AVI08 Aviation Training Package

Release: 3.0

CONTENTS

Preliminary Information	26
Overview of Training Packages	76
Qualifications Framework	82
Assessment Guidelines	88
Competency Standards	106
The AVI08 Aviation Training Package (Version 3)	112
Qualifications Pathways	120
AVI08 Version 3 Qualifications and Packaging Rules	128
Skill Sets	129
Glossary	130
AVI10108 Certificate I in Aviation (Foundation Skills)	145
AVI20208 Certificate II in Aviation (Flight Operations)	150
AVI20408 Certificate II in Aviation (Ground Operations and Service)	156
AVI30208 Certificate III in Aviation (Flight Operations)	163
AVI30408 Certificate III in Aviation (Ground Operations and Service)	168
AVI30510 Certificate III in Aviation (Rescue Crewman)	176
AVI40108 Certificate IV in Aviation (Commercial Pilot Aeroplane Licence)	182
AVI40208 Certificate IV in Aviation (Commercial Pilot Helicopter Licence)	186
AVI40408 Certificate IV in Aviation (Ground Operations and Service)	191
AVI40508 Certificate IV in Aviation (Leadership and Supervision)	198
AVI40610 Certificate IV in Aviation (Aircrewman)	204
AVI50308 Diploma of Aviation (Air Traffic Control)	210
AVI50408 Diploma of Aviation (Instrument Flight Operations)	217
AVI50510 Diploma of Aviation (Flight Instructor)	224
AVI60110 Advanced Diploma of Aviation (Flight Instruction)	232
AVISS00001 Aerobatic Pilot Skill Set	241
AVISS00005 Airborne Rappelling Skill Set	243
AVISS00006 Airborne Rappelling Supervisor Skill Set	245
AVISS00007 Airborne Recovery Skill Set	247
AVISS00008 Aircraft Underwater Escape Skill Set	249
AVISS00009 Aviation Operator Skill Set	251
AVISS00010 Aviation Supervisory Cabin Crew Skill Set	253
AVISS00011 Emergency Breathing System Skill Set	255
AVISS00012 External Load Pilot Skill Set	257
AVISS00013 Formation Pilot Skill Set	259
AVISS00015 Helicopter Wireman Skill Set	261
AVISS00016 Manual Handle Freight/Baggage in Aircraft Cargo Hold Confined Spaces Skill Set	263
AVISS00017 Marine Transfer Pilot Skill Set	265
AVISS00018 Night Aided Vision Aviation Operations Skill Set	267
AVISS00019 Night Visual Flight Rules (NVFR) Pilot Skill Set	269
AVISS00021 Rappelling and Winching Pilot Skill Set	271
AVISS00022 Simulator Operator Skill Set	273
AVISS00023 Simulator Operator/Trainer Skill Set	275
AVISS00024 Simulator Trainer Skill Set	277
AVIA3001B Package dangerous goods for air transport	279
AVIB3001B Inspect and report on an aerodrome	288
AVIB3002B Inspect and report on aerodrome lighting systems	299
AVIB3003B Inspect and report on the Obstacle Limitation Surfaces	309

AVIB3004B Manage and carry out pre- and post-flight cabin checks	317
AVIC2001A Drive on the airside	326
AVIC4002A Administer airside driving.....	333
AVID2001B Accept dangerous goods for air transport.....	340
AVID2003B Prepare freight for flight	349
AVID2004B Conduct aviation freight weighing operations	358
AVID2005B Accept freight for air transport	367
AVID2006A Load and secure aviation freight and baggage.....	377
AVID2007A Unload aviation freight and baggage	387
AVIE3003B Complete a Notice to Airmen (NOTAM)	397
AVIE3004B Maintain radio communications as part of airport operations	405
AVIE4001B Maintain aircraft radio communications	414
AVIE5002B Apply air traffic control communication procedures and services	422
AVIF2007B Implement regulations and policies during check-in procedures.....	436
AVIF2010B Implement regulations and policies during aircraft safety and service operations	444
AVIF2012A Monitor the transfer of hazardous materials	453
AVIF2014A Undertake aircraft underwater escape and survival.....	460
AVIF2015A Utilise emergency breathing system.....	468
AVIF2019A Work in aircraft confined spaces.....	475
AVIF3004B Supervise the safety of aerodrome works and general access.....	484
AVIF3005B Maintain the safety of people and aircraft	493
AVIF3006B Respond to abnormal and emergency situations within the aircraft.....	503
AVIF3011B Apply relevant laws and regulations to the management of an aerodrome ..	513
AVIF3016A Marshal aircraft	522
AVIF4001B Manage human factors in aircraft flight	532
AVIF4008A Supervise cabin safety and security	542
AVIF5003B Manage human performance and team resources during air traffic control operations	550
AVIF5013A Provide SAR alerting and emergency service.....	562
AVIG5001B Work professionally in an air traffic control workplace	572
AVIH3002B Advise on major services and attractions at aviation destinations	579
AVIH4001B Navigate aircraft - VFR.....	588
AVIH4012A Plan a flight under Night Visual Flight Rules (NVFR)	600
AVIH4013A Navigate aircraft - NVFR.....	609
AVIH5016A Plan a flight under Instrument Flight Rules (IFR)	622
AVIH5017A Navigate aircraft - IFR.....	631
AVII2001B Provide customer service on an aircraft	643
AVII2003C Carry out beverage service on an aircraft	653
AVII2004B Provide advice on cuisine on an aircraft	662
AVII2006B Conduct in-flight retailing	670
AVII2007B Check in aircraft passengers.....	680
AVII2008B Provide assistance to transit and arriving passengers	690
AVII2009B Serve wine to aircraft passengers.....	699
AVII2014B Provide transport services to passengers with special needs.....	708
AVII3002B Carry out food preparation and service on an aircraft	718
AVII3005B Apply knowledge of the structure, products and services of the airline operator	728
AVII3010B Carry out aircraft business/first class meal and beverage service	738
AVII3011A Provide quality customer service	748
AVII4012B Manage aircraft passengers and cargo.....	757
AVII4013A Supervise cabin operations	766
AVII4015A Monitor and enhance customer service excellence	773

AVIJ2001B Contribute to the achievement of on-time performance standards	782
AVIJ4002B Conduct quality control operations related to refuelling_de fuelling aircraft	791
AVIL2001B Manage a check-in queue.....	801
AVIL3002B Complete aircraft despatch duties	809
AVIL3003B Plan an aircraft load	819
AVIL3004B Assess pavement concessions	827
AVIM5001A Operate a simulator.....	835
AVIM5002A Conduct aeronautical knowledge training	844
AVIM5003A Conduct flight training	853
AVIM5004A Facilitate training in a synthetic environment	865
AVIM5005A Conduct training for the issue of an endorsement.....	878
AVIM5007A Conduct pre-assessment	887
AVIM5008A Conduct flight review.....	897
AVIM6006A Deliver operational flight management training	904
AVIN6003A Manage flight training.....	914
AVIO2001A Use firearms on an aerodrome to control wildlife hazards	924
AVIO4003A Implement airside access.....	931
AVIR3001B Service customer airline contracts	937
AVIW2002B Operate an aerobridge.....	946
AVIW2008B Conduct baggage handling operations	955
AVIW2010B Operate baggage tug.....	965
AVIW2029A Operate aircraft refuelling nozzle.....	974
AVIW2030A Be airborne extracted by suspended rope.....	982
AVIW2031A Be airborne extracted using suspended extraction equipment.....	992
AVIW2032A Fast rope from a helicopter	1001
AVIW2033A Rappel from a helicopter.....	1012
AVIW3003B Operate aircraft embarkation and disembarkation equipment	1023
AVIW3004B Operate ramp equipment	1032
AVIW3005B Operate aircraft push-out tug.....	1041
AVIW3006B Refuel aircraft	1051
AVIW3011B Defuel aircraft	1061
AVIW3021A Coordinate aircraft ground operations.....	1071
AVIW3023A Implement wildlife hazard control measures.....	1078
AVIW3024A Perform wireman duties.....	1085
AVIW3025A Complete aircraft/equipment pre - and post-flight actions	1093
AVIW3026A Conduct night aided vision aviation operations	1101
AVIW3027A Deliver pyrotechnics and hand held stores	1111
AVIW4001B Manage pre - and post-flight actions	1118
AVIW4028A Manage aircraft sensor systems.....	1126
AVIW4034A Supervise aircraft refuelling.....	1133
AVIW5013B Operate air traffic control equipment and workstations.....	1141
AVIW5018A Operate and manage aircraft systems	1153
AVIW5022A Coordinate the removal of disabled aircraft	1165
AVIY3052A Conduct Helicopter Landing Site and Unprepared Helicopter Landing Site operations	1175
AVIY4001B Control aeroplane on the ground.....	1184
AVIY4002B Take off aeroplane	1193
AVIY4003B Control aeroplane in normal flight	1202
AVIY4004B Land aeroplane.....	1212
AVIY4005B Execute advanced aeroplane manoeuvres and procedures.....	1221
AVIY4006B Manage abnormal aeroplane flight situations.....	1230
AVIY4007B Manage aircraft fuel.....	1242
AVIY4008B Control aircraft solely by reference to full instrument panel	1251

AVIY4009B Control aircraft solely by reference to limited instrument panel	1260
AVIY4011B Control helicopter on the ground.....	1269
AVIY4012B Control helicopter in hovering flight	1278
AVIY4013B Taxi helicopter.....	1288
AVIY4014B Take off helicopter and approach to hover.....	1298
AVIY4015B Control helicopter in normal flight.....	1308
AVIY4017B Execute advanced helicopter manoeuvres and procedures	1318
AVIY4018B Manage abnormal and emergency helicopter flight situations	1329
AVIY4019B Operate helicopter at low level	1342
AVIY4051A Conduct external load-lift operations	1352
AVIY4053A Perform aircrewman cockpit duties	1361
AVIY4054A Conduct hoisting operations.....	1368
AVIY4055A Conduct airborne extraction operations.....	1377
AVIY4056A Conduct airborne rappelling operations.....	1387
AVIY4057A Perform helicopter deck landing operations.....	1397
AVIY4058A Pilot a helicopter during external load operations	1408
AVIY4059A Pilot a helicopter during roping operations	1419
AVIY4060A Pilot a helicopter during winching operations	1430
AVIY4061A Perform aerobatic manoeuvres	1440
AVIY4062A Perform an aerobatic sequence.....	1451
AVIY4063A Perform close formation flight.....	1460
AVIY4064A Lead an aircraft formation flight.....	1469
AVIY4066A Control aircraft in advanced flight manoeuvres.....	1479
AVIY5020A Conduct full instrument panel manoeuvres	1487
AVIY5021A Conduct limited instrument panel manoeuvres	1497
AVIY5022B Manage traffic flow	1506
AVIY5023A Operate multi-engine fixed wing aeroplane	1516
AVIY5024A Operate aircraft in the traffic pattern at night	1525
AVIY5025A Perform an instrument arrival	1535
AVIY5026A Perform standard arrival route (STAR).....	1543
AVIY5027A Perform instrument departure - non published procedure.....	1551
AVIY5028A Perform instrument departure - published procedures (SID/SRD)	1560
AVIY5033A Perform visual circling approach.....	1569
AVIY5034A Perform non-directional beacon (NDB) instrument approach.....	1578
AVIY5035A Perform VHF omni-directional radio range (VOR) instrument approach.....	1587
AVIY5036A Perform instrument landing system (ILS) instrument approach.....	1596
AVIY5037A Perform distance measuring equipment (DME) _global positioning system (GPS) arrival	1606
AVIY5038A Perform global positioning system (GPS)/non-precision approach (NPA).....	1616
AVIY5048A Provide approach control services.....	1627
AVIY5049A Provide area control services.....	1639
AVIY5050A Provide aerodrome control services.....	1650
AVIY5065A Operate a multi-engine helicopter.....	1661
AVIZ1005B Maintain basic situation awareness in the aviation workplace.....	1672
AVIZ4001B Manage situation awareness in aircraft flight	1682
AVIZ5049A Manage situational awareness in the air traffic control environment	1692
BSBAUD402B Participate in a quality audit.....	1701
BSBCM301A Process customer complaints.....	1711
BSBCM401A Make a presentation.....	1719
BSBCUS301A Deliver and monitor a service to customers	1727
BSBFIM501A Manage budgets and financial plans	1735
BSBHRM402A Recruit, select and induct staff.....	1744
BSBLE401A Develop teams and individuals	1751

BSBMGT401A Show leadership in the workplace.....	1759
BSBMGT402A Implement operational plan.....	1765
BSBMGT502A Manage people performance.....	1773
BSBMGT502B Manage people performance.....	1781
BSBMKG501B Identify and evaluate marketing opportunities.....	1788
BSBOHS407A Monitor a safe workplace.....	1797
BSBRKG502B Manage and monitor business or records systems.....	1806
BSBWOR301A Organise personal work priorities and development.....	1820
BSBWOR402A Promote team effectiveness.....	1829
BSBWOR502A Ensure team effectiveness.....	1837
BSBWRK509A Manage industrial relations.....	1844
CHCCAR501B Conduct career guidance interview.....	1852
HLTFA201A Provide basic emergency life support.....	1861
HLTFA301B Apply first aid.....	1870
HLTFA402B Apply advanced first aid.....	1883
HLTFA404A Apply advanced resuscitation techniques.....	1897
PRMCL04B Maintain a carpeted floor.....	1909
PRMCL17B Clean a wet area.....	1922
PRMCL37A Clean external surfaces.....	1937
PRMCL38A Clean a food handling area.....	1950
PUAFIR209B Work safely around aircraft.....	1965
SITTTSL007A Receive and process reservations.....	1972
SITTTSL009A Process travel-related documentation.....	1981
SITTTSL010A Control reservations or operations using a computerised system.....	1993
SITTTSL012A Construct domestic airfares.....	2006
SITTTSL013A Construct normal international airfares.....	2014
SITTTSL014A Construct promotional international airfares.....	2023
SITTTSL015A Construct advanced international airfares.....	2032
TAAASS501B Lead and coordinate assessment systems and services.....	2040
TAACMQ501B Develop training and/or assessment organisational policies and procedures.....	2065
TAACMQ503B Lead and conduct training and/or assessment evaluations.....	2079
TAACMQ504B Determine and manage scope of training and/or assessment services.....	2095
TAACMQ505B Lead a team to foster innovation.....	2109
TAADEL503B Provide advanced facilitation to support learning.....	2118
TAADEL504B Lead and coordinate training services.....	2135
TAADES501B Design and develop learning strategies.....	2150
TAADES502B Design and develop learning resources.....	2171
TAAENV501B Maintain and enhance professional practice.....	2190
TAATAS502B Prepare a tender bid.....	2203
TAATAS503B Manage contracted work.....	2216
TAATAS504B Facilitate group processes.....	2233
TAEASS401A Plan assessment activities and processes.....	2248
TAEASS402A Assess competence.....	2258
TAEASS403A Participate in assessment validation.....	2270
TAEASS502A Design and develop assessment tools.....	2276
TAEDEL301A Provide work skill instruction.....	2285
TAEDEL401A Plan, organise and deliver group-based learning.....	2295
TAEDEL402A Plan, organise and facilitate learning in the workplace.....	2304
TAEDES401A Design and develop learning programs.....	2314
TAEDES402A Use training packages and accredited courses to meet client needs.....	2321
TAELLN401A Address adult language, literacy and numeracy skills.....	2328
TAESUS501A Analyse and apply sustainability skills to learning programs.....	2334

TLIA1007C Coordinate goods to bond premises	2340
TLIA107C Secure cargo	2349
TLIA1107C Package goods.....	2360
TLIA1307C Receive goods.....	2369
TLIA1407C Use product knowledge to complete work operations	2379
TLIA1507C Complete receipt/despatch documentation.....	2390
TLIA1707C Apply product knowledge to organise work operations	2400
TLIA2007C Replenish stock.....	2412
TLIA207C Maintain container/cargo records.....	2422
TLIA2207C Participate in stocktakes.....	2431
TLIA2307C Coordinate stocktakes.....	2441
TLIA2507D Regulate temperature controlled stock	2451
TLIA3007C Organise cargo for export.....	2461
TLIA3107C Consolidate freight	2472
TLIA3207C Organise transport of freight or goods.....	2481
TLIA3307C Organise international transport of freight.....	2491
TLIA507C Check and evaluate records and documentation.....	2501
TLIA807C Transfer cargo.....	2510
TLIB107C Check and assess operational capabilities of equipment.....	2522
TLIB207C Test equipment and isolate faults.....	2532
TLIB2407B Clean transportation units and facilities for passenger use.....	2541
TLIB2807B Maintain and use hand tools	2551
TLIB2907B Use and maintain minor mechanical equipment.....	2560
TLIB307C Carry out vehicle servicing and maintenance.....	2569
TLIB407C Carry out vehicle inspection	2578
TLIB707C Carry out maintenance of trailers	2586
TLIB7307B Clean road tankers.....	2594
TLIB807C Carry out inspection of trailers	2605
TLIC107C Drive vehicle	2613
TLIC307C Drive medium rigid vehicle.....	2623
TLIC407D Drive heavy rigid vehicle	2634
TLIC507D Drive heavy combination vehicle	2645
TLIC607C Drive multi-combination vehicle.....	2657
TLIC707C Operate vehicle carrying special loads	2668
TLIC807C Drive coach/bus	2679
TLID1007C Operate a forklift.....	2690
TLID107C Shift materials safely using manual handling methods	2701
TLID1307C Move materials mechanically using automated equipment.....	2711
TLID2007C Care for livestock in transit	2730
TLID207C Shift a load using manually-operated equipment.....	2739
TLID407C Load and unload goods/cargo.....	2753
TLIE107C Present routine workplace information.....	2763
TLIE1207C Consolidate manifest documentation	2772
TLIE1307C Apply workplace statistics.....	2781
TLIE1407C Compile and process export documentation.....	2790
TLIE1807B Maintain freight records	2801
TLIE207C Estimate/calculate mass, area and quantify dimensions	2811
TLIE307C Participate in basic workplace communication.....	2820
TLIE407C Prepare workplace documents.....	2829
TLIE507C Carry out basic workplace calculations	2838
TLIE607D Collect, analyse and present workplace data and information	2846
TLIE707B Use communication systems	2856
TLIE807C Process workplace documentation.....	2866

TLIF1007C Apply fatigue management strategies.....	2875
TLIF107C Follow occupational health and safety procedures	2884
TLIF1407C Develop and maintain a safe workplace	2897
TLIF1807B Operate firefighting equipment	2910
TLIF207C Conduct housekeeping activities	2919
TLIF307C Implement and monitor occupational health and safety procedures	2929
TLIF607C Apply accident-emergency procedures.....	2942
TLIF6307A Administer the implementation of fatigue management strategies	2952
TLIF6407A Manage fatigue management policy and procedures	2964
TLIF707C Implement and coordinate accident-emergency procedures.....	2977
TLIF907C Conduct cleaning operations in enclosed spaces.....	2987
TLIG107C Work effectively with others.....	2997
TLIG207C Lead a work team or group.....	3006
TLIG607C Facilitate work teams	3016
TLIG707B Work in a socially diverse environment.....	3026
TLII107D Coordinate quality customer service.....	3034
TLII207D Apply customer service skills	3043
TLII507C Market services and products to clients	3052
TLII907C Provide on-board services to customers	3061
TLIJ107C Apply quality procedures	3069
TLIJ207C Apply quality systems.....	3078
TLIJ707C Conduct internal quality audits	3087
TLIK107C Use infotechnology devices and computer applications in the workplace....	3098
TLIK307C Apply keyboard skills.....	3108
TLIK707C Perform electronic data interchange (EDI) to transmit shipping documentation.....	3116
TLIL1007C Assess and confirm customer transport requirements	3126
TLIL107C Complete workplace orientation/induction procedures.....	3136
TLIL307C Conduct induction process.....	3147
TLIL3107B Monitor and process attendance records.....	3157
TLIL3207B Implement equal employment equity strategies.....	3166
TLIL3307B Promote effective workplace practice.....	3175
TLIL3607B Develop rosters.....	3185
TLIL3707B Apply and amend rosters	3196
TLIL507D Apply conflict/grievance resolution strategies	3206
TLIL807C Complete routine administrative tasks.....	3215
TLIL907C Manage personal work priorities and professional development	3225
TLIO1107C Provide revenue protection measures	3235
TLIO1207C Manage disruptive and/or unlawful behaviour.....	3243
TLIO1307C Administer the security of assets and facilities.....	3253
TLIO1607B Apply and monitor workplace security procedures.....	3262
TLIO207D Follow security procedures.....	3272
TLIO707C Undertake emergency response action to a security threat	3284
TLIP107C Develop plans to meet customer and organisation needs	3293
TLIP207C Facilitate and capitalise on change in the workplace	3302
TLIP507C Manage workplace information	3312
TLIP707C Contribute to the development of a workplace learning environment.....	3322
TLIQ1007B Maintain customer credit accounts and services	3332
TLIQ107D Conduct financial transactions	3341
TLIQ1207B Sell products and services	3350
TLIQ1307B Advise on and construct fares for customers.....	3358
TLIQ707C Prepare and process financial documents.....	3367
TLIR107C Monitor supplier performance	3377

