect stakeholder views as required in legislation, government policies, organisational strategies and procedures, and environmental sustainability requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.6 Submit strategies for approval to legislative and organisational requirements

Assessment Requirements for AHCOCM502 Develop conservation strategies for cultural resources

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed conservation strategies for cultural resources for a site on at least one occasion and has:

- reviewed the cultural resources and level of deterioration in the area
- assessed the compatibility of current utilisation with cultural and heritage values
- investigated feasible land uses that maintain the cultural integrity of the site
- carried out a risk assessment for damage/deterioration to cultural sites
- consulted with local Aboriginal and/or Torres Strait Islander people and communities according to cultural protocols
- developed strategies for management of cultural resources that consider cultural and environmental requirements
- applied cultural protocols to investigation and development of policies
- applied organisational policies and procedures to undertake assessment of resources, consultation with stakeholders and development of new policies
- applied appropriate sustainability practices to management strategies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the range of conservation strategies for cultural areas
- policies from all levels of government and within the specific region, including those under catchment plans that apply to land management practices
- key principles of legislation and codes of practice as they apply to use of cultural resources
- principles of risk management
- organisational environmental and sustainability procedures

- differences between native title and land rights legislation
- organisational policies and procedures for carrying out investigations and consultations
- design and implementation of consultation processes
- policy analysis and impact statements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - specific legislation/codes of practice relevant to developing conservation strategies for cultural resources
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

Assessment Requirements for AHCOCM503 Manage restoration of cultural places

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed the restoration of a cultural place on at least one occasion and has:

- incorporated the prior assessment of significance into an operational plan
- researched traditional building techniques to carry out repairs and maintenance
- sought permissions from local Aboriginal and/or Torres Strait Islander Communities or Cultural Authorities where required
- sought expert advice to meet special building and conservation requirements from the plan of management
- maintained the cultural and environmental integrity of the site and surrounds during and on completion of building
- supervised the work of others to ensure compliance with restoration plan and requirements
- applied work health and safety practices in the context of own work and the work of others
- applied environmentally sustainable practices in maintenance and restoration works.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key concepts of the Burra Charter, heritage and building acts, and other relevant legislation
- conservation architecture techniques applicable to the restoration of cultural places
- interpretation of archaeological reports or assessments of Aboriginal and/or Torres Strait Islander cultural sites and artefacts
- traditional and current building practices
- project management processes, including:

- communicating with stakeholders
- scoping
- establishing timelines
- budgetary requirements
- supervising work
- finalising and report writing
- environmentally sustainable work practices used for restoration works
- building or maintenance requirements and specifications
- work health and safety requirements and risk management practices relevant to the restoration of cultural places.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - specific legislation/codes of practice relevant to the restoration of cultural places
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

AHCOCM504 Develop strategies for on Country management

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to develop strategies for on Country management from an Aboriginal and/or Torres Strait Islander perspective. On Country refers to the land, waterways and the sea.

This unit applies to Aboriginal and/or Torres Strait Islander worldviews and beliefs as they impact and affect Aboriginal and/or Torres Strait Islander sites work on Country. The unit applies to working either as an autonomous worker or under the supervision and Cultural Authority of Traditional Owners or Elders for specific Country.

All work is undertaken according to local Community guidelines and cultural protocols.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for AHCOCM504 Develop strategies for on Country management

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed strategies for on Country management for a specified area at least once and has:

- consulted local Aboriginal and/or Torres Strait Islander Communities and Cultural Authorities
- researched cultural and contemporary on Country management practices
- developed management strategies based on cultural and contemporary Aboriginal and/or Torres Strait Islander on Country management practices
- identified appropriate source of funding and applied for funds according to organisational requirements
- consulted with local Aboriginal and/or Torres Strait Islander Communities and Authorities on strategies, priorities and project works
- developed an on Country management plan according to local Community, organisational and funding standards
- applied work health and safety practices in the context of own work
- applied biosecurity measures in the management strategies
- applied appropriate sustainability practices in the management strategies
- developed staff training relevant to management strategies
- complied with funding requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- local cultural and contemporary Aboriginal and/or Torres Strait Islander on Country management practices
- funding applications and submission requirements
- project development requirements, including:

- projected budget
- legislation and funding compliance
- developing timelines
- management of staff and site
- environmental and sustainability practices
- local Aboriginal and/or Torres Strait Islander cultural protocols
- key components of legislation relevant to Aboriginal and/or Torres Strait Islander on Country management
- staff training processes for new procedures
- relationship between natural and cultural management processes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - specific legislation/codes of practice relevant to developing strategies for on Country management
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

AHCOCM505 Map relationship of business organisation to culture and Country

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to map the relationship of a business organisation to culture and Country from Aboriginal and/or Torres Strait Islander perspectives. The unit requires an understanding of Aboriginal and/or Torres Strait Islander cultural protocols, cultural customs and cultural practices that the Aboriginal and/or Torres Strait Islander worker is likely to encounter in a business organisation.

This unit applies to Aboriginal and/or Torres Strait Islander worldviews and beliefs as they impact and affect Aboriginal and/or Torres Strait Islander organisations on Country. The unit applies to working either autonomously or under the supervision and Cultural Authority of Traditional Owners or Elders for specific Country.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has mapped the relationship of the business to culture and Country for an organisation at least once and has:

- described the goals and activities of the organisation
- defined the legal parameters of the business organisation
- analysed the positions and power relationships for decision-making within a local Aboriginal and/or Torres Strait Islander Community
- related local Aboriginal and/or Torres Strait Islander Community and business roles to the concept of Country
- made recommendations to support the concept and implementation of local Aboriginal and/or Torres Strait Islander management principles.

Knowledge Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has mapped the relationship of the business to culture and Country for an organisation at least once and has:

- described the goals and activities of the organisation
- defined the legal parameters of the business organisation
- analysed the positions and power relationships for decision-making within a local Aboriginal and/or Torres Strait Islander Community
- related local Aboriginal and/or Torres Strait Islander Community and business roles to the concept of Country
- made recommendations to support the concept and implementation of local Aboriginal and/or Torres Strait Islander management principles.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - specific legislation/codes of practice relevant to mapping the relationship of a business to culture and Country.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

Assessment Requirements for AHCOCM506 Operate within Community cultures and goals

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated within a Community's cultural protocols and goals for a program at least once and has:

- investigated a local Community's culture
- identified the roles of Cultural Authorities, Elders, Custodians and other members of the Community
- followed local Community protocols for consultation, promotion and use of information
- researched the background and goals of Community, and their perspectives on program management issues
- promoted the local Community program, plans and history according to permissions given by Cultural Authority, Elders or Custodians
- planned for consultation within the local Community by working with their culture and goals and applying Community protocols.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- local Community structure or hierarchy
- communication and consultation processes used for gathering information including:
 - verbal and non-verbal communication
 - appropriate questioning
 - listening
 - formal documentation
- organisations to which appropriate referrals can be made, including:
 - Aboriginal Land Councils (ALCs)
 - Local Aboriginal Land Councils (LALCs)

- Northern Peninsula Area Regional Council (NPARC)
- Prescribed Bodies Corporate (PBCs)
- Torres Strait Regional Authority (TSRA)
- research methods for investigating Community history
- the principles of self-determination
- the principles of free, prior and informed consent
- current social and environment affairs for Community and wider region.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - specific legislation/codes of practice used for gathering and researching information about an Aboriginal and/or Torres Strait Islander Community
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

Assessment Requirements for AHCOCM507 Propose a negotiated outcome for a given area of Country

Modification History

Release	Comments
Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has proposed a negotiated outcome for a given area of Country according to Community guidelines at least once and has:

- researched information required to develop a proposal
- identified implications for an area of Country for government, agency and Community perspectives and issues
- analysed information on a given area to develop a proposed framework for land use
- communicated proposals for given area of Country according to Community protocols and government requirements
- documented and sought endorsement for a proposal that seeks to negotiate an outcome for a given area of Country
- prepared documentation to Community, government and organisational requirements
- followed local Aboriginal and/or Torres Strait Islander Community cultural protocols and cultural heritage relevant to proposal.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- consultation approaches used to propose a negotiated outcome including:
 - researching information
 - analysing information
 - communicating and negotiating proposals
 - documenting proposals and agreements
- local cultural protocols, including:
 - greetings
 - appropriate inclusive language

- verbal and non-verbal cues
- informed consent
- key principles of state, territory and Commonwealth legislation relevant to Country
- relevant international and national conventions and agreements
- management and use of the resources of the specific area
- processes and proposals for resolving issues regarding access and use of land according to consultation outcomes and organisational procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - specific legislation/codes of practice relevant to proposing a negotiated outcome for a given area of Country and use of Country
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

Release 1	This version released with Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed cultural processes in an Aboriginal and/or Torres Strait Islander organisation at least once and has:

- communicated with stakeholders in the Aboriginal and/or Torres Strait Islander organisation
- defined and applied cultural processes within an Aboriginal and/or Torres Strait Islander organisation according to local Community and organisational guidelines and best practice procedures
- recognised and documented differences between Aboriginal and/or Torres Strait Islander and non-Aboriginal and/or Torres Strait Islander management processes
- documented the strategies required to support Aboriginal and/or Torres Strait Islander management processes
- developed and implemented a strategy for managing cultural processes
- developed a vision for the organisation that supports cultural processes
- sought agreement for the proposed strategy and vision for the organisation.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- contemporary management practices and styles
- Aboriginal and/or Torres Strait Islander cultural protocols and processes
- Aboriginal and/or Torres Strait Islander management practices and styles
- organisational planning and strategic planning practices
- risk management techniques relevant to managing potential conflict in the workplace
- policy and process development and implementation

- legislation and regulations that apply to management of an organisation

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on Country and/or within an Aboriginal and/or Torres Strait Islander Community or an environment that accurately represents workplace conditions
- specifications:
 - organisational policies and processes relevant to managing cultural processes in an Aboriginal and/or Torres Strait Islander organisation
- relationships:
 - local Community Elders and/or Custodians.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In addition, the following specific assessor requirements apply to this unit:

- Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:
 - an Aboriginal and/or Torres Strait Islander Elder and/or Custodian

or:

- accompanied by, and/or in communication with, an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience and knowledge of local cultural protocols.

AHCORG102 Support organic production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to support livestock and plant based organic production.

The unit applies to individuals who work under close supervision. They undertake defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Organic Production (ORG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare materials, tools and equipment for organic production work	1.1 Identify required materials, tools and equipment according to supervisor instructions 1.2 Check tools and equipment and report faults to supervisor 1.3 Select, check and fit personal protective clothing and equipment before work 1.4 Identify and report work health and safety hazards

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Undertake organic production work as directed	2.1 Interpret and verify instructions for work with supervisor 2.2 Undertake work according to site biosecurity, hygiene, environmental procedures 2.3 Interact with work team and customers according to instructions and workplace code of conduct 2.4 Handle and dispose of materials according to workplace safety and environmental procedures 2.5 Report problems or difficulties in completing work to required standards or timelines to supervisor 2.6 Maintain a clean and safe work site
3. Handle materials and equipment	3.1 Store waste material produced during work according to supervisor instructions 3.2 Handle and transport materials, tools and equipment according to supervisor instructions and workplace procedures
4. Clean up on completion of work	4.1 Return or dispose of unused materials according to supervisor instructions 4.2 Clean, maintain and store tools and equipment 4.3 Report work outcomes to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret and check completeness and accuracy of information obtained from instructions and workplace procedures to implement requirements
Oral communication	<ul style="list-style-type: none"> Use clear language, concepts, tone and pace appropriate when communicating with supervisor and work team

Unit Mapping Information

Assessment Requirements for AHCORG102 Support organic production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has on at least one daily work routine supported organic production and has:

- applied principles of organic agriculture to work activities as directed
- interpreted and followed supervisor instructions
- followed work health and safety procedures
- reported variations from required standards or procedures to supervisor
- conducted organic production work according to workplace biosecurity protocols.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of organic production, including:
 - organic procedures and recording requirements
- biosecurity protocols, including:
 - quarantine
 - workplace hygiene practices
 - movement of materials
- code of conduct, including:
 - respect
 - harassment and discrimination
 - positive and productive attitude
- safe work practices relevant to the tasks being undertaken, including:
 - safe use of tools and equipment
 - food safety requirements

- work health and safety and environmental protection procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a property producing organic products or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment used for organic production
 - personal protective equipment
 - consumables and materials
 - hygiene and cleaning resources
- specifications:
 - workplace procedures and processes
 - workplace instructions
- relationships:
 - team members
 - supervisor
 - customers
- timeframes:
 - according to time specified in instructions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCORG409 Manage biodynamic production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to manage a farming system according to the principles, practices and standards for organic and biodynamic agricultural production.

The unit applies to individuals and farmers who take responsibility for their own work and for the quality of the work of others within known parameters, and use discretion and judgment in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Organic Production (ORG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare a plan for a biodynamic farming enterprise	1.1 Identify health, safety and environmental hazards, assess risk and develop controls according to workplace procedures 1.2 Identify requirements for biodynamic certification 1.3 Develop goals and plan for a biodynamic enterprise 1.4 Develop marketing plans for biodynamic produce

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Investigate and implement trials for biodynamic agriculture and products 1.6 Record outcomes of trials and incorporate into business plans 1.7 Develop and implement biodynamic production plan according to biodynamic principles and organic farming strategies
2. Make and apply biodynamic field spray preparations	2.1 Formulate, manufacture and store biodynamic field spray preparations 2.2 Agitate preparations to ensure homogeneity 2.3 Select and prepare equipment for application of biodynamic preparation 2.4 Calibrate and adjust equipment for application rate according to workplace and industry standards 2.5 Apply preparations according to biodynamic principles
3. Use biodynamic compost preparations, composts and liquid brews	3.1 Use and store biodynamic compost preparations according to biodynamic principles 3.2 Identify materials and mineral inputs for compost formulae from farm production plan and soil analysis 3.3 Construct compost according to formulation and biodynamic standards 3.4 Apply biodynamic preparations to compost according to biodynamic industry standards 3.5 Monitor conditions of compost to ensure anticipated decomposition according to workplace procedures and biodynamic standards 3.6 Apply compost to enhance natural cycles
4. Apply biodynamic principles and techniques to enhance soil and plant health	4.1 Plan crop production activities and schedule according to moon rhythms and planetary patterns 4.2 Optimise soil and plant health using biodynamic products and processes 4.3 Monitor crops for weeds and pests in enterprise 4.4 Identify weeds and pests and evaluate options for their control 4.5 Develop, document and implement plan for managing pests and weeds

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
5. Manage livestock within a biodynamic production system	5.1 Optimise soil and plant health to provide a nutrient-dense and balanced diet 5.2 Develop and incorporate grazing and feeding strategies into biodynamic system 5.3 Incorporate homeopathic remedies and treatments into livestock health strategies according to biodynamic and organic farming principles 5.4 Implement enterprise livestock welfare policies

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Critically analyse biodynamic principles, standards and certification procedures to ensure compliance when developing biodynamic production systems
Writing	<ul style="list-style-type: none"> Write, proofread and edit biodynamic management plans to ensure clarity of meaning, accuracy and consistency of information
Numeracy	<ul style="list-style-type: none"> Apply mathematical skills for accurately preparing treatments to a formula and for scheduling and analysing biodynamic management outcomes

Assessment Requirements for AHCORG409 Manage biodynamic production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, managed a farm using biodynamic production principles and has:

- developed goals and plans for a biodynamic or organic enterprise that must include personal, ecological and financial goals
- developed marketing plan that must address quality, integrity and ethical goals
- formulated, prepared, stored and applied biodynamic preparations, which must include:
 - horn manure (500)
 - horn silica (501)
 - horn clay preparations
 - compost
- monitored aeration, moisture and temperature of compost to ensure quality of decomposition
- enhanced soil and plant health, which must include:
 - application of biodynamic preparations
 - sowing and growing cover crops
 - using crop rotation strategies
 - using mulching and composting on soil
 - applying farm-based nutrient products
- identified, assessed and applied biodynamic controls for weeds and pests, which must include:
 - natural predators
 - life cycles of weeds and pests
 - cultural practices
 - soil health
 - plant community

- integrated and managed livestock in a biodynamic enterprise.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- biodynamic production processes and practices, including:
 - animal production and welfare
 - biodynamic preparations and their role in soil food web and atmosphere
 - importance of biodiversity, fauna and native flora on biodynamic farms
 - calcium-clay-silica polarities
 - crop and animal rotation systems and manuring practices
 - cultivation methods
 - etheric and astral forces and how they relate to biodynamics
- strategies for planning and promoting an organic and biodynamic enterprise and its products
- setting up trials and testing procedures used to assess biodynamic methods and products
- quality standards applicable to biodynamic produce
- paradigms of various farming systems: biodynamics, organics and permaculture, and holistic management
- formulation, use and storage of biodynamic preparations, including the selection and use of materials and equipment
- scheduling and planting calendar for production
- relationship between soil, microbes, plant, animal and human health
- research in biodynamics principles and practices
- role of water in biodynamic and organic production and methods of water retention
- pests, diseases and pest plant management in an organic and biodynamic system
- principles, practices and inputs allowable under the National Standard for Organic and Bio-Dynamic Produce.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a biodynamic farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment used for managing biodynamic production
 - personal protective equipment
- specifications:
 - workplace policies, procedures, processes

- biodynamic and organic industry standards and codes of practice
- timeframes:
 - according to etheric and astral forces.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to manage animal health and welfare	1.1 Investigate and consider natural behaviours, requirements and welfare of animals when planning for organic livestock production 1.2 Identify production requirements and environment of farm 1.3 Identify and select genetic varieties of animals best suited to

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	production requirements and environment 1.4 Develop animal health management strategies for farm
2. Manage animal health and welfare	2.1 Communicate and implement animal health management strategy to work team 2.2 Monitor livestock for health and welfare 2.3 Manage livestock according to certified organic standards and biosecurity procedures 2.4 Conduct animal husbandry and transport according to animal welfare principles and organic certification requirements 2.5 Maintain livestock records required for organic certification
3. Develop and implement supplementary feed requirements	3.1 Identify feed gaps and requirements for supplementary feed, taking into account seasonal conditions and drought 3.2 Incorporate on-farm supplementary feed strategies, including fodder crops, agroforestry or standing hay paddocks, into the annual program for animal feed and on-farm sustainability 3.3 Implement good storage practices for feed inputs to ensure quality is maintained 3.4 Purchase and use nutritional inputs in the feed program that meet relevant Organic Standards and/or agroecological principles where applicable
4. Develop a sustainable grazing strategy	4.1 Determine feed requirements, carrying capacity and stocking rate for farm according to seasonal variability, livestock needs and sustainability requirements 4.2 Determine indicators and benchmarks for sustainable pasture, land and soil use for farm 4.3 Identify grazing infrastructure required according to planned grazing outcomes 4.4 Incorporate infrastructure requirements into farm improvement program 4.5 Develop a planned grazing system according to optimal livestock health, productivity and grazing requirements
5. Implement a sustainable grazing strategy	5.1 Optimise soil and plant health to provide a nutrient-dense and balanced diet for livestock 5.2 Implement and monitor grazing system to ensure productivity and

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	sustainability 5.3 Implement strategies for controlling weeds in pastures according to Organic Standards and agroecological principles 5.4 Maintain records of grazing activity according to workplace procedures and Organic Standards
6. Manage farm fertility for the livestock enterprise	6.1 Estimate level of nutrients exported from farm 6.2 Implement soil fertility monitoring program 6.3 Manage soil nutrient levels and balance according to Organic Standards and agroecological principles 6.4 Eliminate risk of weed and chemical contamination of farm according to Organic Standards and agroecological principles 6.5 Maintain records of soil fertility according to workplace procedures and Organic Standards

Foundation Skills

Assessment Requirements for AHCORG410 Manage organic livestock production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, managed livestock production for an organic farm and has:

- monitored and maintained animals in an organic production system
- provided a suitable diet and living environment for animals according to Standards for Organic Livestock Production and agroecological principles
- integrated animals into an organic production system
- managed animal health and welfare
- managed grazing of animals to enhance soil health and fertility
- implemented enterprise environmental sustainability practices and organic standards.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- organic standards and certification requirements
- organic agriculture and agroecological principles
- animal health, pests, parasites and diseases and their control
- relevant animal welfare code of practice
- grazing management, including:
 - pasture identification and assessment
 - feed budgeting
 - planned grazing strategies
- carrying capacity and sustainable pasture utilisation
- pasture, land and soil condition and indicators of fertility, including:
 - soil-testing
 - plant testing

- observation of plant growth
- management options for animal health based on an understanding of pest life cycles, genetic selection and acquired immunity
- permitted, restricted and prohibited inputs and activities for soil, plant and animal health as specified in the national standards for organic and biodynamic livestock production, including:
 - recycling
 - optimising nutrient availability in soil
 - sourcing fertility inputs
- work health and safety and animal welfare legislation and codes of practice.
- record-keeping practices for farm and organic certification.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an organic farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, equipment and machinery used for organic livestock production
 - input materials and consumables
 - personal protective equipment
- specifications:
 - workplace policies and procedures
 - manufacturer operating instructions for equipment and machinery
 - safety data sheets
 - workplace livestock production specifications
 - specific organic and biodynamic standards
- relationships:
 - team member.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCORG411 Manage organic soil improvement

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, managed the improvement of soil on an organic farm and has:

- implemented principles of organic agriculture and agroecology
- devised and implemented a soil improvement plan to correct imbalances and maintain soil fertility
- sampled soil, conducted tests and analysed soil test results for the following physical and chemical indicators of soil condition and fertility:
 - soil texture
 - structure
 - salinity
 - sodicity
 - pH
 - mineral balances
 - organic matter
 - drainage
 - compaction
 - aeration
 - water infiltration
- improved and maintained soil fertility using natural processes and according to National Standard for Organic and Bio-Dynamic Produce
- applied workplace health, safety and environmental procedures and practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- availability, use and definition of organic fertilisers
- physical and chemical properties of soil, including:
 - factors contributing to soil acidity, sodicity and salinity
 - factors promoting soil and plant water-holding capacity
 - importance of soil biological activity
 - major nutrient elements and their role in plant growth
 - soil textural types and determinants
- soil sampling and testing procedures for indicators of soil fertility
- preparing soils to submit for laboratory testing
- methods and inputs that can be used to correct imbalances and maintain soil fertility
- principles of organic agriculture and the management of soil
- processes and practices that impact on soil structure, biological activity, water-holding capacity and weed patterns
- processes of aggregate and colloid formation
- range of soil analyses available and principles of each
- relationship between plants, soil structure, water holding capacity and nutrient availability, including:
 - role of organic matter, humus and microorganisms
 - role of livestock in enhancing soil fertility
 - role of macro- and micro-elements in soil and plants
 - role of weeds
 - significance of levels and balance of soil fertility indicators
 - soil food chains and food webs
- principles, practices and inputs allowable under the National Standard for Organic and Bio-Dynamic Produce.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an organic farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for sampling and testing soils
 - personal protective equipment
- specifications:
 - workplace policies, procedures and processes
 - manufacturer operating instructions for sampling and testing equipment
 - safety data sheets
 - workplace specifications for soils

- specific organic and biodynamic standards and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCORG412 Arrange selling through community based marketing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to prepare, market, transport and conduct transactions for produce sold through community-based marketing schemes.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters, and use discretion and judgment in the selection, allocation and use of available resources.

Licensing, legislative or certification requirements may apply to this unit where handling, processing and distribution of organic farm produce is used for human consumption. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

Nil

Unit Sector

Organic Production (ORG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and evaluate selling options	1.1 Identify various types of community-based selling schemes 1.2 Identify characteristics of farm produce 1.3 Identify and document potential customer base

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Evaluate and document selling options
2. Comply with the requirements of the selected community marketing scheme	2.1 Identify and comply with market requirements 2.2 Comply with legislative requirements in each step of the supply chain 2.3 Keep records to verify compliance with community marketing scheme, food safety and organic certification
3. Develop and maintain a relationship with customers	3.1 Investigate characteristics of community customers 3.2 Identify potential links between community and farm system 3.3 Develop connections between individuals and farm production system 3.4 Develop a 'farm story' and communicate uniqueness of enterprise to community according to workplace procedures 3.5 Monitor community satisfaction through customer feedback 3.6 Respond to feedback according to workplace procedures
4. Organise transport of produce	4.1 Identify transport requirements and engage carrier for produce distribution 4.2 Schedule transport and delivery of product with recipient 4.3 Identify and comply with recipients delivery requirements 4.4 Verify compliance with legislation, food safety and organic certification
5. Maintain records	5.1 Complete pre-sale and post-sale documentation 5.2 Record transactions according to traceability and workplace procedures 5.3 Document customer feedback and identify and record potential improvements

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency

Assessment Requirements for AHCORG412 Arrange selling through community based marketing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, arranged the selling of organic farm produce through community-based markets and has:

- identified farm produce selling options
- identified and complied with requirements of a community marketing scheme and its characteristics
- established relationships with community stakeholders and customers
- monitored and recorded community satisfaction levels and customer feedback and addressed concerns
- communicated the 'farm story' and the uniqueness of enterprise to customers
- arranged timely transport and delivery of produce and addressed special transport requirements
- complied with transport legislative requirements
- recorded sale documentation and transactions
- identified and recorded potential improvements
- applied health, safety and environmental policies and procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes in selling produce through community-based markets
- relevant legislation and regulations relating to work health and safety
- organic certification systems and standards
- organisation policies and procedures related to supply chain management, purchasing, and contracting and tendering

- characteristics and composition of farm business marketing plans
- characteristics of community marketing schemes and the steps within a farm produce supply chain
- product knowledge related to goods and services required by the organisation
- ways to build trust and collaboration as opposed to competition
- business terms and conditions for purchasing, tendering and contracting
- ethical behaviour
- established communication channels and protocols
- procedures for operating electronic communications equipment
- procedures for recording and reporting workplace information and completing relevant documentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for organic farm produce or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for preparing and transporting produce
 - personal protective equipment
- specifications:
 - workplace policies, procedures, processes
 - transport company instructions
 - workplace specifications for produce
 - specific legislation and codes of practice for organic produce
- relationships:
 - customers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCORG413 Implement sustainable practices in the organic farm based business

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to manage the establishment and implementation of sustainable work practices in organic farming enterprises.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters, and use discretion and judgment in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Organic Production (ORG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Access the farm businesses guidelines and principles for social, financial and environmental	1.1 Identify environmental regulations, organic farming standards and the organic farm plan 1.2 Source and interpret environmental and sustainable organic farming best practice and principles

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
sustainability	<p>1.3 Identify impact of best practice guidelines and organic principles on day-to-day farm management</p> <p>1.4 Identify key sustainability practices for an organic farming enterprise</p> <p>1.5 Access sustainable organic farming business guidelines, principles and farm practices</p>
2. Implement established farm business guidelines and principles	<p>2.1 Implement strategies to effectively integrate sustainability principles and practices into organic farm system</p> <p>2.2 Identify continuous improvement opportunities and document changes identified into businesses policies and procedures</p> <p>2.3 Implement improvements to farm businesses</p>
3. Monitor farm business sustainability initiatives for effectiveness and compliance	<p>3.1 Monitor and evaluate effectiveness and compliance of organic and sustainability practices</p> <p>3.2 Evaluate and report changing trends and techniques relevant to sustainable organic farming for continuous improvement</p>
4. Engage farm business stakeholders in sustainability practices	<p>4.1 Communicate sustainability strategies to organic farm stakeholders</p> <p>4.2 Monitor stakeholders of supply chain and their compliance with organic sustainability strategies</p> <p>4.3 Identify and document identified continuous improvement initiatives</p> <p>4.4 Encourage and assist stakeholders to implement improvements to system</p>
5. Determine social capital benefits from community engagement with the farm enterprise	<p>5.1 Identify food security and food sovereignty issues addressed by farm business practices</p> <p>5.2 Monitor compliance with regulatory and legislative requirements for labour management</p> <p>5.3 Determine level of community engagement with local stakeholders</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Critically analyse organic production principles, standards and certification procedures to ensure compliance
Oral communication	<ul style="list-style-type: none"> Use collaborative and inclusive techniques, including active listening, questioning and reading of verbal and non-verbal signals to convey and clarify information on sustainable organic farming to stakeholders

Assessment Requirements for AHCORG413 Implement sustainable practices in the organic farm based business

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, implemented sustainable practices on an organic farm and has:

- identified businesses guidelines and principles for social, financial and environmental sustainability
- identified and interpreted environmental regulations, sustainable organic farming requirements, farm plan and current best practice guidelines and principles
- implemented strategies to integrate sustainability principles and practices into farm system and identified continuous improvement opportunities
- monitored farm business sustainability initiatives for effectiveness and compliance
- adopted and documented continuous improvement initiatives
- assisted staff and farm business stakeholders to embrace sustainability practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- organic farming best practice guidelines
- principles and processes relevant to sustainable organic farming
- compliance requirements for all relevant environmental/sustainability legislation, regulations and codes of practice, including:
 - resource hazards/risks associated with work area
 - job specifications and procedures
- sustainability issues related to an organic farm, including:
 - environmental
 - social issues
 - economic

- external benchmarks used within an organic farming enterprise, including approaches to improving techniques used and expected outcomes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an organic farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - research tools and equipment
- specifications:
 - workplace policies, procedures, processes
 - specific sustainability and organic farming legislation and codes of practice
- relationships:
 - stakeholders
 - work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCORG414 Oversee compliance with an organic certification scheme

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, overseen the compliance with organic certification standards for an organic farm and has:

- identified and documented compliance requirements of farm system with organic standards
- identified and documented key farm operations impacted by organic farm standards
- supported and trained key stakeholders to implement and foster a compliant organic supply chain culture
- maintained accurate records for key supply chain to verify and maintain organic compliance
- conducted an internal organic audit of the farm system and accurately completed associated records and documents
- participated in an annual organic review and audit and successfully closed out identified corrective actions
- identified food safety requirements and ensured compliance of farm system with industry standards
- ensured all farm records, traceability and production data is kept, monitored and maintained in compliance with National Organic Standard requirements.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- organic standards, compliance requirements and industry specifications
- applicable food safety and licensing requirements
- farm supply chain market requirements for product
- organic quality specifications for product

- enterprise and industry quality assurance systems
- strategies for control of hazards to organic compliance
- basic workplace training methodologies
- document control protocols.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an organic farm or an environment that accurately represents workplace conditions
- specifications:
 - workplace policies, procedures, processes
 - specific legislation and organic farming codes of practice
- relationships:
 - team members and stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCORG415 Manage on farm composting

Modification History

Modification history

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to manage composting on farms according to recipes and in compliance with state regulations, Australian Standards, industry standards for organic and biodynamic production and agroecological principles.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters, and use discretion and judgment in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Organic Production (ORG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Organise for composting	1.1 Confirm composting technology, recipe and method to be used for raw material available and farm needs

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.2 Determine end product compost quality requirements 1.3 Identify composting site requirements 1.4 Identify health, safety and environmental hazards, assess risk and implement controls 1.5 Select, check and use personal protective equipment (PPE) 1.6 Select, check serviceability and prepare materials, equipment and machinery for safe operation 1.7 Prepare composting site ready to receive materials
2. Prepare raw materials and compost on farm	2.1 Identify and collect raw materials and additives for composting according to recipe and quality standards 2.2 Pre-process raw materials into suitable forms for composting according to recipe 2.3 Mix raw materials into suitable compost mixtures for composting according to recipes 2.4 Handle feedstock materials according to composting method, available equipment 2.5 Maintain records for tracking batch according to workplace procedures
3. Manage and monitor the composting process	3.1 Manage compost batches according to composting methods 3.2 Use field testing procedures to monitor composting progress 3.3 Maintain records for process control indicators 3.4 Identify substandard composting indicators and rectify according to production process 3.5 Follow site biosecurity and hygiene according to workplace procedures
4. Inspect compost quality and maintain site	4.1 Inspect and assess finished compost to determine if quality indicators have been met 4.2 Implement biosecurity procedures for machinery and processing equipment between batches 4.3 Store raw materials and finished compost products according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCORG415 Manage on farm composting

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, managed the production of compost on a farm and has:

- implemented and managed an on-farm compost system
- managed composting processes, record keeping and testing
- managed a composting site
- evaluated compost quality and implemented remedial actions where key indicators were lacking
- implemented enterprise work health and safety policies
- followed site biosecurity protocols.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic principles of composting, including:
 - different methods of composting
 - characteristics of raw materials used in compost
 - fundamental characteristics of compost quality
 - compost quality standards
 - steps in pre-processing compost materials
- batch documentation techniques
- site and equipment requirements for on-farm composting
- key process control stages critical to consistent compost production
- overview of systems and technologies used in compost production

- characteristics and categories of a range of compost products
- relevant environmental, health and safety legislation and regulations
- record-keeping requirements
- site biosecurity protocols
- agroecological principles
- principles, practices and inputs allowable under the industry standards for organic and biodynamic production.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on-farm or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - composting tools and equipment
 - compost components and materials
 - personal protective equipment
- specifications:
 - workplace policies, procedures, processes
 - manufacturer operating instructions for equipment and machinery
 - safety data sheets
 - workplace compost methods, recipes and specifications
 - specific legislation and codes of practice and industry standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCORG509 Prepare and manage organic or biodynamic certification

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to investigate and access information to support conversion to organic or biodynamic production, conduct a risk assessment, implement Hazard Analysis and Critical Control Points (HACCP)-based procedures and manage customer feedback for a certified organic or biodynamic farm.

The unit applies to individuals who apply specialised skills and knowledge, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Organic Production (ORG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Investigate and access information sources and support for conversion to organic or biodynamic production	1.1 Establish contact with organic producers and marketers of organic products 1.2 Identify and access sources of support and advice 1.3 Review and assess relevance and reliability of reference materials 1.4 Review certification requirements from accrediting bodies 1.5 Select accrediting body according to organic farm production system 1.6 Investigate roles and responsibilities of stakeholders for accrediting body and government agencies
2. Conduct a risk assessment of the site	2.1 Identify and document previous land use and chemicals applied on the site 2.2 Undertake and document risk assessment for potential on-farm contaminants 2.3 Assess potential contamination risk from off-farm land use and agricultural practices 2.4 Incorporate risk management procedures reducing potential contamination into a certification preparation plan
3. Develop and implement Hazard Analysis and Critical Control Points (HACCP)-based procedures	3.1 Identify and document production processes for supply chain according to accrediting body and national standards for organic and biodynamic production 3.2 Verify quality of production output with organic and statutory product standards 3.3 Identify and document corrective actions or improvements to processes and activities 3.4 Develop and implement procedures for monitoring and reviewing processes and compliance 3.5 Integrate a food safety management program according to production process
4. Manage customer feedback	4.1 Develop and implement procedures to obtain, analyse and respond to stakeholder feedback on quality and integrity of organic product 4.2 Develop and monitor product recall procedures, and communicate to stakeholders

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret information regarding the national standards and certification requirements
Oral communication	<ul style="list-style-type: none"> Initiate discussions with agricultural extension officers, work colleagues and others, using clear language to inform the development of a site certification preparation plan

Assessment Requirements for AHCORG509 Prepare and manage organic or biodynamic certification

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared an enterprise for organic or biodynamic certification on at least one occasion and has:

- identified requirements for organic certification
- identified critical points in supply chain where organic or biodynamic integrity may be compromised
- implemented and monitored effective risk management for those parts of supply chain under farm control
- identified and documented practices and strategies to minimise risk of contamination and non-conformance with organic or biodynamic standards
- developed an operational plan for conversion to organic or biodynamic production.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- organic and biodynamic certification process
- standards and codes of practice for organic and biodynamic production
- chain of custody of products and exposure to non-compliance
- workplace hazard assessment and critical control point principles and risk management, including:
 - procedures for conducting and documenting a risk assessment
- health and food safety requirements for farm produce
- labelling requirements for domestic and export markets
- market for organic produce, including the organic movement and organic industry
- principles of organic or biodynamic agriculture

- procedures and responsibilities for product recall
- regulatory requirements and their domestic and international contexts
- role of quality management systems in organic industry, including:
 - documentation and record-keeping requirements
- working knowledge of the regulated organic industry, including:
 - role of the government, certification bodies and inspectors.
 - support, including agricultural extension officers and training programs.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - literature, publications and internet sources of information relevant to organic or biodynamic certification
 - certification process requirements
- specifications:
 - standards and codes of practice for organic and biodynamic production
- relationships:
 - stakeholders
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCORG510 Design and document an organic farm landscape

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, designed and documented a landscape plan for an organic farm and has:

- sourced and interpreted legislative requirements, industry standards and codes of practice
- identified compliant work practices and procedures
- conducted an audit of natural resources and infrastructure of property
- identified physical and biological characteristics and landscape features of property
- developed farm soil map and determined land capability
- developed a draft concept landscape plan using design tools
- revised concept plan and documented final organic landscape plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislative and regulatory requirements and codes of practice relevant to organic farming practice
- physical and biological characteristics of landscape, including:
 - habitat and plant communities on farm
 - soil types and their relationship with land shape
 - different zoning categories, including cultural and historical
 - landscape hydrology
- organic certification requirements
- landscapes for agroecosystems
- principles of design and design strategies and tools

- native habitat requirements
- requirements of the organic standard and agroecological principles.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a farming property or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - design tools and equipment
- specifications:
 - workplace policies, procedures, processes
 - workplace organic farming goals and specifications
 - specific legislation/codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate the suitability of different community marketing options for farm products	1.1 Research and document selling options suitable for farm produce 1.2 Identify community marketing models applicable to farm system 1.3 Identify key input supply chain steps, stakeholders and certification requirements 1.4 Evaluate and record most suitable options
2. Determine the marketing chain processes to participate in the selected community marketing schemes	2.1 Research and identify legislative, environmental and certification requirements for managing a community-based marketing chain 2.2 Document specifications for components of marketing chain management system according to workplace and legislative requirements 2.3 Document traceability requirements of marketing chain
3. Determine appropriate community marketing strategies for farm products	3.1 Identify communities with potential relationship for farm system 3.2 Document the characteristics and values of identified communities 3.3 Compare community characteristics and values with farm system 3.4 Establish and document market specifications to meet community expectations 3.5 Identify and document community marketing strategies 3.6 Identify and assess risks in strategy
4. Establish product marketing chain requirements to meet marketing options	4.1 Map steps in marketing chain to supply identified market 4.2 Establish farm business requirements for each step in the marketing chain 4.3 Establish compliance requirements at each step in the marketing chain 4.4 Develop record-keeping requirements for each step in the marketing chain
5. Develop and document a community-based marketing plan	5.1 Document required processes for supply chain stakeholders and production systems 5.2 Identify and document marketing targets 5.3 Identify key factors that differentiate product 5.4 Develop and document a promotion plan

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.5 Collate customer feedback for improvement in market outcomes

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Organise, evaluate and critique ideas and information on organic farm markets, legislation and certification to develop ideas for managing community market supply within legal frameworks
Writing	<ul style="list-style-type: none"> Prepare documentation expressing ideas, exploring complex market and supply issues and constructing plans and strategies logically, succinctly and accurately

Assessment Requirements for AHCORG511 Develop and manage a community based marketing supply chain

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, developed and managed a community-based marketing supply chain and has:

- researched and evaluated suitability of different community marketing options for farm products
- researched and identified legislative, environmental and certification requirements for community-based marketing chain
- prepared specifications for components of marketing chain management system according to workplace procedures and legislative requirements
- established and documented market specifications for community expectations
- established product marketing chain to meet marketing options
- established farm business requirements for each step in the marketing chain
- established compliance requirements for each step in the marketing chain
- developed record-keeping systems for each step in the marketing chain
- developed and documented a community-based marketing plan
- developed and documented a promotion plan
- collated customer feedback.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- federal, state or territory legislation, regulations, standards and codes of practice for selling produce through community-based markets
- legislation and regulations relating to work health and safety

- organic certification systems and standards
- rural produce marketing and presentation
- organisation policies and procedures related to supply chain management, purchasing, and contracting and tendering
- characteristics and composition of farm business marketing plans
- characteristics of community marketing schemes and the steps within a farm produce supply chain
- product knowledge related to goods and services required by the organisation
- ways to build trust and collaboration as opposed to competition
- ethical behaviour
- established communication channels and protocols
- procedures for operating electronic communications equipment
- procedures for recording and reporting workplace information and completing relevant documentation.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - planning and management tools and resources
- specifications:
 - workplace policies, procedures, processes
 - workplace plans and specifications for farm produce
 - specific legislation and codes of practice
- relationships:
 - community and stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCORG512 Develop and monitor a sustainable production plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to investigate sustainability goals, determine production system to achieve goals, and develop and monitor a sustainable production plan for an organic or agroecological farming system.

The unit applies to individuals who apply specialised skills and knowledge, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Organic Production (ORG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify goals for	1.1 Determine goals of production plan for farm

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
sustainable production plan	1.2 Identify and document physical, biological, social and financial resources of farm 1.3 Identify and analyse values, expectations and goals of stakeholders 1.4 Identify and document sustainability goals from industry data and organisational records
2. Research and evaluate available sustainable production systems	2.1 Research potential farming models and evaluate against identified goals and resources 2.2 Research and evaluate applicable sustainable production systems for farm 2.3 Identify a production system that complies with sustainability and farm management goals 2.4 Compare elements of production system with existing farm processes and resources 2.5 Assess system against farm goals and sustainability principles, and document findings
3. Develop a sustainable production plan	3.1 Specify modifications to existing farm processes and resources for chosen production system 3.2 Identify and document optimal production targets 3.3 Identify inputs and system design elements required to achieve the production targets 3.4 Establish risk management strategies 3.5 Identify record-keeping requirements 3.6 Develop and document a sustainable production plan for selected enterprises and production systems
4. Monitor and evaluate effectiveness of the sustainable production systems	4.1 Establish farm system monitoring procedures and performance indicators 4.2 Monitor performance indicators against production and sustainability targets 4.3 Evaluate production and sustainability data against sustainable production plan goals 4.4 Modify production system to resolve differences between planned and actual production targets 4.5 Identify, monitor and assess environmental impact of farm production process

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.6 Identify health and safety hazards, assess risk and implement controls for farm production
5. Record and manage information and data	5.1 Create and maintain records according to production plan, health and safety, and equipment programs 5.2 Maintain record-keeping systems and data to enterprise and industry standards 5.3 Prepare and assess recommendations for future sustainable production plans 5.4 Document revised plans and record changes in organic management plan (OMP) according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Source, organise, and evaluate information on sustainable production from a wide range of complex texts
Writing	<ul style="list-style-type: none"> Demonstrate sophisticated writing skills by selecting appropriate conventions and stylistic devices to express meaning in plans, processes and record-keeping systems

Assessment Requirements for AHCORG512 Develop and monitor a sustainable production plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, developed and monitored a sustainable production system for a farm and has:

- identified personal and enterprise goals
- identified and documented physical, biological, social and financial resources
- researched and evaluated sustainable production systems
- developed a sustainable production plan consistent with land capacity and production system design
- monitored and evaluated effectiveness of sustainable production system
- reviewed and modified the production system
- designed, updated and managed farm record-keeping system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes in developing and monitoring a sustainable production plan
- importance of stakeholders and their engagement for developing a sustainable enterprise, including:
 - farm owners and partners
 - farm workers
 - contractors
 - suppliers
 - customers

- legislation and regulations, including:
 - health and safety
 - contractor engagement
 - animal health and welfare
 - chemical use and application
 - vehicle and plant use
 - soil and water degradation
- environmental protection requirements and codes of practice, including:
 - safe disposal of products
 - waste management
 - biosecurity
- organisational policies and procedures, standards and site requirements for risk management and hazard identification
- sustainable land use principles and practices applicable in the region
- farm planning processes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - research tools and references
- specifications:
 - workplace policies, procedures, processes
 - farm produce specifications
 - specific legislation and industry codes of practice
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCORG513 Manage an agroecology production system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to use agroecology principles in managing all elements of a farm ecosystem, including the soil, vegetation, animals, pests and diseases, to achieve and maintain overall ecological and economic health of the farm ecosystem and production.

The unit applies to individuals who apply specialised skills and knowledge, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Organic Production (ORG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify the farm	1.1 Identify and map energy flows through a farm agroecosystem

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
agroecosystem functions at a systems level	1.2 Identify and map nutrient cycles through parts of a farm ecosystem 1.3 Identify disturbance points in farm ecosystem succession 1.4 Develop a model of farm ecosystem and its elements 1.5 Identify areas of complexity within farm ecosystem 1.6 Identify ecosystem functions with potential to replace external inputs for farm production system 1.7 Identify interactions between elements of farm ecosystem 1.8 Assess health of existing farm ecosystem
2. Develop plans to enhance farm agroecosystem	2.1 Identify areas within farm agroecosystem that require enhancement 2.2 Identify farming methods that enhance farm agroecosystem 2.3 Document farming methods in an implementation plan
3. Manage farm agroecosystems	3.1 Set up farm monitoring system 3.2 Monitor components of farm ecosystem according to organic standards and legislative requirements 3.3 Review ecosystem and farm production against planned performance and identify inconsistencies 3.4 Review and adjust agroecology production system plans to rectify inconsistencies

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCORG513 Manage an agroecology production system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, managed and monitored a farm agroecology production system and has:

- identified farm agroecosystem functions
- assessed health of existing farm ecosystems
- developed plans to enhance farm agroecosystem, which must include:
 - the encouragement of niche development
 - increased complexity of agroecosystem
 - improved interactions between components of farm agroecosystem
- reviewed ecosystem and farm production performance.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- advantages of ecological agriculture farming
- ecosystem processes, including:
 - energy flow
 - nutrient cycles
 - biological succession
 - predator and prey relationships
 - ecological niche
- relationships between ecosystems and agricultural production
- application of ecosystem processes to a production system

- production planning methods.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an existing farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - research tools and references
- specifications:
 - workplace policies, procedures, processes
 - farming systems and production specifications
 - specific legislation and industry codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCORG514 Develop an organic or biodynamic management plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to access assistance, develop sub-plans for soil fertility, weed, integrated pest and disease, animal health and environmental management, and to integrate into the design of an organic management plan (OMP) or biodynamic management plan (BMP).

The unit applies to individuals who apply specialised skills and knowledge, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and demonstrate deep knowledge in a specific technical area. They analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Organic Production (ORG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Locate and access assistance in developing OMP or BMP	1.1 Locate and access sources of support and advice 1.2 Assess industry publications for their value in informing decision-making 1.3 Seek and consider contributions of work colleagues and others during planning process 1.4 Access information from certifier and organic or biodynamic standards
2. Design the organic farming system to be described in the OMP or BMP	2.1 Acquire property map 2.2 Determine time scale to be addressed in plan 2.3 Establish benchmark position for soils, pests, diseases and animal health for farm property 2.4 Obtain regional catchment targets for land, water and biodiversity for property and sub-catchment 2.5 Identify components of OMP or BMP to be developed 2.6 Develop format for planning documents 2.7 Identify risks to organic integrity for the farm enterprise, and outline strategies to manage risk
3. Develop soil fertility plan	3.1 Conduct a soil fertility assessment of farm production areas 3.2 Map soil types and topography on farm plan 3.3 Identify and assess options for soil fertility plan 3.4 Identify inputs according to industry standards for organic and biodynamic production and agroecological principles 3.5 Document soil fertility plan according to format
4. Develop soil management sub-plan	4.1 Determine soil physical and chemical characteristics and suitability for production 4.2 Develop soil management plan to improve soil characteristics 4.3 Identify inputs according to industry standards for organic and biodynamic production and agroecological principles 4.4 Document soil management sub-plan according to format 4.5 Identify farm management practices and strategies to enhance soil conditions
5. Develop weed	5.1 Observe and identify weed species and their indication of soil

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
management sub-plan	<p>health</p> <p>5.2 Identify life cycles of weeds species to inform management options</p> <p>5.3 Identify inputs according to industry standards for organic and biodynamic production and agroecological principles</p> <p>5.4 Develop integrated farming strategies and cultural practices for managing weeds</p> <p>5.5 Document weed management sub-plan according to format</p>
6. Develop and design an integrated pest and disease management sub-plan	<p>6.1 Collect and document evidence of pest and disease incursion in farming system</p> <p>6.2 Observe and monitor pests and diseases and their life cycles</p> <p>6.3 Evaluate pest and disease impact</p> <p>6.4 Evaluate pests, diseases and beneficial organisms as indicators of farming system health</p> <p>6.5 Identify options for addressing pests and diseases</p> <p>6.6 Identify inputs according to industry standards for organic and biodynamic production and agroecological principles</p> <p>6.7 Document integrated pest and disease management sub-plan according to established format</p>
7. Develop animal health and management sub-plan	<p>7.1 Identify regional and farm-based animal health issues</p> <p>7.2 Identify options for preventative actions for maintaining optimal animal health</p> <p>7.3 Identify options for treating animal health issues</p> <p>7.4 Develop a sustainable grazing management plan</p> <p>7.5 Develop an animal management program that ensures compliance with organic standards or agroecological principles</p> <p>7.6 Document animal health and management sub-plan according to established format</p>
8. Develop an environmental management sub-plan	<p>8.1 Identify environment and climate issues</p> <p>8.2 Identify options for addressing environment and climate issues</p> <p>8.3 Identify appropriate inputs according to industry standards for organic and biodynamic production and agroecological principles</p> <p>8.4 Document environmental management sub-plan according to</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	established format
9. Integrate and finalise the OMP or BMP	9.1 Collate and integrate sub-plans into OMP or BMP 9.2 Track all plan components to ensure plan is complete 9.3 Review and update OMP or BMP annually

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret information for industry standards for organic and biodynamic production and agroecological principles, and planning requirements Identify and interpret information on regional catchment targets for land, water and biodiversity applicable to property and sub-catchment
Oral communication	<ul style="list-style-type: none"> Initiate discussions with work colleagues and others, using clear language to discuss and communicate plan
Numeracy	<ul style="list-style-type: none"> Access and analyse data for input to OMP or BMP Document time scale and costs of implemented strategy

Assessment Requirements for AHCORG514 Develop an organic or biodynamic management plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed biodynamic or organic management plans for at least two different properties and for each property, has:

- identified and developed required components of organic management plan (OMP) or biodynamic management plan (BMP) for each property
- established benchmark position from past practices for weeds, pests, diseases and animal health status and their interrelationships
- conducted a soil fertility assessment, which must include:
 - soil physical and chemical test results
 - interrelationships between soil, plant, animal health and environment
 - current soil condition and past management practices
- developed a soil fertility plan and soil management sub-plan based on assessment of soil tests and observations, which must include:
 - amendments to soil chemistry
 - soil structure
 - soil biology
- developed a weed management sub-plan
- developed and designed an integrated pest and disease management sub-plan
- developed an animal health and management sub-plan
- developed an environmental management sub-plan
- compiled sub-plans, tracked plan components and documented the OMP or BMP according to organic certification standards

There must also be evidence that the individual has:

- undertaken a review of an existing OMP or BMP for a property.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of organic agriculture,
- fundamental role of soil health, including:
 - soil type
 - slope and aspect
 - previous use
 - soil structure
 - compaction
 - drainage and water logging
 - soil biology and soil food web, and the role of bacteria, fungi and protozoa
 - organic soil nutrition and fertiliser management
 - role of green manures and organic matter
- principles of sustainable production
- use of biological systems for improving soil health resilience
- potential impact of climate change on crop production
- requirements and components of an OMP and BMP
- organic and biodynamic certification standards
- integrated organic pest and disease management, including:
 - cultural practices
 - certified organic pest and disease products
 - system design
 - soil health impact on pests and diseases
 - role of BRIX in pest and disease management
- biological control:
 - cultural practices
 - system design
 - soil health and pests and diseases
- management and farming system's resilience
- animal grazing management, including:
 - feed requirements
 - stocking densities
 - regional catchment land and soil condition targets.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - industry publications relevant to OMP or BMP
 - OMP or BMP certification standards
 - maps of property
 - soil fertility assessment
- specifications:
 - industry standards for organic and biodynamic production and agroecological principles
- relationships:
 - work colleagues.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPCM204 Recognise plants

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to recognise commonly encountered plants, including desired species and weeds, and to document and confirm plant identification.

The unit applies to individuals who recognise plants under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Plant Culture and Management (PCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for plant recognition	1.1 Confirm work activity and instructions with supervisor 1.2 Recognise workplace health and safety hazards, and report to supervisor 1.3 Select and prepare tools, equipment and material for plant recognition activity 1.4 Locate a range of desirable and non-desirable plants requiring

Assessment Requirements for AHPCPM204 Recognise plants

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has recognised a range of plants from a range of plant families and classifications, including:

- annual
- biennial
- perennial
- evergreen and deciduous
- trees
- shrubs
- ground cover
- climbers
- monocot.

There must also be evidence that the individual has:

- applied workplace health and safety requirements applicable to recognising plants
- selected and prepared tools, equipment and materials for use in recognition activity
- located desirable and non-desirable plants requiring recognition
- recognised and described plant habits, characteristics and significant features
- used appropriate reference material to assist with plant recognition
- recorded information about identified plants.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for recognising plants
- principles and practices of plant recognition, including:
 - plant morphology and physiology as they relate to recognising plants

- plant nomenclature
- resources for obtaining information about plants
- plant recognition techniques.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plants
 - plant recognition resources and equipment
 - access to internet and field guide reference materials applicable to plant recognition
- specifications:
 - workplace requirements applicable to health and safety in the workplace for recognising plants
- relationships:
 - appropriate personnel and supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPCM205 Fell small trees

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare for tree felling, fell small trees and complete felling operations where hazards have been assessed as low risk.

The unit applies to individuals who apply low risk work procedures and comply with worksite health and safety requirements when felling trees under general supervision, with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

The prerequisite unit of competency for this unit is:

- AHCMOM213 Operate and maintain chainsaws.

Unit Sector

Plant Culture and Management (PCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assist in preparation of worksite	1.1 Identify location of worksite and correct tree from scope of works, and confirm with supervisor 1.2 Identify site hazards, assess risks and report to supervisor 1.3 Confirm work zone with work crew, and monitor site

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Confirm first aid and emergency personnel, equipment and procedures</p> <p>1.5 Document and implement site health and safety in the workplace, environmental and traffic control measures according to workplace procedures</p>
2. Identify tree felling requirements	<p>2.1 Identify hazards and risks relevant to felling operation, and implement safe working practices to manage risks</p> <p>2.2 Examine topography and site conditions</p> <p>2.3 Identify factors influencing the tree felling operation, and confirm with supervisor</p> <p>2.4 Identify trees considered outside own skill level for felling, and seek assistance from appropriate personnel</p> <p>2.5 Determine natural direction of fall, safe fall zone and exclusion zone, and confirm with supervisor</p> <p>2.6 Confirm tree felling operations and instructions with supervisor prior to undertaking work</p>
3. Prepare for tree felling	<p>3.1 Select and prepare felling equipment and component options appropriate to the task being undertaken</p> <p>3.2 Prepare, transport and position support tools to minimise felling delays</p> <p>3.3 Select and maintain safety and personal protective equipment (PPE) according to workplace health and safety requirements</p> <p>3.4 Fit and use safety equipment and PPE applicable to the task being undertaken</p> <p>3.5 Clear fall zone of obstacles and articles that may be damaged by felled tree</p> <p>3.6 Establish clear escape route appropriate to site</p>
4. Fell tree	<p>4.1 Note and monitor location of other personnel</p> <p>4.2 Carry out tree felling operation according to scope of works</p> <p>4.3 Communicate with work team during operations using voice, hand or whistle signals</p> <p>4.4 Determine standard tree felling techniques, patterns and cut sequences by ground conditions and state of canopy</p> <p>4.5 Take corrective action in response to changing conditions or</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>problems encountered</p> <p>4.6 Use planned escape route when tree starts to fall</p> <p>4.7 Monitor fall of tree and movement on ground until felled tree is stable</p> <p>4.8 Undertake tree felling activities using documented low risk work methods</p>
5. Complete tree felling operation	<p>5.1 Determine appropriate method of clearing the site of felled tree</p> <p>5.2 Select and use machinery required for removal of felled tree</p> <p>5.3 Clear fall site of tree and all tree debris according to supervisor instructions</p> <p>5.4 Clean and return machinery, tools and equipment to required location</p> <p>5.5 Identify and report unserviceable machinery, tools and equipment according to workplace procedures</p> <p>5.6 Report tree felling activities according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about tree felling operations
Oral communication	<ul style="list-style-type: none"> Use clear language to report hazards and risks and to confirm worksite, first aid and emergency personnel, equipment and procedures, and to report felling activities and unserviceable machinery, tools and equipment Participate in verbal exchanges to respond to questions and clarify information Use verbal and non-verbal communications with work team during operations using voice, hand and whistle signals

Assessment Requirements for AHCPM205 Fell small trees

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has felled small trees on at least three occasions, and has:

- applied workplace health and safety requirements applicable to felling small trees
- applied principles and practices of small tree felling operations
- applied documented low risk work methods and workplace procedures
- assessed topography and site conditions, identified factors influencing tree felling operation, and confirmed findings with supervisor
- prepared, transported and positioned support tools to minimise felling delays
- safely operated a chainsaw to fell small trees
- reported felling activities, and machinery, tool and equipment unserviceability according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for small tree felling operations
- principles and practices of small tree felling operations, including:
 - corrective action
 - emergency and first aid procedures
 - felling equipment and components
 - first aid and emergency personnel, equipment and procedures
 - ground conditions
 - how to determine natural direction of fall
 - how to establish a clear escape route
 - industry standard terminology

- obstacles and articles that may be damaged by felled trees
- positioning support tools
- safe operating procedures for felling small trees
- safe fall and exclusion zones
- selection, preparation and appropriate equipment for task
- standard tree felling techniques, patterns and cut sequences
- topography, site conditions and other factors influencing tree felling operations
- low risk work methods and workplace procedures for small tree felling operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
 - personal protective equipment (PPE) must be worn whilst operating chainsaw
 - individual must not be under the influence of alcohol or drugs
 - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
- resources, equipment and materials:
 - chainsaws
 - chainsaw tools
 - small trees
 - tree felling machinery, tools and equipment
 - safety equipment and PPE applicable to the task being undertaken
- specifications:
 - workplace requirements applicable to health and safety in the workplace and small tree felling operations
 - documented low risk work methods and workplace procedures applicable to small tree felling operations
- relationships:
 - team members, supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPCM305 Implement a plant nutrition program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to implement a plant nutrition program, including preparing for the nutrition program, monitoring and controlling the nutritional requirements of plants, preparing fertilisers and application equipment, applying products to plants, and completing plant nutrition program activities.

The unit applies to individuals who implement a plant nutrition program under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Plant Culture and Management (PCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for implementation of the plant nutrition program	1.1 Identify goals, target site, plant species and varieties for implementing the program 1.2 Locate services using site plans or consultation with supervisor 1.3 Identify potential hazards and risks, and identify safe working practices to manage risks

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Confirm environmental and biosecurity implications associated with plant nutrition program activities, and minimise impact 1.5 Select, fit use and maintain personal protective equipment applicable to the task
2. Identify and assess soil or growing media characteristics	2.1 Assess site soil or growing media characteristics, including pH, in relation to plant nutrition 2.2 Identify, compare, select and source ameliorants to improve soil or growing media characteristics or fertility 2.3 Assess product application methods according to product type and growing media
3. Determine nutritional problems in plants	3.1 Conduct a visual inspection and identify common nutrient deficiency and toxicity problems in plants 3.2 Determine causes of nutritional or toxicity problems, and confirm with supervisor or horticulturalist, as required
4. Prepare to use fertilisers	4.1 Select a fertiliser that is compatible with plant species and growing media according to nutrition program 4.2 Assess fertiliser application methods, taking into account the fertiliser type, soils and environmental implications according to nutrition program
5. Prepare application equipment	5.1 Select tools, equipment and machinery appropriate for the plant application being performed, and check for safe operation 5.2 Calibrate and adjust tools, equipment and machinery
6. Apply specific products at appropriate rates	6.1 Calculate product application rates to optimise plant benefit and minimise environmental impact according to nutrition program 6.2 Apply products with the correct rate, timing and method according to the product type, plant needs and with consideration of the environmental implications and according to nutrition program 6.3 Apply fertilisers appropriate to the plant growing cycle, workplace fertiliser schedule and nutrition program 6.4 Record product applications according to workplace procedures 6.5 Monitor, document and report target plant response to the plant nutrition program, as well as non-target effects or responses according to workplace procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
7. Complete plant nutrition program activities	7.1 Remove and dispose of waste material according to workplace and environmental requirements 7.2 Clean, maintain and return tools, equipment and machinery to required location 7.3 Identify and report unserviceable tools, equipment and machinery according to workplace procedures 7.4 Record and report plant nutrition program activities

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about the plant nutrition program
Writing	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to complete product application and plant nutrition program activity records
Oral communication	<ul style="list-style-type: none"> Initiate discussions with supervisor using clear language to confirm site services, and report target plant response, non-target effects or responses, and unserviceable tools, equipment and machinery Initiate discussions with supervisor or horticulturalist using clear language to confirm plant nutritional or toxicity problems
Numeracy	<ul style="list-style-type: none"> Calculate soil ameliorant, fertiliser and product ratios, quantity and application rates

Assessment Requirements for AHPCCM305 Implement a plant nutrition program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented a plant nutrition program on at least one occasion, and has:

- applied workplace health and safety requirements, including a site hazard identification and risk control assessment
- minimised environmental and biosecurity impacts associated with the plant nutrition program
- identified appropriate products and application methods according to nutrition program
- determined nutritional problems in plants
- selected, calibrated and operated plant nutrition program tools, equipment and machinery, and checked for safe operation
- calculated treatment and product requirements, material sizes and quantities
- applied specific products at appropriate rates
- recorded product applications and plant nutrition program activities
- reported target plant response, non-target effects or responses, and unserviceable tools, equipment and machinery
- removed and disposed of waste material
- cleaned, maintained and stored tools, equipment and machinery.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements applicable to implementing a plant nutrition program
- industry and workplace environmental and biosecurity procedures applicable to implementing a plant nutrition program
- principles and practices of plant nutrition, including:

- methods of nutrient uptake by plants
- nutrient cycling and its practical relevance to the specific plants and growing media
- common nutrients requirements applicable to plants grown in the workplace
- ameliorants commonly used to treat soil or growing media problems
- the effects of nutrient deficiency and toxicity on plant species and varieties
- the environmental implications of ameliorant and fertiliser use
- the main simple and compound fertiliser products available to the workplace, including analysis, solubility, salt index, application rates and costs
- the relationship between soil characteristics and the availability of nutrients
- plant nutrition tools, equipment and machinery operating instructions and safe work procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plant nutrition tools, equipment and machinery
 - soil ameliorants, fertiliser and plant nutrition products commonly used to treat soil problems
 - personal protective equipment applicable to plant nutrition
- specifications:
 - plant nutrition tools, equipment and machinery operating instructions and safe work procedures
 - industry and workplace environmental and biosecurity procedures applicable to implementing a plant nutrition program
 - workplace health and safety requirements applicable to implementing a plant nutrition program
- relationships:
 - supervisor and horticulturalist
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPCM306 Provide information on plants and their culture

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify client issues or requirements, identify the preferred solution, and provide information and solutions to clients.

The unit applies to individuals who provide information on plants and their culture under broad direction, and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Plant Culture and Management (PCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify client issues or requirements	1.1 Initiate contact with the client in a timely and professional manner using interpersonal skills and communication techniques 1.2 Assist the client in explaining issues or requirements by using attentive listening and questioning techniques 1.3 Clarify the nature of the issue or requirements by gathering relevant information from the client

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Define the issue according to the amount of information gathered 1.5 Seek assistance from appropriate personnel, and follow up with client where required
2. Identify preferred solution	2.1 Identify and develop recommendations, options or strategies using available in-house and online reference material, product information, own experience and collective workplace knowledge 2.2 Examine and evaluate options and strategies using problem-solving techniques 2.3 Determine optimal solution based on reasoned argument and gathered evidence
3. Provide information or preferred solution	3.1 Explain cultural requirements for the plant or recommended solution, including method of application, where applicable, and probable outcomes to the client 3.2 Refer to original source of the plant and its cultural requirements, where necessary 3.3 Use attentive listening and questioning techniques to respond to client requests for clarification or more information

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about plant production information and culture requirements
Oral communication	<ul style="list-style-type: none"> Use clear language with clients to determine issue and explain plant cultural requirements or recommended solution Initiate discussions with personnel as appropriate, using clear language to communicate client issues or requirements and determine preferred solutions

Assessment Requirements for AHCPMB06 Provide information on plants and their culture

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has provided information on plants and their culture on at least two occasions, and has:

- communicated effectively with clients and appropriate personnel as required
- investigated requests for information, identified and evaluated options, decided on a solution, and delivered recommendation and information to the client
- developed product knowledge through research and access to in-house and online information
- interpreted information sheets, labels, horticultural literature, specifications and design symbols
- selected solutions from a range of available stock lists.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of plant culture, including:
 - duty of care in provision of advice and recommendations to retail, commercial and private clients
 - local plant suppliers, consultants, services, products and contractors
 - pest and disease symptoms, basic physiology and life cycle of pests and diseases, vulnerable plant growth stages, treatment thresholds, treatment products, effective application procedures and environmental implications
 - plant identification techniques, plant selection, plant physiology, and habit and growth characteristics of the plants
 - soil characteristics, particularly in relation to the local region

- weed species, growth stages, treatment thresholds, treatment products, effective application procedures and environmental implications.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - in-house and online information
- specifications:
 - information sheets, labels, horticultural literature, specifications and design symbols
- relationships:
 - clients and appropriate personnel
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHPCMB07 Report on health and condition of trees

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has reported on the health and condition of trees on at least two occasions, and has:

- applied workplace health and safety requirements
- selected tools and equipment for tree inspection
- documented and implemented traffic management requirements where required
- recognised a range of tree species and cultivars common to the region
- identified obvious potential structural defects, damage, pests or diseases
- completed inspection form and tree health condition report
- recognised potential structural or other defects that require inspection by an arborist
- reported and informed client of tree health and condition, and recommended follow-up treatments or further inspection.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements applicable to inspecting and reporting on health and condition of trees
- principles and practices for inspecting trees, including:
 - Australian standard for pruning of amenity trees
 - botany and tree physiology applicable to determining the health and condition of trees
 - local government tree protection and preservation regulations
 - methods of determining tree dimensions
 - methods of low risk work applicable to inspecting trees
 - recognition of a wide range of trees common to the region
 - relevant codes of practice

- signs of structural defects, decay, damage and stress in trees
- workplace recording and reporting requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tree inspection tools and equipment
 - inspection forms
- specifications:
 - workplace health and safety requirements applicable to inspecting and reporting on health and condition of trees
 - Australian standard for pruning of amenity trees
 - local government tree protection and preservation regulations
 - relevant codes of practice
 - workplace recording and reporting requirements
- relationships:
 - client or other stakeholder
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPMB08 Identify and select plants

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- identified a minimum of 50 plants to common name and scientific name without using reference material
- identified an additional 30 plants to scientific name using reference material, including online resources
- selected a group of plants based on their function for use in three different scenarios.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic principles of plant growth and development, including:
 - photosynthesis, light levels, quality and quantity
 - respiration, oxygen movement
 - transpiration, water movement within a plant
 - leaf structure and function, including chlorophyll and stomata
 - stem structure and function, including trunk, vascular structure, xylem, phloem, cambium and meristems
 - root structure, types and function
 - flower, fruit and seed structure
 - plant growth and life cycles, perennial, annual, evergreen, deciduous, dormancy
 - plant cultural requirements, soil, light levels, water, disease and pest protection, temperatures and drainage

- plant identification techniques, plant selection, and habit and growth characteristics of the plants
- soil characteristics and texture, in relation to the local region
- taxonomy at the family, genus, species and cultivar level
- grouping of plant types, including:
 - trees
 - shrubs
 - perennials and annuals
 - herbs
 - grasses.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plants, cuttings and live specimens
 - reference material applicable to identifying and selecting plants
 - computer hardware and software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPCM404 Recommend plants and cultural practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify client preferences and requirements, and select and advise on plants for specific situations.

The unit applies to individuals who apply specialist skills and knowledge to recommending plants and cultural practices. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Plant Culture and Management (PCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify client preferences and requirements	1.1 Use interpersonal skills to engage client and identify needs 1.2 Confirm with the client the purpose of the planting, and cultural and environmental factors of the intended planting site

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Use botanical and common names to describe plants
2. Select plants to suit specific situations	<p>2.1 Research plants and their growth and performance characteristics that suit the specific situation, using authoritative sources</p> <p>2.2 Research local workplace and district requirements for planting site</p> <p>2.3 Use problem-solving techniques to compare, assess and evaluate available plants</p> <p>2.4 Determine the best choice based on reasoned argument, appropriate evidence, sound principles and client needs</p>
3. Advise on plants for specific situation	<p>3.1 Explain performance characteristics and particular planting, cultural and maintenance requirements to the client</p> <p>3.2 Address client concerns and questions and refer to the original supplier of the plant where necessary</p> <p>3.3 Record and report cultural practice recommendations</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about plants and related cultural practices
Oral communication	<ul style="list-style-type: none"> Use clear language with clients to gather information, address concerns and questions, and explain plant performance characteristics and particular planting, cultural and maintenance requirements

Unit Mapping Information

Assessment Requirements for AHPCPM404 Recommend plants and cultural practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has recommended plants and cultural practices on at least two occasions, and has:

- conducted literature and industry research, and collated and analysed findings on plant species and cultivars, their characteristics and requirements
- complied with local workplace and district requirements
- selected plants that suit client preferences and suitability for the site
- explained to the client work health and safety requirements or basic safety precautions relevant to the establishment and ongoing maintenance of plants
- documented client preferences and site particulars
- reported recommendations to the client that detailed the types of plants chosen and their requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for recommending plants and their cultural practices, including:
 - customer service and communication skills
 - features of plant species and cultivars
 - innovation and recent practices in plant selection, use and performance
 - plant nomenclature, including family, genus, species and cultivar, for the range of plants recommended by the workplace
 - practical understanding of the physiology of the range of plants supplied and recommended by the workplace, and their comparative growth and performance characteristics in response to different cultural and environmental factors
 - principles and practices for the establishment and maintenance of plants

- soil characteristics, particularly in relation to the geographical and climatic region of the intended planting site
- local workplace and district requirements relevant to the intended planting site.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - planting, cultural and maintenance requirements
- specifications:
 - local workplace and district requirements relevant to the intended planting site
- relationships:
 - clients.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPCM405 Implement an integrated pest management program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assess infestations, and plan and implement an integrated pest management program.

The unit applies to individuals who apply specialist skills and knowledge to implementing an integrated pest management program. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Plant Culture and Management (PCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess weed, pest and disease infestations	1.1 Determine operational parameters and objectives of the integrated pest management (IPM) program

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Identify symptoms of weed, pest and disease infestation in response to client needs</p> <p>1.3 Define weed, pest and disease relationships and vectors as key factors in plan</p> <p>1.4 Assess size and scope of infestation</p> <p>1.5 Assess business implications and urgency of action according to published data and workplace procedures</p> <p>1.6 Report to management conditions likely to impact on business viability</p>
2. Plan appropriate integrated treatments for weeds, pests and diseases	<p>2.1 Identify and confirm treatments selected include chemical or non-chemical products according to workplace procedures and IPM program</p> <p>2.2 Outline integrated application of treatments in planning documentation</p> <p>2.3 Identify and cost treatments that provide a suitable response to infestations, having regard to cost of damage, cost of infestation, marketing requirements, withholding periods and sustainable horticultural practices</p> <p>2.4 Determine if professional assistance is required and seek professional assistance where necessary</p> <p>2.5 Document IPM plan according to workplace procedures</p>
3. Implement weed, pest and disease control measures	<p>3.1 Confirm control procedures reflect sound implementation of integrated pest management strategy, marketing objectives and business imperatives</p> <p>3.2 Develop and implement monitoring procedures</p> <p>3.3 Communicate IPM plan and activities to staff, and supervise work according to the IPM plan</p> <p>3.4 Identify non-compliance with documented objectives, and implement remedial actions to alleviate or overcome identified shortcomings in plan</p> <p>3.5 Identify and record variances from IPM plan or monitoring procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about IPM program requirements and key factors in plan development
Oral communication	<ul style="list-style-type: none"> Initiate discussions with management, using clear language to report conditions likely to impact on business viability Use clear communications with staff to communicate IPM plan and activities
Numeracy	<ul style="list-style-type: none"> Calculate IPM plan treatment costs

Assessment Requirements for AHPCPM405 Implement an integrated pest management program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented an integrated pest management (IPM) program on at least one occasion, and has:

- identified symptoms of weed, pest and disease infestation
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- applied and implemented IPM program requirements
- developed an IPM plan and monitoring procedures
- communicated IPM plan to staff, and supervised work.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for integrated pest management, including:
 - application techniques for chemical and non-chemical treatments
 - concept and principles of IPM
 - cost and benefit analysis relevant to selection of weed, pest and disease control measures
 - crop and plant scouting and monitoring
 - ecological impacts of different control treatments
 - integration of weed, pest and disease control measures
 - lifecycles of hosts, predators and pests and diseases
 - sustainable horticultural practices
 - weeds and pests of specific horticultural workplaces
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to implementing an IPM program

- IPM program requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - published data, marketing requirements, withholding periods and sustainable horticultural practice information relevant to implementing an integrated pest management program
 - industry publications and internet sources of information relevant to implementing an integrated pest management program
- specifications:
 - IPM program requirements
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to implementing an IPM program
- relationships:
 - staff and management.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHPCPM406 Develop a soil health and plant nutrition program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed a soil health and plant nutrition program on at least one occasion, and has:

- applied relevant workplace health and safety, and environmental and biosecurity legislation, regulations and workplace procedures
- accessed and analysed information on regional site factors
- assessed the physical, chemical and biological characteristics of soils
- assessed the physical, nutritional and health requirements of plants
- developed a soil, plant and water testing program
- researched and analysed findings on plant nutritional requirements, nutrients available from soils and other growth media, and environmental implications of program
- developed a program to achieve appropriate soil conditions and nutrient availability for plant growth, incorporating a soil health and plant nutrition plan
- selected suitable management practices, soil amendments, additives and fertilisers
- negotiated, budgeted and documented soil health and plant nutrition plans
- communicated plans, site procedures and schedules to staff
- monitored soil health and plant nutrition program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of soil health and plant nutrition, including:
 - characteristics of soil and other growth media types, their uses and additives to enhance available nutrition for specific plants
 - main simple and compound fertiliser products available to workplace, including analysis, solubility, salt index, application rates and costs

- methods of nutrient uptake by plants, and favourable conditions for effective uptake to occur
- nutrients and water required by plants grown within workplace, and effects of nutrient deficiency and toxicity on individual plant species and varieties
- visual and other symptoms of nutrient deficiency and toxicity on individual plant species and varieties
- organic matter, pest and disease, and nutrient interactions in soil and nutrient cycling
- types of relationships between soil and growth media characteristics and availability of nutrients to plants, including macro and micro elements
- types of site evaluation techniques, and methods of sampling and analysing soils and other growth media
- soil amendments commonly required to treat soil problems experienced by the workplace
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to developing a soil health and plant nutrition program.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - site and climate data, and environmental context information relevant to developing a soil health and plant nutrition program
 - industry publications and internet sources of information relevant to developing a soil health and plant nutrition program
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to developing a soil health and plant nutrition program
- relationships:
 - staff, suppliers, contractors, appropriate personnel and management
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPCM507 Diagnose plant health problems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to determine, monitor, diagnose and remedy plant health problems and evaluate a control plan.

The unit applies to individuals who apply specialised skills and knowledge to diagnose plant health problems, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Plant Culture and Management (PCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine factors that influence plant health	1.1 Identify the plant species to the lowest taxonomic level, and state its region of origin

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.2 Determine plant seasonal growth stages 1.3 Record daily cultural practices used on each horticultural species 1.4 Determine the growing environment characteristics that affect the growth of a specific plant species 1.5 Identify environmental and cultural factors that predispose plants to attack by pests and diseases 1.6 Record climatic data and environmental growing conditions 1.7 Record the presence or numbers of beneficial organisms
2. Monitor and diagnose plant health problems	2.1 Identify the symptoms and signs of plant health problems using accepted nomenclature 2.2 Assess the severity and extent of the problem in a plant species 2.3 Compare observations with published data, historical records and own experience 2.4 Determine possible causes of the plant health problem 2.5 Consult with specialist services in severe, complex or rapid onset cases 2.6 Sample plant or soil specimens, and dispatch for specialist diagnosis or laboratory testing where required 2.7 Record and document plant disorders and problems in a report
3. Remedy plant health problems	3.1 Formulate and document a weed, pest and disease control plan according to workplace integrated pest management (IPM) strategy and production plan requirements 3.2 Identify a range of modifications to growing conditions for a specific situation or plant species to rectify plant health problems 3.3 Identify, cost and confirm availability of resources, tools, equipment and machinery required for work activities, and analyse benefits 3.4 Identify hazards and assess risks associated with work activities, and implement control measures according to workplace health and safety procedures 3.5 Identify and minimise environmental impacts of weed, pest and disease control plan according to environmental and biosecurity legislation, regulations and workplace procedures
4. Evaluate control plan	4.1 Monitor plants during treatment

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.2 Record and analyse monitoring data 4.3 Compare observations and data to expected results 4.4 Recommend control plan modifications to client or management 4.5 Document and present control plan report to client or management

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Assessment Requirements for AHCPM507 Diagnose plant health problems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has diagnosed plant health problems on at least two occasions, and has:

- researched information about plant health problems, their diagnosis and remedial treatments
- differentiated between pest, disease and nutrient associated symptoms
- identified signs and symptoms of plant health problems
- assessed the severity, extent and speed of onset of health problems in a specific situation
- determined possible causes of the problem
- liaised with specialist services, clients and management
- formulated and documented a weed, pest and disease control plan
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- implemented a control plan to remedy the diagnosed health problems
- evaluated a control plan and recommended modifications.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of plant health, including:
 - chemical use, toxicity and compatibility with target plants, growth media and environmental characteristics of the horticultural region
 - chemical, cultural and biological control methods
 - evaluation procedures, including cost and benefit analysis, for plant and growth media treatments in relation to plant health, workplace budget and performance targets

- plant anatomy, morphology, physiology, histology, pathology, taxonomy and nomenclature
- plant nutrition issues associated with the growth media used and the horticultural region for specific plant species
- sustainable horticultural practices relevant to the workplace or horticultural region
- taxonomic descriptions, horticultural function, cultural and growth requirements, and target growth and performance characteristics of specific horticultural plants for the achievement of workplace production and business plans
- weeds, pests and disease detection methods, taxonomic identification, lifecycle stages and characteristic symptoms for the specific horticultural plants of the workplace
- workplace and industry record-keeping and reporting procedures and requirements
- workplace integrated pest management (IPM) strategy and production plan requirements
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to diagnosing plant health problems.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - published data and historical records relevant to diagnosing plant health problems
 - workplace IPM strategy and production plan requirements
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to diagnosing plant health problems
 - workplace and industry record-keeping and reporting procedures and requirements
- relationships:
 - specialist services, clients or management
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHPCPM508 Develop an integrated pest management program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed an integrated pest management (IPM) program on at least one occasion, and has:

- determined IPM strategy
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- determined business and crop economic threshold
- developed and documented an IPM program based on analysis of weed, pest or disease presence
- tracked costs of IPM program against budget requirements
- reported on IPM program activities and control procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to developing an IPM program
- principles and practices for developing integrated pest management programs, including:
 - application techniques for chemical and non-chemical treatments
 - concept and principles of IPM
 - cost and benefit analysis relevant to selection of weed, pest and disease control measures
 - crop and plant scouting and monitoring
 - ecological impacts of different control treatments
 - integration of weed, pest and disease control measures
 - lifecycles of hosts, predators and pests and diseases

- sustainable horticultural practices
- weeds and pests of specific horticultural workplaces.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - published data, crop and business economic thresholds, workplace marketing objectives, business imperatives and sustainable horticultural practice information relevant to developing an IPM program
 - industry publications and internet sources of information relevant to developing an IPM program
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to developing an IPM program.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPCM509 Apply knowledge of plant physiology to horticultural practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to research plant structures, investigate plant growth and responses to horticultural practices, and analyse plant reproduction for horticultural practices.