TLIR207C Source goods/services and evaluate contractors	3386
TLIR307C Negotiate a contract.....	3396
TLIT107C Capture records into a records keeping system.....	3406
TLIT207C Document a records system	3416
TLIT307C Identify and classify records to be captured.....	3427
TLIT407C Maintain control of records	3438
TLIT507C Provide information from and about records.....	3449
TLIU107B Implement and monitor environmental protection policies and procedures	3460
TLIU607B Conduct environmental audits	3471
TLIU707B Care for the environment.....	3481

Modification History

Table 1: Version Modification History for Aviation Training Package

Name	Version	Release Date	Comments				
AVI08	3.1	November 2010	<p>The following changes have been undertaken in this version of the AVI08 Aviation Training Package:</p> <p>The title of the following Qualification has been altered:</p> <table border="1"><tr><td>AVI50510</td><td>Diploma of Aviation (Grade 2 Flight Instructor)</td></tr></table> <p>To become;</p> <table border="1"><tr><td>AVI50510</td><td>Diploma of Aviation (Flight Instructor)</td></tr></table> <p>The following Skill Sets have been removed:</p> <p>Grade 1 Flight Instructor Skill Set</p> <p>Grade 3 Flight Instructor Skill Set</p>	AVI50510	Diploma of Aviation (Grade 2 Flight Instructor)	AVI50510	Diploma of Aviation (Flight Instructor)
AVI50510	Diploma of Aviation (Grade 2 Flight Instructor)						
AVI50510	Diploma of Aviation (Flight Instructor)						
AVI08	3	April 2010	<p>The following changes have been undertaken in this new Version of the AVI08 Aviation Training Package:</p> <p>All codes have been updated to reflect current Training Package Development Handbook Policy.</p> <p>All TLI07 units affiliated with this Training Package are now listed as imported units. They have remained available within Volume II of this Training Package.</p> <p>The field codes within the Training Package have been updated and the following changes have been made:</p>				

			Old field code	New field code
			M – Training	M – Training and Assessment
			N – Assessment	N – Leadership and Supervision
			W – Carrying out Operations on Equipment and Systems	W – Equipment and Systems Operations
			Y – Control Aircraft and Traffic Management	Y – Aircraft Operation and Traffic Management
			7 new units have been added	
			AVID2006A	Load and secure aviation freight and baggage
			AVID2007A	Unload aviation freight and baggage
			AVIF2019A	Work in aircraft confined spaces
			AVIM5005A	Conduct training for the issue of an endorsement
			AVIM6006A	Deliver operational flight management training
			AVIM5008A	Conduct flight review
			AVIN6003A	Manage flight training
			1 existing unit has been revised	
			AVII2003C	Carry out beverage service on an aircraft
			1 existing unit has been edited	

			AVIY3052A	Conduct Helicopter Landing Site and Unprepared Helicopter Landing Site operations
			The following unit has been realigned to a new field	
			AVIM5007A	Conduct pre-assessment
			38 new imported units have been added	
			BSBAUD402B	Participate in a quality audit
			BSBCMM301A	Process customer complaints
			BSBFIM501A	Manage budgets and financial plans
			BSBLED401A	Develop teams and individuals
			BSBMGT502A	Manage people performance
			BSBMKG501B	Identify and evaluate marketing opportunities
			BSBRKG502B	Manage and monitor business or records systems
			BSBWOR502A	Ensure team effectiveness
			BSBWRK509A	Manage industrial relations
			CHCCAR501B	Conduct career guidance interview
			TAAASS501B	Lead and coordinate assessment systems and services
			TAACMQ501B	Develop training and/or

				assessment organisational policies & procedures
			TAACMQ503B	Lead and conduct training and/or assessment evaluations
			TAACMQ504B	Determine and manage scope of training and/or assessment services
			TAACMQ505B	Lead a team to foster innovation

AVI08	1	April 2008	Reviewed Training Package	
			Primary Release is the first release of the Aviation Training Package AVI08	
			Aerodrome reporting officers/Airside workers	Development of 8 new competency units
			Research and analysis of units in the areas of air marshals, air marshalling, weather, aircraft washing and deicing for possible inclusion into the Training Package	Research and analysis proved that development of units should not be a priority at this point in time. May be considered again in light of Defence engagement under continuous review
			Inclusion of 10 additional units from TLI07	Units accessed for inclusion in AVI08
			Inclusion of 5 Asset Maintenance units from CPSISC	Asset Maintenance Training Package was endorsed in December 2007 and units have been included in this Training Package.
			Development of revised Diploma for Air Traffic Control	Diploma established
			Development of Diploma for Instrument Ratings	Diploma established
			Category 2 change for CPL and HPL	Cat 2 change endorsed in 2007
			CPL & HPL units	Requirement to review units post Cat 2 change to align with CASA's reviewed Manual of Standards (MOS)

			Helicopters	Development of 2 additional qualifications for: Rescue crewman, and Aircraftman Add 2 Skill Sets: Night Aided Vision Aviation Operations Skill Set Helicopter Wireman Skill Set
			Certificate IV	Development of additional qualification for: Certificate IV in Aviation (Leadership and Supervision) as well as an identified Skill Set for Supervisory Cabin Crew
			Review of first aid units	Reviewed first aid units aligned with various occupational roles and included in AVI08
			Development of 4 new units for Cabin Crew	New units drafted, developed and validated and embedded into Training Package
			Mapping of ATC units	Mapping of revised Air Traffic Control units to CASR Part 65 in order to satisfy compliance on behalf of CASA and Airservices Australia
			Revision of all competencies to ensure suitability across commercial and	In late 2007, DFA went from an observer of the process to an active participant, thereby

			<div>defence realms</div> <div>requiring all standards be revisited to ensure applicability across both civilian and military regulatory realms</div>
			<div>Changes to documentation in alignment with Training Package Development Handbook</div> <div>The Training Package Development Handbook changed in May, August and September 2007, resulting in changes to the Volume 1 document and to each unit requiring a licensing statement</div>
			<div>Changes to codes and insertion of AQF descriptor</div> <div>Completed</div>
			<div>Development and validation of Aviation Operator – Helicopter Skill Set</div> <div>This work has been completed and validated</div>
			<div>Development and validation of Night Flying Rules Skill Set</div> <div>Night Flying Rules – work completed</div>
TDA03	2	April 2007	<p>Category 2 change</p> <p>Title and qualification requirement changes to an existing Aviation qualification:</p> <p>Licensed qualification</p> <p>Change: AVI40203A Certificate IV in Transport & Distribution – Aviation Flight Operations</p> <p>To: AVI40107 Certificate IV in Aviation Operations (Commercial Pilot Aeroplane Licence) and AVI40207 Certificate IV in Aviation Operations (Commercial Pilot Helicopter Licence)</p> <p>Reduces the requirements for completion from twenty eight (28) to fifteen (15) units. The fifteen (15) units</p>

			are all placed at level IV Removes the thirteen (13) Cert 1–Cert III level units from the qualification which do not contribute to occupational outcomes for commercial pilots
TDA03	1	March 2003	Primary Release

Preliminary Information

Preliminary Information

Important Note to Users

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

Check the version number before commencing training or assessment

This Training Package is Version 3 – check whether this is the latest version by going to the National Training Information Service (www.ntis.gov.au) and locating information about the Training Package. Alternatively, contact the Transport and Logistics Industry Skills Council on (www.tlisc.com) to confirm the latest version number.

Explanation of version number conventions

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Package's national code (which remains the same during its period of endorsement).

Explanation of the review date

The review date (shown on the title page and in the footer of each page) indicates when the Training Package is expected to be reviewed in the light of changes such as changing technologies and circumstances. The review date is not an expiry date. Endorsed Training Packages and their components remain current until they are reviewed or replaced.

Version modification history

The version details of this endorsed Training Package are in the table below. The latest information is at the top of the table.

Table 1: Version Modification History for Aviation Training Package

Name	Version	Release Date	Comments
AVI08	3.1	November 2010	<p>The following changes have been undertaken in this version of the AVI08 Aviation Training Package:</p> <p>The title of the following Qualification has been altered:</p>

			<table><tr><td>AVI50510</td><td>Diploma of Aviation (Grade 2 Flight Instructor)</td></tr></table> <p>To become;</p> <table><tr><td>AVI50510</td><td>Diploma of Aviation (Flight Instructor)</td></tr></table> <p>The following Skill Sets have been removed: Grade 1 Flight Instructor Skill Set Grade 3 Flight Instructor Skill Set</p>	AVI50510	Diploma of Aviation (Grade 2 Flight Instructor)	AVI50510	Diploma of Aviation (Flight Instructor)

			HLTFA402B	Apply advanced first aid
			BSBMGT401A	Show leadership in the workplace
			AVI40508 Certificate IV in Aviation (Leadership and Supervision)	
			<i>1 existing imported unit</i>	
			HLTFA402B	Apply advanced first aid
AVI08	2	April 2009	Category II change	
			The following changes have been undertaken in this new Version of AVI08 Aviation Training Package:	
			27 new units have been added	
			AVIF214A	Undertake aircraft

				underwater escape and survival
			AVIF215A	Utilise emergency breathing system
			AVIF316A	Marshal aircraft
			TLILIC108A	Licence to operate a forklift truck
			AVIM501A	Operate a simulator
			AVIM502A	Conduct aeronautical knowledge training
			AVIM503A	Conduct flight training
			AVIM504A	Facilitate training in a synthetic environment
			AVIN501A	Conduct pre-assessment
			AVIW229A	Operate aircraft refuelling nozzle
			AVIW230A	Be airborne extracted by suspended rope
			AVIW231A	Be airborne extracted using suspended extraction equipment
			AVIW232A	Fast rope from a helicopter
			AVIW233A	Rappel from a helicopter
			AVIW434A	Supervise aircraft refuelling
			AVIY455A	Conduct airborne extraction operations
			AVIY456A	Conduct airborne rappelling operations
			AVIY457A	Perform helicopter deck landing operations

			AVIY458A	Pilot a helicopter during external load operations
			AVIY459A	Pilot a helicopter during roping operations
			AVIY460A	Pilot a helicopter during winching operations
			AVIY461A	Perform aerobic manoeuvres
			AVIY462A	Perform an aerobic sequence
			AVIY463A	Perform close formation flight
			AVIY464A	Lead an aircraft formation flight
			AVIY565A	Operate a multi-engine helicopter
			AVIY466A	Control aircraft in advanced flight manoeuvres
			1 new imported unit has been added	
			TAADEL301C	Provide training through instruction and demonstration of work skills
			1 imported unit has been removed	
			PMAOHS214B	Undertake helicopter safety and escape
			15 new Skill Sets have been added	
			Airborne Rappelling Skill Set	
			Airborne Recovery Skill Set	

			Aircraft Underwater Escape Skill Set	
			Emergency Breathing System Skill Set	
			Simulator Operator Skill Set	
			Simulator Trainer Skill Set	
			Simulator Operator/Trainer Skill Set	
			Airborne Rappelling Supervisor Skill Set	
			Aerobatic Pilot Skill Set	
			Formation Pilot Skill Set	
			Night Visual Flight Rules (NVFR) Pilot Skill Set	
			Marine Transfer Pilot Skill Set	
			External Load Pilot Skill Set	
			Rappelling and Winching Pilot Skill Set	
			Grade 3 Flight Instructor Skill Set	

			<p>7 qualifications have been revised</p> <table><tr><td>6 new elective units added to AVI20208 Certificate II in Aviation (Flight Operations)</td></tr><tr><td>1 new elective unit has been added to AVI20408 Certificate II in Aviation (Ground Operations and Service)</td></tr><tr><td>1 new elective unit has been added to AVI30208 Certificate III in Aviation (Flight Operations)</td></tr><tr><td>1 new elective unit has been added to AVI30408 Certificate III in Aviation (Ground Operations and Service)</td></tr><tr><td>1 new elective unit has been added to AVI40408 Certificate IV in Aviation (Ground Operations and Service)</td></tr><tr><td>1 new elective unit has been added to AVI40508 Certificate IV in Aviation (Leadership and Supervision)</td></tr><tr><td>1 new optional unit has been added AVI50408 Diploma of Aviation (Instrument Flight Operations)</td></tr></table> <p>2 qualification have been updated</p> <table><tr><td>1 new core unit – to replace PMAOHS214B – and 3 new elective units have been added to AVI40609 Certificate IV in Aviation (Aircrewman). 2 existing core/mandatory units have been moved to the elective unit list. Qualification code has been updated from AVI40608.	1 new core unit – to replace PMAOHS214B – and 1 new optional unit has been added to AVI30509 Certificate III in Aviation (Rescue Crewman). Qualification code has been updated from AVI30508.
6 new elective units added to AVI20208 Certificate II in Aviation (Flight Operations)												
1 new elective unit has been added to AVI20408 Certificate II in Aviation (Ground Operations and Service)												
1 new elective unit has been added to AVI30208 Certificate III in Aviation (Flight Operations)												
1 new elective unit has been added to AVI30408 Certificate III in Aviation (Ground Operations and Service)												
1 new elective unit has been added to AVI40408 Certificate IV in Aviation (Ground Operations and Service)												
1 new elective unit has been added to AVI40508 Certificate IV in Aviation (Leadership and Supervision)												
1 new optional unit has been added AVI50408 Diploma of Aviation (Instrument Flight Operations)												
1 new core unit – to replace PMAOHS214B – and 3 new elective units have been added to AVI40609 Certificate IV in Aviation (Aircrewman). 2 existing core/mandatory units have been moved to the elective unit list. Qualification code has been updated from AVI40608.												
1 new core unit – to replace PMAOHS214B – and 1 new optional unit has been added to AVI30509 Certificate III in Aviation (Rescue Crewman). Qualification code has been updated from AVI30508.												

AVI08	1	April 2008	Reviewed Training Package	
			Primary Release is the first release of the Aviation Training Package AVI08	
			Aerodrome reporting officers/Airside workers	Development of 8 new competency units
			Research and analysis of units in the areas of air marshals, air marshalling, weather, aircraft washing and deicing for possible inclusion into the Training Package	Research and analysis proved that development of units should not be a priority at this point in time. May be considered again in light of Defence engagement under continuous review
			Inclusion of 10 additional units from TLI07	Units accessed for inclusion in AVI08
			Inclusion of 5 Asset Maintenance units from CPSISC	Asset Maintenance Training Package was endorsed in December 2007 and units have been included in this Training Package.
			Development of revised Diploma for Air Traffic Control	Diploma established
			Development of Diploma for Instrument Ratings	Diploma established
			Category 2 change for CPL and HPL	Cat 2 change endorsed in 2007
			CPL & HPL units	Requirement to review units post Cat 2 change to align with CASA's reviewed Manual of Standards (MOS)

			Helicopters	Development of 2 additional qualifications for: Rescue crewman, and Aircraftman Add 2 Skill Sets: Night Aided Vision Aviation Operations Skill Set Helicopter Wireman Skill Set
			Certificate IV	Development of additional qualification for: Certificate IV in Aviation (Leadership and Supervision) as well as an identified Skill Set for Supervisory Cabin Crew
			Review of first aid units	Reviewed first aid units aligned with various occupational roles and included in AVI08
			Development of 4 new units for Cabin Crew	New units drafted, developed and validated and embedded into Training Package
			Mapping of ATC units	Mapping of revised Air Traffic Control units to CASR Part 65 in order to satisfy compliance on behalf of CASA and Airservices Australia
			Revision of all competencies to ensure suitability across commercial and	In late 2007, DFA went from an observer of the process to an active participant, thereby

			<div>defence realms</div> <div>requiring all standards be revisited to ensure applicability across both civilian and military regulatory realms</div>
			<div>Changes to documentation in alignment with Training Package Development Handbook</div> <div>The Training Package Development Handbook changed in May, August and September 2007, resulting in changes to the Volume 1 document and to each unit requiring a licensing statement</div>
			<div>Changes to codes and insertion of AQF descriptor</div> <div>Completed</div>
			<div>Development and validation of Aviation Operator – Helicopter Skill Set</div> <div>This work has been completed and validated</div>
			<div>Development and validation of Night Flying Rules Skill Set</div> <div>Night Flying Rules – work completed</div>
TDA03	2	April 2007	<p>Category 2 change</p> <p>Title and qualification requirement changes to an existing Aviation qualification:</p> <p>Licensed qualification</p> <p>Change: AVI40203A Certificate IV in Transport & Distribution – Aviation Flight Operations</p> <p>To: AVI40107 Certificate IV in Aviation Operations (Commercial Pilot Aeroplane Licence) and AVI40207 Certificate IV in Aviation Operations (Commercial Pilot Helicopter Licence)</p> <p>Reduces the requirements for completion from twenty eight (28) to fifteen (15) units. The fifteen (15) units</p>

			are all placed at level IV Removes the thirteen (13) Cert 1–Cert III level units from the qualification which do not contribute to occupational outcomes for commercial pilots
TDA03	1	March 2003	Primary Release

Table 2: Summary of AQF Qualifications in AVI08 Version 3 Aviation Training Package

This table lists all of the qualifications in the AVI08 Version 3 Training Package. These are detailed in Part 2 of this volume.

Code	National qualification title
AQF1	
AVI10108	Certificate I in Aviation (Foundation Skills)
AQF2	
AVI20208	Certificate II in Aviation (Flight Operations)
AVI20408	Certificate II in Aviation (Ground Operations and Service)
AQF3	
AVI30208	Certificate III in Aviation (Flight Operations)
AVI30408	Certificate III in Aviation (Ground Operations and Service)
AVI30510	Certificate III in Aviation (Rescue Crewman)
AQF4	
AVI40108	Certificate IV in Aviation (Commercial Pilot Aeroplane Licence)
AVI40208	Certificate IV in Aviation (Commercial Pilot Helicopter Licence)
AVI40408	Certificate IV in Aviation (Ground Operations and Service)
AVI40508	Certificate IV in Aviation (Leadership and Supervision)
AVI40610	Certificate IV in Aviation (Aircrewman)
AQF5	

Code	National qualification title
AVI50308	Diploma of Aviation (Air Traffic Control)
AVI50408	Diploma of Aviation (Instrument Flight Operations)
AVI50510	Diploma of Aviation (Flight Instructor)
AQF6	
AVI60110	Advanced Diploma of Aviation (Flight Instruction)

Table 3: Summary of Units of Competency in AVI08 Version 3 Aviation Training Package

The AVI08 units of competency listed below are presented in field order and include the Australian Qualifications Framework for each unit. Note there are no pre-requisites for any AVI units of competency.

For each unit in the table, the AQF level at which it is normally packaged is indicated. Where a unit is packaged at different AQF levels, the lowest level is shown as its nominal level.

Code	Title	AQF
A Handling Cargo/Stock		
AVIA3001B	Package dangerous goods for air transport	3
B Equipment Checking and Maintenance		
AVIB3001B	Inspect and report on an aerodrome	3
AVIB3002B	Inspect and report on aerodrome lighting systems	3
AVIB3003B	Inspect and report on the Obstacle Limitation Surfaces	3
AVIB3004B	Manage and carry out pre- and post-flight cabin checks	3
C Driving Vehicle		
AVIC2001A	Drive on the airside	2
AVIC4002A	Administer airside driving	4
D Load Handling		
AVID2001B	Accept dangerous goods for air transport	2
AVID2003B	Prepare freight for flight	2

Code	Title	AQF
AVID2004B	Conduct aviation freight weighing operations	2
AVID2005B	Accept freight for air transport	2
AVID2006A	Load and secure aviation freight and baggage	2
AVID2007A	Unload aviation freight and baggage	2

E Communication and Calculation

AVIE4001B	Maintain aircraft radio communications	4
AVIE5002B	Apply air traffic control communication procedures and services	5
AVIE3003B	Complete a Notice to Airmen (NOTAM)	3
AVIE3004B	Maintain radio communications as part of airport operations	3

F Safety Management

AVIF4001B	Manage human factors in aircraft flight	4
AVIF5003B	Manage human performance and team resources during air traffic control operations	5
AVIF3004B	Supervise the safety of aerodrome works and general access	3
AVIF3005B	Maintain the safety of people and aircraft	3
AVIF3006B	Respond to abnormal and emergency situations within the aircraft	3
AVIF2007B	Implement regulations and policies during check-in procedures	2
AVIF4008A	Supervise cabin safety and security	4
AVIF2010B	Implement regulations and policies during aircraft safety and service operations	3
AVIF3011B	Apply relevant laws and regulations to the management of an aerodrome	3
AVIF2012A	Monitor the transfer of hazardous materials	2
AVIF5013A	Provide SAR alerting and emergency service	5
AVIF2014A	Undertake aircraft underwater escape and survival	2
AVIF2015A	Utilise emergency breathing system	2

Code	Title	AQF
AVIF3016A	Marshal aircraft	3
AVIF2019A	Work in aircraft confined spaces	2
G Teamwork		
AVIG5001B	Work professionally in an air traffic control workplace	5
H Route Planning and Navigation		
AVIH4001B	Navigate aircraft - VFR	4
AVIH3002B	Advise on major services and attractions at aviation destinations	3
AVIH4012A	Plan a flight under Night Visual Flight Rules (NVFR)	4
AVIH4013A	Navigate aircraft - NVFR	4
AVIH5016A	Plan a flight under Instrument Flight Rules (IFR)	5
AVIH5017A	Navigate aircraft –IFR	5
I Customer Service		
AVII2001B	Provide customer service on an aircraft	2
AVII3002B	Carry out food preparation and service on an aircraft	3
AVII2003C	Carry out beverage service on an aircraft	2
AVII2004B	Provide advice on cuisine on an aircraft	2
AVII3005B	Apply knowledge of the structure, products and services of the airline operator	3
AVII2006B	Conduct in-flight retailing	2
AVII2007B	Check in aircraft passengers	2
AVII2008B	Provide assistance to transit and arriving passengers	2
AVII2009B	Serve wine to aircraft passengers	2
AVII3010B	Carry out aircraft business/first class meal and beverage service	3
AVII3011A	Provide quality customer service	3

Code	Title	AQF
AVII4012B	Manage aircraft passengers and cargo	4
AVII4013A	Supervise cabin operations	4
AVII2014B	Provide transport services to passengers with special needs	2
AVII4015A	Monitor and enhance customer service excellence	4

J Quality

AVIJ2001B	Contribute to the achievement of on-time performance standards	2
AVIJ4002B	Conduct quality control operations related to refuelling/defuelling aircraft	4

L Resource Management

AVIL2001B	Manage a check-in queue	2
AVIL3002B	Complete aircraft despatch duties	3
AVIL3003B	Plan an aircraft load	3
AVIL3004B	Assess pavement concessions	3

M Training and Assessment

AVIM5001A	Operate a simulator	5
AVIM5002A	Conduct aeronautical knowledge training	5
AVIM5003A	Conduct flight training	5
AVIM5004A	Facilitate training in a synthetic environment	5
AVIM5005A	Conduct training for the issue of an endorsement	5
AVIM6006A	Deliver operational flight management training	6
AVIM5007A	Conduct pre-assessment	5
AVIM5008A	Conduct flight review	5

N Leadership and Supervision

AVIN6003A	Manage flight training	6
-----------	------------------------	---

Code	Title	AQF
O Security		
AVIO2001A	Use firearms on an aerodrome to control wildlife hazards	2
AVIO4003A	Implement airside access	4
R Contract Procurement		
AVIR3001B	Service customer airline contracts	3
W Equipment and Systems Operations		
AVIW4001B	Manage pre- and post-flight actions	4
AVIW2002B	Operate an aerobridge	2
AVIW3003B	Operate aircraft embarkation and disembarkation equipment	3
AVIW3004B	Operate ramp equipment	3
AVIW3005B	Operate aircraft push-out tug	3
AVIW3006B	Refuel aircraft	3
AVIW2008B	Conduct baggage handling operations	2
AVIW2010B	Operate baggage tug	2
AVIW3011B	Defuel aircraft	3
AVIW5013B	Operate air traffic control equipment and workstations	5
AVIW5018A	Operate and manage aircraft systems	5
AVIW3021A	Coordinate aircraft ground operations	3
AVIW5022A	Coordinate the removal of disabled aircraft	5
AVIW3023A	Implement wildlife hazard control measures	3
AVIW3024A	Perform wireman duties	3
AVIW3025A	Complete aircraft/equipment pre- and post-flight actions	3
AVIW3026A	Conduct night aided vision aviation operations	3
AVIW3027A	Deliver pyrotechnics and hand held stores	3

Code	Title	AQF
AVIW4028A	Manage aircraft sensor systems	3
AVIW2029A	Operate aircraft refuelling nozzle	2
AVIW2030A	Be airborne extracted by suspended rope	2
AVIW2031A	Be airborne extracted using suspended extraction equipment	2
AVIW2032A	Fast rope from a helicopter	2
AVIW2033A	Rappel from a helicopter	2
AVIW4034A	Supervise aircraft refuelling	4

Y Aircraft Operation and Traffic Management

AVIY4001B	Control aeroplane on the ground	4
AVIY4002B	Take off aeroplane	4
AVIY4003B	Control aeroplane in normal flight	4
AVIY4004B	Land aeroplane	4
AVIY4005B	Execute advanced aeroplane manoeuvres and procedures	4
AVIY4006B	Manage abnormal aeroplane flight situations	4
AVIY4007B	Manage aircraft fuel	4
AVIY4008B	Control aircraft solely by reference to full instrument panel	4
AVIY4009B	Control aircraft solely by reference to limited instrument panel	4
AVIY4011B	Control helicopter on the ground	4
AVIY4012B	Control helicopter in hovering flight	4
AVIY4013B	Taxi helicopter	4
AVIY4014B	Take off helicopter and approach to hover	4
AVIY4015B	Control helicopter in normal flight	4
AVIY4017B	Execute advanced helicopter manoeuvres and procedures	4
AVIY4018B	Manage abnormal and emergency helicopter flight situations	4

Code	Title	AQF
AVIY4019B	Operate helicopter at low level	4
AVIY5020A	Conduct full instrument panel manoeuvres	5
AVIY5021A	Conduct limited instrument panel manoeuvres	5
AVIY5022B	Manage traffic flow	5
AVIY5023A	Operate multi-engine fixed wing aeroplane	5
AVIY4024A	Operate aircraft in the traffic pattern at night	4
AVIY5025A	Perform an instrument arrival	5
AVIY5026A	Perform standard arrival route (STAR)	5
AVIY5027A	Perform instrument departure - non published procedure	5
AVIY5028A	Perform instrument departure - published procedure (SIDSRD)	5
AVIY5033A	Perform visual circling approach	5
AVIY5034A	Perform non-directional beacon (NDB) instrument approach	5
AVIY5035A	Perform VHF omni-directional radio range (VOR) instrument approach	5
AVIY5036A	Perform instrument landing system (ILS) instrument approach	5
AVIY5037A	Perform distance measuring equipment (DME)/global positioning system arrival	5
AVIY5038A	Perform global positioning system (GPS)/non-precision approach (NPA)	5
AVIY5048A	Provide approach control services	5
AVIY5049A	Provide area control services	5
AVIY5050A	Provide aerodrome control services	5
AVIY4051A	Conduct external load-lift operations	4
AVIY3052A	Conduct Helicopter Landing Site and Unprepared Helicopter Landing Site operations	3
AVIY4053A	Perform aircrewman cockpit duties	4
AVIY4054A	Conduct hoisting operations	3

Code	Title	AQF
AVIY4055A	Conduct airborne extraction operations	4
AVIY4056A	Conduct airborne rappelling operations	4
AVIY4057A	Perform helicopter deck landing operations	4
AVIY4058A	Pilot a helicopter during external load operations	4
AVIY4059A	Pilot a helicopter during roping operations	4
AVIY4060A	Pilot a helicopter during winching operations	4
AVIY4061A	Perform aerobatic manoeuvres	4
AVIY4062A	Perform an aerobatic sequence	4
AVIY4063A	Perform close formation flight	4
AVIY4064A	Lead an aircraft formation flight	4
AVIY5065A	Operate a multi-engine helicopter	5
AVIY4066A	Control aircraft in advanced flight manoeuvres	4

Z Situation Awareness

AVIZ4001B	Manage situation awareness in aircraft flight	4
AVIZ1005B	Maintain basic situation awareness in the aviation workplace	1
AVIZ5049A	Manage situational awareness in the air traffic control environment	5

Table 4: Imported Units of Competency in AVI08 Version 3 Aviation Training Package

The AVI08 Version 3 Aviation Training Package has imported units of competency from the Business Services Training Package, Community Services Training Package, Health Training Package, Assessment Maintenance Training Package, Public Safety Training Package, Tourism, Hospitality and Events Training Package, Training and Assessment Training Package, Training and Education Training Package, and the Transport and Logistics Training Package. Please check the relevant Assessment Guidelines of the source Training Package by accessing the NTIS (or a physical copy) regarding any special conditions which may apply to the assessment of imported units of competency.

For up-to-date versions of the following units, refer to www.ntis.gov.au or the respective Industry Skills Councils:

- **Innovation and Business Industry Skills Council** – www.ibsa.org.au
- **Community Services & Health Industry Skills Council** – www.cshisc.com.au

- Service Industry Skills Council – www.serviceskills.com.au
- Construction and Property Services Industry Skills Council – www.cpsisc.com.au
- Government Skills Australia – www.governmentskills.com.au
- Transport and Logistics Industry Skills Council – www.tlisc.com.au

Code	Title
BSB07 Business Services Training Package	
BSBAUD402B	Participate in a quality audit
BSBCUS301A	Deliver and monitor a service to customers
BSBCMM301A	Process customer complaints
BSBCMM401A	Make a presentation
BSBFIM501A	Manage budgets and financial plans
BSBHRM402A	Recruit, select and induct staff
BSBLED401A	Develop teams and individuals
BSBMGT401A	Show leadership in the workplace
BSBMGT402A	Implement operational plan
BSBMGT502A	Manage people performance
BSBMKG501B	Identify and evaluate marketing opportunities
BSBOHS407A	Monitor a safe workplace
BSBRKG502B	Manage and monitor business or records systems
BSBWOR301A	Organise personal work priorities and development
BSBWOR402A	Promote team effectiveness
BSBWOR502A	Ensure team effectiveness
BSBWRK509A	Manage industrial relations
CHC08 Community Services Training Package	
CHCCAR501B	Conduct career guidance interview
HLT07 Health Training Package	

Code	Title
HLTFA201A	Provide basic emergency life support
HLTFA301B	Apply first aid
HLTFA402B	Apply advanced first aid
HLTFA404A	Apply advanced resuscitation techniques

PRM04 Asset Maintenance Training Package

PRMCL04B	Maintain a carpeted floor
PRMCL17B	Clean a wet area
PRMCL37A	Clean external surfaces
PRMCL38A	Clean a food handling area

PUA00 Public Safety Training Package

PUAFIR209B	Work Safely around aircraft
------------	-----------------------------

SIT07 Tourism, Hospitality and Events

SITXHRM008A	Manage workplace relations
SITTTSL007A	Receive and process reservations
SITTTSL010A	Control reservations or operations using a computerised system
SITTTSL014A	Construct promotional international airfares
SITTTSL009A	Process travel-related documentation
SITTTSL012A	Construct domestic airfares
SITTTSL013A	Construct normal international airfares
SITTTSL015A	Construct advanced international airfares

TAA04 Training and Assessment Training Package

TAAASS501B	Lead and coordinate assessment systems and services
TAACMQ501B	Develop training and/or assessment organisational policies & procedures

Code	Title
TAACMQ503B	Lead and conduct training and/or assessment evaluations
TAACMQ504B	Determine and manage scope of training and/or assessment services
TAACMQ505B	Lead a team to foster innovation
TAADEL503B	Provide advanced facilitation to support learning
TAADEL504B	Lead and coordinate training services
TAADES501B	Design and develop learning strategies
TAADES502B	Design and develop learning resources
TAAENV501B	Maintain and enhance professional practice
TAATAS502B	Prepare a tender bid
TAATAS503B	Manage contracted work
TAATAS504B	Facilitate group processes

TAE10 Training and Education Training Package

TAEASS401A	Plan assessment activities and processes
TAEASS402A	Assess competence
TAEASS403A	Participate in assessment validation
TAEASS502A	Design and develop assessment tools
TAEDEL301A	Provide work skill instruction
TAEDEL401A	Plan, organise and deliver group-based learning
TAEDEL402A	Plan, organise and facilitate learning in the workplace
TAEDES401A	Design and develop learning programs
TAEDES402A	Use training packages and accredited courses to meet client needs
TAELLN401A	Address adult language, literacy and numeracy skills
TAESUS501A	Analyse and apply sustainability skills to learning programs

TLI07 Transport and Logistics Training Package

Code	Title
TLIA107C	Secure cargo
TLIA207C	Maintain container/cargo records
TLIA507C	Check and evaluate records and documentation
TLIA807C	Transfer cargo
TLIA907E	Complete and check import/export documentation
TLIA1007C	Coordinate goods to bond premises
TLIA1107C	Package goods
TLIA1307C	Receive goods
TLIA1407C	Use product knowledge to complete work operations
TLIA1507C	Complete receipt/despatch documentation
TLIA1707C	Apply product knowledge to organise work operations
TLIA2007C	Replenish stock
TLIA2207C	Participate in stocktakes
TLIA2307C	Coordinate stocktakes
TLIA2507D	Regulate temperature controlled stock
TLIA3007C	Organise cargo for export
TLIA3107C	Consolidate freight
TLIA3207C	Organise transport of freight or goods
TLIA3307C	Organise international transport of freight
TLIB107C	Check and assess operational capabilities of equipment
TLIB207C	Test equipment and isolate faults
TLIB307C	Carry out vehicle servicing and maintenance
TLIB407C	Carry out vehicle inspection
TLIB707C	Carry out maintenance of trailers

Code	Title
TLIB807C	Carry out inspection of trailers
TLIB2407B	Clean transportation units and facilities for passenger use
TLIB2807B	Maintain and use hand tools
TLIB2907B	Use and maintain minor mechanical equipment
TLIB7307B	Clean road tankers
TLIC107C	Drive vehicle
TLIC307C	Drive medium rigid vehicle
TLIC407D	Drive heavy rigid vehicle
TLIC507D	Drive heavy combination vehicle
TLIC607C	Drive multi-combination vehicle
TLIC707C	Operate vehicle carrying special loads
TLIC807C	Drive coach/bus
TLID107C	Shift materials safely using manual handling methods
TLID207C	Shift a load using manually-operated equipment
TLID307E	Handle dangerous goods/hazardous substances
TLID407C	Load and unload goods/cargo
TLID1007C	Operate a forklift
TLID1307C	Move materials mechanically using automated equipment
TLID1507D	Identify and label explosives and dangerous goods
TLID1607D	Load and unload explosives and dangerous goods
TLID2007C	Care for livestock in transit
TLID2707C	Prepare for transport of packaged dangerous goods
TLIE107C	Present routine workplace information
TLIE207C	Estimate/calculate mass, area and quantify dimensions

Code	Title
TLIE307C	Participate in basic workplace communication
TLIE407C	Prepare workplace documents
TLIE507C	Carry out basic workplace calculations
TLIE607D	Collect, analyse and present workplace data and information
TLIE707B	Use communication systems
TLIE807C	Process workplace documentation
TLIE1207C	Consolidate manifest documentation
TLIE1307C	Apply workplace statistics
TLIE1407C	Compile and process export documentation
TLIE1807B	Maintain freight records
TLIF107C	Follow occupational health and safety procedures
TLIF207C	Conduct housekeeping activities
TLIF307C	Implement and monitor occupational health and safety procedures
TLIF607C	Apply accident-emergency procedures
TLIF707C	Implement and coordinate accident-emergency procedures
TLIF907C	Conduct cleaning operations in enclosed spaces
TLIF1007C	Apply fatigue management strategies
TLIF1207C	Apply safe procedures when handling/transporting dangerous goods or explosives
TLIF1407C	Develop and maintain a safe workplace
TLIF1807B	Operate fire-fighting equipment
TLIF6307A	Administer the implementation of fatigue management strategies
TLIF6407A	Manage fatigue management policy and procedures
TLIG107C	Work effectively with others

Code	Title
TLIG207C	Lead a work team or group
TLIG607C	Facilitate work teams
TLIG707B	Work in a socially diverse environment
TLII107D	Coordinate quality customer service
TLII207D	Apply customer service skills
TLII507C	Market services and products to clients
TLII907C	Provide on-board services to customers
TLIJ107C	Apply quality procedures
TLIJ207C	Apply quality systems
TLIJ707C	Conduct internal quality audits
TLIK107C	Use infotechnology devices and computer applications in the workplace
TLIK307C	Apply keyboard skills
TLIK707C	Perform electronic data interchange (EDI) to transmit shipping documentation
TLIL107C	Complete workplace orientation/induction procedures
TLIL307C	Conduct induction process
TLIL507D	Apply conflict/grievance resolution strategies
TLIL807C	Complete routine administrative tasks
TLIL907C	Manage personal work priorities and professional development
TLIL1007C	Assess and confirm customer transport requirements
TLIL3107B	Monitor and process attendance records
TLIL3207B	Implement equal employment equity strategies
TLIL3307B	Promote effective workplace practice

Code	Title
TLIL3607B	Develop rosters
TLIL3707B	Apply and amend rosters
TLILIC108A	Licence to operate a forklift truck
TLIO207D	Follow security procedures
TLIO707C	Undertake emergency response action to a security threat
TLIO1107C	Provide revenue protection measures
TLIO1207C	Manage disruptive and/or unlawful behaviour
TLIO1307C	Administer the security of assets and facilities
TLIO1607B	Apply and monitor workplace security procedures
TLIP107C	Develop plans to meet customer and organisation needs
TLIP207C	Facilitate and capitalise on change in the workplace
TLIP507C	Manage workplace information
TLIP707C	Contribute to the development of a workplace learning environment
TLIQ107D	Conduct financial transactions
TLIQ707C	Prepare and process financial documents
TLIQ1007B	Maintain customer credit accounts and services
TLIQ1207B	Sell products and services
TLIQ1307B	Advise on and construct fares for customers
TLIR107C	Monitor supplier performance
TLIR207C	Source goods/services and evaluate contractors
TLIR307C	Negotiate a contract
TLIT107C	Capture records into a records keeping system
TLIT207C	Document a records system
TLIT307C	Identify and classify records to be captured

Code	Title
TLIT407C	Maintain control of records
TLIT507C	Provide information from and about records
TLIU107B	Implement and monitor environmental protection policies and procedures
TLIU607B	Conduct environmental audits
TLIU707B	Care for the environment

Table 5: Mapping of AVI08 Version 3 Units of Competency to AVI08 Version 2 Units of Competency

This table shows the relationship between units of competency in the AVI08 Version 3 Training Package and units of competency in the AVI08 Version 2 Training Package.