The unit applies to individuals who apply specialist skills and knowledge to apply knowledge of plant physiology to horticultural practices, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHPCPM509 Apply knowledge of plant physiology to horticultural practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied knowledge of plant physiology to horticultural practices on at least two occasions, and has:

- researched plant internal and external structures, including cell structures, primary tissues, and plant structural features
- investigated and described plant growth responses to horticultural practices
- applied knowledge of plant responses to physical and environmental conditions to manipulate plants for desired horticultural outcomes
- analysed plant reproduction, including asexual and sexual reproduction of plants and methods of seed and propagule dispersal
- researched and evaluated plant reproduction information for a range of plants.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- botanical and biological references and publications relevant to plant physiology, including:
 - the International Code of Botanical Nomenclature (ICBN)
 - the International Code of Nomenclature for Cultivated Plants (ICNCP)
- plant cell structures and components, including:
 - cell wall
 - cell membrane
 - nucleus
 - vacuole
 - cytoplasm
 - mitochondrion

- chloroplasts
- other organelles
- plant primary tissues, including:
 - xylem
 - phloem
 - cuticle
 - epidermis
 - cortex
 - vascular cambium
 - vascular rays
 - stomata
 - parenchyma
 - sieve tubes
 - meristem
- plant structural features, including:
 - roots
 - stems
 - leaves
 - flowers
 - fruit
- plant functions, including:
 - diffusion
 - osmosis
 - photosynthesis
 - respiration
 - transpiration
 - translocation
- physical and environmental conditions that may impact on plant function, including:
 - light quantity, quality and duration
 - availability of water
 - temperature range
 - frost
 - wind
 - air quality
 - soil conditions, including availability of a range of mineral nutrients, compaction and drainage
 - presence of competing plants, diseases and pests
 - influence of building, walls and paving
- horticultural practices that may impact on plant function, including:
 - the selection, growing, management and maintenance of plants

- the manipulation and management of growing environments
- plant protection
- propagating and disbudding
- pruning techniques, including crown reduction, thinning and root pruning
- creation of artificial microclimates and growing environments
- use of soil ameliorants and mulches
- fertilising and watering regimes
- location of plants in relation to light, moisture, air pollutants and competition with other plants
- the role of plant growth regulators in plant responses
- the manipulation of physical and environmental conditions for desired plant growth outcomes
- the asexual reproduction of plants through natural vegetative reproduction and the propagation of plants through horticultural practices, including stem, leaf and root:
 - cuttings
 - division
 - grafting
 - layering
- sexual reproduction of plants, including:
 - the development of gametes
 - pollination
 - fertilisation and embryo development
 - seed
 - fruit
- the range of dispersal characteristics of seeds and other propagule, including:
 - size
 - shape structure
 - wind, water or vector dispersal
- the application of plant reproduction processes for use in horticultural practices.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - access to a wide range of plants that grow in a range of horticultural settings
 - microscope
 - computer

- industry publications and internet sources of information relevant to applying knowledge of plant physiology to horticultural practices
- specifications:
 - botanical and biological references and publications relevant to plant physiology
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for plant collecting	1.1 Confirm purpose and objectives for collecting a range of plants

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.2 Define area, location and habitat for collecting 1.3 Determine and prepare resources to assist in locating and identifying plants 1.4 Determine and prepare equipment required for collecting and preserving specimens 1.5 Obtain licences or permission to collect specimens from landowner or managing agency 1.6 Assess range of likely operating conditions, hazards and difficult or sensitive environments for impact on collecting and preserving specimens 1.7 Identify workplace health and safety hazards associated with plant collecting, assess risks and implement controls
2. Collect plant specimens	2.1 Observe collection ethics when selecting specimens for picking 2.2 Enter into a field note book relevant information about the specimen, its characteristics and occurrence, and note location coordinates 2.3 Confirm specimen collected provides adequate material for identification and preserving 2.4 Tag and store specimens for later identification 2.5 Follow appropriate work health and safety requirements and work practices
3. Preserve specimens	3.1 Preserve specimen while still fresh 3.2 Clean and prepare specimen for preserving 3.3 Preserve specimen using either pressing or drying techniques 3.4 Mount dried specimen and label with information from note book
4. Identify plant specimen	4.1 Use relevant plant key to identify plant 4.2 Identify and document basic characteristics of a plant 4.3 Confirm plant identity against botanical description of species 4.4 Document plant identity on label according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding the collection of plants and the botanical description and plant key of plant specimens
Numeracy	<ul style="list-style-type: none"> Record specimen collection date and location coordinates into field note book

Assessment Requirements for AHCPM510 Collect and classify plants

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has collected and classified a variety of plants on at least three occasions, and has:

- prepared for plant collection
- noted the location, characteristics and occurrence of specimens at the point of collection
- cleaned, preserved, mounted and labelled specimens
- used a plant key to identify plants against the botanical description of the species.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of plant classification,
 - herbarium collection techniques and ethics
 - physical and biological habitat types, including vegetation associations and communities, where appropriate
 - plant anatomy, physiology, morphology, taxonomy and nomenclature
- specimen license or permission granting processes
- environmental conditions and hazards that impact upon plant specimen collection and preservation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions

- resources, equipment and materials:
 - plants
 - plant specimen collection and preservation equipment and materials
 - field note book
- specifications:
 - plant key
 - herbarium collection techniques and ethics
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHPCPM511 Specify plants for landscapes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has specified plants for landscapes on at least one occasion, and has:

- developed a client brief on client needs, objectives and expectations, the purpose of the landscape and plant selection criteria
- conducted site inspections and site assessments
- compiled a database of plant specimens and characteristics
- evaluated and determined plant selections
- identified and selected from a range of plants appropriate to the site
- researched plant reference sources
- documented plant selection and specifications
- used comparative techniques
- assessed quality and quantity of plants and materials meet specifications
- selected and checked soils and growing media
- recorded plant and product quality checks
- documented and presented client report.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of specifying plants for landscapes, including:
 - basic physiology and life cycle of pests and diseases
 - botany, plant morphology, physiology, taxonomy and nomenclature
 - methods of data capture
 - plant identification techniques
 - soil characteristics, particularly in relation to the local region

- soil and growing media selection techniques
- symptoms of plant pests and diseases.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - industry publications and internet sources of information on plant species, cultivars growing requirements, environmental conditions and functional characteristics
- relationships:
 - client
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPM512 Design specialised landscape

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has designed a specialised landscape on at least one occasion, and has:

- developed a design brief in consultation with client to establish design purpose and requirements
- identified plant species and cultivars using botanical nomenclature
- identified and selected plants appropriate to the design criteria
- used botanical nomenclature when selecting plants
- identified the implications of climate and environment on plant selection and design
- identified and designed with plants appropriate for use in controlled environments where required
- identified and recommended soils and plant nutrition requirements
- identified biological, organic and inorganic plant and plant pest management techniques to be used
- identified weeds and recommended appropriate weed management
- provided garden design solutions
- compiled the recommendations and documented and presented a design plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of specialised landscape design, including:
 - aesthetic, ornamental, productive and economic plant groups
 - allied horticultural, environmental and conservation industries and movements
 - botanical geography, including plant families, geographic distribution and links
 - botany, including plant structures and physiology

- ethno-botany, including sustainability and the stories of plants
- horticultural media, information and knowledge-based resources
- how to determine suitability of plants for different environments, such as green buildings, rooftops, conservatories, glass houses and atriums
- irrigation and current progress in new irrigation techniques
- plant families and detailed knowledge of species and cultivars used in garden design, horticulture industry and other ornamental, productive and economic plant industries
- plant taxonomy and nomenclature
- principles and processes of plant culture
- the use and development of plants through history
- turf culture
- types, properties and characteristics of a wide range of soils and growing media.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - industry publications and internet sources of information on plant species, cultivars growing requirements, environmental conditions and functional characteristics
- relationships:
 - client
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPCM513 Conduct environment and food safety risk assessment of plant nutrition and soil fertility programs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to conduct an environment and food safety risk assessment of plant nutrition and soil fertility programs, including maintaining currency, evaluating risks, developing a plant nutrient and soil fertility program, and identifying and communicating best practice.

The unit applies to individuals who apply specialised skills and knowledge to diagnose plant health problems, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHPCPM513 Conduct environment and food safety risk assessment of plant nutrition and soil fertility programs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted environment and food safety risk assessments of plant nutrition and soil fertility programs on at least one occasion, and has:

- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- researched, identified and documented community, government and agricultural industry information, concerns and requirements in relation to fertiliser and soil ameliorant use and environmental stewardship
- researched, identified and documented information and standards relating to transporting, handling, storing and applying fertilisers and soil ameliorants
- identified and evaluated probability and severity of identified environmental risks associated with plant nutrition and soil fertility programs
- liaised with managers and landowners, and local and national organisations
- developed a plant nutrition and soil fertility management program, and key environmental stewardship issues report
- monitored effectiveness of plant nutrition and soil fertility management decisions over time
- identified opportunities to improve efficiency and effectiveness of plant nutrition and soil fertility program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to conducting environment and food safety risk assessment of plant nutrition and soil fertility programs

- principles and practices of food safety risk assessment, including:
 - environmental implications of soil amendment and fertiliser use, which may include nutrient mining, run-off, nutrient loading of soil and water, toxicity, noise and dust
 - food safety issues relating to the use of fertilisers and soil ameliorants
 - law of the minimum, and importance of nutrient interactions
 - methods and pathways of nutrient uptake by plants, and loss from soil
 - nutrient cycling and its practical relevance to specific plants and soils encountered in local area, including role of soil biology
 - nutrients required by plants grown within workplace, and effects of nutrient deficiency and toxicity on individual plant species and varieties
 - relationship between soil characteristics and the availability of nutrients, including macro and micro elements, to plants
 - single nutrient and complete fertiliser products encountered in local area, including physical attributes, nutrient analysis, solubility, salt index, application rates and costs, and appropriate application techniques and equipment
 - soil amendments commonly used to treat local soil problems
 - soil and water sampling techniques to adapt activities and instructions to a range of environmental contexts
 - techniques for interpreting laboratory results and making fertiliser and amendment recommendations
 - techniques to assess effects of fertiliser and amendment recommendations on soil, plants and water.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - published local information relevant to nutrient management
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to conducting environment and food safety risk assessment of plant nutrition and soil fertility programs
 - legislation and standards relevant to fertiliser and soil ameliorant transportation, handling, storage, application and environmental stewardship
 - national and local information and standards relevant to food safety associated with fertiliser and soil ameliorant
- relationships:
 - land owner or manager, client and local organisations
- timeframes:

- according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPCM602 Develop and implement a plant health management strategy

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to gather information and advice on plant health, and develop, implement and evaluate a plant health management strategy.

The unit applies to individuals who apply advanced skills and knowledge to develop and implement a plant health management strategy, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse information and exercise judgement to complete a range of advanced skilled activities. They work in contexts that are subject to change, and adapt a range of fundamental principles accordingly.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Plant Culture and Management (PCM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop a plant health management program	<p>1.1 Identify plant health issues from published data, historical records and industry consultation</p> <p>1.2 Define management issues relative to desired quality, quantity and productivity requirements according to workplace marketing and production plans</p> <p>1.3 Develop and document a program that defines workplace guidelines and specific responsibilities of operational elements to achieve required outcomes</p> <p>1.4 Establish systems to monitor business goals</p> <p>1.5 Seek professional assistance where appropriate</p> <p>1.6 Consider and document the environmental implications of chemical use, alternative methods and non-chemical preventative methods</p> <p>1.7 Assess and determine potential key information for input to planning decisions</p>
2. Determine plant health strategy	<p>2.1 Analyse gathered information and determine plant health management approaches</p> <p>2.2 Consider plant health management approaches and their impacts</p> <p>2.3 Determine strategies for plant health management to integrate the most suitable methods with the proposed plants and existing soil types</p> <p>2.4 Establish environmental controls according to environmental and biosecurity legislation and regulations, and include in the plan</p> <p>2.5 Identify workplace health and safety hazards, assess risks and incorporate suitable controls into the plan</p>
3. Provide input to other planning processes	<p>3.1 Provide plant health management strategy information for consideration and input to other workplace planning processes</p> <p>3.2 Collect and use information from other workplace planning processes to inform the plant health management planning process</p> <p>3.3 Communicate information about the range of planning processes according to workplace requirements</p>
4. Determine scheduling and key responsibilities	<p>4.1 Determine scheduling for plant health management, taking into consideration the range of seasonal, geographic and resourcing factors</p> <p>4.2 Determine key responsibilities for specific implementation processes</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>4.3 Determine record-keeping requirements and establish procedures to ensure compliance with relevant regulations</p> <p>4.4 Document strategic plant health management plan, including scheduling and key responsibilities</p> <p>4.5 Confirm the plan includes the type, format, frequency and detail of any reporting required by both managers and operators</p>
5. Monitor and adjust plant health management strategy	<p>5.1 Evaluate the effectiveness of the plant health management strategy at key points, and make adjustments as necessary</p> <p>5.2 Identify and monitor environmental impacts and workplace health and safety hazards relating to plant health management, and assess and manage risks throughout the implementation process</p> <p>5.3 Make modifications to the plan according to environmental, workplace health and safety, resourcing, or effectiveness reasons</p>
6. Evaluate plant health management strategy and record results	<p>6.1 Analyse data, observations and documentation from the implementation of the plant health management strategy against the plan</p> <p>6.2 Prepare recommendations for future strategies based on the analysis of the data</p> <p>6.3 Prepare a report that documents the implementation of the plant health management strategy</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding plant health management requirements
Oral communication	<ul style="list-style-type: none"> Initiate discussions with professionals, managers or operators, using clear language to seek assistance where required, and communicate planning processes
Numeracy	<ul style="list-style-type: none"> Analyse published data and historical records for input into planning processes

Assessment Requirements for AHPCPM602 Develop and implement a plant health management strategy

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed and implemented a plant health management strategy on at least one occasion, and has:

- developed plant health management program
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- provided input to other planning processes
- determined scheduling and key responsibilities
- documented record-keeping procedures and strategic plant health management plan
- evaluated plant health management strategy and recorded results
- monitored and adjusted plant health management strategy
- prepared recommendations for future strategies and implementation report.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of plant health management, including:
 - environmental controls and codes of practice applicable to the business and to plant health management operations
 - environmental controls and codes of practice applicable to the enterprise
 - integrated pest management
 - management of weed, pest and disease infestations
 - management practices and processes to minimise plant health management control operations
 - planning water budgets and irrigation strategies
 - plant growth and development and growth regulators

- plant growth processes such as photosynthesis, respiration, nutrient uptake, solute transport and metabolism, water balance and osmotic pressure
- strategic aspects of managing plant quality, performance and nutrition
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to developing and implementing a plant health management strategy.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - published data and historical records relevant to developing and implementing a plant health management strategy
 - workplace marketing and production plans
 - workplace planning processes relevant to developing and implementing a plant health management strategy
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to developing and implementing a plant health management strategy
- relationships:
 - professionals, managers or operators
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER106 Observe permaculture principles and work practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to follow workplace directions and instructions while observing permaculture principles and practices being carried out on community, home or school gardens and farms.

The unit applies to individuals who work alongside a supervisor in most situations and exercise limited autonomy within established and well-known parameters. They identify and seek help with simple problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for AHCPER106 Observe permaculture principles and work practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has observed, on at least one occasion while completing a working task, permaculture principles and work practices and has:

- communicated with supervisors and workplace colleagues to clarify, establish and discuss permaculture work requirements
- recognised basic environmental and community influences on work performed
- contributed to improved permaculture work practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- fundamentals of permaculture, including:
 - ethics, including earth care, people care, fair share
 - basic principles
- practices and approaches to minimise environmental hazards and risks, including:
 - producing no waste
 - thinking globally and acting locally
 - observing nature and learning from her patterns
 - responding to change creatively and with consideration for the needs of all users of and/or elements in the system
 - learning from mistakes and developing successes
- basic factors to improve environmental performance, including:
 - water catchments
 - ecosystems

- habitat
- efficient use of resources
- sustainability
- waste minimisation
- factors to improve community, including:
 - caring for people
 - sharing surpluses
 - setting limits to growth
- environmental issues and their potential impacts:
 - sustainability of land use and agricultural work practices
 - reduction and disposal of waste
 - improvements to water quality
 - improvements to air quality
 - energy efficiency
 - biodiversity and habitat protection
 - conservation of natural resources
 - wild-fire management and mitigation
 - food, water and energy security
 - human rights and right livelihood
- workplace health and safety hazards.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture garden or farm workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - permaculture hand tools
 - specific items of personal protective equipment
 - materials, plants and consumables
- specifications:
 - workplace policies and procedures for health and safety
 - workplace instructions
 - information on permaculture
- relationships:
 - colleagues
 - supervisors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER107 Support resource conservation practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has supported resource conservation practices on at least one resource conservation activity, and has:

- followed supervisor instructions
- gathered information on resource conservation
- stored, stockpiled and prepared materials according to supervisor instructions
- cleaned, stored, and reported progress on completion of work.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic permaculture principles and practices
- basic tools and equipment used in resource conservation work
- basic principles of resource conservation, including:
 - reduce, reuse, recycle, repair, repurpose, restore, resource materials
 - minimal impact living
 - sustainable food production
 - energy efficiency
 - energy conservation through solar and wind power
 - resource conservation technologies, including composting toilets and grey water re-use
 - water catchment, storage and re-use
 - seed collection and seed banks
 - mulching and soil conservation
 - revegetation

- community and social interaction and support, including:
 - resource banking
 - seed banking
 - co-operatives
 - Local Energy Trading Systems (LETS)
 - Skill-Share
- techniques used in resource conservation, including:
 - stockpiling resources
 - processing resources that cannot be stockpiled including composting, fermentation, drying
 - water storage and treatment
 - capture and storage of energy (heat capture in mass, basic turbine function)
- making connections between everyday living and sustainable use of resources.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture garden or farm workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment used in resources conservation work
 - personal protective equipment
 - materials and consumables
- specifications:
 - workplace policies and procedures for health and safety
 - workplace instructions
 - information on resource conservation
- relationships:
 - supervisor.

Assessment Requirements for AHCPER108 Support plant care in a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion:

- identified common characteristics of permaculture Zone 1 gardens
- identified, checked and prepared materials, tools and equipment
- prepared and planted a garden area with at least one of the following:
 - seeds
 - seedlings
 - plants
- identified and applied watering regime and nutrient requirements for Zone 1 planting
- identified crop maturity and harvested and stored plant yields
- reported activity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the characteristics of permaculture Zone 1 gardens, including:
 - how permaculture gardens differ from conventional gardens
 - functions and yields of plants in a Zone 1 garden
 - observing nature and learning from it
- principles of planting in permaculture systems, including:
 - aspect
 - planting patterns
 - companion planting

- the soil-water-plant relationship
- plant care techniques and plant nutrition, including:
 - the role of composts, worm castings, green manures, animal manures and support species in permaculture plant care
 - when to leave weeds, chop-and-drop and mulching
 - simple pest protection, including cages, rings, stakes and nets
 - simple climate protection from sun, frost and wind
- harvesting plant produce, including:
 - types of plant produce
 - recognising maturity
 - harvesting techniques
 - basic storage techniques
- reuse and recycling of excess products of plant care
- reporting procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a Zone 1 permaculture garden or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plants, seeds and seedlings
 - permaculture tools and equipment
 - personal protective equipment
- specifications:
 - specific workplace safety procedures
 - workplace instructions
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER216 Harvest, treat and store seed

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to identify specified seed and its maturity, use harvesting techniques, apply treatments according to seed harvest plan and store seed to preserve viability.

This unit applies to individuals who work under supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

Legislation, regulations and by-laws relating to the collection and removal of plant materials from public and private land apply nationally and in some states, territories and jurisdictions. Users are advised to check with the local relevant authority.

Pre-requisite Unit

Assessment Requirements for AHCPER216 Harvest, treat and store seed

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has harvested, treated and stored seeds and has:

- confirmed seed harvesting plan and work requirements with supervisor
- prepared equipment for harvesting, cleaning and storing of seed
- harvested seeds safely according to harvesting plan, which must include any two (2) of the following seed types:
 - seeds of soft fruits
 - monocotyledon (grasses and grains)
 - leguminous seeds
 - woody plants with dry dehiscent seed
 - herbaceous plants
- separated seed from chaff or other waste material, which must include three (3) different seed extraction methods
- treated and stored viable seed
- maintained accurate records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- seed harvesting techniques, including:
 - materials, equipment and resources
 - health and safety
 - field storage containers for harvested seed
 - protection of plants being harvested

- characteristics of mature viable seed
- diseases and pests likely to affect seed on the plant or in storage
- seed extraction methods, including:
 - hand selection
 - winnowing
 - sieving
 - vibration
 - flotation and fermentation
 - drying
 - heat-assisted dehiscing
 - crumbling of husks
- practices relating to seed harvesting and storage, including:
 - containers, including re-used jars, boxes and packets
 - cool, dry location
 - freezer or refrigerator
 - pest deterrent mechanisms
 - light exclusion
 - protection treatments against pathogens
- records and information required in the field and storage of seed:
 - genus, species, family, variety and cultivar information
 - provenance – where the seed came from
 - weight or number
 - date collected
 - place collected
 - collector
 - cultural advice or growing conditions
 - seed pre-treatment advice
 - longevity information
- storage location information or record locator.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plants with seed to harvest
 - seed collection tools and equipment

- personal protective equipment
- specifications:
 - workplace safety procedures
 - manufacturer operating instructions for harvesting equipment
 - access to safety data sheets for treatments
 - supervisor instructions and harvesting plan
 - access to permits for seed collection
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to work	1.1 Confirm geographic area and work requirements for bioregion report with supervisor 1.2 Identify, select and prepare materials and resources required to

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	perform the work 1.3 Identify sources of information and literature to support bioregion report 1.4 Identify and engage community for local bioregion information
2. Collect information	2.1 Determine the boundaries and extent of bioregion according to community, geography and biological information 2.2 Identify vernacular names of key plant and animal species of ecosystem 2.3 Identify key features and sites within the bioregion and relationship to ecosystem 2.4 Investigate plant and animal relationships and possible impact on community or permaculture system 2.5 Investigate current land use and land management practices in bioregion 2.6 Identify historical land use within the bioregion 2.7 Identify and document simple food chains and energy flows relevant to local bioregion
3. Review changes	3.1 Identify key environmental changes from historical land use and potential impact on current and future land use 3.2 Summarise environmental trends and their potential impacts on the bioregion 3.3 Identify land and water use practices that can mitigate or repair environmental change
4. Document information	4.1 Collate information about local bioregion 4.2 Prepare report to supervisor according to work requirements and workplace format

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret and evaluate information for bioregional characteristics from a variety of sources to ensure accurate understanding and presentation of information to supervisor
Writing	<ul style="list-style-type: none"> Prepare documentation and reports to supervisor using clear presentation and language skills and industry specific terminology

Assessment Requirements for AHCPER217 Report information about the local bioregion

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, reported information about the local bioregion and has:

- clarified bioregion reporting requirements with supervisor
- investigated and identified key information required for bioregion, including:
 - boundaries
 - key plant and animal species of the ecosystem
 - key features and sites
 - relationships between elements in the bioregion and impact on community or permaculture system
 - historical and current land use
 - food web and energy flow within the region
- reviewed the environmental changes, trends and impacts on land use in the bioregion
- collated and prepared a report according to requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- specified areas and features of a bioregion, including:
 - land and water territory defined by the geographical limits of human communities and ecological systems
 - water catchment as a key identifier
 - vegetation on the catchment as an essential feature
- vernacular names of plants and animals, with a focus on local common names

- ecological concepts, including:
 - niche
 - habitat
 - community
 - ecosystem
 - energy flows
 - food webs/chains
 - water cycles
 - species and species relationships
 - plant and animal succession
- permaculture and community perspectives, including:
 - recognising the connections between elements in a system
 - supporting ecological and community co-existence
 - valuing renewable resources and energy
- alternative strategies of trade, including:
 - barter system
 - local exchange trading systems (LETS)
- community resources, including local skills, public transport options, contractors and facilities
- basic report structure and format, including:
 - forms in which to present reports, including oral, visual or written
 - reports and intellectual property
 - acknowledgment of intellectual property used in report.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a specified bioregion
- resources, equipment and materials:
 - hand tools and equipment to capture information on bioregion
- specifications:
 - supervisor instructions and report specifications
 - access to sources of information
- relationships:
 - members of the community
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER218 Prepare and store products from a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to carry out routine preparation and storage of products on a permaculture property. It covers the grading, labelling, treatment and storage of harvested products.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

Licensing, legislative or certification requirements may apply to this unit for handling, processing and distribution of permaculture products that are used for human consumption. Users are advised to check with relevant regulatory authority.

Pre-requisite Unit

Assessment Requirements for AHCPER218 Prepare and store products from a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared and stored at least two (2) products for at least three (3) of the following product groups:

- plants
- animals
- invertebrates
- fungi and yeasts.

There must also be evidence the individual has:

- identified and prepared materials, equipment and resources for product preparation and storage
- identified and complied with regulations and workplace procedures for product
- identified safety hazards and implemented controls to safely handle and transport products and containers
- graded, labelled, packaged and stored products
- maintained product storage areas and containers
- checked stored products for damage, and rectified damaged product.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- preparation and storage of products produced in a permaculture system:
 - preserving techniques for harvested products
 - methods of storing product to retain product quality

- range of products produced by permaculture enterprises and their yields, including products from:
 - plants
 - animals
 - invertebrates
 - fungi and yeasts
- handling, preparation and treatment techniques for a range of products, including:
 - observation and identification of product maturity for harvest
 - storage methods for different products
 - packaging types for products
 - grading and packaging standards
 - methods and equipment used in packaging
 - pests, diseases and microbes likely to affect stored produce
 - hygiene issues in the handling and storage of permaculture products
- regulatory restrictions on handling, storing and distributing product
- product-related permaculture industry standards, including approved treatments.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a permaculture system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for packaging product
 - personal protective equipment
 - harvested product ready for preparation and storage
- specifications:
 - workplace procedures and processes for packaging product
 - manufacturer operating instructions for equipment used for packaging
 - access to safety data sheets for treatments
 - access to regulatory information on product handling, processing and storage
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER219 Plant and maintain crops in a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to plant and maintain plants in a permaculture cropping system involving site preparation, handling and planting of a range of planting materials, and the maintenance of crops in the field.

This unit applies to individuals who work under supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to plant permaculture crops	1.1 Confirm work requirements with supervisor 1.2 Select and prepare tools and equipment 1.3 Identify plant materials to be planted 1.4 Identify safety hazards and implement controls according to workplace procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Select, use and maintain personal protective equipment
2. Prepare the site for planting	2.1 Tend to residual material on site according to permaculture planting plan 2.2 Apply soil treatments or amendments according to supervisor instructions 2.3 Implement plant protection strategy according to instructions 2.4 Mark out planting pattern according to permaculture planting plan
3. Carry out planting operations	3.1 Select planting material according to plan 3.2 Maintain viability of planting material 3.3 Handle and transport planting material to site 3.4 Carry out planting according to permaculture planting plan
4. Maintain plants	4.1 Apply treatments to plantings according to the permaculture planting plan 4.2 Water plantings according to irrigation schedule 4.3 Train and protect plants according to permaculture planting plan

Assessment Requirements for AHCPER219 Plant and maintain crops in a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planted and maintained at least two (2) crops in a permaculture system and has:

- selected and prepared plant material, tools and equipment
- prepared site for planting
- planted according to permaculture planting plan
- trained and protected plantings, including the use of supports and guards
- maintained soil moisture according to irrigation plan
- applied treatments to planting site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices related to planting operations, including:
 - planting in natural groupings or guilds
 - utilising plant partnerships such as vines on corn crops
 - planting mixed species and interplanting with companion species
 - avoiding soil compaction or disturbance
 - utilising chickens to plough and prepare ground for planting
 - avoiding water, seed or weed leakages from the system
- handling residual materials sustainably on the planting site, including:
 - previous crops
 - weeds
 - detritus
- principles of sustainable horticultural practices

- planting techniques
- basic plant nutrition
- soil improvement and nutrient maintenance, including:
 - minerals, including rock dusts
 - organic matter
 - manures, appropriate fertilisers and composts
 - foliar feeds or fertigation
 - vermicompost and worm castings
 - planting of a temporary green manure or cover crop
 - legume plantings or interplantings
 - sheet mulches
- companion planting
- plant growth and development
- methods of waste disposal causing minimal impact on the environment
- safe work practices in the workplace.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture garden system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - permaculture tools and equipment
 - personal protective equipment
 - planting materials
 - irrigation/watering system
 - treatments, guards, support systems for training and maintaining plantings
- specifications:
 - workplace safety procedures
 - access to manufacturer operating instructions for tools and equipment
 - access to safety data sheets
 - workplace instructions and planting plans
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER220 Harvest crops in a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit provides the skills and knowledge required to recognise crop maturity and harvest crops commonly used in permaculture systems, requiring an understanding of grading characteristics, maintaining quality and the effect of adverse weather conditions on harvesting operations.

The unit applies to individuals who work under supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess plants for harvest	1.1 Identify crops to be harvested according to the harvesting plan 1.2 Determine crop maturity and confirm with supervisor 1.3 Confirm conditions are conducive for harvesting operations

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Prepare equipment for harvesting	2.1 Select tools, equipment and machinery for harvesting operations 2.2 Carry out pre-operational and safety checks on tools, equipment and machinery according to manufacturer specifications 2.3 Select, use and maintain personal protective equipment (PPE)
3. Harvest the crop	3.1 Harvest crop safely according to workplace safety procedures 3.2 Harvest and handle crop to prevent damage and maintain quality 3.3 Sort and grade crop into containers according to harvesting plan 3.4 Clean and maintain harvesting tools, equipment and machinery
4. Complete crop harvesting work	4.1 Employ safe manual handling techniques throughout harvesting operations 4.2 Move and stack containers to minimise damage to crop 4.3 Maintain temperature of crop according to harvesting plan 4.4 Transport crop from field to processing or storage area 4.5 Maintain containers in good working order

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCPER220 Harvest crops in a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has harvested at least one crop and has:

- assessed crops and conditions for harvest
- prepared resources and materials for crop harvest operations
- carried out harvest operations safely without damage to crop
- prepared, operated and maintained harvesting equipment
- graded, packed into containers and stored harvested crop.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles related to harvesting
- principles of sustainable horticultural practices
- crops commonly used in permaculture systems
- indicators of crop maturity for harvesting
- impact of environmental conditions on crop harvesting, including:
 - weather impact on crop
 - safe access to harvest site
- harvesting techniques, including:
 - selective picking or hand picking ripe from unripe
 - tree shaking
 - picking leaves rather than whole plants
 - cutting plants and allowing to regrow
 - thinning or removing weak or diseased plants from among healthy ones

- end of season crop extension harvesting
- equipment and machinery used in harvesting
- sorting and grading, including:
 - removing out-of-type crop
 - removing physically damaged, unhealthy, rotten or immature crop
 - grading of the crop according to variety, size, length, colour, maturity, blemishes, bud count and quality, being subject to seasonal and market forces
- storage, transportation and grading of crops, including containers and their maintenance
- methods of waste disposal with minimal impact on the environment
- safe work practices when harvesting, grading and storing crops.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a permaculture property with maturing crops or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for harvesting
 - personal protective equipment
 - crops to harvest
 - containers and site to store harvest
- specifications:
 - workplace procedures and processes
 - manufacturer operating instructions for equipment
 - workplace instructions
 - grading standards for harvested crops
- relationships:
 - supervisor
- timeframes:
 - according to ripening time specified in harvesting plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER221 Recognise characteristics of integrated plant and animal systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, recognised the characteristics of the integration of plants and animals in a permaculture system and has:

- obtained and read a permaculture plan
- recognised planned plants and animals and their interactions for a permaculture system
- observed and recorded plants and animal interactions used in a permaculture system, including:
 - named animals and plants by common name
 - identified plants and animals commonly encountered in permaculture system
 - identified plants with useful properties
 - described animals with functions in the system
- monitored and reported discrepancies between planned and actual plant and animal interactions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices related to integrated plant and animal systems, including:
 - practices that conserve energy and resources
 - protecting water, soil and other resources
 - obtaining a yield
 - preserving heritage or heirloom varieties and biodiversity
 - re-using or adapting materials for other functions
 - making use of vertical space

- creating multiple functions for the same thing
- using nature as the model
- seed-saving
- animals and plants common to permaculture systems in a given region or bioregion, including:
 - common naming conventions
 - usefulness of plants and animals as products of permaculture systems
 - detrimental traits that conflict with permaculture systems
- the role or niche of animals in system and interrelationship with other animals, plants or systems, including:
 - native or wild animals and plants
 - pest and feral plants and animals
 - insects, fish, birds and reptiles, both beneficial and detrimental to permaculture systems
 - principles of integrated plant and animal systems.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a permaculture site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for conducting observations
- specifications:
 - workplace procedures for reporting and records
 - permaculture plan and specifications
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has used at least eight (8) of the tools listed below:

- spades and shovels
- forks
- trowels
- rakes
- scythes or sickles
- hand mower or hand seeder
- secateurs and loppers
- picks or mattocks
- pruning saws or bow saws
- club or sledge hammers.

There must also be evidence that the individual has:

- identified hand tools and equipment for specific uses
- used hand tools and equipment safely for specific garden or farm tasks
- identified and rectified defective hand tools and equipment
- cleaned, maintained and stored garden hand tools and equipment
- complied with workplace safety and biosecurity procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices related to garden and farm tools and equipment use and maintenance

- workplace health and safety when using garden and farm hand tools and equipment, including:
 - size of tools and equipment for operator and ergonomics
 - safe operation of tools fit for purpose
 - working with sharp tools and equipment
 - manual handling and lifting
- hand tools and equipment commonly used in garden and farm practice
- maintaining hand tools and equipment in good condition and working order
- storage techniques for hand tools and equipment
- carrying and transporting hand tools and equipment safely
- hygiene practices for garden and farm hand tools and equipment to ensure biosecurity.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a garden or farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment as specified in the Performance Evidence
 - personal protective equipment
- specifications:
 - workplace safety procedures for tools and equipment
 - instructions for gardening or farming tasks
 - manufacturer operating instructions for tools and equipment
 - materials and consumables for cleaning, repairing and maintaining tools and equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER223 Produce new plants for a permaculture garden system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to produce plants for a permaculture garden system using propagation techniques and basic growing methods, including nutrition and potting media, suitable for small scale propagation systems.

The unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to propagate plants	1.1 Identify plants to be reproduced and select propagation method 1.2 Source and acquire suitable plant materials for propagation

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Select, check and prepare materials and resources</p> <p>1.4 Prepare containers with media according to selected propagation method</p> <p>1.5 Implement hygiene practices according to workplace biosecurity procedures</p> <p>1.6 Identify hazards and implement controls according to workplace health and safety procedures</p>
2. Undertake propagation activities	<p>2.1 Prepare propagation material according to propagation plan</p> <p>2.2 Place prepared propagation material into growing environment according to selected propagation method</p> <p>2.3 Label propagated plants according to workplace procedures</p> <p>2.4 Record propagation activity according to workplace procedures</p>
3. Maintain health of plants during propagation	<p>3.1 Maintain optimal growing environment to ensure successful plant production outcomes</p> <p>3.2 Monitor health of plants under propagation and implement remedial action where risk is identified</p> <p>3.3 Check plants under propagation for indicators of success</p> <p>3.4 Transfer successfully propagated plants into subsequent growing conditions according to propagation method and propagation plan</p> <p>3.5 Prepare propagated plants for transfer into final growing position according to plant species requirements</p>
4. Maintain garden propagation system year-round	<p>4.1 Implement seasonal biosecurity and hygiene practices for propagation activities according to workplace procedures</p> <p>4.2 Monitor and maintain mother stock for propagation purposes</p> <p>4.3 Maintain stocks of resources required for seasonal propagation activities</p> <p>4.4 Update records of propagation outcomes according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCPER223 Produce new plants for a permaculture garden system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has produced new plants for a permaculture garden system and has:

- identified method of propagation for at least 10 different species
- selected and prepared materials and resources, including:
 - implemented hygiene practices
 - prepared containers and media
 - sourced plant propagation material
- propagated plants safely using at least 3 of the following techniques:
 - seeds
 - cuttings
 - division
 - grafting/budding
 - layering
- maintained the health of new plants and mother stock, including:
 - watering
 - monitored and responded to pests, diseases or nutrient problems
 - monitored and responded to environmental condition in growing environment
- implemented seasonal propagation maintenance activities
- maintained accurate labelling and records during propagation activity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices related to propagation including:
 - using reclaimed or reused containers (suitably cleaned to avoid cross-contamination)
 - labelling systems using reclaimed materials
 - maintaining rare and unusual varieties
 - using edges and valuing marginal or unusual plants in micro-climates
 - sharing and swapping to increase biodiversity and mutual wellbeing
 - preserving provenance of locally indigenous species
 - testing and trialling for new plants or resistant varieties
 - global food plant preservation, including seed saving
 - importance of hygiene and biosecurity in propagation practices
- principles of sustainable horticultural practices
- propagation techniques, including:
 - seed sowing
 - tip and softwood
 - semi hardwood cuttings
 - hard wood cuttings
 - root cuttings
 - layering
 - division
 - grafting, including whip and tongue, saddle, wedge and budding
- maintaining optimum growing environment, including:
 - propagule treatments
 - media moisture
 - humidity
 - basic plant nutrition
- potting mixes suitable for propagation in a garden setting, including:
 - compost and worm casting mixes
 - sieved and graded sands
 - blends used for different purposes or different times of year
 - sphagnum moss
- common conditions for propagation in permaculture systems, including:
 - direct into prepared beds
 - containers and pots
 - greenhouses, cloches and cold frames
 - shade and lathe houses
 - directly on existing plants
- basic plant growth and development
- workplace health and safety requirements relevant to plant propagation
- methods of waste disposal causing minimal impact on the environment.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture garden system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - propagation tools and equipment
 - personal protective equipment
 - plant propagation materials specified in the performance evidence
 - growing environments for propagation methods
- specifications:
 - workplace procedures and processes
 - workplace instructions and propagation plans
- timeframes:
 - according to season specified for plant species propagation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER224 Work effectively in permaculture

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to work effectively on an individual basis and with others in permaculture.

The unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Obtain information about working in a permaculture workplace	1.1 Identify and collate information about working in a permaculture environment 1.2 Interpret information to assist effective and safe work performance in a permaculture workplace 1.3 Identify workplace terms and conditions of employment 1.4 Identify work and career options for permaculture practice

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
2. Observe requirements of a permaculture workplace	2.1 Ensure work practices comply with workplace procedures 2.2 Recognise faults and irregularities in workplace practices and take remedial action according to workplace procedures 2.3 Observe punctuality and work attendance according to workplace terms and conditions 2.4 Complete work routines and specific instructions to meet workplace expectations
3. Work effectively in a permaculture workplace	3.1 Plan work tasks in consultation with team members and supervisor 3.2 Follow instructions from supervisor 3.3 Cooperate with others as part of a team, with consideration of special needs of co-workers and others 3.4 Accept responsibility for quality of own work
4. Contribute to a productive permaculture workplace	4.1 Fulfil commitments to undertake work or assist co-workers 4.2 Share knowledge and skills with co-workers through conversation and demonstration 4.3 Recognise and seek out contributions from individuals of different gender, social and cultural background 4.4 Ensure work activity complies with workplace anti-discrimination and harassment policies 4.5 Recognise and resolve conflict according to workplace procedures and supervisor support

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret permaculture and industry texts and information from a range of sources to identify and apply permaculture principles to work requirements
Oral communication	<ul style="list-style-type: none"> Use clear language, concepts, tone and pace appropriate for

Assessment Requirements for AHCPER224 Work effectively in permaculture

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, worked effectively in a permaculture environment and has:

- accessed and collated information on working in a permaculture environment
- complied with workplace conditions and expectations
- worked within a team and promoted workplace cooperation
- contributed to a productive workplace environment.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture systems, including:
 - sectors within the permaculture system
 - relationships between sectors
 - relationships between the permaculture enterprise and other industries
 - legislation that affects permaculture enterprises
- permaculture as an industry, including:
 - unions and industry associations
 - career opportunities within permaculture
 - work ethic required to work in permaculture enterprises
 - importance of experience and personal observation of nature
- source of permaculture information, services and resources available for a region
- ethics of permaculture:
 - care for the earth

- care for all people
- sharing the surplus
- setting limits to growth
- permaculture practices and procedures, including:
 - cooperation over competition
 - respecting and celebrating all ethnicities, religions, ages, genders and abilities
 - working in a team
- labour exchange programs and volunteer programs, World Wide Opportunities on Organic Farms (WWOOF) program
- lifestyle as a conserver
- workplace expectations and communication channels.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture garden or farm or an environment that accurately represents workplace conditions
- specifications:
 - workplace policies, procedures and processes
 - permaculture reference materials
 - workplace instructions, terms and conditions of employment
- relationships:
 - team member(s)/supervisors
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER225 Assist with garden soil health and plant nutrition

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to assist with garden soil health and plant nutrition using simple methods and without costly equipment. It requires knowledge of simple soil testing techniques and how to improve soil health and plant nutrition organically.

The unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCPER225 Assist with garden soil health and plant nutrition

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, assisted with maintaining garden soil health and plant nutrition in a permaculture system and has:

- collected soils samples and conducted field tests to determine basic soil conditions, which must include each of the following tests:
 - texture
 - pH
 - organic matter
 - soil life
- conducted observations of plant growth to identify possible soil and health problems, which must include:
 - health of plant growth
 - insect activity
 - animal activity
 - symptoms of organisms
 - common nutrient deficiencies in leaves
 - common signs of plant pathogens, including fungal, bacterial or viral
- applied soil additives to improve soil according to organic and permaculture practices
- protected soil to maintain moisture and overall soil health.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices related to soil health and plant nutrition, including:
 - working with natural soils rather than importing soil

- soil as an ecosystem
- soil as biomass and carbon capture and storage
- principles of sustainable horticultural practices
- soil testing techniques, including:
 - jar test for texture
 - ribbon test and ball test
 - pH testing
 - surface evaporation test
 - worm count
- basic plant nutrition
- waste water and plant health, including:
 - types of waste water
 - plant problems from waste water
 - common symptoms
 - basic tests and observations for waste water issues
- allowable additives to improve soils, including:
 - compost and worm castings
 - compost teas
 - rock dust
 - gypsum
 - green manures
 - manures/animal bedding materials
 - leaf mould
 - plants – green manures, nurse plants
 - companion planting
 - dynamic accumulators
 - chop and drop
 - nutrient trapping systems
 - greywater use
 - organically certified products
- permaculture planting techniques to improve plant growth, including:
 - guilds
 - nurse plants
- common soil-borne pests, diseases and nutrient problems and their symptoms
- methods of waste disposal causing minimal impact on the environment.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture garden system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - hand tools and equipment
 - soil amendments and additives
 - basic test equipment and consumables
- specifications:
 - workplace instructions and procedures
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER322 Communicate permaculture system principles to stakeholders

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, communicated permaculture principles to stakeholders and has:

- accessed and interpreted information on permaculture system design options for a site
- investigated site and verified conditions are consistent with possible permaculture system
- identified and compiled differences between permaculture systems and other conventional systems
- discussed permaculture principles and practices for possible permaculture systems with stakeholders, including the benefits to stakeholders and ecosystem
- maintained records and reports for stakeholders' interactions according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices, including:
 - ethics
 - permaculture systems and their key features
 - social permaculture
 - sustainable communities
 - environmental and land management
- reading and interpreting plans and specifications for permaculture systems, including:
 - management of soil
 - energy use

- water access and use
- nutrient flow
- crop rotation
- harvesting
- similarities and differences between other land use and management practices and permaculture systems
- using primary data sources, including:
 - original data gathered by the researcher
 - measurements
 - photographs
 - maps or sketches
 - soil tests
 - observations of light, shade, sun angle
 - flora and fauna present at the site
 - slope and contour information
 - observation of site and adjoining landscape features (e.g., sector analysis)
 - weather observations
- using secondary data sources, including:
 - data provided by government departments and agencies, local environmental and land owner groups and individuals
 - survey documents, maps and plans
 - official weather data
 - photographs, such as Google Earth
- communication techniques, including culturally appropriate speech and behaviours to stakeholders
- importance of records and reporting in permaculture system management.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a site with a permaculture system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for conducting observations
- specifications:
 - workplace procedures
 - permaculture system plans and specifications
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Conduct observations of resilient plants for a permaculture site	1.1 Identify resilient plant species and record in field notes for permaculture site 1.2 Assess scope and size of resilient plant populations

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Investigate soil characteristics, water availability and terrain of site 1.4 Investigate history of land use and management strategies of site 1.5 Observe biological processes attributed to resilient plant species 1.6 Record identities and observations in field notes
2. Assess the implications of resilient plants in permaculture system	2.1 Identify beneficial characteristics of resilient plants for a permaculture system 2.2 Determine plant species and population density of resilient plants according to permaculture management plan 2.3 Determine plant population levels at which resilient plant would be deemed a weed 2.4 Obtain professional advice to support determinations
3. Plan the implementation of permaculture resilient plant management	3.1 Identify control measures for resilient plants and weeds in a permaculture system 3.2 Select, check and prepare tools and equipment required for maintaining resilient plants and weeds 3.3 Select, use and maintain safety equipment and personal protective equipment (PPE)
4. Implement the permaculture resilient plant management plan	4.1 Coordinate and schedule work team and control animals according to permaculture system management plan 4.2 Implement permaculture plant and weed management 4.3 Use by-products of plant and weed management according to permaculture system plan 4.4 Maintain records of resilient plant management activity according to workplace procedures
5. Monitor the permaculture resilient plant management plan	5.1 Monitor progress of permaculture resilient plants and weeds 5.2 Identify unintended effects to permaculture system from management activity 5.3 Assess effectiveness of the permaculture resilient plant and weed management plan 5.4 Adjust resilient plant and weed management plan to meet permaculture system objectives

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Accurately record information and document outcomes on the management of resilient plants using industry specific language and organisational formatting and protocols
Oral communication	<ul style="list-style-type: none"> Clearly explain detailed information on work requirements and standards to work team using appropriate language, tone and pace to ensure understanding and compliance

Assessment Requirements for AHCPER323 Use the characteristics of plant resilience in a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion:

- investigated and recorded field notes of resilient plants, weeds and conditions for a permaculture site, which must include:
 - plant name
 - scope and size of populations
 - soil characteristics
 - water availability
 - terrain
 - historical land use and management
 - associated biological processes
- identified characteristics and uses of resilient plants in a permaculture system, including the benefits for:
 - permaculture system
 - potential for produce
 - environment
- determined acceptable population density of resilient plants and levels at which resilient plant would be deemed a weed
- identified control methods used to control resilient plants and weeds
- implemented a permaculture resilient plant and weed management plan
- used by-products, waste materials and debris according to permaculture system plan
- monitored and updated resilient plant and weed management plan for a permaculture system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices in relation to the management of resilient plants
- plant recognition
- strategies used in managing resilient plants and weeds, including:
 - organic chemical, biological and cultural control methods and treatments
 - range and use of tools, equipment and machinery
 - animal systems used to manage resilient plants and weeds
 - plants and planting strategies to out-compete resilient plants or weeds
- site observations, monitoring and analysis techniques
- role that resilient plants and weeds play in an ecological system, including:
 - soil stabilisers
 - fodder for wild and domestic animals
 - nutrient traps
 - nutrient mining from subsoil
 - hosts for beneficial and pest insects
- identification of a range of edible weeds
- uses for resilient plants and weeds, including commercial uses, including:
 - bird and animal feed
 - arts and crafts
 - soil improvers
 - food and medicinal products
- workplace health and safety practices
- records used in field observations and reporting.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for maintaining resilient plants and weeds
 - personal protective equipment
- specifications:
 - workplace procedures and processes
 - manufacturer operating instructions for equipment
 - safety data sheets

- permaculture principles
- permaculture system plan
- relationships:
 - work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER324 Establish a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to read and interpret permaculture designs, and coordinate and schedule resources for the establishment of a permaculture system in either a rural or urban environment.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources, and complete routine activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to establish a permaculture system	1.1 Read and interpret design and plans for permaculture system 1.2 Identify site, planting methods and system features 1.3 Select materials, tools, equipment and machinery
2. Coordinate	2.1 Coordinate and schedule tasks with work team according to design

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
establishment of permaculture system	<p>sequence and specifications</p> <p>2.2 Identify hazards, assess risk and implement controls according to workplace health, safety and environmental procedures</p> <p>2.3 Maintain a clean and safe work environment according to workplace biosecurity procedures</p>
3. Prepare the area	<p>3.1 Implement installation/retrofitting of infrastructure according to plans</p> <p>3.2 Implement earthworks and soil preparation according to plans</p> <p>3.3 Select and apply soil improvement additives according to design specifications</p> <p>3.4 Mark out patterns or positions of elements on site according to design</p>
4. Position elements in permaculture system	<p>4.1 Inspect elements prior to installation against specifications, and reject defective elements according to workplace procedures</p> <p>4.2 Prepare plants to maintain health and vigour before planting</p> <p>4.3 Position elements according to permaculture design</p> <p>4.4 Provide elements with post-installation care</p>
5. Monitor establishment of permaculture system	<p>5.1 Monitor permaculture system and implement maintenance activities during establishment phase</p> <p>5.2 Identify conditions inhibiting elements from developing, and rectify according to system design and permaculture principles</p> <p>5.3 Finalise works for permaculture establishment according to design</p>
6. Complete establishment of permaculture system	<p>6.1 Remove and process waste from site works according to workplace and environmental procedures</p> <p>6.2 Clean, maintain and store tools, equipment and machinery</p> <p>6.3 Record and report establishment work according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCPER324 Establish a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has established a permaculture system in at least one of the following situations:

- urban
- rural.

There must also be evidence that the individual has:

- interpreted permaculture designs and plans and prepared resources
- coordinated and scheduled tasks with work team and stakeholders
- prepare site for installation of elements of design
- installed elements according to schedule
- monitored the system during establishment
- recorded and reported on completion of permaculture system
- complied with workplace health, safety and environmental procedures.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of permaculture and practices, including:
 - principles of permaculture and practices in a rural environment
 - principles of permaculture and practices in an urban environment
 - zone and sector analysis
- elements within permaculture systems, including:
 - integrated animal and plant systems
 - common infrastructure elements

- water storage and management, including:
 - water tanks, dams and other storage systems in rural and urban environments
 - water harvesting from land and structures
 - soil and subsoil water storage
 - installing irrigation and drainage systems, including swales, diversion drains, mulch-pit paths
 - collection and storage of nutrients
- coordination and basic management skills, including:
 - communicating with team members, supervisors, contractors and consultants
 - identifying work tasks from plans and specifications
 - scheduling and sequencing work
 - monitoring work performance against standards and specifications
 - health and safety and environmental policies, procedures and regulations
- zone and sector analysis, including:
 - consideration of the frequency of use and intensity of need of elements in the system
 - consideration of the spatial requirements of elements in the system
 - mutual benefit and connections between zones
 - consideration of the specific needs of the location of the system in terms of climate, access, slope, potential for wildfire, flood, tsunami or other catastrophic force
 - consideration of the neighbouring or local environment, its need, products and intrinsic features
- establishment of permaculture elements, including:
 - elements which together form a system
 - species chosen for their functions in the overall system, including plants, animals and objects
 - elements chosen for mutual benefit
 - elements that address important functions, including energy, water, food and fuel
 - elements that support the needs of the system within the overall design
- objectives of the plant system establishment program, including:
 - end use
 - time constraints
- plant and animal cultural requirements, preparation for installation and procedures and follow-up care
- environment and habitat requirements of animal species
- identification of pests, diseases, parasites, and deficiencies that can affect plants and animals during establishment and their treatment
- soils and soil amelioration techniques
- native species and their value in a permaculture system.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a site proposed for a permaculture system specified in the performance evidence or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - permaculture tools, equipment and machinery
 - plants, animals and infrastructure elements of the design
 - safety equipment
- specifications:
 - workplace procedures and processes
 - manufacturer operating instructions for equipment and machinery
 - design, plans and specifications
 - specific permaculture principles and practices
- relationships:
 - team member and contractors
- timeframes:
 - according to time specified in schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER325 Mitigate plant pests, diseases and disorders in a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to identify healthy permaculture systems and recognise the pests, diseases and disorders requiring an integrated management design solution for managing potential infestations for a permaculture system.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources, and complete routine activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify possible pests, diseases and disorders for permaculture system	1.1 Identify pests, diseases and disorders common to plants grown in the permaculture system 1.2 Identify conditions conducive to development of pests, diseases

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	and disorders 1.3 Identify beneficial organisms that control pests, diseases and disorders
2. Develop pest, disease and disorder programs for permaculture system	2.1 Investigate prevention strategies for pests, diseases and disorders affecting permaculture system 2.2 Investigate control strategies for pests, diseases and disorders affecting permaculture system 2.3 Select control and prevention strategies best suited to permaculture system 2.4 Document prevention and control programs for permaculture system
3. Monitor permaculture system for pests, diseases and disorders	3.1 Monitor conditions that contribute to pests, diseases or disorders 3.2 Monitor plants for symptoms of pests, diseases or disorders 3.3 Identify pest, disease or disorder from observed symptoms 3.4 Identify tolerable threshold of damage from pests, diseases and disorders 3.5 Monitor beneficial organisms to support control of pests, diseases and disorders 3.6 Record observations according to workplace procedures
4. Implement pest, disease and disorder prevention program	4.1 Implement biosecurity procedures to mitigate pests and disease transfer during permaculture operations 4.2 Recognise onset of conditions conducive to development of pests, diseases and disorders 4.3 Manipulate habitat and microclimate conditions to encourage beneficial organisms 4.4 Manipulate environment to prevent conditions conducive to pests, diseases and disorders 4.5 Investigate and mitigate effects of prevention program on other elements within permaculture system 4.6 Implement permaculture practices to minimise pests, diseases and disorders according to permaculture system design 4.7 Record prevention activity according to workplace procedures
5. Implement pest,	5.1 Identify when pest, disease or disorder exceeds tolerable threshold

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
disease and disorder control program	for permaculture system 5.2 Select control method according to permaculture principles and organic standards 5.3 Implement control method, ensuring minimal impact on other permaculture elements 5.4 Record control activity according to workplace procedures
6. Monitor and record the management of plant pests, diseases and disorders	6.1 Compile records from pest, disease and disorder control and prevention activity 6.2 Examine records and formulate patterns of infestation and infection 6.3 Document patterns of infestation and infection for permaculture system 6.4 Review prevention and control programs in consideration of records and formulated patterns

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Foundation Skills essential to performance are explicit in the Performance Criteria of this unit of competency.

Assessment Requirements for AHCPER325 Mitigate plant pests, diseases and disorders in a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented prevention and control programs to mitigate the effects of pests, diseases and disorders on a permaculture system and has:

- identified potential pests, diseases and disorders and their preferred conditions for a permaculture system
- identified and monitored beneficial organisms for prevention and control of pests, diseases and disorders
- developed prevention and control programs for pests, diseases and disorders
- monitored conditions conducive to pests, diseases and disorders, including:
 - soil moisture
 - weather conditions
 - nutrients
- monitored permaculture system and identified pests, diseases and disorders and the tolerable threshold for each
- implemented a pest, disease and disorder prevention program, and monitored impact on other permaculture elements
- investigated methods of managing pests, diseases and disorders in a permaculture system
- recognised when tolerable threshold has been exceeded for infestation/infection
- implemented control program according to organic and permaculture standards
- maintained records and formulated patterns of pest and disease control operations for updating prevention and control programs, which must include:
 - pest disease or disorder name, type and cause
 - weather/environmental conditions conducive for development
 - date and actions taken in prevention and control program activity
 - infection/infestation thresholds for plants in the permaculture system.
 -

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture and organic principles and practices related to managing plant pests, diseases and disorders
- principles of maintaining healthy crops in a permaculture system, including:
 - companion planting
 - increasing diversity
 - providing habitat and food for pests' natural predators
 - healthy, balanced soil
 - planting for insectivorous birds, lizards, frogs and microbats
 - minimal use of soluble fertilisers
- permaculture and organic systems control methods, including:
 - deterrent organic sprays
 - pheromone traps and lures
 - biological controls using predatory, parasitic insects and mites
 - nutrient additives
 - companion planting
 - crop rotation and succession planting
 - covers and netting
 - *Bacillus thuringiensis* (BT) and other action-specific microorganisms
- common pests, diseases and disorders affecting plants in a permaculture system, including:
 - symptoms of disease and disorders
 - soil conditions, weather and environmental conditions supporting infection/infestation
 - common names
 - infestation/infection threshold affecting produce
 - stages of development of pest organisms and signs of pest presence on plants and animals
 - fungal, bacterial and viral infestations and their symptoms
 - disease vectors and plants that harbor them
- preventing and controlling pests, diseases and disorders in enclosed environments, including:
 - greenhouses and shade house
 - closed canopy
 - manipulating microclimate
- workplace health and safety policies and procedures
- biosecurity procedures to prevent transferring infections/infestations in the system
- importance of record-keeping to build understanding of pests and disease development, prevention and control.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an operational permaculture system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - reference materials
 - tools and equipment
 - recording systems
 - treatments and biological agents
- specifications:
 - workplace procedures and processes
 - safety data sheets
 - specifications for infestation/infection threshold
 - specific organic and permaculture standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER326 Install and maintain permaculture water management systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- organised resources for installation work
- set out and prepared site
- installed permaculture water systems materials and components, excluding works requiring a licensed plumber
- installed a water capture system, which must include any one of the following:
 - swales
 - contour banks or terraces
 - mulch-pit paths
 - diversion channels or other passive installation
 - roof and gutter system
- installed and prepared access to a water storage system, which must include any one of the following:
 - dam
 - well or ground water
 - water tank or bladder
- installed and prepared access to a water distribution system, integrated with the storage system, which must include any one of the following:
 - pump
 - gravity or syphon system
 - channels
 - bores
 - hand distribution system
- installed water treatment system according to permaculture water system design

- adjusted water distribution system to deliver water according to system specifications and permaculture plan
- commissioned a permaculture water system
- monitored and maintained permaculture water systems.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture practices regarding water, including natural flows, rainwater and wastewater, storage, movement and retention of water in the system
- permaculture water capture systems and their access or installation, including:
 - natural water supply, including rivers, streams, ground water and springs
 - swales
 - contour banks
 - terraces
 - mulch-pit paths
 - diversion channels and other passive installations
 - low pressure or gravity systems
 - guttering and first-flush diversion system
 - wicking beds
- permaculture water storage systems, including:
 - town mains water supply
 - water table and wells
 - dams
 - tanks and bladders
- permaculture water distribution systems:
 - pumps and pumping
 - gravity and syphon systems
 - above and below ground pipes
 - channels
 - bores
 - windmill
 - mains pressure
- contours and influence on water flow, percolation and erosion
- installation methods and techniques for permaculture water storage systems
- operation of pumps and water flow rates, including friction losses in pipes
- behaviour of water on varying terrain and soil types
- water quality and water filtration techniques, including:
 - course contaminants and debris
 - biological contaminants

- chemical contaminants
- basic desalination techniques
- calculations for installing permaculture water systems
- soil characteristics and water retention
- water legislative and regulatory requirements, including:
 - accessing natural water systems
 - connecting to mains water
 - installing dams or diverting water in catchments
 - water use and conservation
- local government and planning acts and codes, including:
 - building regulations
 - installing tanks
 - licencing for plumbing installations to town water
- environmental and biosecurity legislation and regulations, including:
 - permits for pruning or removal of large trees
 - earth movement and digging guidelines and legislation
 - land restoration codes
 - soil movement regulations
 - habitat and wildlife protection legislation
- workplace health and safety, including:
 - licences for operating specialised machinery
 - setting up traffic and pedestrian barriers
 - overhead services
 - digging near services, including phone, gas, power, water, sewerage and drains.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a permaculture site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, equipment and machinery for permaculture water system installation and maintenance
 - personal protective equipment
 - materials and consumables for construction and installation works
- specifications:
 - workplace procedures
 - manufacturer operating instructions for equipment and machinery
 - installation instructions for components

- plan and design specifications
- specific legislation and regulations
- relationships:
 - stakeholders
 - work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared and installed structures for permaculture systems from design plans for at least two of the following types of structures:

- garden structure or feature
- fence or trellis
- animal house or shelter
- netted protection for plants
- paving and decking
- compost bin
- worm-farm
- retaining wall not requiring a permit
- small shed or outbuilding
- building component.

There must also be evidence that the individual has:

- interpreted permaculture design drawings and specifications
- checked regulatory requirements for construction
- identified the construction method
- selected and prepared materials for construction method, which must include at least three of the following materials:
 - new or reclaimed timber
 - bamboo
 - straw
 - earth
 - new or reclaimed housing components
 - hard landscape materials

- wire, mesh or nets
- metal
- glass or clear synthetic materials
- identified hazards, assessed risks and implemented controls, including checked for underground and overhead services
- surveyed site, and located and marked out location of structure
- measured component materials accurately during preparation and assembly
- assembled structure according to plans
- checked and confirmed permaculture structure with client.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles regarding structures and built environment
- permaculture design drawings, plans and specifications, including:
 - plan interpretation
 - construction and detail drawings
 - extracting construction data from plans
- building regulations and compliance for simple structures
- basic surveying techniques for small scale construction works, including:
 - measuring slope, fall and contours
 - linear measurements
 - use and operation of basic survey equipment
- typical permaculture structures
- hand and power tools, including:
 - pre-use checks, maintenance and operation
 - safety requirements
- workplace health and safety procedures and site safety, including:
 - excavation risks and underground services
 - overhead services
 - safe lifting and transporting techniques
 - personal protective clothing and equipment (PPE)
 - use and installation of safety signs and barriers
 - site access points
- environmental implications associated with excavation and construction activity, including:
 - implication of alteration to water flow
 - waste disposal
 - natural environment
- measuring and mixing composite and aggregate materials, including:

- concrete and mortar
- earth and straw
- rammed and stabilised earth walls.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated at a permaculture site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - hand and power tools and equipment for installing permaculture structures
 - personal protective equipment
 - building materials and consumables
- specifications:
 - workplace procedures and processes
 - manufacturer operating instructions for equipment and machinery
 - permaculture structure design plans and specifications
 - site service location plans
 - construction permits according to structure design
- relationships:
 - stakeholder/s.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER328 Establish organic garden and orchard systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to apply permaculture principles for establishing organic garden and orchard systems from permaculture plans, including selecting plants for site conditions and requirements to achieve optimum production.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources, and complete routine activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess site for organic garden and orchard system	1.1 Access and interpret permaculture system plans and specifications for site and client needs 1.2 Inspect site for environmental and physical attributes 1.3 Inspect site and locate existing structures and services

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Identify location of gardens and orchard 1.5 Identify site constraints and opportunities 1.6 Verify site inspections with plans and specifications and identify inconsistencies 1.7 Rectify inconsistencies with key stakeholders and update plans and specifications 1.8 Prepare zone and sector plan of garden and orchard according to verified permaculture system plan
2. Select plants for organic garden and orchard system	2.1 Test soil and analyse results for garden and orchard locations 2.2 Select plant varieties and types according to soil type, permaculture plan and client production needs 2.3 Determine number and size of plant material according to planned garden and orchard outcomes 2.4 Identify and source planting material according to permaculture system plan
3. Develop planting plan for organic garden and orchard system	3.1 Identify zone and sector details from permaculture plan 3.2 Identify and locate plants to be installed on a planting plan 3.3 Document a schedule of planting actions, timelines and specifications according to workplace procedures
4. Prepare site and plant organic garden and orchard system	4.1 Prepare planting materials according to plant type and schedule 4.2 Prepare gardens and orchard site for planting 4.3 Locate and plant species according to planting plan 4.4 Provide planting with nutrition and soil moisture according to permaculture system design and organic plant standards 4.5 Record and report garden and orchard planting system activity according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret plans, specifications and other documentation for permaculture system, and extract relevant data Consolidate information to determine requirements for establishment of a permaculture garden and orchard systems
Numeracy	<ul style="list-style-type: none"> Perform calculations on soils sample tests to establish base line conditions Make calculations appropriate for measuring and estimating materials for gardens and orchard establishment

Unit Mapping Information

Assessment Requirements for AHCPER328 Establish organic garden and orchard systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, established an organic garden and orchard in a permaculture system, and has:

- acquired and interpreted permaculture system plans for a site
- inspected site for key features, verified against plans and rectified inconsistencies
- prepared a garden and orchard zone and sector plan for garden and orchard
- tested soil for garden and orchard locations and analysed results
- selected plants and plant types suitable for soil and permaculture system design
- developed garden and orchard planting plan and schedule of activities
- prepared garden and orchard site for planting
- acquired, prepared and planted the following:
 - fruit tree guild for an orchard system
 - annual garden bed
- recorded and reported garden and orchard planting activity
- complied with permaculture and organic systems standards.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and ethics
- permaculture site planning, including:
 - boundaries of sites drawn at an appropriate scale
 - direction of North (or sunward)
 - location of plants
 - information relevant to a permaculture garden and orchard systems

- drawing skills required for clarity and consistency
- graphic styles
- planting schedules and timelines, including Gantt charts
- zone and sector planning, including:
 - zones for garden and orchard systems (Zones 1 and 2)
 - sector information, including prevailing winds, fire aspect, winter and summer sun angles, best locations for sun-loving and shade-tolerant species
 - microclimate information
 - zone and sector plans drawn as overlays to a site plan
- garden and orchard systems, including:
 - an orchard with 5 to 10 or more assorted fruit trees or shrubs
 - integrated plant and animal systems
 - consideration of and design for plant ecosystem relationships
- soil structure, types and function, including soil tests
- soil maintenance and improvement techniques
- aims and purposes of building organic garden and orchard systems
- design principles for organic garden and orchard systems
- features and characteristics of plants used in organic garden and orchard systems
- preparation, planting and growing requirements for organic garden and orchard systems
- source of planting material, including biosecurity principles
- workplace health and safety policies and principles.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a permaculture system site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for establishing garden and orchard systems
 - personal protective equipment
 - drawing and planning equipment
- specifications:
 - permaculture system plans and specifications
 - workplace procedures and processes
 - plant materials for organic garden and orchard
 - specific codes of practice for organic growing
 - permaculture principles.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER329 Coordinate preparation and storage of produce from a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit provides the skills and knowledge required to plan, handle and process products from a permaculture system, including preservation techniques, treatments, storage and product presentation.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources, and complete routine activities.

Licensing, legislative or certification requirements may apply to this unit where permaculture products used for human consumption are handled, processed and distributed. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan for preparation of permaculture products	1.1 Identify permaculture products to be prepared 1.2 Select materials, tools, equipment and machinery 1.3 Carry out pre-operational and safety checks on tools, equipment

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	and machinery in accordance with manufacturer’s specifications 1.4 Select, use and maintain suitable safety and personal protective equipment (PPE)
2. Coordinate preparation of permaculture products	2.1 Prepare permaculture products according to product preparation plan 2.2 Ensure work team are familiar with plan 2.3 Maintain clean, safe and hygienic work conditions during processing and handling operations
3. Treat permaculture products	3.1 Grade and label products according to product preparation plan 3.2 Identify and remove substandard products according to specifications and workplace environmental procedures 3.3 Select treatment according to product requirements and product preparation plan 3.4 Implement treatment according to workplace procedures and quality standards
4. Pack and present permaculture products	4.1 Implement packing and presentation procedures according to product preparation plan 4.2 Label and date products according to workplace procedures and industry standards 4.3 Monitor packing and presentation of products, and take corrective action according to workplace procedures and quality standards
5. Store permaculture products	5.1 Determine storage space requirements for volume of product 5.2 Identify available storage space and environment to retain quality 5.3 Handle and transfer product from packaging area to store according to product preparation plan 5.4 Monitor storage facilities and conditions to maintain product quality

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for AHCPER329 Coordinate preparation and storage of produce from a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has on at least one occasion coordinated the preparation and storage of produce from a permaculture system and has:

- identified resources required to prepare produce
- coordinated produce preparation activities with work team
- maintained hygienic conditions throughout processing activities
- processed and preserved products according to quality standards
- packaged permaculture products according to product preparation plan
- determined storage requirements and stored products to maintain quality
- handled product safely and maintained safe work conditions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles related to product preservation and storage
- seasonal availability cycles of produce
- products suitable for storage
- types of produce from permaculture systems, including:
 - plant-based
 - animal-based
 - fungi and related produce, including mushrooms and yeasts
 - invertebrates, including insects, worms and their by-products
- storage methods appropriate to particular products
- treatment methods for particular products, including:
 - removal of dirt and foreign material

- stripping and/or trimming
- washing/hydration
- drying
- applying preservatives
- storing in a controlled environment
- standards and regulatory requirements, including:
 - organic standards
 - permaculture principles
 - quarantine and biosecurity requirements
 - human food handling, preparation, storage and labelling standards and regulations
 - workplace health and safety
- importance of maintaining the quality of products, including handling and storage requirements
- correct storage conditions for different products, including:
 - specifications for storage facilities
 - environmental conditions, including temperature, humidity and light
 - length of storage
 - types of storage facilities
- hygiene and cleaning standards and procedures to preserve quality and health status of the stored produce
- hygiene issues in the handling and storage of biological products.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - produce obtained from a permaculture system
 - tools and equipment for preparing and storing permaculture produce
 - personal protective equipment
 - cleaning and hygiene materials and consumables
- specifications:
 - workplace procedures and processes
 - manufacturer operating instructions for tools and equipment
 - safety data sheets for cleaning and treatments
 - workplace instructions, specifications and production plan
 - regulations and codes of practice for organic food production

- biosecurity regulations
- relationships:
 - team member
- timeframes:
 - according to food storage and quality standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER330 Coordinate community projects

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to coordinate small-scale community projects and small groups of people working on a permaculture-related project.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources, and complete routine activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for community project	1.1 Consult with community to clarify community project outcomes 1.2 Identify and source resources required for community project 1.3 Identify and schedule activities 1.4 Identify and assess environmental impact of community project 1.5 Identify work health and safety hazards, and assess risks

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.6 Identify and apportion budget according to community project plan
2. Organise resources	2.1 Acquire resources within community project budget 2.2 Apply and confirm permits and authorisations prior to commencement of community project according to regulatory requirements 2.3 Notify stakeholders of scheduled activity 2.4 Arrange delivery of resources to community project location 2.5 Schedule availability of human resources for activities
3. Coordinate community project	3.1 Coordinate resource allocation according to community project plan 3.2 Coordinate and train human resources for work activity according to schedule 3.3 Implement environmental impact mitigation procedures 3.4 Implement health and safety controls according to health and safety assessment 3.5 Monitor and record performance outcomes against community project plan 3.6 Identify substandard performance and implement corrective action according to contingencies in community project plan
4. Finalise community project	4.1 Compile records of resources, schedules, budget and project performance 4.2 Prepare report on community project outcomes 4.3 Communicate project report to community and stakeholders 4.4 Recommend strategy for continuation for future of community project according to community and stakeholder demand

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Participate in verbal exchanges using collaborative and inclusive techniques, including active listening and questioning and reading of verbal and non-verbal signals, to convey and clarify information to stakeholders and work team

Assessment Requirements for AHCPER330 Coordinate community projects

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated at least one community project, including:

- consulted with community and stakeholders throughout community project
- clarified outcomes of community project
- identified, sourced, prepared and scheduled resources, including:
 - equipment, materials and consumables
 - human resources
 - budget
- identified and assessed environmental impact and health and safety risk of community project
- applied and received confirmation for permits and authorisation to conduct community project
- acquired and allocated resources for community project
- scheduled, informed and trained human resources for project
- implemented health, safety and environmental controls throughout the community project
- monitored, rectified and recorded performance of project against planned outcomes
- compiled records of project and prepared and communicated a report to community and stakeholders for review
- recommended strategies for continuation of community project.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- community projects, including:
 - small or short-term projects

- projects that form part of larger projects
- arranging social events
- carrying out fundraising and sponsorship
- representing a community group or project
- environmental impact of community projects and mitigation strategies to protect the environment
- work schedule programming
- human resources, access and responsibilities, including:
 - hiring and subcontracting of labour
 - attracting volunteers
- possible causes of disruption to work activities and contingency situations
- providing work contingencies when delays occur
- responsibilities and requirements for obtaining external agency permits as necessary
- range, use and availability of materials, equipment and resources required for community projects
- work health and safety hazards and risks, including procedures and processes
- legislative and regulatory requirements, including permits, approvals processes and codes of practice
- community and stakeholder consultation
- project coordination principles
- meeting and committee protocols
- project reporting, including:
 - project title
 - author name and date
 - project description
 - progress of activities
 - promotions and publicity
 - work health and safety issues
 - environmental risks and mitigation
 - expenditure
 - future project-related activities that require planning.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a community project or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment to support project outcomes

- safety and personal protective equipment
- specifications:
 - workplace policies, procedures, processes for conducting community projects
 - community project plan and objectives
 - specific legislation/regulations and codes of practice
 - application forms for permits and authorisations
- relationships:
 - community
 - project support team
- timeframes:
 - according to timeframes specified in community project plan/schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER331 Coordinate propagation activities for a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated and implemented propagation activities for at least four (4) different plants in a permaculture system and has:

- researched plant propagation requirements
- planned and scheduled plant propagation
- implemented propagation plan safely using at least four (4) of any of the following propagation techniques:
 - cuttings
 - layering
 - division
 - grafting
 - budding
 - seed sowing
- maintained propagated plants to maturity or distribution
- updated records and plant propagation plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices related to propagation, including:
 - using reclaimed or reused containers (suitably cleaned to avoid cross-contamination)
 - labelling systems using reclaimed materials
 - maintaining rare and unusual varieties
 - using edges and valuing the marginal – unusual plants in microclimates
 - sharing and swapping to increase biodiversity and mutual wellbeing

- preserving provenance of locally indigenous species
- testing and trialling for new plants or resistant varieties
- global food plant preservation, including seed saving
- sustainable sources of propagation materials, including:
 - seed banks
 - stock and garden beds
 - traded and bartered
 - purchased plants, plant material or seed
- propagation plan, including:
 - seasonal activities
 - seed saving
 - needs of the system for plants
 - mother plant health, location and frequency of use
 - schedules and timelines
- propagation techniques, including:
 - cuttings – softwood, hardwood, semi-hardwood, root and tip
 - layering – stool, aerial and runner
 - division
 - grafting – whip and tongue, saddle, wedge, approach and bench
 - budding – shield and patch
 - seed sowing
- growing media suitable for propagation in a permaculture garden setting
- plant growth, development and nutrition
- plant reproduction botany and physiology
- maintaining moisture levels in simple systems without causing disease
- systems for protecting new plants and seedlings, including:
 - polyhouse or shade-house systems, including hoop systems on garden beds
 - systems using reclaimed materials
 - naturally occurring or planned microclimates
- minimal environmental impact waste disposal and composting systems that destroy pathogens
- workplace health and safety hazards, risks and controls for propagation methods
- hygiene and biosecurity procedures in the propagation area.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture system or an environment that accurately represents workplace conditions

- resources, equipment and materials:
 - propagation tools and equipment
 - personal protective equipment
 - plant propagation materials specified in the performance evidence
 - growing environments for propagation methods
- specifications:
 - workplace procedures and processes
 - safety data sheets
- timeframes:
 - according to season specified for plant species.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER332 Maintain integrated plant and animal systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to maintain an integrated plant and animal system, undertake maintenance, and maintain records of activities, including climate, soil, plants and animals commonly found on permaculture properties and typical permaculture solutions for water management and soil maintenance and improvement.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources and complete routine activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCPER332 Maintain integrated plant and animal systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least three (3) occasions, maintained an integrated plant and animal system and has:

- planned maintenance activities for a permaculture integrated plant and animal system
- implemented maintenance activities according to plans
- mitigated risk to permaculture elements, including:
 - soils and soil compaction
 - plants and animals in the system
 - waterways and water storage
 - other key elements within ecosystem
- identified safety hazards and assessed risks and implemented controls during maintenance activities
- maintained records and reports on completion of maintenance activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- integrated plant and animal systems, including:
 - gardens, orchards, organic farms, woodlots and forests that include animals in free range or rotational systems
 - balanced ecosystems where the needs of all species are met
 - systems where poultry provide fertility, pest control and other services to plants
 - frogs, birds and other wild creatures attracted to the garden to maintain ecological balance
 - patterns seen in nature, including stacking and layering of plants in a forest used in deliberate design

- plants and animals commonly found on permaculture properties
- plant groups and vegetation structures
- permaculture practices, including:
 - composting of weeds
 - chop and drop practices
 - feeding weeds to animals
 - soil support and enhancement strategies
 - animal husbandry strategies
- permaculture design information, including:
 - permaculture site plan
 - components of integrated plant and animal systems
- role of animals in improving soil, recycling nutrients, managing ‘weedy’ plants and controlling pests and diseases
- plants as indicators and improvers
- typical permaculture solutions to water catchment and storage for integrated plant and animal systems
- recycling of materials and waste
- workplace health and safety, including:
 - typical hazards and risks
 - controls
- communication strategies with work team and visitors
- importance of records in permaculture systems.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture system with integrated plants and animals or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plants and animals
 - tools and equipment for maintaining plant and animal systems
 - personal protective equipment
 - materials and consumables for maintenance activities
- specifications:
 - workplace health and safety procedures
 - manufacturer operating instructions for tools and equipment
 - workplace maintenance instructions
- relationships:
 - team member.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER333 Implement crop maintenance and harvesting programs for permaculture systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to implement crop maintenance and harvesting programs for permaculture systems, including thinning, spacing, selective harvesting, training, summer and winter pruning, hedging, skirting, topping and trimming.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources, and complete routine activities.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan for maintenance and harvesting of permaculture crops	1.1 Identify site requirements and crop maintenance program 1.2 Select materials, tools, equipment and machinery 1.3 Carry out pre-operational and safety checks on tools, equipment

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	and machinery 1.4 Identify work health and safety hazards, assess risks, and implement controls 1.5 Select, use and maintain safety and personal protective equipment
2. Maintain permaculture crops	2.1 Implement maintenance tasks according to crop maintenance program 2.2 Instruct and monitor work team on required maintenance operations 2.3 Ensure tasks are undertaken according to work health and safety requirements and environmental considerations 2.4 Monitor maintenance of crop, and implement corrective action to maintain standards 2.5 Maintain a clean and safe work area throughout maintenance operations
3. Harvest permaculture crops	3.1 Implement harvesting tasks according to crop maintenance program 3.2 Instruct and monitor work team on required harvesting operations 3.3 Ensure compliance with work health and safety requirements, and observe environmental considerations 3.4 Monitor harvesting of crop, and implement corrective action to maintain standards 3.5 Maintain a clean and safe work area throughout harvesting operations
4. Complete maintenance and harvesting activities	4.1 Manage waste material according to maintenance and harvesting plan and workplace procedures 4.2 Clean, maintain and store tools, equipment and machinery 4.3 Record maintenance and harvesting operations outcomes

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Clearly explain detailed information on work requirements and standards to work team using appropriate language, tone and pace to ensure understanding

Assessment Requirements for AHCPER333 Implement crop maintenance and harvesting programs for permaculture systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented at least one of each of the following:

- a permaculture crop maintenance program
- a permaculture crop harvesting program.

There must also be evidence that the individual has:

- interpreted site requirements, crop maintenance and crop harvesting, plans and schedules
- instructed work team and implemented harvest and maintenance plans according to industry standards and workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices related to obtaining a yield
- principles of maintaining crops and the methods used to maximise crop yields
- maintenance techniques for a range of crops, including:
 - seasonal pruning, thinning and hedging techniques
 - training and trellising
- maturity or ripeness properties of crops when ready for harvest and harvesting techniques, including:
 - selective harvesting
 - picking
- effects of maintenance operations on plant growth, habit and production levels of maintenance operations
- maintenance of soil health and impact on production

- enterprise quality procedures and characteristics of a crop relative to varying market requirements
- workplace health and safety and environmental policies and procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture cropping system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for crop maintenance and harvesting
 - personal protective equipment
- specifications:
 - workplace policies, procedures, processes
 - access to manufacturer operating instructions for equipment
 - permaculture crop maintenance and harvesting plans and specifications
 - access to specific permaculture codes of practice
- relationships:
 - work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER334 Read and interpret property maps and plans

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has read and interpreted maps and plans for at least five (5) different purposes and has:

- identified map and plan types
- recognised their purpose, features and characteristics
- identified the following for each map and plan:
 - scale and relation to site
 - mapping conventions
 - symbols
- used maps and plans in the field, including:
 - located north and oriented map
 - identified boundaries and structures on map and located in the field
 - identified landmarks and topographic features on map and located in the field
 - determined distances and areas
 - checked accuracy of maps and plans against field observations
- navigated from a starting location to a defined destination
- located and marked location of specific features on site, which must include at least:
 - key points on site where water flow changes from erosional to depositional
 - contour lines joining key points
 - zones or property boundaries using grid system from maps/plans.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- maps and plans used in the industry, including:

- paper
- electronic
- 3D models of sites, including sand-box models
- contour models
- elevations and cross-sections
- aerial photographs
- mapping conventions, including:
 - symbols
 - distance and scale
 - direction
 - coordinate systems
 - line and area symbols
 - true North, grid North and magnetic North
- land survey systems, map projections, colour and symbol systems
- contours, slopes and slope profiles
- key points on site where water flow changes from erosional to depositional, and contour lines joining these key points
- topographic features
- curved planes on flat surface distortions
- means of locating current position in the field, including:
 - satellite navigation systems (SNS)
 - other positioning systems, including sun, moon and stars
 - compass bearings.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for navigation
 - a range of maps and plans in different formats used for a range of different purposes
 - references for identification and application of key points for surface water management
- specifications:
 - manufacturer operating instructions for navigation tools and equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER335 Select plant and animal species for permaculture systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has selected plants and animals for integration into a permaculture system, including:

- assessed permaculture system needs
- investigated plant and animal suitability for new permaculture system design
- selected and acquired plant and animal species for a permaculture system and availability of their ancillary needs, including:
 - housing
 - prepared ground
 - shelter
 - food source
- monitored plant and animal systems during the establishment phase.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices related to species selection
- permaculture needs analysis, including bioregional analysis
- plant and animal species and their interactions and interrelationships, including:
 - permaculture combinations – guilds, companions, nurse plants and animal companions
 - EVCs (Ecological Vegetation Classes)
 - indigenous animals and plants
 - what grows or thrives locally – plants, animals, birds, insects, fish, frogs, reptiles

- food, fodder and medicinal plant species suitable for chosen animals
- integrated plant and animal systems such as chicken tractors, cell grazing, aquaculture systems
- basic investigative and research techniques
- primary data sources, including:
 - original data gathered by the researcher
 - local wisdom
 - weather observations
 - flora and fauna observations
- using secondary data sources, including:
 - data provided by government departments and agencies
 - publications
 - reference books, websites and journals
 - official weather data.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plants and animals for establishing system
 - ancillary resources for animals
 - basic research tools and materials
- specifications:
 - bioregion data and permaculture system design.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER336 Test, improve and maintain healthy soil in a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has tested soils in a permaculture system and implemented a soil improvement and maintenance plan, including:

- identified purpose and site for soil sample and collected soil samples
- tested soil samples, which must include all of the following tests:
 - texture
 - structure
 - organic matter
 - pH
 - water infiltration
 - compaction
- prepared a soil sample for laboratory testing of nutrients
- determined soil improvement requirements and strategy to improve soil biota
- implemented soil improvement plan according to permaculture and organic principles
- monitored soil improvement plan to maintain soil health.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices related to soil health and plant nutrition:
 - working with natural soils rather than importing soil
 - soil as an ecosystem
 - soil as biomass and carbon capture and storage

- sampling and testing of soils:
 - purpose for testing soils
 - common soil tests and their outcomes
 - seasonal and soil temperature effects on soil
- how to read and interpret soil test results
- soil testing techniques, such as:
 - jar test for soil structure
 - ribbon test and ball test for soil texture
 - infiltration or permeability test
 - pH testing
 - compaction test
 - non-wetting soil test
 - air-filled porosity test
 - worm count
 - microscopic biota in soils
- plant nutrient uptake and mineral action
- soil chemistry
- science of composting
- fungal and bacterial action and mulches appropriate to different plants
- additives to improve soils and protect soil biota and diversity, including:
 - compost and worm castings
 - biochar
 - green manures
 - organic mulch
 - manures/animal bedding materials
 - leaf mould
 - plantings – green manures, nurse plants
 - companion planting
 - chop and drop
 - nutrient trapping systems
 - greywater use
 - organically certified products
 - amendments that may include rock dust, gypsum, dolomite, lime, zircon, sulphur and other minerals
- soil life, including microscopic life
- monitoring and recording procedures for soil improvement plans, including:
 - observing changes over time
 - use of tables and charts to record data
 - importance of photographic records
 - documenting observations

- cultural practices detrimental to soil health, including:
 - over-watering or under-watering
 - over-grazing
 - over-cultivating
 - off-contour ploughing
- methods of waste disposal causing minimal impact on the environment
- the effects of conventional agricultural chemicals on soils and soil ecosystems.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - soil and soil sampling tools and equipment
 - soil testing consumables and equipment for tests specified in the performance evidence
- specifications:
 - workplace policies, procedures, processes
 - manufacturer operating instructions for sampling and testing equipment
 - access to safety data sheets for test chemicals
 - workplace instructions/job specifications/client briefs
 - access to specific standards and principles of permaculture and organic growing
- relationships:
 - stakeholders with expertise
- timeframes:
 - according to seasonal variations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Companion Volumes, including Implementation Guides, are available at VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

AHCPER414 Develop recommendations for integrated plant and animal systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to develop recommendations for the integration of plant and animals into a permaculture system using a sound knowledge of plant and animal interrelationships.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCPER414 Develop recommendations for integrated plant and animal systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion:

- identified and clarified client objectives into a brief for an integrated plant and animal system, including the interpretation of site-specific:
 - designs
 - maps
 - ground plans, and
 - specifications
- determined possible solutions for an integrated plant and animal system
- assessed possible solutions and selected most appropriate to meet client objectives
- collated solutions and documented recommendation for integrated plant and animal system for client, which must include:
 - method of establishment
 - probable outcomes
 - identity, origin and characteristics of plant and animal species and their cultural requirements
 - function of plants and animals in integrated system
 - drawings to show plant and animal integration
 - tables to show outcomes for improved yields, labour and waste reduction
- communicated solution to client
- recorded and reported recommendations and client interaction.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles related to integrated plant and animal systems
- permaculture practices and outcomes, including:
 - minimising work effort for maximum effect
 - multiple uses for each element in the system
 - more than one way of providing important functions
 - re-using and valuing resources and energy
 - maximising yield and encouraging productivity of the system
 - seeing solutions not problems
 - using vertical space and other edges and connections
 - preventing waste and loss of resources from the system
 - methods of design, such as planning spatially and allowing for overhead and underground structures, shadow, slope and sun angle
- characteristics and interrelationships of integrated plant and animal systems, including:
 - ecological principles
 - climate and weather
 - water
 - soils
 - species identification and selection
 - plants in integrated systems
 - animals in integrated systems
- supply issues for integrated plant and animal system, including:
 - local plant and animal suppliers
 - access to professional services, consultants and contractors
 - availability of local resources and supplies
- patterns in permaculture design, including:
 - patterns in space, such as planting patterns, naturally occurring patterns in nature (radial and bilateral symmetry, spirals, circles, dendritic and mandala patterns)
 - patterns in time, such as succession planting, breeding cycles, seasonality
 - patterns in human culture, such as gardening systems
 - nature as the model for design, such as stacking or layering as with a natural forest
 - gravity as a force for design, such as using contours in design
 - nutrient, water and energy capture, storage and re-use according to the inputs, outputs and intrinsic features of the system
- documentation and drawing skills for developing recommendation.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a site requiring a permaculture system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment used for conducting site observations
 - reference materials
 - drawing tools
- specifications:
 - workplace procedures and processes
 - workplace client brief
 - specific legislation and industry codes of practice
- relationships:
 - client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER415 Plan and implement permaculture works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to prepare and plan permaculture works and implement and monitor the plan, including scoping of the work, planning on-site work health and safety, scheduling equipment, materials and work activity, minimising environmental impact during works, and supervising and monitoring work team activities.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for	1.1 Confirm and verify client preferences and contract requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
permaculture works	1.2 Verify scope of works in permaculture works plan with client 1.3 Verify statutory obligations and permits 1.4 Conduct site visit to confirm details of permaculture works 1.5 Identify health and safety hazards associated with the permaculture works and develop site safety plan 1.6 Verify availability, quantity and costs of plants and materials specified in works plan 1.7 Verify resources, tools and equipment required for permaculture works 1.8 Confirm availability of resources, tools and equipment with suppliers and contractors 1.9 Verify site access and establishment procedures according to works and environmental management plan
2. Plan and schedule permaculture works	2.1 Source tools and materials required for project 2.2 Allocate and schedule materials, resources and work tasks according to specifications and project timelines 2.3 Determine and plan establishment and maintenance phases of works 2.4 Determine impact of seasonal factors on works and incorporate into staging strategy 2.5 Identify potential impediments to implementation, and prepare contingencies 2.6 Collate planning information and prepare a permaculture works plan
3. Implement the permaculture works	3.1 Implement safety plan for permaculture work site 3.2 Oversee supply and delivery of materials and equipment 3.3 Assemble human resources and allocate team leaders 3.4 Conduct briefing sessions for safety and works activities according to safety and works plans 3.5 Supervise progress of works and implement contingencies for discrepancies
4. Monitor and finalise permaculture works	4.1 Monitor environmental impact and implement controls according to environmental management plan

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.2 Monitor resource usage and costs according to budget and planned works 4.3 Inspect site on completion and confirm works outcomes against permaculture works plan 4.4 Confirm and sign off completed works with client and other stakeholders 4.5 Report completion of permaculture works according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Use collaborative and inclusive techniques, including active listening and questioning and reading of verbal and non-verbal signals, to convey, clarify and verify client requirements
Numeracy	<ul style="list-style-type: none"> Apply financial modelling skills to identify, analyse and evaluate budgetary information, time durations and resource allocations for permaculture system works

Assessment Requirements for AHCPER415 Plan and implement permaculture works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, planned and implemented permaculture works and has:

- confirmed and verified planned permaculture works and associated resources and constraints
- developed a staged implementation plan for permaculture works, which must include:
 - amounts and source of resources and materials
 - a schedule of resources, materials and work tasks
 - tools and equipment required
 - plans for establishment and maintenance phases
 - seasonal factors and their impact
 - planned contingencies
 - a documented works plan
- implemented a permaculture works plan, including:
 - communicated works activities and safety requirements to work teams
 - oversaw supply and delivery of resources
 - supervised works progress
 - implemented contingencies for discrepancies
- monitored environment impact and controls and resource usage and costs
- checked completed works against plan and confirmed and signed off works with client and stakeholders
- reported completion according to workplace procedures.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices
- permaculture works, including:
 - implementing permaculture designs
 - following a permaculture works plan as part of a permaculture project
 - constructing permaculture structures and features
 - implementing permaculture earthworks
- practical understanding of the environmental issues associated with undertaking permaculture works, including:
 - use of materials that come from sustainable sources
 - duty of care in conserving site's natural values
 - work practices
 - the use and movement of machinery, storage of materials, removal of weeds and movement of soil and other materials into, across and beyond the site
- principles of ecology, including specific plant and animal relationships and habitat requirements
- statutory compliance and obligations, including:
 - compliance with legislation, ordinances, regulations or bylaws relating to the works or the work site
 - site responsibilities, including work health and safety, industrial relations and equal opportunity and employment
- site evaluation techniques, including methods of analysing soils, waterways and their condition
- practical understanding of the advantages and disadvantages of a range of permaculture procedures
- selection and use of appropriate combinations of machinery and tools
- work health and safety hazards associated with undertaking permaculture works, and the controls necessary to remove or minimise risks associated with them
- contract documentation, including specifications, plans of permaculture works, services, supplies and surveyors documents
- scope of works determination
- works' breakdown into tasks
- scheduling and timeline generation
- task specifications and evaluation.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a permaculture system design or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, equipment, materials and resources for permaculture works
 - site safety equipment
- specifications:
 - workplace policies, procedures, processes
 - manufacturer operating instructions for equipment and machinery
 - budget
 - client brief and permaculture system design
 - specific legislation, regulations and codes of practice for work sites
 - environmental management plan
- relationships:
 - client and stakeholders
 - work team/contractors
- timeframes:
 - according to time specified in schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER416 Manage a seed bank

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to develop and implement a seed collection plan, including extraction, treatment and storage procedures required to maintain a seed collection for a managed seed bank.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

Legislation, regulations and by-laws relating to the collection and removal of plant materials from public and private land apply nationally and in some states, territories and jurisdictions. Users are advised to check with the local relevant authority.

Pre-requisite Unit

Assessment Requirements for AHCPER416 Manage a seed bank

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, managed a seed bank and has:

- planned seed collection program, which must include:
 - plant botanical and vernacular name
 - seed characteristics
 - mapping the location of site and plants on site
 - planning collection strategy according to geography, size and type of plants
 - obtaining approvals according to site tenure
- overseen seed collection activities for program
- developed and monitored safety procedures for seed collection team
- maintained a seed collection to ensure maximum viability
- maintained records, labels and permits for seed collection program.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- flowering biology of the target species
- biological signs that indicate seed crop maturity
- types of seed banks and their purpose, including:
 - community seed banks and networks
 - private and commercial seed collections
 - commercial seed distribution
 - organic food production enterprises
 - heritage and non-hybrid seed collections

- methods of seed collection, including:
 - hand-picking seeds and fruits
 - harvesting plants or plant parts
 - collecting and ripening fruit
 - shaking
- extraction of seed from chaff and waste
- handling of the seed crop after picking
- storage of seed, including:
 - storage containers, including bags, paper envelopes, plastic or glass containers, foil
 - environmental conditions for storage, including cool, dry, dehumidifying agents (silica gel, wood ash), oxygen exclusion techniques and freezer/refrigerator
 - pest deterrent mechanisms
 - light exclusion mechanisms
- documentation of the extracted seed, including:
 - information on provenance
 - botanical name: family, genus, species, variety and/or cultivar
 - common names
 - brief plant description
 - identity of collector
 - date collected or use-by date
 - quantity (by weight or number of seeds)
 - viability test results
 - organic certification of grower
 - growing instructions such as recommended season and spacing
- provenance of seed, including:
 - location and growing conditions of parent plant
 - sub-catchment identification of seed from endemic native plant populations
 - species and/or varieties adapted to local conditions
- collecting ethics, protocols and legislative parameters, including:
 - limits on quantity allowed for collection
 - limits on time period for collection
 - particular use or destination for seed
 - indigenous plant regulatory conditions
 - permits and authorities for site tenure
- safe work practices when harvesting seed, including working at heights.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field for specific seed collection site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment for seed collection
 - health and safety equipment
- specifications:
 - workplace policies, procedures, processes
 - manufacturer operating instructions for equipment
 - specific legislation and codes of practice
- relationships:
 - stakeholders
- timeframes:
 - according to seasonal variations
 - according to seed viability period.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER417 Investigate and recommend species for a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, investigated and recommended species for a permaculture system design and has:

- assessed needs and outcomes of a permaculture system with a client
- identified characteristics of species for a system, which must include each of the following:
 - six (6) plants
 - two (2) animals
 - two (2) invertebrates
 - one (1) microbiological
- investigated and assessed species for each group of species for use in a permaculture system, and their interrelationships
- compiled and documented recommendations and cultural requirements for species meeting identified characteristics for permaculture system
- presented recommendations to client and acted on feedback
- monitored and recorded species and their success in a permaculture system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of permaculture related to needs of species and systems
- fundamentals of biological organisms, interactions, classification and nomenclature, including:
 - plants as produce, fodder, soil improvers, pest control
 - animals as produce, pest control, waste processing, soil improvers
 - invertebrates as food, soil improvers, pests and biocontrol

- common microorganisms used in permaculture, including produce, yeasts and useful bacteria for plant and animal culture
- research methodologies and documenting outcomes of research
- system design process
- permaculture design strategies for species selection and interrelationships
- comparative analysis techniques
- critical evaluation techniques for both written and graphic representations of permaculture design
- dealing with clients
- documenting and presenting recommendations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a permaculture system design or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - research tools and references
- specifications:
 - permaculture design specifications and client brief
 - biological naming convention
- relationships:

Assessment Requirements for AHCPER418 Provide advice on permaculture principles and practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, engaged with a client to provide advice on permaculture principles and practices and has:

- identified requirements for advice and prepared a client brief
- provided general information to support client understanding of permaculture principles and practices
- investigated current principles and practices of permaculture
- investigated permaculture applications for client brief
- documented and provided specific advice on permaculture practices and strategies according to client brief.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- twelve principles of permaculture
- ethics of permaculture, including:
 - care for the earth
 - care for all people
 - fair share of surpluses
 - setting limits to biophysical growth, including population, resource use and waste
- permaculture practices and strategies, including:
 - personal, household, community and bioregional strategies
 - sustainable agriculture, horticulture, aquaculture and organic gardening
 - economic alternatives that support sustainable living
 - low energy and low embodied energy building and manufacturing

- appropriate technology
- restoration ecology and maintenance of biodiversity
- sustainable community development, bioregional development and relocalisation
- reuse and return of products in manufacturing cycle and waste utilisation
- waste water, grey water, sewage and resource treatment for reuse and recycling
- sustainability education
- elements of permaculture systems
- functions of permaculture systems
- permaculture design techniques
- innovation in plant, animal and technology selection, use and performance
- recent practice in bioregional community development and local energy descent planning
- client communication techniques, record-keeping and listening techniques
- preparation of reports and presentations for clients, including:
 - types of presentation of advice, including visual, oral, formal or informal
 - Statements of Limitation and liabilities of stakeholders
 - intellectual property
 - copyright and referencing in documentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a permaculture environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - research tools and equipment
 - analogue and digital reference resources
- specifications:
 - workplace policies, procedures, processes
 - client brief
 - permaculture and organic principles and practices
- relationships:
 - client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to negotiate with clients to develop a design brief, undertake a site assessment, develop design concepts and produce final design specifications for a rural permaculture system.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop a design brief for a rural permaculture system	1.1 Consult with client and determine design objectives for a rural permaculture system 1.2 Determine design context 1.3 Develop and confirm design brief with client 1.4 Negotiate and confirm budget and timelines for design

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	development
2. Undertake design analysis	2.1 Access maps, images and geospatial data for site 2.2 Survey site for Zones 1, 2 and 3 for rural property, and confirm or supplement information of maps and images 2.3 Prepare a site base plan 2.4 Record site survey data on base plan 2.5 Conduct a bioregional analysis for site 2.6 Identify potential permaculture design elements suitable for design brief outcomes 2.7 Assess and select permaculture design elements according to design brief 2.8 Revise and confirm design elements with client
3. Prepare a design concept	3.1 Determine and evaluate a concept for a rural permaculture system 3.2 Prepare concept design drawings 3.3 Identify and document plant and livestock suitable for concept design in a rural setting 3.4 Develop and compile a bill of materials and cost estimates for design elements, plants and livestock 3.5 Prepare a preliminary budget for design concept 3.6 Present concept plan and budget to client for feedback and approval 3.7 Review concept plan and budget according to client feedback
4. Produce final design	4.1 Design rural permaculture system according to design brief and approved concept plan and budget 4.2 Produce drawings and specifications for rural permaculture system design 4.3 Present design plans, drawings and specifications to client for final feedback and approval 4.4 Undertake final revision changes for design according to client feedback and approvals 4.5 Finalise and record design according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Analyse plans and other documentation from a variety of sources, and consolidate information to determine permaculture system requirements and client needs
Writing	<ul style="list-style-type: none"> Prepare and produce client briefs and plans and specifications, including diagrammatic models and plans, to illustrate complex permaculture design principles and requirements
Oral communication	<ul style="list-style-type: none"> Use collaborative and inclusive techniques, including active listening and questioning and reading of verbal and non-verbal signals, to convey, clarify and confirm client requirements
Numeracy	<ul style="list-style-type: none"> Apply financial modelling skills to identify, analyse and evaluate budgetary information, time durations and resource allocations for permaculture system design

Assessment Requirements for AHCPER419 Design a rural permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, designed a permaculture system for a rural property, including:

- consulted and negotiated with client to develop a design brief for a rural permaculture system
- developed concepts and sought feedback and approval from client for a rural permaculture system design
- developed the concept, which must include:
 - analysed zones and sectors relevant to a rural permaculture system design
 - designed elements suitable to a rural property
 - identified and recommended plants and animals suitable for inclusion in a rural environment
 - calculated materials and cost estimates for the concept.

There must also be evidence that the individual has:

- prepared landscape drawings and plans for design, which must include:
 - detail and construction drawings
 - developed planting schedules, budget and specifications
 - developed a final design
- presented a design to client and finalised workplace design procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- elements of rural permaculture design, including:

- representation of 5 zones
- sector analysis
- bioregional analysis
- use of commercial aerial photograph or other geospatial representation on design
- principles and practices of permaculture
- strategies in rural permaculture design, including:
 - land shaping, including contour ploughing, swaling, key points, dam systems, berms and terraces
 - integrated plant and animal systems that suit the bioregion and environmental conditions
 - natural system preservation and incorporation into overall design
 - soil and water preservation
 - forest ecology and recharge plantings for maximum water and nutrient cycling
 - innovative agricultural systems such as cell grazing, inter-cropping, commons and food forests
 - preservation of old and rare breeds of animals
 - biodiversity and habitat preservation and enhancement strategies
- contents of a design brief, including:
 - statement of scope of design
 - statement of client needs and requirements
 - listing of project elements
 - listing of assessable tasks
 - options for dealing with client needs and requirements
- design analysis and research:
 - investigation of books and publications, online material, audio and video material, maps, plans, charts and tables
 - searching geospatial data
 - interviewing local community
- plan interpretation and map reading
- site analysis, including:
 - initial on-site assessment of soil type, pH, texture
 - topography
 - aspect
 - zone and sectors analysis
 - existing vegetation
 - climatic factors
 - indicator species or other landscape-reading notes
- site surveying methods and tools, including:
 - vertical measurements
 - measuring angles

- measuring distance and horizontal measurements
- design concept and methodology, including:
 - preliminary conceptual sketches
 - bubble diagrams
 - preliminary plan, section and elevation design drawings
 - use of design drawing and drafting conventions
 - presentable and legible design drawings
- rural permaculture design principles, including:
 - integration of brief requirements, analytical information and conceptual planning
 - rational justification for placement of design elements
 - integration of elements to produce an efficient and functional rural permaculture system
- drawing conventions for design symbols and those used to convey permaculture elements
- design drafting and drawing conventions
- plant and animal selection
- final design and components, including:
 - rendered plan, elevation and section drawings to scale
 - consistent graphic style
 - legends and keys of elements
 - materials lists, tables, bills of quantity, timelines, installation plans and management plans
 - construction detail drawings
- methods of design:
 - zone and sector planning
 - slope planning
 - patterns in space and time.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a rural environment or an environment that accurately represents rural conditions
- resources, equipment and materials:
 - survey tools and equipment
 - permaculture reference materials
 - drawing equipment and resources
- specifications:
 - workplace procedures
 - workplace client brief

- relationships:
 - client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER420 Design an urban permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, designed a permaculture system for an urban property, including:

- consulted and negotiated with client to develop a design brief for an urban permaculture system
- developed concept ideas and sought feedback and approval from client for an urban permaculture system design
- developed the concept, which must include:
 - analysed zones and sectors relevant to an urban permaculture system design
 - designed elements suitable to an urban property
 - identified and recommended plants and animals suitable for inclusion in an urban environment
 - calculated materials and cost estimates for the concept.

There must also be evidence that the individual has:

- prepared landscape drawings and plans for design, including:
 - detail and construction drawings
 - developed planting schedules, budget and specifications
 - developed a final design
- presented a design to a client and finalised workplace design procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- elements of urban permaculture design, including:
 - representation of zones 1 and 2

- needs supplied by other zones
- sector analysis
- neighbourhood context and bioregional analysis
- design that may utilise existing architects' drawings or local maps and plans
- principles and practices of permaculture in an urban setting
- strategies in urban permaculture design
- edible landscapes and aesthetics in design
- public landscapes and community garden design
- contents of a design brief, including:
 - statement of scope of design
 - statement of client needs and requirements
 - listing of project elements
 - listing of assessable tasks
 - options for dealing with client needs and requirements
- design analysis and research techniques
- plan interpretation and map reading
- site analysis, including:
 - site boundaries and contours
 - location of existing infrastructure and features
 - location of services and access points to meters (power, water, sewer, gas)
- site surveying methods and tools, including:
 - vertical measurements
 - measuring angles
 - distance and horizontal measurements
- design concepts, including:
 - preliminary conceptual sketches
 - bubble diagrams
 - preliminary plans, sections and elevations
- design drawing and drafting conventions, including symbols
- presentable and legible design drawings for urban systems suitable for client use
- plant and animal selection
- final design, including:
 - rendered plan, elevation and section drawings to scale
 - design drawing and drafting conventions
 - consistent graphic style
 - legends and keys of elements
 - materials lists, tables, bills of quantity, timelines, installation plans and management plans
 - construction detail drawing
- methods of design, including:

- zone and sector planning
- slope planning
- patterns in space and time.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an urban environment or an environment that accurately represents urban conditions
- resources, equipment and materials:
 - survey tools and equipment
 - permaculture reference materials
 - drawing equipment and resources
- specifications:
 - workplace procedures
 - workplace client brief
- relationships:
 - client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER421 Select appropriate technology for a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to identify permaculture needs, investigate options and select technology solutions that are small-scale, promote autonomy and are sustainable for a permaculture system within a geographic area.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for AHCPER421 Select appropriate technology for a permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, selected appropriate technology for inclusion in permaculture system design and has:

- identified and confirmed permaculture system requirements for appropriate technology with client
- investigated appropriate technology options for permaculture system requirements
- evaluated appropriate technology options most suited to permaculture system design
- documented and confirmed selection of appropriate technology option with client
- amended permaculture design with appropriate technology option.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and ethics
- definition of appropriate technologies and common considerations, including:
 - energy technologies
 - alternative and resource conserving technologies
 - building technologies
 - tools and implements employed in gardening and farming operations
 - lifestyle choices and behavioural adjustments to conserve energy and resources to meet sustainability objectives
 - smaller scale and low-cost solutions to everyday activities
- ingenuity applied to complex problems to develop simple solutions
- criteria for determining appropriateness of energy and resource conservation technologies
- principles of passive solar design, embodied energy and carbon emission reduction
- role of innovations in appropriate technologies

- role of appropriate technology in energy descent planning and greenhouse gas emission reduction
- types of appropriate technology systems commonly available and applied to the design of energy and resource conscious houses, farms, offices and community projects
- the benefits from combining a number of different appropriate technologies and the limitations of each different technology
- design of systems integrating appropriate technologies.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a permaculture system design or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - reference material for technologies
- specifications:
 - workplace policies, procedures, processes
 - client brief
- relationships:
 - client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER422 Identify and analyse bioregional characteristics and resources

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to identify and source information, analyse and extract relevant data and provide information on bioregional characteristics and resources.

The delivery and assessment for this unit of competency in an Aboriginal and/or Torres Strait Islander context must comply with community protocols and guidelines and be supported by Elders and Custodians of Country.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCPER422 Identify and analyse bioregional characteristics and resources

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified and analysed information on a bioregion and presented information in a report and has:

- identified sources of information on bioregional characteristics and resources
- organised investigative team to extract information on bioregional characteristics and resources
- compiled and checked information against stakeholder requirements
- planned and prepared a report on bioregional characteristics
- prepared and delivered a presentation of report according to stakeholder requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- bioregional characteristics and resources, including:
 - a bioregion as a land and water territory whose limits are defined not by political boundaries, but by the geographical limits of human communities and ecological systems
 - a town or a segment of a city as typical as the main node of a bioregion, as was the pattern of most settlement and economic development until the 20th century
 - water catchment as one of the key identifiers of the bioregion, with the water catchment, storage, use/treatment of effluent and the water quality of rivers and creeks
 - Ecological Vegetation Class (EVC) of the area or the population of endemic species, as well as the suitability of any other species to grow or breed in the area
 - history, social make-up, land use and population information that go towards understanding an area

- bioregional resources, including the human and social capital or culture of an area, its capacity to produce its own needs and supply surplus to others and its resilience in responding to change or catastrophe
- the natural (biophysical), built, social and cultural elements of the area, including water supply and catchment management systems, transport systems, local exchange trading systems (LETS) and cooperatives, food supply systems, fuel and fibre supply systems
- data held by local councils, community groups, historical societies, individuals and organisations that adds value to a study of the bioregion
- bioregional issues, including:
 - transition initiatives
 - local food and water security
 - bioregional self-reliance regarding other components of daily life from local sources as opposed to importing basic needs from long distances at a high cost to the environment
- embodied energy, including:
 - how to measure energy inputs for consumable items
 - compared with energy output over the life of the item
 - waste disposal of an item as part of its energy 'cost'
- types of information sources
- methods and means of accessing data and extracting relevant information
- report writing, including planning, structure and format
- presenting reports and information to stakeholders, including:
 - types of media
 - methods of presenting
 - formatting information
- methods of reviewing, validating and checking reliability of information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a specified bioregion or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment to conduct research
 - sources of information on bioregion
- specifications:
 - workplace policies, procedures, processes
 - stakeholder brief and specification
- relationships:
 - stakeholder(s)

- team member.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER423 Design harvesting and storage systems for permaculture products

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to determine requirements for optimum conditions and plan for harvesting and storage of produce to meet year-round supply of fresh and stored products from a permaculture system.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

Licensing, legislative or certification requirements may apply to this unit where permaculture produce used for human consumption is handled, processed or distributed. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, designed a harvesting and storage system for produce harvested from a permaculture system and has:

- determined harvesting, post-harvest and storage system requirements with stakeholders
- identified requirements for maintaining optimum condition of produce from a permaculture system
- identified resource requirements, which must include:
 - location
 - materials and layout
 - budget
- prepared a harvesting and storage plan
- assessed training needs
- documented harvesting and storage system
- communicated harvesting and storage system to stakeholders.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- products commonly harvested and stored from a permaculture system
- design systems for meeting year-round supplies of fresh and stored produce, including:
 - growing requirements and crop regulation strategies
 - calendar or seasonal chart with planting times of crops
 - selection of early, mid-season and late season varieties to extend harvest
 - number of plants and area to be planted

- crop regulation and maintenance program involving tipping, mounding, thinning, staking
- sequential planting and/or harvesting schedules
- climatic conditions for harvesting crop, including appropriate time of day
- harvest and post-harvest factors influencing plant metabolism and quality
- post-harvest treatment and preparation, including:
 - flow chart of harvest, treatment, preservation and storage process
 - harvest and post-harvest treatment timelines and schedules
 - design or plans of processing and storage area
 - design of processing technology or equipment, including solar food dryer
 - materials, tools, equipment and ingredients
 - manuals and operating instructions for equipment
 - recipes and instructions
 - anticipated shelf-life of product
 - labelling and recording systems
 - work health and safety, food safety, hygiene and other relevant enterprise and work practices
- preservation methods and processes for produce
- technologies used in crop processing, treatment, preservation and storage systems
- design of storage areas
- developing planting and harvesting schedules for products from a permaculture system
- identifying training needs for harvest and storage workers, including:
 - work health and safety, and other relevant enterprise and work practices
 - food safety and hygiene standards
 - appropriate clothing and personal protective equipment (PPE)
 - harvest and post-harvest handling, processing and storage practices
 - food preserving techniques
 - operation and maintenance of tools and equipment
 - reporting, recording and labelling procedures
- preparing plans and reports
- food safety, health and hygiene requirements for preservation and storage of products for human consumption.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a poly-cropping system or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- crops, preservation treatments and storage information
- specifications:
 - safety data sheets
 - stakeholder specifications
 - specific legislation, regulations and codes of practice for food handling and storage
- relationships:
 - stakeholders
- timeframes:
 - according to timeframes specified for storage system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER424 Recommend approaches for sustainable community and bioregional development

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to develop processes to consult and communicate with stakeholders in order to recommend approaches for sustainable community and bioregional development.

The delivery and assessment for this competency standard in an Aboriginal and/or Torres Strait Islander context must comply with Community protocols and guidelines and be supported by Elders and Custodians of Country.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has recommended approaches for at least one sustainable community and bioregional development project and has:

- identified and developed strategies, procedures and processes to communicate with stakeholders
- communicated effectively with stakeholders and diverse community groups and cultures
- identified and communicated potential approaches for sustainable community and bioregional development
- evaluated sustainable community and bioregional development options with community groups.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles governing sustainable community and bioregional development
- options for sustainable community and bioregional development, including:
 - local food security initiatives
 - community gardens and city farms
 - climate action and energy descent initiatives
 - transition towns programs
 - community education and outreach
 - local economy and trade, including complementary currencies
 - sustainable enterprise and business development
 - social wellbeing and welfare services

- renewable energy production
- landcare and environment programs
- sustainable agriculture and land use
- sustainable forestry and reforestation
- catchment and water resources management
- sustainable development and housing
- waste reduction and recycling
- sources of relevant materials and verbal information
- cultural protocols and perspectives, including:
 - beliefs, religion and taboos
 - world views, including mythological, political, social, biological
 - acceptable modes of communication/language
 - body language
 - concepts of family and community
 - community leadership
 - relationships between community members, ages and sexes
 - acceptable modes of dress
- relevant legislation and guidelines
- principles of equal opportunity and affirmative action
- community governance, financial systems, legal and health systems
- current relationships between culturally diverse groups in the area
- understanding of the role of various sections of the community in historical and relationship terms.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a community environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - research tools and information on sustainability and bioregion
- specifications:
 - workplace policies, procedures, processes
 - community development projects
- relationships:
 - diverse community groups
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER425 Operate within a sustainable community and bioregional development program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to assess community energy descent, diverse community group dynamics and issues, and sustainable bioregional issues, while operating within a sustainable community and bioregional development program.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, operated within a sustainable community and bioregional development program and has:

- investigated and clarified issues and associations of a community and a bioregion
- worked within an existing sustainable community or bioregional development program, including:
 - identified key issues and objectives
 - identified key policies, procedures and strategies
 - worked collaboratively to support or effect change
 - implemented communication strategy with stakeholders
- participated in ongoing development of a sustainable community or bioregional development program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of sustainable community and bioregional development
- sustainable community and bioregional development programs, including:
 - transition towns group activities or programs
 - climate change programs
 - peak oil or peak resource programs
 - alternative economic systems, such as local exchange trading systems
 - environmental, water catchment and natural resource conservation projects
 - social and cultural programs
 - housing and community development programs

- community supported agriculture, organic and sustainable primary production and consumer networks and programs
- energy descent action planning
- local food and water security projects
- renewable energy and appropriate technology projects
- greenhouse emission reduction and sequestration projects
- community profile development
- community consultation and facilitation methodologies, including:
 - team and community building activities
 - community forums and discussion
 - open space events
 - cultural mapping processes
 - creative problem-solving processes
 - visualisation and experiential processes
 - information gathering processes
 - group dynamics and conflict resolution strategies.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an active sustainable community and bioregional development program or an environment that accurately represents workplace conditions
- specifications:
 - workplace policies, procedures, processes
 - sustainable community and bioregional development program and specifications
- relationships:
 - diverse community groups
 - key stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER513 Plan and conduct field research

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to plan, develop methodology for and implement field research. It requires the ability to determine research questions, design technical and/or social field research, and prepare, conduct, assess and report on field research outcomes for a specific industry sector.

The unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, planned and conducted field research relevant to a specific industry sector and has:

- formulated and justified research questions
- designed a field research plan
- conducted research and evaluated information
- entered, analysed and organised data quantitatively and qualitatively, which must include at least one of the following according to research plan:
 - charts
 - tables
 - graphs
- produced written reports on research outcomes and provided conclusions based on evidence and reasoned argument for stakeholders.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- potential research opportunities for the specific industry sector
- field research data collection techniques, including:
 - interviews for individuals and groups
 - use of historical records, data
 - conducting observations, surveys and questionnaires
- research methodologies, including:
 - qualitative, quantitative and mixed methodologies
 - action research

- needs studies
- case studies
- statistical sampling
- technologies for communications
- field research plan design
- beneficiaries of the research for specific industry sector
- research ethical standards
- scientific and mathematical research approaches, data collection, processing and analytical techniques and procedures
- auditing and reporting procedures
- research planning and budgeting
- field research health and safety procedures
- research report writing and presentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field specific to the industry sector or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - industry specific research materials and field research data
- specifications:
 - workplace policies, procedures and processes
 - research ethical standards
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER514 Design an integrated permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to design integrated permaculture systems in a range of contexts, including developing a design brief, undertaking a site analysis, developing conceptual designs and producing a final design drawing and specifications.

The unit applies to individuals who apply specialised skills and knowledge, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCPER514 Design an integrated permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has designed an integrated permaculture system for at least two (2) sites, which must include:

- a rural environment
- an urban environment.

There must also be evidence that for each design the individual has:

- developed a design brief with a client, which must include:
 - design scope and objectives
 - design context
 - cost structure
 - timelines
- conducted a site analysis and site survey
- prepared a base plan for design development
- provided design solutions for both urban and rural permaculture systems
- analysed permaculture zones and sectors of a site
- developed concept design, which must include:
 - conceptual themes and patterns
 - location and layout of proposed design elements
- developed planting schedules and bills of quantity
- developed a design budget
- developed final design drawings, including elevations and projections, using industry recognised drafting and drawing techniques.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and elements of integrated permaculture design, including climate change science and mitigation strategies
- strategies for urban and rural permaculture design
- legislative and regulatory requirements of design elements
- strategies for community settlement development and working with planning authorities
- design brief elements, including:
 - scope and objectives of design
 - client needs and requirements
 - project elements
 - assessable tasks
- social and community research and development
- structures and features required for design, and identifying the needs for building permits
- design analysis and research techniques
- plan interpretation and map reading
- site surveying methods and tools, including:
 - measurement and mapping of site boundaries
 - mapping of contour lines
 - location of existing infrastructure and natural features
 - use of surveying instruments
 - digital survey technologies
 - linear measuring devices
- design concepts and detailed design drawing elements, including:
 - client details and site location
 - property boundaries, scale and north point
 - authors of plans, contact details
 - address of site
 - date plan drawn
 - existing infrastructure and natural features
 - drawing scale
 - relevant overlays and drawing numbers
 - plan size and format
 - overlays, including fire, flora and fauna, soil and geology, local planning ordinances, buffer and riparian zones, use zones, cultural and heritage zones
 - indicators of gradient and contour lines, including drainage features
- permaculture design methods
- conventional design symbols
- design drafting, drawing conventions and drafting technologies

- plant and animal selection.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a site suitable for an integrated permaculture system or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - drawing tools and permaculture system equipment
 - research material
- specifications:
 - workplace policies, procedures, processes
 - client brief
 - specific legislation and codes of practice
- relationships:
 - client
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

	1.4 Determine client support for use of consultants and sub-contractors 1.5 Document brief and seek approval from client to proceed
2. Undertake a site analysis	2.1 Inspect site where permaculture structure or feature is to be located 2.2 Record the physical elements and features of site 2.3 Analyse and record assessment of soil, topography, aspect, existing vegetation and climatic factors 2.4 Assess and record other relevant information impacting design 2.5 Assess engineering and legislative requirements and constraints on development
3. Develop a concept design	3.1 Prepare concept plan to illustrate location and layout of proposed structure or feature according to brief 3.2 Undertake consultation with client to agree on options and approaches for development 3.3 Present concept plan according to brief and industry standards 3.4 Communicate legislative requirements affecting proposed design
4. Produce a plan and documentation	4.1 Produce detailed plans and drawings according to design brief, engineering principles and legislative requirements 4.2 Provide supporting documentation for design plan 4.3 Develop a schedule of works for construction of designed structure or feature
5. Prepare documentation	5.1 Prepare bill of materials, labour and equipment for scope and extent of works 5.2 Prepare cost estimate covering items in bill of materials 5.3 Communicate planning or building applications procedures to client where legislative requirements have been identified

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Assessment Requirements for AHCPER515 Design permaculture structures and features

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared a design of at least one permaculture structure or feature and has:

- developed a design brief
- undertaken a site analysis
- developed a concept design
- produced a plan for design with supporting documentation
- produced a bill of materials and cost estimates for the design
- ensured design complies with engineering principles and legislative requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture design process, including:
 - site survey
 - needs analysis
 - bioregional analysis
 - zone and sector analysis
- construction and engineering principles for structures and features, including:
 - basics of forces and loads
 - construction materials, sizing and basic computations
 - basics of soil and foundations to support structures and features
- legislative requirements and responsibilities impacting structural elements, including:
 - application of building codes and standards
 - permits for planning and construction, and the application process

- environmental legislation
- drafting techniques and plan documentation
- cost estimating
- environmental, resource and energy implications of building materials, including:
 - thermal mass
 - insulation
 - embodied and embedded energy
 - cradle to grave planning
 - passive heating and cooling systems
- use of less traditional building materials and techniques, including:
 - earth
 - straw bale
 - pole construction
 - passive solar.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a permaculture system project or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - planning and drawing tools and equipment
- specifications:
 - building codes and engineering standards
 - specific legislation and industry codes of practice
- relationships:
 - client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER516 Facilitate participatory learning activities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to devise strategies for facilitating participatory learning and to implement, review and report on participatory learning activities.

The unit applies to individuals who apply specialised skills and knowledge, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Devise strategies for facilitation of participatory learning	1.1 Identify and assess participatory learning facilitation strategies 1.2 Identify and profile client group 1.3 Clarify learning objectives and outcomes 1.4 Assess resources required to conduct participatory learning

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Identify learning environment for client group and learning activities 1.6 Select participatory learning strategies suitable to stakeholder involvement 1.7 Prepare and circulate program and logistical details to stakeholders 1.8 Verify selected strategies comply with legislative and organisational requirements
2. Carry out participatory learning activities	2.1 Prepare learning resources according to strategy and stakeholder needs 2.2 Brief facilitators and participants involved in participatory learning activities on processes of delivery 2.3 Prepare and provide supplementary information to participants and stakeholders according to planned activity 2.4 Implement access and equity requirements in participatory learning activities 2.5 Implement participatory learning activities according to planned timeframe 2.6 Ensure stakeholders engage in participatory learning activity effectively
3. Report on and review participatory learning	3.1 Seek feedback from stakeholders on participatory learning activity 3.2 Collate and analyse feedback from stakeholders 3.3 Implement improvements to future participatory learning activities according to feedback 3.4 Summarise feedback and adopted improvements and provide to interested stakeholders 3.5 Identify and direct issues raised during participatory learning to relevant stakeholders for follow-up 3.6 Review and evaluate the overall effectiveness of participatory learning activities 3.7 Report on participatory learning activity according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Establish and maintain complex and effective communication during negotiations, discussion, feedback and confirmation of learning activities with stakeholders, demonstrating a depth of understanding of complex oral texts and conventions

Assessment Requirements for AHCPER516 Facilitate participatory learning activities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, planned and facilitated a participatory learning activity and has:

- devised strategies for facilitating participatory learning
- facilitated the group processes in an engaging and inclusive way
- conducted participatory learning activities and ensured:
 - stakeholders participated in decision-making
 - the needs of stakeholders were considered
 - the points of view of stakeholders were also considered
- engaged effectively with people of a wide diversity of ages and socio-economic or cultural groups
- reviewed and reported on participatory learning
- coordinated and briefed team members
- problem-solved and built group dynamics.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- learning styles and methodologies, including accelerated and experiential learning
- strategies for facilitation of participatory learning
- participatory learning activities and processes
- conflict resolution and strategies to deal with strong personalities
- codes of conduct and ethical behaviour
- group presentation methodology.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a group of diverse participants in a venue representative of participatory learning activity or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - planning tools and equipment
- specifications:
 - workplace policies, procedures, processes
 - specifications
- relationships:
 - participants and stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER517 Plan and supervise the implementation of permaculture project works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to scope, plan and implement a permaculture project, including identifying and preparing site health and safety procedures, scoping and planning the equipment and materials required, scheduling and sequencing the work, organising and supervising project works, and monitoring quality for a permaculture project.

The unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They take accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCPER517 Plan and supervise the implementation of permaculture project works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, planned and supervised the implementation of a permaculture project and has:

- determined and reviewed project scope of work
- inspected site and verified site characteristics against project plan, including:
 - biophysical
 - environmental
 - historical
- assessed and resolved site technical challenges associated with implementation of permaculture works
- prepared schedules for implementation of permaculture works
- prepared a staged permaculture works plan
- prepared site-specific health, safety and environmental procedures
- engaged and briefed human resources on works and health and safety
- supervised permaculture project works and monitored and rectified quality issues
- inspected and finalised project works with client.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture and organic principles and practices
- types and characteristics of permaculture project works, including:
 - food and community gardens
 - urban and rural permaculture systems
 - aquaculture, horticulture, forest systems

- agriculture grazing and pasture systems
- integrated food, fibre and energy systems
- permaculture infrastructure requirements
- sustainable soil management
- water management and distribution
- natural ecosystem conservation and regeneration
- permaculture design techniques, including zone and sector planning
- physical and biophysical factors of a site, including:
 - location and boundaries of site
 - environmental considerations
 - site access issues
 - utility service
 - adjacent landholder considerations
 - security issues
 - climatic conditions, including rainfall, humidity, wind and sunlight intensity
 - soil types and characteristics, including nutrients and deficiencies
 - property characteristics, including slope, aspect, natural and artificial watercourses, outcrops of rock, presence of significant vegetation
 - weeds and existing plants
 - feral or indigenous animals and their management
- practical understanding of the environmental issues associated with undertaking permaculture works, including:
 - use of materials that come from sustainable sources
 - duty of care in conserving sites natural values
 - work practices
 - the use and movement of machinery, storage of materials, removal of weeds and movement of soil and other materials into, across and beyond the site
- principles of ecology, including specific plant and animal relationships and habitat requirements
- statutory compliance and obligations, including:
 - compliance with legislation, ordinances, regulations or by-laws relating to the works or the work site
 - site responsibilities, including OHS, industrial relations and equal opportunity and employment
- site evaluation techniques, including methods of analysing soils, waterways and their condition
- soil conservation, erosion control and enhancement techniques and their advantages and disadvantages in reference to specific sites and habitats
- selection and use of machinery and tools
- work health and safety hazards, risks and controls
- contract documentation, including specifications, plans of permaculture works, services, supplies and surveyors documents

- planning and documenting project works, including:
 - scope of works
 - statement of works
 - works breakdown into tasks
 - scheduling and timelines
- quality assurance in project works, including interpretation and evaluation of specifications.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a permaculture system project or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, equipment and resources of permaculture works
 - personal protective equipment
 - materials for project
- specifications:
 - workplace policies, procedures, processes
 - manufacturer operating instructions for equipment and machinery
 - safety data sheets
 - project plans and specifications
 - specific legislation and industry codes of practice
- relationships:
 - clients
 - work team and other stakeholders
- timeframes:
 - according to times specified in project plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER518 Manage a permaculture aid and development project

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to plan, resource, develop and manage a permaculture aid and development project for vulnerability, disaster, relief and response issues for remote communities.

The delivery and assessment for this competency standard in an Aboriginal and/or Torres Strait Islander context must comply with Community protocols and guidelines and be supported by Elders and Custodians of Country.

The unit applies to individuals who apply specialised skills and knowledge, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Obtain information on aid project	1.1 Contact peak aid organisation or agency to obtain information about aid projects 1.2 Research projects and their outcomes 1.3 Research location of remote community and cultural protocols
2. Develop a plan for project in consultation with others	2.1 Establish nature of project, issues and key stakeholder 2.2 Coordinate with other organisations involved in aid project and clarify responsibilities 2.3 Establish initial communication channels 2.4 Confirm budget allocations and allowances attached to project 2.5 Document permaculture aid and development project as a strategic plan 2.6 Distribute strategic plan according to project guidelines
3. Obtain resources and confirm logistics for transportation to remote location	3.1 Negotiate material resources, equipment and other needs with remote community 3.2 Follow communication protocols for culturally sensitive communities 3.3 Arrange transportation to remote location according to project procedures and cultural protocols 3.4 Monitor transportation phase
4. Organise human resources and confirm transit and living arrangements, food and supplies for staff	4.1 Interview and engage stakeholders 4.2 Confirm living arrangements with stakeholders at remote community 4.3 Confirm food and supply procedures for aid team separately to project arrangements 4.4 Document and communicate arrangements to aid team 4.5 Brief aid team on arrangements and project before departure
5. Document emergency plan	5.1 Document emergency plan with aims and objectives for project 5.2 List strategies for achieving emergency aims 5.3 Allocate personnel and resources to strategic actions 5.4 Include benchmarks and timeline for operations 5.5 Include processes, procedures and communication lines for

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	adoption by aid team
6. Implement a permaculture aid and development project	6.1 Maintain regular communication with aid team 6.2 Identify, troubleshoot and resolve issues that arise during project 6.3 Document roll-out of aid and development plan 6.4 Identify and rectify omissions and misunderstandings in a timely manner 6.5 Monitor and simplify reporting procedures to minimise stress for aid team 6.6 Action team requests in a timely manner 6.7 Debrief aid team on return 6.8 Maintain detailed records according to project guidelines and workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and extract relevant information from complex texts, reports, maps and plans, including legislation and regulations, policies and procedures, to formulate organisational strategies for preparing to manage aid and development projects
Writing	<ul style="list-style-type: none"> Prepare management documentation, expressing ideas and exploring complex issues to produce structured procedural texts which are constructed logically, succinctly and accurately
Oral communication	<ul style="list-style-type: none"> Establish and maintain complex and effective communications in a culturally diverse range of contexts, displaying a depth of understanding of oral texts
Numeracy	<ul style="list-style-type: none"> Use highly developed numeracy skills to interpret complex financial information, perform calculations and translate financial and budgetary obligations of the aid and development project

Assessment Requirements for AHCPER518 Manage a permaculture aid and development project

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed at least one permaculture aid and development project and has:

- obtained information about the permaculture aid and development project
- developed a plan for an aid and development project in consultation with stakeholders
- obtained resources for the permaculture project
- obtained human resources for the permaculture project
- documented the emergency plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles, ethics and practices related to aid and development in remote communities and overseas
- permaculture aid and development projects, including:
 - disaster response and recovery
 - disaster planning
 - community projects in remote communities
 - social and economic development projects
 - educational projects in remote communities
 - health and wellbeing projects in remote communities
 - resource management project for remote communities
 - sustainable farming projects
 - regional autonomy projects
- strategic planning

- project management principles and processes
- research and development
- community development
- cultural protocols and taboos
- religious practices and sensitivities
- engineering issues associated with remote area power supply, water supply, sewerage and waste treatment, erosion and sediment control, structural support and emergency housing
- feasibility studies and methods, including:
 - economic and financial assessment
 - legal and planning issues
 - market opportunities and challenges
 - community and cultural acceptance
 - bioregional suitability
 - operational considerations
 - resource availability
 - sustainability criteria
 - energy descent/transition strategies
 - climate change strategies
 - environmental, water catchment and natural resource conservation issues
- contract law
- budgetary frameworks
- benchmarking.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a permaculture aid and development project in a remote community or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - resources required by project
- specifications:
 - workplace policies, procedures, processes
 - permaculture aid and development project
 - specific legislation/codes of practice
- relationships:
 - remote community
 - stakeholders
 - aid team member
- timeframes:

- reporting and actions in a timely manner.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER601 Develop a strategic plan for a permaculture project or enterprise

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed at least one strategic plan for a permaculture project or enterprise, which must represent a time period of at least two (2) years, and has:

- consulted with client and stakeholders and developed a strategic plan brief
- acquired, researched and analysed project information and resources
- documented a strategic plan
- evaluated the vision statement
- presented strategic plan for review, interpreted feedback and amended strategic plan according to feedback.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles, ethics and practices
- permaculture values
- permaculture projects or enterprises
- strategic planning, including:
 - vision statement
 - project or enterprise goals
 - strategies
- action plans – sequences of smaller steps necessary to achieve strategies, including timelines and benchmarks
- community development
- project management
- feasibility study methodology

- contract law
- budgetary frameworks.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a permaculture project or enterprise, or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment required to prepare documents
- specifications:
 - workplace policies and procedures
 - stakeholder and client brief
 - legislation and regulations
 - industry codes of practice
- relationships:
 - client and stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPER602 Plan community governance and decision-making processes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to assess the needs for a community governance and decision-making process, develop options and frameworks for a community governance and decision-making process, and implement a community governance and decision-making process.

The unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess current community governance and decision-making	1.1 Research and define characteristics and social structure of community

Assessment Requirements for AHCPER602 Plan community governance and decision-making processes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and implemented a community governance and decision-making process and has:

- researched and defined the community characteristics and social structure and identified key stakeholders
- assessed and considered outcomes of current community governance and decision-making process
- developed options for community governance and decision-making process
- planned and documented community governance and decision-making process, which must include:
 - communication and consultation with community
 - determined legal framework
 - documented decision-making framework
 - documented governance framework
- monitored and reported outcomes of community governance and decision-making process
- reviewed and revised process from community feedback.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- community governance and decision-making processes, including:
 - governance of community resources, enterprises and activities
 - meeting facilitation, negotiation and mediation
 - conflict resolution procedures
 - decision-making methodologies
 - consensus processes

- qualified decision-making processes
- protocols
- codes of conduct
- recording and sorting decisions, such as Many Baskets process (Robin Clayfield)
- characteristics and social structures affecting governance, including:
 - community goals
 - institutions and groups
 - existing skills, resources and needs
 - individual members and their roles and responsibilities
 - beliefs
 - communications
 - physical, virtual or psychological boundaries of the community
- strategic planning procedures
- community needs analysis techniques
- opportunities and constraints for community development, including:
 - seeing solutions rather than problems
 - viewing the negative in a positive light
 - modifications or extensions of existing systems to solve inherent problems
 - applying old or simple technology to new or complex problems
 - behaviour change, including organisational change and transformation
 - willingness or unwillingness to participate
 - legal framework requirements
 - vested interests and hidden agendas
- advanced negotiation techniques
- organisational change and development
- group and individual goal setting techniques
- risk management processes and techniques
- action planning methods
- information technology
- legal frameworks obligations and responsibilities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a community or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - research tools and resources
- specifications:

-
- community and workplace policies, procedures, processes
 - legislation and regulations
 - relationships:
 - community members.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPER603 Prepare a sustainable community and bioregional development strategy

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, prepared a sustainable community and bioregional development strategy and has:

- investigated and analysed community characteristics, structure and needs and prepared a brief for a strategy
- consulted community stakeholders and planned processes to ensure effective communication
- identified strategies suitable for community objectives and outcomes
- designed organisational structures to support strategic outcomes
- documented a community and bioregional development strategy.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- permaculture principles and practices related to bioregional development
- bioregional analysis and development
- community responses to climate change, Peak Oil and resource depletion
- types of community or bioregional development strategies
- strategic planning framework, including:
 - core values
 - vision
 - goals
 - strategies
 - action plans
 - benchmarks
 - timelines

- community profile development, consultation and facilitation methodologies
- information gathering processes
- structure, processes and characteristics of community organisations, including:
 - non-government organisations
 - government organisations
 - cooperatives
 - incorporated and non-incorporated groups
 - companies both limited and unlimited
 - public companies both listed and unlisted
 - trusts
- funding sources, their policies and strategies for encouraging community participation, including grants, gifts and crowd-sourced funding
- relevant local, state and federal strategies and legislation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a community or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - research tools and references of the development strategy
- specifications:
 - workplace policies, procedures, processes
 - specific legislation and codes of practice
- relationships:
 - community and key stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD102 Support gardening work

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to undertake routine gardening work under direct supervision and to support the gardening work of others.

The unit applies to individuals who support gardening work while working alongside a supervisor, exercising limited autonomy within established and well known parameters. They identify and seek help with simple problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Parks and Gardens (PGD)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for gardening work	1.1 Collect required materials, tools and equipment according to lists provided and supervisor instructions 1.2 Fit and use personal protective equipment (PPE) applicable to job requirements 1.3 Use correct manual handling techniques when loading and unloading materials

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Check and report faulty or unsafe tools, equipment and PPE to supervisor 1.5 Recognise and report workplace hazards to supervisor
2. Undertake gardening work as directed	2.1 Follow instructions and directions provided by supervisor, and seek clarification when necessary 2.2 Interact with staff and customers in a professional manner 2.3 Handle and dispose of materials according to workplace practices and procedures 2.4 Maintain a clean and safe work site while undertaking gardening activities 2.5 Undertake gardening work in a safe and environmentally appropriate manner 2.6 Report problems or difficulties in completing work to required standards or timelines to supervisor
3. Handle materials and equipment	3.1 Handle and transport materials, tools and equipment according to supervisor instructions and workplace procedures 3.2 Store, recycle or dispose of waste material and debris according to supervisor instructions
4. Clean up on completion of gardening work	4.1 Restore site according to supervisor instructions 4.2 Clean and store materials, tools and equipment according to supervisor instructions 4.3 Report work outcomes and faults, wear or damage of tools to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has supported gardening work on at least two occasions, and has:

- prepared tools and equipment
- applied safe work practices in gardening work, including fitted and used personal protective equipment (PPE)
- handled materials and equipment
- undertaken gardening work as directed
- cleaned up on completion of gardening work
- reported work outcomes and faulty, worn or damage of tools.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of gardening work, including:
 - garden tools and equipment
 - maintenance practices for planted areas
 - planting techniques
- safe work practices used in gardening work.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions

- resources, equipment and materials:
 - work instructions and workplace procedures applicable to supporting gardening work
 - gardening materials, tools and equipment
 - PPE applicable to supporting gardening work
- relationships:
 - supervisor, staff and customers
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPGD207 Plant trees and shrubs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planted trees and shrubs on at least three occasions including at least two of the following:

- bare rooted, tube stock, potted or bagged plants

and has:

- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- prepared, used and maintained tree and shrub planting tools, equipment, material and plants
- inspected plant and root ball condition
- excavated planting holes
- applied soil treatments and amendments
- installed plant protection, stakes and ties
- applied mulch
- cleaned up the site and disposed of or recycled waste
- reported tree and shrub planting operations and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for planting trees and shrubs, including:
 - basic plant structure, physical and nutritional requirements of plants
 - basic botany and plant physiology applicable to planting trees and shrubs
 - factors affecting the timing and method of tree or shrub planting
 - initial establishment needs of young plants

- common plant and root ball problems
- types and use of plant protection
- mulches and fertilisers
- planting techniques relating to specific species
- soil and root ball amelioration techniques
- effects of environmental conditions on plant growth
- methods of disposing of waste to minimise damage to the environment
- the impact of planting activities on the surrounding environment
- workplace requirements applicable to health and safety in the workplace for planting trees and shrubs, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - materials, tools and equipment applicable to planting trees and shrubs
 - trees and shrubs
 - tree protection material
 - PPE applicable planting trees and shrubs
- specifications:
 - workplace requirements applicable to health and safety in the workplace and planting trees and shrubs
- relationships:
 - supervisor
- timeframes:

AHCPGD209 Prune shrubs and small trees

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to prune shrubs and small trees that are less than three meters in height, including identifying pruning requirements, undertaking pruning and completing pruning work.

The unit applies to individuals who prune shrubs and small trees under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Parks and Gardens (PGD)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify pruning requirements	1.1 Confirm plants that require pruning and pruning method with supervisor 1.2 Identify workplace health and safety hazards, assess risks and report to supervisor 1.3 Check and confirm proximity of powerlines and obstacles with supervisor

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Select, prepare and use pruning tools and equipment appropriate for the location, access and size of material to be pruned 1.5 Select, fit and use personal protective equipment (PPE) applicable to the task 1.6 Carry out pre-operational and safety checks on pruning tools and equipment
2. Undertake pruning of shrubs and small trees	2.1 Operate machinery, equipment and tools as directed 2.2 Carry out pruning as directed 2.3 Use correct manual handling techniques when lifting or moving heavy loads
3. Complete work	3.1 Remove and dispose of or recycle rubbish and plant waste material 3.2 Clean, maintain and store tools and equipment 3.3 Report work outcomes and malfunctions, faults, wear or damage of tools to supervisor

Assessment Requirements for AHCPGD209 Prune shrubs and small trees

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has pruned at least three different shrubs and small trees using the following:

- secateurs
- loppers or extension loppers
- shears
- pruning or pole saws

and has:

- identified plant pruning requirements
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- prepared, used and maintained shrubs and small trees pruning tools and equipment
- cleaned up the site and disposed of or recycled waste
- reported tree and shrub planting operations and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of pruning, including:
 - basic botany and physiology applicable to pruning shrubs and small trees
 - correct and safe use and care of tools and equipment
 - effects of pruning on plant growth and habit
 - plant health principles applicable to pruning shrubs and small trees
 - plant names and growth habits
 - AS4373-2007 Pruning of amenity trees

- workplace requirements applicable to health and safety in the workplace for pruning shrubs and small trees, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - materials, tools and equipment applicable to pruning shrubs and small trees
 - shrubs and small trees
 - PPE applicable to pruning shrubs and small trees
- specifications:
 - workplace requirements applicable to health and safety in the workplace and pruning shrubs and small trees
 - AS4373-2007 Pruning of amenity trees
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD210 Transplant shrubs and small trees

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to transplant shrubs and small trees without the use of lifting machinery or equipment, including preparing for shrub or small tree removal, removing and replanting shrub or small tree, and completing work.

The unit applies to individuals who transplant shrubs and small trees under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Parks and Gardens (PGD)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for tree or shrub removal	1.1 Confirm transplanting instructions and activities with supervisor 1.2 Identify workplace health and safety hazards, assess risks and report to supervisor 1.3 Confirm with supervisor location of underground and above ground services 1.4 Prepare and use tools and equipment appropriate to the task

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Select, fit and use personal protective equipment (PPE) applicable to the task
2. Prepare tree or shrub and undertake earthworks for removal	2.1 Prepare crown as required by species and time of removal 2.2 Clear and water site prior to transplanting 2.3 Confirm root ball width and depth with supervisor to ensure root system can colonise new ground
3. Remove tree or shrub from original site	3.1 Excavate soil around the root zone 3.2 Prune tree roots where required 3.3 Stabilise tree as root system is undercut and apply anti-transpirants as a root soak or foliar spray to ensure viability of plant is maintained 3.4 Bind root ball with appropriate material to ensure adequate soil is retained and kept moist prior to transportation and installation 3.5 Lift tree and secure for potential storage or transportation using safe manual lifting techniques 3.6 Prepare and handle tree or shrub to minimise damage during handling and transportation
4. Replant tree or shrub in new environment	4.1 Provide appropriate drainage to ensure root system survival is maintained according to the needs of the species and conditions of planting site 4.2 Modify soil according to the cultural requirements of species 4.3 Plant tree or shrub in prepared hole 4.4 Install plant support devices as directed 4.5 Apply mulch as directed
5. Complete work	5.1 Maintain transplanted plant with regular aftercare activities appropriate to requirements of the species 5.2 Remove and dispose of or recycle rubbish and plant waste material 5.3 Clean, maintain and store tools and equipment 5.4 Report work outcomes and malfunctions, faults, wear or damage of tools to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral Communication	<ul style="list-style-type: none"> Use clear language to report malfunctions, faults, wear or damage to tools Participate in verbal exchanges to respond to questions and clarify information

Assessment Requirements for AHCPGD210 Transplant shrubs and small trees

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has transplanted shrubs and small trees on at least two separate occasions and has:

- prepared for tree or shrub removal
- identified and reported workplace health and safety hazards
- fitted and used personal protective equipment (PPE)
- prepared, used and maintained small tree and shrub transplanting tools and equipment
- prepared crown, root ball and earthworks
- pruned roots where appropriate
- removed tree or shrub from original site
- prepared new environment
- transplanted tree or shrub in selected site
- installed support devices
- maintained transplanted specimen
- cleaned up the site and disposed of or recycled waste
- reported tree and shrub planting operations and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of transplanting trees, including:
 - causes of damage or drying-out of trees and shrubs, and prevention methods
 - basic physiology applicable to transplanting shrubs and small trees
 - correct and safe use and care of tools and equipment
 - factors affecting the timing and method of lifting trees and shrubs

- techniques of securing and anchoring transplanted trees and shrubs
- transportation, manual handling and lifting techniques applicable to transplanting shrubs and small trees
- AS4373-2007 Pruning of amenity trees
- methods of disposing of waste to minimise damage to the environment
- workplace requirements applicable to health and safety in the workplace for transplanting shrubs and small trees, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - materials, tools and equipment applicable to transplanting shrubs and small trees
 - shrubs and small trees
 - PPE applicable transplanting shrubs and small trees
- specifications:
 - workplace requirements applicable to health and safety in the workplace and transplanting shrubs and small trees
 - AS4373-2007 Pruning of amenity trees
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD212 Conduct visual inspection of park facilities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to conduct routine visual inspections of park and recreational facilities to identify visible hazards and existing and potential risks.

The unit applies to individuals who conduct visual inspections of park facilities under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Parks and Gardens (PGD)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for visual inspection	1.1 Interpret site plans and inspection checklists and confirm inspection activities with supervisor 1.2 Clarify the specific terminology used in checklists with supervisor 1.3 Identify park elements to be inspected and locate on the site plan 1.4 Confirm park facilities, equipment and services on site

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Undertake visual inspection	2.1 Inspect park facilities, equipment and services and compare to workplace standards of presentation and workplace health and safety requirements 2.2 Identify and record workplace presentation, workplace health and safety hazards and adverse environmental impacts using appropriate form and photographs 2.3 Report situations requiring urgent action to supervisor
3. Submit report	3.1 Complete and check inspection activity reports and checklists are concise, accurate and comply with workplace standards, and include photographs where required 3.2 Forward checklist and report to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual and drawn information from site plans and checklists to identify relevant and key information about park facilities, inspection and workplace standards requirements
Oral communication	<ul style="list-style-type: none"> Initiate discussions with supervisor using clear language to confirm inspection activities and clarify information

Assessment Requirements for AHCPGD212 Conduct visual inspection of park facilities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted a visual inspection of park facilities on at least two occasions and has:

- prepared for and conducted visual inspection of park facility
- applied workplace health and safety requirements
- applied workplace standards of presentation
- compared the condition of facilities to the required workplace standard
- determined the extent of problems
- recorded and reported hazards and associated environmental implications of malfunctioning facilities, equipment and services
- reported serious issues that may be present
- completed and submitted inspection activity checklist, report and photographs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of park facility visual inspection, including:
 - cleaning, servicing and hygiene requirements of public conveniences
 - hazard identification and reporting
 - the range of park facilities, equipment and services
 - park inspection reporting requirements, procedures and materials
 - terminology used to describe different components of the range of facilities, equipment and services relevant to the workplace
 - issues likely to be encountered by visitors using the park facilities and equipment

- the practical application of site plans, checklist descriptions and workplace standards of presentation to locate and effectively assess facilities and equipment against the required parameters
- workplace standards of presentation and Australian Standards applicable to park facilities
- workplace requirements applicable to health and safety in the workplace for inspection of park facilities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - site plans, checklists, forms and activity reports applicable to conducting visual inspection of park facilities
 - photographic device
- specifications:
 - workplace requirements applicable to health and safety in the workplace and inspection of park facilities
 - workplace standards of presentation and Australian Standards applicable to park facilities
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD307 Implement a plant establishment program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to establish planting areas, including preparing, implementing, reviewing and completing plant establishment work, in new projects and in programs of extensive replacement and renovation works across a range of situations and environments.

The unit applies to individuals who implement a plant establishment program under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Parks and Gardens (PGD)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to establish a planting area	1.1 Identify the planting site, planting methods and plant species and cultivars from site plan and specifications 1.2 Identify potential hazards and risks, and implement safe working practices to manage risks 1.3 Select materials, tools, equipment and machinery required to

Assessment Requirements for AHCPGD307 Implement a plant establishment program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented a plant establishment program on at least one occasion and has:

- interpreted site plans and specifications
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- selected, used and maintained tools, equipment and machinery required for implementing a plant establishment program
- checked and confirmed site plan and plant stock
- measured quantities, calculated material requirements, area, volume, ratios and application rates
- carried out planting operations
- inspected and determined plant quality and health
- ensured planting methods comply with plant species and cultivar growing requirements
- pruned plants to ensure they develop a sound framework for their growth and habit
- reviewed site establishment program
- reported unserviceable tools, equipment and machinery
- recorded and reported work outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of plant establishment, including:
 - soils and soil amelioration techniques

- the identification of pests and diseases, plant symptoms of infections, treatment threshold levels, recommended treatments, methods of application and environmental implications
- the objectives of the plant establishment program, including finished plant forms, site appearance, end use and time constraints
- selection and calculation of stock requirements
- site planning
- the physiology of required plant species and cultivars, culture and planting procedures, including growth rates, main nutrient and water requirements, deficiency symptoms, recommended treatments and associated environmental implications
- workplace requirements applicable to health and safety in the workplace for implementing a plant establishment program, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to implementing a plant establishment program
 - materials, tools, equipment and machinery applicable to implementing a plant establishment program
 - plants
 - PPE applicable to implementing a plant establishment program
- specifications:
 - workplace requirements applicable to health and safety in the workplace for implementing a plant establishment program
 - site plans and specifications applicable to implementing a plant establishment program
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPGD308 Plan and maintain plant displays

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and installed one plant display, and maintained the plant display on three occasions and has:

- selected, used and maintained tools, equipment and machinery required for installing and maintaining plant displays
- determined spatial measurements of display site
- applied workplace health and safety requirements
- checked irrigation system where required
- selected plants according to the display plan and workplace quality specifications, and for their ability to survive for the length of the display
- calculated number of plants and materials
- placed plants according to the display plan
- planted stock
- maintained plant display appearance, including mulching, weeding, dead heading, and shaping, and replacing plants
- removed and disposed of or recycled waste material
- reported unserviceable tools, equipment and machinery.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for planning, installing and maintaining plant displays, including appropriate use of personal protective equipment (PPE)
- irrigation system operation
- principles and practices of plant display planning, installation and maintenance, including at least ten annual and ten perennial plant types, including their:

- features and characteristics
- growing requirements
- common health problems and remedial action
- workplace quality specifications applicable to planning, installing and maintaining plant displays
- methods of disposing of waste to minimise damage to the environment.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to planning, installing and maintaining plant displays
 - materials, tools, equipment and machinery applicable to planning, installing and maintaining plant displays
 - annual and perennial plants
 - PPE applicable to planning, installing and maintaining plant displays
- specifications:
 - workplace requirements applicable to health and safety in the workplace for planning, installing and maintaining plant displays
 - workplace quality specifications applicable to planning, installing and maintaining plant displays
- relationships:
 - supervisor or manager
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD309 Perform specialist amenity pruning

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to perform specialist amenity pruning, including preparing, undertaking and completing amenity pruning work using specialist pruning techniques.

The unit applies to individuals who perform specialist amenity pruning under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Parks and Gardens (PGD)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for specialist amenity pruning	1.1 Identify and inspect plants and determine pruning strategy according to plant characteristics or desired outcome 1.2 Identify common diseases, pests and nutrition deficiencies in plants 1.3 Identify potential hazards and risks, and implement safe working practices to manage risks

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Select tools, equipment and machinery required to perform specialist pruning and check for safe operation</p> <p>1.5 Select, fit, use and maintain personal protective equipment (PPE) applicable to the task</p> <p>1.6 Consult references where required to determine best pruning strategies for special plants</p>
2. Undertake specialist pruning	<p>2.1 Undertake pruning using established and specialist pruning techniques</p> <p>2.2 Adhere to site environmental and disease control procedures</p> <p>2.3 Assess pruned plants to determine if pruning requirements have been met</p> <p>2.4 Carry out remedial work as required</p>
3. Complete work	<p>3.1 Dispose of or recycle waste material from the site</p> <p>3.2 Clean, maintain and store tools, equipment and machinery</p> <p>3.3 Identify and report unserviceable tools, equipment and machinery according to workplace procedures</p> <p>3.4 Report completed specialist amenity pruning activities according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed specialist amenity pruning on at least three different plants including at least one tree using at least three of the following:

- secateurs
- loppers or extension loppers
- shears
- pruning or pole saws
- powered hedgers
- powered secateurs

and has:

- identified and inspected plants
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- selected, used and maintained tools, equipment and machinery required for specialist amenity pruning
- stored and carried tools safely
- carried out pruning using specialist pruning techniques
- applied site environmental and disease control procedures
- met pruning program requirements
- assessed pruning quality
- cleaned and cleared pruning site
- reported unserviceable tools, equipment and machinery
- reported work outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of specialist amenity pruning, including:
 - anatomy and physiology of plants, shrubs and trees
 - AS4373-2007 Pruning of amenity trees
 - compartmentalisation of decay in trees (CODIT)
 - effect on plant growth and habit after pruning
 - identification of plant species and their pruning requirements
 - local government tree protection and preservation regulations
 - types of plants and their pruning requirements, including; climbing plants, fruiting plants, standard plants
 - methods of specialist pruning, including; espalier, topiary, hedging, pleaching, crown lifting, pollarding, thinning out and sucker control
 - specialist pruning tools, equipment and machinery
- workplace requirements applicable to health and safety in the workplace for performing specialist amenity pruning, including appropriate use of PPE
- site environmental and disease control procedures applicable to performing specialist amenity pruning.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to performing specialist amenity pruning
 - tools, equipment and machinery applicable to performing specialist amenity pruning
 - three different plant types including at least one tree
 - PPE applicable to performing specialist amenity pruning
- specifications:
 - workplace requirements applicable to health and safety in the workplace for performing specialist amenity pruning
 - site environmental and disease control procedures applicable to performing specialist amenity pruning
 - AS4373-2007 Pruning of amenity trees
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD310 Implement a landscape maintenance program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to implement a landscape maintenance program, including interpreting the program requirements, and monitoring and maintaining landscape areas of newly constructed or established landscapes.

The unit applies to individuals who implement a landscape maintenance program under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Parks and Gardens (PGD)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Interpret a landscape maintenance program	1.1 Identify and apply scope of the maintenance works from the landscape maintenance program and standards 1.2 Identify potential hazards and risks, and implement safe working practices to manage risks 1.3 Review site inspection checklist

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Monitor and maintain landscape areas	2.1 Complete site inspection and checklist 2.2 Identify remedial action, repairs, renovations, treatments and replacements required to restore site to full effectiveness 2.3 Determine the frequency of maintenance works and implement landscape maintenance standards 2.4 Plan and implement maintenance tasks 2.5 Report items which are beyond the scope of the maintenance program to supervisor 2.6 Record items requiring further action 2.7 Evaluate and record results of maintenance works according to workplace procedures

Foundation Skills

Skill	Description
Oral communication	<ul style="list-style-type: none"> Use clear language to report items beyond the scope of the maintenance program

Assessment Requirements for AHCPGD310 Implement a landscape maintenance program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented a landscape maintenance program on at least one occasion and has:

- applied workplace health and safety requirements
- completed general site inspection
- determined maintenance requirements
- implemented maintenance operations
- performed general plant maintenance, including:
 - weeding
 - fertilising
 - watering
 - pruning
 - pest and disease control
- repaired and renovated landscape structures and features, including:
 - tidying up
 - blowing
 - sweeping
 - cleaning
- identified any items requiring further action or cannot be completed within existing resources
- evaluated and recorded results of maintenance works.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of landscape maintenance, including:
 - actions permitted in the event of variations to maintenance programs
 - common maintenance tasks for landscapes
 - characteristics and optimal growing conditions of a range of plants
 - common problems and remedial actions of a range of plants
- workplace requirements applicable to health and safety in the workplace for a landscape maintenance program.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to implementing a landscape maintenance program
 - site inspection checklist
 - soft and hard landscape
 - materials, tools and equipment applicable to implementing a landscape maintenance program
- specifications:
 - workplace requirements applicable to health and safety in the workplace for implementing a landscape maintenance program
 - landscape maintenance program and standards
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD311 Conduct operational inspection of park facilities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to conduct operational inspections of park or recreational facilities to identify hazards, existing and potential risks and non-conformities with Australian Standards and workplace health and safety requirements.