AVI08 Version 3		AVI08 Version 2		Comments	E/N
Code	Title	Code	Title		E

Table 6: Mapping of AVI08 Version 3 Qualifications to AVI08 Version 2 Qualifications

This table shows the relationship between qualifications in the AVI08 Version 2 Aviation Training Package and the qualifications in the AVI08 Version 3 Aviation Training Package.

Qualification code in AVI08 (V3)	Relationship	E/N	Comment in relation to AVI08 (V2) Aviation Training Package
AVI30510 Certificate III in Aviation (Rescue Crewman)	Revised qualification	E	This qualification has been restructured to enable selection of elective units and to reflect National Quality Council changes to qualification packaging rules

Qualification code in AVI08 (V3)	Relationship	E/N	Comment in relation to AVI08 (V2) Aviation Training Package
AVI40610 Certificate IV in Aviation (Aircrewman)	Revised qualification	E	This qualification has been restructured to reflect National Quality Council changes to qualification packaging rules
AVI50510 Diploma of Aviation (Flight Instructor)	New qualification		This is a new qualification in the Training Package
AVI60110 Advanced Diploma of Aviation (Flight Instruction)	New qualification		This is a new qualification in the Training Package

Overview of Training Packages

Overview of Training Packages

What is a Training Package?

A Training Package is an integrated set of nationally endorsed competency standards, assessment guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, recognising and assessing people's skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training which suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Skills Framework?

The National Skills Framework applies nationally, is endorsed by the Ministerial Council for Vocational and Technical Education, and comprises the Australian Quality Training Framework 2007 (AQTF 2007), and Training Packages endorsed by the National Quality Council (NQC).

How are Training Packages developed?

Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained.

Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency, and even gain a qualification, without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off-the-job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

Who can deliver and assess using Training Packages?

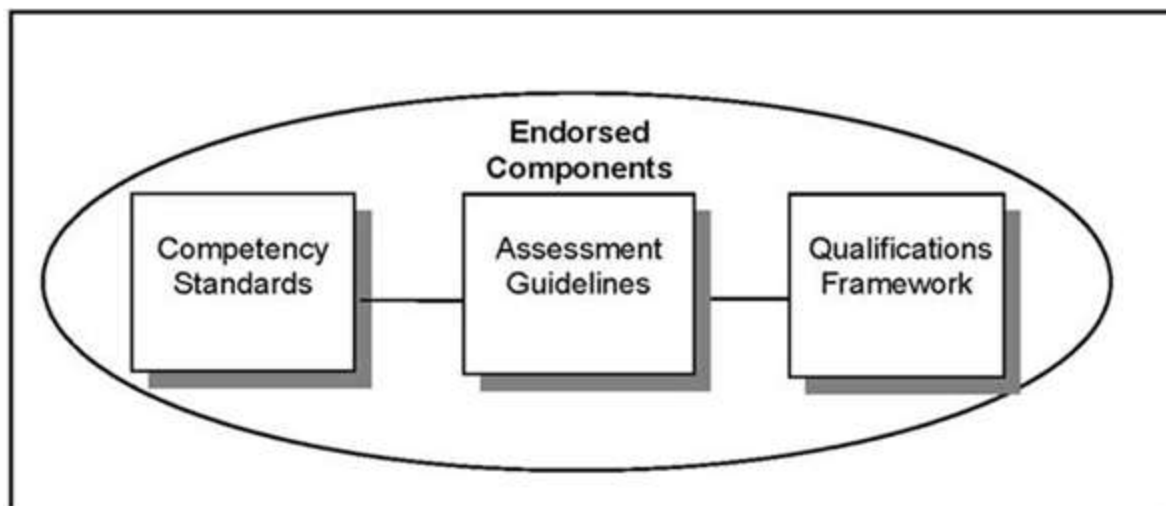

Training and assessment using Training Packages must be conducted by a Registered Training Organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO, as specified in the AQTF 2007.

Training Package Components

Training Packages are made up of mandatory components endorsed by the NQC, and optional support materials.

Training Package Endorsed Components

The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.

Competency Standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment Guidelines

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the AQTF 2007. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

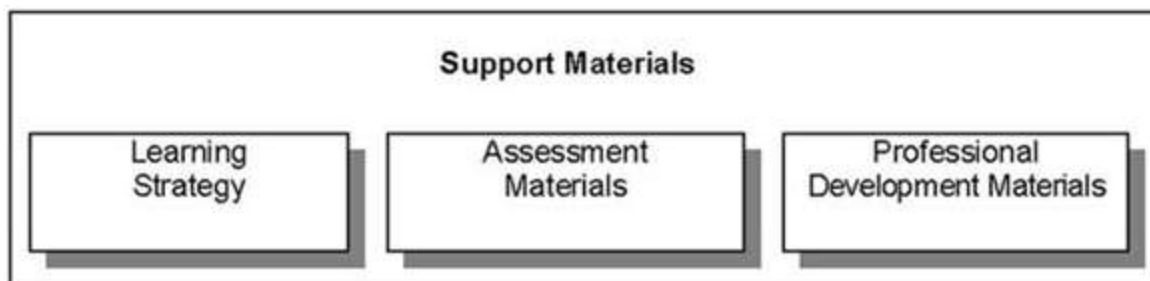

Qualifications Framework

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the 'packaging rules'. The packaging rules must be followed to ensure the integrity of nationally recognised qualifications issued.

Training Package Support Materials

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.

Training Package support materials are produced by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and Government agencies.

Where such materials have been quality assured through a process of 'noting' by the NQC, they display the following official logo. Noted support materials are listed on the National Training Information Service (NTIS), together with a detailed description and information on the type of product and its availability <www.ntis.gov.au>

It is not compulsory to submit support materials for noting; any resources that meet the requirements of the Training Package can be used.

Training Package, Qualification and Unit of Competency Codes

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, **and with the code always before the title.**

Training Package Codes

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example XYZ08. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

Qualification Codes

Within each Training Package, each qualification has a unique eight-character code, for example XYZ10108. Qualification codes are developed as follows:

- the first three letters identify the Training Package
- the first number identifies the qualification level (noting that, in the qualification titles themselves, arabic numbers are **not** used)
- the next two numbers identify the position in the sequence of the qualification at that level
- the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

Unit of Competency Codes

Within each Training Package, each unit of competency has a unique code. Unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package. Unit codes are developed as follows:

- a typical code is made up of 12 characters, normally a mixture of uppercase letters and numbers, as in AVIA3001B
- the first three characters signify the Training Package – Aviation Training Package AVI08 – in the above example and up to eight characters, relating to an industry sector, function or skill area, follow
- the last character is always a letter and identifies the unit of competency version. An ‘A’ at the end of the code indicates that this is the original unit of competency. ‘B’, or another incremented version identifier means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent

- where changes are made that alter the outcome, a new code is assigned and the title is changed.

Training Package, Qualification and Unit of Competency Titles

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

Training Package Titles

The title of each endorsed Training Package is unique and relates the Training Packages broad industry coverage.

Qualification Titles

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- first, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma, Advanced Diploma, Vocational Graduate Certificate, or Vocational Graduate Diploma
- this is followed by the words 'in' for Certificates I to IV, and 'of' for Diploma, Advanced Diploma, Vocational Graduate Certificate and Vocational Graduate Diploma
- then, the industry descriptor, for example Telecommunications
- then, if applicable, the occupational or functional stream in brackets, for example (Computer Systems).

For example:

- AVI20208 Certificate II in Aviation (Flight Operations)
- AVI30408 Certificate III in Aviation (Ground Operations and Service).

Unit of Competency Titles

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example:

- AVIA3001B Package dangerous goods for air transport
- AVIB3001B Inspect and report on an aerodrome.

Qualifications Framework

Qualifications Framework

The Australian Qualifications Framework

What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the *AQF Implementation Handbook*. The 2007 version of the *AQF Implementation Handbook* is expected to be available on the Australian Qualifications Framework Advisory Board (AQFAB) website <www.aqf.edu.au> during September 2007, and in print in October 2007 (obtain the hard copy by contacting AQFAB on phone 03 9639 1606 or email at aqfab@curriculum.edu.au).

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications

Training Packages can incorporate the following eight AQF qualifications.

- Certificate I in ...
- Certificate II in ...
- Certificate III in ...
- Certificate IV in ...
- Diploma of ...
- Advanced Diploma of ...
- Vocational Graduate Certificate of ...
- Vocational Graduate Diploma of ...

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) may issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the *AQF Implementation Handbook* and the *AQTF 2007 Essential Standards for Registration*.

Statement of Attainment

A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). Issuance of Statements of Attainment must comply with the advice provided in the current *AQF Implementation Handbook* and the *AQTF 2007 Essential Standards for Registration*.

Under the AQTF 2007, RTOs must recognise the achievement of competencies as recorded on a qualification or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes

The *AQF Implementation Handbook* provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

Certificate I

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas;
- demonstrate basic practical skills, such as the use of relevant tools;
- perform a sequence of routine tasks given clear direction
- receive and pass on messages/information.

Certificate II

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas;
- apply a defined range of skills;
- apply known solutions to a limited range of predictable problems;
- perform a range of tasks where choice between a limited range of options is required;
- assess and record information from varied sources;
- take limited responsibility for own outputs in work and learning.

Certificate III*Characteristics of Learning Outcomes*

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team co-ordination may be involved.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning
- take limited responsibility for the output of others.

Certificate IV*Characteristics of Learning Outcomes*

Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature.

Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills. Applications involve responsibility for, and limited organisation of, others.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
- identify, analyse and evaluate information from a variety of sources
- take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others.

Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and co-ordination.

The self directed application of knowledge and skills, with substantial depth in some areas where judgment is required in planning and selecting appropriate equipment, services and techniques for self and others.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team co-ordination may be involved.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters
- take some responsibility for the achievement of group outcomes.

Advanced Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including

development of new criteria or applications or knowledge or procedures.

The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.

Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of specialised knowledge with depth in some areas
- analyse, diagnose, design and execute judgements across a broad range of technical or management functions
- generate ideas through the analysis of information and concepts at an abstract level
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
- demonstrate accountability for personal outputs within broad parameters
- demonstrate accountability for personal and group outcomes within broad parameters.

Vocational Graduate Certificate

Characteristics of Competencies or Learning Outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.
- Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts.
- Generate and evaluate ideas through the analysis of information and concepts at an

abstract level.

- Demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts.
- Demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

Vocational Graduate Diploma

Characteristics of Competencies or Learning Outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts.
- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.
- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.

Assessment Guidelines

Assessment Guidelines

Introduction

These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the AQTF 2007. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

Assessment System Overview

This section provides an overview of the requirements for assessment when using this Training Package, including a summary of the AQTF 2007 requirements; licensing/registration requirements; and assessment pathways.

Benchmarks for Assessment

Assessment within the National Skills Framework is the process of collecting evidence and making judgments about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

In the areas of work covered by this Training Package, the endorsed units of competency are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

Australian Quality Training Framework Assessment Requirements

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the AQTF as expressed in the AQTF 2007 *Essential Standards for Registration*.

The AQTF 2007 *Essential Standards for Registration* can be downloaded from <www.training.com.au/aqtf2007>. The following points summarise assessment requirements.

Registration of Training Organisations

Assessment must be conducted by, or on behalf of, an RTO formally registered by a State or Territory Registering/Course Accrediting Body in accordance with the AQTF 2007 *Essential Standards for Registration*. The RTO must have the specific units of competency and/or AQF qualifications on its scope of registration.

Quality Training and Assessment

Each RTO must provide quality training and assessment across all its operations. See the AQTF 2007 *Essential Standards for Registration*, Standard 1.

Assessor Competency Requirements

Each person involved in training, assessment or client service must be competent for the functions they perform. See the AQTF 2007 *Essential Standards for Registration*, Standard 1, for assessor (and trainer) competency requirements.

Assessment Requirements

The RTOs assessments, including RPL, must meet the requirements of the relevant endorsed Training Package. See the AQTF 2007 *Essential Standards for Registration*, Standard 1.

Assessment Strategies

Each RTO must have strategies for training and assessment that meet the requirements of the relevant Training Package or accredited course and are developed in consultation with industry stakeholders. See the AQTF 2007 *Essential Standards for Registration*, Standard 1.

National Recognition

Each RTO must recognise the AQF qualifications and Statements of Attainment issued by any other RTO. See the AQTF 2007 *Essential Standards for Registration*, Condition of Registration 7: Recognition of qualifications issued by other RTOs.

Access and Equity and Client Outcomes

Each RTO must adhere to the principles of access and equity and maximise outcomes for its clients. See the AQTF 2007 *Essential Standards for Registration*, Standard 2.

Monitoring Assessments

Training and/or assessment provided on behalf of the RTO must be monitored to ensure that it is in accordance with all aspects of the Essential Standards for Registration. See the AQTF 2007 *Essential Standards for Registration*, Standard 3.

Recording Assessment Outcomes

Each RTO must manage records to ensure their accuracy and integrity. See the AQTF 2007 *Essential Standards for Registration*, Standard 3.

Issuing AQF Qualifications and Statements of Attainment

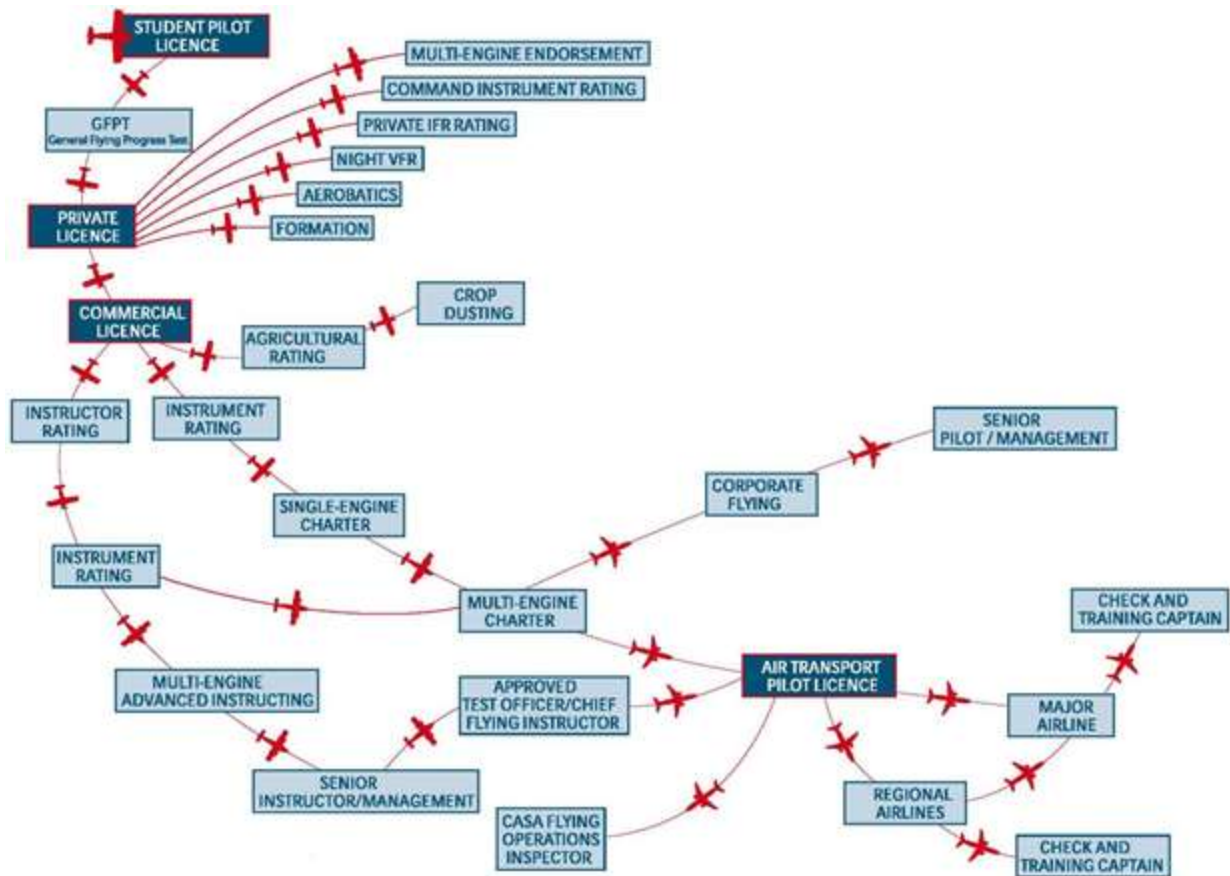

Each RTO must issue AQF qualifications and Statements of Attainment that meet the requirements of the current AQF Implementation Handbook and the endorsed Training Packages within the scope of its registration. An AQF qualification is issued once the full requirements for a qualification, as specified in the nationally endorsed Training Package are met. A Statement of Attainment is issued when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). See the AQTF 2007 and the 2007 edition of the AQF Implementation Handbook—available on the AQFAB website <www.aqf.edu.au>.

Licensing/Registration Requirements

This section provides information on licensing/registration requirements for this Training Package, with the following important disclaimer.

Licensing and registration requirements that apply to specific industries, and vocational education and training, vary between each state and territory, and can regularly change. The developers of this Training Package, and DEEWR, consider that the licensing/registration requirements described apply to RTOs, assessors or candidates with respect to this Training Package. While reasonable care has been taken in its preparation, the developers of this Training Package and DEEWR cannot guarantee that the list is definitive or accurate at the time of reading; the information in this section is provided in good faith on that basis. Contact the relevant State or Territory Department(s) of the Civil Aviation Safety Authority (CASA) to check if the licensing/registration requirements described still apply, and to check if there are any others with which you must comply. For further information contact www.casa.gov.au

Civil Aviation Pilot Career Path Licensing & Endorsements

Requirements for Assessors

In order to conduct assessment for statutory licensing or other industry registration requirements, assessors must meet the requirements outlined as follows, in addition to the AQTF requirements.

CASA Regional Offices

Licensing requirements in High Risk Licensing Work

In order to deliver the qualifications contained in this Training Package, assessors delivering qualifications requiring High Risk Licensing Work units from this Training Package or from other Training Packages should have the following minimum competency, recognition and experience:

- formal recognition of competency at least to the level being assessed
- relevant industry experience, that is, workplace experience within the last two years in the competency area being delivered
- relevant occupational registration or licensing in areas where this is a regulatory requirement to practise in the jurisdiction where the qualification is being assessed.

A number of occupations and job roles covered by the units of competency and qualifications in the AVI08 (Version 3) Training Package may be subject to state and territory licensing requirements.

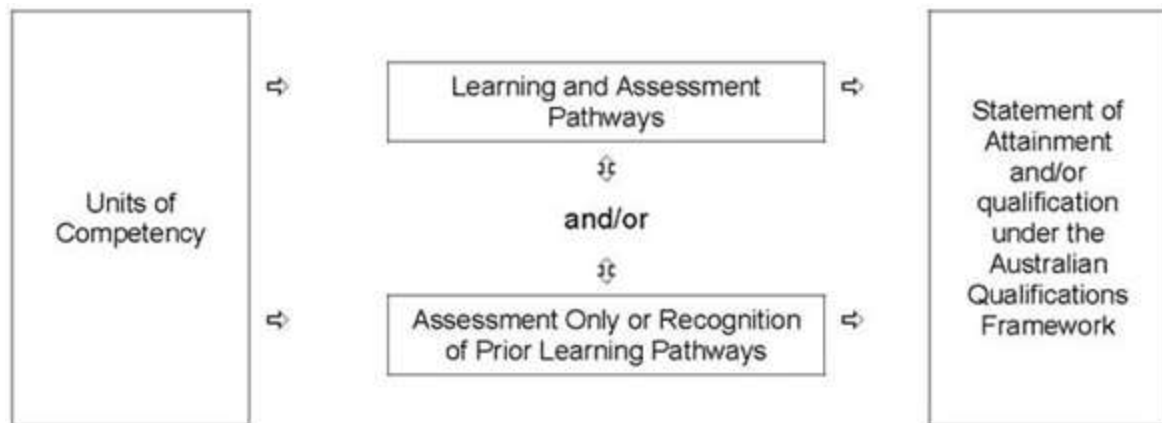

These requirements vary significantly across jurisdictions. There is however one specific unit of competency – namely *TLILIC108A Licence to operate a forklift truck* – which has been agreed by all OH&S regulators and the Australian Safety and Compensation Council (ASCC) as meeting certain licensing categories.