The unit applies to individuals who conduct operational inspection of park facilities under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Parks and Gardens (PGD)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for operational inspection	1.1 Determine from operational request, specific facilities and equipment to be inspected and purpose of inspection 1.2 Identify potential hazards and risks of conducting inspection, and implement safe working practices to address risks 1.3 Select, tools and equipment required for testing and inspection and

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>check for safe operation</p> <p>1.4 Prepare checklists and reporting formats applicable to inspection purpose</p> <p>1.5 Identify the different types of facilities from checklist descriptions</p> <p>1.6 Clarify specific terminology used in checklists with supervisor</p> <p>1.7 Select, fit, use and maintain personal protective equipment (PPE) applicable to task</p>
2. Undertake operational inspection	<p>2.1 Identify and record non-conformity with Australian standards and workplace health and safety procedures</p> <p>2.2 Identify and record damaged or unserviceable infrastructure</p> <p>2.3 Identify and record site hazards and indications or signs of hidden faults</p> <p>2.4 Maintain accurate and concise checklist entries and photographic records according to workplace procedures</p>
3. Finalise the park inspection	<p>3.1 Report and record areas or situations requiring urgent action or closure of facilities to supervisor</p> <p>3.2 Secure or isolate areas requiring urgent action</p> <p>3.3 Record recommendations to rectify non-conformities as required</p> <p>3.4 Complete inspection report, including photographs where required and submit to client or supervisor</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual and drawn information to identify relevant and key information about park facilities, and inspection and workplace standards requirements
Oral communication	<ul style="list-style-type: none"> Initiate discussions with supervisor using clear language to report situations requiring urgent action or closure of facilities

Assessment Requirements for AHCPGD311 Conduct operational inspection of park facilities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted an operational inspection of two different park facilities and has:

- determined the purpose of the inspection and the facilities and equipment to be inspected and tested
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- selected, used and maintained tools and equipment required for operational testing and inspection of park facilities
- clarified specific terminology used in checklists with the supervisor
- compared actual measurements of inspected components with Australian standards, workplace health and safety requirements, and workplace specifications
- evaluated the condition of facilities
- determined and reported urgent and serious situations
- completed and submitted proforma inspection report, photographs and workplace procedure documents.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of park facility operational inspection, including:
 - different areas of non-conformity that may be identified in relevant Australian standards and health and safety in the workplace requirements
 - identification, assessment and control of hazards
 - inspection procedures and techniques, and workplace reporting requirements for maintenance, repair and replacement recommendations

- principles and practices of park facility operational inspections
- terminology used to describe different components of park or recreational facilities and equipment
- operational expectations and workplace requirements for the presentation and working order priorities of a range of park or recreational facilities and equipment
- the range, use and safety parameters of park or recreational facilities and equipment, their material construction and maintenance requirements
- legislative requirements and codes of practice applicable to public use of park facilities
- workplace requirements applicable to health and safety in the workplace for conducting an operational inspection of park facilities, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to conducting an operational inspection of park facilities
 - materials, tools and equipment applicable to conducting an operational inspection of park facilities
 - checklists, forms and inspection report proformas applicable to conducting an operational inspection of park facilities
 - photographic device
 - PPE applicable to conducting an operational inspection of park facilities
- specifications:
 - workplace requirements applicable to health and safety in the workplace for conducting an operational inspection of park facilities
 - workplace requirements and Australian standards applicable to park facilities and conducting an operational inspection of park facilities
 - legislation and codes of practice applicable to public use of park facilities and conducting an operational inspection of park facilities
- relationships:
 - client or supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD312 Implement a maintenance program for an aquatic environment

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to implement a maintenance program for an aquatic environment, including preparing for maintenance activities, and maintaining aquatic organisms and water quality, in a park or garden setting.

The unit applies to individuals who implement a maintenance program for an aquatic environment under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Parks and Gardens (PGD)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for maintenance activities	1.1 Identify and apply requirements for maintenance of aquatic environment 1.2 Identify potential hazards and risks, and implement safe working practices to address risks

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Select and prepare tools, equipment and machinery for use</p> <p>1.4 Select, fit, use and maintain personal protective equipment (PPE) applicable to the task</p> <p>1.5 Identify environmental implications associated with maintenance activities and report to supervisor</p>
2. Maintain aquatic organisms	<p>2.1 Identify indigenous, exotic and pest aquatic animals and plants for specific aquatic environment</p> <p>2.2 Monitor aquatic plants and animals and record and maintain relevant data and apply to aquatic plant maintenance activities</p> <p>2.3 Report issues to supervisor, with suggestions for action</p> <p>2.4 Implement control methods for excess aquatic animals and plants, and identified pest animals and plants</p> <p>2.5 Process waste plant and animal material with regards to environmental issues</p>
3. Maintain water quality	<p>3.1 Monitor aquatic environment water quality and input water resource</p> <p>3.2 Record and maintain monitoring data, and apply to water quality maintenance activities</p> <p>3.3 Remove and process debris using appropriate equipment</p> <p>3.4 Report water quality issues to supervisor, with suggestions for remedial action</p> <p>3.5 Discharge water, clean environment, and recharge water from designated storage area or other input water resource</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCPGD312 Implement a maintenance program for an aquatic environment

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented a maintenance program for an aquatic environment on at least one occasion and has:

- interpreted site plans and maintenance program requirements, and used proforma reporting, recording, analysis and work procedure documents
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- selected, used and maintained tools, equipment and machinery required for implementing a maintenance program for an aquatic environment
- scheduled and implemented monitoring activities correctly and recorded, interpreted and applied monitoring data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of aquatic environment maintenance, including:
 - aquatic systems ecology
 - correct safety procedures working from boats or adjacent to large bodies of water
 - enterprise systems and procedures for the safe operation and maintenance of machinery and equipment in aquatic environments
 - food chain and nutrient cycling in aquatic systems
 - recognition, physiology and biological characteristics of animals and/or plants specific to the aquatic environment
 - regulations and industry standards for water quality requirements in association with specified use
 - relevant legislation regarding water pollution and management

- safe systems and procedures for handling, transporting and storing chemicals and hazardous substances taking into account toxicity levels and environmental impacts
- wildlife habitats associated with the aquatic environment
- workplace requirements applicable to health and safety in the workplace for implementing a maintenance program for an aquatic environment, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to implementing a maintenance program for an aquatic environment
 - materials, tools, equipment and machinery applicable to implementing a maintenance program for an aquatic environment
 - PPE applicable to implementing a maintenance program for an aquatic environment
- specifications:
 - workplace requirements applicable to health and safety in the workplace for implementing a maintenance program for an aquatic environment
 - site plans and maintenance program requirements applicable to implementing a maintenance program for an aquatic environment
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD403 Design plant displays

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to design plant displays, including developing the design concept plan and ensuring compliance with the design plan in a wide range of locations and situations, buildings and structures. It applies to permanent, semi-permanent and temporary displays of plant life under a range of gardening, exhibition, visual merchandising, marketing and commercial leasing and hiring activities.

The unit applies to individuals who apply specialist skills and knowledge to design plant displays. This includes applying and communicating non routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCPGD403 Design plant displays

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has designed two different plant displays and has:

- consulted with clients
- evaluated sites or locations to determine the effect of aesthetic, environmental and physical attributes on nature of display
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- determined timelines and budget constraints
- researched and analysed information about plant and materials specifications and cultural requirements
- developed concept plan, design plan and specifications.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of plant display design, including:
 - characteristics of a range of plants used in plant displays
 - growth and maintenance requirements of plants in natural and artificial environments
 - horticultural conventions for design plans
 - plant selection
 - principles of design
 - processes and techniques for preparing, costing and documenting plans for plant displays
 - client consultation and negotiation techniques
 - plants commonly used in plant displays
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to designing plant displays.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - industry publications, internet and in house sources of information relevant to designing plant displays
 - plant display
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to designing plant displays
- relationships:
 - clients
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPGD404 Plan a plant establishment program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned a plant establishment program on at least one occasion and has:

- consulted with clients
- researched plant species and cultivars and local by-laws and restrictions
- complied with local by-laws and restrictions
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- developed a plant establishment program concept plan
- calculated the cost and spatial and logistical requirements of components of the plant establishment program
- documented plant establishment program, site plan, work procedures, schedules, and specifications.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of plant establishment program planning, including:
 - identification and establishment techniques of specific plant species and cultivars
 - the advantages and disadvantages of a range of plant establishment procedures
 - maintenance requirements and practices for specific plant species and cultivars, prior to and after initial establishment
 - processes and techniques for preparing, costing and documenting plans for and scheduling plant establishment activities
 - processes and techniques for scheduling plant establishment activities
- local by-laws and restrictions relevant to planning a plant establishment program

- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to planning a plant establishment program.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - industry publications, internet and in house sources of information relevant to planning a plant establishment program
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to planning a plant establishment program
 - local by-laws and restrictions relevant to planning a plant establishment program
- relationships:
 - clients
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD506 Manage parks and reserves

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to manage parks and reserves, including reviewing the organisation, identifying problems, researching and communicating potential solutions and their impact.

The unit applies to individuals who apply specialist skills and knowledge to manage parks and reserves, take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCPGD506 Manage parks and reserves

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed a park or reserve on at least one occasion and has:

- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- liaised effectively with consultants and other industry contacts on management systems and on-ground operations
- assessed and monitored budgets and allocation of monetary resources
- interpreted business, financial, cultural, marketing and human resource management plans
- assessed environmental impacts of management decisions on the immediate and related environments
- researched and obtained information required for effective maintenance and development of the park or reserve
- assigned work, received and interpreted staff feedback and consultant reports, and responded effectively to achieve management objectives
- identified, documented and recommended improvements to operations and presented to senior management.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of park and reserve management, including:
 - asset and resource management
 - budgeting, monitoring systems and allocation of monetary resources

- legislative and regulatory requirements relevant to parks and reserve land use applications and management activities including hazardous chemicals, dangerous goods, duty of care and Australian standards relevant to parks and reserves management
- management information systems
- performance management and benchmarking
- policies applying across all levels of government and within the specific region, including those under catchment plans relevant to managing parks or reserves
- principles of the Australian Natural Heritage Charter and the Draft Guidelines for the Protection, Management and Use of Aboriginal and Torres Strait Islander Cultural Heritage Places and the Burra Charter
- sports and recreational land use applications and associated environmental implications
- staff training and development principles, practices and techniques
- computer software and hardware, and telecommunications equipment relevant to managing parks or reserves
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to managing parks or reserves.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources:
 - park or reserve business, financial, marketing and human resource management plans
 - computer software and hardware, and telecommunications equipment relevant to managing parks or reserves
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to managing parks or reserves
 - legislative and regulatory requirements relevant to parks and reserve land use applications and management activities including hazardous chemicals, dangerous goods, duty of care and Australian standards relevant to parks and reserves management
 - policies applying across all levels of government and within the specific region, including those under catchment plans relevant to managing parks or reserves
 - Australian Natural Heritage Charter and the Draft Guidelines for the Protection, Management and Use of Aboriginal and Torres Strait Islander Cultural Heritage Places and the Burra Charter
 - sports and recreational land use applications
- relationships:

- staff, consultants and senior management
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD507 Manage plant cultural practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to manage a plant cultural program, including defining site requirements, developing the site program, managing the implementation of the program, and monitoring, reviewing and documenting the program.

The unit applies to individuals who apply specialist skills and knowledge to managing plant cultural programs, take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed plant cultural practices on at least one occasion and has:

- allocated resources
- contracted specialist services
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- determined and implemented staff training and development where required
- determined plant cultural requirements
- developed a plant cultural program and budget documentation
- planned and scheduled of operations
- managed contingencies
- supervised, monitored and appraised the performance of work team and contracted services
- completed plant cultural program report.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of plant cultural practice management, including:
 - budgeting and planning
 - operation and maintenance of irrigation systems
 - plant anatomy, physiology, morphology, taxonomy and nomenclature relevant to program
 - plant cultural practices
 - plant identification and selection

- plant nutrition requirements and practices
- soil types, properties, field tests and sampling techniques
- staff and contractor supervision and performance appraisal
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to managing plant cultural practices.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources:
 - soil and growing media sampling and testing equipment
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to managing plant cultural practices
- relationships:
 - staff, contractors and specialist sub-contractors
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPGD508 Plan the restoration of parks and gardens

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned the restoration of parks and gardens on at least one occasion and has:

- consulted with clients
- determined requirements of the restoration work
- complied with legislative requirements
- researched and evaluated information
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- calculated the cost and spatial and logistical requirements of components of the restoration works
- selected restoration procedures that are consistent with the agreed concept plan, appropriate to the site and account for historical and cultural values, available resources and relevant environmental factors
- prepared and documented the restoration plan and specifications.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of park and garden restoration, including:
 - construction procedures, plant selection and cultural practices for historically or culturally significant parks and gardens
 - growth habits and cultural requirements of specific plants under a range of soil and environmental conditions
 - historic parks and gardens management principles and guidelines
 - legislation and regulations relating to heritage sites and restoration works

- maintenance requirements and practices for specific plants prior to and after initial establishment
- principles of the Australian Natural Heritage Charter, the Draft Guidelines for the Protection, Management and Use of Aboriginal and Torres Strait Islander Cultural Heritage Places and the Burra Charter
- role of project briefs and client consultation processes in planning restoration works
- site evaluation techniques, including methods of analysing the condition of soils, plants and waterways for restoration activities
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to planning the restoration of parks and gardens.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources:
 - computer software and hardware relevant to planning the restoration of parks and gardens
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to planning the restoration of parks and gardens

Assessment Requirements for AHCPGD509 Develop and implement a streetscape management plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed and implemented a streetscape management plan on at least one occasion and has:

- consulted with clients, planning team, major stakeholders and residents
- defined the need for a management plan
- undertaken preliminary planning activities
- prepared a site description
- analysed site information and description
- identified and costed management strategies
- prepared and documented the management plan
- implemented the management plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for streetscape management planning, including:
 - basic civil design
 - client and stakeholder consultation processes
 - horticultural, landscape and arboriculture practices used in streetscape management
 - landscape assessment, survey and analysis techniques
 - management planning principles and issue identification strategies
 - site description and management plan documentation and reporting
 - plants commonly used in streetscapes and their growing requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources:
 - soil, plant and water test results
 - sources of information on current, cultural and historical modifications relevant to the development and implementation of a streetscape management plan
- relationships:
 - clients, planning team, major stakeholders and residents
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPGD510 Conduct comprehensive inspection of park facilities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to conduct a comprehensive inspection of park or recreational facilities to identify non-conformities with Australian standards, legislation and workplace health and safety requirements, as well as industry and manufacturer specifications.

The unit applies to individuals who apply specialist skills and knowledge to conducting comprehensive inspections of park or recreational facilities, take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to a range of complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCPGD510 Conduct comprehensive inspection of park facilities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted a comprehensive inspection of three different park facilities and has:

- prepared for and undertaken a comprehensive inspection of park facilities
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- selected, used and maintained tools and equipment required for testing and comprehensive inspection of park facilities
- interpreted Australian standards, workplace health and safety and workplace standards, industry and manufacturer specifications
- interpreted plans, design symbols and terminology
- determined age and calculated effective lifespan of existing park facilities
- estimated costs of repair or replacement of existing park facilities
- completed inspection records and reports, including photographs where required and submitted to management
- made improvements to inspection documentation or practice
- made recommendations to management.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of park facility inspection, including:
 - different modes of non-conformity that may be identified in relation to specific park facilities and equipment
 - hazard identification, assessment and control
 - information management systems relevant to park facilities inspection

- software and hardware relevant to park facilities inspection
- hazards associated with conducting a comprehensive inspection of park facilities and equipment, and the controls necessary to remove or minimise associated risks
- park facilities and equipment including installation methods, intended use, intended users and safety parameters
- practical understanding of inspection and auditing procedures and techniques, legal and workplace reporting requirements for recommendations on maintenance, and estimating cost of repair and replacement of park facilities
- practical understanding of the terminology used to describe different components of park facilities and equipment
- Australian standards relevant to park facilities
- legislative requirements and codes of practice applicable to public use of park facilities
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to conducting a comprehensive inspection of park facilities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources:
 - workplace procedures applicable to conducting a comprehensive inspection of park facilities
 - materials, tools and equipment applicable to conducting a comprehensive inspection of park facilities
 - site plans applicable to conducting a comprehensive inspection of park facilities
 - information management system, software and hardware applicable to park facilities inspection
 - photographic device
- specifications:
 - workplace requirements applicable to health and safety in the workplace for conducting a comprehensive inspection of park facilities
 - industry and workplace specifications, and Australian standards, applicable to park facilities and conducting a comprehensive inspection of park facilities
 - legislation and codes of practice applicable to public use of park facilities and conducting a comprehensive inspection of park facilities
- relationships:
 - management
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPHT102 Support horticultural production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to undertake routine horticultural production work under direct supervision and to support the horticultural production work of others.

The unit applies to individuals who support horticultural production work while working alongside a supervisor, exercising limited autonomy within established and well-known parameters. They identify and seek help with simple problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare materials, tools and equipment for horticultural production work	1.1 Collect required materials, tools and equipment according to lists provided and supervisor instructions 1.2 Check materials, tools and equipment required to carry out routine horticultural production work 1.3 Fit and use personal protective equipment (PPE) applicable to job

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	requirements 1.4 Demonstrate correct manual handling techniques when loading and unloading materials 1.5 Report faulty or unsafe tools, equipment or PPE to supervisor 1.6 Provide horticultural production work support according to work health and safety requirements and supervisor instruction 1.7 Recognise and report workplace hazards to supervisor
2. Undertake horticultural production work as directed	2.1 Follow instructions and directions provided by supervisor, and seek clarification when necessary 2.2 Interact with other staff and customers in a professional manner 2.3 Follow workplace policy and procedures in relation to workplace practices, handling and disposal of materials 2.4 Report problems or difficulties in completing work to required standards or timelines to supervisor
3. Clean up on completion of work	3.1 Store materials and dispose of waste materials according to supervisor instructions 3.2 Clean, maintain and store tools and equipment according to supervisor instructions 3.3 Report work outcomes and malfunctions, faults, wear or damage of tools to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Use clear language to report malfunctions, faults, wear or damage to tools Participate in verbal exchanges to respond to questions and clarify information

Unit Mapping Information

Assessment Requirements for AHCPHT102 Support horticultural production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has supported horticultural production work on at least two occasions, and has:

- prepared materials, tools and equipment for horticultural production work
- applied safe work practices
- undertaken routine horticultural production work as directed, including the safe use and operation of farm tools and equipment
- cleaned up and disposed of waste material on completion of work, consistent with environmental and workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for supporting production of horticultural crops:
 - planting, picking, packing, loading and transporting techniques support work
 - safe work practices used in horticultural production work
 - use of horticultural tools and equipment, including the safe use and operation of farm tools and equipment
- workplace health and safety requirements and environmental protection legislation applicable to supporting horticultural production.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to supporting horticultural production work
 - horticultural production materials, tools and equipment
 - personal protective equipment applicable to supporting horticultural production work
- relationships:
 - supervisor, staff and customers
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPHT210 Assist with protected cropping water sampling and testing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to assist with protected cropping water sampling and testing.

The unit applies to individuals who assist with protected cropping water sampling and testing under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Collect water sample	1.1 Confirm with supervisor crop water to be sampled 1.2 Identify and select water sample tools and materials 1.3 Identify environmental and biosecurity implications associated with sampling and testing crop water and minimise impact 1.4 Recognise workplace hazards and report safety concerns

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Select, fit, use and maintain personal protective equipment applicable to the task and workplace safety requirements 1.6 Take samples as instructed 1.7 Assist with labelling and recording samples as required
2. Perform basic tests on water sample	2.1 Identify content features of the water sample 2.2 Assist with testing and inspecting physical properties of water sample 2.3 Assist with testing chemical properties of water sample 2.4 Relate water test results to suitability of water for growing crops 2.5 Record water test results according to workplace procedures
3. Complete sampling and testing activities	3.1 Dispose of waste material according to workplace procedures 3.2 Clean and return tools and material to required location 3.3 Report water test results to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations and products
Writing	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to prepare water test results
Oral Communication	<ul style="list-style-type: none"> Use clear language to confirm crop to be sampled and report water test results and report tool and material unserviceabilities
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility
Get the work done	<ul style="list-style-type: none"> Take responsibility for routine decisions about water sampling and testing and reflect on outcomes to identify effectiveness of decisions

Assessment Requirements for AHCPHT210 Assist with protected cropping water sampling and testing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has sampled and tested protected crop water on at least two occasions and has:

- selected and used protected crop water sampling tools and material
- minimised environmental impacts associated with testing protected crop water
- followed industry and workplace biosecurity procedures
- applied workplace health and safety requirements
- collected and described water samples using descriptive terms
- assisted with the use of simple water testing equipment
- recorded and reported water testing results
- disposed of waste material, including test water and testing material.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- crop water sampling and testing tools operating instructions
- environmental impacts associated with testing protected crop water
- industry and workplace biosecurity procedures
- workplace requirements applicable to health and safety in the workplace for testing protected crop water
- principles and practices for recognising protected crop water properties, including:
 - basic water tests
 - water chemical properties
 - water physical properties
 - water and plant relationship
 - water sampling techniques.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - crop water sampling and testing tools and materials
 - personal protective equipment applicable to protected crop water sampling and testing
- specifications:
 - crop water sampling and testing tools operating instructions
 - workplace requirements applicable to health and safety in the workplace, and sampling and testing protected crop water
 - industry and workplace biosecurity procedures applicable to sampling and testing protected crop water
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPHT213 Perform plant blocking on

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed plant blocking on, on at least three occasions and has:

- selected, positioned, used and maintained plant blocking on tools, equipment, substrate and materials
- minimised environmental impacts associated with plant blocking on
- followed industry and workplace biosecurity procedures
- applied workplace health and safety requirements
- flooded block on substrate, checked plant health and adjusted water flow
- recorded and reported plant blocking on activities and unserviceable tools and equipment
- removed and disposed of waste material.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of blocking on substrate, including:
 - clay aggregate
 - coco coir
 - perlite
 - rockwool
 - vermiculite
- plant blocking on tools and equipment operating instructions
- purpose and procedures for plant blocking on
- environmental impacts associated with blocking on plants
- industry and workplace biosecurity procedures

- workplace requirements applicable to health and safety in the workplace for blocking on plants.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plant blocking on tools, equipment, substrate and materials
 - personal protective equipment applicable to plant blocking on
- specifications:
 - plant blocking on equipment operating instructions
 - workplace requirements applicable to health and safety in the workplace and blocking on of plants
 - industry and workplace biosecurity procedures applicable to blocking on of plants
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPHT214 Support horticultural crop harvesting

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to support horticultural crop harvesting, including preparing equipment for harvesting, harvesting crops and transporting crops.

The unit applies to individuals who support horticultural crop harvesting under general supervision and exercise limited autonomy or accountability for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for harvest	1.1 Carry out pre-operational and safety checks on tools, equipment and machinery 1.2 Recognise workplace hazards and report safety concerns 1.3 Select, fit, use and maintain personal protective equipment applicable to the task and workplace safety requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Harvest the crop	2.1 Estimate readiness of crop for picking according to supervisor instructions 2.2 Apply harvesting processes that minimise crop damage 2.3 Carry out basic sorting and grading according to workplace procedures 2.4 Clean and maintain harvesting tools, equipment and machinery according to industry standards 2.5 Report harvesting problems to supervisor
3. Transport the crop	3.1 Use safe manual handling when handling containers 3.2 Move and stack containers to minimise damage to the crop 3.3 Maintain temperature of the harvested crop 3.4 Transport harvested crop to the processing or storage area 3.5 Maintain containers in good working order according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral Communication	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to report harvesting problems

Assessment Requirements for AHCPHT214 Support horticultural crop harvesting

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has supported horticultural crop harvesting on at least two occasions and has:

- applied workplace health and safety requirements
- estimated the readiness of crop for picking
- harvested the crop using the correct procedure
- selected and graded produce at picking where required
- stacked produce in containers without causing damage or losses
- transported produce according to enterprise requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for harvesting horticultural crops
- workplace requirements applicable to health and safety in the workplace and horticultural crop harvesting
- the effect of adverse climatic conditions which may downgrade the quality of affected crop, prevent or impede harvest operations or severely influence the time taken to complete the harvest program, such as:
 - rain
 - hail
 - extreme wind with dust
 - very high ultraviolet radiation
- recognition of crop maturity and readiness for picking
- enterprise quality procedures
- grading characteristics of each crop

- the importance of maintaining quality of produce, including cooling requirements and quick transport to processing areas.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - horticultural crop harvesting tools, equipment and machinery
 - personal protective equipment applicable to horticultural crop harvesting
- specifications:
 - workplace requirements applicable to health and safety in the workplace and horticultural crop harvesting
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for crop planting operations	1.1 Confirm crop planting activities and instructions with supervisor 1.2 Select tools, equipment and machinery appropriate for crop planting 1.3 Identify workplace health and safety hazards, and report to supervisor

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Select and maintain personal protective equipment (PPE) according to workplace health and safety requirements 1.5 Fit and use PPE applicable to the task being undertaken
2. Prepare the site and plant material for planting	2.1 Prepare soil or growing media according to instructions 2.2 Carry out crop protection measures according to instructions 2.3 Apply pre-planting treatments according to instructions where required 2.4 Store planting material to required location
3. Carry out planting operations	3.1 Operate soil preparation tools, equipment and machinery where required according to instructions and manufacturer instructions 3.2 Locate planting material according to instructions 3.3 Store, handle and transport planting materials to the site 3.4 Plant crop according to instructions 3.5 Identify environmental and biosecurity implications associated with planting crops, and minimise impact
4. Complete planting operations	4.1 Water plants in and apply post-planting treatments 4.2 Clean and return tools, equipment and machinery to required location 4.3 Identify and report unserviceable tools, equipment and machinery according to workplace procedures 4.4 Record and report planting operations according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about planting of horticultural crops

Skill	Description
Writing	<ul style="list-style-type: none"> Use clear language and accurate industry terminology to record planting activity
Oral communication	<ul style="list-style-type: none"> Use clear language to confirm and report planting operations and report tool, equipment and machinery unserviceability to supervisor

Assessment Requirements for AHCPHT215 Plant horticultural crops

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed horticultural crop planting on at least one occasion, and has:

- selected, used and maintained crop planting tools and equipment
- applied workplace health and safety requirements
- applied treatments under supervision where required
- operated and maintained crop planting machinery where required according to manufacturer specifications
- located planting material
- minimised environmental impacts associated with crop planting
- followed industry and workplace biosecurity procedures
- recorded and reported planting operations and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for planting horticultural crops, including:
 - basic preparation of soil and growing media
 - importance of correct timing and procedures for crop planting
 - importance of field hygiene and quality control in regard to crop planting
 - nutritional, water and other requirements of the crop
 - basic principles of pest, weed and disease control
 - pre-planting soil and plant treatments and their importance
 - basic soil structure and health
- workplace requirements applicable to health and safety in the workplace for planting horticultural crops

- horticultural crop planting tools, equipment and machinery operating instructions and manufacturer specifications
- environmental impacts associated with planting horticultural crops
- industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - crop planting tools, equipment and machinery
 - pre-planting soil and plant treatment material
 - personal protective equipment applicable to planting horticultural crops
- specifications:
 - horticultural crop planting tools, equipment and machinery operating instructions and manufacturer specifications
 - workplace requirements applicable to health and safety in the workplace and planting horticultural crops
 - industry and workplace biosecurity procedures applicable to planting horticultural crops
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT216 Carry out canopy maintenance

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare for crop canopy maintenance, and carry out and complete maintenance and pruning on crop canopies.

The unit applies to individuals who carry out crop maintenance under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for canopy maintenance activities	1.1 Confirm canopy maintenance activities and instructions with supervisor 1.2 Select tools and equipment appropriate to canopy maintenance 1.3 Identify workplace health and safety hazards, and report to supervisor 1.4 Select and maintain personal protective equipment (PPE) according to workplace health and safety requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Fit and use PPE applicable to the task being undertaken
2. Carry out basic canopy maintenance	2.1 Identify and prune unwanted growth 2.2 Remove pruned material out of the canopy 2.3 Perform post-pruning treatments on the canopy 2.4 Shape, support or position canopy according to supervisor instructions 2.5 Use control measures to regulate exposure of the crop to sun and protect crop from damage 2.6 Operate and maintain tools and equipment according to instructions and manufacturer instructions
3. Complete canopy maintenance activities	3.1 Clean, sharpen and return tools and equipment to required location 3.2 Identify and report unserviceable tools and equipment according to workplace procedures 3.3 Dispose of pruned material according to supervisor instructions 3.4 Record and report canopy maintenance activities according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about canopy maintenance
Writing	<ul style="list-style-type: none"> Use clear language and accurate industry terminology to record crop maintenance activity

Assessment Requirements for AHCPHT216 Carry out canopy maintenance

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed canopy maintenance on at least two occasions, and has:

- interpreted instructions and confirmed with supervisor
- selected, used and maintained crop canopy maintenance tools and equipment
- applied workplace health and safety requirements
- applied basic crop maintenance techniques including shaping, supporting and positioning according to supervisor instruction
- removed and disposed of pruning waste material
- recorded and reported canopy maintenance activities according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of canopy maintenance, including:
 - basic canopy maintenance techniques and their importance in relation to the desired quality of fruit
 - the difference between fruiting and non-fruiting wood
 - the effect of different climatic conditions on canopy maintenance requirements
 - the importance of hygiene and quality control when performing basic canopy maintenance activities
- workplace requirements applicable to health and safety in the workplace for crop canopy maintenance.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - crops with canopies
 - canopy maintenance tools and equipment
 - personal protective equipment applicable to crop canopy maintenance
- specifications:
 - workplace requirements applicable to health and safety in the workplace and crop canopy maintenance
 - work instructions and workplace procedures applicable to crop canopy maintenance
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT217 Undertake field budding and grafting

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare parent material and budding and grafting materials for budding and grafting, and bud and graft trees, shrubs, vines and other plant types in nurseries or in-field situations.

The unit applies to individuals who undertake field budding and grafting under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare parent material for budding and grafting	1.1 Confirm budding and grafting activities with supervisor 1.2 Clean tools and equipment according to workplace procedures 1.3 Prepare plant material and use appropriate method for taking budding or grafting material 1.4 Select and use tools and equipment appropriate to field budding and grafting

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Select and maintain personal protective equipment (PPE) according to workplace health and safety requirements 1.6 Fit and use PPE applicable to the task being undertaken
2. Prepare budding and grafting materials	2.1 Select budding and grafting material for propagation 2.2 Use appropriate storage methods to maintain viability of materials 2.3 Dispose of discarded material according to workplace procedures 2.4 Prepare stock according to species guidelines 2.5 Handle budding and grafting materials and stock in a way that prevents damage
3. Bud and graft scion	3.1 Select budding and grafting method according to species guidelines 3.2 Seal bud and graft according to workplace procedures 3.3 Affix labels and identification
4. Complete budding and grafting activities	4.1 Clean, maintain and return tools and equipment to required location 4.2 Identify and report unserviceable tools and equipment according to workplace procedures 4.3 Return materials to store and dispose of waste and unused grafting material according to supervisor instructions 4.4 Record and report budding and grafting activities according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about field budding and grafting
Writing	<ul style="list-style-type: none"> Use clear language and accurate industry terminology to record budding and grafting activity

Assessment Requirements for AHCPHT217 Undertake field budding and grafting

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has undertaken field budding and grafting on at least three occasions, and has:

- selected, cleaned, used and maintained field budding and grafting tools and equipment
- selected and prepared stock for budding and grafting
- applied workplace health and safety requirements
- stored, removed or disposed of unused grafting material
- applied budding and grafting techniques applicable to plant species
- treated plants after budding and grafting
- recorded and reported budding and grafting activities according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for field budding and grafting, including:
 - cleaning requirements of work area and equipment
 - common problems and corrective action required
 - environmental issues and controls
 - importance of selection and use of rootstock
 - maintenance requirements of equipment
 - operation, components and purpose of budding and grafting equipment
 - plant features and processes relevant to budding and grafting
 - procedures and responsibilities for reporting problems
 - recording requirements and procedures
 - rootstock and scion stock

- stages of the budding and grafting procedure and their purpose
- workplace requirements applicable to health and safety in the workplace for field budding and grafting.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plants, rootstock, and budding and grafting material
 - budding and grafting tools and equipment
 - personal protective equipment applicable to plant budding and grafting
- specifications:
 - workplace requirements applicable to health and safety in the workplace, and for field budding and grafting
 - work instructions and workplace procedures applicable to field budding and grafting
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPHT218 Carry out post-harvest operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to carry out post-harvest operations, including preparing for post-harvest operations, transporting, packing and storing harvested produce.

The unit applies to individuals who carry out post-harvest operations under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for post-harvest operations	1.1 Identify post-harvest treatments, operations to be performed and client specifications with supervisor 1.2 Select materials, tools, equipment and machinery according to post-harvest operations requirements 1.3 Carry out pre-operational and safety checks on tools, equipment and machinery

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Identify the Hazard Analysis and Critical Control Points (HACCP) and food safety requirements applicable to crop under cultivation 1.5 Identify site quarantine protocols and farm and personal hygiene requirements
2. Transport harvested produce	2.1 Transport produce to post-harvest processing or storage area 2.2 Maintain required temperature of harvested produce 2.3 Maintain containers, materials and equipment in good working order according to workplace requirements
3. Grade, label, treat, weigh and pack produce	3.1 Grade and label produce according to client specifications 3.2 Apply post-harvest treatments according to produce requirements 3.3 Identify quality parameters of produce and specifications for packaging materials, containers, filling techniques and labelling 3.4 Select packaging materials and containers for specific produce 3.5 Weigh filled containers, record weight and repack to correct weight 3.6 Use required filling techniques for specific containers and produce 3.7 Apply wraps and lids, and label containers according to client specifications
4. Store produce in a facility	4.1 Place containers onto pallets or racks to ensure stability and optimum airflow 4.2 Transport and arrange pallets or racks in storage facility 4.3 Read storage facility monitoring gauges, and report abnormal readings to supervisor 4.4 Check condition of stored produce, and remove damaged produce and containers from storage facility 4.5 Clean storage facility and packing containers 4.6 Record and report post-harvest operations according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about post-harvest operations
Writing	<ul style="list-style-type: none"> Use clear language and accurate industry terminology to prepare produce labels and record post-harvest operations
Oral communication	<ul style="list-style-type: none"> Use clear language to confirm post-harvest operations and client specifications and report to abnormal gauge readings and post-harvest operations to supervisor

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
AHCPTH218 Carry out post-harvest operations	AHCPTH205 Carry out post-harvest operations	Minor changes to application Major changes to performance criteria Foundation skills added Assessment requirements updated	Not equivalent

Assessment Requirements for AHCPHT218 Carry out post-harvest operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has carried out post-harvest operations on at least two occasions, and has:

- identified post-harvest treatments and operations to be performed
- applied client specifications and workplace requirements applicable to post-harvest operations
- used a range of equipment for handling and transporting produce
- identified the Hazard Analysis and Critical Control Points (HACCP) and applicable food safety requirements
- transported, graded, treated, packed and stored harvested produce according to market requirements, client specifications and workplace requirements
- labelled produce accurately and correctly
- read storage facility monitoring gauges, and reported abnormal readings
- minimised handling damage to produce
- maintained records of post-harvest operations to allow traceability
- reported on post-harvest operations to supervisor.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- client specifications and workplace requirements applicable to post-harvest operations
- HACCP and applicable food safety requirements
- principles and practices of post-harvest operations, including:
 - attributes of workplace produce in relation to desired quality of produce to be presented to client
 - characteristics and procedures for the use of cool rooms

- cool chain principles and practices
- correct storage temperatures for a range of enterprise produce
- disposal of waste materials to minimise damage to external environment
- environmental effects of post-harvest treatments
- humidity levels and the effect of humidity on quality of enterprise produce
- hygiene issues in the handling and storage of plant produce
- industry standards for packaging
- produce handling and cooling requirements
- relationship between quality attributes of produce and packing techniques and packaging
- storage methods for different workplace produce.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - post-harvest tools, equipment and machinery
- specifications:
 - client specifications and workplace requirements applicable to post-harvest operations
 - HACCP and applicable food safety requirements
 - principles and practices of post-harvest operations
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT219 Handle and move mushroom boxes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to handle and move mushroom boxes, including distributing empty boxes, collecting and moving filled boxes, and finalising handing and moving tasks.

The unit applies to individuals who handle and move mushroom boxes under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Distribute boxes for filling to picking rooms	1.1 Select, assemble and position materials, trolleys, tools and equipment appropriate for handling and moving mushroom boxes 1.2 Carry out pre-operational and safety checks on trolleys, tools and equipment 1.3 Follow site quarantine protocols and farm and personal hygiene requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Identify workplace health and safety hazards, and report to supervisor 1.5 Identify environmental and biosecurity implications associated with work, and minimise impact 1.6 Distribute empty boxes to pickers in a timely and efficient manner
2. Collect and move filled boxes	2.1 Coordinate collection of filled boxes with delivery of empty boxes 2.2 Stack filled boxes on trolleys to the recommended height 2.3 Move stacked trolleys safely from picking rooms and with consideration for other traffic flow in the area 2.4 Transfer and stack filled boxes into cool room using safe work practices 2.5 Record cool room air and mushroom pulp temperatures 2.6 Report variations of temperature and anomalies, and take remedial action according to supervisor instructions
3. Finalise tasks	3.1 Clean and return trolleys, tools and equipment to required location 3.2 Identify and report unserviceable trolleys, tools and equipment according to workplace procedures 3.3 Complete daily work records legibly and accurately 3.4 Report work outcomes and seek feedback on performance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about handling and moving mushroom boxes
Writing	<ul style="list-style-type: none"> Use clear language and accurate industry terminology to complete daily work records
Oral communication	<ul style="list-style-type: none"> Use clear language to report cool room and mushroom pulp

Skill	Description
	temperature variations and anomalies, unserviceable trolleys, tools and equipment, and work outcomes to supervisor and seek feedback
Numeracy	<ul style="list-style-type: none"> Estimate mushroom box quantities and packing rate Record cool room air and mushroom pulp temperatures

Unit Mapping Information

Assessment Requirements for AHCPHT219 Handle and move mushroom boxes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has handled and moved mushroom boxes on at least three occasions, and has:

- selected, assembled, positioned and maintained mushroom box handling and moving materials, trolleys, tools and equipment
- applied workplace health and safety requirements
- carried out an inventory of mushroom boxes
- estimated and supplied quantities of empty boxes to mushroom pickers in a number of picking rooms
- minimised environmental impacts associated with handling and moving mushroom boxes
- followed industry and workplace biosecurity procedures
- estimated rate of packing for collection
- collected filled boxes to ensure continued smooth flow of picking and packing work
- recorded cool room air and mushroom pulp temperatures
- reported temperature variations and anomalies, and taken remedial action
- completed daily work records and reported work outcomes and unserviceable trolleys, tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for handling and moving mushroom boxes, including:
 - collection and packing procedures
 - quality requirements
 - safe manual handling techniques
 - storage requirements for mushrooms

- workplace requirements applicable to health and safety in the workplace for handling and moving mushroom boxes
- environmental impacts associated with handling and moving mushroom boxes
- industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - mushroom box handling and moving materials, trolleys, tools and equipment
 - mushroom boxes
 - thermometer
- specifications:
 - workplace requirements applicable to health and safety in the workplace for handling and moving mushroom boxes
 - industry and workplace biosecurity procedures applicable to handling and moving mushroom boxes
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT220 Perform mushroom substrate process tasks

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to perform mushroom substrate process tasks, including preparing and assisting with each process stage and finalising substrate processes.

The unit applies to individuals who perform mushroom substrate process tasks under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for each process stage	1.1 Identify substrate process requirements with supervisor 1.2 Select and prepare tools, equipment and machinery 1.3 Report and fix faults or variations from required settings 1.4 Identify site quarantine protocols, workplace and personal hygiene requirements and food safety requirements when preparing for substrate process stages

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.5 Identify workplace health and safety hazards, and report to supervisor</p> <p>1.6 Identify environmental and biosecurity implications associated with work, and minimise impact</p>
2. Fill units with mushroom substrate	<p>2.1 Operate filling equipment at a speed that maintains continuous operation</p> <p>2.2 Fill units with mushroom substrate according to workplace procedures</p>
3. Assist with spawning processes	<p>3.1 Inspect and report any abnormalities found in spawn</p> <p>3.2 Mix spawn into mushroom substrate</p> <p>3.3 Check spawn usage rate and report variations according to workplace procedures</p> <p>3.4 Apply and mix supplement as required</p> <p>3.5 Install spawned mushroom substrate in spawn run rooms</p> <p>3.6 Take samples of mushroom substrate according to workplace procedures</p> <p>3.7 Check mushroom substrate for presence of pests, and take remedial action as required</p>
4. Prepare and apply casing mixture	<p>4.1 Assemble and check required quantities of pesticides, peat, limestone and additives for casing</p> <p>4.2 Blend casing ingredients according to workplace procedures</p> <p>4.3 Take samples of prepared casing and mushroom substrate before casing has been added</p> <p>4.4 Apply and mix supplement as required</p> <p>4.5 Check casing depth, structure and consistency, and report variations according to workplace procedures</p>
5. Finalise mushroom substrate processes	<p>5.1 Clean and return tools, equipment and machinery to required location</p> <p>5.2 Identify and report unserviceable tools, equipment and machinery according to workplace procedures</p> <p>5.3 Clean up at the end of each process stage</p> <p>5.4 Complete records legibly and accurately</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.5 Report work outcomes and seek feedback on performance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about processing mushroom substrate
Writing	<ul style="list-style-type: none"> Use clear language and accurate industry terminology to complete work records
Oral communication	<ul style="list-style-type: none"> Use clear language to report spawn usage rate variations, and casing depth, structure and consistency variations Use clear language to report work outcomes and unserviceable tools and equipment to supervisor and seek feedback
Numeracy	<ul style="list-style-type: none"> Calculate pesticide, peat, limestone and additive quantities for casing Measure casing depth

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed mushroom substrate process tasks on at least three occasions, and has:

- selected, prepared and maintained mushroom substrate processing tools, equipment and machinery
- maintained site quarantine protocols and personal hygiene
- applied workplace health and safety requirements
- minimised environmental impacts associated with mushroom substrate process tasks
- followed industry and workplace biosecurity procedures
- filled units with mushroom substrate
- applied spawn into mushroom substrate
- reported spawn usage rate variations, and casing depth, structure and consistency variations
- calculated pesticide, peat, limestone and additive quantities
- prepared and applied casing mixture
- measured casing depth
- completed work records and reported work outcomes and unserviceable tools and equipment to supervisor and sought feedback.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of mushroom substrates, including:
 - food safety standards, hazards and critical control points, quality systems and emergency procedures

- the impact on the rest of the mushroom production cycle of deviations of mushroom substrate quality from workplace standards for substrate
- the mushroom production cycle
- substrate production
- site quarantine protocols
- workplace requirements applicable to health and safety in the workplace for mushroom substrate process tasks
- environmental impacts associated with mushroom substrate process tasks
- industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - mushroom substrate processing tools, equipment and machinery
 - mushroom substrate and spawn
 - pesticide, peat, limestone, additive and casing mixture
- specifications:
 - food safety standards relevant to mushroom substrate preparation
 - workplace requirements applicable to health and safety in the workplace for mushroom substrate process tasks
 - industry and workplace biosecurity procedures applicable to mushroom substrate process tasks
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT221 Water mushroom crops

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare and operate watering equipment and complete watering operations for mushroom crops.

The unit applies to individuals who water mushroom crops under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use watering equipment	1.1 Identify mushroom watering requirements with supervisor 1.2 Assemble and connect watering equipment components to water supply 1.3 Add chemicals to water according to supervisor instructions 1.4 Read and record water meter for the area to be watered

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Identify rooms requiring watering and required watering pattern
2. Operate watering equipment	2.1 Follow site quarantine protocols, workplace and personal hygiene requirements for watering operation 2.2 Check and adjust water pressure to ensure correct spray or droplet pattern is achieved 2.3 Provide and distribute water evenly in the correct quantity and pressure 2.4 Report and fix faults or variations in watering operations 2.5 Identify workplace health and safety hazards, and report to supervisor 2.6 Identify environmental and biosecurity implications associated with work, and minimise impact
3. Finalise watering operations	3.1 Read water meter for area, and record amount of water used 3.2 Disconnect watering equipment and return to storage area 3.3 Identify and report unserviceable watering equipment according to workplace procedures 3.4 Report work outcomes and seek feedback on performance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about watering mushroom crops
Oral communication	<ul style="list-style-type: none"> Use clear language to report water equipment faults, variations, unserviceable equipment and work outcomes to supervisor and seek feedback
Numeracy	<ul style="list-style-type: none"> Measure chemical quantities Record water meter reading Calculate and record amount of water used

Assessment Requirements for AHCPHT221 Water mushroom crops

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has watered mushroom crops on at least three occasions, and has:

- assembled, connected and maintained watering equipment
- measured correct doses of additives for water
- delivered water to the mushroom crop at required rate and pressure
- estimated flow rate of water by the range of watering equipment in use
- applied workplace health and safety requirements
- minimised environmental impacts associated with watering mushroom crops
- followed industry and workplace biosecurity procedures
- recorded water use
- reported work outcomes and unserviceable tools and equipment to supervisor and sought feedback.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for watering mushroom crops, including:
 - effect on mushrooms of under-watering, overwatering, insufficient evaporation, late watering and moisture imbalance
 - effects of water on casing structure, mycelium, yields and quality
 - factors affecting effective operation of watering tree or other equipment used
 - how panning occurs
 - light, medium and heavy water and when each type is used
 - safe and effective use of fungicides and other water additives

- workplace requirements applicable to health and safety in the workplace for watering mushroom crops
- environmental impacts associated with watering mushroom crops
- industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - mushroom watering equipment
 - water additives
- specifications:
 - workplace requirements applicable to health and safety in the workplace for watering mushroom crops
 - industry and workplace biosecurity procedures applicable to watering mushroom crops
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT222 Produce trellis dried grapes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to produce trellis dried grapes, including summer pruning, emulsion application, crown bunch removal, harvesting and post-harvest drying.

The unit applies to individuals who produce trellis dried grapes under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Summer prune grape crop for trellis drying	1.1 Reduce leaf coverage on fruiting canes to assist cutting, emulsion application and drying 1.2 Cut canes according to workplace requirements 1.3 Leave replacement canes intact and undamaged to ensure next year fruiting 1.4 Spray grapes requiring emulsion treatment to ensure full and

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	complete coverage
2. Prepare for harvesting trellis dried grapes	2.1 Recognise workplace hazards and report safety concerns 2.2 Select, fit, use and maintain personal protective equipment according to the task and workplace requirements 2.3 Identify and hang uncut grapes and cut crown bunches on trellis without causing damage for drying or removal 2.4 Sample crop and test for moisture content and fruit maturity 2.5 Select harvest tools, equipment and machinery appropriate to harvesting operations 2.6 Carry out pre-operational and safety checks on harvesting machinery and ancillary equipment
3. Harvest trellis dried grapes	3.1 Operate harvesting machinery and ancillary equipment according to workplace requirements in a safe manner and at speeds to suit crop conditions 3.2 Maximise crop quality by implementing and maintaining standards that meet processor and workplace requirements 3.3 Remove, store and treat full bulk bins as soon as possible to minimise deterioration of crop quality 3.4 Clean and return harvest tools, equipment and machinery to required location
4. Carry out post-harvest drying	4.1 Select and check drying tools, equipment and machinery 4.2 Carry out post-harvest drying as directed to meet processor requirements 4.3 Monitor moisture and temperature of crop during drying, and return to bulk bins after appropriate cool down has occurred 4.4 Identify and report unserviceable tools, equipment and machinery according to workplace procedures 4.5 Report harvest and post-harvest activities to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about trellis dried grape production

Assessment Requirements for AHCPHT222 Produce trellis dried grapes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has produced trellis dried grapes on at least one occasion, and has:

- summer pruned vines according to workplace requirements
- identified parts of the vine
- selected, used and maintained trellised grape harvesting and drying tools, equipment and machinery
- applied workplace health and safety requirements
- carried out post-harvest drying
- reported harvest and post-harvest activities, and unserviceable tools, equipment and machinery.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for producing trellis dried grapes, including:
 - crown and cordon bunch picking or removal requirements and procedures
 - environmental impact issues
 - hazard identification and control
 - processor quality standards and requirements
 - summer pruning requirements and procedures
 - year-round preparation required for trellis drying
- workplace requirements applicable to health and safety in the workplace for producing trellis dried grapes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - trellis dried grape crops
 - crop harvesting and drying tools, equipment and machinery
 - personal protective equipment applicable to producing trellis dried grapes
- specifications:
 - workplace requirements applicable to health and safety in the workplace and producing trellis dried grapes
 - work instructions and workplace procedures applicable to producing trellis dried grapes
- relationships:
 - supervisors
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT302 Prepare raw materials and compost feedstock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare and mix raw materials into a suitable feedstock mixture, monitor the composting process, conduct quality control inspection and clean up.

The unit applies to individuals who prepare raw materials and compost feedstock under broad direction, and take responsibility for their own work and for the quality of the work of others.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria

Assessment Requirements for AHCPHT302 Prepare raw materials and compost feedstock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared raw materials and compost feedstock on at least three occasions, and has:

- applied workplace health and safety requirements
- prepared raw materials for composting according to workplace product requirements
- established, maintained and completed compost batch documentation
- prepared batches for composting according to defined compost recipes
- conducted and interpreted basic field test results to confirm effective processing and defined intervention required to rectify composting processes
- maintained processing operations records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for preparing composting raw materials, including:
 - Australian composting standards
 - batch documentation techniques
 - characteristics of a range of raw materials
 - compost production cycle
 - compost quality standards
 - fundamental characteristics of compost quality
 - key process control stages critical to consistent compost production
 - overview of systems and technologies used in compost production
 - principles of commercial compost production
 - range and characteristics of categories of compost product

- steps in pre-processing compost materials
- workplace requirements applicable to health and safety in the workplace for preparing raw materials and compost feedstock.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - commercial composting materials, equipment and machinery, and load-shift machinery
 - raw compost materials and feedstock mixtures
 - field testing equipment
- specifications:
 - workplace requirements applicable to health and safety in the workplace for preparing raw materials and compost feedstock
- relationships:
 - supervisor, sales and operational staff members
- timeframes:
 - according to job specification requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPTH307 Prepare raw materials and compost feedstock

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to prepare and mix raw materials into a suitable feedstock mixture for commercial-scale composting and compost feedstock mixtures to manufacture compost products.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Production horticulture (PHT)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Organise for processing	1.1 Review job sheet to identify all processing requirements 1.2 Check machinery, equipment and materials for serviceability and safe operation 1.3 Identify and assess workplace hazards and take action to

Element	Performance criteria
	minimise risk to self and others
2. Prepare raw materials and compost the feedstock mixture	2.1 Identify, collect and check raw materials and additives for physical contamination 2.2 Confirm composting technology and methods to be used as appropriate to raw material types and enterprise product requirements 2.3 Pre-process raw materials into suitable forms for composting 2.4 Mix pre-processed raw materials into suitable feedstock mixtures for composting 2.5 Handle feedstock mixtures for composting according to technology, appropriate method and industry best practice 2.6 Assign batch numbers or codes and create batch documentation to enable tracking of batch
3. Monitor composting process	3.1 Monitor composting batch by observing and using field testing equipment 3.2 Maintain processing and operations records for process control and to track batch through the compost production cycle 3.3 Report to supervisor faults or variations observed at any stage of the process and take remedial action to maintain effective and consistent compost production
4. Conduct quality control inspection	4.1 Inspect and assess finished compost for compliance with enterprise product requirements 4.2 Report faults or variations 4.3 Reprocess non-compliant product with necessary adjustments 4.4 Confirm compliance of compost batch with product requirements 4.5 Complete batch documentation for compliant compost product 4.6 Inform sales and operational staff members that product is suitable for sale and/or preparation of value-added products
5. Clean up area	5.1 Clean loading-shifting machinery and other processing equipment 5.2 Clear away raw materials and finished compost products to designated areas and clean processing site

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCPTH307A Prepare raw materials and compost the feedstocks.

Assessment Requirements for AHCPHT307 Prepare raw materials and compost feedstock

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- conduct and interpret basic field test results to confirm effective processing and define intervention required to rectify composting processes
- establish and maintain appropriate compost batch documentation accurately and promptly
- prepare batches for composting according to defined compost recipes
- prepare raw materials for composting according to enterprise product requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for preparing composting raw materials
 - Australian composting standards
 - batch documentation techniques
 - characteristics of a range of raw materials
 - compost production cycle
 - compost quality standards
 - fundamental characteristics of compost quality
 - key process control stages critical to consistent compost production
 - overview of systems and technologies used in compost production
 - principles of commercial compost production
 - range and characteristics of categories of compost product
 - steps in pre-processing compost materials

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHC PHT311 Install and maintain vertical hanging trellis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to install and maintain vertical hanging trellis.

The unit applies to individuals who install and maintain vertical hanging trellis under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install and maintain vertical hanging trellis	1.1 Clarify requirements of the installation and maintenance work with supervisor 1.2 Identify and select tools, equipment and material resource requirements according to scope of work and supervisor instructions 1.3 Recognise workplace hazards and report safety concerns 1.4 Identify environmental and biosecurity implications associated with installation and maintenance work, and minimise impact

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Select, fit, use and maintain personal protective equipment applicable to the task and workplace safety requirements
2. Install vertical hanging trellis	2.1 Identify appropriate starting point for installation activities 2.2 Position equipment and materials at commencement and during installation activities to ensure they are ready for use 2.3 Identify appropriate suspension point for vertical hanging trellis 2.4 Attach vertical hanging trellis to suspension point 2.5 Attach base of plant to vertical hanging trellis using loose overhand knot or trellis clip
3. Maintain vertical hanging trellis and plants	3.1 Inspect trellis for signs of disrepair 3.2 Rectify and report disrepair according to workplace procedures 3.3 Evaluate plant growth and attach vertical hanging trellis to new plant growth using trellis clip or twisting method 3.4 Lower and lean plants where appropriate
4. Complete installation and maintenance activities	4.1 Remove and dispose of waste material according to workplace procedures 4.2 Clean and return tools and equipment to required location 4.3 Identify and report unserviceable tools and equipment according to workplace procedures 4.4 Record installation activities according to workplace procedures 4.5 Report installation and maintenance activities to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations and products

Skill	Description
Writing	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to prepare installation and maintenance activity records
Oral communication	<ul style="list-style-type: none"> Use clear language to confirm and report installation and maintenance activities, and report safety concerns and tool and equipment unserviceability
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility
Get the work done	<ul style="list-style-type: none"> Take responsibility for routine decisions about installing and maintaining vertical hanging trellis, and reflect on outcomes to identify effectiveness of decisions

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Vertical hanging trellis must include at least one of the following:	<ul style="list-style-type: none"> plastic trellis trellis twine or string trellis netting.
--	--

Assessment Requirements for AHCPHT311 Install and maintain vertical hanging trellis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has installed and maintained two different vertical hanging trellis on at least two occasions, and has:

- selected, positioned, used and maintained vertical hanging trellis tools equipment and materials
- applied workplace health and safety requirements
- minimised environmental impacts associated with installing and maintaining vertical hanging trellis
- followed industry and workplace biosecurity procedures
- evaluated vertical hanging trellis and plant growth maintenance requirements
- applied plant maintenance techniques, including:
 - clipping or twisting
 - lowering and leaning where appropriate
- removed and disposed of waste material
- recorded and reported installation and maintenance activities and unserviceable tools and equipment

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- vertical hanging trellis installation and maintenance tools and equipment and operating instructions
- workplace requirements applicable to health and safety in the workplace for installing and maintaining vertical hanging trellis
- environmental impacts associated with installing and maintaining vertical hanging trellis
- industry and workplace biosecurity procedures

- vertical hanging trellis and plant maintenance:
 - purpose
 - techniques
 - tools, equipment and materials.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - vertical hanging trellis installation and maintenance tools, equipment and materials
 - personal protective equipment applicable to vertical hanging trellis installation and maintenance
- specifications:
 - vertical hanging trellis equipment operating instructions
 - workplace requirements applicable to health and safety in the workplace and installing and maintaining vertical hanging trellis
 - industry and workplace biosecurity procedures applicable to installing and maintaining vertical hanging trellis
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPHT312 Implement a crop regulation program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to implement a crop regulation program, including preparing the program and communicating, monitoring and undertaking crop regulation, and completing crop regulation activities.

The unit applies to individuals who implement a crop regulation program under broad direction, and take responsibility for their own work and the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for the crop regulation program	1.1 Identify and confirm with supervisor the crop to be regulated and operational requirements of the program 1.2 Select, tools, equipment and machinery appropriate for the crop to be regulated, and check for safe operation 1.3 Identify environmental and biosecurity implications associated with regulating crop, and minimise impact

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Select, fit, use and maintain personal protective equipment according to the task and workplace safety requirements 1.5 Calibrate and adjust tools, equipment and machinery
2. Communicate and monitor crop regulation activities	2.1 Inform work teams and contractors of the operational requirements of the regulation program and strategy 2.2 Communicate daily work tasks to work teams and contractors 2.3 Monitor crop regulation tasks and undertake remedial action where necessary to achieve program objectives
3. Undertake crop regulation	3.1 Evaluate crop growth and identify plant material to be thinned or pruned 3.2 Regulate crop using techniques appropriate to crop requirements 3.3 Operate crop regulation tools, equipment and machinery safely 3.4 Record and report signs of diseases and pests according to workplace procedures
4. Complete crop regulation activities	4.1 Remove and dispose of waste material according to workplace and biosecurity requirements 4.2 Clean, maintain and return tools, equipment and machinery to required location 4.3 Identify and report unserviceable tools, equipment and machinery according to workplace procedures 4.4 Record and report crop regulation activities

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about the crop regulation program
Writing	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to record signs of diseases and pests, and complete crop

Skill	Description
	regulation activity records
Oral communication	<ul style="list-style-type: none"> Initiate discussions with supervisor using clear language to confirm crop to be regulated and report signs of diseases and pest, crop regulation activities, and unserviceable tools, equipment and machinery Use clear language to inform work teams and contractors of crop regulation program operational requirements and strategy, and daily work tasks

Assessment Requirements for AHCPHT312 Implement a crop regulation program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented a crop regulation program on at least two occasions, and has:

- selected and operated crop regulation tools, equipment and machinery, and checked for safe operation
- applied workplace health and safety requirements applicable to regulating crops
- minimised environmental and biosecurity impacts associated with the crop regulation program
- used and maintained a range of plant thinning and pruning tools
- communicated and monitored the crop regulation program
- evaluated crop growth and identified plant material to be thinned or pruned
- assessed the effects of thinning and pruning operations on plant growth, habit and production levels
- used a range of methods to achieve crop regulation goals
- recorded and reported signs of diseases and pests, crop regulation activities and unserviceable tools, equipment and machinery
- removed and disposed of waste material
- cleaned, maintained and stored tools, equipment and machinery.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- crop regulation tools, equipment and machinery operating instructions and safe work procedures
- workplace health and safety requirements applicable to regulating crops
- industry and workplace environment and biosecurity procedures applicable to regulating crops

- principles and practices of crop regulation, including:
 - effect of weather on crop regulation activities
 - effects on thinning and pruning operations on plant growth, habit and production levels
 - workplace quality procedures and characteristics of crop being regulated
 - principles of thinning and pruning and the methods used to achieve crop regulation goals
 - types of crop regulation methods and materials
 - signs of pests and disease.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - crop regulation tools, equipment and machinery
 - personal protective equipment applicable to crop regulation
 - principles and practices of crop regulation
- specifications:
 - crop regulation tools, equipment and machinery operating instructions and safe work procedures
 - industry and workplace environment and biosecurity procedures applicable to regulating crops
 - workplace health and safety requirements applicable to regulating crops
- relationships:
 - team members, contractors and supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPHT313 Implement a post-harvest program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to implement a post-harvest program for horticultural crops.

The unit applies to individuals who implement a post-harvest program under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for implementation of post-harvest operations	1.1 Identify post-harvest operations to be performed and requirements of the program 1.2 Select materials, tools, equipment and machinery according to post-harvest operations requirements, and check for safe operation 1.3 Identify the Hazard Analysis and Critical Control Points (HACCP) and food safety requirements applicable to crop under cultivation

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Coordinate post-harvest work	<p>2.1 Identify work team and coordinate tasks</p> <p>2.2 Undertake post-harvest operations according to post harvest program requirements</p> <p>2.3 Follow site quarantine protocols and farm and personal hygiene requirements</p>
3. Implement post-harvest treatments	<p>3.1 Grade and label produce according to client specifications</p> <p>3.2 Identify and dispose of produce that does not meet client specifications or workplace requirements</p> <p>3.3 Select post-harvest treatments according to harvested produce requirements</p> <p>3.4 Confirm timing, rate, application method, environmental requirements and handling techniques conform to the requirements of the harvested produce</p> <p>3.5 Confirm post-harvest practices meet workplace requirements and minimise damage to produce</p> <p>3.6 Clean, maintain and return tools, equipment and machinery to required location</p> <p>3.7 Identify and report unserviceable tools, equipment and machinery according to workplace procedures</p>
4. Implement hazardous waste disposal guidelines	<p>4.1 Review waste disposal requirements and determine operational tasks</p> <p>4.2 Monitor collection and disposal of waste according to workplace procedures</p> <p>4.3 Report conditions likely to impact on business viability</p>
5. Implement packing and presentation requirements of produce	<p>5.1 Review packing and presentation specification requirements, and determine operational tasks</p> <p>5.2 Monitor and adjust packing and presentation processes</p> <p>5.3 Record packing and presentation processes</p>
6. Implement storage requirements of produce	<p>6.1 Review storage specification requirements, and determine operational tasks</p> <p>6.2 Monitor storage processes and facilities</p> <p>6.3 Record storage processes and conditions</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about post-harvest program

Assessment Requirements for AHCPHT313 Implement a post-harvest program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented a post-harvest program on at least two occasions, and has:

- identified and coordinated post-harvest operations according to post-harvest program requirements
- applied client specifications and workplace requirements applicable to post-harvest operations
- identified the Hazard Analysis and Critical Control Points (HACCP) and applicable food safety requirements
- implemented post-harvest treatments and labelling, packing, presentation and storage requirements according to market requirements, client specifications and workplace procedures
- reported unserviceable tools, equipment and machinery, and conditions likely to impact on business viability
- monitored the collection and disposal of hazardous waste materials according to guidelines and workplace procedures
- completed packing and presentation process records, and storage processes and conditions records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- client specifications and workplace requirements applicable to post-harvest operations
- HACCP and applicable food safety requirements
- principles and practices of post-harvest treatments and processes, including:
 - attributes of produce in relation to the desired quality of produce to be presented to the client

- characteristics and procedures for the use of cool rooms
- cool chain principles and practices
- correct storage temperatures for a range of produce
- enterprise confined spaces policy and safety procedures
- environmental effects of post-harvest treatments and hazardous waste disposal methodologies, application and purpose
- humidity levels and their effect on the quality of produce
- hygiene issues in the handling and storage of plant produce
- industry standards for packaging
- relationship between the quality attributes of produce and packing techniques and packaging
- storage methods for a range of produce
- the importance of maintaining the quality of produce, including handling and cooling requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - post-harvest tools, equipment and machinery
- specifications:
 - client specifications, post-harvest program and workplace requirements applicable to post-harvest operations
 - HACCP and applicable food safety requirements
 - principles and practices of post-harvest operations
- relationships:
 - team members
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT314 Harvest horticultural crops mechanically

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare, operate and shut down machinery and related equipment used in the harvest of horticultural crops.

The unit applies to individuals who harvest horticultural crops mechanically under broad direction, and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare machinery for use	1.1 Determine work requirements from workplace instructions 1.2 Identify potential hazards and risks, and implement safe working practices to manage risks 1.3 Source and interpret relevant machinery and equipment operation and maintenance manual and manufacturer instructions 1.4 Select, fit, use and maintain personal protective equipment applicable to the task

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.5 Select required tools, equipment and machinery, and conduct routine pre-operational checks</p> <p>1.6 Document and replace damaged or worn components according to workplace procedures</p> <p>1.7 Attach ancillary equipment and check for correct operation</p>
2. Operate machinery and equipment	<p>2.1 Carry out pre-start and start-up procedures according to workplace procedures</p> <p>2.2 Operate machinery and equipment in a safe, controlled and efficient manner, and monitor for performance efficiency</p> <p>2.3 Operate machinery according to operation and maintenance manual, manufacturer specifications, task requirements and conditions</p> <p>2.4 Identify environmental and biosecurity implications associated with harvesting, and undertake activities to minimise impact</p> <p>2.5 Continually monitor hazards and risks, and ensure safety of self, other personnel, plant and equipment</p>
3. Complete work	<p>3.1 Conduct shut-down according to workplace procedures</p> <p>3.2 Perform routine operational servicing and minor maintenance</p> <p>3.3 Identify and report malfunctions, faults, irregular performance or damage according to workplace procedures</p> <p>3.4 Clean, store and secure harvest machinery and equipment</p> <p>3.5 Record and report harvest activities and machinery use records</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about mechanical horticultural crop harvesting
Writing	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to record harvest activity

Skill	Description
Oral communication	<ul style="list-style-type: none"> Use clear language to report malfunctions, faults, irregular performance or damage
Numeracy skills	<ul style="list-style-type: none"> Calculate quantities of machinery fluids

Unit Mapping Information

Assessment Requirements for AHCPHT314 Harvest horticultural crops mechanically

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has harvested horticultural crops mechanically on at least two occasions, and has:

- applied workplace health and safety requirements
- carried out horticultural harvesting machinery and equipment pre-operational checks according to operation and maintenance manual
- operated and shut down horticultural harvesting machinery and equipment according to operation and maintenance manual, manufacturer specifications, task requirements and local conditions
- recognised and documented defects in horticultural harvesting machinery and equipment
- attached and uncoupled ancillary equipment safely
- minimised environmental impacts associated with horticultural harvesting machinery and equipment operation
- performed minor maintenance
- recorded and reported harvest activities and machinery use
- cleaned, stored and secured machinery and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for harvesting horticultural crops mechanically
- principles and practices for operating horticultural crop harvesting machinery, including:
 - basic diagnostic techniques
 - components and controls features and functions
 - crop quality assurance and hygiene requirements

- equipment characteristics, technical capabilities and limitations
- manufacturer and workplace requirements for:
 - pre-operational checks
 - machinery operation techniques
 - operator level servicing
 - planned and emergency-shut down procedures
- industry and workplace environmental and biosecurity procedures applicable to horticultural crop harvesting.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
 - individual must not be under the influence of alcohol or drugs
 - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
 - individual must not be in a fatigued state when operating harvest machinery
- resources, equipment and materials:
 - horticultural harvest machinery and equipment
 - horticultural crop
 - personal protective equipment applicable to operating horticultural harvesting machinery and equipment
- specifications:
 - horticultural harvest machinery and equipment operation and maintenance manuals
 - workplace requirements applicable to health and safety in the workplace for harvesting horticultural crops mechanically
 - work instructions and workplace procedures applicable to operating horticultural crop harvest machinery and equipment
 - recording procedures
 - industry and workplace environmental and biosecurity procedures applicable to horticultural crop harvesting
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPHT315 Establish horticultural crops

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has established horticultural crops on at least two occasions, and has:

- applied workplace health and safety requirements
- carried out tool, machinery and equipment pre-operational checks according to operation and maintenance manual
- attached and calibrated equipment safely
- carried out ground preparation and applied pre-planting treatments
- operated tools, machinery and equipment according to operation and maintenance manual, manufacturer specifications, task requirements and local conditions
- carried out sowing or planting operations, and fertiliser application
- minimised environmental and biosecurity impacts associated with establishing horticultural crops
- shut down machinery and equipment
- performed minor maintenance
- recognised and documented defects in machinery and equipment
- cleaned, stored and secured tools, machinery and equipment
- recorded and reported establishment activities and machinery use.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for establishing horticultural crops
- manufacturer and workplace requirements for seeding and planting machinery and equipment, including:

- pre-operational checks
- machinery operation techniques
- principles of weight distribution with regard to load shifting and vehicle movement
- operator level servicing
- planned and emergency shut-down procedures
- principles and practices for establishing crops, including:
 - crop types, preparation of seeds and plants, seeding and planting methods and application techniques
 - effects of weather conditions on seeding and planting and fertilising applications
 - workplace procedures for seeding and planting operations, recording and reporting
 - fertiliser types, rates of application and crop nutrient requirements
 - sustainable land management and soil conservation techniques
- environmental and biosecurity impacts associated with establishing horticultural crops, including:
 - positive environmental practices, negative environmental impacts, and minimisation measures associated with seeding operations
 - chemical handling techniques for fertiliser
 - fertiliser safety data sheets information
 - environmental impacts of fertiliser
 - use and control of hazardous substances.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
 - individual must not be under the influence of alcohol or drugs
 - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
 - individual must not be in a fatigued state when operating seeding and planting machinery
- resources, equipment and materials:
 - seeding and planting machinery
 - horticultural seeds and seedlings
 - personal protective equipment applicable to establishing horticultural crops
- specifications:
 - horticultural seeding and planting machinery and equipment operation and maintenance manuals
 - workplace requirements applicable to health and safety in the workplace for establishing horticultural crops

- work instructions and workplace procedures applicable to establishing horticultural crops
- recording procedures
- industry and workplace environmental and biosecurity procedures applicable to establishing horticultural crops
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT316 Supervise mushroom substrate preparation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to supervise mushroom substrate preparation (Phase II), including confirming preparation requirements, monitoring the preparation process and finalising the mushroom substrate preparation process.

The unit applies to individuals who supervise mushroom substrate preparation under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm requirements for mushroom substrate preparation	1.1 Obtain details of required quantities of substrate, dates and times to be achieved for each stage of the process, and inform work team 1.2 Determine availability, quality, serviceability and cleanliness of resources required for mushroom substrate preparation 1.3 Identify and apply site quarantine protocols, workplace and personal hygiene requirements, and food safety requirements for

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	substrate preparation 1.4 Identify potential hazards and risks and implement safe working practices to manage risks 1.5 Identify environmental and biosecurity implications associated with substrate preparation, and undertake activities to minimise impact
2. Monitor mushroom substrate preparation process	2.1 Monitor mushroom substrate preparation processes 2.2 Take samples of materials and outputs according to workplace procedures 2.3 Monitor and position probes to ensure representative readings 2.4 Record production information required for Hazard Analysis and Critical Control Points (HACCP) 2.5 Report faults or variations from required settings or workplace quality standards 2.6 Monitor compost, rooms and work areas for the presence of pests, and take remedial action according to workplace procedures
3. Finalise mushroom substrate preparation process	3.1 Monitor clean-up activities at the end of each process stage 3.2 Perform routine preventative maintenance, and report faults according to workplace procedures 3.3 Clean and store tools and equipment according to workplace requirements 3.4 Record substrate preparation activities according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about mushroom substrate preparation

Skill	Description
Writing	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to record production information and substrate preparation activity
Oral communication	<ul style="list-style-type: none"> Use clear language to inform work team of substrate preparation activity and report faults or variations from required settings and workplace quality standards, and report routine preventative maintenance faults

Assessment Requirements for AHCPHT316 Supervise mushroom substrate preparation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has supervised mushroom substrate preparation on at least two occasions, and has:

- organised and communicated mushroom substrate preparation process
- maintained site quarantine protocols, and workplace and personal hygiene
- applied workplace health and safety requirements
- minimised environmental and biosecurity impacts associated with mushroom substrate preparation
- coordinated substrate preparation activities so that standards relating to productivity, workflow requirements, workplace procedures and quality are met
- recorded and reported production information and substrate preparation activities
- observed and reported non-compliance with workplace quality standards
- reported routine preventative maintenance faults.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for supervising mushroom substrate preparation, including:
 - hazard and critical control points, quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
 - casing function, application, required depth and required surface structure
 - impact on mushroom production cycle of deviations of mushroom substrate quality from workplace standards for substrate
 - overview of mushroom production cycle
 - overview of Phase I and Phase II substrate production

- food safety standards, legislation and industry codes of practice relevant to mushroom substrate preparation
- site quarantine protocols
- workplace requirements applicable to health and safety in the workplace for mushroom substrate preparation
- industry and workplace environmental and biosecurity procedures applicable to mushroom substrate preparation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- specifications:
 - food safety standards, legislation and industry codes of practice relevant to mushroom substrate preparation
 - workplace requirements applicable to health and safety in the workplace for mushroom substrate preparation
 - industry and workplace environmental and biosecurity procedures applicable to mushroom substrate preparation
- relationships:
 - team members
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPHT317 Coordinate horticultural crop harvesting

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated horticultural crop harvesting on at least one occasion, and has:

- prepared for crop harvesting activities
- determined and complied with client, workplace and industry quality assurance specifications
- applied workplace health and safety requirements
- minimised environmental and biosecurity impacts associated with horticultural crop harvesting
- coordinated a work group
- maintained harvest requirements
- monitored crop quality
- calculated and recorded picking tallies and harvest yields
- completed crop delivery documentation.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for coordinating horticultural crop harvesting, including:
 - effect of adverse climatic conditions, including rain, hail, extreme wind, or very high ultraviolet radiation, which may prevent or impede crop harvesting operations or severely influence the time taken to complete the tasks necessary to fulfil the operation
 - workplace quality procedures and characteristics of a crop relative to varying market requirements
 - grading characteristics of each crop

- importance of maintaining quality of produce, including cooling requirements and quick transport from field to processing areas
- industry wage rates and conditions, and contractor services, conditions and rates
- licensing requirements for use of forklifts, trucks and machinery
- recognition of the maturity parameters of a range of crops
- client, workplace and industry quality assurance specifications
- crop harvesting tools, equipment and machinery operating instructions
- workplace requirements applicable to health and safety in the workplace for horticultural crop harvesting
- industry and workplace environmental and biosecurity procedures applicable to horticultural crop harvesting.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - horticultural crop harvesting tools, equipment and machinery
 - personal protective equipment applicable to horticultural crop harvesting
- specifications:
 - client, workplace and industry quality assurance specifications
 - horticultural crop harvesting equipment and machinery operating instructions
 - workplace requirements applicable to health and safety in the workplace for horticultural crop harvesting
 - industry and workplace environmental and biosecurity procedures applicable to horticultural crop harvesting
- relationships:
 - team members, client
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT318 Prepare value added compost-based products

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare or blend compost with other materials or products to produce various value-added compost-based products, and conduct quality inspection.

The unit applies to individuals who prepare value-added compost-based products under broad direction, and take responsibility for their own work and for the quality of the work of others.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Organise for value-added product preparation	1.1 Identify product requirements from job specifications or work order 1.2 Identify potential hazards and risks, and implement safe working

Assessment Requirements for AHCPHT318 Prepare value added compost-based products

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared value-added compost-based products on at least three occasions, and has:

- identified value-added product requirements
- interpreted job specifications and followed workplace production procedures
- applied workplace health and safety requirements
- followed industry and workplace environmental and biosecurity procedures, and minimised impacts associated with preparing value-added compost-based products
- prepared batches of value-added product according to defined batch recipes and methods
- recognised value-added products and their characteristics
- recognised, quantified and handled products.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for preparing value-added compost-based products, including:
 - Australian standards for products
 - common product contaminants
 - workplace product specifications and standards
 - environmental license requirements, aspects and management measures associated with operation of machinery and equipment
 - hazards in handling materials and additives, and appropriate risk control measures
 - identification of contaminants
 - legislation, regulations and codes of practice with regard to licensing, roads and traffic requirements
 - operating principles and methods for plant and machinery

- potential risks and hazards associated with operation of machinery and equipment
- procedures for cleaning, securing and storing machinery, equipment and materials
- product types and characteristics
- raw materials, compost and additives commonly used to manufacture value-added products
- value-added product types and characteristics
- workplace requirements applicable to health and safety in the workplace for preparing value-added compost-based products
- industry and workplace environmental and biosecurity procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - commercial compost and value-added products blending, processing and transporting equipment and machinery
 - compost and value-added products
- specifications:
 - job sheets and work orders relevant to preparing value-added compost-based products
 - workplace requirements applicable to health and safety in the workplace for preparing value-added compost-based products
 - industry and workplace environmental and biosecurity procedures relevant to preparing value-added compost-based products
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPHT409 Develop a crop regulation program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assess, develop, document and monitor a crop regulation program.

The unit applies to individuals who apply specialist skills and knowledge to developing a crop regulation program. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCPHT409 Develop a crop regulation program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed a crop regulation program on at least one occasion, and has:

- assessed and selected cost-effective techniques, resources and equipment for the regulation of horticultural crops
- applied relevant workplace health and safety procedures
- prepared a cost-benefit analysis on available crop regulation methods
- developed a crop regulation program to achieve the yield and quality specified in the workplace production plan
- documented a crop regulation plan, specifications and quotation
- documented detailed schedules and work procedures
- monitored and reviewed the crop regulation program
- implemented appropriate courses of action in response to identified shortcomings.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for developing a crop regulation program, including:
 - processes and techniques for preparing, costing and documenting plans for scheduling crop regulation activities
 - site evaluation techniques, including analysis of the condition of soils, plants and the site for production activities
 - specific crop physiology and timing of regulation
 - the characteristics of soil and other growth media types, and the use of additives to enhance the available nutrition for specific plant species and cultivars

- the relationship between workplace crop regulation methods, including thinning, pruning and regulated deficit irrigation (RDI), and the yield and quality of specific crops
- crop regulation published data on the species and cultivars
- workplace requirements applicable to health and safety in the workplace for developing a crop regulation program.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - crop production plan
 - crop regulation published data on the species and cultivars
 - industry publications and internet sources of information relevant to developing a crop regulation program
- specifications:
 - workplace requirements applicable to health and safety in the workplace for developing a crop regulation program
- relationships:
 - staff and management
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPHT410 Develop harvesting and processing specifications to produce an olive oil

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to develop specifications that will produce the required quantity, style and quality of oil from an olive crop.

The unit applies to individuals who apply specialist skills and knowledge to developing harvesting and processing specifications to produce an olive oil. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Assessment Requirements for AHCPHT410 Develop harvesting and processing specifications to produce an olive oil

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed harvesting and processing specifications to produce olive oil on at least one occasion, and has:

- estimated and scheduled fruit maturity
- documented and communicated olive crop harvest and post-harvest requirements and procedures
- selected an appropriate style of oil that can be produced from a crop, and described it using standard industry terminology
- incorporated specifications into an olive oil processor contract
- arranged for an appropriate method of processing to produce the desired style and quality of oil
- documented olive oil specifications and related processing requirements in a report.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for developing specifications for olive oil, including:
 - how an olive oil is produced from olives
 - influence of processing on chemical composition of oil, including polyphenols, aroma and flavour compounds
 - influence of various harvesting methods on olive oil style and quality, including; bitterness, pungency, aroma and flavour
 - market preferences for styles of olive oil
 - methods of olive oil extraction and advantages/disadvantages associated with each
 - post-harvest handling, including storage and transport requirements for olive fruit intended for olive oil processing

- post-processing storage and handling requirements of olive oil.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - industry publications and internet sources of information relevant to the development of olive oil harvesting and processing specifications
- relationships:
 - harvesting personnel and olive oil processor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented and monitored a horticultural crop harvesting program on at least one occasion, and has:

- estimated crop quality and yield
- established strategies for pre-harvest and harvest
- implemented treatments for control and eradication of pests
- organised resources for the harvest
- coordinated equipment
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- documented a crop harvesting program and schedule of activities
- evaluated harvest operations and outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for crop harvesting, including:
 - crop measurement techniques and parameters
 - customer requirements
 - environmental controls and codes of practice applicable to harvesting operations
 - functions and limitations of harvesting equipment
 - location and relative skills and abilities of available staff, contractors or casual staff
 - market information and sources
 - required productivity rates
 - weather or other conditions that may affect harvest

- where relevant to workplace production: food safety and Hazard Analysis and Critical Control Points (HACCP) requirements, and requirements for export markets
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to implementing and monitoring a horticultural crop harvesting program.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - industry publications and internet sources of information relevant to the planning of a horticultural crop harvesting program
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to implementing and monitoring a horticultural crop harvesting program
 - where relevant to workplace production food safety and HACCP requirements, and requirements for export markets
- relationships:

Assessment Requirements for AHCPHT412 Manage mushroom substrate preparation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed mushroom substrate preparation on at least two occasions, and has:

- set and monitored productivity standards for mushroom substrate and rest of production cycle
- maintained site quarantine protocols, and workplace and personal hygiene requirements
- applied relevant workplace health and safety procedures
- established and reviewed workplace procedures for mushroom substrate preparation
- recorded and analysed production data
- monitored and manipulated all interactions between inputs, conditions and outputs for each stage of substrate process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for managing mushroom substrate preparation and casing production, including:
 - casing function, application, required depth and required surface structure
 - detailed knowledge of all stages in Phase II substrate preparation process
 - Hazard Analysis and Critical Control Points, quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
 - how mushrooms are grown, with a focus on interaction between compost, environmental factors such as temperature, water, relative humidity, carbon dioxide and ammonia, and mushroom growth
 - industry and workplace awards and conditions

- key parameters to be recorded and monitored, and appropriate ranges in relation to temperature, ammonia, relative humidity, moisture content, carbon dioxide and time
- overview of mushroom production cycle and possible impact of deviations from workplace standards on substrate and rest of production cycle
- overview of Phase I compost production
- food safety standards, legislation and industry codes of practice relevant to managing mushroom substrate preparation
- workplace requirements applicable to health and safety in the workplace for managing mushroom substrate preparation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- specifications:
 - food safety standards, legislation and industry codes of practice relevant to managing mushroom substrate preparation
 - workplace requirements applicable to health and safety in the workplace for managing mushroom substrate preparation
- relationships:
 - staff and maintenance personnel
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT413 Oversee vineyard practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to define vineyard requirements, develop and implement a program of vineyard practices, and monitor and review the growing program.

The unit applies to individuals who apply specialist skills and knowledge to overseeing vineyard practices. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define the requirements of the vineyard	1.1 Identify range of grape varieties and cultivars, and vineyard growing systems according to requirements 1.2 Determine materials, equipment and labour required for

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>maintaining the vineyard</p> <p>1.3 Determine consumables required for maintaining the vineyard</p> <p>1.4 Check staff skills and knowledge of vineyard practices according to requirements</p>
2. Develop a program of vineyard practices	<p>2.1 Determine vineyard practices from planting out to harvest and for the annual growing season</p> <p>2.2 Identify hazards and assess risks in the workplace, and implement control measures to manage risks according to workplace health and safety procedures</p> <p>2.3 Consider the environmental implications of the vineyard program</p> <p>2.4 Identify and allocate resources required to meet vineyard program requirements</p> <p>2.5 Make allowance in the program for unforeseen circumstances, damage caused by weather and new developments</p> <p>2.6 Document the vineyard growing program</p>
3. Implement the program	<p>3.1 Communicate the vineyard growing program and activities to staff</p> <p>3.2 Maintain daily workplace records and other information relevant to the vineyard growing program</p> <p>3.3 Monitor work to ensure materials and equipment are used according to workplace procedures</p>
4. Monitor and review the program	<p>4.1 Compare vineyard growing program against previous programs, and make adjustments as necessary</p> <p>4.2 Review production plans to determine and align schedule of activities</p> <p>4.3 Compare vineyard growing program estimates against resource allocation costs</p> <p>4.4 Review vineyard practices and growing program to identify opportunities for improvements in performance</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding requirements for overseeing vineyard practices and developing a vineyard growing program

Assessment Requirements for AHCPHT413 Oversee vineyard practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has overseen vineyard practices on at least one occasion, and has:

- recognised wine grape varieties and cultivars
- determined maintenance requirements for the vineyard
- planned and programmed vineyard practices
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- documented and communicated the vineyard growing program
- maintained daily workplace records
- overseen the implementation of vineyard practices
- monitored and reviewed the vineyard growing program
- determined and organised work schedules.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for overseeing vineyard practices, including:
 - irrigation systems operation
 - plant nutrition practices
 - safe operating practices
 - supervision and team building
 - trellis and harvesting systems
 - vineyard practices and growing systems for grape varieties and cultivars
 - weed, pest and disease control practices

- wine grape varieties and cultivars
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to overseeing vineyard practices.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - industry publications and internet sources of information relevant to overseeing vineyard practices
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to overseeing vineyard practices
- relationships:
 - staff
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT414 Assess olive oil for style and quality

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to establish olive oil tasting protocols, determine sensory and analytical quality of olive oil, identify factors influencing the style and quality of olive oil, and implement findings.

The unit applies to individuals who apply specialist skills and knowledge to assessing olive oil for style and quality. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish and implement appropriate tasting protocols	1.1 Establish appropriate tasting conditions 1.2 Apply industry tasting procedures 1.3 Determine oils to taste, and taste oils in the order that will best show the character of each oil

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Determine style and sensory quality of the olive oil	2.1 Identify and assess characteristics of the olive oil 2.2 Taste oil to assess style 2.3 Smell and taste oil to assess sensory quality 2.4 Analyse and record observed defects for future action
3. Determine the analytical quality of the olive oil	3.1 Send oil samples to laboratory to test key chemical indices 3.2 Interpret key chemical indices to assess analytical quality of oil 3.3 Record observed chemical indices that are beyond the normal range, for future action
4. Identify factors influencing the style and quality of the olive oil	4.1 Identify horticultural factors that may influence the style and quality of the olive oil 4.2 Identify processing factors that may influence the style and quality of the olive oil 4.3 Identify other factors that may influence the style and quality of the olive oil
5. Implement findings of tastings and chemical analyses	5.1 Maintain records of season tastings and chemical analyses 5.2 Evaluate horticultural and processing activities and methods to identify modifications and improvements 5.3 Adjust and document horticultural production plan for next season 5.4 Document and communicate next season processing requirements to processing personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding requirements for assessing olive oil style and quality

Assessment Requirements for AHCPHT414 Assess olive oil for style and quality

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assessed olive oil for style and quality on at least one occasion, and has:

- applied industry tasting procedures
- identified olive oil style and quality
- identified common olive oil defects
- interpreted olive oil chemical indices
- maintained records of season tasting and chemical analyses
- modified horticultural and processing practices to remedy variations from desired style and quality
- documented and communicated next season processing requirements and adjustments to horticultural production plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- industry tasting procedures
- principles and practices for assessing olive oil, including:
 - cause of olive oil defects and how they can be remedied
 - horticultural and processing practices that affect olive oil style, and reasons for the effect
 - relationship between critical chemical parameters and oil style and quality.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - olive oils
 - sampling equipment
 - horticultural production plan
- specifications:
 - industry tasting procedures
- relationships:
 - processing personnel
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT415 Control Phase II mushroom substrate process

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to control Phase II of a mushroom substrate process, including confirming requirements for mushroom substrate preparation and carrying out Phase II processes.

The unit applies to individuals who apply specialist skills and knowledge to control Phase II of a mushroom substrate process. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCPHT415 Control Phase II mushroom substrate process

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has controlled Phase II mushroom substrate processes on at least two occasions, and has:

- applied relevant workplace health and safety procedures
- differentiated between Phase I substrate and substrate ready for spawning, and described desired parameters of each stage
- monitored and managed Phase II process for at least eight crops
- assessed room or tunnel layout and determined most appropriate locations for taking substrate and air measurements
- carried out effective troubleshooting during Phase II process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for controlling Phase II mushroom substrate processes, including:
 - concept of compost selectivity and biological indicators of compost quality
 - correct probe placement and calibration
 - factors influencing air quantity and distribution
 - Hazard Analysis and Critical Control Points, quality systems, emergency procedures, organisational structure
 - interpretation of chemical test results
 - how different systems, including; shelf, tray and tunnel, impact on temperature zones in substrate
 - key parameters to be recorded and monitored relating to temperature, ammonia and moisture content
 - objectives and desired parameters of each sub-stage of Phase II substrate preparation

- overview of Phase I compost production and how it impacts on Phase II process
- food safety standards, legislation and industry codes of practice relevant to controlling Phase II processes
- site quarantine protocols
- workplace requirements applicable to health and safety in the workplace for controlling Phase II mushroom substrate processes.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- specifications:
 - food safety standards, legislation and industry codes of practice relevant to controlling Phase II processes
 - site quarantine protocols
 - workplace requirements applicable to health and safety in the workplace for controlling Phase II mushroom substrate processes
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPTH416 Manage mushroom crop development

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to manage mushroom crop development, including the selection, application and management of the mushroom casing and all activities up to the end of the harvesting period.

The unit applies to individuals who apply specialist skills and knowledge to manage mushroom crop development. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Manage casing application	1.1 Select casing materials and recipe 1.2 Assess condition and quality of spawn run before casing

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Select product and rate of application where supplement is to be added to substrate at casing, and instruct appropriate personnel</p> <p>1.4 Confirm casing mixture is checked against workplace standards for moisture, structure and depth, and confirm remedial action has been taken if required</p>
2. Control environment during casing colonisation growth phase	<p>2.1 Install crop in growing room according to workplace procedures</p> <p>2.2 Set up growing room air conditioning system and check for correct functioning</p> <p>2.3 Measure, record and adjust temperature, relative humidity and carbon dioxide content as required</p> <p>2.4 Assess mycelium growth and determine timing and quantity of water to be applied</p> <p>2.5 Monitor and record pest and disease status and take remedial action as required</p>
3. Initiate fruit body formation and manage pinning and pre-picking growth phases	<p>3.1 Assess growth and make changes to temperature and ventilation to initiate fruit body formation according to workplace procedures</p> <p>3.2 Record and adjust temperature, relative humidity and carbon dioxide content</p> <p>3.3 Identify and analyse variations from expected or required ranges of temperature, relative humidity and carbon dioxide content, and take appropriate remedial action</p> <p>3.4 Assess mycelium development and pin development, and determine timing and quantity of water and additives to be applied to water</p> <p>3.5 Monitor and record pest and disease status, and take remedial action as required</p>
4. Assess crop maturity, flush development and quality, and monitor the harvesting process	<p>4.1 Assess crop maturity to determine when and what to pick</p> <p>4.2 Instruct pickers on tasks to be performed</p> <p>4.3 Monitor picking results to ensure instructions continue to be appropriate and are being carried out</p> <p>4.4 Consult markets to ensure product meets market needs and specifications</p> <p>4.5 Monitor crop quality, recognise disorders stimulated by environmental conditions, and implement remedial action as required</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>4.6 Monitor and record pest and disease status during this stage of crop development, and take remedial action as required</p> <p>4.7 Plan daily work schedule for waterers, and coordinate picking and watering schedules</p> <p>4.8 Review harvest process for compliance with quality standards, and identify, document and implement areas for improvement as appropriate</p> <p>4.9 Provide feedback to pickers on individual and team performance</p>

Foundation Skills

Assessment Requirements for AHCPHT416 Manage mushroom crop development

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed mushroom crop development on at least two occasions, and has:

- maintained environment within parameters for production
- recorded, analysed and adjusted temperature, relative humidity and carbon dioxide content
- monitored and managed growing room conditions, watering and flush development of mushroom crops
- identified stages of growth and development, and factors impacting on yields and mushroom quality
- identified the interdependency of stages of growth, and impact of early stages of production cycle on production results
- recorded pest and disease status, and documented harvest process and areas for improvement
- developed work schedules.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of mushroom crop development, including:
 - available options of additives to irrigation water to promote mushroom quality, and the main considerations of their use
 - basic understanding of air conditioning principles, particularly relative humidity
 - casing function, application and depth and surface structure requirements
 - desirable physical, biological and chemical characteristics of casing

- Hazard Analysis and Critical Control Points (HACCP), quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
- goals and sub-stages of Phase II substrate preparation, and impact of Phase II on yields and quality
- growth phases of a mushroom crop, and interactions that occur between the compost, casing, environmental factors, such as temperature, water, relative humidity and carbon dioxide, and growth of the mushroom
- how nature of casing and the appearance and quantity of mycelium growth in casing affect the number, distribution and quality of fruit bodies formed
- impact of mushroom numbers and size on picking and quality
- industry and workplace awards and conditions
- management impacts of supplementing at spawning or casing
- management requirements of casing, including Compost Added at Casing (CAC) or Casing Inoculums (CI)
- overview of Phase I substrate production and its impact on yields and quality
- food safety standards, legislation and industry codes of practice relevant to managing mushroom crop development
- site quarantine protocols.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- specifications:
 - food safety standards, legislation and industry codes of practice relevant to managing mushroom crop development
 - site quarantine protocols
- relationships:
 - appropriate personnel, pickers, waterers
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT507 Evaluate grapes for production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to collect, process and evaluate grapes for production, monitor and evaluate vineyard, and analyse the effect of climate, site characteristics, grape varieties and viticultural practices on grape quality.

The unit applies to individuals who apply specialised skills and knowledge to the evaluation of grapes for production, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Collect samples	1.1 Identify vineyard block to be sampled 1.2 Determine optimum grape sampling time 1.3 Identify and interpret standard sampling procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Utilise vegetation indices where available to identify zones of uniformity or variation</p> <p>1.5 Confirm sampling areas with client or winemaker</p> <p>1.6 Observe and record out-of-specification condition or characteristics of grapes</p> <p>1.7 Take samples of grapes according to standard sampling procedures</p>
2. Process samples	<p>2.1 Prepare sample processing equipment according to standard sampling procedures</p> <p>2.2 Extract juice using processing equipment</p> <p>2.3 Wash processing equipment between samples</p> <p>2.4 Wash and store processing equipment after use</p>
3. Evaluate samples	<p>3.1 Evaluate juice using standard organoleptic procedures</p> <p>3.2 Perform simple grape analysis procedures and record results</p> <p>3.3 Evaluate results using quantitative parameters</p>
4. Taste and evaluate wine	<p>4.1 Use accepted tasting procedures for tasting wine</p> <p>4.2 Identify the flavour and aroma components and characteristics of wine using organoleptic evaluation techniques</p> <p>4.3 Identify the relative contribution and interaction of wine components to the wine taste, aroma and appearance, using accepted wine description terminology</p>
5. Monitor and evaluate vineyard	<p>5.1 Establish and document vineyard qualitative parameters</p> <p>5.2 Monitor qualitative parameters to determine harvest time for optimum wine quality</p> <p>5.3 Compare results to grape production plan schedule, and determine best course of action</p> <p>5.4 Identify and communicate opportunities to optimise fruit quality prior to harvest</p>
6. Analyse effects in grape quality	<p>6.1 Identify effects of climate on grapes</p> <p>6.2 Identify site effects on grape quality</p> <p>6.3 Identify and analyse effects of grape variety and flavour</p> <p>6.4 Identify and evaluate effects of vineyard management practices on grapes in terms of modifications and improvements to be made for the</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	current and next season

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies and interprets grape standard organoleptic procedures and quantitative parameters Identifies and interprets grape production plan schedule Interprets vegetation indices where available
Oral communication	<ul style="list-style-type: none"> Initiates discussions with client or winemaker, using clear language to confirm sampling areas and communicate opportunities to optimise grape quality
Numeracy	<ul style="list-style-type: none"> Records and evaluates sample data Interprets quantitative parameters
Navigate the world of work	<ul style="list-style-type: none"> Identifies and describes own workplace requirements associated with own role and area of responsibility
Interact with others	<ul style="list-style-type: none"> Uses appropriate language and communication skills to disseminate information to client or winemaker

Assessment Requirements for AHCPHT507 Evaluate grapes for production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has evaluated grapes for production on at least two occasions and has:

- utilised vegetation indices where available
- researched, evaluated and recorded relevant information
- collected, processed and evaluated samples using standard sampling procedures
- evaluated juice using standard organoleptic procedures
- tasted and evaluated wines using standard organoleptic evaluation techniques
- recorded grape analysis results and evaluated results using quantitative parameters, including:
 - sugar content, soluble solids concentration (SSC)
 - titratable acidity (TA)
 - concentration of hydrogen ions in solution (pH)
- established and documented vineyard qualitative parameters, including:
 - berry colour and skin splitting
 - texture
 - aroma
 - aftertaste
 - rachis
 - berry dehydration
 - seed ripeness
- identified areas of concern and opportunities to change harvest plans to optimise grape quality outcomes prior to harvest, including unsuitable or special parcels of fruit
- identified and recommended improvements to vineyard management practices that will contribute to enhanced grape quality in the next season.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for evaluating grapes for production, including:
 - changes to the chemical characteristics of grapes during ripening, including SSC, TA and pH
 - changes to the physical characteristics of grapes during ripening, including size, hardness and colour
 - climatic and physical features of wine grape growing areas and wine styles produced
 - quantitative parameters of grape testing
 - sensory evaluation and qualitative parameters of grapes and wine
- sensory evaluation of wines
- grape end-use, including:
 - dried
 - table
 - wine
- grape standard sampling procedures
- vegetation indices, including:
 - plant cell density (PCD) maps
 - normalised difference vegetation index (NDVI)
- vineyard management practices and their impact on grapes, including:
 - plant moisture status management
 - irrigation management
 - canopy management
 - pruning levels
 - nutrition regimes.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - grapes
 - vineyard
 - sample processing equipment
 - grape standard sampling procedures
- relationships:
 - clients or winemakers
- timeframes:

- according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT508 Develop a grape production plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to carry out preliminary planning activities, determine grape production requirements, schedule production activities, plan monitoring of grape production plan and document grape production plan.

The unit applies to individuals who apply specialised skills and knowledge to the development of a grape production plan, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Carry out preliminary planning activities	1.1 Identify and evaluate trends and issues affecting the Australian viticulture industry for their impact on planning decisions

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Determine client specifications for the production of grapes</p> <p>1.3 Assess the vineyard site for growing environment factors, resources, services and site modifications</p> <p>1.4 Conduct research into the characteristics and growing requirements of grape varieties and cultivars, legal attributes of the site, and local by-laws and restrictions that may affect the production plan</p> <p>1.5 Identify sustainable land use issues that may affect planned production</p> <p>1.6 Set production targets that are consistent with the marketing strategy and business plan</p> <p>1.7 Determine production requirements in terms of quantity and quality of grapes</p> <p>1.8 Develop a draft plan that reflects client preferences and requirements, and regulatory requirements and takes into account site factors and any identified sustainable land use requirements</p>
<p>2. Determine the production requirements for grapes</p>	<p>2.1 Identify grape varieties that are appropriate to the site and consistent with the plan</p> <p>2.2 Calculate, cost and confirm the quantity required with the supplier</p> <p>2.3 Select establishment procedures consistent with the agreed preliminary plan</p> <p>2.4 Document cultural management practices to achieve optimal growth</p> <p>2.5 Determine harvesting dates to meet market specifications and deadlines</p> <p>2.6 Determine production costs of growing grapes</p> <p>2.7 Identify hazards associated with production activities, assess risks and identify and document controls in the plan</p> <p>2.8 Identify policy concerning grapes not meeting specifications according to customer requirements, quality assurance policies and marketing strategy</p>
<p>3. Schedule grape production activities</p>	<p>3.1 Outline staged implementation and development of the grape production activities</p> <p>3.2 Determine and document timelines for grape production activities</p> <p>3.3 Plan and schedule marketing according to the production schedule</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	and marketing strategy
4. Plan monitoring of the grape production plan	<p>4.1 Determine production activities to be monitored, the format for recording factors, frequency of monitoring and the thresholds for remedial action</p> <p>4.2 Document required remedial action or contingency plan for implementation by staff</p> <p>4.3 Review the effectiveness of the monitoring system on a regular basis</p>
5. Match grape production to required output	<p>5.1 Determine grape yields required to meet client projections</p> <p>5.2 Determine grape variety required to meet output</p> <p>5.3 Compare production program to client projections</p> <p>5.4 Implement remedial action or contingency plan where grape production falls outside client projections</p>
6. Prepare and document the grape production plan and specifications	<p>6.1 Prepare detailed plans and specifications based on industry conventions and the requirements of production</p> <p>6.2 Produce a scaled vineyard site plan which can be readily interpreted and understood by on-site personnel</p> <p>6.3 Develop and document detailed on-site procedures and schedules required for grape production</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret information regarding the Australian viticulture industry issues and trends Identify and interpret information regarding grape growing requirements, legal attributes of the site, and by-laws and restrictions Identify and interpret customer requirements and market specifications, quality assurance policies and marketing strategy

Skill	Description
Oral communication	<ul style="list-style-type: none"> Initiate discussions with clients, using clear language to plan and communicate grape production plan
Numeracy	<ul style="list-style-type: none"> Access and analyse data for input to grape production plan and grape production schedule Document harvesting dates, and resource costs of grape production plan Identify and calculate production costs
Navigate the world of work	<ul style="list-style-type: none"> Identify and describe own workplace requirements associated with own role and area of responsibility

Assessment Requirements for AHCPHT508 Develop a grape production plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed a grape production plan on at least one occasion and has:

- researched, evaluated and recorded relevant information
- calculated production costs, including:
 - staff
 - resources
 - tools
 - equipment and machinery
 - logistical requirements required for production
- planned and scheduled grape production activities
- planned and scheduled marketing
- communicated and negotiated with the client
- documented plans, specifications and production work procedures
- prepared reports for staff, managers, clients and contractors
- produced a site plan which can be readily understood by on-site personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- trends and issues of the Australian viticulture industry
- principles and practices for developing a grape production plan, including:
 - establishment and management of grape production in relation to client specifications and the standards required by the marketplace
 - environmental growing conditions and sustainable land use strategies
 - establishment procedures, grape variety selection and cultural practices for grape production

- processes and techniques for preparing, costing and documenting plans for grape production and scheduling grape production
- the role of business and marketing plans and client consultation processes in planning grape production
- regulations and legislation relevant to grape production.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - industry publications and internet sources of information relevant to the development of a grape production plan
 - marketing strategy
- specifications:
 - market specifications
 - regulations and legislation relevant to grape production
- relationships:
 - customers
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT509 Evaluate wine

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to analyse chemical components of wine, resolve winemaking problems, taste and evaluate wine, analyse the effect of winemaking techniques, site characteristics, viticultural practices and grape varieties on wine quality, and analyse current packaging and bottle closure methods and wine labelling laws.

The unit applies to individuals who apply specialised skills and knowledge to the evaluation of wine, take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse chemical components of wine	1.1 Determine chemical components for a particular wine style, and identify testing laboratories 1.2 Take samples of grapes, juice or wine according to standard

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	sampling procedures and laboratory requirements 1.3 Perform simple wine analysis procedures and record results 1.4 Evaluate and compare results of chemical analyses with desired values to identify potential chemical problems in the winemaking process and any required additions or fining agents
2. Resolve winemaking problems	2.1 Evaluate wine or juice using standard laboratory and organoleptic procedures 2.2 Identify the protein stability of a wine using a buttes or heat technique 2.3 Identify the need for cold stabilisation of a wine 2.4 Use additives or fining agents to alleviate problems or improve quality 2.5 Evaluate the effectiveness of additives and/or fining agents used to alleviate problems or improve quality, and adjust their use where indicated 2.6 Carry out winemaking and handling processes in a hygienic working environment 2.7 Identify, record and use cellar operations procedures and instructions during the winemaking process
3. Taste and evaluate a wine	3.1 Use accepted tasting procedures for tasting the wine 3.2 Identify the flavour and aroma components and characteristics of the wine using organoleptic evaluation techniques 3.3 Identify the relative contribution and interaction of wine components to the wine taste, aroma and appearance, using accepted wine description terminology
4. Analyse the effect of winemaking techniques on wine	4.1 Identify evidence of the winemaking technique in the wine to distinguish it from other influences on the wine 4.2 Identify faults in the wine attributable to the winemaking technique, and distinguish from bottle age characteristics 4.3 Determine the effect of winemaking techniques on suitability of wine for cellaring
5. Analyse the effect of site characteristics, vineyard management	5.1 Identify effects of climate in the wine 5.2 Identify site effects on grape quality 5.3 Identify and evaluate effects of vineyard management practices in

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
practices and grape varieties on wine quality	the wine in terms of modifications and improvements to be made for the next season 5.4 Identify and analyse effects of grape variety on wine flavour 5.5 Adjust, document and communicate viticultural production plan for next season to vineyard personnel
6. Analyse current packaging methods, bottle closure methods and wine labelling laws	6.1 Identify the range of wine packaging available and used in the Australian wine industry 6.2 Identify and compare the range of wine bottle closure methods used in the Australian wine industry 6.3 Identify and interpret current wine labelling regulations and their impact on the wine industry

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets standard sampling procedures, laboratory requirements and procedures, and organoleptic procedures Interprets cellar operations procedures and instructions, and current wine labelling regulations
Oral communication	<ul style="list-style-type: none"> Initiates discussions with work colleagues, using clear language to plan and communicate next season viticultural production plan
Numeracy	<ul style="list-style-type: none"> Accesses and analyses data for input into winemaking process Calculates additives or fining agents to alleviate problems or improve quality
Navigate the world of work	<ul style="list-style-type: none"> Identifies and describes own workplace requirements associated with own role and area of responsibility
Interact with others	<ul style="list-style-type: none"> Uses appropriate language and communication skills to disseminate information within work team

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has evaluated wine on at least one occasion and has:

- researched, evaluated and recorded information for a wine
- performed chemical analyses necessary for the winemaking process
- determined wine characteristics and faults using organoleptic evaluation techniques
- evaluated a wine, following tasting
- determined the effect of winemaking techniques on wine
- identified and recommended improvements to vineyard management practices that will contribute to enhanced wine quality in the next season
- analysed current packaging methods, bottle closure methods and wine labelling laws.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for evaluating wine, including:
 - balance in relation to wine taste
 - changes to the chemical characteristics of grapes during ripening, including acid, sugar and flavour
 - changes to the physical characteristics of grapes during ripening, including size, hardness and colour
 - climatic and physical features of wine grape growing areas and wine styles produced
 - factors involved in the initiation and management of primary, secondary and malolactic fermentation processes
 - food safety requirements
 - ideal Australian cellaring conditions
 - main export markets
 - packaging, regulations and relationship to product marketing and quality

- sensory evaluation of wines with potential for cellaring
- types and styles of wine produced in Australia
- varieties of wine grapes in Australia
- vintage ratings in Australia
- vineyard management practices and their impact on wine, including:
 - plant moisture status management
 - canopy management
 - pruning levels
 - nutrition regimes.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - grapes, juice or wine
 - sampling equipment
 - viticultural production plan
- specifications:
 - wine labelling regulations
 - standard laboratory and organoleptic procedures
 - cellar operations procedures and instructions
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT510 Manage a wine making process

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to determine wine to be produced and winemaking process, acquire grapes for processing, initiate a ferment, manage primary and secondary fermentation and mature wine in storage vessels.

The unit applies to individuals who apply specialised skills and knowledge to the management of a wine making process, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine wine and wine making process	<p>1.1 Determine the type and style of wine to be produced according to variety and characteristics of the grapes, winemaking factors, consumer preferences, client requirements and industry trends</p> <p>1.2 Determine the winemaking process to be followed according to type and style of wine to be produced, quality and quantity of grapes</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	available, and availability of required equipment and personnel
2. Acquire, deliver and prepare grapes for fermentation	<p>2.1 Harvest and handle grapes according to standard vineyard practices and quality criteria</p> <p>2.2 Acquire and deliver the grapes that meet the desired variety and quality parameters to the winery</p> <p>2.3 Prepare grapes for fermentation, and deliver must or juice to fermentation vessels to meet the desired wine type and style requirements</p>
3. Initiate a ferment	<p>3.1 Select yeast types or strains to produce a given wine type and style</p> <p>3.2 Prepare fermentation vessels and transfer must or juice according to wine type and style requirements</p> <p>3.3 Prepare yeast culture according to specifications and add to fermentation vessels</p>
4. Manage primary fermentation	<p>4.1 Monitor and adjust physical and chemical characteristics of ferment</p> <p>4.2 Predict potential fermentation problems</p> <p>4.3 Detect the presence of undesirable fermentation characteristics</p> <p>4.4 Outline steps to rectify fermentation problems</p> <p>4.5 Rack off gross lees or pressings into appropriate vessels at a determined time</p> <p>4.6 Maintain records of additions and adjustments</p>
5. Manage secondary fermentation	<p>5.1 Obtain and check oak barrels for serviceability for use if required</p> <p>5.2 Inoculate wine with selected malolactic fermentation bacteria</p> <p>5.3 Manage malolactic fermentation to the predetermined end point</p>
6. Mature wine in storage vessels	<p>6.1 Select suitable maturation storage vessels to produce a given wine style and check for serviceability and use</p> <p>6.2 Transfer wine into the selected vessels according to determined wine style characteristics</p> <p>6.3 Monitor condition of wine in storage</p> <p>6.4 Bottle and seal wine according to workplace procedures</p> <p>6.5 Maintain wine production and storage records</p>

Foundation Skills

Assessment Requirements for AHCPHT510 Manage a wine making process

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed a wine making process on at least one occasion and has:

- planned processes that may be used to maximise production of grapes that meet winery quality requirements
- acquired and processed grapes for wine production
- performed must handling processes
- operated the range of equipment required to process grapes from winery receipt point to the fermentation tank
- initiated and managed the fermentation process
- made additions and finings as required
- identified, established, supervised and monitored daily cellar work practices
- performed chemical analyses necessary for the winemaking process
- organised and undertaken routine cellar operations
- operated the filtration and bottling processes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- changes to the chemical characteristics of grapes during ripening, including acid, sugar and flavour
- changes to the physical characteristics of grapes during ripening, including size, hardness and colour
- climatic and physical features of wine grape growing areas and wine styles produced
- types and styles of wine produced in Australia
- varieties of wine grapes in Australia
- principles and practices for managing a wine making process
- balance in relation to wine taste

- vineyard practices relevant to the production of grapes that meet the requirements of the winery
- processes involved in handling grapes from the vineyard to the winery in order to produce wine
- must and marc handling procedures
- routine winemaking and cellar operation procedures including maintenance of a clean, safe working environment
- ranges of equipment and using this equipment to process grapes and must in a winery
- factors involved in the initiation and management of primary, secondary and malolactic fermentation processes
- ideal Australian cellaring conditions
- equipment and processes for wine filtration.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - industry publications and internet sources of information on variety and characteristics of grapes, winemaking factors, consumer preferences, client requirements and industry trends
 - grapes, yeast and bacteria for production of wine
 - fermentation vessels
 - oak barrels
 - storage vessels
 - wine bottles and seals
- specifications:
 - yeast culture specifications
 - malolactic fermentation bacteria inoculation specifications
- relationships:
 - clients
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPHT511 Develop a horticultural production plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed a horticultural production plan on at least one occasion, and has:

- developed a horticultural production plan that reflects client preferences and requirements
- communicated and negotiated with the client and suppliers
- researched, evaluated and recorded relevant information, including site factors and land use issues
- selected and sourced plants or plant material for seeding or propagation
- calculated and documented the cost and logistical requirements of the production plan
- designed and incorporated infrastructure into planning
- planned and scheduled production activities
- planned and scheduled marketing
- developed a monitoring program to cover the horticultural operation from sowing to sale
- established product specifications
- documented plans, specifications and production work procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for developing a horticultural production plan:
 - advantages and limitations of sustainable horticulture systems
 - establishment and maintenance of a range of enterprise horticultural products in relation to client needs and the standards required by the marketplace
 - establishment procedures, plant selection and cultural practices for a range of enterprise horticultural products

- processes and techniques for preparing, costing and documenting plans for and scheduling horticultural production
- the role of business and marketing plans and client consultation processes in planning horticultural production.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - industry publications and internet sources of information relevant to the development of a horticultural production plan
 - marketing strategy
- specifications:
 - market specifications
- relationships:
 - client
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC PHT512 Manage a controlled growing environment

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to manage a controlled growing environment, including identifying and determining crop requirements, preparing a management plan, and managing the controlled growing environment.

The unit applies to individuals who apply specialised skills and knowledge to the management of a controlled growing environment, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Production Horticulture (PHT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify crop requirements	1.1 Determine crop growth and production requirements according to a documented production plan

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Research environmental parameters and optimal growing conditions for the specific crop, using available information resources</p> <p>1.3 Identify and record controlled growing environment factors</p>
2. Determine requirements for a controlled growing environment	<p>2.1 Identify, cost and confirm availability of structures, machinery, equipment and resources required to control environmental conditions</p> <p>2.2 Identify detrimental environmental impacts associated with the controlled growing environment system</p>
3. Prepare a management plan for the controlled growing environment	<p>3.1 Determine management objectives for the controlled growing environment consistent with production plan and market requirements for crop quantity and quality</p> <p>3.2 Develop a schedule of environmental control procedures according to controlled environment management objectives</p> <p>3.3 Evaluate and report staff training needs for operation and maintenance of environmental control systems</p> <p>3.4 Negotiate and document a budget supporting the controlled environment management plan</p> <p>3.5 Determine and communicate roles and responsibilities of staff</p> <p>3.6 Document the controlled growing environment plan</p>
4. Manage the controlled growing environment	<p>4.1 Identify controlled environment indicators and thresholds for remedial action, and monitoring frequency</p> <p>4.2 Develop monitoring procedures according to the requirements of the production plan, and communicate to staff</p> <p>4.3 Record, analyse and apply monitoring data to ensure optimal plant development</p> <p>4.4 Document and report remedial action undertaken</p> <p>4.5 Monitor costs of the controlled growing environment system against budget</p> <p>4.6 Record and report budget adjustments</p> <p>4.7 Evaluate recorded information, budget data and production outputs</p> <p>4.8 Document and report operational achievements towards management objectives</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding production requirements for a controlled growing environment plan
Oral communication	<ul style="list-style-type: none"> Initiate discussions with management, using clear language to discuss production requirements, controlled growing environment plan and operational achievement report, and to negotiate budget Use clear language with staff to communicate roles and responsibilities and monitoring procedures
Numeracy	<ul style="list-style-type: none"> Access and analyse data for input into the controlled growing environment plan, monitoring procedures and operational achievement report Calculate structures, machinery, equipment and resource costs Document controlled growing environment budget and adjustments

Assessment Requirements for AHCPHT512 Manage a controlled growing environment

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed a controlled growing environment on at least one occasion, and has:

- researched, evaluated and recorded relevant information about production requirements, growing requirements of the crop, and controlled growing environment factors
- developed a controlled growing environment plan to cover staff training, budgets, operating procedures and remedial actions
- developed environmental monitoring procedures
- evaluated, documented and reported the achievements towards management objectives.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for managing controlled growing environments, including:
 - controlled environmental conditions for crop plant physiology, growth stages and product quality and quantity
 - legislation and regulations relevant to controlled growing environment systems
 - market requirements for crop quantity and quality
 - monitoring, analysis and recording systems
 - plant physiology and biochemistry
 - quality production methods and techniques for a range of controlled environment plants
 - staff training requirements
 - techniques and methods of implementing optimal growing conditions for a range of horticultural crops.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - industry publications and internet sources of information relevant to the management of a controlled growing environment and development of a controlled growing environment plan
 - production plan
- specifications:
 - legislation and regulations relevant to controlled growing environment systems
- relationships:
 - management and staff
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPLY208 Collect and pack eggs for human consumption

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to collect and pack eggs from a variety of poultry species intended for human consumption in readiness for transfer to a grading and packing floor.

This unit applies to workers in commercial poultry production who undertake routine tasks under supervision. They perform defined activities according to enterprise procedures. Work environments may include poultry farms and packing sheds.

Commonwealth and/or state/territory health and safety, environmental protection and biosecurity legislation, regulations and codes of practice apply to keeping and working with poultry. Food safety regulations and codes also apply to eggs that are produced and sold for human consumption. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and efficiently collected and packed at least two different batches of eggs to be sold for human consumption. Each batch must include at least 30 eggs.

For each batch, the individual must have, according to enterprise requirements:

- confirmed and applied enterprise health and safety, food safety, biosecurity and environmental protection procedures related to handling, processing and storing eggs
- followed personal hygiene requirements
- identified at least two health and safety hazards, and assessed and controlled and/or reported associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- ensured nests and egg conveyors are free from obstructions
- matched egg collection equipment flow rate to handling rate
- removed eggs that do not meet quality requirements, including cracked, leaking, weak-shelled or dirty eggs
- placed eggs on trays pointed end down
- correctly packed and labelled eggs
- transferred and/or stored eggs in cool room
- safely handled and mixed cleaning products and prepared cleaning equipment
- cleaned and/or sanitised work areas and equipment, including:
 - egg collection shed or facility
 - egg collection and packing equipment, including conveyors
 - cool room surfaces.

For at least one batch, the individual must also have, according to enterprise procedures:

- correctly operated egg storage facility or cool room
- checked work area for pests and implemented at least two appropriate control measures

- processed eggs not for retail sale
- removed and disposed of waste
- accurately completed records and reported issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, food safety, biosecurity and environmental protection that apply to working with poultry and collecting and packing eggs to be sold for human consumption
- enterprise procedures and requirements for worker health and safety, biosecurity and environmental protection that apply to working with poultry and collecting and packing eggs to be sold for human consumption
- industry standards and codes of practice, and enterprise procedures for collecting, handling, sorting, packing and storing eggs to be sold for human consumption
- commonly used methods of pest and vermin control in egg production
- relevant documentation and records that are required
- types, uses, cleaning, maintenance and servicing of machinery and equipment used to collect, sort, label, pack, transport and store eggs sold for human consumption
- criteria for sorting and determining eggs that are unfit for retail sale
- temperature, humidity, cleaning and operation for cool rooms
- procedures for handling, measurement and use of cleaning chemicals, disinfectants and sanitisers
- procedures for taking and handling swabs and egg samples for testing
- enterprise procedures for disposal and management of waste, including biosecurity and environmental requirements
- enterprise documentation, records and reports required for collection, processing, packing and storage of eggs to be sold for human consumption.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a commercial poultry egg production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - poultry eggs specified in performance evidence
 - poultry egg collection and packing infrastructure, materials, resources, tools and equipment, including PPE
 - safety data sheets
- specifications:

- enterprise health and safety, food safety, biosecurity and environmental protection procedures related to egg handling, packing and storing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPLY210 Catch and load poultry

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and efficiently transferred at least two different groups of live poultry from a shed and onto a transport vehicle and/or into another poultry shed or facility. Each group must include at least 20 birds.

For each group, the individual must have, according to enterprise requirements:

- confirmed and followed biosecurity and animal welfare procedures
- confirmed shed and quantity of birds being moved, and their destination
- identified at least two health and safety hazards, and assessed and controlled and/or reported associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- adjusted shed infrastructure and/or set up, in preparation to safely catch and move poultry
- ensured catching locations, pathways and destination are ready and safe for poultry and workers
- selected, checked and effectively used tools and equipment to handle and move poultry
- separated at least two birds not suitable for transport
- caught, packed and moved poultry using safe and low stress techniques
- loaded birds into crates or modules or weighing cells according to space or weight requirements
- used safe manual handling and/or lifting techniques
- cleaned equipment and tools used during the capture and movement of poultry
- completed movement records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, biosecurity and environment protection that apply to handling and moving live poultry
- enterprise procedures and requirements for worker health and safety, animal welfare, biosecurity and environment protection that apply to handling and moving live poultry
- hazard identification, risk assessment and controls to minimise risks when handling and moving live poultry
- types, uses, cleaning and maintenance of equipment, tools, machinery and personal protective equipment required when handling and moving live poultry
- safe and low stress techniques and methods for moving live poultry, including:
 - catching and picking
 - placing and packing into containers or crates or weighing cells
 - moving containers loaded with poultry
 - loading poultry containers into transport vehicle
- how to assess live poultry health and condition prior to catching and loading
- temperature control management and prevention of smothering during movement
- enterprise procedures for disposal and management of waste, including biosecurity and environmental requirements
- regulatory and enterprise documentation, records and reports required for poultry movement.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a commercial poultry site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - live poultry specified in performance evidence
 - poultry sheds, materials, resources, tools and equipment, including PPE
 - safety data sheets
- specifications:
 - enterprise procedures for poultry care, health and welfare, worker health and safety, and biosecurity for the activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCPLY211 Collect, store and handle eggs from breeder flocks

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and efficiently collected, sorted and stored at least three different batches of fertile eggs from a breeder flock. Each batch must be at least 20 eggs.

For each batch, the individual must have, according to enterprise requirements:

- confirmed and applied enterprise health and safety, animal welfare, infection control, biosecurity and environmental protection procedures related to handling, processing and storing eggs
- followed personal hygiene requirements
- identified at least two health and safety hazards, and assessed and controlled and/or reported associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- checked nest boxes and egg belts and removed obstructions
- matched egg collection equipment flow rate to handling rate
- collected nest eggs
- collected and separated floor eggs
- assessed and sorted eggs into settable and non-settable and categories within each
- operated egg washing equipment according to manufacturer instructions
- placed eggs on trays pointed end down
- correctly packed and labelled eggs
- transferred and/or stored eggs
- safely handled and mixed cleaning products and prepared cleaning equipment
- cleaned and sanitised egg sorting equipment, egg washing equipment, cool rooms and work areas, including conveyors and shed surfaces.

For at least one batch, the individual must also have, according to enterprise procedures:

- correctly operated egg storage facility or cool room
- fumigated eggs

- checked work area for pests, vermin and predators and implemented at least two appropriate control measures
- removed and/or disposed of non-settable eggs and waste products
- separated eggs selected for human consumption
- accurately completed records and reported issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, infection control, biosecurity and environmental protection that apply to working with poultry, and handling, processing and storing settable eggs
- enterprise procedures and requirements for worker health and safety, animal welfare, infection control, biosecurity and environmental protection that apply to working with poultry, and handling, processing and storing settable eggs
- government food safety regulations and codes that apply to eggs produced and sold for human consumption
- industry standards and codes of practice, and enterprise procedures for collecting, handling, sorting, packing and storing settable eggs and eggs selected for human consumption
- types, uses, cleaning and maintenance of machinery and equipment used to collect, sort, label, pack, transport and store settable eggs and eggs selected for human consumption
- criteria for sorting and determining eggs that are unfit for setting or eggs selected for human consumption, and disposal methods
- procedures for egg handling, collection, washing, sorting, packing, labelling, storage and fumigation
- temperature, humidity, cleaning and operation for cool rooms
- procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
- procedures for taking and handling swab and egg samples for testing
- enterprise procedures for disposal and management of waste, including biosecurity and environmental requirements
- commonly used methods of pest, vermin and predator control in poultry and egg production
- enterprise documentation, records and reports required for collection, processing and storage of settable eggs and eggs selected for human consumption.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- a commercial poultry and egg production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - live poultry and eggs specified in performance evidence
 - poultry and fertile egg production shed, materials, resources, tools and equipment, including PPE
 - safety data sheets
- specifications:
 - enterprise health and safety, animal welfare, infection control, biosecurity and environmental protection procedures related to egg handling, processing and storing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPLY303 Maintain health and welfare of poultry

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to maintain poultry health and welfare. It includes monitoring poultry environments, feeding, watering and completing health checks and treatments.

This unit applies to workers who apply technical knowledge and skills with discretion and judgement to care for poultry in commercial production environments. They work under broad direction, coordinate activities and solve problems related to poultry husbandry. Work environments may include poultry farms and breeding facilities.

Commonwealth and/or state/territory health and safety, animal welfare, environmental protection and biosecurity legislation, regulations and codes of practice apply to keeping and working with poultry. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCPLY303 Maintain health and welfare of poultry

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively cared for at least three different groups of poultry over a period of at least five days. Each group must include at least 20 birds.

For each group, the individual must have, according to enterprise requirements:

- identified and applied enterprise health and safety, animal welfare, infection control, biosecurity and environmental protection procedures related to working with poultry
- followed personal hygiene requirements
- identified at least three different hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- maintained poultry environments, including:
 - checked and/or adjusted ventilation or temperature or humidity controls as required
 - cleaned feeding and watering equipment
 - maintained feed and water availability
 - checked for pests, vermin and/or predators and implemented controls if required
- monitored poultry health and welfare, and identified signs of ill health or injury
- taken and labelled swabs from at least two different work surfaces
- accurately completed poultry health records.

The individual must also have treated at least one group of 20 birds, including:

- caught and handled birds for inspection and/or weighing
- used appropriate techniques and location to administer treatments
- safely handled and stored materials used for treatments according to enterprise health, safety, environmental and biosecurity requirements
- documented all treatments provided according to enterprise requirements.

In addition to the above, the individual must have, according to enterprise procedures:

- used enterprise criteria to identify at least three cull birds
- isolated at least one bird showing signs of illness
- removed at least one dead bird.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, biosecurity, quarantine and environment protection that apply to providing health care for poultry
- enterprise procedures and requirements for worker health and safety, animal welfare, biosecurity, quarantine and environment protection that apply to providing health care for poultry
- hazard identification, risk assessment and controls to minimise risks when checking and treating poultry
- signs of common poultry ill health, diseases and injuries, including:
 - abnormal feather loss
 - abnormal breathing
 - weight loss
 - general inactivity or lethargy
 - discharges from eyes
 - dull or closed eyes
 - dirty vent
 - warm, swollen and cracked feet
- poultry ill health treatment and management strategies
- poultry health and welfare assessment methods
- safe and low stress techniques for handling and restraining poultry, including injured and ill birds
- typical industry criteria for determining birds to be culled
- common types, features, functions and operational checks of enclosures, infrastructure and equipment used to house poultry
- types, uses, handling, storage and routes of administration of commonly used veterinary medicines and chemicals
- procedures for taking, handling, labelling, packing and transporting swab samples
- procedures for assisting a post-mortem examination
- enterprise procedures for disposal and management of waste, including biosecurity and environmental requirements
- zoonoses that transfer between poultry and humans
- regulatory and enterprise documentation, records and reports required for poultry health care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a commercial poultry site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - live poultry specified in performance evidence
 - poultry production infrastructure, materials, resources, tools and equipment, including PPE
 - safety data sheets
- specifications:
 - enterprise procedures for poultry care, health and welfare, worker health and safety, and biosecurity activities
- timeframes:
 - the five days specified in the performance evidence can be consecutive or non-consecutive.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPLY308 Set up sheds for placement of poultry

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to set up sheds for placement of poultry. Poultry may include a variety of species and breeds at various life stages, including day old, point of lay and mature birds.

This unit applies to workers who apply technical knowledge and skills with discretion and judgement to care for poultry in commercial production environments. They work under broad direction, coordinate activities and solve problems related to poultry husbandry. Work environments may include poultry farms and breeding farms.

Commonwealth and/or state/territory health and safety, animal welfare, environmental protection and biosecurity legislation, regulations and codes of practice apply to keeping and working with poultry. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCPLY308 Set up sheds for placement of poultry

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and efficiently prepared a shed or part thereof to receive and acclimatise at least two groups of poultry. The groups can be one or more of the following:

- day old birds
- point of lay birds
- mature birds.

Each group must include at least 20 birds, and for each group, the individual must have, according to enterprise requirements:

- identified and applied enterprise health and safety, animal welfare, infection control, biosecurity and environmental protection procedures related to setting up a poultry shed and handling poultry
- identified age and quantity of poultry to be housed and their specific requirements
- followed personal hygiene requirements
- identified at least three different hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- checked, cleaned and sanitised shed or part thereof and related work surfaces
- checked shed tools and equipment are operational, clean and sanitised
- checked for pests, vermin and/or predators and implemented controls if required
- prepared shed or part thereof specifically to meet health and welfare needs of incoming group of poultry, including:
 - prepared cages or floor surfaces, including litter or paper if required
 - set up, tested and adjusted feeders and drinkers prior to and after arrival of poultry
 - set up and adjusted lighting, temperature and ventilation equipment prior to and after arrival of poultry
- used safe manual handling and low stress bird handling techniques to move poultry and place them in housing environment

- checked poultry behaviour and health to ensure successful transition to new housing
- accurately completed records and/or reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, biosecurity, and environment protection that apply to caring for poultry
- enterprise procedures and requirements for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for poultry
- hazard identification, risk assessment and controls to minimise risks when setting up sheds for and moving poultry
- types, uses, cleaning and maintenance of suitable equipment, tools, machinery and personal protective equipment used to prepare sheds for poultry
- poultry shed structures, including their cleaning and maintenance requirements
- commonly used methods of pest, vermin and predator control in and around sheds used for poultry
- types, characteristics and maintenance of bird wires and rodent barriers
- key features and operational checks of lighting systems, time switches, alarm systems, brooders, watering systems, feeding systems, ventilation systems and fogging systems used in poultry sheds
- safe and low stress techniques for handling poultry
- health and welfare requirements for poultry
- behavioural signs of health and methods for assessing health and welfare of poultry
- types, characteristics, uses and maintenance of litter and other bedding materials used for poultry
- enterprise procedures for disposal and management of waste, including biosecurity and environmental requirements
- regulatory and enterprise documentation, records and reports required for poultry health care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a commercial poultry site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - live poultry specified in performance evidence
 - poultry production shed or part thereof, materials, resources, tools and equipment, including PPE

- safety data sheets
- specifications:
 - enterprise procedures for poultry care, health and welfare, worker health and safety, and biosecurity for the activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHPLY309 Brood poultry

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and efficiently cared for at least three separate groups of brooding poultry.

Each group must include at least 20 birds, and for each group, the individual must have, according to enterprise requirements:

- identified and applied enterprise health and safety, animal welfare, infection control, biosecurity and environmental protection procedures related to setting up a poultry shed and undertaking brooding operations
- identified brood poultry quantity and housing shed and their specific housing requirements
- followed personal hygiene requirements
- identified at least three different health and safety hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- checked, cleaned and/or sanitised shed or section of shed, and related work surfaces
- checked shed equipment is operational, clean and sanitised
- checked for pests, vermin and/or predators, and implemented controls if required
- prepared shed specifically to meet health and welfare needs of incoming batch of poultry, including:
 - spread litter or placed paper or checked cages
 - set up, tested and adjusted feeders and drinkers prior to and after arrival of poultry
 - set up and adjusted lighting, temperature and ventilation equipment prior to and after arrival of poultry
- used safe and low stress bird handling techniques to move poultry and place them on litter or paper or cage/s in shed
- checked poultry behaviour and health to ensure successful acclimatisation to new housing
- completed brooding operations to maximise poultry growth, including:
 - monitored poultry behaviour and health regularly
 - identified and removed sick, injured or dead birds as required

- monitored and adjusted feeders and drinkers regularly
- monitored poultry body weight regularly
- monitored and adjusted lighting, temperature, humidity, ventilation and litter regularly, and adjusted according to growth of poultry
- extended brooding area to correspond to growth of poultry
- completed brooding records and/or reports according to enterprise requirements
- safely handled and mixed cleaning products and prepared cleaning equipment
- safely cleaned and/or sanitised shed, working surfaces, equipment and tools
- removed and disposed of waste according to enterprise procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for poultry
- enterprise procedures and requirements for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for and brooding poultry
- hazard identification, risk assessment and controls to minimise risks when caring for brooding poultry
- types, characteristics, cleaning and maintenance of poultry sheds and poultry brooding work areas
- industry standards, codes of practice and enterprise procedures for health and welfare of poultry during brooding
- impact on poultry behaviour, development, health and welfare of:
 - shed climate, including temperature, humidity and ventilation
 - light, lighting equipment and programmes
 - stocking density, including overcrowding
 - feeding and watering regimes
- enterprise procedures and methods for checking, operating, cleaning and/or maintaining equipment used in brooding poultry, including:
 - personal protective equipment
 - shed lighting and lighting programs
 - climate control equipment, including temperature, humidity and ventilation
 - feeding and watering equipment
- safe and low stress techniques and methods for handling and moving live poultry
- enterprise procedures for disposal and management of waste, including biosecurity and environmental requirements
- industry terminology to describe poultry health, welfare and biosecurity requirements
- notifiable diseases in poultry, including enterprise procedures for reporting and responding to notifiable diseases

- regulatory and enterprise documentation, records and reports required for poultry health care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a commercial poultry production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - live poultry specified in performance evidence
 - poultry production shed, materials, resources, tools and equipment, including PPE
 - safety data sheets
- specifications:
 - enterprise health and safety, animal welfare, infection control, biosecurity and environmental protection procedures for the activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPLY310 Incubate eggs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to incubate eggs, including the operation and monitoring of egg setting and hatching equipment.

This unit applies to workers who apply technical knowledge and skills with discretion and judgement to incubate poultry eggs in commercial production environments. They work under broad direction, coordinate activities and solve problems related to egg incubation. Workplaces may include poultry breeding farms and egg incubation facilities.

Commonwealth and/or state/territory health and safety, animal welfare, environmental protection and biosecurity legislation, regulations and codes of practice apply to working with fertilised poultry eggs, and the use of fumigants. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Poultry (PLY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Receive and store eggs	1.1 Identify and implement enterprise biosecurity procedures that apply to incubating eggs

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Identify tasks to be undertaken from work plan</p> <p>1.3 Identify health and safety hazards, and assess and control risks associated with fumigating, operating, transferring eggs and carrying out the hatching process</p> <p>1.4 Select and fit personal protective equipment (PPE) required for fumigating, operating, transferring eggs and carrying out the hatching process</p> <p>1.5 Check egg storage plant, equipment and tools in readiness to receive eggs</p> <p>1.6 Unload eggs from delivery vehicle, transfer to setter trolleys and record temperature, humidity, storage period and other required information</p> <p>1.7 Attach eggs to turning machine and manage eggs according to enterprise requirements</p> <p>1.8 Monitor and adjust temperature, humidity and airflow to maintain required conditions</p> <p>1.9 Complete ongoing records and report issues according to enterprise requirements</p>
2. Fumigate setter and/or incubator	<p>2.1 Identify fumigation requirements according to work plan</p> <p>2.2 Prepare fumigant and application equipment and PPE</p> <p>2.3 Fit PPE, seal room and fumigate for required period</p> <p>2.4 Ventilate room or chamber to remove unsafe remnants of the fumigant prior to re-entry of staff, re-installation of equipment and placement of eggs</p>
3. Monitor and operate setter	<p>3.1 Calibrate temperature probes in setter according to manufacturer and/or enterprise requirements</p> <p>3.2 Check and record setter readings</p> <p>3.3 Recognise alarms and carry out specified sequence of operations</p> <p>3.4 Operate and maintain setter to consistently meet required settings</p>
4. Transfer eggs and operate incubator	<p>4.1 Move trollies and/or pallets to egg handling and transfer area according to sequence required by enterprise</p> <p>4.2 Check incubator temperature, humidity and airflow, and adjust to maintain required conditions according to developmental stage of eggs</p> <p>4.3 Transfer eggs to hatching trays according to predetermined</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	sequence 4.4 Recognise alarms and carry out specified sequence of operations
5. Carry out hatching processes	5.1 Operate incubator and/or hatcher and record temperature, humidity and airflow as required 5.2 Transition eggs into hatching stage 5.3 Recognise alarms and carry out specified sequence of operations 5.4 Vaccinate viable hatchlings and complete processes required to transfer chicks to brooding destination
6. Clean and/or sanitise work areas and equipment	6.1 Identify health and safety hazards, and assess risks and control risks for cleaning and/ or sanitising 6.2 Select and fit appropriate PPE required for cleaning and/ or sanitising 6.3 Measure chemicals and prepare cleaning fluids safely according to supplier instructions and enterprise procedures 6.4 Check and prepare cleaning equipment 6.5 Clean and/or disinfect work areas, tools, equipment and surfaces according to enterprise health, safety, personal hygiene and biosecurity procedures 6.6 Dispose of waste according to enterprise biosecurity and environmental procedures 6.7 Maintain and store tools, equipment and machinery 6.8 Complete records and report issues according to enterprise requirements

Assessment Requirements for AHPLY310 Incubate eggs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and efficiently incubated at least two separate batches of fertilised poultry eggs.

Each batch must include at least 20 eggs, and for each batch, the individual must have, according to enterprise requirements:

- identified and applied enterprise health and safety, animal welfare, biosecurity and environmental protection procedures related to preparing plant and equipment to incubate eggs
- identified egg quantities and specific requirements from work program
- followed personal hygiene requirements
- identified at least three different health and safety hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- received, transferred and stored eggs, including recording required information
- monitored and operated setter, including:
 - calibrated temperature probes
 - checked, recorded and adjusted settings
 - carried out predetermined sequence of actions in response to alarms
- transferred eggs to hatcher, and checked and adjusted hatcher settings to achieve required conditions
- safely fumigated setter and/or hatcher and ensured safe removal of fumigant afterwards
- monitored and operated hatcher
- completed processes to transfer hatchlings to brooding destination
- safely prepared cleaning equipment, and cleaned and/or sanitised working surfaces, equipment and tools
- removed and disposed of waste
- completed egg incubation records and/or reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, biosecurity and environment protection that apply to incubating poultry eggs
- enterprise procedures and requirements for worker health and safety, animal welfare, biosecurity and environment protection that apply to incubating poultry eggs
- hazard identification, risk assessment and controls to minimise risks when incubating poultry eggs
- requirements, methods and procedures for handling, unloading, storing, transferring and turning eggs
- types, uses, cleaning, maintenance and storage of machinery, equipment and tools used in incubating operations, including temperature probe calibration
- range, effects and impacts of environmental parameters on incubating eggs, including temperature, humidity and ventilation
- types, handling, use and disposal of fumigating agents, including enterprise health, safety and environmental procedures for fumigants
- selection criteria for determining viable and non-viable hatchlings
- appropriate treatments to prepare hatchlings for transfer to next destination, including vaccination
- enterprise procedures for disposal and management of waste, including biosecurity and environmental requirements
- enterprise requirements and procedures for cleaning and maintaining egg incubation work areas
- regulatory and enterprise documentation, records and reports required for incubation of poultry eggs.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a commercial poultry egg incubation facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - live fertilised eggs specified in performance evidence
 - poultry egg incubation facility, materials, resources, tools and equipment, including egg setter, hatcher and
 - safety data sheets
- specifications:
 - enterprise health and safety, animal welfare, biosecurity and environmental protection procedures for the activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPLY311 Clean and disinfect poultry production sheds

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to wet or dry clean and disinfect sheds used for poultry production. The standard of cleaning and disinfection applied may vary depending on the species, breed and life stage of poultry, enterprise disease status and risk.

This unit applies to workers who apply technical knowledge and skills with discretion and judgement to care for poultry in commercial production environments. They work under broad direction, coordinate activities and solve problems related to poultry husbandry. Work environments may include poultry farms and breeding facilities for a variety of poultry species.

Commonwealth and/or state/territory health and safety, animal welfare, environmental protection and biosecurity legislation, regulations and codes of practice apply to working in a poultry work environment, including the use of fumigants. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCPLY311 Clean and disinfect poultry production sheds

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and efficiently cleaned and sanitised at least two different poultry sheds or two different sections of a shed. Each shed or section is to be at least 20 square metres.

For each shed or section, the individual must have, according to enterprise requirements:

- confirmed and applied enterprise health and safety, biosecurity and environmental protection procedures related to cleaning and disinfecting poultry shed
- confirmed sheds being cleaned, scope of work and cleaning methods, and created cleaning plan
- followed personal hygiene requirements
- identified at least three different health and safety hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- identified at least two environmental hazards, and assessed and controlled associated risks
- prepared to clean shed, including:
 - raised or removed shed equipment, including feeders and drinkers
 - protected electrical equipment to prevent entry of water
 - selected, mixed and prepared cleaning agents
- cleaned shed and shed equipment, including:
 - feeders and drinkers, and/or slats or nesting systems
 - dry cleaned electrical equipment
 - removed and disposed of waste materials
- sanitised, disinfected or fumigated shed or section and shed equipment according to regulatory requirements, including:
 - sealed shed or section to minimise escape of fumigant as required
 - ventilated shed or section to remove unsafe remnants of disinfectant agents

- applied pest control measures as required
- completed check of cleaning and disinfection against required work scope and standards
- safely and correctly stored or disposed of left-over cleaning and/or disinfection agents
- accurately completed records and/or reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, biosecurity and environment protection that apply to cleaning and disinfecting poultry sheds
- enterprise procedures and requirements for worker health and safety, biosecurity and environment protection that apply to cleaning and disinfecting poultry sheds
- hazard identification, risk assessment and controls to minimise risks when cleaning and disinfecting poultry sheds
- common types of poultry sheds, machinery and equipment found in sheds
- how to handle, raise or remove equipment in sheds
- methods of sealing or protecting electrical or sensitive equipment to prevent entry of water
- methods for litter and manure removal
- methods for dry cleaning electrical equipment
- procedures for dry or wet cleaning sheds and shed equipment
- equipment and machinery used for poultry shed cleaning and disinfection, including its operation, maintenance and storage
- enterprise procedures for disposal and management of waste, including biosecurity and environmental requirements
- cleaning, maintenance and servicing of filters, drinker lines and tanks used in poultry production
- regulatory and enterprise requirements for storage, handling and application of insecticides, sanitisers, disinfectants and fumigants
- environmental impacts and controls of cleaning and fumigating sheds
- chemical spillage management, including safety equipment and clothing requirements
- regulatory and enterprise documentation, records and reports required for cleaning and sanitising poultry sheds and equipment.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a commercial poultry production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- poultry production sheds or sections of sheds, materials, resources, tools and equipment, including PPE
- safety data sheets
- specifications:
 - enterprise health and safety, biosecurity and environmental protection procedures for the activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPLY312 Implement and monitor biosecurity measures in poultry production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to implement and monitor biosecurity measures in commercial poultry enterprises and facilities.

This unit applies to workers who apply technical knowledge and skills with discretion and judgement to interpret codes of practice, and enterprise procedures to maintain biosecurity in commercial poultry production. They work under broad direction, and coordinate activities and solve problems to implement biosecurity requirements. Work environments may include poultry farms and breeding facilities for a variety of poultry species.

Commonwealth and/or state/territory health and safety, animal welfare, environmental protection and biosecurity legislation, regulations and codes of practice apply to keeping and working with poultry, including the use of fumigants. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCPLY312 Implement and monitor biosecurity measures in poultry production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively implemented and monitored biosecurity measures on a poultry production worksite, on at least two occasions, including:

- applied enterprise biosecurity procedures for site entry, including personal hygiene
- implemented enterprise preventative biosecurity procedures for at least two of the following:
 - visitor and/or contractor site entry
 - incoming vehicles
 - incoming poultry
 - incoming poultry feed
- followed enterprise biosecurity procedures on detection of disease or pest, including reporting
- identified signs of good health, ill health or abnormal disease in live birds
- implemented wild bird and/or pest control measures
- cleaned and disinfected poultry work area, work surface or equipment in response to, or to prevent, a specific pest or disease
- monitored application of biosecurity procedures in part of poultry worksite over at least one week in each monitoring period, and documented and reported outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, biosecurity and environment protection that apply to working on a poultry production site, including current national biosecurity manuals

- enterprise procedures and requirements for worker health and safety, biosecurity and environment protection that apply to working on a poultry production site
- hazard identification, risk assessment and controls to minimise risks when implementing biosecurity measures in a poultry enterprise
- typical biosecurity threats that apply to commercial poultry production environments, including disease, pests and wild birds
- major routes for disease and pathogen transmission in poultry production, including:
 - transfer of poultry from production area to production area
 - dead bird disposal
 - other animals, including wild birds, feral and domestic animals (including other livestock and pets), insects, rodents (including rats and mice) and domestic birds
 - people, including farm workers and family members living on site, contractors, maintenance and service workers, neighbours and visitors
 - vehicles and equipment
 - aerosols and dust
 - water, feed and bedding materials
- signs of healthy poultry and signs of unusual disease in poultry
- types, characteristics, methods of spread, signs, prevention, control and treatment of diseases and pests that impact poultry production
- requirements for maintaining enterprise biosecurity, including:
 - perimeter fencing, lockable gates, and controlling vehicle access
 - monitoring enterprise boundaries and movement of poultry, humans and equipment across worksite
 - appropriate signage
- standard biosecurity procedures and practices used in poultry production enterprises, including:
 - site entry and movement of workers, contractors and visitors
 - site entry of vehicles, equipment, machinery
 - site entry and movement of poultry and poultry feed
 - control of pests, vermin, predators, including wild birds
 - poultry feeding and watering
- methods and procedures for cleaning and disinfection of facilities, sheds, feeding and watering equipment and other shed equipment, including fumigation
- enterprise requirements, methods and procedures for treatment of drinking, cooling and washing-down water supplies
- enterprise procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
- enterprise and regulatory environmental and sustainability requirements, methods and procedures for disposal and management of effluent, organic and inorganic waste
- essential biosecurity principles of government disease control emergency plans that apply to poultry
- notifiable diseases in poultry, including enterprise procedures for reporting and responding to notifiable diseases

- regulatory and enterprise documentation, records and reports required for biosecurity in poultry production.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a commercial poultry production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - live poultry
 - poultry production shed, materials, resources, tools and equipment, including PPE
 - safety data sheets
- specifications:
 - enterprise health and safety, infection control, biosecurity and environmental protection procedures for the activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPMG401 Implement the pest monitoring and evaluation plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to implement the pest monitoring plan and evaluate and report on performance of pest management.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pest Management (PMG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Obtain and collate all available data	1.1 Determine objectives of pest monitoring and evaluation plan 1.2 Collate data on pest numbers, economic and environmental impacts of pests and pest management plan operating costs 1.3 Consult with stakeholders for input into pest management plan 1.4 Investigate site and record presence of recent pest activity

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Investigate and record previous pest control activity
2. Monitor the pest management plan	2.1 Determine monitoring points in the monitoring plan 2.2 Measure and record outcomes of pest control procedures 2.3 Verify and record compliance with health and safety and environmental requirements 2.4 Report monitoring outcomes and compliance according to workplace procedures
3. Evaluate data against objectives and performance criteria	3.1 Collate and evaluate pest control outcomes against objectives in the monitoring plan 3.2 Reconcile cost of plan against budget 3.3 Conduct a cost–benefit analysis of pest control program
4. Compile a report of the evaluation	4.1 Isolate and examine indicators of performance 4.2 Analyse indicators to build a considered conclusion on outcome of control program on pest populations and impact 4.3 Compile conclusions into a report
5. Recommend modifications	5.1 Consider conclusions and recommend changes to improve pest control performance and impact on land management and production processes 5.2 Provide recommendations to stakeholders according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Critically analyse pest control plans and outcomes, and consolidate information into data sets for analysis to formulate recommendations for improvement
Writing	<ul style="list-style-type: none"> Prepare reports to stakeholders to inform on pest control outcomes using clear and accurate language

Assessment Requirements for AHCPMG401 Implement the pest monitoring and evaluation plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, implemented a pest monitoring and evaluation plan to workplace requirements.

There must also be evidence that the individual has:

- collated data for performance of control program according to pest monitoring and evaluation plan
- consulted with stakeholders on monitoring plan performance metrics
- analysed performance data against objectives
- produced a cost–benefit analysis
- reported results of monitoring operations and evaluation results.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- setting and analysing performance metrics, including:
 - data sets and analysis against objectives and performance
 - comparing actual costs with budgeted costs
 - creating a cost–benefit analysis
- environmental and economic impacts of pests on land management and production processes
- pest management plans, their structure and use in land management
- monitoring and evaluation principles and how they work in the pest management plan
- types and range and characteristics of pests, including:
 - identified pests
 - lifecycles

- threshold levels
- effects of control methods on them
- local, regional, state or territory and national pest management strategies for pest control
- federal, state or territory legislation and regulations relating to pest management activities
- principles of integrated pest management (IPM).

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a site for a specified pest management plan or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital technology and software for analysing data and preparing reports
- specifications:
 - workplace policies and procedures for pest management and reporting
 - workplace pest management plans and performance data
 - legislation, regulations and codes of practice for Commonwealth, state and local jurisdictions
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPMG402 Ensure compliance with pest legislation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify and investigate non-compliances with pest legislation and act on non-compliance issues.

The unit applies to individuals who take a lead role in implementing pest management procedures and work autonomously, instruct, and monitor the work of others within a team. They use discretion and judgment in the selection, allocation and use of available resources.

Pest control legislation and regulations apply in all states and territories and must be adhered to. Users are advised to check details with the relevant regulatory authority.

Pre-requisite Unit

Nil

Unit Sector

Pest Management (PMG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify non-compliance with legislation	1.1 Identify and record alleged non-compliance with pest control legislation 1.2 Report allegation to authority according to workplace procedures
2. Investigate non-compliance	2.1 Determine land ownership, identity and responsibility of stakeholders accused of non-compliance 2.2 Investigate and collect evidence for alleged non-compliance of

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	pest control legislation 2.3 Notify stakeholders of non-compliance of pest control legislation 2.4 Provide stakeholder with advice and estimates on rectifying non-compliance 2.5 Conduct investigations and communications according to privacy, right of entry, and workplace policies and procedures 2.6 Record investigation activity, actions and advice according to workplace procedures
3. Act on non-compliance issues	3.1 Produce and issue notices of non-compliance to stakeholders 3.2 Collate investigations, evidence and findings into a final report 3.3 Advise stakeholder of outcomes of investigations and findings according to legislative and regulatory requirements 3.4 Provide support to stakeholders during implementation of rectifications according to workplace policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Maintain accurate records of investigations and document notifications and reports accurately for specific audience using clear and detailed language in order to convey explicit information, requirements and recommendations
Oral Communication	<ul style="list-style-type: none"> Elicit evidence and inform stakeholders of breaches in legislation and requirements for rectification using collaborative and inclusive techniques, including active listening, questioning and reading of non-verbal signals

Assessment Requirements for AHCPMG402 Ensure compliance with pest legislation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, conducted an investigation, determined status of compliance and advised rectification procedures to stakeholders for a breach in pest control legislation according to Commonwealth, state or territory legislation.

There must also be evidence that the individual has:

- identified and interviewed stakeholders alleged to have not complied with pest control legislation
- investigated and collected evidence of breaches
- provided advice to stakeholders of a non-compliance issue according to authority guidelines
- provided advice and support to stakeholder to rectify the non-compliance according to authority guidelines
- conducted investigations and communication according to privacy and right of entry legislation and policies
- reported findings of investigations and actions according to legislative requirements
- produced and issued notices to stakeholders for non-compliance
- completed records and reports according to authority and workplace standards.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relevant Commonwealth, state, territory and local government legislation regarding pest management and the destruction and movement of declared species
- methods of investigation and procedures for collecting evidence, including:
 - interview skills

- types of evidence relevant to non-compliant pest control
- conflict avoidance and resolution techniques
- site access rights and responsibilities
- communicating with and supporting stakeholders through notifications and advice
- the legislative status of particular pests and how to identify whether a pest is a declared species
- the types of breaches that generally occur in the locality, and the appropriate control options for pests, including:
 - plants
 - vertebrates
 - invertebrates
 - microbial
- property owners' rights and responsibilities for managing pests on properties
- delegations under the relevant Acts and Certificates of Authority
- control measures appropriate to the pests and environment in the area.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a property with an actual breach in legislative compliance or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - equipment used to capture and store evidence during investigations
- specifications:
 - workplace policies, procedures and processes for conducting investigations and preparing notices and reports
 - legislation, regulations and codes of practice relevant to pest control
- relationships:
 - stakeholder
 - agency authority.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPMG403 Apply predator trapping techniques

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to effectively use leg hold traps to capture predator species, to release the animal unharmed as part of research programs or to humanely euthanise in accordance with pest management programs. It primarily deals with the use of leg hold or foothold traps to capture predator pest species, including dogs, foxes and cats. Animals may be native animals, domestic animals, animals determined to be pests or feral animals. Trapping techniques call for the use of a variety of equipment and may include the use of lures or attractants baits.

Trapping must be carried out in accordance with an approved pest management plan or research project plan.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources.

Some forms of traps are strictly regulated in some states and territories in Australia. Specific determination should be sought through the relevant state or territory authority.

Where feral animals are trapped, they may need to be euthanised with a firearm. Firearms licensing conditions apply to this unit, in particular the use of Cat A, B or C firearms. Specific approval should be sought through the relevant state or territory firearms licensing agency.

Appropriate firearms licences and training are also required for those involved in training and assessment of this unit.

Pre-requisite Unit

Nil

Unit Sector

Pest Management (PMG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess site and predator trapping requirements	1.1 Identify purpose of animal capture and set objectives 1.2 Confirm the location and extent of the pest problem 1.3 Confirm target animal movement patterns and behaviour to determine trapping location and placement of equipment 1.4 Identify non-target animals present in the area 1.5 Estimate time required to complete trapping
2. Prepare equipment required for trapping	2.1 Identify and check vehicles, materials and equipment required for trapping 2.2 Clean and maintain trapping equipment and prepare traps for trapping 2.3 Identify hazards, assess risks and implement controls according to workplace health and safety and environmental procedures 2.4 Assess site access requirements and obtain authority and permits to enter property 2.5 Identify potential hazards to non-target animals from trapping, and implement control strategies to mitigate risk 2.6 Tune, modify and prepare traps to minimise non-target capture
3. Place and set traps	3.1 Undertake site surveillance to identify target and non-target animals 3.2 Identify and interpret signs of target animal 3.3 Select, check and use personal protective equipment 3.4 Select and prepare trap site to maximise opportunity of trapping target animals 3.5 Position, set, calibrate and check trapping equipment 3.6 Apply lures, decoys or baits and toxins according to trapping objectives 3.7 Camouflage traps according to trap design
4. Check and remove traps	4.1 Inspect traps according to frequency specified in trapping objectives and legislative requirements 4.2 Identify trapped animals, then release, destroy or prepare for transport according to trapping objective

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>4.3 Handle and transport captured animals humanely according to animal welfare codes of practice</p> <p>4.4 Observe workplace health and safety procedures and public safety requirements during trapping activities</p> <p>4.5 Render traps safe and remove trap according to manufacturer specifications</p> <p>4.6 Restore trap site to its prior condition</p>
5. Maintain accurate records	<p>5.1 Record details of trapping activities according to workplace procedures</p> <p>5.2 Report results of trapping activities and incidents according to workplace procedures</p> <p>5.3 Report trapping results and outcomes according to approved management plan</p> <p>5.4 Record trap locations and captures according to workplace record-keeping procedures</p>
6. Clean and store equipment and material	<p>6.1 Remove, retain or dispose of carcasses according to workplace health and safety and biosecurity procedures</p> <p>6.2 Clean, maintain and store equipment and unused materials</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Maintain accurate records and prepare reports using structure and layout specified in workplace procedures, incorporating vocabulary, grammatical structure and conventions appropriate to the reader

Assessment Requirements for AHCPMG403 Apply predator trapping techniques

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has deployed leg hold traps on at least two occasions for the capture of predatory pest animals.

There must also be evidence that the individual has:

- trapped, handled and released or euthanised animals humanely according to trapping objectives and animal welfare regulations and guidelines
- identified target and non-target animals in the field
- checked vehicles, equipment and materials for serviceability, and cleaned equipment before starting and on completion of trapping activity
- selected and prepared the trapping site and restored it on completion of trapping activity
- positioned, set, calibrated and checked trapping equipment according to trapping objectives and procedures
- prepared and applied lures or attractants to traps
- identified signs of target animals using scent stations, and identifiable tracks, scats and/ or other traces
- summarised and presented trapping results according to workplace reporting procedures
- maintained accurate records according to workplace procedures including:
 - types of trap sets and lures
 - target species captured
 - non-target species captured
- recorded location of traps and lures using at least one of the following methods:
 - Global Positioning System (GPS) device
 - software application
 - maps or charts.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic requirements for ensuring the welfare of animals described in the relevant codes of practice and standard operating procedures, including animal ethics
- purpose of the animal capture
- selecting trapping location and equipment, including:
 - target animal's range
 - movement patterns and behaviour
- factors affecting choices around equipment and resources and timing of trapping activities, including:
 - the reproductive cycle of the target animal
 - food preferences, both general and local, of target animals
 - biology of non-target animals that may be impacted by trapping program in the area
 - permissions and permits that may be required
 - suitable traps for the target animal
 - precautions that need to be taken to minimise trapping non-target animals
- capture and humane killing methods for target animals
- principles relating to property, stock and duty of care
- how to camouflage traps
- how to safely set off traps to render them inactive
- workplace health and safety procedures that relate to trapping animals
- recording and reporting requirements
- decoys and lures types, purpose and safe use
- toxins used in trapping, including:
 - types
 - preparation
 - use
 - state or territory legislation on the use and storage of toxins
- applicable legislation on the capture and handling of pest animals
- suitable personal protective equipment
- transportation methods for captured animals.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field where predatory pest animals are to be found, or in an environment that accurately represents workplace conditions
- resources, equipment and materials:

- leg hold and foothold traps and lures that comply with Commonwealth and state/territory legislation
- personal protective equipment
- specifications:
 - workplace policies and procedures for using trapping techniques
 - manufacturer operating instructions for traps
 - safety data sheets for chemical lures and baits
 - workplace instructions and trapping objectives
 - legislation and codes of practice for humane traps, trapping and handling of animals
- timeframes:
 - checking traps according to timeframes recommended in legislation and animal welfare regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

In addition, the following specific assessor requirements apply to this unit:

- assessors must have appropriate firearms licence where required by trapping techniques.