Pathways

The competencies in this Training Package may be attained in a number of ways including through:

- formal or informal education and training
- experiences in the workplace
- general life experience, and/or
- any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, an assessment-only or recognition pathway, or a combination of the two as illustrated in the following diagram.

Each of these assessment pathways leads to full recognition of competencies held - the critical issue is that the candidate is competent, not how the competency was acquired.

Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package and the AQTF 2007.

Learning and Assessment Pathways

Usually, learning and assessment are integrated, with assessment evidence being collected and feedback provided to the candidate at anytime throughout the learning and assessment process.

Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace.

Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

Assessment-Only or Recognition of Prior Learning Pathway

Competencies already held by individuals can be formally assessed against the units of competency in this Training Package, and should be recognised regardless of how, when or where they were achieved.

In an assessment-only or Recognition of Prior Learning (RPL) pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor, such as in the compilation of portfolios; or directed by the assessor, such as through observation of workplace performance and skills application, and oral and/or written assessment. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the AQTF 2007 must be met (Standard 1).

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, and work samples. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:

- authentic (the candidate's own work)
- valid (directly related to the current version of the relevant endorsed unit of competency)
- reliable (shows that the candidate consistently meets the endorsed unit of competency)
- current (reflects the candidate's current capacity to perform the aspect of the work covered by the endorsed unit of competency), and
- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).

The assessment only or recognition of prior learning pathway is likely to be most appropriate in the following scenarios:

- candidates enrolling in qualifications who want recognition for prior learning or current competencies
- existing workers
- individuals with overseas qualifications
- recent migrants with established work histories
- people returning to the workplace, and
- people with disabilities or injuries requiring a change in career.
-

Combination of Pathways

Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

Assessor Requirements

This section identifies the mandatory competencies for assessors, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

Assessor Competencies

The AQTF 2007 specifies mandatory competency requirements for assessors. For information, Standard 1, Element 1.4 from the AQTF 2007 *Essential Standards for Registration* follows:

- "1.4 Training and assessment is delivered by trainers and assessors who:*
- a) have the necessary training and assessment competencies as determined by the National Quality Council or its successors*
 - b) have the relevant vocational competencies at least to the level being delivered or assessed*
 - c) continue developing their vocational and training and assessment competencies to support continuous improvements in the delivery of the RTO's services."*

Designing Assessment Tools

This section provides an overview on the use and development of assessment tools.

Use of Assessment Tools

Assessment tools provide a means of collecting the evidence that assessors use in making judgments about whether candidates have achieved competency.

There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

Using Prepared Assessment Tools

If using prepared assessment tools, assessors should ensure these are benchmarked, or mapped, against the current version of the relevant unit of competency. This can be done by checking that the materials are listed on the National Training Information Service <www.ntis.gov.au>. Materials on the list have been noted by the National Quality Council as meeting their quality criteria for Training Package support materials.

Developing Assessment Tools

When developing assessment tools, assessors must ensure that they:

- are benchmarked against the relevant unit or units of competency
- are reviewed as part of the continuous improvement of assessment strategies as required under Standard 1 of the AQTF 2007
- meet the assessment requirements expressed in Standard 1 of the AQTF 2007.

A key reference for assessors developing assessment tools is TAA04 Training and Assessment Training Package and the unit of competency TAAASS403A *Develop assessment tools*. There is no set format or process for the design, production or development of assessment materials.

Conducting Assessment

This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

Assessment Requirements

Assessments must meet the criteria set out in the AQTF 2007 Essential Standards for Registration.

For information, the mandatory assessment requirements from Standard 1 from the AQTF 2007 *Essential Standards for Registration* are as follows:

<p>"1. 5 <i>Assessment, including Recognition of Prior Learning:</i></p>

- a) meets the requirements of the relevant Training Package or accredited course,*
- b) is conducted in accordance with the principles of assessment and the rules of evidence, and*
- c) meets workplace and, where relevant, regulatory requirements."*

Assessment of Employability Skills

Employability Skills are integral to workplace competency. As such they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way, as represented diagrammatically below.

Employability Skills are embedded and explicit within each unit of competency. Training providers must use Employability Skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant Employability Skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the application of Employability Skills at that qualification outcome
- designing training and assessment to address Employability Skills requirements.

For more information on Employability Skills in the Transport and Logistics, Aviation and Maritime Training Packages, go to the Transport and Logistics Industry Skills Council website at: www.tlisc.com.au

Access and Equity

An individual's access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia's VET clients and Australia's current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia's economic development and social and cultural life.

Reasonable adjustments

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability.

Under the *Disability Standards for Education 2005*, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While 'reasonable adjustment' and 'unjustifiable hardship' are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student's disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.

An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship.

See Part 4, Chapter 2 of the *Training Package Development Handbook* (DEST, September 2007) for more information on reasonable adjustment, including examples of adjustments.

Further Sources of Information

The section provides a listing of useful contacts and resources to assist assessors in planning, designing, conducting and reviewing of assessments against this Training Package.

Assessment Resources

Training Package Assessment Guides – a range of resources to assist RTOs in developing Training Package assessment materials (originally developed by ANTA with funding from the Department of Education, Training and Youth Affairs) and made up of 10 separate titles. Go to www.resourcegenerator.gov.au/loadpage.asp?TPAG.htm

Printed and/or CD ROM versions of the Guides can be purchased from Technical and Vocational Education and Training (TVET) Australia Limited. The resource includes the following guides:

- Training Package Assessment Materials Kit
- Assessing Competencies in Higher Qualifications
- Recognition Resource
- Kit to Support Assessor Training
- Candidates Kit: Guide to Assessment in New Apprenticeships
- Assessment Approaches for Small Workplaces
- Assessment Using Partnership Arrangements
- Strategies for ensuring Consistency in Assessment
- Networking for Assessors
- Quality Assurance Guide for Assessment

An additional guide 'Delivery and Assessment Strategies' has been developed to complement these resources.

Competency Standards

Competency Standards

What is Competency?

The broad concept of industry competency concerns the ability to perform particular tasks and duties to the standard of performance expected in the workplace. Competency requires the application of specified skills, knowledge and attitudes relevant to effective participation in an industry, industry sector or enterprise.

Competency covers all aspects of workplace performance and involves performing individual tasks; managing a range of different tasks; responding to contingencies or breakdowns; and, dealing with the responsibilities of the workplace, including working with others. Workplace competency requires the ability to apply relevant skills, knowledge and attitudes consistently over time and in the required workplace situations and environments. In line with this concept of competency Training Packages focus on what is expected of a competent individual in the workplace as an outcome of learning, rather than focussing on the learning process itself. Competency standards in Training Packages are determined by industry to meet identified industry skill needs. Competency standards are made up of a number of units of competency each of which describes a key function or role in a particular job function or occupation. Each unit of competency within a Training Package is linked to one or more AQF qualifications.

Contextualisation of Units of Competency by RTOs

Registered Training Organisations (RTOs) may contextualise units of competency in this endorsed Training Package to reflect required local outcomes. Contextualisation could involve additions or amendments to the unit of competency to suit particular delivery methods, learner profiles, specific enterprise equipment requirements, or to otherwise meet local needs. However, the integrity of the overall intended outcome of the unit of competency must be maintained.

Any contextualisation of units of competency in this Training Package must be within the bounds of the following advice:

- RTOs must not remove or add to the number and content of elements and performance criteria.
- RTOs can include specific industry terminology in the range statement.
- Any amendments and additions to the range statement made by RTOs must not diminish the breadth of application of the competency, or reduce its portability.
- RTOs may add detail to the evidence guide in areas such as the critical aspects of evidence or required resources and infrastructure—but only where these expand the breadth of the competency and do not limit its use.

Components of Units of Competency

The components of units of competency are summarised below, in the order in which they appear in each unit of competency.

Unit Title

The unit title is a succinct statement of the outcome of the unit of competency. Each unit of competency title is unique, both within and across Training Packages.

Unit Descriptor

The unit descriptor broadly communicates the content of the unit of competency and the skill area it addresses. Where units of competency have been contextualised from units of competency from other endorsed Training Packages, summary information is provided. There may also be a brief second paragraph that describes its relationship with other units of competency, and any licensing requirements.

Employability Skills

This sub-section contains a statement that the unit contains Employability skills.

Pre-requisite Units (optional)

If there are any units of competency that must be completed before the unit, these will be listed.

Application of the Unit

This sub-section fleshes out the unit of competency's scope, purpose and operation in different contexts, for example, by showing how it applies in the workplace.

Competency Field (Optional)

The competency field either reflects the way the units of competency are categorised in the Training Package or denotes the industry sector, specialisation or function. It is an optional component of the unit of competency.

Sector (optional)

The industry sector is a further categorisation of the competency field and identifies the next classification, for example an elective or supervision field.

Elements of Competency

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

Performance Criteria

The performance criteria specify the required performance in relevant tasks, roles, skills and in the applied knowledge that enables competent performance. They are usually written in passive voice. Critical terms or phrases may be written in bold italics and then defined in range statement, in the order of their appearance in the performance criteria.

Required Skills and Knowledge

The essential skills and knowledge are either identified separately or combined. *Knowledge* identifies what a person needs to know to perform the work in an informed and effective manner. *Skills* describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Range Statement

The range statement provides a context for the unit of competency, describing essential operating conditions that may be present with training and assessment, depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. As applicable, the meanings of key terms used in the performance criteria will also be explained in the range statement.

Evidence Guide

The evidence guide is critical in assessment as it provides information to the Registered Training Organisation (RTO) and assessor about how the described competency may be demonstrated. The evidence guide does this by providing a range of evidence for the assessor to make determinations, and by providing the assessment context. The evidence guide describes:

- conditions under which competency must be assessed including variables such as the assessment environment or necessary equipment
- relationships with the assessment of any other units of competency
- suitable methodologies for conducting assessment including the potential for workplace simulation
- resource implications, for example access to particular equipment, infrastructure or situations
- how consistency in performance can be assessed over time, various contexts and with a range of evidence
- the required underpinning knowledge and skills.

Employability Skills in Units of Competency

The detail and application of Employability Skills facets will vary according to the job-role requirements of each industry. In developing Training Packages, industry stakeholders are consulted to identify appropriate facets of Employability Skills which are incorporated into the relevant units of competency and qualifications.

Employability Skills are not a discrete requirement contained in units of competency (as was the case with Key Competencies). Employability Skills are specifically expressed in the context of the work outcomes described in units of competency and will appear in elements, performance criteria, range statements and evidence guides. As a result, users of Training Packages are required to review the entire unit of competency in order to accurately determine Employability Skills requirements.

How Employability Skills relate to the Key Competencies

The eight nationally agreed Employability Skills now replace the seven Key Competencies in Training Packages. Trainers and assessors who have used Training Packages prior to the introduction of Employability Skills may find the following comparison useful.

Employability Skills	Key Competencies
Communication	Communicating ideas and information
Teamwork	Working with others and in teams
Problem solving	Solving problems Using mathematical ideas and techniques
Initiative and enterprise	
Planning and organising	Collecting, analysing and organising information Planning and organising activities
Self-management	
Learning	
Technology	Using technology

When analysing the above table it is important to consider the relationship and natural overlap of Employability Skills. For example, using technology may involve communication skills and combine the understanding of mathematical concepts.

Explicitly embedding Employability Skills in units of competency

This Training Package seeks to ensure that industry-endorsed Employability Skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability Skills must be both explicit and embedded within units of competency. This means that Employability Skills will be:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Packages users to identify accurately the performance requirements of each unit with regards to Employability Skills.

This Training Package also seeks to ensure that Employability Skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

Sample unit of competency components showing Employability Skills

The following table shows the sequence of a unit of competency, and each cell contains text taken from a range of units. It provides examples of where and how various Employability Skills could be embedded in each component.

Please note that in the example, the bracketed Employability Skills are provided for clarification only and would not be present in units of competency within this Training Package.

Unit Title	Give formal presentations and take part in meetings (Communication)
Unit Descriptor	This unit covers the skills and knowledge required to promote the use and implementation of innovative work practices to effect change. (Initiative and enterprise)
Element	Proactively resolve issues. (problem solving)
Performance Criteria	Information is organised in a format suitable for analysis and dissemination in accordance with organisational requirements. (Planning and organising)
Range Statement	Software applications may include email, internet, word processing, spreadsheet, database or accounting packages. (technology)
Required Skills and Knowledge	Modify activities depending on differing workplace contexts, risk situations and environments. (Learning) Work collaboratively with others during a fire emergency. (teamwork) Instructions, procedures and other information relevant the maintenance of vessel and port security. (Communication)
Evidence Guide	Evidence of having worked constructively with a wide range of community groups and stakeholders to solve problems and adapt or design new solutions to meet identified needs in crime prevention. In particular, evidence must be obtained on the ability to: assess response options to identified crime-prevention needs and determine the optimal action to be implemented in consultation with relevant others, design an initiative to address identified issues. (Initiative and enterprise).

Employability Skills Summaries and units of competency

An Employability Skills Summary exists for each qualification. Summaries include broad advice on industry expectations with regard to Employability Skills at the qualification level. Summaries should be used by trainers and assessors to assist in identifying the Employability Skills requirements contained within units of competency.

The AVI08 Aviation Training Package (Version 3)

The AVI08 Aviation Training Package (Version 3)

AVI08 Aviation Training Package (Version 3) is the outcome of a review and redevelopment process.

Introduction

The endorsed components of the AVI08 Aviation Training Package (Version 3) include national competency standards for:

- Flight Instructor Qualifications and Skill Sets
- Manual Handling Freight/Baggage in Aircraft Cargo Hold Confined Spaces Skill Set
- Helicopter Qualifications and Skill Set.

The AVI08 Aviation Training Package (Version 3) has been developed by the Transport and Logistics Industry Skills Council (TLISC) on behalf of the Australian Aviation Industry. An extensive review and consultation process occurred across all sectors of the Aviation Industry and with stakeholders in Aviation Industry training.

Summary of Changes in AVI08 Version 3

The new features of the Training Package include:

- 7 new units have been added
- 1 existing unit has been removed
- 38 new imported units have been added
- 2 imported units have been removed.
- 2 new Skill Sets have been added
- 2 Skill Sets have been revised
- 2 new qualifications have been added
- 2 qualifications have been revised.

The new units that have been included have been finalised following validation and are presented as part of the reviewed Training Package AVI08 Version 3.

A more detailed explanation of some of these changes is provided below.

Flight Instructor Qualifications and Skill Sets

The Aviation Industry has a graded system for Flight Instructors that starts at Grade 3 and concludes at Chief Flying Instructor. There are specific licensing and regulatory requirements for each of the various grades of Flight Instructors. This project addresses not only licensing and regulatory requirements but also articulates the occupational outcomes for all Flight Instructors.

The project was a strategic body of work undertaken to address the occupational outcomes, licensing and regulatory requirements of all grades of Flight Instructors.

The development of units to identify both occupational outcomes and the licensing and regulatory requirements of Flight Instructors was identified by the Aviation Advisory Committee as the most efficient and effective way of addressing pilot skills shortages. The project was also seen as having a positive impact on the quality and quantity of available Flight Instructors by providing a clearly defined career structure aligned to qualification outcomes.

Manual Handling Freight/Baggage in Aircraft Cargo Hold Confined Spaces Skill Set

The introduction of the AVI08 Aviation Training Package saw the incorporation of much of the regulatory and licence requirements for the Aviation Industry into a cohesive Training Package.

However, there are still additional occupational roles, both regulated and unregulated, that require articulation into the Training Package. Once such area was identified as occupations that are required to work within aircraft confined spaces, in particular aircraft cargo holds. The project addressed this occupational role for ground operations personnel. The development of the Manual Handling Freight/Baggage in Aircraft Cargo Hold Confined Spaces Skill Set was identified by the Aviation Advisory Committee as the most efficient and effective way of addressing the competency requirements of those occupational roles that work within aircraft confined spaces.

Helicopter Qualification and Skill Set Restructure

Many of the helicopter occupations and Skill Sets have been incorporated into both the original and subsequent versions of the AVI08 Aviation Training Package. However, there were three areas that needed minor restructure to enable flexibility to meet industry needs whilst maintaining regulatory requirements.

These three areas were:

- Certificate III in Aviation (Rescue Crewman)
- Certificate IV in Aviation (Aircrewman)
- Aviation Operator Skill Set.
-

In particular the Certificate III in Aviation (Rescue Crewman) and Certificate IV in Aviation (Aircrewman) have been restructured to enable selection of elective units within these qualifications and to reflect National Quality Council changes to qualification packaging rules. This has been achieved whilst still maintaining the regulatory and industry requirements of these highly specialised and safety critical occupation related qualifications.

The Aviation Operator Skill Set on the other hand has been restructured specifically to conform to Training Package Development Handbook Policy whilst still maintaining industry/regulatory related outcomes.

Profile of the Australian Aviation Industry

Australia's aviation environment is unique: large, sparsely settled and a long way from the rest of the world. The Aviation Industry has four principal areas: general aviation, regional airlines, domestic airlines and international airlines.

The general aviation sector is made up of all non-scheduled flying activity in Australia, other than that performed by the major domestic and international airlines. The major categories of flying are private, business, training, aerial agriculture, charter and aerial work. In the last few years, aerial agriculture, private flying and charter activity as well as regional flying have all seen significant increases in activity.

Domestic airline activity also saw increases with airline passenger numbers effectively recovered to pre-September 11 levels. New domestic players have contributed to these increases with total passenger movements increasing from 41.3 million in 2005 to 43 million in 2006 – an increase in activity of 6.3%.

Competitiveness and consumer demands for safety and security as well as regulatory compliance continue to impact on the skills needed by employees in the industry.

The changing face of the industry has forced many companies to look to training to make a seamless transition from the old to the new. The change stems from a multitude of sources such as reforms to relevant regulations and legislation, new work practices, the penetration of technology, increasing levels of automation, and the changing overall structure of the aviation industry and the economy.

Nationally recognised qualifications and the portability of skills are of increased importance, both for employers within the industry and for career planning for individuals.

The trend towards globalisation is placing increasing demands on the skills base in the aviation industry. Consequently, the skills base must continue to develop to support the delivery of the world's best practice in aviation services. This will ensure the international competitiveness of the aviation industry as it increasingly competes in both global and regional markets.

This Training Package is designed to help companies and training organisations produce a flexible and nationally consistent competent workforce for the aviation industry. It covers qualifications from Certificate I to Diploma and covers occupations in Ground Operations, Flight Operations, Air Traffic Control and Pilot Pathway.

Work in the Industry

The work roles and functions covered by this Training Package are from entry level through to senior management and include:

- Flight Crew – (Commercial Pilots, Flight Instructors, Helicopter Aircrewman and Rescue Crewman)
- Cabin Crew and Supervisory Cabin Crew
- Air Traffic Control
- Airport Management
- Airport Reporting Services
- Baggage Handling and Freight Services
- Ground Support and Ramp Services
- General Airport Operations
- Check in and Customer Service Staff.
-

Impacts on Training Package Development

Increased customer requirements, outsourcing, industry reform, competitive pressures, safety requirements, new technologies, environmental considerations, and regulatory and licensing requirements have all been addressed in the development of AVI08.