AHCPMG501 Develop a regional pest management plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to develop a pest management plan that applies to a large or regional area. It also describes the skills and knowledge required to gain agreement and commitment from stakeholders to implement the plan, which is used by land managers who practice sustainable land management principles and require a collaborative approach with neighbouring landholders.

The unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. They demonstrate deep knowledge in specific technical areas, are able to analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pest Management (PMG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine goals of the plan	1.1 Define pest problem and determine scope of pest management plan 1.2 Establish a steering committee where a need has been identified

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Determine consultation requirements 1.4 Determine and document goals through consultation with stakeholders 1.5 Assess and document pest management options for goals of management plan
2. Set specific objectives for the pest management plan	2.1 Define and document objectives to be achieved in consultation with stakeholders 2.2 Define roles and responsibilities of stakeholders in delivering objectives
3. Identify activities required to achieve specific objectives	3.1 Determine and document activities required to achieve objectives in consultation with stakeholders 3.2 Prioritise activities and seek commitment from stakeholders 3.3 Conduct risk management assessment for community, environment, workplace health and safety and production 3.4 Confirm activities align with pest management plan, and environmental, sustainability and biosecurity policies and legislation 3.5 Determine measurable performance metrics for objectives 3.6 Determine monitoring, evaluation and reporting methods
4. Publish the plan	4.1 Verify that plan complies with biosecurity, legislative and national and state or territory strategic policies 4.2 Submit draft plan to stakeholders for review and feedback 4.3 Finalise plan from stakeholder feedback and seek endorsement 4.4 Publish and distribute plan according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Generate complex written plans for a specified purpose by selecting appropriate conventions and stylistic devices to express

Skill	Description
	precise meaning
Oral Communication	<ul style="list-style-type: none"> Establish and maintain effective communication in a broad range of contexts when communicating and negotiating with stakeholders
Numeracy	<ul style="list-style-type: none"> Interpret complex economic measures, and perform calculations for determining the economic impact of pests

Assessment Requirements for AHCPMG501 Develop a regional pest management plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has produced at least one pest management plan that must include the following:

- objectives of the management plan
- alternative management options
- measurable metrics for objectives.

The management plan must also comply with relevant legislation and best practice principles for pest management, and must take into consideration the following points:

- pest populations and options for control
- changes to land management or production practices
- impact of economic factors
- technical difficulty
- practicality and feasibility
- social and environmental acceptability.

There must also be evidence that the individual has:

- consulted with stakeholders to reach agreed outcomes
- investigated geographical area for landscape and land use
- developed pest management plan according to defined pest problem
- aligned pest management plan to biosecurity regulations and other legislation
- developed, evaluated and documented management options for managing pest populations
- achieved approval of the plan from key stakeholders
- conducted risk assessment and cost–benefit analyses of a range of management options to assist in selection.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- consultative planning methods and techniques
- concepts of the strategic approach to pest management, the importance of monitoring and the effectiveness of management evaluation
- relevant local, regional, state/territory and national pest management strategies
- federal, state or territory legislation and regulations relating to pest management activities
- principles of integrated pest management
- types of monitoring technology for pest management
- impact of pests on terrestrial and aquatic ecosystems and production enterprises
- pest management options and strategies
- techniques used to validate target pest population and distribution data supplied by stakeholders, and methods of obtaining other relevant data
- measuring and estimating economic losses and environmental impact from pest presence
- federal and state or territory legislation and regulations relating to property, stock and duty of care
- target pest biology and lifecycles
- pest population dynamics and economic and environmental thresholds
- wildlife issues and how to minimise risks to non-target species as well as deal with pest behaviour
- environmental protection, cultural and heritage legislation affecting pest management
- basic requirements for ensuring the welfare of animals described in the relevant codes of practice.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a regional area or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital technology and software for research and documenting plans
- specifications:
 - workplace policies and procedures for pest management planning
 - legislation, regulations and industry codes of practice for pest management
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPMG502 Investigate a pest control failure

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to investigate causes of pest control failure after the implementation of a pest management plan for the control of weeds, vertebrate and/or invertebrate pests.

This unit applies to individuals who are regional pest control officers and managers that take personal responsibility for their own work and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCPMG502 Investigate a pest control failure

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, investigated a failure of a pest control program, determined solutions and rectified pest management planning and implementation documentation.

There must also be evidence that the individual has:

- investigated the planning process, including:
 - planning documentation
 - stakeholder engagement and support
 - pest and damage caused
- reviewed and assessed methods and records of pest control measures used
- analysed pre-treatment and post-treatment pest infestation levels
- evaluated and determined solutions to the failure
- revised pest management plans and procedures and advised stakeholders of changes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles that underpin the strategic approach to managing pests
- pest management processes and procedures, including:
 - surveying pest populations for determining infestation levels
 - pest monitoring techniques
 - defining the pest problem
 - pest treatments for different contexts
 - pest control measures
- chemical, biological, physical and habitat management techniques for pest management

- investigative techniques, including:
 - desktop reviews
 - site visits and evidence collection
- federal, state or territory legislation and regulations relating to pest management activities
- designing and developing pest management plans and procedures
- assessing work team performance and skills
- importance of public and stakeholder consultation in pest management planning.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital technology and software for reviewing records and revising documents
- specifications:
 - legislation, regulations and industry codes of practice for pest management
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPRK202 Move and handle pigs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to move and handle pigs.

This unit applies to workers in pork production who undertake routine pig handling tasks under supervision. Work environments may include indoor and outdoor pork production systems.

Commonwealth and/or state/territory health and safety, animal welfare, environmental protection and biosecurity legislation, regulations and codes of practice apply to keeping and working with pigs. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Mandatory workplace requirements apply to the assessment of this unit.

Pre-requisite Unit

Nil

Unit Sector

Pork (PRK)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for movement of pigs	1.1 Identify and follow biosecurity procedures that apply to entering and working on a pork production site 1.2 Confirm pigs to be moved, their current location, their destination

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>and timing of the move</p> <p>1.3 Confirm enterprise animal welfare and biosecurity requirements for pig movement</p> <p>1.4 Identify health and safety hazards, assess risks and control and/or report risks prior to commencing tasks</p> <p>1.5 Select, prepare and fit appropriate personal protective equipment (PPE) required for the tasks and conditions</p> <p>1.6 Check gates and/or pathways/routes for clear access, and readiness of destination to receive pigs</p> <p>1.7 Advise other workers of upcoming pig movement as required</p>
2. Move pigs	<p>2.1 Determine pigs to be moved individually and/or in groups</p> <p>2.2 Handle, move and/or lift pigs using safe manual handling techniques, and low stress animal handling techniques</p> <p>2.3 Monitor pig behaviour during all handling and moving activities, and identify and respond to situations and hazards that arise to avoid or minimise injury to self, others and pigs</p> <p>2.4 Report and seek assistance from supervisor for incidents and/or risks beyond level of own responsibility</p>
3. Complete movement of pigs	<p>3.1 Check pigs are safely and securely housed or enclosed at destination</p> <p>3.2 Reset gates and raceways as required</p> <p>3.3 Clean and store equipment used to handle and move pigs as required</p> <p>3.4 Complete pig movement records, and report incidents according to enterprise procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Skill	Description

Assessment Requirements for AHCPRK202 Move and handle pigs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely, efficiently and calmly moved pigs from one location to another, including at least:

- four groups of pigs, with each group to include at least three pigs
- an individual pig.

For each pig movement, the individual must have:

- identified at least two health and safety hazards, and assessed and controlled and/or reported associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- used safe manual handling and low stress animal handling and moving techniques
- ensured passageways are ready and safe for pigs to move through
- selected and effectively used tools and equipment to handle and move pigs as required.

For at least one pig movement, the individual must have:

- confirmed and followed enterprise biosecurity requirements
- used safe manual handling and/or lifting techniques
- separated a targeted pig from within a group of pigs
- secured pig at their destination
- completed movement record.

Mandatory workplace requirements

All performance evidence specified above must be demonstrated in a pork production site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare and biosecurity that apply to handling, lifting and moving pigs
- enterprise procedures and requirements for worker health and safety, animal welfare and biosecurity that apply to handling, lifting and moving pigs
- hazard identification, risk assessment and controls to minimise risks when handling, lifting and moving pigs
- key features of pig body language and behaviour, including:
 - herding
 - flight zone and field of vision, including flight or fight responses
 - protective behaviours of sows and boars
 - reaction to light, sudden sounds, movement or changes in environment
 - reaction to obstacles in pathways and changes in flooring conditions
 - incline and decline issues
 - exploratory behaviour using smell, hearing and sight
- signs of distress, and methods for assessing pig stress levels based on their behaviour
- safe manual handling, and low stress methods and techniques for handling, lifting, moving and securing pigs
- zoonoses, including erysipelas, Japanese encephalitis, leptospirosis, worms and influenza
- types and methods of identifying pigs
- enterprise documentation, records and reports required for pig movements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - *a pork production site*
- resources, equipment and materials:
 - *live pigs specified in performance evidence*
 - *materials, resources, passageways, tools and equipment, including PPE, specified in the performance evidence*
 - *safety data sheets*
- specifications:
 - *enterprise procedures for pig handling, movement and care, worker health and safety, and biosecurity activities specified in the performance evidence.*

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Mandatory workplace requirements

Mandatory workplace requirements are shown in *italic text*. Refer to the Companion Volume Implementation Guide for further information.

AHCPRK307 Mate pigs naturally

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to manage the mating of pigs, including preparing for and facilitating mating.

The unit applies to individuals who mate pigs under broad direction, and take responsibility for their own work.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare legislative, regulatory and codes of practice requirements, and sustainability and biosecurity practices.

In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCPRK307 Mate pigs naturally

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has mated pigs on at least two occasions and has:

- followed relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- followed workplace animal welfare practices
- facilitated mating
- completed mating procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environment and biosecurity legislation and regulations and workplace practices relevant to mating pigs
- workplace requirements applicable to health and safety in the workplace for mating pigs, including appropriate use of personal protective equipment (PPE)
- principles and practices of mating pigs, including:
 - nutritional requirements for boars
 - husbandry and management practices for pregnant and non-pregnant sows
 - anatomy and physiology of sows and boars
 - tools and equipment used during methods and procedures
 - methods and procedures for oestrus detection in sows
 - requirements, methods, procedures and management of mating in pigs
 - methods and management of conception rates in pigs
 - animal welfare legislation, codes of practice and procedures relevant to mating of pigs
 - documentation and record keeping requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to mating pigs
 - live pigs
 - materials, tools and equipment applicable to mating pigs
 - PPE applicable to mating pigs
- specifications:
 - workplace requirements applicable to health and safety in the workplace for mating pigs
 - environment and biosecurity legislation and regulations and workplace practices applicable to mating pigs
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to mating pigs
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCPRK308 Monitor dry sow performance

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to monitor dry sow performance, including determining conditions of pigs, adjusting nutrition for mating and providing adequate nutrition for pregnant sows.

The unit applies to individuals who monitor dry sow performance under broad direction, and take responsibility for their own work.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare legislative, regulatory and codes of practice requirements, and sustainability and biosecurity practices.

In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

AHCPRK311 Care for health and welfare of pigs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to provide routine health care for pigs. It includes monitoring pig environments, feeding and watering, and completing health checks and treatments.

This unit applies to individuals who apply technical knowledge and skills with discretion and judgement to care for pigs in pork production environments. They work under broad direction, coordinate activities and solve problems related to pig welfare. Work environments may include indoor and outdoor pork production systems.

Commonwealth and/or state/territory health and safety, animal welfare, environmental protection and biosecurity legislation, regulations and codes of practice apply to keeping and working with pigs. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Mandatory workplace requirements apply to the assessment of this unit.

Assessment Requirements for AHCPRK311 Care for health and welfare of pigs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively cared for at least four different groups of pigs over a period of at least five days. Each group must include at least three pigs. For each group, the individual must have:

- identified at least two health and safety hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- used safe and low stress animal handling techniques
- maintained feed and water availability
- maintained pig environments, including:
 - cleaned feeding and watering equipment
 - identified and reported signs of pest and/or predator activity
 - disposed of waste materials according to environmental requirements
- monitored and reported basic pig health, and identified signs of:
 - ill health, injury or distress
 - abnormal or depressed appetite
 - non-routine behaviour.

The individual must also have treated at least five different pigs as directed, including:

- used appropriate techniques and location to administer treatments
- safely handled and stored materials used for treatments according to enterprise health, safety, environmental and biosecurity requirements
- documented all treatments provided to pigs according to enterprise requirements.

In addition to the above, the individual must have removed at least one dead or non-viable pig according to enterprise biosecurity and/or environmental procedures.

Mandatory workplace requirements

All performance evidence specified above must be demonstrated in a pork production site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, biosecurity and environment protection that apply to providing health care for pigs
- enterprise procedures and requirements for worker health and safety, animal welfare, biosecurity and environment protection that apply to providing health care for pigs
- hazard identification, risk assessment and controls to minimise risks when checking and treating pigs
- key features of pig anatomy and body functions
- physical needs of pigs, including food, water, protection from weather, and predators
- signs of common pig ill health, diseases and injuries, and detection methods, including:
 - irregular behaviour, including self-isolation, lethargy, loss of appetite and drinking
 - checks including weight and breathing
 - lameness, straight tail, head tilt and body tremors
 - checking skin for red patches, scabs, bleeding, lesions, swelling, and open wounds
 - checking for unusual discharges from eyes, nose and genitalia
 - abnormal faeces
- safe and low stress techniques for handling and restraining pigs, including injured and ill pigs
- treatment and prevention of common pig diseases
- key features and functions of pig hospital pens and quarantine enclosures
- common types, features, functions and operational checks of enclosures, infrastructure and equipment used to house pigs
- types, uses, handling, storage and routes of administration of commonly used vaccines, veterinary medicines and chemicals used to treat pigs
- enterprise requirements, methods and procedures for removing and disposing of waste and debris
- notifiable diseases, including enterprise procedures for reporting and responding to notifiable diseases
- zoonoses, including erysipelas, leptospirosis, Japanese encephalitis, worms and influenza
- regulatory and enterprise documentation, records and reports required for pig health care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - *a pork production site*

- resources, equipment and materials:
 - *live pigs specified in performance evidence*
 - *pig infrastructure, materials, resources, tools and equipment, including PPE specified in the performance evidence*
 - *safety data sheets*
- specifications:
 - *enterprise procedures for pig care, health and welfare, worker health and safety, and biosecurity activities specified in the performance evidence*
- timeframes:
 - *the five days specified in the performance evidence can be consecutive or non-consecutive.*

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Mandatory workplace requirements

Mandatory workplace requirements are shown in *italic text*. Refer to the Companion Volume Implementation Guide for further information.

AHCPRK312 Care for weaner pigs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to care for weaner pigs, including their accommodation, feeding, health and welfare.

This unit applies to individuals who apply technical knowledge and skills with discretion and judgement to care for pigs in pork production environments. They work under broad direction, coordinate activities and solve problems related to pig welfare. Work environments may include indoor and outdoor pork production systems.

Commonwealth and/or state/territory health and safety, animal welfare, environmental protection and biosecurity legislation, regulations and codes of practice apply to keeping and working with pigs. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Mandatory workplace requirements apply to the assessment of this unit.

Pre-requisite Unit

Assessment Requirements for AHCPRK312 Care for weaner pigs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively cared for at least two different groups of weaner pigs. Each group must include at least four pigs. For each group, the individual must have:

- identified at least two health and safety hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- used safe and low stress animal handling techniques to care for weaner pigs
- identified and applied enterprise health and safety, infection control, biosecurity and environmental protection procedures
- maintained weaner pig environments, including:
 - checked and prepared feeders and drinkers are operational
 - cleaned and/or disinfected food handling equipment and/or housing area
 - identified and reported pest and/or predator activity
 - disposed of waste materials according to environmental requirements
- monitored feed and water quantity, quality and availability
- fed according to weaner pig requirements, including monitored feeding and drinking patterns
- monitored and reported basic pig health and identified signs of:
 - ill health, injury or distress
 - abnormal or depressed appetite
 - non-routine behaviour.

The individual must also have:

- treated at least two pigs according to enterprise requirements, including:
 - administered treatments according to Farm Treatment Plan or Approved Medication List

- demonstrated safe handling and positioning of self to reduce risks to pigs, self and others
- safely stored or disposed of materials used for treatments according to enterprise health, safety and biosecurity requirements
- documented at least two treatments provided to pigs, including their withholding period and/or export slaughter interval.

In addition to the above, the individual must have removed and/or disposed of a dead or non-viable pig according to enterprise biosecurity and environmental procedures.

Mandatory workplace requirements

All performance evidence specified above must be demonstrated in a pork production site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for weaner pigs
- enterprise procedures and requirements for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for weaner pigs
- hazard identification, risk assessment and controls to minimise risks when caring for weaner pigs
- key care, health and welfare requirements for weaner pigs, including nutrition, water, and protection from adverse weather and predators
- features, functions and benefits of common types of infrastructure, enclosures and equipment used to house and care for weaner pigs using indoor and outdoor farming systems
- drinkers, feeders and other common equipment used to care for weaner pigs in indoor and outdoor farming systems, including:
 - features, functions and benefits
 - safety and operational checks
 - maintenance, cleaning and disinfection requirements
- enterprise procedures for identifying and reporting contaminated feed and water
- optimal range, effects and impacts of ventilation, temperature, humidity and other environmental parameters on weaner pig health and welfare
- typical requirements of enterprise work routines for grower and finisher pigs
- safe and low stress techniques for handling and restraining weaner pigs, including injured and ill pigs
- requirements, methods and procedures for weaning piglets
- requirements, methods and procedures for formation of viable weaner groups, and the impacts of a viable group on individual pig health and production, including consideration of pig weight, sex and stocking density
- key features of pig anatomy and body functions

- signs of common weaner pig ill health, diseases and injuries, and detection methods, including:
 - irregular behaviour, including self-isolation, lethargy, loss of appetite and drinking
 - checks including weight and breathing
 - limp in step, straight tail, head tilt and body tremors
 - checking skin for red patches, scabs, bleeding, lesions, swelling, open wounds and unusual discharges from eyes, nose and genitalia
 - abnormal faeces
- methods and procedures for feeding and watering weaner pigs
- criteria and methods of assessing optimal stocking densities of weaner pigs
- criteria for assessing suitability of weaner pigs for transition to grower facilities, including Fitness to Load guidelines
- requirements, methods and procedures for removal and disposal of pig carcasses, including enterprise biosecurity and environmental considerations
- types, storage, handling, application and disposal procedures of health care treatments of weaner pigs, including withholding periods
- types, storage, handling, use and disposal of cleaning agents and disinfectants commonly used in weaner pig care, including related health, safety and environmental requirements
- zoonoses, including erysipelas, Japanese encephalitis, leptospirosis, ringworm and influenza
- key features of typical enterprise recording and reporting requirements related to pig care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - *a pork production site*
- resources, equipment and materials:
 - *live pigs specified in performance evidence*
 - *pig care infrastructure, materials, resources, tools and equipment, including PPE*
 - *safety data sheets*
- specifications:
 - *enterprise procedures for pig care, health and welfare, worker health and safety, and biosecurity activities.*

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Mandatory workplace requirements

Mandatory workplace requirements are shown in *italic text*. Refer to the Companion Volume Implementation Guide for further information.

Assessment Requirements for AHCPRK313 Treat rectal prolapse in pigs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely treated at least two different pigs for a rectal prolapse. In treating each pig, the individual must have:

- identified at least two health and safety hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- used safe manual handling, and safe and low stress animal handling techniques
- identified and applied enterprise health and safety, infection control, biosecurity and environmental protection procedures
- identified severity of prolapse in relationship to pig's age, general health and condition
- isolated pig from other pigs if required
- treated pig according to Farm Treatment Plan and/or Approved Medication List
- completed health treatment records according to enterprise requirements.

Mandatory workplace requirements

All performance evidence specified above must be demonstrated in a pork production site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare and biosecurity that apply to caring for pigs with rectal prolapse and rectal strictures
- enterprise procedures and requirements for worker health and safety, animal welfare and biosecurity that apply to caring for pigs with rectal prolapse and rectal strictures
- hazard identification, risk assessment and controls to minimise risks when caring for pigs with rectal prolapse and rectal strictures

- factors associated with rectal prolapse and/or stricture causation
- common management strategies and treatments for rectal prolapse and/or strictures
- anatomy and physiology of pig organs and tissues related to rectal prolapse and strictures
- safe manual handling, and safe and low stress animal techniques and methods for handling and restraint of pigs with rectal prolapse or rectal strictures
- when, where and how to seek expert advice related to treatment of rectal prolapses in pigs
- enterprise requirements, resources and materials for treatment of rectal prolapse, including Farm Treatment Plan
- characteristics, signs, management and control of abnormal increase in incidence of rectal prolapse and/stricture
- requirements, functions and procedures for set-up and operation of pig hospital or recovery pens
- zoonoses, including erysipelas, leptospirosis, Japanese encephalitis, worms and influenza
- regulatory and enterprise documentation, records and reports required for pig health care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - *a pork production site*
- resources, equipment and materials:
 - *live pigs specified in performance evidence*
 - *safety data sheets*
 - *materials, resources, tools and equipment, including PPE specifications:*
 - *enterprise procedures for pig care, health and welfare, worker health and safety, and biosecurity activities.*

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Mandatory workplace requirements

Mandatory workplace requirements are shown in *italic text*. Refer to the Companion Volume Implementation Guide for further information.

Assessment Requirements for AHCPRK314 Care for grower and finisher pigs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively cared for at least two different groups of grower and/or finisher pigs. Each group must include at least four pigs. For each group, the individual must have:

- identified at least two health and safety hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- used safe and low stress animal handling techniques to care for grower and/or finisher pigs
- identified and applied enterprise health and safety, infection control, biosecurity and environmental protection procedures
- maintained grower and/or finisher pig environments, including:
 - checked and prepared feeders and drinkers to ensure they are operational
 - cleaned and/or disinfected food handling equipment and/or housing area
 - identified and reported pest and/or predator activity
 - disposed of waste materials according to environmental requirements
- monitored feed and water quantity, quality and availability
- fed according to grower or finisher pig requirements, including monitored feeding and drinking patterns
- monitored and reported basic pig health and identified signs of:
 - ill health, injury or distress
 - abnormal or depressed appetite
 - non-routine behaviour.

The individual must also have:

- treated at least two pigs according to enterprise requirements, including:

- administered treatments according to Farm Treatment Plan or Approved Medication List
- demonstrated safe handling and positioning of self to reduce risks to pigs, self and others
- safely stored or disposed of materials used during treatments according to enterprise health, safety and biosecurity requirements
- documented at least two treatments provided to pigs, including their withholding period and/or export slaughter interval.

In addition to the above, the individual must have:

- removed and/or disposed of a dead or non-viable pig according to enterprise biosecurity and environmental procedures
- identified and prepared at least three pigs for sale or transfer to another location, including:
 - checked fit to load conditions
 - checked identification and/or tattoo brand as required
 - completed at least one PigPass/National Vendor Declaration (NVD).

Mandatory workplace requirements

All performance evidence specified above must be demonstrated in a pork production site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for grower and finisher pigs
- enterprise procedures and requirements for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for grower and finisher pigs
- hazard identification, risk assessment and controls to minimise risks when caring for grower and finisher pigs
- key care, health and welfare requirements for grower and finisher pigs, including nutrition, water, and protection from adverse weather and predators
- features, functions and benefits of common types of infrastructure, enclosures and equipment used to house and care for grower and finisher pigs using indoor and outdoor farming systems
- drinkers, feeders and other common equipment used to care for grower and finisher pigs in indoor and outdoor farming systems, including:
 - features, functions and benefits
 - safety and operational checks
 - maintenance, cleaning and disinfection requirements
- enterprise procedures for identifying and reporting contaminated feed and water

- optimal range, effects and impacts of ventilation, temperature, humidity and other environmental parameters on grower pig health and welfare
- typical requirements of enterprise work routines for grower and finisher pigs
- safe and low stress techniques for handling and restraining grower and finisher pigs, including injured and ill pigs
- requirements, methods and procedures for formation of viable grower and finisher groups, and the impacts of a viable group on individual pig health and production, including consideration of pig weight, sex and stocking density
- key features of pig anatomy and body functions
- signs of common grower and finisher pig ill health, diseases and injuries, and detection methods, including:
 - irregular behaviour, including self-isolation, lethargy, loss of appetite and drinking
 - checks including weight and breathing
 - limp in step, straight tail, head tilt and body tremors
 - checking skin for red patches, scabs, bleeding, lesions, swelling, open wounds and unusual discharges from eyes, nose and genitalia
 - abnormal faeces
- signs of distress and methods for assessing grower and finisher pig stress levels based on their behaviour
- methods and procedures for feeding and watering grower and finisher pigs
- criteria and methods of assessing optimal stocking densities of grower and finisher pigs
- criteria, methods and procedures for assessing suitability of grower and finisher pigs for sale or transfer, including Fitness to Load guidelines
- requirements, methods and procedures for removal and disposal of pig carcasses, including enterprise biosecurity and environmental considerations
- types, storage, handling, application and disposal procedures of health care treatments of grower and finisher pigs, including withholding periods
- types, storage, handling, use and disposal of cleaning agents and disinfectants commonly used in grower and finisher pig care, including related health, safety and environmental requirements
- features and requirements of property branding and PigPass National Vendor Declaration (NVD)
- zoonoses, including erysipelas, Japanese encephalitis, leptospirosis, worms and influenza
- key features of typical enterprise recording and reporting requirements related to pig care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - *a pork production site*
- resources, equipment and materials:
 - *live pigs specified in performance evidence*

- *pig care infrastructure, materials, resources, tools and equipment, including PPE*
- *safety data sheets*
- specifications:
 - *enterprise procedures for pig care, health and welfare, worker health and safety, and biosecurity activities.*

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Mandatory Workplace Requirements

Mandatory workplace requirements are shown in *italic text*. Refer to the Companion Volume Implementation Guide for further information.

AHCPRK315 Care for sows prior, during and after farrowing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to assist sows prior to, during and after farrowing. It includes weaning piglets where required.

This unit applies to individuals who apply technical knowledge and skills with discretion and judgement to care for pigs in pork production environments. They work under broad direction, coordinate activities and solve problems related to pig welfare. Work environments may include indoor and outdoor pork production systems.

Commonwealth and/or state/territory health and safety, animal welfare, environmental protection and biosecurity legislation, regulations and codes of practice apply to keeping and working with pigs. Requirements vary between industry sectors and jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Mandatory workplace requirements apply to the assessment of this unit.

Prepare farrowing environment	1.1 Identify and follow biosecurity procedures that apply to entering and working on a pork production site 1.2 Identify health and safety hazards, and assess risks and control risks prior to commencing tasks 1.3 Select, prepare and fit appropriate personal protective equipment (PPE) required for tasks and conditions 1.4 Select, clean and/or disinfect and prepare accommodation for sows according to pig, security and safety requirements and enterprise procedures 1.5 Check and/or adjust housing environment and conditions as required to ensure appropriate ventilation, temperature and humidity 1.6 Check and/or adjust feeders and drinkers to ensure availability of feed and correct flow rate 1.7 Check for signs of pests and/or predators according to enterprise procedures 1.8 Resolve and/or report issues according to enterprise requirements
2. Monitor pre-farrowing sows	2.1 Monitor general health and welfare of pre-farrowing sows 2.2 Move and acclimatise sows and gilts to new environment as required, using safe manual handling techniques and low stress animal handling techniques 2.3 Adjust feeding regime for pre-farrowing sows as required 2.4 Check sow records and confirm anticipated due date where possible 2.5 Identify sows showing signs of farrowing, and adjust environment accordingly 2.6 Identify, resolve and report issues to supervisor, including overdue sows
3. Care for farrowing sows	3.1 Select, check and prepare farrowing equipment and resources required to assist sows 3.2 Monitor sows for signs of distress and/or discomfort 3.3 Identify health and safety hazards, and assess and control risks related to assisting sows during farrowing 3.4 Select and fit PPE according to enterprise safety and biosecurity requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	3.5 Identify sows experiencing farrowing difficulties, and assist sows according to enterprise safety and animal welfare procedures 3.6 Record and report farrowing data and/or issues as required
4. Care for lactating sows	4.1 Monitor sows for signs of lactation 4.2 Adjust feeding regime to suit sow nutritional requirements throughout lactation 4.3 Identify signs of ill health and/or discomfort in sows and piglets, and take appropriate action according to Farm Treatment Plan and welfare requirements 4.4 Maintain clean pig environment and dispose of waste according to enterprise environmental requirements 4.5 Foster piglets according to sow capacity and enterprise procedures 4.6 Record and report husbandry data and/or issues as required
5. Wean sows	5.1 Confirm sows to be weaned according to enterprise procedures 5.2 Identify and move piglets to be weaned 5.3 Record weaning data according to enterprise procedures 5.4 Complete sow husbandry and health procedures according to Farm Treatment Plan 5.5 Relocate sows according to production program

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information in enterprise procedures, forms and work standards related to pig care
Writing	<ul style="list-style-type: none"> Record pig farrow data accurately using industry terminology
Numeracy	<ul style="list-style-type: none"> Estimate and calculate quantity, weight, volume, ratio and temperature

Assessment Requirements for AHCPRK315 Care for sows prior, during and after farrowing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively cared for two different sows prior to farrowing, and during farrowing and lactation. For each sow, the individual must have completed the following according to individual pig and enterprise requirements:

- identified at least two health and safety hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- identified and applied enterprise health and safety, biosecurity and protection procedures
- selected and checked equipment and resources required for each task
- used safe and low stress animal handling techniques when handling sows and piglets
- demonstrated safe manual handling techniques as required
- prepared and monitored pig accommodation according to individual animal needs
- met the nutritional needs of sows according to enterprise regime, including:
 - assessed and measured the rate and frequency of feeding
 - adjusted feeding levels pre-farrowing and post-farrowing
 - adjusted feed levels throughout lactation
- monitored animal health and condition, and recognised and reported to supervisor signs of ill health, injury and abnormalities
- administered health treatments as required
- determined or approximated sow due date from relevant data
- recognised signs of imminent parturition
- recognised signs of birthing difficulties in sows, and taken appropriate action
- implemented contingency measures to address unforeseen events, including:
 - adverse weather
 - facility and equipment malfunctions
- documented farrowing data, including litter size and any interventions required.

Mandatory workplace requirements

All performance evidence specified above must be demonstrated in a pork production site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for farrowing sows
- enterprise procedures and requirements for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for farrowing sows
- enterprise procedures for care of farrowing sows, birthing pigs, lactating sows and weaning piglets, including recording and reporting requirements
- hazard identification, risk assessment and controls to minimise risks when caring for farrowing sows
- safe manual handling, and low stress techniques for handling farrowing sows and piglets
- physiological and behavioural signs in sows of impending birth
- typical behaviours and signs of farrowing difficulties
- key causes of farrowing difficulties
- intervention and follow-up treatment strategies for difficult births
- housing and nutritional requirements of pregnant and lactating sows
- feed and feed supplements for pregnant sows, and when to provide them
- effects of weather conditions and inadequate nutrition on pregnant sows and their newborn
- health treatments, procedures and methods for pregnant and lactating sows
- worker health and safety hazards associated with handling farrowing sows, and veterinarian medicines and chemicals related to farrowing sows
- key information provided in Farm Treatment Plan and Approved Medication List for care of farrowing sows
- pests and predators and their impact on farrowing sows and their piglets
- zoonoses, including erysipelas, leptospirosis, Japanese encephalitis, worms and influenza
- key features of typical enterprise recording and reporting requirements related to pig care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - *a pork production site*
- resources, equipment and materials:

- *live pigs specified in performance evidence*
- *pig accommodation, materials, resources, tools and equipment, including PPE, and applicable to working with pigs*
- *safety data sheets*
- specifications:
 - *enterprise procedures related to pig care, animal welfare, worker health and safety, and biosecurity*
- relationships:
 - *supervisor.*

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Mandatory Workplace Requirements

Mandatory workplace requirements are shown in *italic text*. Refer to the Companion Volume Implementation Guide for further information.

AHCPRK403 Implement a feeding plan for pig production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to implement a feeding plan for pig production. It includes preparing resources, managing feed storages, and monitoring pig feeding.

This unit applies to individuals who work in pork production environments and apply specialist knowledge and skills with discretion and judgement to interpret production requirements to prepare, coordinate and monitor pig feeding plans. They work autonomously, supervise other workers and solve predictable and unpredictable pig health and welfare problems. Work environments may include indoor and outdoor pork production systems.

Commonwealth and/or state/territory health and safety, animal welfare, environmental protection and biosecurity legislation, regulations and codes of practice apply to keeping and working with pigs. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Mandatory workplace requirements apply to the assessment of this unit.

Pre-requisite Unit

Nil

Pork (PRK)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare feeding plan and resources	<p>1.1 Identify and follow biosecurity procedures that apply to entering and working on a pork production site</p> <p>1.2 Determine feed quantities required from the production program</p> <p>1.3 Use relevant laboratory results when determining quantities and ration formulation of stockfeed in consultation with nutritionist</p> <p>1.4 Schedule and allocate responsibility for feeding according to production program and other relevant operational requirements</p> <p>1.5 Monitor and ensure feed systems are maintained regularly</p>
2. Manage storage of feed	<p>2.1 Develop a plan for secure and hygienic storage of feed according to enterprise biosecurity procedures</p> <p>2.2 Allocate and monitor feed storage areas to meet enterprise hygiene, production and safety requirements</p> <p>2.3 Organise rotation and replenishment of feed supplies to maximise quality and meet quantities required for production</p> <p>2.4 Schedule pig feeding times according to their nutritional needs and enterprise equipment resources available</p> <p>2.5 Supervise calibration of feeding equipment and calculation of feed quantities to meet pig nutritional requirements</p>
3. Supervise feeding	<p>3.1 Identify health and safety hazards to team members and pigs related to pig feeding tasks, and assess and control risks</p> <p>3.2 Check appropriate personal protective equipment is maintained and used by team members according to enterprise health, safety and biosecurity requirements</p> <p>3.3 Ensure that feed rations are supplied to pigs and recorded according to feeding plan requirements</p> <p>3.4 Ensure continuous supplies of potable water are available to pigs</p> <p>3.5 Provide pig feeding advice to team members as required</p> <p>3.6 Monitor and supervise pig feeding to minimise waste</p> <p>3.7 Monitor and record pig health and condition in response to pig feeding plan</p> <p>3.8 Evaluate and report implementation of feeding plan and related pig health and production outcomes according to enterprise procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret information in enterprise plans, procedures and standards related to pig feeding Interpret terminology in laboratory and pig nutrition reports
Writing	<ul style="list-style-type: none"> Use pork industry and technical terminology when completing pig nutrition records and reports
Oral communication	<ul style="list-style-type: none"> Instruct other workers clearly using language appropriate to the audience Use open-ended questions, active listening and paraphrasing to gather information
Numeracy	<ul style="list-style-type: none"> Estimate and calculate quantity, time, weight, volume, ratio and temperature

Assessment Requirements for AHCPRK403 Implement a feeding plan for pig production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively planned, implemented and monitored a feeding plan for at least three different groups of pigs to meet production targets over a period of at least six weeks. Each group must include at least four pigs. For each group, the individual must have:

- determined and documented feeding plan based on professional nutritional advice
- identified at least three health and safety hazards to workers and pigs related to implementing the feeding plan, and assessed and controlled risks
- briefed at least one worker on their allocated feeding task/s, including confirmation of safety, personal protective equipment (PPE), biosecurity and animal welfare responsibilities
- prepared PPE for at least one worker and ensured it is correctly fitted and used
- checked feeding and watering systems and equipment required to implement pig feeding plan are operational
- checked pig feed has been stored safely and securely according to enterprise quality and biosecurity requirements
- monitored pig feeding and identified feed waste
- ensured removal and/or reuse of unused feed and water according to enterprise procedures
- evaluated and documented implementation of feeding plan and related pig health and production outcomes according to enterprise procedures.

Mandatory workplace requirements

All performance evidence specified above must be demonstrated in a pork production site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare and biosecurity that apply to pig feeding
- enterprise procedures and requirements for worker health and safety, animal welfare and biosecurity that apply to pig feeding
- hazard identification, risk assessment and controls to minimise risks when implementing pig feeding plans
- main structures and functions of pig digestive system
- principles of nutrition, feeding strategies and feeding management of pigs
- key nutritional requirements of pigs, including:
 - energy, carbohydrate, protein, fats, fibre, essential amino acids and vitamins
 - variations for weaners, growers, finishers and pregnant and lactating sows
- types, forms and characteristics of pig feeds
- pig feeding behaviour relevant to managing nutrition, including:
 - herd behaviour
 - individual behaviour
 - life stage
 - environmental conditions
- criteria, requirements, types of and principal considerations for feed storage, including:
 - pest control
 - prevention of contamination
 - temperature and moisture
- features, criteria and requirements for formulating feeding plans and rations
- antibiotic and residue withholding periods relating to feed and nutrition
- types, calibration and use of equipment used to feed pigs
- requirements, types and maintenance of potable water supplies to pigs
- selection, use and maintenance of PPE required for pig feeding tasks
- signs of health, ill health, good condition and poor condition in pigs, and methods for assessing pig health and condition in relation to nutrition and feeding
- types of waste associated with pig feeding, and methods for removal, reuse, recycling and disposal
- zoonoses, including erysipelas, leptospirosis, Japanese encephalitis, worms and influenza
- key features of typical enterprise recording and reporting requirements related to pig care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - *a pork production site*
- resources, equipment and materials:
 - *live pigs specified in performance evidence*
 - *pig farm infrastructure, materials, resources, tools and equipment, including PPE*

- *safety data sheets*
- specifications:
 - *enterprise procedures for pig care, health and welfare, worker health and safety, and biosecurity and environmental protection activities*
 - *enterprise pig production plans, including professional nutritional information*
 - *enterprise and manufacturer specifications for checking and maintaining pig feeding systems and equipment.*

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Mandatory workplace requirements

Mandatory workplace requirements are shown in *italic* text. Refer to the Companion Volume Implementation Guide for further information.

AHCSAW202 Recognise landforms and soil types

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to recognise commonly encountered landforms and soil, their origins and human and natural influences on their degradation.

The unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Soil and Water Conservation (SAW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for landform and soil survey	1.1 Identify sources of expertise and references for assisting in landform and soil recognition 1.2 Prepare resources and equipment required for landform and soil survey 1.3 Identify hazards and report to supervisor for controls to implement

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	during field survey work 1.4 Follow workplace procedure for landform and soil field survey
2. Identify regional geology	2.1 Identify geological land forms and associated rock types for a local region 2.2 Conduct geological field tests to identify broad rock types and their characteristics 2.3 Recognise historical geological events that created landforms and soils in a local region
3. Recognise specified landforms and soils	3.1 Carry out a visual inspection of landforms and soil on specified site 3.2 Recognise and name outcropping rocks and parent materials by their identifiable characteristics 3.3 Conduct basic field tests to assist in recognising soil types 3.4 Recognise the association between soil type and local geology 3.5 Record description of landforms and soil for a specified site 3.6 Seek expert advice and consult references to confirm recognition of landform and soil type
4. Recognise and record degrading influences on landforms and soil	4.1 Identify natural and human activity that impacts on identified landforms and soil 4.2 Identify degrading processes associated with natural and human activity on specified site 4.3 Recognise impact of current land use of site on landforms and soil 4.4 Record degrading impact from current and projected future activity on landforms and soil according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret reference materials to identify characteristics and assist in the recognition of landforms, rock types and soils
Oral Communication	<ul style="list-style-type: none"> Use clear language, vocabulary, tone and pace appropriate for the audience to discuss and confirm recognition of soils and landforms with experts

Assessment Requirements for AHCSAW202 Recognise landforms and soil types

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed landform and soil surveys on at least two sites with distinctly different landforms and soil conditions, and has recognised the landforms and basic soil type on each site.

There must also be evidence that the individual has:

- implemented safe work procedures relating to landform and soil field survey
- prepared for landform and soil recognition activities
- selected sampling and testing equipment and materials and:
 - conducted basic field tests on rock samples to assist recognition
 - conducted basic field tests on soil samples to assist recognition
- operated sampling and testing equipment according to safe work practices and manufacturer instructions
- recognised the processes affecting the formation and degradation of common landforms and soil types
- recorded results of landform and soil recognition activity according to supervisor instruction and workplace procedures
- cleaned and stored tools and equipment according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- main geological crustal processes and influences in a region
- main rock types, formation, common mineral content and characteristics for identification, including:
 - sedimentary
 - volcanic

- metamorphic
- field tests to assist in identifying rock types
- main soil types, common mineral content, soil characteristics and basic tests used for identification
- weathering, change and degrading processes relating to landforms and soil from both natural and human causes
- sampling and testing equipment
- landforms common to different geological regions, and the processes for their formation
- basic soil survey techniques and the equipment required
- records required for documenting results for rocks, landforms and soils
- sources of expertise and reference materials required for landforms and soil recognition.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field on at least two sites with different landforms and soil types, or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - sampling and testing equipment
 - personal protective equipment
 - access to expertise and reference materials to assist in recognition of soils and landforms
- specifications:
 - workplace instructions and procedures for sampling rocks and soils
 - manufacturer operating instructions for equipment
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSAW203 Conduct erosion and sediment control activities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to control erosion and sediment using earthworks construction and other land forming activities, usually using a single earthmoving machine in varied conditions and terrains that requires the plant operator to develop skills that are unique to this sector.

The unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined routine activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed erosion and sediment control on at least two different sites with distinctly different terrain and soil conditions.

There must also be evidence that the individual has:

- conducted erosion and sediment control activities as instructed by a supervisor
- identified hazards and followed safe operating procedures for each site
- identified erosion and sediment control structures, measures and practices
- carried out routine work using control measures and structures
- identified areas at risk of erosion
- operated machinery tools and equipment safely and efficiently
- followed biosecurity procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- need of erosion and sediment, including:
 - importance of erosion and sedimentation to the community
 - effect on loss of habitat
 - effect on water quality
 - loss of production, assets and amenities
- maintenance, repair and monitoring requirements for erosion and sediment controls
- agents and processes of erosion and sedimentation, and ways to control them
- types of erosion and sediment control structures, and techniques for constructing them
- role of vegetation in erosion control
- basic catchment issues

- basic characteristics of erodible soils
- environmental and biosecurity procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on at least two different sites with distinctly different terrain and soil characteristics
- resources, equipment and materials:
 - tools, equipment and machinery for installing erosion and sediment controls specific to the site requirements
 - consumables and materials required for erosion controls
 - personal protective equipment

AHCSAW303 Construct conservation earthworks

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to use specialised earthmoving techniques to achieve fine tolerances in the construction of conservation earthworks, using a single earthmoving machine in varied conditions and terrains that requires the plant operator to develop skills that are unique to this sector.

The unit applies to individuals who work in conservation and land management roles and who use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

Special vehicle licenses may apply to this unit, dependent on the type of machinery and conditions of use. Specific determination should be sought through the relevant state or territory authority.

Assessment Requirements for AHCSAW303 Construct conservation earthworks

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, selected equipment and safely constructed earthworks for conservation using plans and specialisations.

There must also be evidence that the individual has:

- identified hazards and implemented controls and safe operating procedures
- prepared for construction according to construction plans and workplace requirements
- carried out planned earthworks with minimal damage to natural areas according to construction works plan and specifications, including:
 - excavation
 - transport
 - dumping
 - compaction of material
- applied finishing techniques to the site
- interpreted maps and plans to identify site construction requirements
- selected and safely used earthmoving equipment suitable for construction, soil properties and terrain
- cleaned, maintained and stored equipment and machinery according to biosecurity and environmental procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- erosion and sediment control standards
- soil types and formation and impact on construction works and site access
- principles of conservation earthwork construction and erosion and sediment control, including:

- catchment management and soils
- earthmoving principles
- levels and levelling
- interpreting plans and designs
- natural area protection and rehabilitation principles, including:
 - preservation of topsoil
 - soils and effect on erosion and sediment control
 - recognition and preservation of threatened vegetation
 - basic plant root physiology and construction works
 - root disturbance and compaction
 - disturbance of fauna habitat
- application of legislation and regulations relating to conservation earthwork construction, including:
 - protection of flora and fauna
 - health and safety
 - environmental protection from fuels and oils
 - biosecurity
- safety while working on construction sites, including:
 - proximity to machinery and site personnel
 - impediments to safe machinery operation, including terrain
 - workplace health and safety procedures
 - personal protective equipment
- construction works and sequencing, including:
 - excavation and earthmoving principles
 - transport
 - dumping
 - compaction
 - surface finish
- risk factors, including human health and environmental damage
- environmental and biosecurity impacts and controls for constructing conservation earthworks.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on at least one conservation site for earthworks, or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - machinery and equipment suitable for conservation earthworks

- personal protective equipment
- specifications:
 - workplace documents such as policies, procedures, processes
 - manufacturer operating instructions for equipment and machinery
 - workplace instructions, plans and specifications
- relationships:
 - work team, supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSAW304 Implement erosion and sediment control measures

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to construct, install and maintain a range of measures specified on erosion and sediment control plans.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Soil and Water Conservation (SAW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for implementation and construction	1.1 Confirm erosion and sediment control site and work requirements with maps, plans and specifications 1.2 Identify and locate worksite and surveyed work according to maps and site plans 1.3 Select, check and prepare machinery and equipment required for

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	erosion and sediment control work 1.4 Verify the suitability of equipment and attachments for terrain and control works 1.5 Identify hazards, assess risks and implement controls according to workplace health and safety and environmental procedures 1.6 Select, check and use personal protective equipment 1.7 Select materials required for proposed works according to plans and specifications
2. Carry out implementation and construction	2.1 Coordinate work sequence with work team according to planned works 2.2 Operate tools and equipment safely using techniques suitable for terrain, site conditions and other operators and site worker safety 2.3 Construct erosion and sediment control earthworks according to specifications
3. Carry out repairs and maintenance procedures	3.1 Monitor site operations and identify and resolve performance issues according to workplace procedures 3.2 Clean, maintain and store machinery, tools and equipment according to environmental and biosecurity procedures 3.3 Maintain records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret basic construction plans and specifications for erosion control works and consolidate information to determine equipment required, methods and location of works and the tolerances required
Numeracy	<ul style="list-style-type: none"> Make measurements and perform calculations to check site layout against plans for erosion and sediment control works Make basic volumetric calculations for measuring and estimating

Skill	Description
	materials during construction works

Assessment Requirements for AHCSAW304 Implement erosion and sediment control measures

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted erosion and sediment control activities on at least one conservation worksite, and has constructed, installed and maintained at least three erosion and sediment control measures.

There must also be evidence that the individual has:

- identified hazards, assessed risk and implemented controls
- read and followed plans for construction work and site construction layout
- implemented site and equipment repairs and maintenance according to workplace procedures
- selected and operated tools and equipment according to safe work practices and manufacturer instructions
- cleaned, maintained and stored equipment, machinery and tools according to workplace and biosecurity procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- construction and site plan types, reading and interpretation
- erosion and sediment control methods and construction techniques
- materials cartage pollution control
- operational planning skills to sequence and schedule the timing/duration of work
- workplace health and safety issues relating to erosion and sediment control works, including:
 - equipment
 - site-specific risks
 - personal protective equipment

- sun protection
- type and operation of machinery and equipment used for erosion and sediment control, including:
 - safety checks
 - site access and operational restrictions
 - maintenance
 - environmental protection from fuels and oils
 - impact of tools and machinery on biosecurity
- materials suitable for constructing erosion and sediment control measures, and where to source them on site
- limitations of structures, including:
 - timing of maintenance
 - structure life cycle
 - specifications and standards for construction.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a conservation worksite or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, equipment and materials for installing specified erosion and sediment controls
 - personal protective equipment
- specifications:
 - workplace policies, procedures and processes for safety, biosecurity and environmental safety
 - manufacturer operating instructions for specific equipment and machinery
 - workplace instructions and plans
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSAW402 Set out conservation earthworks

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set out standard structures using specialised pegging and marking techniques, for erosion and sediment control earthworks.

The unit applies to individuals who take responsibility for their own work and use discretion and judgement in the selection, allocation and use of available resources. This includes undertaking a range of routine and non-routine activities and work in known and changing contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Soil and Water Conservation (SAW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Interpret plans and specifications	1.1 Determine overall objective of construction work from plans and in consultation with landholder and surveyor 1.2 Establish earthworks specifications required to achieve desired objectives 1.3 Inspect site for prevailing conditions and identify inconsistency

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	with plan 1.4 Consult surveyor to rectify inconsistencies 1.5 Verify plan according to workplace procedures 1.6 Identify hazards, assess risks and implement controls according to workplace health and safety procedures
2. Relate plan to site	2.1 Harmonise key data points on plan with matching features on site 2.2 Identify features on site plan to be used for survey work 2.3 Identify and record inconsistencies between site plan and actual site that will affect survey activity
3. Peg project	3.1 Establish layout sequence in consultation with site surveyor 3.2 Measure site dimensions according to plan and specification 3.3 Relay site dimensions from plan to site 3.4 Mark out site construction area and locations using workplace and industry best practice 3.5 Lay out earthworks according to project specifications and specified tolerances 3.6 Advise construction team of layout to preserve site layout integrity

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Critically analyse plans and specifications to extract critical data for survey works
Numeracy	<ul style="list-style-type: none"> Select and apply mathematical and problem solving strategies to interpret plans and specifications and transfer linear dimensional information from scale drawings into real-world site layout

Assessment Requirements for AHCSAW402 Set out conservation earthworks

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has interpreted plans and specifications and transferred dimensions to at least one conservation earthworks site.

There must also be evidence that the individual has:

- set out conservation earthworks site using industry and workplace practices
- identified hazards, assessed risks and implemented controls for the survey site
- interpreted plans and specifications and related plan to site for layout
- transferred measurements from plan to site to specified accuracy
- marked out site according to workplace and industry practices
- informed work team of layout and to preserve the integrity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- plans and plan reading and interpretation, including:
 - types of plans
 - general and technical specifications
 - scale and calculating dimensions
 - supplementary plan documentation
 - version control
- survey equipment and its use for setting out earthworks, including:
 - equipment used for linear dimensions
 - determining levels and heights
 - setting up, operation and maintenance of equipment for preserving accuracy
- civil engineering and survey techniques applicable to conservation earthworks, including:

- industry operating procedures
- methods and materials used for marking out sites
- workplace health and safety issues relating to site safety while undertaking site survey works, including:
 - safe use of laser equipment
 - site-specific risks and impediments
 - personal protective equipment
 - sun protection.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a conservation construction site or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - surveying tools and equipment for transferring measurements
 - consumables for marking out site
 - personal protective equipment
- specifications:
 - workplace policies and procedures for safely conducting survey work
 - manufacturer operating instructions for survey equipment
 - workplace instructions, plans and specifications
- relationships:
 - landholder
 - surveyor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSAW404 Supervise implementation of conservation earthworks plans

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to supervise the on-site implementation of earthworks designed to control erosion and sediment at a given site.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. This includes using discretion and judgement in the selection and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Soil and Water Conservation (SAW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan efficient implementation of erosion and sediment control works	1.1 Review plans and specifications and correlate to earthworks work site 1.2 Determine resource requirements to undertake work 1.3 Plan and record work sequences according to proposed work schedule

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Identify pest control requirements and develop a strategy for control</p> <p>1.5 Order resources required for works according to construction schedule and workplace procedures</p> <p>1.6 Identify potential regulatory, planning, biosecurity and environmental impacts of the work, and notify senior management of inconsistencies</p> <p>1.7 Identify workplace health and safety hazards, assess risks and implement control measures</p>
2. Direct and monitor work	<p>2.1 Communicate instructions and expected work performance standards to work team</p> <p>2.2 Assess work team skill level and arrange training according to assessment outcomes</p> <p>2.3 Assess site for constraints limiting achievement of performance targets, and modify techniques and schedules to mitigate constraints</p> <p>2.4 Report mitigating conditions and project modifications to senior management for approval</p> <p>2.5 Assess work performance against target and adjust activities or plan where inconsistencies in performance are identified</p> <p>2.6 Monitor site and machinery operational safety according to workplace health and safety policies and environmental and biosecurity practices</p> <p>2.7 Liaise with stakeholders to keep them apprised of project development</p>
3. Complete work	<p>3.1 Inspect site for confirmation of completion of work according to performance targets</p> <p>3.2 Report underperformance to target, and arrange rectification notices</p> <p>3.3 Supervise the maintenance and cleaning of machinery and equipment</p> <p>3.4 Report outcomes of conservation earthworks to senior management according to workplace reporting procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Critically analyse project plans and specifications, and consolidate information into schedules, programs, materials and equipment requirements, and for monitoring work team performance
Writing	<ul style="list-style-type: none"> Prepare reports for stakeholders and senior managers to inform on project progress and completion targets, using clear and accurate language
Oral Communication	<ul style="list-style-type: none"> Use collaborative and inclusive techniques, including active listening and questioning and reading of non-verbal signals, to convey and clarify instruction to workers and to provide reports to stakeholders
Numeracy	<ul style="list-style-type: none"> Interpret and perform calculations to analyse materials and resource requirements, to determine costs and quantities, and to accurately report on progress performance against target

Assessment Requirements for AHCSAW404 Supervise implementation of conservation earthworks plans

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, supervised the implementation of conservation earthworks, and has:

- determined operational resource requirements, including:
 - human resources
 - materials and consumables
 - tools and equipment
 - financial
- identified hazards and implemented controls for the site
- identified pests and control strategy
- planned the implementation of works
- protected natural areas from damage
- directed implementation of planned works
- monitored job performance against target and took action to rectify
- identified and addressed risks to achieving planned outcomes
- communicated with stakeholders about work undertaken
- assessed and arranged work team upskilling
- ensured workplace health and safety policies and procedures were followed
- monitored adherence to biosecurity measures and sustainability practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- conservation earthworks standards and principles, including:
 - erosion control and design principles

- sediment control principles
- natural area topsoil protection and rehabilitation principles
- impact of earthworks on the ecology
- impact of geology on soils and subsequent earthworks activity and site access
- pest control required on earthworks, including:
 - site weeds
 - soil-borne pests and pathogens
 - strategies required to control or eradicate
- supervision techniques and strategies, including:
 - working with work teams
 - assessing performance
 - rectifying performance issues
 - reporting procedures
- work sequencing and scheduling
- equipment most suitable to the constructing of erosion and sediment control works, including:
 - earthmoving principles
 - principles of machine operation
- quality assurance systems, processes and practices
- staff deployment, supervision, skills assessment and training
- application of legislations and codes of practice, including:
 - workplace health and safety
 - environmental legislation, codes of practice
 - biosecurity
 - workplace policies and procedures
 - enterprise requirements to work site
- communications strategies to ensure stakeholders are engaged and informed, including:
 - working with the media
 - special interest groups
 - general public
 - clients and senior managers
- workplace health and safety hazards associated with conservation earthworks, and the controls necessary to remove or minimise associated risks
- state/territory legislative requirements related to conservation earthworks, environmental protection and biosecurity standards.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- skills must be demonstrated on a conservation earthworks site or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - materials and other resources as specified in project plans and specifications
 - tools and equipment required to perform earthworks activities
- specifications:
 - workplace policies and procedures for safety and supervision of work
 - earthworks plans and specifications
- relationships:
 - stakeholders
 - senior managers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSAW504 Design control measures and structures

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to design erosion and sediment control measures and structures.

The unit applies to individuals who work in soil and water conservation and who analyse information and exercise judgement to complete design and development activities, demonstrating a deep understanding of the technical areas within soil and water conservation. They have accountability for the work of others and analyse, design and communicate solutions to complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Soil and Water Conservation (SAW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify measures or structures to be designed	1.1 Review erosion and sediment control plan for technical accuracy and environmental impact 1.2 Confirm adherence to regulations and legislation, and record on works plans

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Confirm budget constraints for project with management or client 1.4 Apply design criteria according to industry standards
2. Apply design procedures	2.1 Calculate catchment characteristics to required accuracy 2.2 Determine design specifications for project 2.3 Use a computer aided design (CAD) program to develop draft design according to budgetary constraints and erosion and sediment control plan 2.4 Verify design against plans, budget and industry best practice with stakeholders 2.5 Review and recommend changes to the design to comply with design procedures and accepted industry practices and environmentally sustainable practices
3. Prepare specification schedule	3.1 Prepare documentation and specifications for design 3.2 Verify design and documentation complies with industry standards 3.3 Confirm suitability of design and specifications for the category of work and legislative requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Organise, assess and critique data and information from legislation and regulations and plans for incorporation into design
Writing	<ul style="list-style-type: none"> Select appropriate conventions and stylistic devices to express precise meaning in design documentation and specifications
Numeracy	<ul style="list-style-type: none"> Use highly developed numeracy skills to interpret design criteria from catchment characteristics and costs, and perform calculations to translate into dimensions and structural design of control measure

Assessment Requirements for AHCSAW504 Design control measures and structures

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has produced at least one design for erosion and sediment control measures and structures, and has:

- identified control measures for a specified situation
- applied design procedures and prepared specifications
- costed the project and provided recommendations according to budget
- used computer aided design (CAD) program to create the design
- determined design specifications according to industry standards
- developed design plan to meet planned sediment and erosion control criteria
- verified design with stakeholders and for compliance with sustainability principles.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- erosion control and design principles:
 - soils and soil formation
 - levels and levelling
 - earthmoving principles
 - total catchment issues
 - managing peak water flows
- state and territory legislative requirements for design of control measures, including heritage and cultural regulations
- sub-surface and surface drainage principles and systems
- environmental issues related to the design
- limitations of design aids provided for industry
- CAD software for design.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a specified site for erosion and sediment control, or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital technology with CAD software
- specifications:
 - workplace documents, policies and procedures
 - catchment data for determining the design characteristics
 - legislation and codes of practice for civil design work
- relationships:
 - client/stakeholder
 - senior manager.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCSAW505 Plan erosion and sediment control measures

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed at least one plan for erosion and sediment control measures according to regulatory requirements and industry standards.

There must also be evidence that the individual has:

- established suitability of development proposal to location and environment
- prepared erosion and sediment control plans to enterprise standards
- developed erosion and sediment control measures consistent with industry principles and selection criteria
- prepared an erosion and sediment control plan according to industry standards and in compliance with regulatory planning authority.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- application of relevant environmental, planning, groundwater and heritage and cultural legislation in erosion and sediment control work
- planning process for erosion and sediment control
- surface water and groundwater interactions and their influence on erosion, erosion control and design, including:
 - soils and soil formation and impact on water flow
 - levels and levelling
 - earthmoving principles
 - total catchment issues
 - managing peak water flows
 - sub-surface and surface drainage principles and systems
- computations relevant to water runoff, flow and design of erosion control

- structures and structural design principles of erosion and sediment control
- permits or approvals required for developing erosion and sediment control structures
- environmental issues related to erosion and sediment
- awareness of the limitations of design aids provided for industry
- workplace health and safety implications of implementing plans.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a development site requiring sediment and erosion control, or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital technology with planning and design tools and resources
- specifications:
 - workplace policies, procedures and processes for planning and design
 - site development proposals
 - legislation, regulations and industry codes of practice for controlling land degradation sediment
- relationships:
 - developer
 - consenting authority.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSDT308 Perform tests for quality on seeds

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to perform tests on seeds and grain to determine quality. Tests are performed under laboratory conditions in accordance with industry standards.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

Seed to be processed for Certification must be sampled by an Authorised Sampler in accordance with International, Federal and State seed certification regulations.

Pre-requisite Unit

Nil

Unit Sector

Seed Testing (SDT)

Elements and Performance Criteria

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare seed for testing and maintain condition and purity	1.1 Identify purpose of seed tests from work instructions 1.2 Verify authenticity of seed from submitted sample documentation 1.3 Verify submitted seed sample complies with condition specified for seed test and report inconsistencies to supervisor 1.4 Prepare working test sample/s from submitted seed sample

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>according to workplace and laboratory procedures</p> <p>1.5 Store and maintain condition and quality of seed samples for testing according to seed species, workplace procedures and industry standards</p> <p>1.6 Implement procedures to prevent contamination of submitted sample and working samples</p> <p>1.7 Label and record working samples according to workplace and industry standards for traceability</p>
2. Prepare equipment for seed tests	<p>2.1 Select number of replicates for seed test according to specified test procedure and work instructions</p> <p>2.2 Prepare the required number of replicates according to specific test procedures and industry standards</p> <p>2.3 Label and store replicates according to workplace procedures and industry standards</p> <p>2.4 Compile and prepare materials required according to specified seed test procedures</p> <p>2.5 Select, clean, check and calibrate test equipment according to manufacturer instructions and seed test specifications</p> <p>2.6 Report and record faults, repairs and calibration of equipment according to workplace procedures</p> <p>2.7 Identify health and safety hazards, assess risk and implement controls according to workplace procedures</p>
3. Conduct seed tests	<p>3.1 Measure quantities of seed required for each test replicate according to test procedures</p> <p>3.2 Pre-treat or condition seed replicates ready for testing according to test procedures</p> <p>3.3 Conduct seed test according to seed test procedures and industry standards</p> <p>3.4 Maintain conditions to maintain quality and prevent contamination of replicates during testing process</p> <p>3.5 Update labelling of replicates and records according to workplace and industry standards for traceability</p>
4. Examine and assess tested seed	4.1 Identify endpoint of test and prepare replicates for assessment according to testing procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.2 Examine each replicate and record observations 4.3 Assess observations against standards specified in workplace and industry procedures 4.4 Record observations and test results according to workplace and industry procedures
5. Prepare and report test results	5.1 Calculate test results according to workplace procedures and industry standards 5.2 Compile and document test results 5.3 Assess test results against standards and report results according to workplace procedures 5.4 Update records according to workplace and industry standards for traceability
6. Finalise testing procedures	6.1 Dispose of replicates and waste according to testing protocols and workplace waste and biosecurity procedures 6.2 Clean and store test equipment according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret seed testing procedures and industry standards to ensure accuracy of tests performed and integrity of test results
Writing	<ul style="list-style-type: none"> Document test results accurately using industry recognised language and formatting
Numeracy	<ul style="list-style-type: none"> Perform calculations accurately and according to industry standards for seed testing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed the following tests on seeds:

- seed purity
- germination
- fluorescence
- moisture
- 'Determination of Other Seeds by Number' test
- hybrid vigour

There must also be evidence that the individual has:

- verified compliance of seed sample with documentation, including:
 - seed species/variety
 - seed condition as submitted
 - seed condition suitable for testing
- prepared and stored samples to maintain quality and condition
- selected, prepared and used testing equipment and materials to conduct tests
- selected, and prepared replicates from working samples for testing
- conducted seed tests, examined tested seed, assessed and calculated test results
- maintained accurate labelling and records at each stage of the testing process suitable for traceability according to industry and workplace standards
- cleaned test equipment, laboratory and disposed of waste according to biosecurity and workplace procedures.

Knowledge Evidence

- An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
- industry and enterprise standard operating procedures (SOPs) for seed tests, including:

- seed purity
- germination
- fluorescence test on seeds
- moisture
- 'Determination of Other Seeds by Number' test
- hybrid vigour
- testing equipment, setup, calibration and operation for the different seed tests
- work health, safety and environment requirements
- seed biology and relation to seed quality, condition and seed tests
- the role of the International Seed Testing Association (ISTA) and the ISTA Rules for Seed Testing
- preparing statistically representative replicates by weight or number of seed for testing
- seed sampling methods, including:
 - hand samples
 - mechanical samples
 - authorised sampler and seed certification
- federal and state agencies overseeing seed movement in Australia and sampling and testing standards, including:
 - Australian Quarantine and Inspection Service (AQIS)
 - Organisation for Economic Co-operation and Development (OECD)
 - Association of Official Seed Certifying Agencies (AOSCA)
 - other certification agencies
- assessing seed test results against industry standards and reporting results
- recordkeeping and documentation for traceability and reporting.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in seed testing laboratory or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - seeds of crops or pasture plants
 - tools and equipment to perform all the tests specified in the Performance Evidence
 - personal protective equipment
- specifications:
 - sampled seed documentation
 - workplace policies, procedures, processes and forms for seed testing
 - manufacturer operating instructions for seed sampling and testing equipment
 - specific safety data sheets for reagents used in seed testing

- workplace instructions and industry specifications for seed testing and assessment
- specific seed testing and certification regulations and industry practice
- relationships:
 - supplier of seed for testing
 - supervisor(s)
- timeframes:
 - according to seed testing times specified testing procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSDT309 Prepare a working sample

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to receive a sample of seed, reduce the sample for testing and store the working sample to maintain its quality.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Seed Testing (SDT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Receive submitted sample	1.1 Receive submitted sample and verify documentation 1.2 Assess sample for compliance with documentation and laboratory standards and report inconsistencies to supervisor 1.3 Label sample and update records according to workplace procedures and industry standards 1.4 Prepare submitted sample for testing according to timeframes

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	specified in workplace procedures and documentation 1.5 Handle and store submitted sample according to workplace procedures and industry specifications for species
2. Reduce sample	2.1 Check working area and equipment is clean and free of contaminants 2.2 Identify and use equipment suitable for dividing samples according to workplace procedures and industry specifications for species 2.3 Reduce sample size to equal or greater than required working sample according to workplace and industry procedures 2.4 Package working sample for testing according to procedures 2.5 Update sample labelling and records according to workplace procedures and industry specifications
3. Store working sample after testing	3.1 Receive tested samples and verify records and labels before storing 3.2 Handle samples according to workplace guidelines where live insects have been detected before storage 3.3 Store samples after testing in environmental conditions that minimise changes in seed quality traits

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Document samples and labels accurately using industry standards formatting and language
Numeracy	<ul style="list-style-type: none"> Calculate seed quantities and sample sizes accurately

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared a working sample of seeds for testing from at least five samples submitted and has:

- received and verified submitted samples
- obtained a working sample from a seed sample submitted for testing
- reduced samples to a size consistent with documentation and industry standards
- updated documentation and labelling accurately
- stored samples following testing to preserve their integrity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace procedures for sampling seeds for testing
- mechanical dividers and their applications
- sample reduction methods and apparatus
- procedures for obtaining working samples for different tests
- relevant work health, safety and environment requirements
- seed handling and storage requirements to maintain seed quality
- the rules and role of the International Seed Testing Association (ISTA).

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- skills must be demonstrated in a seed testing laboratory or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - seed samples with documentation for testing
 - seed sampling equipment
 - recording and labelling materials
- specifications:
 - specific workplace procedures, processes, forms for seed sampling
 - manufacturer operating instructions for sampling equipment
 - workplace instructions and seed sampling specifications
 - industry codes of practice and standards
- relationships:
 - supervisor(s).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCSDT310 Identify seeds

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has accurately identified the seeds of at least ten different crop plants to species level and has:

- prepared for seed identification
- identified botanical name of seed according to nomenclature specified in workplace procedures
- contributed to workplace seed reference collection.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- binomial nomenclature
- basic botany and concepts required for seed identification
- seed identification techniques
- workplace and/or legal traceability requirements
- workplace procedures
- tools and testing methods
- work health, safety and environmental requirements in seed testing conditions
- role of workplace seed reference collections
- role of the International Seed Testing Association (ISTA) and the ISTA Rules for Seed Testing

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- skills must be demonstrated in a seed testing laboratory, on a farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - seeds requiring identification
 - seed identification reference materials, tools and equipment
- specifications:
 - workplace policies, procedures, processes and forms for seed testing
 - laboratory or workplace instructions and specifications
- relationships:
 - supervisor(s).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSDT412 Perform advanced tests on seeds

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to perform advanced tests on seeds and grain to determine quality, performed under laboratory conditions in accordance with Australian and industry standards. Tests to be demonstrated include, Anguina test on annual ryegrass seed, endophytic seed test, electrophoresis test on a seed sample, tetrazolium test, seed vigour test and 1000 seed weight test.

The unit applies to senior seed analysts who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

Seed to be processed for Certification must be sampled by an Authorised Sampler in accordance with international, federal and state seed certification regulations.

Pre-requisite Unit

Assessment Requirements for AHCSDT412 Perform advanced tests on seeds

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed each of the following tests on seeds:

- tetrazolium test, including:
 - prepared seed and tetrazolium solution
 - stained seeds with a tetrazolium solution
- seed vigour test
- 1000 seed weight test, including:
 - calculated variance, standard deviation and coefficient of variance
 - determined the weight per 1000 pure seeds from a submitted sample

There must also be evidence that the individual has conducted at least one of the following tests:

- Anguina test on annual ryegrass seed, including:
 - identified galls on ryegrass seed
 - inspected seed samples using a diaphanoscope
 - used a microscope to detect nematode gall (*Anguina* spp.)
- endophytic seed test, including:
 - prepared endophyte staining solution
 - tested seed for endophyte presence
 - tested seedlings for endophyte presence
- electrophoresis test on a seed sample, including:
 - extracted seed and prepared gel
 - centrifuged seed and gel mixes
 - interpreted stain bands and patterns.

There must also be evidence that the individual has:

- verified compliance of seed sample with documentation

- selected and correctly used personal protective equipment (PPE)
- prepared and stored working sample and supplied sample to maintain quality and condition
- selected, prepared and used testing equipment and materials to conduct tests and complied with manufacturer specifications
- selected, and prepared replicates from working samples for testing
- conducted seed tests, examined tested seed, assessed and calculated test results
- maintained accurate labelling and records at each stage of the testing process for traceability according to industry and workplace standards
- cleaned test equipment, laboratory and disposed of waste according to biosecurity and workplace procedures
- disposed of replicates and waste
- updated records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- industry and workplace operating procedures for seed tests, including:
 - Anguina test on annual ryegrass seed
 - endophytic seed test
 - electrophoresis test on a seed sample
 - tetrazolium test
 - seed vigour test
 - 1000 seed weight test
 - testing equipment, setup, calibration and operation for the different seed tests
- work health, safety and environment requirements
- seed biology and relation to seed quality, condition and seed tests
- role of the International Seed Testing Association (ISTA) and the ISTA Rules for Seed Testing
- seed sampling methods, including:
 - hand samples
 - mechanical samples
 - authorised sampler and seed certification
 - preparing statistically representative replicates by weight or number of seed for testing
- federal and state agencies overseeing seed movement in Australia and sampling and testing standards, including:
 - Australian Quarantine and Inspection Service (AQIS)
 - Organisation for Economic Co-operation and Development (OECD)
 - Association of Official Seed Certifying Agencies (AOSCA)
 - other certification agencies
- calculations and statistical analysis of seed test results

- personal protective equipment (PPE)
- assessment of seed test results and against industry standards and reporting results
- recordkeeping and documentation for traceability and reporting.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in seed testing laboratory or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - seeds of crops or pasture plants
 - use of tools and equipment to perform all tests selected in the Performance Evidence
 - use of personal protective equipment
- specifications:
 - use of sampled seed documentation
 - use of workplace policies, procedures, processes and forms for seed testing
 - use of manufacturer operating instructions for seed sampling and testing equipment
 - access to specific safety data sheets for reagents used in seed testing
 - use of workplace instructions and industry specifications for seed testing and assessment
 - access to specific seed testing and certification regulations and industry practice
- relationships:
 - supplier of seed for testing
 - supervisor(s)
- timeframes:
 - according to seed testing times specified in testing procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSDT413 Handle and store seed subject to quarantine regulations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to store and handle seeds subject to quarantine or isolation to mitigate biosecurity risk, in accordance with laboratory procedures in compliance with state and federal regulations.

The unit applies to senior seed analysts who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

Federal, state and territory legislation, regulations and certification requirements apply to this unit for biological materials subject to quarantine.

Assessment Requirements for AHCSDT413 Handle and store seed subject to quarantine regulations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has complied with state and federal regulations for handling and storing seed subject to quarantine and biosecurity regulations on at least one occasion, and has:

- handled, tested and stored seeds subject to quarantine
- maintained records and documentation of seed in compliance with state and federal quarantine and biosecurity regulations
- designed work procedures to prevent non-compliance
- reported non-compliance according to workplace and regulatory obligations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- state and federal regulations for handling and storing seeds subject to quarantine
- biosecurity regulations governing the importation and transportation of seeds in Australia
- laboratory systems, records and reporting procedures for dealing with seed subject to quarantine and biosecurity regulations
- testing methods and equipment
- relevant work health, safety and environment requirements
- statutory and legal compliance requirements for seeds.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- skills must be demonstrated in quarantine compliant laboratory or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - seeds subject to quarantine restrictions
 - access to tools, equipment and materials subject to quarantine regulations
 - access to training and mentoring materials and equipment
- specifications:
 - use of workplace policies, procedures and processes
 - access to specific legislation, regulations and codes of practice for quarantine compliant laboratories
- relationships:
 - work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSDT414 Maintain a quarantine approved laboratory

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to maintain and monitor a quarantine approved laboratory that meets federal and state government certification requirements.

The unit applies to senior seed analysts who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

Federal, state and territory legislation, regulations and certification requirements apply to this unit for biological materials subject to quarantine.

Pre-requisite Unit

Nil

Unit Sector

Seed Testing (SDT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Interpret and communicate quarantine requirements	1.1 Maintain information on quarantine and biosecurity requirements impacting laboratory operations 1.2 Distribute information on responsibilities of work team to maintain laboratory's compliance according to state and federal regulations

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Explain implications of non-compliance with regulations to personnel within laboratory
2. Ensure that work practices are compliant	2.1 Plan work practices to ensure compliance 2.2 Implement testing procedures for methods and equipment in compliance with regulations 2.3 Implement systems to ensure accuracy and/or efficiency of equipment 2.4 Coach and mentor team members compliance according quarantine and biosecurity procedures
3. Review, modify and implement laboratory procedures	3.1 Identify, rectify and report problems with compliance 3.2 Minimise potential non-compliance through on-going review of procedures and supervision of activities 3.3 Advise laboratory personnel of strategies to improve compliance 3.4 Communicate new and improved procedures to laboratory personnel
4. Investigate, rectify and report non-conformance	4.1 Investigate and manage incidents and occurrences of non-compliance 4.2 Provide training for laboratory personnel to acquire and apply competencies to meet compliance 4.3 Redesign or adjust work practices to ensure that non-compliance is not repeated 4.4 Maintain systems, records and reporting procedures according to state and federal quarantine regulations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret and comply with documented federal, state and territory quarantine regulations

Skill	Description

Assessment Requirements for AHCSDT414 Maintain a quarantine approved laboratory

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has on at least one occasion maintained a quarantine approved laboratory and has:

- monitored a quarantine approved laboratory meeting federal and state regulations and certification
- planned work processes and initiated action to rectify instances of non-compliance
- maintained records and reporting according to quarantine and biosecurity regulations
- designed and negotiated changes to work practices and procedures to comply with quarantine and biosecurity regulations
- provided information, coaching and mentoring support to laboratory work team to comply with required work practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- state and federal quarantine and biosecurity regulations for approved laboratories
- compliant laboratory systems, records and reporting procedures
- workplace procedures
- health, safety and environment requirements for approved quarantine laboratories
- statutory and legal compliance requirements
- coaching and mentoring strategies
- communication and supervision skills/techniques.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in quarantine compliant laboratory or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, equipment and materials subject to quarantine regulations
 - training and mentoring materials and equipment
- specifications:
 - workplace policies, procedures and processes
 - specific legislation, regulations and codes of practice for quarantine compliant laboratories and biosecurity
- relationships:
 - work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSHG407 Prepare shearing team wages

Modification History

Release	Comments
Release 1	This version released with Agriculture Horticulture and Conservation and Land Management Training Package 4.0.

Application

This unit of competency describes the skills and knowledge required to prepare the wages for shearing teams.

This unit applies to individuals who manage shearing teams, who take responsibility for their own work and use discretion and judgement in the selection, allocation and use of available resources.

All work must be carried out to comply with workplace procedures, legislative requirements and workplace health and safety policies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Shearing (SHG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Maintain staff records	1.1 Confirm that all employees are signed on and declaration forms are completed and signed 1.2 Collect tax file and superannuation numbers and maintain confidentially

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Arrange employment agreements for staff 1.4 Ensure number and type of sheep shorn is recorded accurately 1.5 Record total units of work for each employee relevant to basis of engagement 1.6 Maintain staff injury records
2. Calculate earnings	2.1 Obtain relevant awards and current pay rates 2.2 Follow employment contracts and agreements 2.3 Calculate gross earnings for each employee
3. Calculate deductions and net pay	3.1 Calculate taxation deductions 3.2 Produce payslips for individuals 3.3 Transfer tax to the Australian Taxation Office 3.4 Calculate and document superannuation 3.5 Transfer superannuation payment to appropriate fund
4. Pay staff	4.1 Schedule electronic transfer of funds to individuals, in accordance with the relevant award 4.2 Arrange cash advances on request

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Access and interpret legislation and regulations relevant to taxation and superannuation
Get the work done	<ul style="list-style-type: none"> Effectively navigate online banking systems

Assessment Requirements for AHCSHG407 Prepare shearing team wages

Modification History

Release	Comments
Release 1	This version released with Agriculture Horticulture and Conservation and Land Management Training Package 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared wages for three shearing team members from different employee categories, using manual or computer-based systems, and including:

- maintained staff records
- calculated earnings, deductions and net pay
- arranged electronic transfers for individual's pay
- produced individual's pay slips.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- physical and financial recording systems
- accounting system software programs
- how wages are calculated for different employment categories, such as piece work, daily, per run, per fleece
- types of records kept during shearing, including the number and types of sheep shorn, the number of bales produced, the size of the shed
- roles of a shearing team, including shearer, learner shearer, crutcher, shearing cook, shed hand, wool presser, shearing shed expert and wool classer
- additional allowances that can be claimed, such as for mess, travel, vehicle
- Commonwealth and/or state and territory awards relevant to the shearing industry
- maintenance of employment and payment records
- Australian Tax Office requirements including Goods and Services Tax, Pay As You Go withholding tax and Super Guarantee Charge
- legislative requirements for keeping records of contracts, wage payments and payment summaries
- Commonwealth or state/territory legislation relevant to hiring shearing contractors.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - information about shearing activity over a pay period
 - access to internet banking
- specifications:
 - access to relevant award for shearing operations, and ATO and superannuation requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSOL203 Assist with soil or growing media sampling and testing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assist with the sampling and testing of soil or growing media, including collecting soil or media samples, performing basic tests on soil or media samples, and completing sampling and testing activities.