Licensing/Registration Requirements

The Aviation Industry is bound by a wide range of licensing and regulatory requirements, including but not limited to:

- Civil Aviation Regulations (CARs), Civil Aviation Safety Regulations (CASRs) and other regulatory and advisory requirements of the Civil Aviation Authority
- relevant requirements, standards and recommended practices of the International Civil Aviation Organisation (ICAO)
- local instructions of airport authorities and air traffic services
- relevant national, state/territory emergency services regulations
- relevant state/territory road rules
- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements including mass and loading regulations and state/territory oversize/mass pilot/escort permit requirement
- fatigue management regulations and codes of practice
- Australian, international and state/territory regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including:
 - Australian and International Dangerous Goods Codes
 - IATA's 'Dangerous Goods by Air' regulations
 - Australian and International Explosives Codes
- quarantine regulations administered by the Australian Quarantine and Inspection Service (AQIS)
- customs regulations (export/import/bond requirements)
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation.

Persons employed in the Aviation Industry need to fulfil competency and training requirements as detailed in the regulations relevant to their occupation. Persons assessed as complying with these requirements are usually provided with some form of certification by CASA or other relevant bodies. These are certificates required by the relevant state/territory or Australian legislation or international code or convention before a person can be allowed to work in the occupation covered under the legislation. These certificates should not be confused with national educational qualifications that are issued by Registered Training Organisations. While in the Aviation Industry there is a close relationship between the regulatory certificates and the National VET qualifications, they are issued by different organisations under different legislative authority.

It should be noted that regulatory requirements are usually subject to ongoing review and improvement. There are also many national initiatives to improve consistency and cooperative arrangements across state/territory regulatory requirements. Given the dynamic nature of these reforms and improvements, it is important that Registered Training

Organisations access and interpret current regulatory requirements from CASA and other relevant regulatory authorities. Training and assessment resources and processes then will need to be adjusted to suitably incorporate and accommodate any pertinent changes to regulatory requirements.

The regulatory/licensing requirements pertinent to a specific competency unit are dependent on the contexts within which the units are typically applied. As part of its development, additional detail has been provided throughout the Training Package to alert Registered Training Organisations and other users of the Training Package to the licensing regulatory requirements pertinent to specific units within the Training Package. The Assessment Guidelines have also been designed to incorporate information on action Registered Training Organisations should take to ensure that trainees are not only prepared and assessed against the competency units in the standards, but also fulfil relevant requirements of pertinent licensing/regulatory authorities.

Licensing and registration requirements that apply to specific industries and vocational education and training vary between each state and territory, and can regularly change. As a result, for information on applicable licensing and registration requirements please contact: Civil Aviation Safety Authority (CASA) at www.casa.gov.au

or

Transport and Logistics Industry Skills Council at:

Level 15, 628 Bourke Street Melbourne VIC 3000

T: 03 9604 7200 E: tlisc@tlisc.com.au W: www.tlisc.com.au

Defence Aviation

The Australian Defence Force (ADF) owns and operates aircraft for the defence of Australia. The ADF has developed and established a regulatory framework for ADF aircraft in much the same way as commercial aviation meets regulations determined by the Civil Aviation Safety Authority (CASA). Therefore, RTOs delivering training for Defence must interpret the competencies according to Defence regulations and instructions.

Should RTOs delivering training or assessment require further information, they should contact:

Assistant Director National Skills Framework

Directorate Education and Learning Systems

Defence Education and Training Development Branch

Campbell Park (Defence); ACT 2600

T: (07) 3332 7756

High Risk Licensing

The licensing unit *TLILIC108A Licence to operate a forklift truck* is included in this Training Package as an imported unit. This unit was created as part of the DEEWR project which developed licensing units that reflect the minimum safety standards required by persons performing high risk work to obtain a 'licence to operate', as required by the Occupational Health and Safety (OH&S) regulators in each state and territory. (In total, twenty-six licensing units were developed. These units are made up of twelve units allocated to the Transport and Logistics Training Package, twelve units allocated to the Construction Training Package and two allocated to the Electricity Supply Industry – Generation Sector Training Package.)

This work was undertaken to support the Australian Safety and Compensation Council (ASCC) agreement to declare the National Standard for Licensing Persons Performing High Risk Work (the National Standard). The National Standard applies to the operation of crane and hoists, forklifts and pressure equipment and the undertaking of scaffolding, rigging and dogging. The National Standard requires training and assessment to be undertaken by Registered Training Organisations (RTOs) under the Australian Quality Training Framework (AQTF).

This imported licensing unit is easily identified in the Aviation Training Package with the code beginning TLILIC. It is to be used for training and assessing for licensing purposes, whereas current industry units are to be used for assessing workplace competence, which occurs following employment and experience on the job.

Training Package Review Methodology

Broad process

The broad processes for the review of the Aviation Training Package include:

Desktop research drawing from a range of information sources

Including:

- the existing versions of the Aviation Training Package (i.e. AVI08 Version 2)
- Aviation regulations, certification requirements and codes of practice
- guidelines for Training Package development
- related developments in higher education and schools
- related Training Packages (e.g. business, tourism, health and asset maintenance)
- existing accredited courses for aviation occupations.
-

Industry and VET consultation processes

Including:

- consultative forums of key stakeholders at key stages of the project
- individual consultative meetings as required
- maintenance of an issues register to track inputs and suggested changes received from stakeholders
- meetings with the equity adviser appointed to the review to ensure that all equity requirements had be fulfilled
- meetings with representatives of the Aviation regulatory authorities to ensure that all proposed changes were consistent with regulatory requirements
- development of schedules of agreed changes to guide the consultants and the project steering committee.
-

Validation

Including:

- validation meetings to confirm that agreed changes had been made and to identify any further enhancements necessary
- validation meetings to confirm continued inclusion of units where no changes were required

Aviation Advisory Committee Members

Membership of the Aviation Advisory committee is based on their broad understanding of the National Training Framework and their current knowledge and experience of the aviation industry.

The table below details the Aviation Advisory Committee members:

Name	Organisation
Warren Barnes	Qantas Ramp Services
Mike Becker	Becker Helicopter Services Pty Ltd
Michael Bent	REX
David Blake	OZ Jet
Jeff Boyd	Brindabella Airlines
Chris Butler	Qantas – Qantas College
Brett Reed	TWU
Chris Duffield	Menzies Aviation Group
Ben Hargreaves	Rehbein AOS
Kevin James	Sydney Airport Corporation
Jo Justo	Australian Services Union

Dave Bailey	RAAF – Air Traffic Control

Qualifications Pathways

Qualifications Pathways

There are many pathways into and through occupations within the Aviation Industry. These occupations are subject to a wide range of state, territory, national and international regulatory requirements, codes and licences.

For many of the occupations, it is desirable to hold a certificate of competency or at least to have completed specific certification requirements before a person can be actively employed on the types of machinery concerned in particular operational areas. These certification requirements include educational requirements (e.g. the educational qualifications contained in this Training Package) but also involve a range of other requirements such as medical certificates, radio operator certificates, etc. In other words, for many occupations in the Aviation Industry, the achievement of an educational qualification is only a partial fulfilment of the regulatory requirements that must be demonstrated by a person seeking a certificate of competency from the relevant state or territory regulatory or safety authority.

The information described in Figures 1–5 explains the more significant pathways between qualifications and does not represent the only pathways. The information describes the pathway relationships between the ‘education pathways’ and is not intending to provide information on the diverse range of occupations and positions in the Aviation Industry. Users of the Aviation Training Package are therefore encouraged to access the pertinent documents from the relevant authorities to understand the various regulated occupations in the Aviation Industry and the full certification requirements for each.

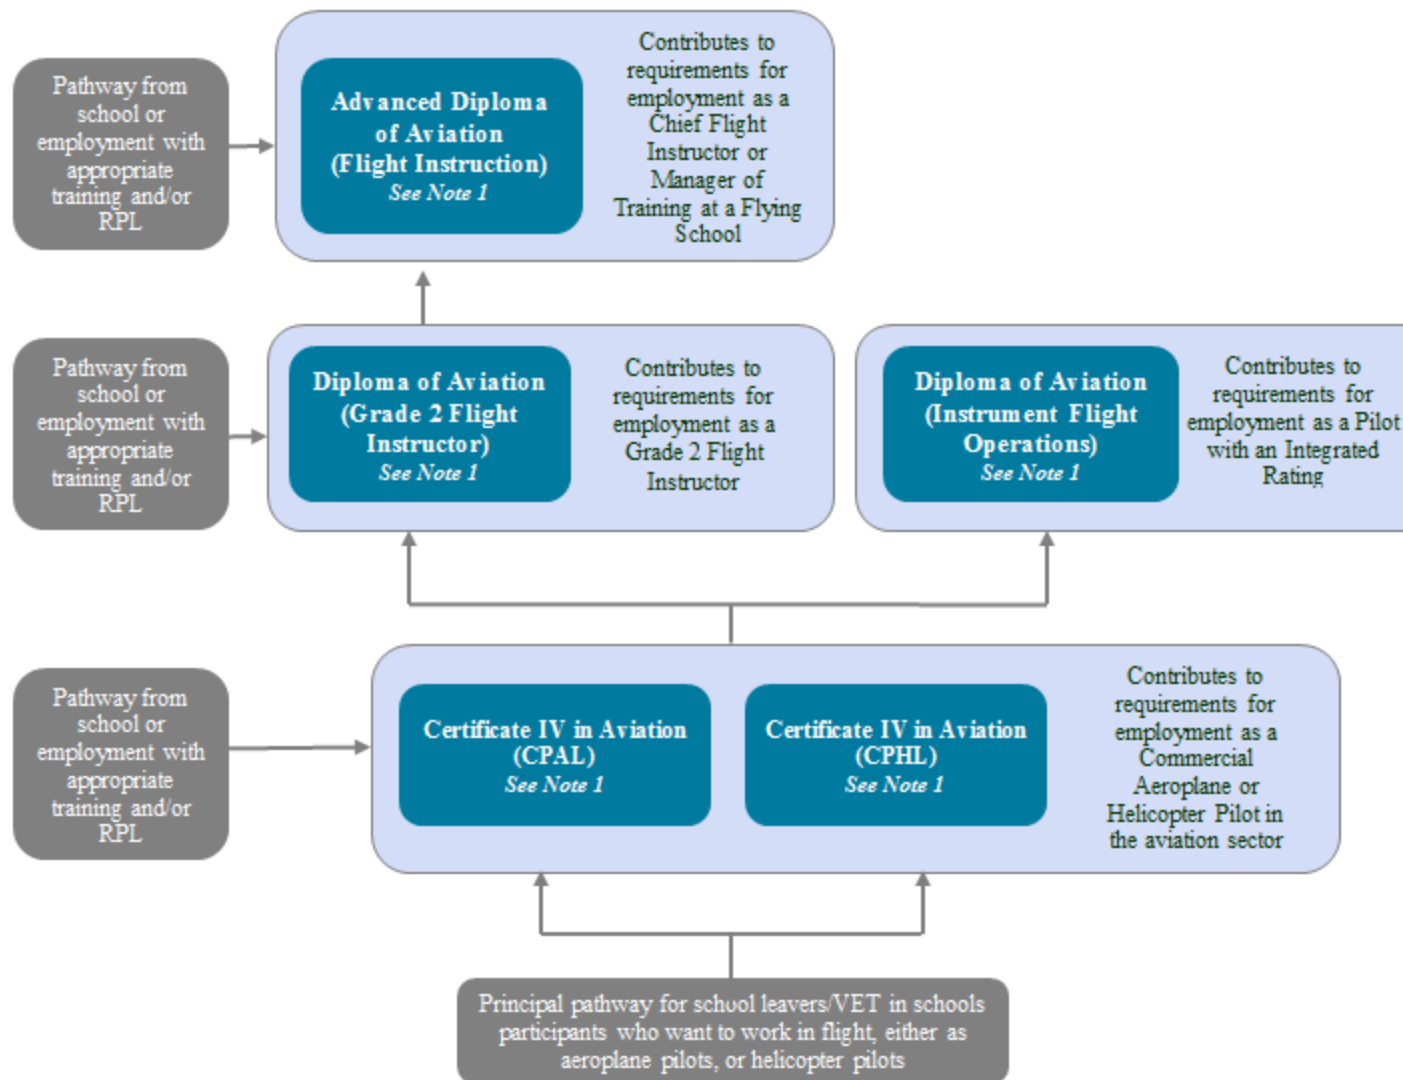

VET in Schools

There are some qualifications within AVI08 that may be delivered and assessed as part of the VET in Schools initiatives. However, schools and Registered Training Organisations wishing to pursue this pathway should firstly consult with Industry Stakeholders, CASA, and State Training Authorities as to the appropriateness of this pathway so as to not raise false expectations around employment/career aspirations.

Australian Apprenticeships Job Pathways

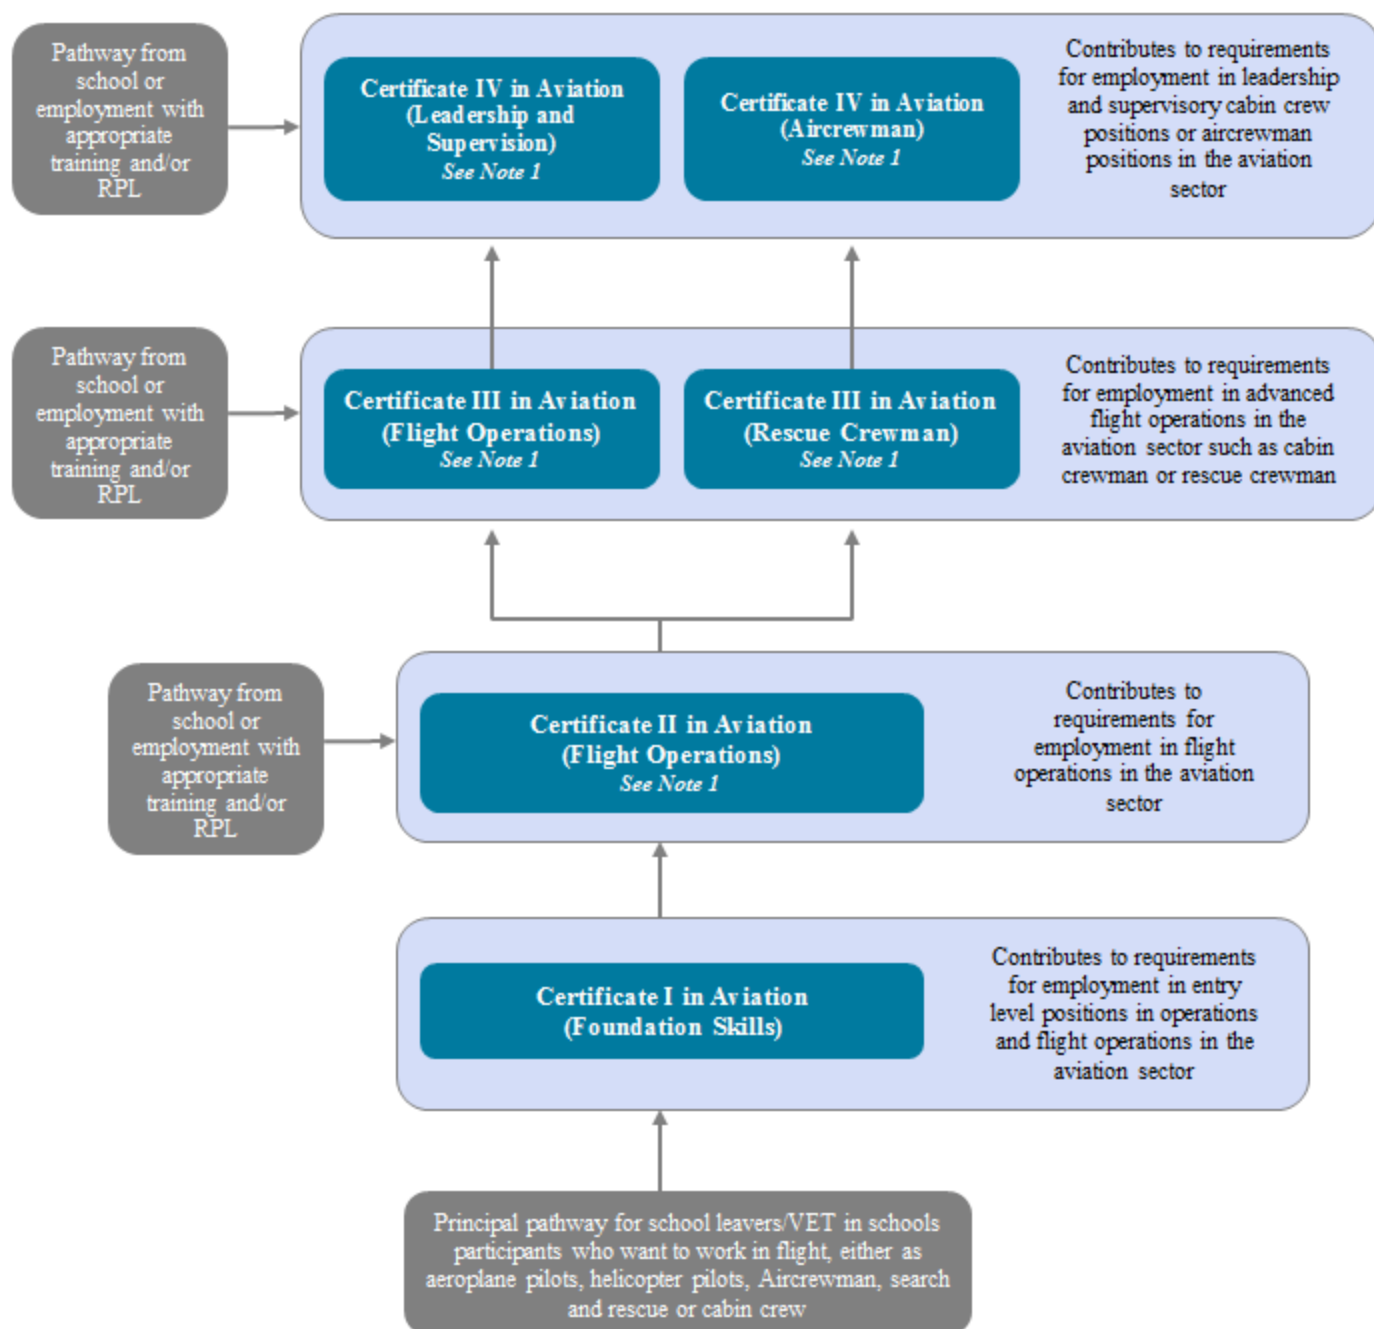

In the past, a number of Aviation Apprenticeships/Traineeships have been available in occupational areas such as: cabin crew, baggage handling, check in and customer services, airport operations, aircraft refuelling, and helicopter and aeroplane pilots. For the most current information regarding Australian Apprenticeships (including School Based New Apprenticeships) please refer to your State Training Authority website, local Apprenticeship Centres and the Australian Apprenticeships Job Pathways website: www.najobpathway.com.au

AVI08 Version 3 Qualifications and Packaging Rules

AVI08 Version 3 Qualifications and Packaging Rules

The qualifications and packaging rules for AVI08 Version 3 are listed in the order below.

Certificate I

AVI10108	Certificate I in Aviation (Foundation Skills)
----------	---

Certificate II

AVI20208	Certificate II in Aviation (Flight Operations)
AVI20408	Certificate II in Aviation (Ground Operations and Service)

Certificate III

AVI30208	Certificate III in Aviation (Flight Operations)
AVI30408	Certificate III in Aviation (Ground Operations and Service)
AVI30510	Certificate III in Aviation (Rescue Crewman)

Certificate IV

AVI40108	Certificate IV in Aviation (Commercial Pilot Aeroplane Licence)
AVI40208	Certificate IV in Aviation (Commercial Pilot Helicopter Licence)
AVI40408	Certificate IV in Aviation (Ground Operations and Service)
AVI40508	Certificate IV in Aviation (Leadership and Supervision)
AVI40610	Certificate IV in Aviation (Aircrewman)

Diploma

AVI50308	Diploma of Aviation (Air Traffic Control)
AVI50408	Diploma of Aviation (Instrument Flight Operations)
AVI50510	Diploma of Aviation (Flight Instructor)

Advanced Diploma

AVI60110	Advanced Diploma of Aviation (Flight Instruction)
----------	---

Overview

There are fifteen qualifications in the AVI08 Aviation Package at the following AQF levels:

- 1 at AQF1 Certificate 1
- 2 at AQF2 Certificate II
- 3 at AQF3 Certificate III
- 5 at AQF4 Certificate IV
- 3 at AQF5 Diploma
- 1 at AQF6 Advanced Diploma.