The unit applies to individuals who assist with soil or growing media sampling and testing under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Soils and Media (SOL)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Collect soil or media samples for testing	1.1 Confirm with supervisor soil or growing media to be sampled 1.2 Select soil or growing media sampling tools and materials 1.3 Follow environmental and biosecurity procedures when sampling and testing soil and growing media, to minimise impact

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Select, fit and use personal protective equipment applicable to the task 1.5 Take samples as instructed 1.6 Assist with labelling and recording samples as required
2. Perform basic tests on soil or media sample	2.1 Recognise basic features of soil or growing media 2.2 Assist with testing and inspecting physical properties of samples 2.3 Assist with testing chemical properties of samples 2.4 Relate soil or growing media test results to suitability for plant requirements
3. Complete sampling and testing activities	3.1 Remove and dispose of waste material 3.2 Clean and return tools and materials to required location 3.3 Identify and report unserviceable tools and materials according to workplace procedures 3.4 Record soil or growing media test results according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about soil and growing media sampling and testing
Writing	<ul style="list-style-type: none"> Use clear language and accurate industry terminology to prepare and record soil and media test results
Oral communication	<ul style="list-style-type: none"> Use clear language to confirm soil and media to be sampled and to report tool and materials unserviceability

Assessment Requirements for AHCSOL203 Assist with soil or growing media sampling and testing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has sampled and tested soil or growing media on at least two occasions, and has:

- selected and used soil and growing media sampling tools and material
- minimised environmental impacts associated with testing soil and media
- followed industry and workplace biosecurity procedures
- applied workplace health and safety requirements
- collected and described soil and media samples
- performed basic descriptive tests for soil or media properties
- assisted with the use of simple soil testing equipment for testing pH and salinity
- removed and disposed of waste material
- recorded soil and media test results and reported unserviceable tools and materials.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental impacts associated with testing soil or growing media
- industry and workplace biosecurity procedures applicable to soil and growing media testing
- workplace requirements applicable to health and safety in the workplace for testing soil or growing media
- principles and practices for recognising soils or growing media properties, including:
 - basic soil or media tests
 - basic soil or media chemical properties
 - basic soil or media physical properties
 - soil or media plant relationship

- soil or media sampling techniques.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - soil and growing media sampling and testing tools and materials
 - personal protective equipment applicable to soil and growing media sampling and testing
- specifications:
 - workplace requirements applicable to health and safety in the workplace, and sampling and testing soil and growing media
 - industry and workplace biosecurity procedures applicable to sampling and testing soil and growing media
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSOL302 Develop and apply knowledge of fertiliser and soil ameliorant products

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to develop, and apply knowledge through the provision of advice to others, of fertiliser and soil ameliorant products, including storage and handling.

The unit applies to individuals who develop and apply knowledge of fertiliser and soil ameliorant products under broad direction and take responsibility for their own work.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and environment and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Soils and Media (SOL)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop and provide information on fertiliser and soil ameliorant	1.1 Source information about new products and developments 1.2 Provide information about fertiliser and soil ameliorant product to

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed and applied fertiliser and soil ameliorant product knowledge on at least one occasion and has:

- identified fertiliser and soil ameliorant products using information about their characteristics, labelling, handling and storage
- provided information to customers about fertiliser and soil ameliorant products
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- stored and handled fertiliser and soil ameliorant products according to workplace procedures
- recognised and reported workplace health and safety hazards and used safe work practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- characteristics and key label components, including product analysis, impurities and warnings of the range of fertiliser and soil ameliorants sold or handled in the workplace
- key environmental, workplace health and safety and food safety risks associated with the use, spreading, storage, handling and transport of fertilisers and soil ameliorants
- workplace requirements applicable to health and safety in the workplace for handling, storage and application of fertiliser and soil ameliorants, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - fertiliser and soil ameliorant products
 - PPE applicable to handling, storage and application of fertiliser and soil ameliorants
- specifications:
 - workplace health and safety legislation, regulations, codes of practice and workplace procedures relevant to handling, storage and application of fertiliser and soil ameliorants
 - workplace documents, including workplace environmental procedures, processes, instructions and job specifications relevant to handling, storage and application of fertiliser and soil ameliorants.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCSOL304 Implement soil improvements for garden and turf areas

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has collected soil samples, including:

- determined the purpose for collecting and testing soil samples
- collected representative soil samples for testing and packaged and labelled them according to workplace and laboratory requirements
- collected samples of at least three different soil types, and:
 - conducted tests safely to determine soil physical and chemical properties according to industry standards
 - assessed test results and prepared soil improvement plan to meet the requirements and conditions required for the plant species to be cultivated.

There must also be evidence that, on at least one occasion, the individual has, according to workplace procedures:

- selected tools, materials and equipment required for implementing soil improvement plan
- calibrated equipment prior to application of soil improvement materials
- adjusted physical and chemical properties according to cultural requirements of the plants to be grown
- maintained records and reported soil test outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- physical properties of soils and media and methods for testing, including:
 - colour
 - organic matter
 - texture tests using field and sieve analysis techniques

- structure
- air filled porosity
- moisture holding capacity
- soil bulk density
- infiltration rate and drainage properties, including hydraulic conductivity
- perched water tables
- wettability
- chemical properties of soils and media, and methods for testing, including:
 - pH using colorimetric and pH meters
 - salinity, total dissolved salts and electrical conductivity
 - types of nutrient tests and their purpose
- soil sampling, collecting and testing procedures, including:
 - tools and equipment required
 - procedures for testing
 - procedures for sampling, securing, packaging and labelling
- soil and media improvement strategies for physical and chemical characteristics, including:
 - products and processes for improving soil and media physical condition
 - soil ameliorants and improvement techniques
 - bio-stimulants
 - organic matter and effect on soil and media
 - water holding capacity and readily available water, including wetting agents and penetrants
 - soil biological organisms and their impact
 - effect of pH, salinity and fertilisers on availability of nutrients
 - soil profile both natural and constructed
 - Australian standards AS4454:2012 Composts, soil conditioners and mulches, and AS4419:2018 Soils for landscaping and garden use
- assessment and interpretation of soil test results for physical and chemical properties and their relationship to cultivated plants relevant to workplace
- basic mathematics for calculating rates of application of soil additives, water holding capacity, air filled porosity and measuring and weighing materials to perform accurate soil tests
- using test results to determine soil improvements
- safe field and laboratory practices when collecting and testing soils and media
- record keeping and reporting procedures for soil collecting, testing and planning procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
 - at least three separate soil sites or media for collecting and testing
- resources, equipment and materials:
 - soil testing equipment, including pH meter and pH colour test kit, conductivity meter, soil colour charts, NPK colour test kit
 - equipment for storing and handling samples
 - accurate measuring equipment for soil testing
 - personal protection and other safety equipment required for safe handling and testing of soils
- specifications:
 - workplace procedures and instructions related to soil testing and soil improvement
 - industry standards for testing and interpreting soil test results.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSOL305 Prepare growing media

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to prepare growing media for various plants, including preparing for work, confirming specifications for growing media and preparing and storing the media.

The unit applies to individuals who prepare growing media under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Soils and media (SOL)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to work	1.1 Clarify work instructions with supervisor 1.2 Prepare required tools and equipment for the task 1.3 Recognise workplace hazards and report safety concerns 1.4 Select, fit, use and maintain personal protective equipment according to the task and workplace safety requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Confirm specifications of growing media	2.1 Investigate and select various media components for specific plant requirements according to growing media specifications 2.2 Determine plant nutrient requirements for growing period 2.3 Determine growing media by plant requirements and accepted industry practice 2.4 Investigate sources of nutrients and their suitability for plant requirements 2.5 Analyse growing media for chemical, physical and biological characteristics to confirm suitability for plants 2.6 Determine and applied sterilisation methods for the growing media
3. Prepare and store growing media	3.1 Establish growing media composition according to specifications 3.2 Maintain mixing equipment in a clean and effective condition 3.3 Store components in a safe and hygienic manner 3.4 Weigh and mix components into the growing media 3.5 Dispose of waste in an environmentally safe manner 3.6 Store growing media in a safe and hygienic manner 3.7 Record growing media preparation activities according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations and products
Writing	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to prepare growing media preparation activity records
Oral Communication	<ul style="list-style-type: none"> Use clear language to confirm work instructions

Skill	Description
Numeracy	<ul style="list-style-type: none"> Access growing media specification data Calculate and weigh growing media components
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility
Get the work done	<ul style="list-style-type: none"> Take responsibility for routine decisions about confirming specifications, preparing and storing growing media, and reflect on outcomes to identify effectiveness of decisions

Assessment Requirements for AHCSOL305 Prepare growing media

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared growing media on at least two occasions and has:

- applied workplace health and safety requirements
- collected and analysed data
- confirmed specifications of growing media
- analysed growing media chemical, physical and biological characteristics
- disposed of waste in an environmentally safe manner
- stored growing media.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for preparing growing media
- principles and practices for preparing growing media
- alternative pre-prepared growing media options, including coconut fibre bags
- alternative methods of incorporating ingredients into a growing media
- plant nutrition requirements for growing period
- ingredients used in the preparation of growing media
- physical, chemical and biological characteristics required of the media
- properties of the various ingredients used in the preparation of the growing media
- requirements of a growing media
- hygiene in the preparation and storage of the media
- volume and weight determination
- environmentally safe disposal of waste.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to growing media preparation
 - growing media tools and equipment
 - growing media ingredients
 - mixing and weighing equipment
 - personal protective equipment applicable to growing media preparation
- specifications:
 - growing media specifications
 - work instructions and workplace procedures for preparing growing media
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or current standards.

AHCSOL405 Provide information on fertilisers and soil ameliorants

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to gather and provide information on fertilisers and soil ameliorants.

The unit applies to individuals who apply specialist skills and knowledge to provide information on fertilisers, soil ameliorants and related environmental information. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCSOL405 Provide information on fertilisers and soil ameliorants

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has provided information on fertilisers and soil ameliorants on at least three occasions, and has:

- considered the following when providing information:
 - applicable workplace health and safety procedures
 - manufacturer requirements
 - chemical safety and food safety legislation and regulations
 - biosecurity and environmental guidelines for using
 - transportation, storage and handling of fertiliser and soil ameliorants
- explained the use of nutrient management tools
- recorded details of information provided to the customer.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- crop nutrient requirements, including both macro and micro nutrients
- effect of soil ameliorants in dispersion and adjustment for acidity or alkalinity (pH)
- workplace health and safety procedures, manufacturer requirements, chemical safety and food safety legislation and regulations, biosecurity and environmental guidelines for using, transportation, storage and handling of fertiliser and soil ameliorants
- packaging and dispatch procedures for samples
- physical, chemical and biological properties related to a healthy soil and environment
- sampling tools and methods, including:
 - soil, plant tissue and water tests
 - yield monitoring

- electrical conductivity survey
- workplace health and safety and environmental procedures in operating sampling equipment
- impact of climate on soil productivity
- environmental impacts, including:
 - soil structural decline
 - fertility decline
 - acidification and salinity
 - erosion
 - loss of organic matter
 - water quality
 - fertiliser and soil ameliorant impurities
 - greenhouse gas emissions
- major nutrient management risks of leach, run-off, load, blow, and mine, and how these impact on the environment
- nutrient management advisory tools and processes used by advisers in making a crop nutrition recommendation
- fertiliser and soil ameliorant application methods, including timing and frequency of fertiliser and soil ameliorant application to minimise losses
- industry production regimes and fertiliser practices.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - fertilisers and soil ameliorants
 - soil, plant tissue and water sampling tools
 - nutrient management tools
- specifications:
 - workplace health and safety procedures, manufacturer requirements, chemical safety and food safety legislation and regulations, biosecurity and environmental guidelines applicable to fertiliser and soil ameliorant use, transportation, storage and handling
- relationships:
 - customers, specialist adviser.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCSOL406 Sample soils and interpret results

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has sampled soils and interpreted results on at least two occasions, and has:

- identified and collected soil samples using appropriate sampling methodology
- applied testing agency requirements applicable to sampling soils
- applied workplace health and safety requirements applicable to sampling soils
- prepared soil samples for dispatch to soil analysis laboratory
- received, interpreted and compared published data and records with analytical results
- filed and recorded results according to workplace procedures
- provided soil improvement recommendations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- testing agency requirements applicable to sampling soils
- workplace health and safety requirements applicable to sampling soils
- principles and practices of soil sampling, including:
 - environmental implications associated with soil sampling activities and the application of analytical results
 - practical understanding of the range of sample collection, testing and analytical methods that may be used to perform soil samples, and the association of sampling methods with site conditions, environmental implications and intended horticultural use of the sampled site
 - soil ameliorants and soil improvement techniques for addressing site limitations identified through sampling
 - the capacity of soils to provide water to plants

- the importance of organic matter in soil in relation to the intended horticultural use
- the physical and chemical properties of soils in relation to their ability to support specified horticultural production
- workplace filing and recording procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - soil sampling and testing tools, equipment and machinery
 - safety and personal protective equipment applicable to soil sampling
 - principles and practices of soil sampling
- specifications:
 - testing agency requirements applicable to sampling soils
 - workplace health and safety requirements applicable to sampling soils
 - workplace filing and recording procedures
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCSOL407 Develop a soil use map for a property

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed a soil use map for a property on at least one occasion, and has:

- confirmed soil samples were collected according to testing agency requirements
- determined soil characteristics and parameters
- interpreted and compared published data and records with analytic results
- determined areas of cultural significance and habitats of biodiversity on the property
- interpreted soil analysis test results
- determined RAW values for irrigation sites, and indexed on property map
- plotted topography, soil survey data and areas of concern on property map.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- testing agency requirements applicable to sampling soils
- principles and practices for developing soil use maps, including:
 - environmental impacts of irrigation, using water from any ground or underground source
 - methods and techniques of soil sampling
 - nutrient availability in soils
 - physical and chemical properties of soils
 - readily available water
 - soil analyses results
 - soil quality factors
 - soil types and profiles

- soil water retention testing techniques
- water table and salinity.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - soil sampling test results
 - information on areas of cultural significance and habitats of biodiversity on the property
 - principles and practices for developing soil use maps
- specifications:
 - testing agency requirements applicable to soil sampling
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSOL505 Monitor and manage soils for production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to research soil information, apply soil testing information to production or management plan, develop and monitor soil amendment practices, review and document soil management plan.

The unit applies to individuals who apply specialised skills and knowledge to the monitoring and management of soils for production, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCSOL505 Monitor and manage soils for production

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has monitored and managed soils for at least one product project and has:

- interpreted soil analytical data for the purposes of developing management or production plans
- identified particular soil properties that are relevant to the workplace and researched for further enquiry
- applied information from soil testing to production or management plan
- documented the soil management plan or production plan
- developed soil improvement programs
- reviewed ongoing soil monitoring programs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for managing soils for production, including:
 - basic soil field tests
 - interpreting laboratory results
 - soil chemical properties
 - soil conservation strategies and sustainable production techniques
 - soil physical properties
 - soil sampling techniques
 - soil types
 - strategies to ameliorate soil properties.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - published data and records
 - production history
 - soil sampling equipment
 - soil test results
- specifications:
 - testing agency requirements
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSOL506 Manage erosion and sediment control

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify areas with erosion and sediment problems, and develop, implement, manage and evaluate an erosion and sediment control plan.

The unit applies to individuals who apply specialist skills and knowledge to the management of erosion and sediment control, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCSOL506 Manage erosion and sediment control

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed erosion and sediment control on at least one occasion, and has:

- applied environmental and biosecurity practices and workplace procedures applicable to managing erosion and sediment control
- identified appropriate erosion and sediment control strategy methods
- developed and documented erosion and sediment control plan
- communicated and collaborated effectively with stakeholders for planning and conflict resolution
- prepared plans and reports on erosion and sediment control plans
- monitored, evaluated and analysed effectiveness of erosion and sediment control plan outcomes
- organised required resources and key stakeholders
- applied workplace health and safety requirements applicable to managing erosion and sediment control.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of erosion and sediment control management, including:
 - environment and sustainability as a whole farm system approach
 - environmental issues with regard to water catchment, ecosystems, habitats and waste minimisation
 - erosion control and design principles
 - planning processes for erosion and sediment control

- project and risk management techniques and tools for the management of erosion and sediment control
- soils and soil formation
- earthmoving principles and practices
- subsurface and surface drainage principles and systems
- environmental and biosecurity practices and workplace procedures applicable to managing erosion and sediment control, including licences and permits to implement erosion and sediment control activities
- workplace health and safety requirements applicable to managing erosion and sediment control.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - regulatory planning authority and environmental legislation relevant to erosion and sediment control planning
 - principles and practices of erosion and sediment control management
- specifications:
 - workplace health and safety requirements applicable to managing erosion and sediment control
 - environmental and biosecurity practices and workplace procedures applicable to managing erosion and sediment control
- relationships:
 - landowner, personnel, stakeholders, developer, relevant government and planning authorities, and consent authority
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSOL507 Develop and manage a plan to reclaim land affected by salinity

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to review the saline area, manage water use and movement, protect and manage natural areas, implement a strategy to reduce salinity, and document a long-term plan to reclaim land affected by salinity.

The unit applies to individuals who apply specialist skills and knowledge to the development and management of a plan to reclaim land affected by salinity, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCSOL507 Develop and manage a plan to reclaim land affected by salinity

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed and managed a plan to reclaim land affected by salinity on at least one occasion, and has:

- assessed land forms and soil types
- determined categories of saline land
- assessed the level of degradation and damage through salinity
- identified salinity indicator plant species
- managed the crop and animal selected for the farm to utilise the saline area
- calculated the costs of the project
- calculated benefits of salinity reduction to the property
- taken soil and water samples for testing
- communicated with adjacent property landowners, relevant authorities and community groups
- researched the latest innovations and salinity management techniques
- documented a long-term plan to reclaim land affected by salinity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for reclaiming land affected by salinity, including:
 - salt tolerant plant and pasture species, and the management of each
 - range of methods for reclaiming saline land
 - strategies to profit from the saline area
 - value of using natural species and natural systems to improve farm production
 - benefits of biodiversity on plant production and the animal enterprise
 - strategic and responsible use of susceptible land

- consequences of poor management or removal of vegetation on the land.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - principles and practices for reclaiming land affected by salinity
 - fencing tools and equipment
 - water sampling and testing tools and equipment
 - safety and personal protective equipment applicable to reclaiming land affected by salinity
 - industry publications and internet sources of information relevant to researching the latest innovations and salinity management techniques
- relationships:
 - adjacent property landowners, relevant authorities and community groups
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCSOL508 Manage soils to enhance sustainability

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed soils to enhance sustainability on at least one occasion, and has:

- researched information on soils
- assessed soil type, texture and structure in the paddock
- diagnosed areas with soil problems or potential soil problems
- developed, implemented, monitored and evaluated a plan to achieve healthy soils through application of soil science
- diagnosed and interpreted soil sample test results, and determined priorities for improving soil health
- calculated amounts of nutrients required, and prepared a fertiliser program that reflects needs and priorities
- considered and selected alternatives, including organic products and methods for improving soil health
- recorded and filed soil management activities according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- physical, chemical and biological properties of soils
- extent and nature of soil microorganisms
- soil biota types, role in cycling nutrients and improving soil structure
- natural cycling of nutrients, including:
 - carbon
 - nitrogen
 - phosphorous

- the role of soil biota
- factors affecting soil biota, including:
 - moisture
 - temperature
 - aeration
 - nutrient supply
 - pH
 - organic matter
- basic chemistry concepts related to interpreting soil test analysis, including:
 - symbols, elements and compounds
 - valency, anions, cations
 - reactions
 - EC (electrical conductivity)
 - CEC (Cation Exchange Capacity)
 - organic matter
 - pH and its importance in the availability of nutrients
 - role of macronutrients and micronutrients in plant nutrition
 - the concept of limiting factors for production
- basic biology, including:
 - chemical basis of plants and animals
 - basic plant structure and function
- plant nutrition, including:
 - water
 - proteins
 - sugar
 - nitrate
 - lignin content
- potential problems with the use of conventional chemical fertilisers, including:
 - acidification
 - contamination of soil and associated water contamination
 - harm to soil biota
- alternative methods to improve soil fertility, including:
 - products
 - aeration and mulching machinery
- workplace recording and filling procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- specifications:
 - workplace recording and filling procedures
- relationships:
 - staff and stakeholders
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSP0309 Process planting seed

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to operate seed processing machinery and equipment to clean, grade, and prepare grains and seeds for planting or further pre-planting treatments.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Seed Processing (SPO)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Select and prepare for processing of planting seeds and grains	1.1 Determine seed type, location and volume for processing from work plan and storage schedule 1.2 Confirm seed processing requirements and specifications from work plan 1.3 Confirm transfer and storage requirements of pre and post seed

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	processing according to work plan and seed storage schedule
2. Select and prepare seed processing machinery and equipment	2.1 Select, check and use personal protective equipment (PPE) according to workplace health and safety procedures 2.2 Select seed processing machinery and equipment according to work plan 2.3 Prepare seed processing machinery and equipment according to work plan 2.4 Conduct pre-operational checks of machine according to manufacturer specifications, workplace requirements and biosecurity procedures 2.5 Identify work health and safety hazards, assess risk and implement controls 2.6 Calibrate and adjust settings of machinery and equipment to comply with seed processing specifications 2.7 Perform a sample seed run to confirm settings and seed processing performance against specifications according to workplace procedures
3. Operate seed processing machinery and equipment	3.1 Transfer seeds for processing to storage bins and hoppers according to work plan, operator requirements and seed storage schedule 3.2 Use seed processing machinery and equipment safely according to manufacturer operating procedures 3.3 Monitor the performance and efficiency of machinery operation and make adjustments to maintain optimum performance and safety 3.4 Sample and monitor processed seed and make adjustments to machinery to maintain specified quality standards 3.5 Monitor input and output seed storage capacities and implement mitigation procedures to maintain safe and efficient seed storage levels according to workplace procedures and storage schedule
4. Complete seed processing machinery and equipment operation	4.1 Implement seed processing machinery shut-down procedures according to manufacturer specifications and workplace requirements 4.2 Implement operator level maintenance procedures for seed treatment machinery and equipment according to workplace and manufacturer specifications 4.3 Identify and report faults and performance problems of seed processing machinery and equipment according to workplace

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	procedures 4.4 Clean, secure and store seed processing machinery and equipment according to biosecurity requirements and to prevent cross contamination
5. Maintain records and reporting for processed seed	5.1 Update records of processed seeds and grains according to workplace procedures 5.2 Update records of seed storage according to storage schedule and workplace procedures 5.3 Identify and report seed processing and machinery irregularities according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret work plans, seed processing quality specifications, seed processing equipment manufacturer specifications and operator instruction
Oral Communication	<ul style="list-style-type: none"> Use industry language and concepts, and tone and pace appropriate for reporting to supervisor

Assessment Requirements for AHCSPO309 Process planting seed

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has on at least one occasion processed planting seed or grains according to a defined quality specification and must include at least 3 of the following processes:

- separated seed from impurities and contaminants
- graded seed by size
- graded seed by weight/density
- graded seed by deformity
- graded seed by colour
- modified seed

There must also be evidence that the individual has:

- identified seed, location and volume requiring processing
- coordinated access and storage of seeds with seed storage schedule
- selected, set up and prepared seed processing machinery and equipment
- fitted and used PPE
- operated seed processing machinery safely within manufacturer specifications and identified irregularities
- complied with biosecurity guidelines to prevent cross contamination
- monitored seed processing and implemented mitigation procedures to maintain quality
- maintained safe and efficient seed storage during processing
- shut down, cleaned and maintained seed processing equipment
- maintained records and reporting according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic understanding of seed biology in relation to viability and seed cleaning processes

- principles and practices for operating seed processing machinery, including:
 - safety equipment and safe operation of machinery
 - operator servicing and maintenance
 - calibration and settings for quality outcomes of different seed and grain types
- the basic principles of seed processing equipment, their operation and effects on seeds, including:
 - screen cleaners
 - indent cylinder
 - gravity tables
 - airlegs and winnowers
 - seed modification machinery for de-awners, clippers and scarifiers
 - optical/colour sorters
 - floatation tanks
 - magnetic rollers
 - dryers
 - spirals
 - velvet rollers
- workplace health and safety in the seed treatment process, including personal protective equipment (PPE)
- basics of programmable logic controller/treatment control systems and electrical process for seed processing equipment
- operation and maintenance of seed processing machinery
- seed storage requirements and scheduling during seed processing
- biosecurity and cross contamination during seed processing
- seed and grain quality standards affecting seed processing, equipment setup and monitoring
- record keeping and reporting procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a seed processing plant, a farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - seed processing machinery and equipment
 - tools and equipment for calibration and adjustments
 - use of specific items of personal protective equipment
- specifications:
 - workplace procedures

- manufacturer operating instructions for equipment
- workplace instructions and specifications
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSP0310 Treat planting seed

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to apply a range of treatments to planting seed using specialised seed treatment machinery and equipment.

The unit applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Seed Processing (SPO)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Select and prepare for treatment of planting seeds and grains	1.1 Determine seed type, location and volume for treatment according to work plan and storage schedule 1.2 Confirm seed treatment requirements and specifications from work plan 1.3 Confirm seed is in a suitable pre-treatment condition according to specifications

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Confirm transfer and storage requirements of pre and post seed treatment according to work plan and seed storage schedule</p> <p>1.5 Select and prepare seed treatment materials and consumables according to workplace procedures and treatment specifications</p>
<p>2. Select and prepare seed treatment machinery and equipment for use</p>	<p>2.1 Identify and ready seed processing machinery and equipment according to work plan</p> <p>2.2 Conduct pre-operational checks on machine according to manufacturer specifications, workplace requirements and biosecurity procedures</p> <p>2.3 Identify work health and safety hazards, assess risk and implement controls</p> <p>2.4 Calibrate and adjust settings of machinery and equipment to comply with seed processing specifications</p> <p>2.5 Charge machinery with treatments according to workplace procedures and manufacturer instructions</p> <p>2.6 Perform a sample seed treatment run to confirm settings and seed treatment performance against specifications according to workplace procedures</p>
<p>3. Operate seed treatment machinery and equipment</p>	<p>3.1 Select, check and use personal protective equipment (PPE) according to workplace health and safety procedures</p> <p>3.2 Transfer seeds for treatment to storage bins and hoppers according to work plan, operator requirements and seed storage schedule</p> <p>3.3 Commence usage of seed treatment machinery and equipment safely according to manufacturer operating procedures</p> <p>3.4 Monitor the performance and efficiency of machinery operation and make adjustments to maintain optimum treatment performance and safety</p> <p>3.5 Sample and monitor treated seed and make adjustments to machinery to maintain specified quality standards</p> <p>3.6 Monitor input and output seed storage capacities and implement mitigation procedures to maintain safe and efficient seed storage levels</p>
<p>4. Complete and report on seed treatment machinery and</p>	<p>4.1 Implement seed treatment machinery shut-down procedures to manufacturer specifications and workplace requirements</p> <p>4.2 Implement operator level maintenance procedures for seed</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
equipment operation	<p>treatment machinery and equipment according to workplace and manufacturer requirements</p> <p>4.3 Identify and report faults and performance problems of seed treatment machinery and equipment according to workplace procedures</p> <p>4.4 Clean, secure and store seed treatment machinery and equipment according to workplace and environmental procedures</p> <p>4.5 Retrieve and store unused treatment materials and consumables and store/dispose according to workplace and environmental procedures</p>
5. Maintain records and reporting for treated seed	<p>5.1 Update records of treated seeds and grains according to workplace procedures</p> <p>5.2 Update records of treated seed storage according to storage schedule and workplace procedures</p> <p>5.3 Identify and report seed treatment and machinery irregularities according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret work plans, manufacturer specifications and operator instruction for using a screen cleaner for seed
Oral communication	<ul style="list-style-type: none"> Use industry language and concepts, and tone and pace appropriate for reporting to supervisor
Numeracy	<ul style="list-style-type: none"> Calculate volumes and ratios relevant to the preparation of treatments for seed and the calibration of equipment for application of treatments

Assessment Requirements for AHCSPO310 Treat planting seed

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has on at least one occasion treated seed using seed treatment machinery and equipment and has:

- prepared the seed resources and machinery for treatment
- set up and prepared seed treatment machinery
- calculated, calibrated and measured dose rates
- formulated chemical mix to achieve treatment goals according to specifications
- maintained safe and efficient seed storage during processing
- fitted and used PPE
- operated seed treatment machinery and equipment safely, efficiently and according to manufacturer specifications
- cleaned and stored machinery, equipment according to workplace, and environmental procedures
- maintained and reported seed treatment operations according to workplace procedures
- updated records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for operating seed treatment machinery, including:
 - basics of programmable logic controller/treatment control systems and electrical process
 - drying, scalping and aspiration of treated seed
 - expectations and limitations of different types of seed coating machines
 - interaction of biological components and their effect on other chemicals, powders, polymers and heat
 - use and differences in biological components in seed coatings

- types of seed treatment machinery and equipment
- seed treatments their purpose and application, including:
 - chemical types and classes
 - difference between coating and pelleting which includes <5% weight gain film coating (insecticide/fungicide) or >5% weight gain is pelleting
 - disposal of waste chemical
 - hazards of chemicals
 - labelling requirements associated with coated seed
 - methods of applying chemical and basic recipe formula
 - methods of applying powders
- workplace health and safety considerations in the seed treatment process, including personal protective equipment (PPE)
- rules and regulations for storage, transportation and bunding.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a seed processing plant, a farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - seed treatment machinery
 - seed treatment consumables, materials and chemicals
 - tools and equipment for calibration and adjustments
 - use of personal protective equipment
- specifications:
 - workplace procedures
 - manufacturer operating instructions for equipment
 - workplace instructions and specifications
 - safety data sheets (SDS)
- relationships:
 - supervisor

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCSP0311 Handle, package and store commercial quantities of seed

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has on at least one occasion handled, packaged and stored commercial quantities of seed and has:

- packaged seed which must include:
 - prepared packaging equipment
 - prepared packaging
 - operated packaging and labelling machinery
 - operated label printers and label and apply stickers and labels
 - operated industrial sewing machines
 - sealed seed packages
 - labelled and stencilled seed containers
- handled packed seed which must include:
 - moved and stored packaged seed
 - operated a pallet wrapper to shrink wrap palletised seed
 - operated bag and pallet transportation systems
 - operated bulk seed transportation equipment
 - operated palletising equipment
- performed basic machinery maintenance
- selected, used and maintained personal protective equipment (PPE)
- identified work health and safety hazards, assess risks and implemented controls
- moved and stored and retrieved seed
- set up and prepare machinery for use.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for handling commercial quantities of seed, including:
 - types of packaging
 - seed packaging methods and equipment and
 - methods for sealing bags
 - regulations and legislation for labelling of packaged seed
 - chemical warnings and seed details required on packages
 - labelling requirements and equipment
- bulk seed storage and planning storage of raw and packaged materials, including:
 - controlled environment
 - pest control and contamination
 - segregation of seed types and grades
- types of machinery, operation and safety, including:
 - basic equipment preparation and maintenance
 - packaged product transport and storage
 - relevant manufacturer specifications
- workplace health and safety policies and procedures, including:
 - confined space and working at heights
 - handling of chemically treated seed
 - manual handling techniques
 - implications of packaging operations on the natural environment and risk mitigation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a seed processing plant, a farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - seed packaging machinery including palletiser
 - seed to package
 - seed labelling and packaging consumables
 - tools and equipment for adjustments
 - personal protective equipment (PPE)
- specifications:
 - workplace procedures
 - manufacturer operating instructions for equipment

- workplace instructions and specifications
- relationships:
 - supervisor(s).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCSP0312 Sample seed before and after processing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to sample seed on arrival at a processing plant and following processing for quality and certification purposes.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

Seed to be processed for Certification must be sampled by Authorised Sampler in accordance with International, Federal and State seed certification regulations.

Pre-requisite Unit

Nil

Unit Sector

Seed Processing (SPO)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Sample seed before cleaning or processing	1.1 Prepare the seed lot for sampling according to job requirements and relevant federal and state agencies overseeing seed movement and sampling standards 1.2 Follow workplace health and safety standards, including fitting and using personal protective equipment (PPE) 1.3 Select sampling equipment according to type of seed and job

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	requirements 1.4 Inspect samples visually for contaminants and biosecurity risk 1.5 Record or report results of sampling 1.6 Direct seed load for storage according to workplace procedures 1.7 Label, record and store seed samples
2. Sample seed after processing	2.1 Prepare the seed lot for sampling according to job requirements 2.2 Select sampling equipment according to type of seed and job requirements 2.3 Take samples according to specified sampling techniques 2.4 Batch and label samples according to industry standards and workplace procedures 2.5 Package samples with accompanying labelling and forward for testing according to workplace and laboratory procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCSP0312 Sample seed before and after processing

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has sampled seed using industry and workplace sampling methods on at least one occasion for the following situations:

- graded and/or treated seed
- delivery truck on arrival at a processing plant/farm
- bulk containers and/or sacks

In doing so, there must be evidence that the individual has:

- completed sampling documentation including packaged and labelled seed samples and prepared samples for despatch
- recognised common weed seeds and other seed contaminants in sample
- recorded workplace information for seed samples
- selected sampling equipment for a representative sample according to workplace procedures and certification authority
- collected seed samples for testing by other agencies according to their specifications and procedures
- completed record and labels accurately according to specifications
- used tools for sampling and prepared a sample for despatch
- followed workplace health and safety standards, including fitted and used personal protective equipment (PPE).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of seed sampling, including:
 - purpose and correct methods of sampling
 - workplace records and other documentation

- seed handling and the importance of seed moisture content in seed samples
- recognised seed/grain types, including contaminating seed and biosecurity threats
- seed sampling protocols required by farm and/or agencies
- federal and state agencies overseeing seed movement in Australia and sampling standards, including:
 - federal and state quarantine and biosecurity regulators
 - Organisation for Economic Co-operation and Development (OECD)
 - Association of Official Seed Certifying Agencies (AOSCA)
 - other certification agencies
- workplace health and safety when sampling seed, including:
 - personal protective equipment used for sampling treated seed
 - working in confined spaces
 - safety barriers
 - working at heights.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a seed processing plant, a farm or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - bulk unprocessed seed
 - bulk processed seed
 - seed sampling equipment
 - seed record keeping and labelling resources
 - personal protective equipment
- specifications:
 - seed sampling procedures and standards
 - manufacturer operating instructions for equipment
 - workplace instructions and specifications
- relationships:
 - supervisor(s).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTHH401 Develop a therapeutic horticulture design brief

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to develop a therapeutic horticulture (TH) design brief. It includes undertaking research, identifying client requirements, determining the **therapeutic horticulture benefits of plant species**, potential site and materials, and documenting a design brief.

The unit applies to individuals who apply specialist skills and knowledge to develop a therapeutic horticulture design brief. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCTHH401 Develop a therapeutic horticulture design brief

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed a therapeutic horticulture (TH) design brief on at least one occasion, and has:

- researched, interpreted and applied information relevant to TH principles and practices
- consulted with clients
- conducted risk assessment
- interpreted and applied local council, legislative and regulatory requirements relevant to TH design
- assessed site
- documented and presented TH design brief.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- local council, legislative and regulatory requirements relevant to TH design
- principles and practices of TH, including:
 - sources of information and resources relevant to TH principles and practices
 - health and wellbeing benefits of TH
 - TH activities relevant to individual and stakeholder groups
 - communication strategies to promote TH
 - interpreting client project requirements
 - client consultation strategies
 - risk assessment
 - site assessment techniques
 - project timelines, scope and reports.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - site plans, client brief
 - software and hardware to source and document information
- specifications:
 - local council, legislative and regulatory requirements applicable to TH design
- relationships:
 - clients
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF102 Support turf work

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to assist with turf maintenance and growing activities to industry standards and deadlines for the green keeping and turf production industry.

The unit applies to individuals who maintain turf under direct supervision in most situations and exercise limited autonomy within established and well-known parameters. They identify and seek help with simple problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, supported others in turf work according to workplace procedures, including:

- confirmed instructions and prepared materials, tools and equipment ready for turf work
- used tools and equipment and assisted with turf work according to supervisor instructions
- handled materials and equipment safely while completing turf activities
- cleaned up and stored equipment on completion of turf work
- disposed of waste materials according to workplace procedures
- reported work outcomes to their supervisor.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- safe operation and storage of turf machinery and equipment, including:
 - cylinder, rotary and electrical mowers and mowing patterns
 - mower settings for required turf surface
 - cultivation hand tools, including rakes and spades
 - whipper snippers
 - lawn edgers
 - wheelbarrow
 - level lawn and screed
 - powered blowers
 - self-propelled mowers
 - walk-behind mowers and rollers
 - marking out equipment, including string lines, tape measures, pegs and frames
- safe work practices required for turf work sites, including:

- personal protection
- machine operator safety
- materials handling
- hazard identification and reporting
- turf and facility maintenance requirements and practices, including:
 - mowing
- enterprise procedures for disposing of turf waste, including:
 - methods of disposal
 - impact of waste disposal on the environment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports turf facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - basic machinery including cylinder mowers, rotary mowers and rotary hoe
 - hand tools and equipment for turf cultivation
 - personal protective equipment
- specifications:
 - workplace procedures and instructions for turf work
- relationships:
 - team members and supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF205 Assist in the preparation of turf surfaces for play

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to prepare sports turf surfaces for play.

The unit applies to individuals who prepare sports turf surfaces for play and undertake defined routine activities under supervision. They exercise limited autonomy within established and well-known parameters, providing solutions to a limited range of predictable problems.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Turf (TRF)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare the site for sports turf preparation activities	1.1 Confirm sports turf set-up plan and work activity with supervisor 1.2 Identify workplace health, safety and environmental hazards, and assess risks and implement controls 1.3 Check the site condition and report irregularities to supervisor
2. Collect equipment required for sports turf	2.1 Select, ensure serviceability of, fit and use personal protective

Assessment Requirements for AHCTRF205 Assist in the preparation of turf surfaces for play

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared turf surfaces for play on at least one of the following types of sports turf surface:

- a golf course
- a lawn bowling green
- a cricket ground
- a sporting field
- a horse race track.

There must also be evidence that the individual has:

- identified safety hazards and risks and implemented controls to ensure personal and users' safety when performing work
- selected, checked, adjusted, transported and operated equipment on the turf site safely
- assessed turf condition and confirmed preparation requirements against set-up plan, and reported changed conditions to supervisor
- prepared a consistent and uniform sports turf playing surface according to the rules and regulations of the game
- collected and disposed of waste
- selected, checked and used marking-out equipment, materials and procedures to accurately lay out a sports turf play surface
- reported work outcomes, faults and irregularities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of turf preparation for play, including:

- effect of adverse climatic conditions on turf preparation
- the use of turf in high performance sport environments
- purpose of turf surface preparation in maintaining turf presentation
- various cultural requirements of turf grass species
- biological factors of turf grass species affected by turf preparation activities, including:
 - moving golf holes
 - reasons for moving markers
 - height of cut for grass species and sport
 - effect of rollers on compaction and turf growth
 - effect of mower cutting type
- assessment of turf grass condition when reporting irregularities to supervisor prior, including:
 - colour and length of sward in relation to turf health
 - set-up equipment requirements and selection criteria
- conducting mowing operations, including:
 - ensuring uniform cut
 - maintaining a consistent pattern
 - implications of repetitive activity on equipment wear and tear and grain, and the need to vary direction of cut
- marking out sports turf surfaces for play, including:
 - preparation and use of tools and equipment for marking out
 - line marking methods for sports turf surfaces
 - basic calculations for line marking
 - rules and regulations for marking and layout of sports turf surfaces
- markers and other sports turf match play requirements, including:
 - holes
 - tee markers
 - out of bounds markers
- water and its effect on sports play, preparation activities, and how to rectify, including:
 - soil water requirements
 - turf surface water condition, including dew and rain
 - effect on play condition
 - water and dew removal techniques
- work health and safety hazards, risks and controls when preparing turf surfaces for play, including:
 - rapid risk assessment for safety of self, the community and the environment
 - safe transport of equipment to site
 - legal requirements when transporting equipment on public roads
- maintaining a safe work site, including:
 - safety barriers

- signage and notifications
- managing pedestrian user traffic flow
- obstacles affecting sports turf set-up, and methods for managing them during preparation activities, including:
 - permanent obstacles
 - temporary obstacles
 - identifying hazards to players and playing conditions
- adjustment and safe use of equipment commonly used for preparation of sports turf, including:
 - mowers and height adjustments
 - sports turf edgers
 - rollers
 - water soppers and blowers
 - line marking equipment
- equipment checks, including:
 - electrical cords
 - checking and testing procedures
 - identifying, tagging and reporting faulty equipment
 - pre-start checks
 - post-work checks
 - fault reporting procedures
- waste materials disposal procedures and environmental considerations
- record keeping requirements and their purpose.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports turf facility or an environment that accurately represents workplace conditions in which to demonstrate the preparation and layout of at least one type of sports turf surface specified in the performance evidence
- resources, equipment and materials:
 - turf set-up equipment, including cylinder and rotary mowers, edger, roller and marking-out materials and equipment
 - measuring and layout equipment, including tape measures and string lines
- specifications:
 - workplace procedures and instructions for turf preparation
 - set-up plan for a specific sports playing surface
- relationships:
 - supervisor
- timeframe:

- sports turf play schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF206 Assist with turf construction

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to assist in the construction of soil profiles for the establishment of a turf surface.

The unit applies to individuals who support turf construction and undertake defined routine activities under supervision. They exercise limited autonomy within established and well-known parameters, providing solutions to a limited range of predictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Turf (TRF)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for soil profile construction	1.1 Interpret site and construction plans to locate services in consultation with the supervisor 1.2 Identify workplace health, safety and environmental hazards, assess risks and implement controls in consultation with supervisor 1.3 Select safety equipment, signage and barriers required according to the construction plan

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Install safety equipment to ensure construction site is secure
2. Prepare equipment for soil profile construction	<p>2.1 Select tools, equipment and machinery according to construction project requirements</p> <p>2.2 Carry out pre-operational and safety checks on tools, equipment and machinery</p> <p>2.3 Report faulty or defective equipment and machinery according to workplace procedures</p> <p>2.4 Select, ensure serviceability of, fit and use personal protective equipment</p>
3. Undertake soil profile construction	<p>3.1 Interpret site construction plan to establish grades, levels and boundaries of works</p> <p>3.2 Use basic survey equipment to assist construction team to mark out and define grades, levels and boundaries</p> <p>3.3 Use hand tools and machinery to grade and consolidate the base according to specifications</p> <p>3.4 Excavate drainage and irrigation trenches to depth, width and fall specified in the construction plan</p> <p>3.5 Remove and store excavated material safely according to construction plan specifications</p>
4. Restore the site after drainage and irrigation installation	<p>4.1 Back fill trenches, consolidate and level the site to construction plan specifications</p> <p>4.2 Restore the soil profile, maintaining levels of each layer</p> <p>4.3 Irrigate the restored site according to soil profile requirements</p> <p>4.4 Collect and dispose of waste material from the site</p>
5. Clean and store equipment and machinery	<p>5.1 Clean and maintain tools, equipment and machinery according to workplace procedures</p> <p>5.2 Collect and store tools, equipment, machinery and unused materials</p> <p>5.3 Report work outcomes to supervisor</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret construction plans to identify key information, including symbols and text

Assessment Requirements for AHCTRF206 Assist with turf construction

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, assisted in the construction of a turf surface project using a construction plan, including:

- assisted in locating services and established construction site grades, levels and boundaries from the plan
- used basic survey equipment and assisted with the layout of construction grades, levels and boundaries
- selected and checked machinery and equipment required to perform levelling, grading, excavation and consolidation
- reported faults and defects in machinery and equipment
- safely used tools, equipment and machinery to perform levelling, grading, excavation and consolidation tasks
- safely cleaned, maintained and stored turf construction tools, equipment and machinery
- followed workplace procedures, including health, safety and environmental
- worked collaboratively and productively within a team
- reported work outcomes on completion.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of turf construction, including:
 - different soil preparations for construction
 - purpose of turf construction in maintaining turf presentation
 - relationship between a well-constructed soil profile and the quality and appearance of the turf
 - purpose, effect, methods and equipment used for compacting turf profiles

- materials used in developing a profile for turf
- selection, effective use and safe operation of tools and machinery
- basic irrigation and drainage installation techniques relevant to turf construction
- basic awareness of survey techniques and equipment required to support survey work, including:
 - principles of surveying, including laser levels, dumpy levels
 - purpose and use of surveyor staff and lenses
 - purpose and use of tape measures
- basic survey calculations used for determining levels, grades and boundaries, including:
 - 3,4,5 triangle for right angles
 - calculating grades
 - measurements and units of measure
- basic plan reading skills required for supporting turf construction operations and to identify:
 - services
 - measurements
 - levels and grades
- safe handling and disposal of construction waste materials
- workplace health and safety hazards, risks and control measures when constructing new turf, including:
 - site safety
 - personal safety
 - safe use and operation of tools, equipment and machinery
- reporting procedures relevant to turf construction.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports turf facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - excavation and grading equipment
 - personal protection and other safety equipment
 - measuring and layout equipment including levels, tape measures, string lines
 - basic levelling tools
- specifications:
 - professionally drawn sports turf site and construction plans that include site layout, existing services, proposed services, excavation levels, fill materials, fill profiles and finished levels
 - workplace procedures and instructions for sports turf construction

- workplace health, safety and environmental procedures related to sports turf construction
- relationships:
 - work team and supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCTRF207 Renovate grassed areas

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, renovated a sports turf area according to a renovation plan, including:

- identified work site impediments and the required renovation activity in consultation with supervisor
- identified hazards and risks and implemented control measures for personal and site-specific safety
- prepared materials, equipment, machinery and turf propagation materials ready for implementation
- performed turf renovation activities safely using equipment, machinery and materials
- collected waste from renovation works and disposed of safely
- safely transported, cleaned and stored turf renovation machinery and equipment
- reported turf renovation activities, faults and issues to supervisor.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of grass area renovation activities, including:
 - purpose of turf renovation programs for maintaining turf presentation and use
 - soils and soil preparation for renovation
 - turf grass species and effect on mat, thatch and dethatching techniques
 - soil aeration and compaction, including core, solid tyne, and water injection
 - impact of soil compaction and thatch on irrigation and infiltration rate
 - turf grass improvements using topdressing, dusting, shaving, scarifying and grooming
 - effect of adverse weather conditions on renovation activities
 - levelling turf surfaces

- effective and safe use of equipment commonly used during sports turf renovation programs, including:
 - scarifier
 - sod cutter
 - corer
 - slicer
 - shaver
 - top dresser
 - drag mat
 - fertiliser spreader
 - transporter
 - loader, bobcat or similar
 - hand tools, tynes, shovels, spades, level lawns, and wheelbarrows
 - influences on the selection of tools, machinery and safety equipment
 - common pre-operational and post-operational checks of equipment
 - adjustments and settings for renovation equipment
- assessment of safety hazards and risks when renovating turf areas, including:
 - responsibilities of working near the public
 - barriers and exclusion zones
 - signage
 - personal protection and equipment
 - manual handling techniques for lifting or moving heavy loads and materials
- chemical amendments for renovations, including:
 - fertilisers
 - ameliorants
 - growth regulators
- turf repairs and regeneration procedures, including:
 - over sowing
 - sprigging
 - chaffing
 - plugging
 - rolled turf/turf replacement
 - divot replacement
- waste materials handling and disposal, including environmental considerations
- reporting procedures and requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:

- a facility that has sports turf requiring renovation or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - turf renovation machinery and equipment
 - turf renovation hand tools
 - fertiliser, ameliorants and growth regulators
 - top dressing sand/materials
 - turf propagation materials
- specifications:
 - sports turf area renovation plan
 - workplace procedures and instructions related to sports turf renovation, including health, safety and environment
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCTRF208 Support turf establishment

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has established a turf surface using at least three different propagation materials, including:

- seed (hand seed sowing, mechanical seed sowing, hydro-seeding, drilling)
- sod (turf rolls or sheets)
- and one of following:
 - sprigs (hand sprigging, hydro sprigging, mechanical sprigging)
 - plugs.

There must also be evidence that the individual has:

- interpreted site plans and turf establishment instructions to determine work site impediments and required turf establishment activities
- identified hazards and risks and implemented control measures for personal and site-specific safety
- prepared materials, equipment, machinery and turf propagation materials ready for implementation
- performed turf establishment activities safely using equipment, machinery and materials
- collected and disposed waste from turf establishment site
- safely transported, cleaned, maintained and stored turf establishment machinery and equipment
- reported turf renovation activities, faults and issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for supporting turf establishment, including:

- propagation methods for new turf, including seed, sod, sprigs and plugs
- distributing/laying/planting turf propagation materials to establish even coverage
- applications of propagation methods for sports turf
- sports turf grass species and their propagation and establishment
- handling and assessing turf propagation materials for defects
- irrigation requirements for establishment of newly propagated turf
- soil types and their preparation for establishing new turf, including:
 - basic checks to assess soil condition, including soil moisture, tilth, compactness, depth and organic matter
 - soil preparation additives, including fertilisers, ameliorants, moisture control materials and growth regulators
 - calculations for rates of application
 - methods for incorporation of soil additives
 - soil preparation requirements for turf propagation techniques
- tools and machinery used in preparing new turf surfaces, including:
 - sod cutter
 - rotary hoe
 - transporters
 - bobcat or loader
 - scarifier
 - self-propelled cylinder mower
 - ride-on mower
 - fertiliser application equipment
 - top-dresser
 - drag mat
 - hand tools, including shovels, spades, turf pluggers, buckets, level lawns
 - equipment pre-start checks
 - care and storage of tools, equipment and machinery
- post-turf propagation treatments, including:
 - protection for seed, sod, sprigs and plugs during first weeks of establishment
 - basic irrigation practices, and recognising turf establishment needs and problems
 - rolling and mowing practices for new turf
 - monitoring nutrient, pest, diseases and damage
 - top dressing
- workplace health and safety hazards, risks and control measures when constructing new turf, including:
 - site safety
 - personal safety
 - safe use and operation of tools, equipment and machinery
- reporting procedures relevant to turf construction.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports turf facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - soil preparation hand tools, equipment and machinery
 - personal protection safety equipment
 - soil amendments and treatment materials
 - turf grass species and propagation materials
- specifications:
 - turf establishment program and specifications
 - workplace procedures and instructions for turf establishment, including health, safety and environmental procedures
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF306 Prepare sports turf surfaces for play

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to plan, prepare the turf and mark out the sports surfaces ready for play, complying with the rules and regulations of the sport.

The unit applies to individuals who prepare turf surfaces for play under general direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCTRF306 Prepare sports turf surfaces for play

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared sports surfaces for play for at least three of the following:

- a single hole for a golf course with tee and surrounds, rough, fairway and green, and including moving the hole and location of tee markers
- a bowling green, including the assessment of the pace of green
- a cricket ground, including preparation of wicket surface, line marking of wicket and outfield and stump installation
- a ball sport surface selected from Australian Rules football, soccer or rugby, including outfield line marking
- a horse race track surface preparation, including line marking, and rail positioning installation
- a sports surface selected from lawn tennis, lacrosse, hockey, polo or croquet.

There must also be evidence that the individual has:

- determined the condition required for playing surface and planned the work requirements according to sport rules and regulations
- identified safety hazards, assessed risks and implemented controls to ensure personal and user safety when performing work
- selected, checked, adjusted and operated equipment and machinery on the sport site safely
- assessed sports surface condition and confirmed preparation requirements
- prepared a consistent and uniform sports playing surface
- collected and disposed of waste
- selected, checked and used marking-out equipment, materials and procedures to accurately lay out sports surfaces
- checked playing surface performance and potential hazards to players, and reported or rectified
- cleaned and stored tools, equipment and machinery

- prepared a report on sports surface preparation activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of turf preparation for play, including:
 - golf courses, lawn bowls, cricket, race courses, sports fields and tennis
 - effect of adverse climatic conditions on turf preparation
 - use of turf in high performance sport environments
 - purpose of turf surface preparation in maintaining turf presentation
 - cultural requirements of warm and cool turf grass species
- turf surface performance measurement equipment and benchmarks for play, including:
 - stimpmeter
 - bowling green speed
 - clegg hammer
 - traction meter
 - moisture sensor
 - bounce and ball roll/smoothness
- artificial surfaces and their preparation, including:
 - cleaning
 - grooming
 - watering
 - decompacting
 - sterilisation
- biological factors of turf grass species affected by turf preparation activities, including:
 - moving golf holes
 - reasons for moving markers
 - height of cut for grass species
 - effect of rollers on compaction and turf growth
 - effect of mower cutting type
- assessment of turf grass condition prior to setting up, including:
 - colour of sward
 - length of sward and cutting heights
 - set-up equipment requirements and selection criteria
 - moisture content
- conducting mowing operations, including:
 - ensuring uniform cut
 - maintaining a consistent pattern

- implications of repetitive activity on equipment wear, tear and grain, and the need to vary direction of cut
- marking out sports surfaces for play, including:
 - tools and equipment for marking out, and their preparation and use, including pegs, measuring equipment and string lines
 - line marking methods for sports surfaces
 - basic calculations and geometry relevant to layout and line marking
 - rules and regulations for marking and layout of sports surfaces
 - common terms for sport markers and line marking
- markers and other sports surface obstacles for match play requirements, including:
 - holes
 - tee markers
 - out of bounds markers
- water and its effect on sports play and preparation activities, including:
 - soil water requirements
 - turf surface water condition, dew and rain
 - water and dew removal techniques
 - turf covers, their application and consequences of use
- work health and safety hazards, risks and controls when preparing turf surfaces for play, including:
 - rapid risk assessment
 - safe transport of equipment to site
 - legal requirements when transporting equipment on public roads
- maintaining a safe work site, including:
 - safety barriers
 - signage and notifications
 - managing pedestrian traffic flow
- obstacles affecting sports surface set-up, and methods for managing them during preparation activities, including:
 - permanent obstacles
 - temporary obstacles
 - identifying and rectifying hazards to players and playing conditions
- calibration, adjustment and safe use of equipment commonly used for preparation of sports surfaces, including:
 - mowers and height adjustments
 - sports surface edgers
 - rollers
 - water soppers and blowers
 - line marking equipment
- pre-operational and post-operational machinery and equipment checks, including:
 - electrical cords

- checking and testing procedures
- identifying, tagging and reporting faulty equipment
- fault reporting procedures
- waste materials disposal procedures and environmental considerations
- record keeping and report preparation procedures and their purpose.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports surface facility or an environment that accurately represents workplace conditions in which to demonstrate the preparation and layout of at least three sports stipulated in the performance evidence
- resources, equipment and materials:
 - turf set-up equipment, including cylinder and rotary ride-on mowers, edger, roller
 - marking-out materials and equipment
 - measuring and layout equipment, including tape measures and string lines
 - turf surface performance measuring equipment
- specifications:
 - turf preparation and set-up plan for at least three specific sports play surfaces stipulated in the performance evidence
 - workplace procedures and instructions for turf preparation for play
- timeframe:
 - sports play schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF307 Construct turf playing surfaces

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to construct the soil profile for the establishment of high-performance sports and recreational turf for new or complete renovation projects in sporting, commercial and public recreational spaces.

The unit applies to individuals who construct turf playing surfaces under general direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Turf (TRF)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for construction activities	1.1 Read and interpret plans and specifications to determine scope of turf construction project 1.2 Collect representative soil samples for the site for testing 1.3 Test soil samples and interpret and record results according to workplace procedures and industry standards

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Locate services and impediments to construction on site, and report discrepancies from construction plan 1.5 Assess the surrounding area relative to construction site and identify potential impact on construction activities 1.6 Identify workplace health, safety and environmental hazards, assess risks and implement controls according to workplace health, safety and environmental procedures 1.7 Document a working plan for the construction
2. Survey and peg out levels for construction site	2.1 Survey construction site and establish and record existing levels and temporary benchmarks according to turf construction and working plans 2.2 Mark out construction site with new levels and contours according to specifications
3. Prepare for construction work	3.1 Read and interpret plans and specifications to determine measurements relevant to materials and quantities 3.2 Identify type of materials required for the turf construction soil profile from construction specifications 3.3 Compute an estimate of materials and costs required for the project and submit for approval 3.4 Develop a construction logistics program for the construction 3.5 Prepare a schedule of works and obtain approvals
4. Set out site for construction	4.1 Reconcile and verify planned boundaries and features of construction works are within actual site constraints 4.2 Verify finishing levels for site, drainage and irrigation are within nominated construction plan specifications 4.3 Transfer measurements for the construction area using markers, and account for variances from construction plan
5. Excavate the construction site	5.1 Select, check, use and maintain safety and personal protective equipment 5.2 Excavate the site within the marked boundaries, and stockpile excess soil according to working plan 5.3 Grade and consolidate the sub-base to levels specified in the construction plan
6. Install irrigation and	6.1 Excavate trenches in sub-surface to receive irrigation and drainage

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
drainage system	components 6.2 Install irrigation system components according to construction plan 6.3 Install drainage system according to construction plan 6.4 Return disturbed sub-surface to levels specified in construction plan
7. Install soil profile	7.1 Install and consolidate soil profile layers according to construction plans and specifications 7.2 Ensure the interface between profile layers is uniform and unbroken 7.3 Ensure soil profile is level and consolidated within specifications ready for planting
8. Complete soil profile construction works	8.1 Clean, maintain and store tools, equipment and machinery according to workplace procedures 8.2 Collect and store unused materials and dispose of waste 8.3 Record and report work outcomes according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret symbols and text on plans and specifications
Writing	<ul style="list-style-type: none"> Prepare working plans, drawings and simple procedures for implementing a turf playing surface construction project
Numeracy	<ul style="list-style-type: none"> Make calculations, including distance, area, volume and ratio, when marking out the construction site and estimating materials for construction works

Assessment Requirements for AHCTRF307 Construct turf playing surfaces

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has contributed to the completion of a sports turf construction project of a minimum of 100 square metres, individually or as part of a team, from concept to completion, including:

- developed a working plan and drawings to scale, including:
 - selected root zone materials
 - determined construction method according to industry standards
 - assessed the site layout
 - obtained, read and interpreted site and construction plans and specifications
 - selected the drainage system
 - estimated materials and costs for the project
- planned the construction of a turf profile, including:
 - conducted and interpreted soil tests
 - identified hazards and assessed the risks and implemented controls
 - used surveying equipment and techniques to accurately set out the site
- constructed the turf profile according to plans and specifications, including:
 - excavated to planned levels
 - installed sub-base to specification
 - installed drainage system to specification
 - installed and consolidated soil profile to specified grade and levels
- complied with local environmental requirements
- scheduled and organised construction work tasks according to construction project
- identified hazards and risks, and implemented control measures for personal, environmental and site-specific safety requirements
- operated, cleaned, maintained and stored tools and excavation and load shifting equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- interpretation of plans and specifications for the scope of sports turf construction, including:
 - location of site
 - implication of impediments and services on construction activities, including irrigation pipes, overhead and underground power, drainage, telecommunications, gas, root system of trees
 - dimensions of construction for determining list of materials
- sports turf soil profile construction principles, methods and resources, including:
 - range of construction methods for specific applications (e.g. golf and bowling greens, cricket wickets, sports fields, race tracks, lawn tennis)
 - Australian and international standards for sports turf construction
 - United States Golf Association (USGA) greens construction profiles
 - Californian method
 - local construction methods
 - natural construction
 - push up greens
 - sand over clay
 - working with a perched water table
- drainage installation methods and materials, including:
 - pipes
 - drainage materials
 - root zone layer and uniformity in depth of horizons
- materials, tools, equipment and machinery for construction of soil profiles, including:
 - soil amendments
 - base construction materials
 - turf growing media and quality
- safe operation of machinery and equipment for constructing profiles, including:
 - excavating to known levels, including the cut and fill quantities
 - working to a consistent level and grade from sub-base to final level
 - methods of compacting and testing the compaction of the sub-base
- practical understanding of surveying principles and techniques, including:
 - using survey equipment to establish benchmarks and levels on a construction site
 - interpreting and constructing basic contour drawings
 - transferring and pegging out contours to a construction site
- soil testing techniques and the application of results to the construction process, including:
 - texture (particle size)
 - pH

- electrical conductivity
- infiltration rates
- site constraints and their impact on constructing turf surface, including:
 - aspect
 - site history
 - trees and other vegetation
 - location of services
 - water quality and reclaimed sources of water
- workplace health and safety hazards, risks and control measures when constructing new turf, including:
 - site safety
 - personal safety
 - safe use and operation of tools, equipment and machinery
- planning and scheduling construction works to ensure a logical, timely and effective process
- laying out a construction area from plans and drawings, including:
 - measuring techniques
 - finding and marking levels
 - types of markers, including paint, pegs, stringlines, flags
- calculations relevant to costing and estimating a turf construction project, including:
 - excavation volumes
 - volume of construction materials
 - labour time and costs
- environmental practices and procedures relevant to turf construction sites, including:
 - implications associated with construction and excavation activity
 - waste disposal procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports turf facility or an environment that accurately represents workplace conditions of a minimum of 100 square metres
- resources, equipment and materials:
 - personal protective equipment and other site safety equipment
 - surveying equipment
 - hand tools, excavation and load shifting equipment
 - soil testing equipment for pH, electrical conductivity, texture and infiltration rates
- specifications:
 - workplace procedures and instructions for construction of sports turf playing surfaces

- sports turf project construction drawings, plans and specifications
- workplace safety and environmental procedures related to construction of sports turf playing surfaces.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF308 Establish turf

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to establish turf by sowing, turf laying, sprigging and chaffing or stolonisation in sporting, public recreational open space, commercial and residential sites.

The unit applies to individuals who establish turf under general direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Turf (TRF)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop a turf establishment plan	1.1 Collect representative soil samples of turf establishment area for testing 1.2 Package and label soil samples for laboratory testing according to laboratory requirements 1.3 Perform field tests of soil and record results

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Identify and select turf grass species and propagation method according to workplace or client planned outcomes</p> <p>1.5 Assess the site for physical and cultural impediments to turf establishment and record results</p> <p>1.6 Interpret results and prepare a turf establishment plan</p>
2. Prepare to establish a new turf area	<p>2.1 Select materials, tools, equipment and machinery for planting according to turf establishment plan</p> <p>2.2 Carry out pre-operational and safety checks on tools, equipment and machinery</p> <p>2.3 Identify workplace health, safety and environmental hazards, assess the risks and implement controls</p> <p>2.4 Select, check, use and maintain personal protective equipment</p> <p>2.5 Implement weed control strategy in preparation for turf establishment activities</p>
3. Prepare soil and plant turf	<p>3.1 Prepare planting site, incorporate soil additives and ensure soil moisture is within specification</p> <p>3.2 Distribute turf propagation material on turf area according to turf establishment plan</p> <p>3.3 Implement irrigation requirements to newly propagated turf</p> <p>3.4 Collect and dispose of waste according to workplace and environmental procedures</p> <p>3.5 Clean, store and maintain tools, equipment and machinery</p>
4. Maintain turf establishment	<p>4.1 Protect the site from disturbance and damage according to workplace procedures</p> <p>4.2 Assess soil moisture condition and rectify according to workplace irrigation practices</p> <p>4.3 Implement turf mowing practices during establishment according to workplace procedures and turf establishment plan</p> <p>4.4 Apply top dressing to level the turf area according to turf establishment plan</p> <p>4.5 Apply nutrients and amendments according to turf establishment plan</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
5. Report and repair areas of damaged turf	5.1 Monitor turf condition for quality, and repair according to turf establishment plan 5.2 Record and report work outcomes according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret symbols and text on plans Interpret soil test procedures and test results for establishing turf grass

Assessment Requirements for AHCTRF308 Establish turf

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has established a turf surface using:

- seed (hand seed sowing, mechanical seed sowing, hydro-seeding or drilling)
- sod (turf rolls or sheets)
- and one of the following methods:
 - sprigs (hand sprigging, hydro sprigging, mechanical sprigging)
 - plugs
 - chaffing or stolonisation.

There must also be evidence that the individual has:

- collected and prepared soil samples for testing and interpreted results
- identified impediments to turf establishment and recorded results
- determined turf establishment species, methods and requirements
- prepared an establishment plan to meet client or workplace requirements
- identified hazards and risks and implemented control measures for personal and site-specific safety
- prepared materials, equipment, machinery and turf propagation materials ready for implementation
- performed turf establishment activities safely using equipment, machinery and materials
- collected waste and disposed of it safely
- selected, safely used, cleaned, maintained and stored turf establishment machinery and equipment
- maintained turf establishment records and reported outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for establishing, turf, including:

- preparing a turf establishment plan
- turf grass identification, propagation and growth characteristics
- turf establishment methods, including seed, sod, sprigs, plugs, chaffing and stolonisation
- handling and assessing turf propagation materials for defects
- distributing, laying and planting turf propagation materials to establish even coverage
- fertiliser use and application
- soils and turf nutrition
- overseeding warm season grasses and allelopathy
- common weeds, pests and diseases, and control measures for establishing new turf, including field tests to identify problems
- physical and chemical properties of soils and effect on establishing new turf, including:
 - compaction
 - pH
 - salinity and nutrition
 - texture and soil type
 - soil sampling techniques and preparation for laboratory testing
 - field testing techniques for soils
- irrigation requirements for establishment of new and establishing turf
- soil types and their preparation for establishing new turf, including:
 - basic checks to assess soil condition, including soil moisture, tilth, compactness, depth and organic matter
 - soil preparation additives, including fertilisers, ameliorants, moisture control materials, pesticides and herbicides
 - methods for incorporation of soil additives
 - soil preparation requirements for different turf propagation techniques
- calculations to determine application rates of amendments, fertiliser and planting material, including distance, area, volume, percentage and ratio
- tools, equipment and machinery used in preparing new turf surfaces, including:
 - types of equipment and their effective and safe operation
 - pre-start checks
 - care and storage of tools, equipment and machinery
- turf propagation treatments for establishment, including:
 - protection for seed, sod, sprigs and plugs during first weeks of establishment
 - basic irrigation practices and recognising turf establishment needs and problems
 - rolling and mowing practices for new turf
 - monitoring and control of disorders
 - top dressing purpose and procedures
 - nutrients and amendments used for establishing turf
- workplace health and safety hazards, risks and control measures when constructing new turf, including:

- site safety
- personal safety
- safe use and operation of tools, equipment and machinery
- record keeping and reporting procedures relevant to turf establishment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports turf facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - hand tools, stringlines, buckets, shovels, rakes, spades, level lawns and wheelbarrows
 - equipment, sod cutter, scarifier, transporter, roller, fertiliser and chemical application equipment
 - dry sand, propagation material and turf plugger
 - personal protection equipment
 - soil amendments and treatment materials
 - soil testing equipment
 - the two types of turf propagation materials and at least one of the propagation methods specified in the performance evidence
- specifications:
 - turf grass species specifications and requirements
 - workplace procedures and instructions for establishing turf.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF309 Implement a grassed area maintenance program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to maintain general turf grass surfaces involving the general procedures for cutting and trimming grass, dethatching older grassed areas, applying fertilisers and treatments for managing grass health.

The unit applies to individuals who maintain turf surfaces under general direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Turf (TRF)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for grassed area maintenance work	1.1 Clarify requirements for maintenance program with supervisor 1.2 Identify permanent and temporary obstacles on grassed area and manage according to maintenance program 1.3 Identify workplace health and safety and environmental hazards, and assess risks and implement controls

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Identify and select equipment and resources according to the maintenance program 1.5 Identify priorities and schedule maintenance activities
2. Prepare equipment and machinery required for grassed area maintenance work	2.1 Select and check tools, equipment and machinery, and rectify, report or and tag faults 2.2 Adjust and calibrate equipment according to maintenance program and manufacturer instructions 2.3 Conduct pre-operational checks of tools, equipment and machinery according to manufacturer instructions and workplace procedures 2.4 Select, check, use and maintain personal protective equipment
3. Implement grassed area maintenance activities	3.1 Assess site-specific safety hazards and implement controls according to workplace safety procedures 3.2 Implement pre-start checks and start-up procedures for machinery according to operator instructions 3.3 Operate machinery and equipment on grassed area according to maintenance plan, operator instructions and workplace procedures 3.4 Implement shut-down procedures for machinery according to manufacturer instructions 3.5 Clean and store equipment and dispose of waste materials according to workplace and environmental procedures
4. Finalise grassed area maintenance activities	4.1 Reconcile outcomes of work maintenance activities against maintenance plan 4.2 Identify discrepancies in outcomes and recommend corrective action 4.3 Discuss recommendations with supervisor and modify maintenance plan and schedules 4.4 Record and report grassed area maintenance activities according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Accurately interpret maintenance plans and operator instructions
Writing	<ul style="list-style-type: none"> Accurately record and update maintenance plans and schedules using clear language and correct spelling, grammar and industry terminology
Numeracy	<ul style="list-style-type: none"> Make calculations, including distance, area, volume, ratio, percentage and time

Assessment Requirements for AHCTRF309 Implement a grassed area maintenance program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, implemented a grassed area maintenance program, including:

- clarified the maintenance requirements for a grassed area with supervisor
- conducted a risk assessment and implemented controls for grassed area maintenance work
- identified fixed and temporary obstacles, and implemented procedures to avoid damage to obstacles
- identified and selected equipment and resources required for the maintenance activities
- prioritised and scheduled maintenance activities
- ensured workplace safety practices were implemented for all grassed area maintenance works
- selected, checked and used personal safety equipment
- selected, checked and adjusted equipment and machinery.

There must also be evidence that the individual has:

- operated equipment and machinery safely to maintain at least 100 square metres of grassed area and has performed the following tasks:
 - used mowers and trimmers to cut grass to a specified height
 - used coring or scarifying equipment to manage thatch
 - used mechanical spreader to apply fertilisers or amendments at a specified rate
 - used manual methods to control broad leaf and grass weeds
 - used manual or mechanical equipment to apply liquid treatments to control weeds at a specified rate
- followed operating procedures for pre-start checks, start-up, operation and shut-down for all machinery and equipment used
- reviewed grassed area maintenance activities and recommended changes to the maintenance plan with supervisor
- recorded and reported grassed area maintenance activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- maintenance and management of grassed areas, including:
 - recognising local turf grass species
 - growing conditions and cultural requirements of warm and cool climate turf grass species
 - purpose of grass and selection of mowing height
 - thatch and impact on grass health and vigour, and methods for reducing thatch
 - basic nutrient requirements of grass and commonly used fertilisers
 - fertiliser application methods and rates
 - turf grass physiology as it applies to grassed area maintenance
- methods of applying fertiliser and chemical treatments to grassed areas, including:
 - liquid treatments using drenches and sprayers and basic application equipment
 - broadcasting granular and powder applications by hand or mechanical means
- health, safety and environmental policies and procedures in a workplace, including:
 - identifying hazards, assessing and controlling risk
 - protecting the environment during operations and waste
 - personal protection and equipment
- methods and practices for mowing grassed areas, including:
 - setting the height of cut
 - obtaining uniform cut
 - maintaining consistent pattern
 - variation of cut direction to reduce wear and tear
- tools, equipment and machinery used for grass maintenance, including:
 - rotary and cylinder mowers and other grass cutting and trimming equipment
 - operation of coring or scarifying equipment, including the potential damage to irrigation and drainage infrastructure
 - mechanical spreaders
 - hand or motorised spray equipment
- equipment operation and maintenance, including:
 - pre-start checks, start-up and shut-down procedures
 - clean-up and storage
- impediments to safe maintenance activities and action to be taken, including:
 - people and animals
 - proximity to roadways, pathways and other public spaces
 - assets and other facilities that may be damaged
- weed species and control strategies in turf grasses, including:

- broad leaf weeds
- grass weeds
- mosses and other invasive plant species
- record keeping and recording procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a grassed area of at least 100 square metres
- resources, equipment and materials:
 - rotary and cylinder mowers, coring and scarifying equipment or machines
 - fertiliser spreaders, and spray and drenching equipment
 - measuring equipment for treatments and fertilisers
 - fertilisers, amendments and weed treatments
 - fuel, oil, tools and equipment required to adjust and operate machinery
- specifications:
 - workplace procedures and instructions related to implementing grassed area maintenance programs, including safety and environmental procedures
 - operating instructions for machinery and equipment
 - specifications for rates of application of fertilisers and weed treatments
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF310 Monitor turf health

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to monitor the health and condition of sports turf playing surfaces.

The unit applies to individuals who monitor turf health under general direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Turf (TRF)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for monitoring activities	1.1 Establish the scope, regularity and time constraints for monitoring and reporting turf health 1.2 Identify turf grass species and assess common health issues attributed to the species 1.3 Identify plant health specialist advisor and determine their scope of support and sampling specifications

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Identify and select tools and equipment required to monitor and sample turf plant health according to specialist advice
2. Assess the health of turf grass area	<p>2.1 Inspect and record signs and symptoms of abnormal turf grass health</p> <p>2.2 Assess extent of turf grass health problem, and report according to workplace procedures</p> <p>2.3 Conduct field diagnoses and tests to aid in identifying plant health issue</p> <p>2.4 Collect, secure, label and despatch samples for laboratory testing according to specialist advisor specifications</p> <p>2.5 Repair sample sites, clean tools and equipment and dispose of waste materials according to workplace and environmental procedures</p> <p>2.6 Communicate with specialist advisors to establish diagnoses of plant health problem</p> <p>2.7 Assess diagnoses and compare results with acceptable parameters</p> <p>2.8 Prepare recommendations to address identified plant health problems</p>
3. Monitor and report turf health and condition	<p>3.1 Examine turf for poor health and substandard quality indicators in a scheduled manner</p> <p>3.2 Identify poor turf health and deviations in turf quality according to expected sporting standards and workplace requirements</p> <p>3.3 Compile examination results and report with recommendations</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret laboratory test procedures and results
Writing	<ul style="list-style-type: none"> Accurately document turf health assessment and recommendations using clear language, correct spelling, grammar and industry

Skill	Description
	terminology
Oral communication	<ul style="list-style-type: none"> Use active listening skills Interpret verbal and non-verbal communication
Numeracy	<ul style="list-style-type: none"> Perform calculations to check test results

Assessment Requirements for AHCTRF310 Monitor turf health

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has monitored the health of a warm and a cool season turf species and reported recommendations for turf health, including:

- established the scope and scheduling for monitoring turf health for a warm season turf grass species and the common health issues
- established the scope and scheduling for monitoring turf health for a cool season turf grass species and the common health issues
- identified turf health specialist advisors and their requirements to support monitoring procedures
- identified and selected tools and equipment required to monitor and sample turf health issues
- inspected and assessed turf grass for signs of common turf health problems and assessed the extent of the problems, including:
 - pests
 - diseases
 - nutritional
 - environmental causes
- conducted field tests to aid in diagnosing turf grass health issues, including:
 - pH
 - electrical conductivity (EC)
 - drainage and infiltration rate
 - soil temperature
- collected and despatched samples for laboratory testing and repaired sample sites
- assessed diagnosis from field and specialist advisor results and determined acceptable parameters
- prepared recommendations according to the sports play standards
- monitored turf grass during growing season.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- 15 turf grass species or cultivars, their common name, genus and species, and growth habit, including warm and cool grass species
- importance of plant physiology in plant health, including:
 - photosynthesis
 - transpiration
 - structural components of turf grasses and relation to turf grass health
 - basic metabolic and physiological processes for disease resistance in turf grass
 - nutrients, nutrient uptake and role in plant growth
 - basic physiology processes for insect and disease resistant turf
 - basic endophyte infection of turf
 - allelopathy in turf grass species
- specialist advisors, their purpose and method of engagement to support turf health diagnosis
- turf grass species selection for plant health management, including:
 - disease tolerance
 - mowing height
 - playing requirements
 - dormancy
 - salinity
 - resilience, wear and recovery
 - water requirements
- turf grass species and common regional health issues, including:
 - basic biology, symptoms and controls of pests
 - basic biology, symptoms and controls of diseases
 - symptoms and controls of disorders, including soil condition, nutrition
 - environmental disorders (e.g. frost, poor drainage, shade)
- tools, equipment and process for diagnosing turf health and disorders
- expectations and quality indicators for turf grass and sports turf standards
- rates and recommended treatments to achieve optimum turf grass health objectives, including:
 - simple and compound fertilisers used in the turf industry and their effect on turf health
 - fertiliser types and nutrient release rates
 - common pesticide types and methods of application
 - external environment impact of treatments through leaching, excessive spraying, off target damage and overuse
 - interpretation of labels and safety data sheets for treatments
 - use of growth regulators and concept of 'growing degree days'

- calculating nutrient application according to fertiliser rates
- role of trace elements and nutrients required by turf grass plants, and symptoms of toxicities and deficiencies
- soil and plant tissue analysis for monitoring and managing turf health, including:
 - main elements of analysis
 - significance as indicators of nutritional deficiency and toxicity.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports turf facility or an environment that accurately represents workplace conditions
 - a sports play area with warm season turf grass species to monitor for health issues
 - a sports play area with cool season turf grass species to monitor for health issues
- resources, equipment and materials:
 - test equipment and resources for pH, soluble salts and soil moisture analysis
 - sampling equipment and materials for collecting, storing and despatching soil, plant, pest and disease test samples
 - examples of pests, diseases and disorders for identification purposes
 - turf health specialist advisory reports
- specifications:
 - workplace procedures and instructions related to monitoring turf health
- relationships:
 - specialist advisor
- timeframe:
 - a scheduled period of time for monitoring a turf grass area for health issues.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF311 Renovate sports turf

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to implement renovation or remediation of a sports turf area for minor projects and seasonal renovations in the turf industry.