In this section the AVI08 qualifications and relevant packaging rules are presented in AQF level 1–6 order. Additionally, the 21 Skill Sets within AVI08 Aviation Training Package are described. They are:

- Aviation Operator Skill Set
- Manual Handle Freight/Baggage in Aircraft Cargo Hold Confined Spaces Skill Set
- Airborne Rappelling Skill Set
- Airborne Recovery Skill Set
- Simulator Operator Skill Set
- Simulator Trainer Skill Set
- Simulator Operator/Trainer Skill Set
- Airborne Rappelling Supervisor Skill Set
- Helicopter Wireman Skill Set
- Aviation Supervisory Cabin Crew Skill Set
- Night Aided Vision Aviation Operations Skill Set
- Aircraft Underwater Escape Skill Set
- Emergency Breathing System Skill Set
- Aerobatic Pilot Skill Set
- Formation Pilot Skill Set
- Night Visual Flight Rules (NVFR) Pilot Skill Set
- Marine Transfer Pilot Skill Set
- External Load Pilot Skill Set
- Rappelling and Winching Pilot Skill Set
-

Skill Sets

Skill Sets

Definition

Skill Sets are defined as single units of competency, or combinations of units of competency from an endorsed Training Package, which link to a licence or regulatory requirement, or defined industry need.

Wording on Statements of Attainment

Skill Sets are a way of publicly identifying logical groupings of units of competency which meet an identified need or industry outcome. Skill Sets are not qualifications.

Where Skill Sets are identified in a Training Package, the Statement of Attainment can set out the competencies a person has achieved in a way that is consistent and clear for employers and others. This is done by including the wording ‘these competencies meet *[insert Skill Set title or identified industry area]* need’ on the Statement of Attainment. This wording applies only to Skill Sets that are formally identified as such in the endorsed Training Package. See the 2007 edition of the AQF Implementation Handbook for advice on wording on Statements of Attainment—the updated version is expected to be available on the AQFAB website <www.aqf.edu.au> during September 2007 and in print in October 2007.

Skill Sets in this Training Package

This section provides information on Skill Sets within this Training Package, with the following important disclaimer: Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

•

The Skill Sets within this Training Package are as follows:

- Aviation Operator Skill Set
- Manual Handle Freight/Baggage in Aircraft Cargo Hold Confined Spaces Skill Set
- Airborne Rappelling Skill Set
- Airborne Recovery Skill Set
- Simulator Operator Skill Set
- Simulator Trainer Skill Set
- Simulator Operator/Trainer Skill Set
- Airborne Rappelling Supervisor Skill Set
- Helicopter Wireman Skill Set
- Aviation Supervisory Cabin Crew Skill Set
- Night Aided Vision Aviation Operations Skill Set
- Aircraft Underwater Escape Skill Set
- Emergency Breathing System Skill Set
- Aerobatic Pilot Skill Set
- Formation Pilot Skill Set
- Night Visual Flight Rules (NVFR) Pilot Skill Set
- Marine Transfer Pilot Skill Set
- External Load Pilot Skill Set
- Rappelling and Winching Pilot Skill Set

•

Glossary

Glossary

Glossary

The following is an explanation of aviation-specific terms, acronyms and phonetic alphabet referred to in the Aviation Training Package.

These definitions are advisory only. The definitions should also be confirmed against the definitions provided in the relevant Manuals of Standards issued by the Civil Aviation Safety Authority as part of Civil Aviation Safety Regulations. Compliance with relevant regulations, checks and actions in approved checklists, placards, Flight Manual/Pilot Operating Handbooks, or Operations Manuals have precedence and must be maintained.

It should also be noted that the glossary does not include the various terms used in aviation weather forecasts and related products. Training Package users should refer to the relevant publications issued by the Australian Bureau of Meteorology and Civil Aviation Safety Authority for definitions of terms used in aviation weather products.

Glossary of terms

Accident	An unplanned, unmeasured event or outcome which may or may not result in injury or property damage.
Aiming point	The 'aiming point' related to a visual approach and landing of a helicopter is that point at which a pilot looks to achieve a predetermined touchdown, hover or termination point.
Air Traffic Services (ATS)	A generic term, meaning, variously, flight information service, alerting service, air traffic advisory service, air traffic control service (area control service, approach control service or aerodrome control service) and any other service which CASA designates to be an air traffic service.
Air Waybill	The document entitled, 'Air Waybill/Air Consignment Note' made out by or on behalf of the shipper which evidences the contract between the shipper and carrier(s) for carriage of goods over routes of the carrier(s).
Aircraft – narrow-body	Any type of passenger aircraft with six seats abreast or less and a single aisle in the passenger cabin, for example, 737.
Aircraft – wide-body	Designates aircraft types with two aisles in the passenger cabin, for example, 747 and 767.
Aircraft configuration	Planned utilisation layout of aircraft interior space.
Airport – destination	Ultimate intended terminating airport of a flight.
Airport – origin	The place from where the flight commences.
Airspace cleared	Collision avoidance must always be practised and a procedure followed to ensure a collision does not occur. This procedure is performed before all turns and manoeuvres. The procedure is: • when turning left, "Clear right, clear ahead, clear left-turning left" or • when turning right, "Clear left, clear ahead, clear right-turning right". If an object is closing and remains on a line

	of constant bearing (stays at the same point on the windscreen), a collision will occur if avoiding action is not taken.
Approach to hover	The process of maintaining a specified track and glide slope at reducing ground speed to a nominated termination point at the hover.
Approved checklist	A checklist derived from information set out in the Flight Manual/POH, placards or other approved documents provided with the aircraft, necessary to ensure the safe operation of the aircraft.
ATC Licence	A licence issued as an authority to act in a licensed air traffic control function and issued in accordance with ICAO Annex 1.
ATS Certificate	A certificate authorising an entity to provide air traffic services.
ATS Certificate Holder	An entity authorised under Part 172 of the Civil Aviation Safety Regulations to provide air traffic services at the location and in the airspace specified by the Airspace Authority.
ATS Licence	Either an Air Traffic Controller Licence or a Flight Service Licence issued as an authority to act in a licensed ATS function.
Avoid area	The area delineated on the height-velocity envelope chart in a helicopter's Flight Manual which shows the parameters within which operations should be avoided.
Baggage – cabin	Baggage of which the passenger retains custody (also as "Hand" and/or "Unchecked").
Baggage – checked	Equivalent to "Registered Luggage" means baggage of which the carrier takes sole custody and for which carrier has issued a baggage check.
Baggage – crew	Baggage which is the property of operating crew and which is separately identified.
Baggage – transfer	Baggage arriving at a point on one flight and continuing its journey there from on another flight within a defined time limit.
Boarding	Equivalent to term, "Embarkation" means passengers entering an aircraft.
Bulkhead – stressed	A bulkhead which in combination with the aircraft structure has been designated to restrain load.

Cargo	Any goods carried on an aircraft which are covered by an air waybill.
Carriers	The air carrier issuing the ticket (or air waybill) and 311 air carriers that carry or undertake to carry the passenger and/or his baggage for the cargo thereunder or to perform any other services related to such air carriage.
Closure rate	The apparent speed at which a helicopter moves towards a specified point or object.
Compartment	A space designated within a hold.
Competency	The defined knowledge and/or skill including the minimum performance standard in that knowledge and/or skill area required of the relevant air traffic services licence holder. Note: an individual is either competent or not.
Consignment	Equivalent to the term "Shipment". One or more pieces of goods accepted by the carrier from one shipper at one time and at one address, receipted for in one lot and moving on one air waybill to one consignee at one destination address.
Controlled corrective action	Smooth, timely and coordinated use of controls made to achieve specified performance.
Controlled rate of descent on landing	'Controlled rate of descent' associated with a landing means that the touchdown is without harshness and the successful outcome of the landing is not in doubt.
Crew Resource Management (CRM)	The application of human factors knowledge within the working environment. This includes the special case of flight crew and cabin crew, their interactions with each other, with other groups, and with the technology of the system. It is an active process to identify threats to safety, communicate them to the Pilot in Command (PIC), and to carry out a plan to avoid or mitigate their potential consequences. CRM is the utilisation of all available human, informational, and equipment resources toward the goal of safe and efficient operations (e.g. flight, maintenance, air traffic control). CRM deals directly with the avoidance of human errors and the management and mitigation of the consequences of those errors that do occur.
Currency	Satisfactory completion of relevant written examinations and performance assessment within the time frame specified.

Dangerous goods	Articles or substances which are capable of posing a significant risk to health, safety or property when transported by air and which are classified as such in the IATA Dangerous Goods Regulations.
Disciplined behaviour	The implementation of successful strategies to manage all personality traits and mental and physical limitations that, if ignored, could compromise safety.
Effect of turbulence	The effect of turbulence must be considered when measuring standards of flying competency. Assessors must evaluate each situation and then apply considered judgement to compensate for variations to the published standards.
Endorsement	An authorisation associated with a rating, and forming part thereof, which defines the location and discrete function at and/or for which a specified service may be performed by its holder.
Engine ingestion	Due to the suction power of the jet engine intake, foreign objects and nearby people can be sucked into the engine.
Equipment operators licence	Issued by the relevant airport authority.
Errors	Deviation from intentions.
Flight number	The alpha-numerical designator of a flight, prefixed by a two-letter or three-character designator.
Foreign object damage (FOD)	Engine damage resulting from foreign matter being ingested by the engine either on the ground or in the air.
FS Licence	A licence issued as authority to act in a licensed flight service function.
Functional Group	A group of one or more sectors and/or work stations that provide an array of air traffic services identified by the ATS provider as requiring a common core of knowledge and skills.
Hazard	Any situation, condition or circumstance capable of causing injury or damage.
Helicopter	A heavier-than-air aircraft supported by the reaction of the air on one or more normally power-driven rotors on substantially vertical axes.

Helicopter is balanced	The skid ball in the balance indicator is less than a quarter of the ball diameter from the centre in forward flight.
Hold	A space confined by ceiling, floor, walls, and bulkhead, used for carrying load.
Hover helicopter	To maintain the helicopter over the hover point at nominated height and heading.
Hover point	That point on the surface of the earth over which a nominated part of the helicopter is maintained.
Human Factors	A developing and dynamic multi-disciplinary activity that aims to optimise the relationship between people and their activities by the systematic application of human sciences, integrated within the framework of systems engineering. Human Factors involves the study of the human's capabilities, limitations, and behaviours and the integration of that knowledge into the design of systems to enhance the safety, performance and the general well being of the operators of the systems.
Igloo -non-structural	A bottomless rigid shell made of fibreglass, metal or other suitable material. Its shape conforms to the contours of cargo aircraft envelopes. It covers the maximum usable area of an aircraft pallet to which it is secured during flight. This shell used in combination with an aircraft pallet and net assembly is known as a non-structural igloo.
In ground effect (IGE)	Hovering the helicopter less than 2/3 rotor diameter above a surface that restricts the induced flow.
Incident	An occurrence with the potential to cause ground damage or personal injury.
Interline	Transfer from one carrier to another.
Jet blast	The exhaust from a jet engine. This blast can create winds of up to 160 kph and high temperatures -stay clear.
Joining	Boarding or loading at a transit station.
Leadership	The ability to manage actions to induce other people to use their skills and knowledge to pursue a defined objective.
Lift off	The process of lifting the helicopter vertically from the surface to a stabilised hover.

Light on the skids or wheels	That with collective pitch (power) applied, and the helicopter still in contact with the ground, any application of cyclic pitch or anti torque pedal will produce a discernible movement by the helicopter.
Like type endorsement	An endorsement defined by the ATS provider which has attributes and requirements sufficiently similar to other within the functional group to be suited to generic recency requirements of familiarisation, training and assessment.
Line up checks	These checks are performed before take-off when lined up in the runway or take-off direction. The checks should include: • compass checked and aligned with take-off direction • engine instruments indicate engine within operating limits.
Load control	A function to ensure the optimum utilisation of the aircraft capacity and distribution of load as dictated by safety and operational requirements.
Loading instruction	Instructions given by Load Control to the person responsible for the aircraft loading.
Mail – diplomatic	Governments' property carried under special agreements.
Manual of Standards	The CASA manual which prescribes operational and technical standards pertaining to the licensing, and training for licensing, of specified aviation personnel including flight crew, air traffic service personnel, and so on.
Minimum power speed	The speed at which level flight can be maintained with minimum power required.
Movement	The arrival or departure of an aircraft.
Nets	A network of webbing affixed to an aircraft within its holds or to aircraft ULD for the purpose of restraining a load within the hold or in the ULD.
Pallet – aircraft	A platform with a flat under surface to standard aircraft requirements on which goods are assembled and secured by nets, straps, igloos, etc., and subsequently locked into the aircraft to achieve rapid loading/unloading on compatible aircraft conveying and restraint systems. As such, it becomes a component of the aircraft loading and restraint system.
Pedal/spot turn	Turning a hovering helicopter about a vertical axis which passes through a nominated part (normally the mast) of the aircraft.

Pre-manoeuvre checks	These checks are completed before performing manoeuvres that involve rapid changes of altitude, attitude or heading. The mnemonic "HASELL" may be used as a reminder for this check: H Height is sufficient to safely complete all manoeuvres A Airframe configuration is appropriate for manoeuvres S Security of harnesses and loose objects is ensured E Engine instruments are checked, RPM, mixture, boost pumps and carburettor heat are set as required. Fuel remaining is adequate
	L Location is correct, clear of built up areas, controlled airspace and restricted areas L Lookout is maintained before and during manoeuvres

Pre-descent or navigation turning point checks	These checks are completed before descending for approach and landing or operations at low level. The mnemonic 'CLEAR' may be used as a reminder for this check: C Compasses are synchronised and checked L Log position and ETA to next reporting point E Engine instruments and fuel are checked A Altimeter sub scale is set and new altitude is confirmed R Radio is tuned to operating frequency and intentions broadcast
Proficiency	The assessed level of ability to carry out the functions of an Endorsement as measured against the minimum prescribed standard in a formal performance assessment. Note: individuals are variously proficient.
Protective equipment	Equipment when worn minimises the risk of injury or disease, for example, ear muffs, gloves, shoes, sunglasses (if applicable) and so on.
Pushback	Push aircraft clear of aerobridge or bay for departure.
Qualification – education	The formal certification issued by a RTO under the Australian Qualifications Framework that a person has achieved all the requirements for a qualification as specified in a national Training Package endorsed by the Australian National Training Authority (ANTA) (in this case the Aviation Industry Training Package).
Qualification – regulatory	An authorisation associated with a licence issued by CASA, and forming part thereof, which defines a specified ancillary activity for which the holder is authorised.
Ramp	The area of an airport intended for accommodation of aircraft for loading, unloading, fuelling, parking and maintenance. Also known as the apron or tarmac.
Rating	An authorisation entered on or associated with a licence and forming part thereof, stating special conditions, privileges or limitations pertaining to such a licence.
Recency	The on-going practical application of a function for a required minimum period within the time frame specified.
Recommended Practice	Any specification of uniform application recognised as desirable for the safety of air navigation, and including any means proposed by a regulator to put that specification into effect.
Registration – aircraft	A unique alphanumeric designation for an aircraft. SECTOR Equivalent to "Leg" means the space between two consecutive

	scheduled stops on any given flight.
Rule	A direction prescribed by a service provider to satisfy maintenance of and compliance with a standard.
Safe(ly)	That a manoeuvre or flight is completed without injury to persons, damage to aircraft or breach of aviation safety regulations, while meeting the requirements of the Australian National Competency Standards for Private and Commercial Helicopter Pilots.
Safest outcome	That the manoeuvre or flight is completed with minimum damage or injury under the prevailing circumstances.
Sector	A volume of airspace defined for the purpose of providing an air traffic service.
Shut down checks	These checks are completed when committed to a forced landing after an engine failure. The purpose is to isolate fuel and electrical source that could lead to a fire. These checks may include: • throttle closed • boost pumps 'off' • mixture 'idle cut off' • fuel 'off' • magnetos off • generator(s)/alternator(s) 'off' • safety harness 'secure' • any other checks detailed in Flight Manual/POH • master switch 'off' when electrical services no longer required
Situation awareness	An appreciation of all factors relevant to the safe progress of a flight.
Slip port	Any port which may be visited other than the home port of the worker
Special load	A load which, owing to its nature or value, requires special attention and treatment during the process of acceptance, storage, transportation, loading and unloading.
Stakeholder	Any person involved with, or affected by the flying operation to be performed.
Standard	Any specification of uniform application recognised as necessary for the safety of air navigation, and including any direction prescribed by a regulator to ensure conformity with that specification.
Standard operating procedures	Any procedure included in documents and publications authorised by the Civil Aviation Safety Authority.

Stress(ors)	A disturbing physiological or psychological influence on human performance which may impact adversely on the safe conduct of a flight or situation.
Take off	The process of accelerating the helicopter through translational lift with the intent of departing.
Tare weight	The weight of an empty unit load device. It includes all liners and/or fittings, etc. when these are required by the specification or as registered with IATA.
Terminate with power (and recover to the hover)	When associated with autorotative flight this term means that the application of collective pitch with engine and rotor RPM coordinated (needles joined) brings the helicopter to a stabilised hover (auto to powered flight).
Termination point	The 'termination point' associated with a landing, is the point at which the helicopter terminates the approach to the hover.
Tie-down	Equivalent to "Restrain/Secure/Lash" means the term used to describe the securing of the bulkload or part thereof to fixed restraint points within an aircraft or in a ULD, to conform to restraint and safety requirements.
Tie-down – equipment	May comprise any or all of the following items which have, been authorised for use* tie-downflashing rings, straps, webbing, nets, ropes, cable and chains.
Tie-down – points	Attachment points for the tie-dawn equipment to secure load on aircraft and/or ULDs.
Touchdown point	The 'touchdown point ' associated with a landing, is the point at which the helicopter landing gear first contacts the runway or landing area.
Transfer	Traffic which arrives on a flight and continues on another flight of the same airline or another airline within a defined time limit.
Tranship	A direct aircraft to aircraft transfer of ULD and/or its load.
Transit	Traffic which arrives on a flight and continues on the same flight.
Transit flight or through flight	A flight transiting one or more airports en route.
Transit station/airport	A scheduled en route stopping place on a flight.

Transit time	The time an aircraft remains in transit.
Trouble checks	Trouble checks are performed to determine the cause(s) of an engine failure and to prepare the engine for a restart. Trouble checks may include: • carburettor heat set as required • fuel selected to a tank containing fuel • mixture set to optimum • fuel boost pumps selected in accordance with Flight Manual/POH • throttle set • magnetos on
Ullage	The space in a tank not occupied by its contents. Used as a measure of storage space still available
Unit load device (ULD)	A unit in which deadload (i.e. baggage) is bulk loaded. The unit is then loaded into the aircraft.
Unserviceable	No longer able to be used, for example, because of wear, damage, and so on.
Violations	Intentional deviations from known rules or standards.
Visual cues	Visual cues associated with hovering, means any visual features or references that are used to determine the position or movement of a helicopter relative to the hover point.
Visual references	'Visual references' associated with hovering means the features within the visual range of the pilot that are used as visual cues to maintain the helicopter over a hover point.