The unit applies to individuals who renovate sports turf under general direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Turf (TRF)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to renovate turf	1.1 Assess the turf renovation site and determine extent of works according to renovation program 1.2 Identify turf grass species, materials and resources and calculate quantities required for renovation program 1.3 Collect soil samples and conduct or arrange tests to establish physical and chemical condition of the soil according to industry

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	standards 1.4 Identify, select and check hand tools, equipment and materials required for renovation work 1.5 Identify workplace health, safety and environmental hazards, assess their risks and implement controls 1.6 Prepare a schedule of works according to site assessment and soil conditions
2. Prepare renovation equipment	2.1 Select, check, use and maintain safety and personal protective equipment 2.2 Carry out pre-operational and safety checks on tools, equipment and machinery and rectify, report or tag faults 2.3 Calibrate and adjust tools, equipment and machinery for turf renovation
3. Implement sports turf renovation	3.1 Operate turf renovation tools, equipment and machinery safely and effectively to renovate turf surface 3.2 Assess and review renovation activities against scheduled works and undertake remedial action where out-of-specification 3.3 Maintain a clean and safe work area throughout and on completion of work
4. Complete renovation activities	4.1 Collect and dispose of waste material according to workplace and environmental procedures 4.2 Clean, maintain and store tools, equipment and machinery 4.3 Record and report work outcomes according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret symbols and text on plans

Skill	Description
	<ul style="list-style-type: none"> Interpret soil test procedures and test results for establishing turf grass
Writing	<ul style="list-style-type: none"> Complete workplace documentation using industry terminology and required format
Numeracy	<ul style="list-style-type: none"> Estimate and calculate distance, area, volume, percentage, time, temperature and ratio Apply numerical information to determine application rates

Assessment Requirements for AHCTRF311 Renovate sports turf

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, renovated a sports turf surface, including:

- assessed the site and renovation program to determine the extent of works and required renovation activities
- identified turf grass, materials and resources and calculated quantities required
- collected and tested soil samples and established the soil condition for renovation site
- prepared a schedule of works for renovation activities
- identified hazards and risks, and implemented control measures for personal and site-specific safety
- selected and prepared materials, equipment, machinery and turf propagation materials ready for renovation works
- performed turf renovation activities safely using equipment, machinery and materials according to renovation schedule and workplace procedures, including:
 - coring or spiking
 - top dressing
 - scarifying or grooming
 - shaving or turf cutting or plugging
 - fertilising or adding amendments
- cleaned site and collected waste from renovation works and disposed of
- cleaned, maintained and stored turf renovation machinery and equipment
- assessed renovation activities against schedule of works and implemented remedial action where out-of-specification
- recorded and reported turf renovation activities, faults and issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of turf renovation, including:
 - turf renovation programs and their function in maintaining playable surfaces
 - developing a schedule of works for sports turf renovation
- calculations required to determine the quantities required for the renovation program, including:
 - amendments
 - fertiliser
 - seed
 - soil, sand and other growing media
- techniques for conducting field tests for soils, including:
 - pH
 - electrical conductivity
 - infiltration rate
 - organic matter
 - firmness and compaction of the surface
 - traction
 - surface smoothness
- planting, care and renovation scheduling requirements of grass species and cultivars, including:
 - specialist turf renovation practices to achieve high performance turf
 - national and international standards for turf surface appearance and quality
 - turf sward height
- structure of a sports turf soil profile, including:
 - soils and soil preparation for renovation
 - soil aeration and compaction, including, core, solid tyne and water injection
 - impact of soil compaction and thatch on irrigation and infiltration rate
 - levelling turf surfaces
- turf grass species and effect on mat, thatch and dethatching techniques, including:
 - turf grass improvements using top dressing, dusting, shaving, scarifying and grooming
 - effect of adverse weather conditions on renovation activities
- effective and safe use of tools, machinery and equipment commonly used for sports turf renovation programs, including:
 - scarifier
 - sod cutter
 - corer
 - slicer
 - shaver

- top-dresser
- drag-mat
- fertiliser spreader
- transporter
- loader, bobcat or similar
- hand tools, tynes, shovels, spades, level lawns and wheelbarrows
- factors for consideration in the selection of tools, machinery and safety equipment
- common pre-operational and post-operational checks of equipment
- adjustments and settings for renovation equipment
- assessment of safety hazards and risks when renovating turf areas, including:
 - public safety
 - barriers and exclusions zones
 - signage
 - personal protection and equipment
 - manual handling techniques for lifting or moving heavy loads and materials
- chemical amendments for renovations, including:
 - fertilisers
 - ameliorants
 - growth regulators
- turf repairs and regeneration procedures, including:
 - over sowing
 - plugging
 - sprigging
 - rolled turf and turf replacement
 - divot replacement
 - top dressing materials and procedures
- waste materials handling and disposal, including environmental considerations
- record keeping and reporting procedures and requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports turf facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - turf renovation machinery and equipment
 - turf renovation hand tools
 - fertiliser, ameliorants and top dressing material
 - turf propagation materials, including seed, sprigs and rolled turf
- specifications:

- turf renovation program
- workplace procedures and instructions related to turf renovation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF403 Develop a sports turf maintenance program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to develop a sports turf maintenance program, prepare implementation documents, communicate the program to work team and key stakeholders and review and update the program.

The unit applies to individuals who apply specialist skills in turf maintenance to provide solutions to technical and unpredictable problems. They work autonomously, and instruct and monitor the work of others within a team. They use discretion and judgment in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Turf (TRF)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine soil properties and plant health	1.1 Develop a soil and plant tissue testing program 1.2 Monitor testing activities against testing program and initiate remedial action where activity does not comply 1.3 Assess and interpret test results with due consideration of

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	influencing factors, and record results 1.4 Compare tests results with cultural requirements of turf grass species and determine nutritional status of the soil according to accepted industry standards
2. Identify the requirements of a sports turf maintenance program	2.1 Establish turf grass optimum presentation characteristics according to client requirements and industry best practice 2.2 Identify financial constraints for the turf area 2.3 Identify maintenance requirements for varying conditions of turf growing cycle 2.4 Select turf maintenance practices to maintain turf health according to sports turf standards of presentation 2.5 Identify and verify availability of resources, tools, equipment and machinery required for the sports turf maintenance program 2.6 Assess requirements and constraints, and document a sports turf playing surface maintenance program
3. Prepare and document the sports turf maintenance program	3.1 Prepare detailed plan, specifications and budget according to requirements of program 3.2 Develop and document on-site procedures and schedules for the sports turf maintenance program 3.3 Develop contingencies to ensure deadlines are met according to client and play requirements
4. Communicate sports turf maintenance program to key stakeholders	4.1 Instruct work team and key stakeholders on turf maintenance program and procedures 4.2 Monitor implementation of turf maintenance program, and provide feedback to work team and stakeholders
5. Review the sports turf maintenance program	5.1 Monitor performance of program against workplace standards, and record discrepancies 5.2 Review the sports turf maintenance program to ensure it remains responsive to changing conditions 5.3 Adjust and make changes to the program to overcome discrepancies in program outcomes 5.4 Document and report remedial action and changes to maintenance program

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret complex technical documents related to sports turf maintenance programs
Writing	<ul style="list-style-type: none"> Use language appropriate for work team when creating workplace procedures
Oral communication	<ul style="list-style-type: none"> Consider target audience when presenting complex information to work team and key stakeholders
Numeracy	<ul style="list-style-type: none"> Perform calculations to analyse budget information, interpret tests and results and develop schedule for maintaining sports turf

Assessment Requirements for AHCTRF403 Develop a sports turf maintenance program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared a sports turf maintenance program for play on at least one of the following:

- a single hole for a golf course with tees and surrounds, rough, fairway and green
- a bowling green
- a cricket ground with wicket surface and outfield
- a sports field for one of Australian Rules football, soccer, rugby, lacrosse or polo
- a horse race track
- a turf farm
- a lawn tennis court
- a croquet lawn
- other natural sports turf surface.

The sports turf maintenance program must:

- include a twelve month cycle for the sports turf playing surface
- specify all maintenance practices, including:
 - irrigation
 - mowing and rolling
 - fertiliser applications
 - pesticide applications to treat pests, diseases and weeds
 - plant growth regulator applications
 - renovation practices
 - surface set-up standards and player expectations
- be implemented for a period of no less than eight weeks to verify the performance outcomes documented in the program.

There must also be evidence that the individual has:

- prepared an annual sports turf maintenance program according to budget
- assessed and incorporated into maintenance program the following: test results, optimum performance characteristics, financial constraints and resource implications
- scheduled activities and informed key stakeholders and work team of their respective roles and responsibilities
- monitored and reviewed the program to ensure program outcomes are achieved
- implemented appropriate course of action to overcome program deficiencies
- documented and reported actions and changes to maintenance program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- biological principles and processes of a range of sports turf species for playing surfaces, including:
 - growth habits and cultural requirements of turf grass species and cultivars under varying soil and environmental conditions
 - maintenance requirements and practices for specific turf plant species and cultivars after initial establishment
 - nutrients required by specific turf plant species and cultivars, and the effects of nutrient deficiency and toxicity on individual plant species and cultivars, including symptoms
 - plant diseases, pests and disorders and weeds of specific turf plant species and cultivars
- site evaluation techniques, including analysis of the condition of soils, plants and the site for turf maintenance activities, including:
 - soil ameliorants required to treat common soil problems
 - the characteristics of soil and other growth media
 - types and functions of additives used to enhance the nutrition available for specific turf plant species and cultivars
 - the main simple and compound fertiliser products available
- design and development of maintenance programs within turf grass requirements, including:
 - requirements to build healthy turf to meet national or international standards
 - standards and player expectations of the playing surface
 - availability of equipment and materials
 - financial resources
- soil and plant testing programs and their development, including:
 - types of soil and plant tissue tests used in turf management
 - field testing activities
 - off-site and laboratory testing activities and the role of consultants
 - scheduling and timing of tests for optimum results

- sampling techniques for soils and plant tissue
- interpretation of soil and plant test results, including:
 - impact of the seasons on results
 - expected results for turf species and cultivars
 - importance of using and maintaining historical records
- turf grass species and their cultural requirements and the implication for a maintenance program, including:
 - irrigation methods and water budget
 - mowing and rolling methods, including frequency for turf play surface requirements
 - fertiliser and ameliorant application timing and impact on turf health and growth
 - pests and disease control, including pesticide application
 - impact and management of plant growth regulators and their application to turf grass
 - planned maintenance for renovation of worn and damaged surfaces
 - maintenance implications for setting up for sports play
- management of unexpected activities and outcomes, including:
 - developing contingencies to manage unpredictable situations
 - managing adverse climatic conditions
 - adverse or unplanned turf usage
- record keeping and reporting procedures and practices.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - access to a sports turf facility or an environment that accurately represents workplace conditions on which to implement and monitor a maintenance program, and at least one of the sports turf surfaces stipulated in the performance evidence
- resources, equipment and materials:
 - access to national and international sports turf industry standards
 - access to player and user expectations for playing surface
 - access to soil and plant tissue analysis reports for interpretation
- specifications:
 - workplace documents, including procedures and brief related to development of a sports turf maintenance program, including a maintenance budget and list of the equipment, machinery and human resources available
- relationships:
 - work team
- timeframe:
 - maintenance program must span 12 months
 - implementation of a minimum of 8 weeks to verify the program outcomes.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF404 Plan and implement sports turf renovation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to plan and implement sports turf renovation activities, which involves the preparation of procedures, scheduling and coordination of staff, and monitoring and reviewing financial and renovation performance.

The unit applies to greenkeepers and turf managers that use specialist skills to plan, coordinate and supervise the work of others within known parameters. They use discretion and judgment in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCTRF404 Plan and implement sports turf renovation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, prepared and implemented a sports turf renovation plan, including:

- assessed site plans and documentation to establish sports turf purpose
- determined size of sports turf area in need of renovation
- conducted field tests to establish the degree of degradation of sports turf surface
- assessed results and established the scope of renovation works
- identified site health, safety and environmental hazards, assessed risks and established controls for the renovation works
- developed and documented a plan for a sports turf renovation program and prepared a schedule of works and specifications for implementation
- reviewed status of machinery and equipment and conducted pre-operational checks in preparation for renovation works
- selected and coordinated work team and contractors to implement the schedule of works for renovation of sports turf surfaces
- monitored restoration activity, safety and environmental impacts of restoration work against performance targets, and implemented remedial actions where non-compliant
- reconciled completed works against renovation plan
- checked equipment for serviceability, and initiated repairs
- recorded costs of restoration and reviewed against budget
- maintained records and produced reports on renovation outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- enterprise, national and international industry standards for turf surface appearance, performance and quality

- environmental implications of renovation activities, turf and soil treatments, and waste disposal procedures
- safe work practices and procedures applicable to renovation activities, including:
 - safe materials handling
 - equipment and operation
 - public and turf area users
- basic surveying skills to measure the size of renovation site
- methods and purpose of field tests, including:
 - infiltration rate
 - organic fines
 - hardness
 - traction
 - surface smoothness
 - turf sward height
- identification and cultural requirements of turf grass species and cultivars, including:
 - planting and propagating
 - care and maintenance
 - renovation scheduling requirements
- specialist turf renovation practices to achieve high performance turf, including:
 - dethatching
 - top dressing
 - aerating
 - over sowing
 - fertilising and soil conditioning
 - drainage and water holding
- determining resource and material requirements for turf grass renovation program, including:
 - financial and budgetary constraints
 - consumables, including fertilisers, ameliorants and other chemicals
 - labour and contractor requirements and scheduling
 - equipment and machinery
 - turf grass propagation material
 - growing soils and media
 - expectations and specification of work quality outcomes
- tools, equipment and machinery commonly used for sports turf renovation programs, including:
 - effective and safe use of tools and machinery
 - influences on the selection of tools, machinery and safety equipment
 - common pre-operational and post-operational checks of equipment
 - adjustments and settings for renovation equipment

- assessment of safety hazards and risks when renovating turf areas, including:
 - public safety
 - barriers and exclusions zones
 - signage
 - personal protection and equipment
 - manual handling techniques for lifting or moving heavy loads and materials
- coordinating a work team and working with contractors, including:
 - communicating with team members
 - organising and directing labour
 - dealing with performance issues
- preparation of renovation plans, recording and reporting renovation activities.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports turf facility or an environment that accurately represents workplace conditions on which to prepare and implement a turf renovation plan
- resources, equipment and materials:
 - turf renovation tools, machinery and equipment
 - fertiliser, ameliorants, top dressing materials
 - turf planting and propagation materials
 - measuring and layout equipment, including levels, tape measures, boning rods, laser level, dumpy level
- specifications:
 - workplace procedures and work instructions for turf area maintenance
 - access to workplace, national and international turf grass industry standards
- relationships:
 - work team and contractors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF505 Plan the establishment of sports turf playing surfaces

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to establish sports turf playing surfaces, develop a design for the site, its specifications and works procedures, planning processes involved in establishing turf in new constructions and major renovations of existing sports turf surfaces.

The unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCTRF505 Plan the establishment of sports turf playing surfaces

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, planned the establishment of a sports turf playing surface taking into consideration the soil profile, including:

- liaised with client to establish the scope of the turf establishment project
- assessed the hydrological, biophysical and chemical characteristics and their impact on turf establishment site and playing surface design
- assessed and evaluated drainage and irrigation requirements for sports turf playing surface
- established a site survey depicting key features, benchmarks, levels and services
- investigated and selected each of the following for inclusion in performance brief:
 - turf area construction technique suitable for client requirements and site characteristics
 - turf grass species and cultivars suitable for the playing surface
- identified conflicts with legislative and regulatory requirements, and proposed solutions to these
- identified environmental impacts of turf establishment and recommended actions for proposed works
- investigated and selected sports turf profile options
- developed a performance brief for a sports turf surface and presented it to client for approval
- sourced, tested and evaluated materials suitable for sports turf profile, including conducting the following tests:
 - saturated infiltration
 - porosity
 - volumetric moisture retention
 - bulk density
 - moisture release curve
 - particle size and distribution

- pH
- selected suitable materials for turf grass profile construction consistent with performance brief and industry best practice
- developed and designed a profile consistent with irrigation and drainage design requirements and performance brief
- documented turf establishment concept design and presented it to client for approval
- determined turf establishment procedures
- confirmed profile, irrigation and drainage concept designs are consistent with performance brief
- produced plans for the design of turf establishment project, including:
 - elevations and views consistent with industry standards
 - section drawings of sports turf profile
- prepared documentation to accompany the turf establishment plan, including:
 - schedule of works
 - details of construction
 - specifications for construction
 - list of materials
 - identified sub-contracted works
- prepared work procedures for turf establishment activities and practices
- prepared maintenance procedures for the turf establishment phase.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- establishing and maintaining sports turf playing surfaces, including:
 - construction procedures, turf species selection and cultural practices for sports turf playing surfaces
 - growth habits and cultural requirements of specific turf plant species and cultivars under a range of soil and environmental conditions
 - crop factor
 - readily available water estimates
- best practices in turf grass profile design, including:
 - United States Golf Association method
 - California method
 - national best practice
 - local practices
- irrigation, drainage and the interrelationship between soil, air, water and the physical structure of existing and manufactured soils and sports turf mixes
- considerations for establishment of type and depth of soil profiles, including:
 - retaining existing soil profile and infrastructure
 - remedial action on existing profile

- full renovation and replacement of soil profile
- sources of irrigation water, including:
 - volume and quality of water supply
 - relative cost
 - irrigation demand and specifications, including flow rate, pressure, water quality testing
- hydrological characteristics of soil profile, materials and tests for root zone profiles, including:
 - saturated infiltration rate and testing procedures
 - sub-soil stability and moisture content
 - perched water table
 - climate and rainfall, including the impact on soil moisture and growth rate
 - factors for establishing 'drainage design rate' (drainage modulus)
 - volumetric moisture retention and moisture release
 - precipitation rate
 - infiltration rate and depth of soil profile
- computations for soil profile design and specifications, including:
 - calculating area and volume
 - hydrological calculations, including flow rates, infiltration rate, precipitation rates and Hooghoudt's equation
 - costing and documenting materials
- biophysical environment of the turf establishment site, including:
 - microbial activity (pests, diseases, beneficial organisms)
 - competition with weeds
 - shade trees
- physical and chemical characteristics of the soil for turf grass establishment, including:
 - compaction, porosity and bulk density of profile materials
 - pH, salinity and nutrition and their respective standards for measuring
 - soil profiles, texture, soil type and particle size distribution
 - soil sampling techniques
 - field testing techniques for soils
- legislation and regulations relating to sports turf sites and turf establishment works, including national and international standards for sports turf surfaces
- maintenance requirements and practices for specific turf plant species and cultivars prior to and after initial establishment
- site evaluation techniques, including analysis of the condition of soils, plants and the site for turf establishment activities, including:
 - surveying principles and techniques
 - surveying services
 - basic surveying techniques and equipment for establishing main features, services and levels

- basic geospatial and digital surveying techniques
- basic plan drawing skills
- role of project briefs and client consultation processes in planning turf establishment works, including:
 - client liaison and negotiation skills
 - working with consultants and professional services
- preparation of plans, specifications and list of materials, including:
 - type and functions of drawings, including views, scale, dimensions and documentation
 - calculation of area, volume and rates
 - costing materials
 - documenting a list of materials
 - plan development, including manual and digital drawing principles
 - industry standards for drawing plans
- identifying resource implications, including:
 - availability and use of tools, equipment and machinery used in preparing new turf surfaces
 - turf establishment treatments and costs
 - delivery and management of raw materials during construction
 - accessing specialist consultants and professional services.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
 - access to a site suitable for establishing a sports turf surface
- resources, equipment and materials:
 - manual drawing equipment and digital drawing equipment and programs
 - computers and software for searching information and preparing documentation
 - reports, results and testing equipment for soil, plant tissue and biophysical characteristics of the site used in the performance evidence
 - site plans with levels for the site used in the performance evidence
 - meteorological data for the site used in the performance evidence
- specifications:
 - workplace documents, including a client brief, work instructions and turf area construction plans
 - local, national and international standards for turf grass establishment
- relationships:
 - client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCTRF506 Manage sports turf renovation programs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to assess a sports turf surface and develop programs and procedures to implement renovation activities appropriate to the sport and sporting regulations.

It applies to individuals who are responsible for the management of turf renovation programs, who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCTRF506 Manage sports turf renovation programs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared a renovation management program for at least three sports turf playing surfaces from the following list:

- a single hole for a golf course with tees and surrounds, rough, fairways and green
- a bowling green
- a cricket ground wicket surface and outfield
- a ball sport surface selected from one of Australian Rules football, soccer or rugby
- a horse race track
- a sport turf surface selected from one of lawn tennis, lacrosse, hockey, polo or croquet.

There must also be evidence that the individual has:

- inspected and assessed turf surface for condition
- assessed soil test results and determined corrective action
- assessed water quality tests and determined effect on turf growth
- assessed grass sward cover and identified species and over-sowing requirements
- reviewed historical records and practices and determined a turf renovation technique for current conditions and desired outcomes
- identified work health, safety and environmental hazards, assessed risks and identified control measures to include in plan
- documented a turf renovation plan and schedule of works
- produced and reviewed a cost budget for the project
- determined suitability and operational status of machinery and equipment and specified settings and adjustments
- identified and liaised with team and contractor for expected works
- prepared a schedule of works
- calculated materials and ordered goods, services and contractors required for the renovation
- prepared a post-renovation turf recovery maintenance program

- updated records and reported outcomes for renovation program
- reviewed program outcomes against plan, and recommended future adjustments.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- comparative health, safety and environmental implications of renovation activities, turf and soil treatments and waste disposal
- enterprise and industry standards for turf surface appearance and quality
- field measurement techniques, including infiltration rate, organic fines, hardness, traction, and surface smoothness
- impact of environment on turf recovery, including:
 - climatic conditions
 - soil temperature
 - moisture
- turf grass species and cultivars, including:
 - planting
 - care
 - renovation scheduling
- requirements of the turf's intended use, including intensity and scheduling
- soil physical and chemical properties for imported and existing soils
- specialist turf renovation principles and practices, including:
 - aeration
 - thatch removal
 - topdressing and dusting
 - over-sowing
 - application of soil ameliorants
 - removal of over-sown species
 - turf nutrition and plant growth regulators
- scheduling, program management and time management tools and Gantt charts
- developing and managing budgets, including:
 - direct costs
 - indirect costs
 - fixed or variable costs
- enterprise, national and international industry standards for sports turf surface appearance, performance and quality
- safe work practices and procedures applicable to renovation planned activities, including:
 - materials handling
 - equipment and operation
 - public and turf user safety

- purpose and methods of field measurement tests, including:
 - infiltration rate
 - organic fines
 - hardness
 - traction
 - surface smoothness
 - turf sward height
- identification and cultural requirements of turf grass species and cultivars, including:
 - planting
 - propagating
 - care and maintenance
 - renovation scheduling requirements
- specialist turf renovation practices to achieve high performance turf, including:
 - dethatching
 - topdressing
 - aerating
 - de-compaction
 - over-sowing
 - fertilising and soil conditioning
 - adjusting drainage and water holding
- establishing and estimating resource and material requirements for turf grass renovation programs, including:
 - financial and budgetary considerations
 - consumables
 - labour and contractor requirements and scheduling
- tools, machinery and equipment used in turf renovation, including:
 - log books and operation status
 - adjustments and settings of tynes and blades
 - types of equipment and their purpose
 - effective and safe use of tools and machinery
 - influences on the selection of tools, machinery and safety equipment
 - common pre-operational and post-operational checks of equipment
- managing techniques and working with a work team and contractors, including:
 - communicating with work team
 - organising and directing labour
 - dealing with performance issues
- preparation of renovation plans, recording and reporting renovation activities.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a sports turf facility or an environment that accurately represents workplace conditions with access to at least three sites suitable for sports turf surface renovation stipulated in the performance evidence
- resources, equipment and materials:
 - computer software for documenting plans and preparing schedules
 - reports, results and testing equipment for soil and plant tissue
- specifications:
 - workplace procedures and site plans for sports turf renovation
 - local, national and international standards for sports turf grass conditions
- relationships:
 - work team and contractor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCTRF507 Develop sports turf management programs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed a management program spanning a 12-month period for at least two sports turf surfaces from the following:

- a single hole for a golf course, including tee and surrounds, rough, fairways and green
- a bowling green
- a cricket surface, including the wicket surface and outfield
- a ball sport selected from one of Australian Rules football, soccer or rugby
- a horse race track
- a sport turf surface selected from one of lawn tennis, lacrosse, hockey, polo or croquet.

There must also be evidence that the individual has:

- liaised with key stakeholders and investigated technical requirements for managing a sports turf site
- determined the scope and objectives of management program and documented in a project brief
- researched turf culture, management principles and practices, health and safety and environmental implications of managing sports turf surface
- assessed availability and quality of resources to inform maintenance program design
- assessed the condition, characteristics and usage of existing turf surface to inform maintenance program design
- developed specifications and schedule of works using a Gantt chart
- developed a list of materials and financial budget for turf management program
- communicated turf management program to key stakeholders according to workplace procedures, including:
 - a digital written report
 - a presentation to a group of stakeholders
- reviewed and documented in an electronic format at least one turf management program against actual works

- communicated planned changes and works achieved by the management program with a verbal presentation of at least 15 minutes' duration
- recorded and reported activities and changes for maintenance program according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- management programs structure, design and development
- project management and scheduling, including:
 - project management tools and software
 - creating and using Gantt charts
- maintaining quality of sports turf, including:
 - impact of type of sport and frequency of usage on turf quality
 - turf varieties and characteristics
 - users' expectations
 - sport regulatory requirements
- cultural requirements of sports turf surfaces, including:
 - turf grass species, varieties and cultivars
 - soil type, characteristics, tests and interpreting results
 - nutritional requirements for different stages of turf development
 - impact of climate on turf grass species and varieties
 - sports turf maintenance requirements and techniques
 - turf establishment techniques and requirements
- sources of water supply and measures of quality, including:
 - testing and interpreting results
 - impact of water quality on soils and turf
 - advantages and disadvantages of sources of water
 - volume of water, irrigation performance and water budgets
- key stakeholders and their importance in developing a sports turf management plan, including:
 - clients and their needs
 - senior management and relevant authorisations
 - employees and their role in implementation
 - contractors and their role in implementation
- workplace health, safety and environmental constraints on management programs, including:
 - legislative requirements
 - storing and use of agricultural chemicals
 - accessing, storing and using hazardous materials

- safety procedures and practices
- strategies to communicate management programs to key stakeholders, including:
 - documentation
 - oral presentations
 - visual presentations
 - electronic presentations
- assets required for sports turf maintenance, including:
 - quality water supply
 - equipment and machinery
 - suitably trained human resources
 - materials and consumables
- record keeping and reporting procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a sports turf facility or an environment that accurately represents workplace conditions
 - access to two sporting venues specified in the performance evidence
- resources, equipment and materials:
 - internet access and computers for researching and documenting a sports turf management program
- specifications:
 - workplace procedures relevant to the development of sports turf management programs
 - sports turf industry standards
 - rules, regulations and standards for two of the sports specified in the performance evidence
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop a sports turf facility asset database	1.1 Identify sports turf physical resources and infrastructure 1.2 Categorise sports turf physical resources and infrastructure according to type and maintenance requirement 1.3 Record resources and infrastructure into sports turf facility assets

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	register according to workplace data management procedures
2. Determine maintenance requirements for turf facility assets	2.1 Establish program maintenance requirements and resources for turf facility assets according to workplace and manufacturer specifications 2.2 Establish program maintenance schedules for equipment and machinery assets according to manufacturer specifications 2.3 Purchase and store resources and consumables required for maintenance of turf facility assets
3. Schedule and monitor program of maintenance works	3.1 Establish the timing of maintenance activities for workplace facility assets according to workplace and manufacturer specifications 3.2 Document a maintenance schedule for turf facility assets 3.3 Develop, implement and monitor record keeping procedures for maintenance of turf facility assets 3.4 Communicate maintenance activities, schedules and recording procedures to stakeholders 3.5 Review safe work procedures associated with maintenance of turf facility assets 3.6 Ensure unserviceable sports turf facility assets are recorded on replacement schedule
4. Review maintenance works	4.1 Review maintenance schedules and update maintenance programs according to workplace timeframes 4.2 Assess and report status of turf facility assets and recommend upgrade, replacement or disposal

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret and evaluate manufacturer instructions to identify and synthesise critical information into programs to manage sports turf asset

Skill	Description
Writing	<ul style="list-style-type: none"> Use industry and other specialised terminology when documenting maintenance programs
Numeracy	<ul style="list-style-type: none"> Analyse and synthesise mathematical information from a broad range of materials to develop maintenance schedules and procedures

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, managed sports turf facility assets, including:

- identified sports turf facility assets, categorised them into type and maintenance requirements and recorded in workplace asset register or database
- determined maintenance requirements, resources and timing of maintenance and developed a schedule for sports turf facility, equipment and mechanical assets
- developed and implemented maintenance record keeping procedures for sports turf facility assets
- communicated sports turf facility assets maintenance schedule and procedures to stakeholders
- monitored maintenance work and safety procedures for sports turf facility assets
- reviewed and updated replacement programs and schedules
- assessed and reported status of sports turf facility assets, and recommended action when identified as unserviceable.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- management strategies for managing sports turf facility assets and effect on key stakeholders
- typical sports turf facility assets, including:
 - buildings and structures
 - tools, machinery and equipment
 - water supply, irrigation and drainage equipment
 - office equipment and resources

- gardens and surrounds
- fencing
- sporting hardware
- maintenance requirements of sports turf physical resources and infrastructure, including:
 - repairs
 - manufacturer specifications
 - regular service requirements and scheduling
 - standards and specifications
- recording asset management, including:
 - information to be recorded
 - proprietary software
 - paper or electronic databases
- scheduling and programming of sports turf maintenance works, including replacement plans and depreciation
- workplace health and safety procedures for overseeing asset maintenance programs, including:
 - safe operating procedures and practices
 - designating required personal safety equipment
- communication strategies and methods for informing stakeholders of maintenance programs
- procedures for reporting and recording maintenance activities.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - access to a sports turf facility or an environment that accurately represents workplace conditions with assets on which to develop a maintenance program
- specifications:
 - workplace procedures and instructions for managing sports turf facility
 - manufacturer maintenance instruction for assets
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWAT302 Monitor and operate water treatment processes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to plan, monitor, control, operate, measure, adjust and report water and waste water treatment performance and process control.

The unit applies to individuals who monitor and operate water treatment processes under broad direction, and take responsibility for their own work.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, food safety codes, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for AHCWAT302 Monitor and operate water treatment processes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has monitored and operated water treatment processes on at least two occasions, and has:

- applied workplace health and safety requirements applicable to monitoring and operating water treatment processes
- applied food safety codes, environmental and biosecurity practices and workplace procedures applicable to monitoring and operating water treatment processes
- used water sampling and testing techniques
- recorded and reported equipment and water treatment processes according to workplace procedures
- prepared and applied chemicals
- identified and reported process faults
- minimised environmental impacts of water treatment processes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements applicable to monitoring and operating water treatment processes
- food safety codes, environmental and biosecurity practices and workplace procedures applicable to monitoring and operating water treatment processes
- workplace recording and reporting procedures
- the principles and practices for monitoring and operating water treatment processes, including:
 - chemical dosing processes
 - environmental impacts of irrigation using water from any ground or underground source

- environmental issues associated with water treatment
- hazardous materials handling
- water quality monitoring methods and techniques
- water treatment and water filtration techniques.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - water treatment tools, equipment and machinery
 - water treatment testing equipment and chemicals
 - personal protective equipment applicable to monitoring and operating water treatment processes
 - principles and practices for monitoring and operating water treatment processes
- specifications:
 - workplace health and safety requirements applicable to monitoring and operating water treatment processes
 - food safety codes, environmental and biosecurity practices and workplace procedures applicable to monitoring and operating water treatment processes
 - workplace recording and reporting procedures
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWAT303 Access, extract and monitor water for irrigation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to identify and analyse common water holding licences and/or accounts that are used to access and extract irrigation water, including water attached to entitlements and/or water that is available on the temporary market. It also includes implementing water deliveries and end of season review. Irrigators may own and operate their own infrastructure (private diverters) and/or access water via infrastructure within an irrigation network.

The unit applies to workers who apply knowledge and skills to access and take delivery of water onto properties for agricultural use. They monitor the environment and use judgement to access water and follow up water extraction and use. The unit applies to irrigators and other agricultural workers that operate autonomously, coordinate activities, solve predictable and unpredictable problems and take responsibility for the success of their crops and/or livestock. It may also apply to the access and extraction of water for other sectors.

Commonwealth and state/territory and regional/local legislation, regulations and rules apply to the access, extraction and use of water. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Water (WAT)

Elements and Performance Criteria

Elements	Performance Criteria
----------	----------------------

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine regulatory requirements for water licences and/or access accounts	1.1 Confirm water sources available to the property to be irrigated and identify the authorities that manage and/or regulate water sources and delivery infrastructure 1.2 Identify water system to be used and associated regulations 1.3 Identify water licences and/or water account types that may be used to access and extract water for irrigation for the property 1.4 Identify regulations, conditions and/or other requirements related to holding and operating a water licence and/or a water account for the property 1.5 Identify, as a private diverter, water entitlements and allocations, water licence and/or water types accessible, infrastructure, delivery risks and yearly costs required to access water 1.6 Identify, as an irrigator in an irrigation network, water licence and/or water types accessible, temporary and/or annual water, delivery risks and yearly costs required to access water
2. Implement water deliveries as a private diverter	2.1 Confirm private diverter's water licence and access conditions related to water share (allocation), allocation account, reporting requirements, tradeable water, potential carryover, and where and/or how the water will be used 2.2 Check pump, water meter and other infrastructure are compliant with regulatory requirements and ready for operation 2.3 Monitor weather conditions and forecasts 2.4 Confirm delivery times and prepare to extract water during time window 2.5 Extract water within licence conditions 2.6 Check metering, complete reporting if required, and track overall extraction against licence conditions 2.7 Monitor water account balance and seasonal allocation announcements and ensure compliance with extraction limits 2.8 Protect pumps if required
3. Implement water deliveries as part of an irrigation network	3.1 Confirm water extraction conditions, related to water share (entitlement and/or allocation), allocation account, reporting requirements, allowable tradeable water and potential carryover, and where and/or how the water will be used 3.2 Confirm there is sufficient water in account to place order, and source additional water if required 3.3 Monitor weather conditions and forecasts

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	3.4 Monitor lead times and place order for water 3.5 Check meter and other water receipt infrastructure is ready for operation 3.6 Confirm delivery times and prepare to extract water during time window 3.7 Extract water according to irrigation network conditions 3.8 Check metering, complete reporting if required and track overall extraction against account conditions 3.9 Confirm and complete ongoing reporting requirements
4. Conduct end of season review and commence preparation for next season	4.1 Compare actual water delivered to water ordered 4.2 Complete water delivery process confirming shut off and final automated procedures 4.3 Identify water usage trends for current season 4.4 Conduct equipment and infrastructure checks and maintenance 4.5 Complete final regulatory reporting as required 4.6 Complete end of year water balance, including any carryover

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret regulations and rules related to water trading
Writing	<ul style="list-style-type: none"> Record and report information accurately using appropriate regulatory and industry terminology
Oral communication	<ul style="list-style-type: none"> Use open and closed questions to gather information
Numeracy	<ul style="list-style-type: none"> Measure and calculate area, volume, percentage, ratio and price per megalitre (ML) Use appropriate terminology to describe water volumes, including kilolitres (KL), megalitres (ML) and gigalitres (GL) Identify and interpret trends from water market data including

Assessment Requirements for AHCWAT303 Access, extract and monitor water for irrigation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has undertaken the processes required to order and take delivery of at least three separate parcels of water for a specific property, either as private diverter or as part of an irrigation network. In doing so, the individual must have:

- confirmed the licence and/or water account conditions, including access conditions and penalties that may apply
- identified total water available under the licence and/or account
- confirmed and completed internal and external reporting requirements
- completed an end of year water balance and determined carryover available

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of regulations and conditions that apply to irrigation water extracted and used including:
 - water access licence
 - water use approval
 - works approval
 - delivery/extraction share
- key features of water markets and how they function, including:
 - permanent or entitlement trade
 - temporary or allocation trade
 - key market participants including irrigators, environmental water holders and regulators
 - conditions on market participants

- functions and compliance powers of federal/state/territory and regional water authorities or private infrastructure operators that apply to water extracted and used
- cost and benefits of accessing and extracting irrigation water as a private diverter
- costs and benefits of accessing and extracting irrigation water as an account holder with an irrigation network
- visual and operational checks of water meters, pumps and water delivery infrastructure
- functions and operations of appropriate water registers that apply to the jurisdiction being irrigated
- water use licences and water trade restrictions that apply to water extracted and used
- key features of water entitlements and water allocations, including seasonal variations
- trade restrictions related to water licence and/or water account, including carryover water and inter-valley trade cap requirements
- types and classes of water available in local water market, and their access conditions
- risks associated with water orders and delivery
- lead time under a range of water availability and deliverability scenarios
- water products available in local water market
- key considerations when monitoring weather and weather forecasts
- sources of information on allocation, allocation announcements and market opportunities
- key end of season dates, including dates for water delivery, extraction, carryover, and annual water trading
- end of year water balance, including any carryover.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital technologies required to complete the tasks specified in the performance evidence
 - access to property specified in the performance evidence and/or information about the property required to successfully undertake the performance evidence as a simulated scenario
 - access to water supplier metering and extraction rules and requirements
- specifications:
 - access to water licence or water account information required to complete tasks in the performance evidence

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWAT503 Manage water systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to determine the feasibility of using or up-grading an irrigation system, install or maintain an irrigation or drainage system, monitor and assess water inputs, irrigation system and plant response and evaluate irrigation system performance.

The unit applies to individuals who apply specialised skills and knowledge to the management of water systems, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess soil and water resources for crop and plant type	1.1 Identify suitability of soil and water resources for irrigation 1.2 Determine range of crops and plant types that could be grown in soil utilising available water resources

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Select crop and/or plant type based on assessment
2. Determine the feasibility of using or up-gradings irrigation system	<p>2.1 Assess water resources and drainage implications to determine suitability for irrigation</p> <p>2.2 Determine water quality and treatment requirements</p> <p>2.3 Determine water requirements and most suitable application systems for each crop and plant type and area, and for each soil type</p> <p>2.4 Determine other water requirements, such as climate control</p> <p>2.5 Determine drainage requirements in relation to each soil and crop and plant type and type of irrigation system</p> <p>2.6 Assess performance data, audit reports, environmental and workplace health and safety data for existing systems</p> <p>2.7 Obtain information from irrigation specialists on all relevant aspects of irrigation design</p> <p>2.8 Assess and cost available irrigation system types and components and make a decision on the particular system to be used or upgrades to existing system</p>
3. Install or maintain an irrigation or drainage system	<p>3.1 Determine and acquire materials and equipment making up the system</p> <p>3.2 Install irrigation system using advice, as necessary, from irrigation specialists</p> <p>3.3 Check that irrigation and drainage systems are supervised to ensure there are no leaks or blockages</p> <p>3.4 Confirm that the water is being evenly distributed and that the drainage is effective and the system is in good working order</p>
4. Assess the need for water inputs	<p>4.1 Assess the need for water inputs at critical growth stages</p> <p>4.2 Consider crop value and induce appropriate water regimes including frost protection where appropriate</p> <p>4.3 Utilise soil moisture monitoring data</p> <p>4.4 Consider weather forecast, seasonal weather outlook, water allocations and water quality</p> <p>4.5 Consider energy costs in water application timing</p>
5. Monitor irrigation system and plant	<p>5.1 Identify volume and quality of water flow</p> <p>5.2 Plan scheduled irrigation system maintenance work to ensure</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
response	minimised disruption to watering activities 5.3 Monitor plant response to irrigation 5.4 Modify irrigation scheduling to minimise water wastage and maximise outcomes 5.5 Record irrigation system water usage according to workplace procedures
6. Evaluate irrigation system performance	6.1 Determine and value plant growth, crop quality and yield from irrigation 6.2 Calculate the cost of irrigation 6.3 Identify and minimise poor water usage practices 6.4 Determine the cost benefit of irrigation and compare with alternative systems and approaches

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding irrigation system design Identify and interpret workplace procedures regarding irrigation system use
Oral communication	<ul style="list-style-type: none"> Initiate discussions with suppliers, using clear language to communicate irrigation requirements
Numeracy	<ul style="list-style-type: none"> Access and analyse performance data, audit reports, environmental and workplace health and safety data for existing irrigation systems Calculate the cost of irrigation and determine the cost benefit of irrigation and alternative systems and approaches
Navigate the world of work	<ul style="list-style-type: none"> Identify and describe own workplace requirements associated with own role and area of responsibility

Assessment Requirements for AHCWAT503 Manage water systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed water systems on at least one occasion and has:

- assessed soil and water resources
- analysed performance and audit data
- assessed environmental and workplace health and safety data
- monitored and assessed water inputs
- monitored and evaluated irrigation system performance
- strategically managed irrigated production systems, including:
 - considered energy costs
 - minimised water wastage
 - prevented poor water usage practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of water systems management, including:
 - cost or benefit analysis
 - workplace policies and procedures
 - environmental impacts of irrigation, using water from any ground or underground source
 - plant requirements
 - natural water system retention and storage
 - soil moisture storage
 - use of yeomans keyline or swales
 - assessing water inputs

- strategies for reducing water evaporation and transpiration
- water quality maintenance.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - performance data, audit reports, environmental and workplace health and safety data for existing systems
 - alternative system information
- specifications:
 - irrigation system design information
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has designed a water treatment system on at least one occasion, and has:

- identified system design requirements
- documented construction specifications, performance indicators and design calculations
- collected and analysed information for the design of a water treatment system
- identified adverse environmental impacts of water treatment activities, and documented appropriate remedial actions
- calculated and documented capital and operating expense budgets
- developed water treatment system specifications.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of water treatment system design, including:
 - automatic control and monitoring systems
 - budgeting, contractual development and obligations
 - design processes
 - developments in water treatment technology
 - environmental impacts of water treatment
 - environmental protection agency regulations
 - waste management and environmental issues
- workplace health and safety and environmental protection legislation and regulations, codes of practice and workplace policies and procedures relevant to water treatment system design
- water treatment systems, including pumping and power systems.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - water treatment system site
 - site information and data relevant to water treatment system design
- specifications:
 - local, state and federal workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace requirements applicable to water treatment system design
- relationships:
 - local authorities, appropriately experienced and qualified person
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWAT505 Purchase and sell temporary water for irrigated agriculture and horticulture

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to navigate water markets, purchase and sell water products for irrigated agriculture and horticulture

The unit applies to individuals that apply specialised knowledge, skills and judgement to navigate complex water regulations and markets, research and analyse information, monitor change and develop strategies to purchase and sell water. The unit may be used by agricultural workers, including those that purchase water to grow permanent or annual crops and/or livestock. It may also apply to the purchase and sale of water for other sectors.

Commonwealth and state/territory and regional/local legislation, regulations and rules apply to the purchase, sale and use of water. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Water (WAT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Undertake preliminary research	1.1 Identify the agriculture or horticulture activity and cyclical and/or seasonal water requirements 1.2 Identify rules, risks and limitations that have potential to affect water market 1.3 Determine volume of water, including transmission losses and timing of watering to successfully undertake the agriculture or horticulture activity 1.4 Identify existing water reserves, water allocations and determine additional water to be purchased 1.5 Identify water product required 1.6 Identify eligibility and conditions to purchase water according to regulatory requirements 1.7 Monitor water market allocation announcements, product releases, pricing and other announcements that may affect water purchase.
2. Prepare for water purchase	2.1 Research water market and identify water products that are suitable and available in trading areas 2.2 Undertake risk and cost benefit analyses to determine return on investment associated with proposed water purchase 2.3 Develop strategy for purchasing water, and sequencing water acquisition if required 2.4 Determine quantity, type and price range of water product required 2.5 Identify platforms, water brokers and other trading options to purchase water 2.6 Identify and calculate fees, commissions and other costs related to water purchase 2.7 Seek legal, financial, agronomical and other specific advice related to proposed water purchase as required 2.8 Monitor water market for product releases, pricing and other variables that affect water purchase
3. Purchase water	3.1 Select and confirm water product chosen is available, within budgeted price range, and meets specific regulatory requirements for buyer's proposed use 3.2 Select water trading platform and/or broker or method to purchase water, and apply to purchase and use water if required

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>3.3 Check and confirm terms and conditions for sale</p> <p>3.4 Complete water transaction, payment and other regulatory reporting requirements, including options for financing</p> <p>3.5 Confirm water transaction has been lodged with regulatory authority</p> <p>3.6 Undertake ongoing requirements that apply to the water trade, if required</p>
4. Determine water available for sale	<p>4.1 Check balance available for sale</p> <p>4.2 Research current season water outlook and identify possible allocation for new season</p> <p>4.3 Identify water pricing and availability trends</p> <p>4.4 Undertake cost benefit analysis to determine whether to carryover or sell water</p> <p>4.5 Decide water product and quantity proposed for sale and/or retention</p>
5. Prepare to sell water	<p>5.1 Identify conditions to sell water according to regulatory requirements and confirm water quantity eligible for sale</p> <p>5.2 Develop strategy for selling water, and sequencing water sales if required</p> <p>5.3 Undertake risk analysis associated with proposed water sale</p> <p>5.4 Determine quantity, class and type and price range of water product to be sold</p> <p>5.5 Identify platforms, water brokers and other trading options to sell water</p> <p>5.6 Identify and calculate fees, commissions and other costs related to water sale</p> <p>5.7 Seek legal, financial and other relevant advice related to proposed sale water if required</p> <p>5.8 Monitor water market for product releases, pricing and other variables that affect water purchase</p>
6. Sell water	<p>6.1 Confirm water product offered for sale meets regulatory requirements and is priced competitively</p> <p>6.2 Check and confirm terms and conditions for contract of sale</p> <p>6.3 Commit to sell water, select water trading platform and/or broker</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	or other method to sell water, and list water for sale 6.4 Accept suitable purchase offer, complete water transaction, confirm payment and other regulatory reporting requirements 6.5 Confirm water transaction has been lodged with regulatory authority 6.6 Undertake ongoing requirements that apply to the water trade, if required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Skill
Reading	<ul style="list-style-type: none"> Interpret regulations and rules related to water trading Identify critical information in water market reports
Writing	<ul style="list-style-type: none"> Record and report information and data accurately using appropriate regulatory and industry terminology
Oral communication	<ul style="list-style-type: none"> Use open and closed questions to gather information Use summarising and paraphrasing to confirm information and messages
Numeracy	<ul style="list-style-type: none"> Measure and calculate area, volume, percentage, ratio and price per megalitre (ML) Use appropriate terminology to describe water volumes, including kilolitres (KL), megalitres (ML) and gigalitres (GL)

Assessment Requirements for AHCWAT505 Purchase and sell temporary water for irrigated agriculture and horticulture

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has undertaken the processes required to purchase at least two different temporary water products. For each purchase, the individual must have:

- calculated water requirements for the plant or livestock production period
- identified at least two different water trading areas or zones that can supply the required water, where possible
- identified regulatory requirements and trading rules related to the purchase of water products
- completed a cost benefit analysis, including return on investment for the water purchase
- developed a strategy to purchase the water, including options for financing
- determined criteria for selection of water trading platform and water broker
- determined risks and benefits of trading without using a water trading platform or broker
- used digital technologies to research water products
- produced a report for each water purchase that includes:
 - purpose for the water purchase
 - summary of applicable regulations
 - risk analysis
 - financial planning
 - purchasing strategy, including a rationale for timing of the purchase
 - water product mix
 - key sources of information for water products.

There must also be evidence that the individual has undertaken the processes required to sell at least two different temporary water products. For each sale, the individual must have:

- determined the volume of water for sale
- identified water for retention and water proposed for sale
- identified regulatory requirements and trading rules related to the sale of water

- completed a cost benefit analysis for the water sale
- developed a strategy to sell the water
- determined criteria for selection of water trading platform and water broker
- used digital technologies to research water products
- produced a report for each water sale that includes:
 - determination of water quantity and type proposed for sale
 - risk analysis
 - financial planning
 - selling strategy, including a rationale for timing of the purchase
 - water product mix
 - key sources of information for water products.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of regulations that apply to the transactions being undertaken
- functions and compliance powers of federal, state and regional water authorities that apply to water transactions being undertaken
- functions and operations of state water registers
- water use licences and water trade restrictions that apply to local area
- key features of water entitlements and water allocations, including seasonal variations
- key principles of carryover water
- water products, including types and classes, available in local water market and other markets
- features and benefits of temporary water trading
- risk analysis and risk management strategies related to trading water, including soil carbon, long range weather forecast and long-term water allocation
- when and how to seek legal and financial advice related to water trades
- water broker and water trading platforms functions, benefits and costs
- water trading rules and guidelines provided by local water authorities
- information on allocation, allocation announcements and market opportunities
- historical data and analysis on long-term reliability of different entitlement types or water products
- considerations for developing a strategy for trading water, including:
 - total volume
 - water losses during transmission
 - timing and sequencing water sale
 - legal advice
 - financing
 - production requirements
 - weather forecasts

- water allocation seasonal forecasts.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital technologies required to complete the tasks specified in the performance evidence
 - historical data related to irrigated agriculture and/or horticulture specified in the performance evidence
 - access to water trading platform and/or documentation required to trade water without use of a water trading platform or broker
- specifications:
 - access to regulations and trading rules that apply to the water purchases and sales specified in the performance evidence

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWAT506 Identify carryover water or continuous accounting

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to evaluate options to determine what to do with water that may be carried over from one year to another, including sale or storage. In Queensland, carryover may also be referred to as continuous accounting.

In this unit the terms 'carryover water' and 'continuous accounting' are used interchangeably to describe an arrangement which allows a water access right holder to retain water allocations not taken in a water accounting period for possible take in the next water accounting period. Carryover may also include parking excess water.

The unit applies to individuals that apply specialised knowledge, skills and judgement to navigate complex water regulations and markets, research and analyse information, monitor change and evaluate options to manage their water holdings. The unit may be used by agricultural workers, including those that grow plants or livestock. It may also apply to people that trade water for other sectors.

Commonwealth and state/territory and regional/local legislation, regulations and rules apply to the purchase, sale and use of water. Requirements vary between jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Water (WAT)

Elements and Performance Criteria

Elements	Performance Criteria
----------	----------------------

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine excess water available at the end of water year	<p>1.1 Confirm entitlement and current water holding account</p> <p>1.2 Determine regulatory limits on amount of water that can be carried over</p> <p>1.3 Determine quantities of water to carryover, sell or park</p>
2. Consider options for water that may be sold or carried over or parked	<p>2.1 Monitor long term weather and water allocation announcements, and other announcements that may affect water trading decisions</p> <p>2.2 Research storage facilities where carryover or continuous accounting water may be stored</p> <p>2.3 Research trading zones where water may be sold prior to end of water year</p> <p>2.4 Research regulations and rules that apply to storing and/or selling carryover or continuous accounting water</p> <p>2.5 Determine costs of storing water</p> <p>2.6 Undertake cost benefit analysis and risk analysis related to selling, buying or retaining water as carryover or continuous accounting</p> <p>2.7 Identify water loss risks associated with having water in account that is not carried over, sold or parked at end of water year</p> <p>2.8 Decide quantity of water to store as carryover or continuous accounting water</p>
3. Find external space to park carryover water	<p>3.1 Identify platforms, water brokers and other trading options to facilitate the holding of water as carryover or continuous accounting</p> <p>3.2 Select person or organisation that has capacity to hold water as carryover or continuous accounting, negotiate and agree costs of storage and retrieval of water</p> <p>3.3 Select water trading platform and/or engage water broker to facilitate carryover water transaction if required</p> <p>3.4 Check and confirm terms and conditions of carryover water or continuous accounting contract.</p> <p>3.5 Commit to carryover water or continuous accounting transaction and complete transaction using appropriate water broker, trading platform or other method</p> <p>3.6 Undertake ongoing requirements that apply to transaction, if required</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
4. Rent out unoccupied storage space for parking water	4.1 Assess parking space available as part of water entitlement and potential risks of leasing the parking space 4.2 Research market and determine pricing of parking space 4.3 Check formal and informal leasing opportunities 4.4 Negotiate rental or lease of space and complete documentation 4.5 Identify ongoing compliance requirements of agreement

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret, regulations and rules related to water trading Identify critical information in water market reports
Writing	<ul style="list-style-type: none"> Record and report information and data accurately using appropriate regulatory and industry terminology
Oral communication	<ul style="list-style-type: none"> Use open and closed questions to gather information Use summarising and paraphrasing to confirm information and messages
Numeracy	<ul style="list-style-type: none"> Measure and calculate area, volume, percentage, ratio and price per megalitre (ML) Use appropriate terminology to describe water volumes, including Kilotres (KL) megalitres (ML) and gigitalres (GL)

Assessment Requirements for AHCWAT506 Identify carryover water or continuous accounting

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has undertaken the processes to complete at least two different carryover or continuous accounting water transactions. One transaction is to be for an average year, and the other for either a dry or wet year. For each transaction, the individual must have:

- determined carryover or continuous accounting water requirement for the upcoming water year
- identified water for retention and water proposed for sale
- confirmed regulatory requirements and rules related to proposed transactions
- completed a cost benefit analysis for water transaction
- purchased more carryover or continuous accounting space
- used digital technologies to research water products
- produced a report for each water transaction that includes:
 - determination of carryover or continuous accounting quantity and type proposed for transaction
 - cost benefit analysis
 - risk analysis
 - key sources of information for water products

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of regulations that apply to carryover or continuous accounting within a water market
- functions and compliance powers of water authorities that apply to carryover or continuous accounting within a water market

- limitations of licence types related to carryover or continuous accounting within a water market
- water use licences and water trade restrictions that apply to local area
- key features of water entitlements and water allocations, including seasonal variations
- key principles of carry over water or continuous accounting
- types and classes of water available in local and other markets applicable to carryover or continuous accounting
- features and benefits of carryover or continuous accounting
- key considerations when undertaking cost benefit analysis for carryover or continuous accounting
- risk analysis related to carryover or continuous accounting including long range weather forecast, soil carbon, and long-term water allocation
- water trading rules and guidelines related to carryover or continuous accounting for a specific property
- key sources of current information on allocation, allocation announcements, water products and market opportunities
- common digital technologies used to research water market products, including accessing websites using personal computers and mobile devices
- historical data and analysis on long-term reliability of different entitlement types or water products
- considerations when developing a strategy for carryover water or continuous accounting options, including:
 - total volume
 - timing and/or sequencing water sale
 - legal advice
 - securing water for following season
 - financing options
 - water allocation seasonal forecasts
 - carryover access conditions or scheme rules as determined by legislation

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital technologies required to complete the tasks specified in the performance evidence
 - historical data related to water trading and seasonal water allocations
 - access to water trading platform and/or documentation required to trade water without an intermediary
- specifications:

- access to regulations and trading rules that apply to the water transactions specified in the performance evidence

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWHS102 Work safely

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to work safely, including identifying work safety issues, observing safe work practices, participating in workplace safety meetings and following incident emergency response procedures.

The unit applies to individuals who are required to work safely while working alongside a supervisor, exercising limited autonomy within established and well-known parameters. They identify and seek help with simple problems.

NOTES:

1. The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the *model WHS laws* have not been implemented, registered training organisations (RTOs) are advised to contextualise this unit of competency by referring to existing WHS legislative requirements.

2. The *model WHS laws* include the model WHS Act, model WHS Regulations and model WHS Codes of Practice. See Safe Work Australia for further information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCWHS102 Work safely

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has completed a work task safely on at least one occasion, and has:

- complied with workplace health and safety practices
- followed workplace procedures for health and safety hazard identification and reporting
- followed workplace safety signs, symbols and work instructions
- fitted and used personal protective equipment (PPE) relevant to work task
- participated in workplace safety meetings
- followed workplace incident and emergency response procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- employee and employer workplace health and safety duty of care responsibilities
- workplace safety signs, symbols and work instructions relevant to area of work
- hazards and risks in the industry sector
- workplace procedures relating to hazards, fires, emergencies, accidents and risk control
- workplace incident and emergency response procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - PPE applicable to work task

- workplace health and safety procedures applicable to work task
- workplace safety signs, symbols and work instructions relevant to work task
- workplace incident and emergency response procedures
- relationships:
 - work team and supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWHS201 Participate in work health and safety processes

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to recognise and report hazards in the workplace. It also describes the skills and knowledge required to follow workplace safety procedures and directions.

This unit is applicable to supervised workers who are required to follow work health and safety policies and procedures.

All work must be carried out in accordance with enterprise procedures, recommended safe practices and the relevant legislation.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They identify and provide solutions to a limited range of predictable problems.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) and occupational safety and health (OSH) are equivalent and generally either can be used in the workplace. In jurisdictions where the Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State and Territory OHS legislative requirements.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCWHS201 Participate in work health and safety processes

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- follow workplace procedures for hazard identification and risk control
- read safety warning signs
- observe safety during work operations
- follow workplace procedures for dealing with accidents, fire and emergencies within the scope of responsibilities and competencies
- participate in arrangements for maintaining the health and safety of all people in the workplace
- recognise caution or hazard signs and symbols
- identify tasks or information from labels, manuals or written instructions
- record information accurately or verbally reporting information

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant work health and safety legislation, codes of practice and enterprise policies
- employee and employer work health and safety responsibilities
- enterprise procedures relating to hazards, fires, emergencies, accidents and risk control
- relevant machinery and equipment operator manuals
- work health and safety signs and symbols relevant to area of work
- hazards and risks in the industry sector

Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has participated in workplace health and safety processes on at least one occasion and has:

- followed workplace procedures for health and safety hazard identification, reporting and risk control
- read and followed workplace notices and workplace safety signs, symbols, labels and work instructions
- followed workplace procedures for dealing with accidents, fire and emergencies within the scope of responsibilities
- recorded information accurately or verbally reported information
- followed safe practices during work operations
- fitted and used personal protective equipment (PPE) relevant to area of work
- participated in arrangements for maintaining the workplace health and safety of all people in the workplace.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks in the industry sector
- workplace notices, workplace safety signs, symbols, labels and work instructions relevant to area of work
- workplace health and safety legislation, regulations, codes of practice and workplace procedures relevant to area of work
- worker and employer workplace health and safety responsibilities
- workplace procedures relating to hazards, fires, emergencies, accidents and risk control.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - PPE applicable to area of work
 - workplace notices, workplace safety signs, symbols, labels and work instructions relevant to area of work
- specifications:
 - workplace health and safety legislation, regulations, codes of practice and workplace procedures relevant to area of work
- relationships:
 - designated personnel.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWHS301 Contribute to work health and safety processes

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to carry out enterprise work health and safety policies and procedures.

This unit is applicable to individuals. They typically work within clear reporting lines and procedures.

All work must be carried out to comply with workplace procedures and work health and safety and other relevant legislation and codes.

This unit applies to individuals who actively participate in the workplace safety system and work under broad direction and take responsibility for their own work. They work in a range of known contexts and complete routine activities.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) and occupational safety and health (OSH) are equivalent and generally either can be used in the workplace. In jurisdictions where the Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State and Territory OHS legislative requirements.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Work Health and Safety (WHS)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Apply work health and safety policies and procedures	1.1 Make information regarding organisation work health and safety policies and procedures readily accessible to all employees 1.2 Identify and carry out employee responsibilities prescribed in work health and safety legislation, codes of practice and national standards 1.3 Identify and carry out employee responsibilities prescribed in enterprise work health and safety policies, including emergency procedures
2. Assist in workplace hazard identification and risk control	2.1 Provide and explain information regarding hazard identification and risk control regularly 2.2 Recognise hazards in the workplace and report them to designated personnel 2.3 Assess risks associated with identified hazards 2.4 Follow workplace procedures, safety signs and work instructions for controlling risks accurately 2.5 Recognise risks to fellow workers, other people and animals and take action to eliminate or reduce them 2.6 Undertake or provide safety training where required
3. Observe safe practices during work operations	3.1 Identify, use, maintain and store Personal Protective Equipment (PPE) required for work 3.2 Read and follow safety warning signs 3.3 Undertake basic safety checks on all machinery and equipment before operation 3.4 Identify hazards associated with handling hazardous substances, assess risks and implement risk controls in accordance with enterprise procedures and work health and safety requirements 3.5 Identify noise hazards, notify relevant personnel, assess associated risks and implement controls in accordance with work health and safety requirements 3.6 Assess manual handling risks prior to commencing activity and use safe lifting practices 3.7 Access information on work health and safety for specific work operations

Element	Performance criteria
4. Participate in arrangements for maintaining the health and safety of all people in the workplace	4.1 Contribute to ongoing monitoring and reporting of all aspects of workplace safety 4.2 Raise work health and safety issues with designated personnel in accordance with enterprise procedures and relevant work health and safety legislation 4.3 Make contributions to participative arrangements in the workplace within the scope of responsibilities and competencies 4.4 Make suggestions to assist the development of effective solutions and control the level of risk associated with enterprise activities

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for AHCWHS301 Contribute to work health and safety processes

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply work health and safety policies and procedures
- apply workplace procedures for hazard identification and risk control
- read safety warning signs
- participate in arrangements for maintaining the health and safety of all people in the workplace
- work safely during work operations
- record incidents in the work area in accordance with relevant work health and safety legal requirements
- observe and direct others to follow safe working operations
- communicate safety information within and to work team

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant employee and employer responsibilities under work health and safety legislation and relevant national and industry codes of practice
- enterprise procedures relating to hazards, fires, emergencies, accidents, and risk control
- work health and safety signs and symbols relevant to work area
- hazard identification and risk assessment process
- manual handling principles and procedures
- safe systems of work

Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has contributed to workplace health and safety processes on at least one occasion and has:

- applied workplace health and safety policies and procedures, including:
 - procedures for hazard identification and risk control
 - workplace safety signs, symbols, labels and work instructions
- assisted co-workers in following workplace health and safety procedures
- communicated safety information within and to work team
- worked safely during work operations
- participated in arrangements for maintaining the workplace health and safety of all people in the workplace
- recorded incidents in the work area according to relevant workplace health and safety legislative requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety policies and procedures, including emergency procedures relating to hazards, fires, emergencies, accidents, and risk control
- hazard identification and risk management process, including:
 - risk assessment
 - risk matrix
 - hierarchy of controls
- workplace health and safety communication, recording and reporting procedures
- workplace safety signs, symbols, labels and work instructions relevant to area of work

- relevant worker and employer responsibilities under workplace health and safety legislation, regulations and codes of practice.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - PPE applicable to area of work
 - workplace safety signs, symbols, labels and work instructions relevant to area of work
- specifications:

Work Health and Safety (WHS)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Provide information about work health and safety	1.1 Explain, with accuracy and clarity, relevant provisions of work health and safety legislation and Codes of Practice to the work group 1.2 Provide information on enterprise work health and safety policies, procedures and programs in a readily accessible manner, and accurately and clearly explain the information to the work group 1.3 Regularly provide, and accurately and clearly explain, information about identified hazards, the outcomes of risk assessment and control procedures
2. Facilitate the participation of workers in work health and safety observance and decision-making	2.1 Implement and monitor enterprise procedures for consultation on work health and safety issues to ensure that all members of the work group have the opportunity to contribute 2.2 Describe, with clarity, procedures used by workers to report work health and safety hazards, assess risks, and take action to control risks, to the work group 2.3 Deal with and resolve issues raised through consultation or refer them to the appropriate personnel 2.4 Communicate, with promptness, the outcomes of consultation over work health and safety issues to the work group
3. Implement procedures for identifying hazards and assessing and controlling risks	3.1 Identify existing and potential hazards and report them to ensure the implementation of adequate risk assessment and effective control measures 3.2 Check that the work group implements procedures to control work health and safety risks and undertakes regular monitoring to ensure ongoing adherence and effectiveness of risk control 3.3 Identify inadequacies in existing risk control measures in accordance with the hierarchy of control and report inadequacies to designated personnel 3.4 Identify and report inadequacies in allocation of resources to management to ensure safe work practice 3.5 Monitor and regularly report existing risk control measures in accordance with workplace procedures
4. Implement workplace procedures for dealing with emergencies and hazardous events	4.1 Implement workplace procedures for dealing with work health and safety emergencies, where necessary, to ensure prompt and effective control action 4.2 Report work health and safety emergencies in accordance with established enterprise procedures 4.3 Implement control measures based on the hierarchy of control to

Element	Performance criteria
	prevent recurrence and minimise the risk of emergencies and hazardous events, or alternatively, refer measures to designated personnel for implementation
5. Implement and monitor enterprise procedures for providing work health and safety training	5.1 Identify work health and safety induction and training needs accurately, specifying the gaps between the required work health and safety competencies and those held by the work group 5.2 Make arrangements for meeting identified work health and safety training needs in both on and off-the-job training programs in consultation with relevant parties
6. Implement and monitor enterprise procedures for maintaining work health and safety records	6.1 Accurately and legibly complete work health and safety records for work area 6.2 Use aggregate information from work health and safety records to identify hazards and monitor risk control procedures within the work area in accordance with own responsibilities

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for AHCWHS401 Maintain work health and safety processes

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- facilitate the participation of workers in work health and safety observance and decision-making
- establish procedures to document the identification of hazards and assessment of risk covering the operations of the enterprise
- identify work health and safety hazards and conducting the risk assessment process
- implement enterprise emergency procedures and organise safety drills
- provide staff with work health and safety training in risk assessment, and other areas nominated by risk controls
- respond to emergencies and work health and safety issues in an appropriate and timely manner
- facilitate meetings and document actions to consider work health and safety issues in the workplace
- distribute information concerning work health and safety processes and requirements to staff
- maintain work health and safety records

Knowledge Evidence

The candidate must demonstrate knowledge of:

- hazards in the workplace
- relevant work health and safety legislation and Codes of Practice
- hazard identification and risk control processes
- the hierarchy of work health and safety risk control and its implementation for hazards in land-based industries

- work health and safety training
- communication and engagement strategies with workers
- relevant enterprise management systems and procedures
- accident and incident investigation
- enterprise emergency procedures
- participative work practices

Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHCWHS402 Maintain workplace health and safety processes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has maintained workplace health and safety processes on at least one occasion and has:

- distributed information concerning workplace health and safety processes and requirements to work group
- facilitated the participation of workers in workplace health and safety observance and decision-making
- consulted with work groups and documented actions to consider workplace health and safety issues in the workplace
- identified workplace health and safety hazards and conducted risk assessment process
- implemented procedures to document the identification of hazards and assessment of risk covering the operations of the workplace
- responded to emergencies and workplace health and safety issues
- implemented workplace emergency procedures and organised a safety drill
- facilitated workplace health and safety training
- maintained workplace health and safety records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relevant workplace health and safety legislation, regulations and codes of practice
- workplace health and safety policies, procedures and programs
- relevant workplace management systems and procedures
- workplace health and safety hazard identification and risk control processes
- communication and engagement strategies with work groups
- consultation practices

- workplace health and safety hazards in the workplace
- the hierarchy of workplace health and safety risk control and its implementation for hazard management
- accident and incident investigation
- workplace emergency procedures
- workplace health and safety training.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - workplace health and safety policies, procedures and programs
- specifications:
 - workplace health and safety legislation, regulations, codes of practice and workplace procedures
- relationships:
 - work group, designated personnel and management representatives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWHS503 Manage workplace health and safety processes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to manage workplace health and safety process, including developing workplace health and safety policies and procedures that demonstrate workplace commitment to workplace health and safety.

The unit applies to individuals who apply specialist skills and knowledge to manage workplace health and safety processes, take responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements.

NOTES:

1. The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the *model WHS Laws* have not been implemented, registered training organisations (RTOs) are advised to contextualise this unit of competency by referring to existing WHS legislative requirements.

2. The *model WHS laws* include the model WHS Act, model WHS Regulations and model WHS Codes of Practice. See Safe Work Australia for further information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCWHS503 Manage workplace health and safety processes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed workplace health and safety processes for at least one workplace, including:

- reviewed, updated or developed workplace health and safety plan and program including policies and procedures
- established and maintained arrangements that enabled all employees to be involved in the management of workplace health and safety
- integrated risk management processes for identifying and controlling hazards and risks, and dealing with emergency events
- established and maintained a workplace health and safety induction and training program
- established and maintained a system for workplace health and safety records
- evaluated the workplace health and safety system and related policies, procedures and programs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- all relevant workplace health and safety legislation, regulations and codes of practice consistent with the hierarchy of workplace health and safety risk control and its implementation for hazard management
- legislated employer and employee workplace health and safety responsibilities
- the hierarchy of risk controls
- significant hazards and areas of risk in the workplace
- data and documentation for industry injury statistics
- local emergency response organisations
- systems to manage workplace health and safety records and procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - access to workplace health and safety records and procedures
- specifications:
 - workplace health and safety legislation, regulations and codes of practice
- relationships:
 - employees, designated personnel and management representatives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWRK102 Maintain the workplace

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to maintain a range of work areas, including preparing tools, equipment and machinery, maintaining a clean and safe workplace and maintaining structures and workplace surroundings.

The unit applies to individuals who are required to maintain the workplace while working alongside a supervisor, exercising limited autonomy within established and well-known parameters. They identify and seek help with simple problems.

All work is carried out to comply with workplace procedures, and health and safety in the workplace requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Work (WRK)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare and use tools, equipment and machinery	1.1 Collect required materials, tools and equipment according to lists provided and supervisor instructions 1.2 Fit and use personal protective equipment (PPE) as directed by

Elements	Performance Criteria

AHCWRK103 Contribute to animal care

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to identify what animal care means in a workplace and how the individual's responsibilities contribute to animal care as a whole within a specific workplace or industry.

The unit applies to individuals who contribute to animal care while working alongside a supervisor, exercising limited autonomy within established and well-known parameters. They identify and seek help with simple problems.

The unit is designed for use in a Pathway qualification or skill set. It should not be used in a qualification that has a direct job outcome.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Work (WRK)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and confirm appropriate animal care approach	1.1 Identify workplace approach to working with animals 1.2 Identify individual responsibilities in contributing to animal care 1.3 Identify workplace products, services, operations and customers

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Identify safe work practices relevant to work activity</p> <p>1.5 Identify appropriate capture and restraint requirements and equipment, where required</p> <p>1.6 Confirm with supervisor animal care strategy based on workplace requirements and individual responsibility, and apply to work activity</p>
2. Contribute to animal care	<p>2.1 Organise food preparation equipment according to task needs and supervisor instructions</p> <p>2.2 Recognise common animal behaviours for the species and take appropriate action as directed</p> <p>2.3 Provide feed, water and care for animals according to animal welfare standards, workplace health and safety requirements and supervisor instructions</p> <p>2.4 Select and use tools and equipment according to supervisor instructions</p> <p>2.5 Count stock levels as directed</p> <p>2.6 Groom animals according to supervisor instructions</p>
3. Communicate progress of animal care activities	<p>3.1 Respond to requests that affect work activity and animal care</p> <p>3.2 Seek supervisor assistance with issues relating to animal care when required</p> <p>3.3 Inform supervisor on progress of animal care activity</p>
4. Reflect on animal care procedures	<p>4.1 Reflect on personal performance in relation to working with animals, and discuss possible improvements with supervisor</p> <p>4.2 Apply improvements to work practice as directed</p> <p>4.3 Identify possible improvements to animal care procedures, and discuss with supervisor</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Skill	Description
Oral communication	<ul style="list-style-type: none"> Use clear language and standard industry terminology to clarify instructions and communicate with supervisor Participate in verbal exchanges to share knowledge and information and discuss possible improvements with supervisor
Numeracy	<ul style="list-style-type: none"> Count and record stock levels

Assessment Requirements for AHCWRK103 Contribute to animal care

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has contributed to animal care on at least one occasion and has:

- applied basic principles of animal ethics and welfare
- applied workplace health and safety requirements, animal welfare standards and environmental protection procedures and requirements applicable to contributing to animal care
- identified and used equipment, tools and other technology required to complete workplace tasks
- followed supervisor instructions
- applied technical skills in animal care
- recognised limitations, asked for help and sought clarification or information about work requirements and procedures
- applied animal observation skills.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic principles of animal ethics and welfare
- terminology relevant to animal care
- workplace animal capture and restraint procedures
- feeding and watering procedures
- common animal behaviours and appropriate responses
- codes of practice relating to work requirements
- workplace requirements applicable to health and safety in the workplace for contributing to animal care

- techniques for grooming animals.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, materials and equipment applicable to animal care activities
 - workplace animal capture and restraint procedures
- specifications:
 - workplace health and safety legislation, regulations, codes of practice and workplace procedures relevant to contributing to animal care
 - workplace documents and procedures relevant to contributing to animal care
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCWRK202 Observe environmental work practices

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to observe and contribute to positive environmental work practices.

The skills and knowledge described in this unit underpin a broad range of activities applicable to a variety of job roles throughout industries at various levels.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Work (WRK)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Follow environmental workplace practices	1.1 Recognise and follow workplace practices and work instructions relating to potential environmental impacts and seek clarification

Element	Performance criteria
	where necessary 1.2 Respond to changes to work practices and procedures positively and promptly
2. Contribute to improved environmental work practices	2.1 Gather information and suggest improvements to support the development of improved workplace approaches to environmental practices 2.2 Discuss environmental issues and their relationship to workplace practices in the workplace with colleagues and designated personnel 2.3 Make contributions to the review of environmental practices and policies within limits of responsibility
3. Recognise and report on a potential environmental threat	3.1 Recognise signs or symptoms of a potential environmental threat 3.2 Report information about or observations of a potential environmental threat to supervisors or appropriate authorities 3.3 Record the location and extent of the potential environmental threat
4. Maintain environmental records	4.1 Prepare and maintain environmental records as required 4.2 Store environmental records securely in a form accessible for reporting purposes

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for AHCWRK202 Observe environmental work practices

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- communicate with supervisors and workplace colleagues
- recognise basic environmental hazards and threats
- follow workplace directions and instructions related to environment
- keep simple environmental records
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant legislation from all levels of government on environmental issues
- relevant environmental policies and workplace and industry practices and procedures
- good practice approaches relevant to work area particularly in regard to minimising environment hazards and risks, and improving environmental performance
- environmental issues, especially in regard to water catchments, air, noise, ecosystems, habitat, efficient use of resources, sustainability and waste minimisation
- potential environmental threats and problems relevant to a given region and occupation
- general work place practices and their potential impact on the environment
- work health and safety in the context of own work.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCWRK204 Work effectively in the industry

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to work effectively on an individual basis and with others as well as within a hierarchy of management.

The skills and knowledge described in this unit underpin a broad range of activities applicable to a variety of job roles throughout industries at various levels.

The unit applies to individuals who work at various levels and should be contextualised to accommodate the responsibility of the individual.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Work (WRK)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Obtain information about the industry	1.1 Identify and access sources of information about the industry 1.2 Collect information to assist effective and safe work performance

Element	Performance criteria
	<p>within the industry</p> <p>1.3 Obtain and update specific information on sector of work</p> <p>1.4 Apply industry and work health and safety information to day-to-day work activities</p> <p>1.5 Identify employment terms and conditions</p> <p>1.6 Identify career pathways within the industry</p> <p>1.7 Maintain biosecurity protocols and procedures at all times</p>
2. Observe employment requirements	<p>2.1 Use industry developments in the workplace context to improve quality, productivity and conditions</p> <p>2.2 Confirm that work practices comply with Codes of Practice and workplace expectations</p> <p>2.3 Recognise faults and abnormalities in workplace practices and take remedial action as required</p> <p>2.4 Ensure that dress and personal requirements comply with workplace standards</p> <p>2.5 Observe punctuality in work attendance</p> <p>2.6 Meet employer's expectations through completion of workplace routines and specific instructions within enterprise policies and procedures</p>
3. Accept responsibility for quality of own work	<p>3.1 Keep personal work space in a well organised and safe condition, and meets relevant standards and policies</p> <p>3.2 Adhere to the workplace code of conduct</p> <p>3.3 Detect variations in the quality of service or products from required standards and report as required</p>
4. Plan and conduct own work	<p>4.1 Interpret and follow instructions</p> <p>4.2 Identify factors affecting work requirements and take appropriate action</p> <p>4.3 Assess work load and prioritise within allocated timeframes</p> <p>4.4 Communicate the need for assistance to improve performance clearly to the appropriate person</p>
5. Promote workplace cooperation	<p>5.1 Undertake responsibilities and duties in a positive manner to promote co-operation and good relationships</p> <p>5.2 Conduct co-operation with others in a courteous manner and is appropriate to culture, special needs and linguistic background and position in the organisation</p> <p>5.3 Recognise problems and conflict and resolve, where possible, through personal communication or refer to a supervisor, manager or employer for resolution</p>
6. Contribute to a productive work	<p>6.1 Fulfil commitments to undertake work or assist co-workers</p> <p>6.2 Share information relevant to work with co-workers to ensure</p>

Element	Performance criteria
environment	designated work goals are met 6.3 Share knowledge and skills co-workers through conversations and meetings 6.4 Recognise and seek contributions of individuals of different gender and social and cultural backgrounds 6.5 Observe and implement the principles of equal employment opportunity 6.6 Ensure work is consistent with workplace standards relating to anti-discrimination and workplace harassment
7. Undertake an activity to workplace requirements	7.1 Interpret work schedules with the schedule and tasks defined 7.2 Discuss knowledge and skills required for task with supervisors and co-workers 7.3 Check the availability of materials and equipment to ensure they are consistent with work schedules and the requirements of the tasks 7.4 Create a daily schedule for completing workplace activities and allocated tasks including priorities, allocated start times, estimation of completion times and materials, equipment and assistance required for completion is decided upon

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

AHCWRK210 Observe and report on weather

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to observe and report on weather and carry out preventative action in response to weather and climate.

The unit applies to individuals who observe and report on weather under general supervision with limited autonomy or accountability.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Work (WRK)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to work	1.1 Confirm work instructions with supervisor 1.2 Prepare and use weather equipment according to supervisor instructions 1.3 Identify and report workplace health and safety hazards and risks to supervisor

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Check weather and climate information	2.1 Check weather and climate information to determine likely conditions 2.2 Recognise changed weather and climate situations 2.3 Anticipate likely impact of changes in weather and climate in respect to work tasks 2.4 Report anticipated impact of weather and climate to supervisor
3. Carry out preventative action	3.1 Discuss information and confirm preventative action with supervisor 3.2 Undertake actions to minimise loss and damage 3.3 Adjust work tasks according to weather and climatic changes
4. Monitor weather and climate	4.1 Access regular updates to determine ongoing suitability of current programs 4.2 Complete workplace weather records according to workplace procedures, and report to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read and interpret workplace instructions to formulate an understanding of expected requirements and activity
Writing	<ul style="list-style-type: none"> Prepare workplace records accurately using clear language and industry relevant terminology
Oral communication	<ul style="list-style-type: none"> Use clear language and standard industry terminology to clarify instructions and communicate with supervisor