Acronyms

AD	Airworthiness Directive
ADF	Automatic Direction Finder
AGL	Above Ground Level
AIP	Aeronautical Information Publication
ATC	Air Traffic Control
ATIS	Automatic Terminal Information Service
ATO	Approved Testing Officer
AVFAX	Meteorological and NOTAM Facsimile Service
ATS	Air Traffic Services

CAAP	Civil Aviation Advisory Publication
CAO	Civil Aviation Orders
CAR	Civil Aviation Regulations
CASA	Civil Aviation Safety Authority
CASR	Civil Aviation Safety Regulations
CPL	Commercial Pilot Licence
CTA	Control Area
CTAS	Common Traffic Advisory Frequency
CTR	Control Zone
DECTALK	Automated Meteorological Telephone Briefing
DME	Distance Measuring Equipment
DR	Deduced/dead Reckoning
ERS(A)	En Route Supplement (Australia)
ETA	Estimated Time of Arrival
ETD	Estimated Time of Departure
FROL	Flight Radio Operators Licence
FT	Feet
GAAP	General Aviation Aerodrome Procedures
GPS	Global Positioning System
HF	High Frequency
HLS	Helicopter Landing Site
IAS	Indicated Air Speed
KTS	Knots
MAP	Manifold Air Pressure

MBZ	Mandatory Broadcast Zone
MPP	Most Probable Position
NAIPS	National Aeronautical Information Processing System
NDB	Non Directional Beacon
NOTAM	Notice to Airmen
POH	Pilot Operating Handbook
PPL	Private Pilot Licence
QNH	Altimeter subscale setting to obtain elevation or altitude
RPM	Revolutions Per Minute
R/T	Radiotelephone
SARTIME	Time Search Action
SIF	Selective Identification Feature
SSR	Secondary Surveillance Radar
TAS	True Air Speed
TEMPO	Temporary changes to prevailing weather conditions for periods not exceeding 60 minutes
VMC	Visual Meteorological Conditions
VHF	Very High Frequency
VFR	Visual Flight Rules
VOR	VHF Omni-directional Radio Range

Phonetic Alphabet

A – Alpha	J – Juliet	S – Sierra
B – Bravo	K – Kilo	T – Tango
C – Charlie	L – Lima	U – Uniform
D – Delta	M – Mike	V – Victor

E – Echo	N – November	W – Whiskey
F – Foxtrot	O – Oscar	X – X-ray
G – Golf	P – Papa	Y – Yankee
H – Hotel	Q – Quebec	Z – Zulu
I – India	R – Romeo	

AVI10108 Certificate I in Aviation (Foundation Skills)

Modification History

Not applicable.

Description

Rationale:

A general qualification for the Aviation Industry. Successful completion will require competency in units that relate to work defined as aligned at AQF Level 1. Qualifications should be structured to align with licensing and regulatory requirements applicable to the occupation concerned.

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities, most of which may be routine and predictable.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Employability Skills Summary for AVI10108 Certificate I in Aviation (Foundation Skills)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Use communication systems and procedures used in basic aviation operations• Read and interpret relevant regulations, instructions, signs and labels applicable to aviation operations• Speak clearly and directly on matters related to aviation operations• Write basic documents as part of duties, including completion of relevant forms and incident and accident reports• Recognise and interpret non-verbal signs, signals and behaviour• Use relevant communication equipment.
Teamwork	<ul style="list-style-type: none">• Assist in the resolution of any interpersonal conflicts that may arise during aviation operations• Avoid and prevent the harassment of others in the workplace• Collaborate with others in the course of aviation operations• Work with persons of different ages, gender, race, religion, political persuasion, etc.
Problem solving	<ul style="list-style-type: none">• Identify and solve or report problems arising in the course of aviation operations• Monitor and anticipate problems that may occur in the course of aviation operations including hazards and risks and take appropriate action to report or resolve the problems within limits of responsibility• Recognise hazards and risks in a range of aviation situations and take appropriate precautions• Use mathematics to solve problems such as

Employability Skill**Industry/enterprise requirements for this qualification include:**

various basic calculations related to aviation operations.

Initiative and enterprise

- Modify activities dependent on differing situations and contingencies that may arise during aviation operations
- Take appropriate initiatives in a range of operational situations such as those above
- Respond appropriately to any changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Follow and apply operational and emergency plans, systems and procedures
- Check own compliance with aviation and safety regulations and codes of practice
- Implement the workplace security and safety management systems
- Check own operational performance
- Collect and interpret basic information needed in the course of aviation operations
- Organise and plan own work activities
- Manage time and priorities in the course of aviation operations and other aviation activities

Self management

- Interpret and apply regulations and instructions
- Establish and follow own work plans and schedules
- Check own work performance.

Learning

- Adapt own competence in response to any changes in aviation operations
- Update own knowledge and skills required for aviation activities.

Technology

- Drive vehicle and use related equipment and tools required during aviation operations
- Follow and apply operational and servicing instructions for equipment used during aviation operations
- Follow and apply OH&S procedures when using aviation equipment and facilities.

Packaging Rules

Requirements for completion of the qualification:

A successful assessment outcome for a total of **7 units** comprising:

- at least 5 and up to 7 units from Certificate I units listed below
- where less than seven units are selected from the list below, the remaining units should be drawn from a relevant Certificate I qualification from any currently endorsed national Training Package or Accredited Course.

Field	Unit
A Handling Cargo/Stock	TLIA107C Secure cargo
B Equipment Checking and Maintenance	PRMCL04B Maintain a carpeted floor
	PRMCL17B Clean a wet area
	PRMCL37A Clean external surfaces
	PRMCL38A Clean a food handling area
	TLIB2407B Clean transportation units and facilities for passenger use
	TLIB2807B Maintain and use hand tools
C Driving Vehicle	TLIC107C Drive vehicle
D Load Handling	TLID107C Shift materials safely using manual handling methods
	TLID207C Shift a load using manually-operated equipment
E Communication and Calculations	TLIE307C Participate in basic workplace communication
	TLIE507C Carry out basic workplace calculations
F Safety Management	TLIF107C Follow occupational health and safety procedures
	TLIF207C Conduct housekeeping activities
	TLIF907C Conduct cleaning operations in enclosed spaces

G Teamwork	TLIG107C	Work effectively with others
I Customer Service	TLII207D	Apply customer service skills
L Resource Management	TLIL107C	Complete workplace orientation/induction procedures
O Security	TLIO207D	Follow security procedures
Z Situation Awareness	AVIZ1005B	Maintain basic situation awareness in the aviation workplace

The selected units when packaged together must provide a coherent qualification aligned at Certificate I level inclusive of the competencies necessary to fulfil occupational and regulatory requirements within the aviation industry.

AVI20208 Certificate II in Aviation (Flight Operations)

Modification History

Not applicable.

Description

Rationale:

A general qualification for the Aviation Industry. Successful completion will require competency in 14 units that relate to work defined as Aviation (Flight Operations).

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Occupations may include:

Cabin crew

Cargo services operator.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Employability Skills Summary for AVI20208 Certificate II in Aviation (Flight Operations)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Implement and monitor communication systems and procedures required for aviation flight operations• Read and interpret relevant regulations, instructions, signs and labels applicable to aviation flight operations• Speak clearly and directly on matters related to aviation flight operations• Listen to and interpret verbal information related to aviation flight operations• Write documents as part of duties, including completion of relevant forms and reports• Negotiate issues with others in the course of aviation flight operations• Recognise and interpret non-verbal signs, signals and behaviour• Use relevant communication equipment.
Teamwork	<ul style="list-style-type: none">• Collaborate with others in the course of aviation flight operations• Provide situational leadership as appropriate in the aviation flight workplace• Motivate others in the workplace• Assist others in the workplace to achieve and maintain competence• Assist in the resolution of any interpersonal conflicts that may arise during aviation flight operations• Avoid and prevent the harassment of others in the workplace• Work with persons of different ages, gender, race, religion, political persuasion, etc.
Problem solving	<ul style="list-style-type: none">• Identify and solve or report problems arising in the course of aviation flight operations

Employability Skill

Industry/enterprise requirements for this qualification include:

- Monitor and anticipate problems that may occur in the course of aviation flight operations including hazards and risks and take appropriate action to report or resolve the problems within limits of responsibility
- Identify and control hazards and risks in a range of aviation flight situations and take appropriate precautions
- Use mathematics to solve various calculations related to aviation flight operations.

Initiative and enterprise

- Modify activities dependent on differing aviation flight situations and contingencies
- Take appropriate initiatives in a range of operational situations such as those above
- Respond appropriately to any changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Follow and apply operational and emergency plans, systems and procedures
- Monitor systems and procedures for compliance with regulations and codes of practice
- Implement the workplace security and safety management systems
- Monitor and evaluate operational performance and compliance
- Collect and interpret information needed in the course of aviation flight operations
- Organise and plan own work activities
- Manage time and priorities in the course of aviation flight operations.

Self management

- Interpret and apply regulations and instructions
- Establish and follow own work plans and schedules
- Evaluate own work performance.

Learning

- Contribute to learning and assessment activities in the workplace
- Assist others to adapt to any changes in workplace systems, equipment, procedures and the workplace operating environment
- Assist in the instruction, coaching or mentoring of others in the workplace

Employability Skill**Industry/enterprise requirements for this qualification include:**

- Contribute to the assessment of the competence of others in the workplace
- Adapt own competence in response to any changes in aviation flight operations
- Update own knowledge and skills required for aviation flight activities.

Technology

- Use equipment and materials required during aviation flight operations
- Follow and apply operational and servicing instructions for equipment used during aviation flight operations
- Follow and apply OH&S procedures when using aviation flight equipment and facilities.

Packaging Rules**Requirements for completion of the qualification:**

A successful assessment outcome for a total **14 units**, comprising:

- at least 5 and up to 7 units from Certificate I in Aviation
- where less than seven units are selected, the remaining units should be drawn from a Certificate I qualification from any currently endorsed national Training Package or Accredited Course.

plus

- at least 5 and up to 7 units from Certificate II units listed below.
- where less than seven units are selected from the list below, the remaining units should be drawn from a relevant Certificate II qualification from any currently endorsed national Training Package or Accredited Course.

Field	Unit
A Handling/Cargo/Stock	TLIA1307C Receive goods
	TLIA1407C Use product knowledge to complete work operations
	TLIA2007C Replenish stock
	TLIA2207C Participate in stocktakes

B	Equipment Checking and Maintenance	TLIB107C	Check and assess operational capabilities of equipment
		TLIB2907B	Use and maintain minor mechanical equipment
D	Load Handling	AVID2006A	Load and secure aviation freight and baggage
		TLID307D	Handle dangerous goods/hazardous substances
		TLID1607C	Load and unload explosives and dangerous goods
E	Communication and Calculations	TLIE707B	Use communication systems
		TLIE807C	Process workplace documentation
F	Safety Management	AVIF2010B	Implement regulations and policies during aircraft safety and service operations
		AVIF2014A	Undertake aircraft underwater escape and survival
		TLIF1007C	Apply fatigue management strategies
		TLIF1207C	Apply safe procedures when handling/transporting dangerous goods or explosives
G	Teamwork	TLIG707B	Work in a socially diverse environment
I	Customer Service	AVII2001B	Provide customer service on an aircraft
		AVII2003C	Carry out beverage service on an aircraft
		AVII2004B	Provide advice on a cuisine on an aircraft
		AVII2006B	Conduct in-flight retailing
		AVII2008B	Provide assistance to transit and arriving passengers
		AVII2009B	Serve wine to aircraft passengers
		AVII2014B	Provide transport services to passengers with special needs

J	Quality	TLIJ107C	Apply quality procedures
K	Technology	TLIK107C	Use infotechnology devices and computer applications in the workplace
L	Resource Management	TLIL807C	Complete routine administrative tasks
O	Security	TLIO1307C	Administer the security of assets and facilities
P	Administrative and Finance	TLIQ107D	Conduct financial transactions
		TLIQ1207B	Sell products and services
U	Environment	TLIU707B	Care for the environment
W	Equipment and Systems Operations	AVIW2029A	Operate aircraft refuelling nozzle
		AVIW2030A	Be airborne extracted by suspended rope
		AVIW2031A	Be airborne extracted using suspended extraction equipment
		AVIW2032A	Fast rope from a helicopter
		AVIW2033A	Rappel from a helicopter

AVI20408 Certificate II in Aviation (Ground Operations and Service)

Modification History

Not applicable.

Description

Rationale:

A general qualification for the Aviation Industry. Successful completion will require competency in units that relate to work defined as aligned at AQF Level 2. Qualifications should be structured to align with licensing and regulatory requirements applicable to the occupation concerned.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Occupations may include:

Check in and customer service

Baggage handling.

Employability Skills Summary

Employability Skills Summary for

AVI20408 Certificate II in Aviation (Ground Operations and Service)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Use communication systems and procedures required for aviation ground operations• Read and interpret relevant regulations, instructions, signs and labels applicable to aviation ground operations• Speak clearly and directly on matters related to aviation ground operations• Write documents as part of duties, including completion of relevant forms and incident reports• Negotiate complex issues with others in the course of aviation ground operations• Recognise and interpret non-verbal signs, signals and behaviour• Use relevant communication equipment.
Teamwork	<ul style="list-style-type: none">• Collaborate with others in the course of aviation ground operations• Contribute to the resolution of any interpersonal conflicts that may arise during aviation ground operations• Assist other team members to achieve and maintain competence where applicable• Avoid and prevent the harassment of others in the workplace• Work with persons of different ages, gender, race, religion, political persuasion, etc.
Problem solving	<ul style="list-style-type: none">• Identify and solve or report problems arising in the course of aviation ground operations• Monitor and anticipate problems that may occur in the course of aviation ground operations including hazards and risks and take appropriate action to report or resolve the problems within limits of responsibility

Employability Skill**Industry/enterprise requirements for this qualification include:**

- Manage hazards and risks in a range of aviation ground situations and take appropriate precautions
- Use mathematics to solve problems such as various calculations involved in aviation ground operations.

Initiative and enterprise

- Modify activities dependent on differing situations and contingencies that may arise during aviation ground operations
- Take appropriate initiatives in a range of diverse operational situations such as those above
- Respond appropriately to any changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Follow and apply operational and emergency plans, systems and procedures
- Check own compliance with regulations and codes of practice
- Implement the workplace security and safety management systems
- Check own operational performance
- Collect and interpret information needed in the course of aviation ground operations
- Organise and plan own work activities
- Manage time and priorities in the course of aviation ground operations.

Self management

- Interpret and apply regulations, standard operating procedures and instructions
- Establish and follow own work plans and schedules
- Monitor and evaluate own work performance.

Learning

- Adapt own competence in response to any changes in aviation ground operations
- Assist others in the workplace to develop their competence
- Update own knowledge and skills required for aviation ground activities.

Technology

- Use the equipment and materials required during aviation ground operations
- Follow and apply operational and servicing instructions for equipment used during aviation

Employability Skill**Industry/enterprise requirements for this qualification include:**

- ground operations
- Follow and apply OH&S procedures when using aviation ground equipment and facilities.

Packaging Rules**Requirements for completion of the qualification:**

A successful assessment outcome for a total **14 units**, comprising:

at least 5 and up to 7 units from Certificate I in Aviation

where less than seven units are selected, the remaining units should be drawn from a Certificate I qualification from any currently endorsed national Training Package or Accredited Course..

plus

at least 5 and up to 7 units from Certificate II units listed below.

where less than seven units are selected from the list below, the remaining units should be drawn from a relevant Certificate II qualification from any currently endorsed national Training Package or Accredited Course.

Field	Unit
A Handling Cargo/Stock	TLIA907D Complete and check import/export documentation
	TLIA307C Receive goods
	TLIA407C Use product knowledge to complete operations
	TLIA2007C Replenish stock
	TLIA2207C Participate in stocktakes
B Equipment Checking and Maintenance	TLIB107C Check and assess operational capabilities of equipment
	TLIB307C Carry out vehicle servicing and maintenance
	TLIB407C Carry out vehicle inspection
	TLIB707C Carry out maintenance of trailers
	TLIB807C Carry out inspection of trailers

		TLIB2907B	Use and maintain minor mechanical equipment
		TLIB7307B	Clean road tankers
C	Driving Vehicle	AVIC2001A	Drive on the airside
		TLIC307C	Drive medium rigid vehicle
D	Load Handling	AVID2001B	Accept dangerous goods for air transport
		AVID2003B	Prepare freight for flight
		AVID2004B	Conduct aviation freight weighing operations
		AVID2005B	Accept freight for air transport
		AVID2006A	Load and secure aviation freight and baggage
		AVID2007A	Unload aviation freight and baggage
		TLID307D	Handle dangerous goods/hazardous substances
		TLID407D	Load and unload goods/cargo
		TLID1007C	operate a forklift
		TLID1307C	Move materials mechanically using automated equipment
		TLID1607C	Load and unload explosives and dangerous goods
E	Communications and Calculations	TLIE107C	Present routine workplace information
		TLIE707B	Use communication systems
		TLIE807C	Process workplace documentation
F	Safety Management	AVIF2007B	Implement regulations and policies during check-in procedures
		AVIF2012A	Monitor the transfer of hazardous materials
		AVIF2019A	Work in aircraft confined spaces

		HLTFA301B	Apply first aid
		TLIF607C	Apply accident-emergency procedures
		TLIF1007C	Apply fatigue management strategies
		TLIF1207C	Apply safe procedures when handling/transporting dangerous goods or explosives
		TLIF1807B	Operate first fighting equipment
G	Teamwork	TLIG707B	Work in a socially diverse environment
I	Customer Service	AVII2007B	Check in aircraft passengers
		AVII2008B	Provide assistance to transit and arriving passengers
		AVII2014B	Provide transport services to passengers with special needs
		BSBCMM301A	Process customer complaints
J	Quality	AVIJ2001B	Contribute to the achievement of on-time performance standards
		TLIJ107C	Apply quality procedures
K	Technology	TLIK107C	Use infotechnology devices and computer applications in the workplace
		TLIK307C	Apply keyboard skills
		TLIK707C	Perform electronic data interchange (EDI) to transmit shipping documentation
L	Resource Management	AVIL2001B	Manage a check-in queue
		SITTTSL007A	Receive and process reservations
		TLIL807C	Complete routine administrative tasks
		TLIL3107B	Monitor and process attendance records
O	Security	AVIO2001A	Use firearms on an aerodrome to control wildlife hazards
		TLIO1107C	Provide revenue protection measures

	TLIO1307C	Administer the security of assets and facilities
P Administration and Finance	TLIQ107D	Conduct financial transactions
	TLIQ707C	Prepare and process financial documents
	TLIQ1207B	Sell products and services
	TLIT107C	Capture records into a records keeping system
	TLIT407C	Maintain control of records
	TLIT507C	Provide information from and about records
U Environment	TLIU707B	Care for the environment
W Equipment and Systems Operations	AVIW2002B	Operate an aerobridge
	AVIW2008B	Conduct baggage handling operations
	AVIW2010B	Operate baggage tug
	AVIW2029A	Operate aircraft refuelling nozzle

AVI30208 Certificate III in Aviation (Flight Operations)

Modification History

Not applicable.

Description

Rationale:

A general qualification for the Aviation Industry. Successful completion will require competency in units that relate to work defined as aligned at AQF Level 3.

Qualifications should be structured to align with licensing and regulatory requirements applicable to the occupation concerned.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Occupations may include:

Cabin crew

Cargo services operator.

Packaging Rules

Requirements for completion of the qualification:

A successful assessment outcome for a total **21 units**, comprising:

- at least 5 and up to 7 units from Certificate I in Aviation
- where less than seven units are selected, the remaining units should be drawn from a relevant Certificate I qualification from any currently endorsed national Training Package or Accredited Course

plus

- at least 5 and up to 7 units from Certificate II in Aviation
- where less than seven units are selected, the remaining units should be drawn from a relevant Certificate II qualification from any currently endorsed national Training Package or Accredited Course

plus

- at least 5 and up to 7 units from Certificate III listed below
- where less than seven units are selected, the remaining units should be drawn from a relevant Certificate III qualification from any currently endorsed national Training Package or Accredited Course.

Field	Unit
A Handling Cargo/Stock	TLIA2307C Coordinate stocktakes

B	Equipment Checking and Maintenance	AVIB3004B	Manage and carry out pre- and post-flight cabin checks
D	Load Handling	TLID2007C	Care for livestock in transit
E	Communications and Calculations	TLIE207C	Estimate/calculate mass, area and dimensions
		TLIE407C	Prepare workplace documents
F	Safety Management	AVIF3005B	Maintain the safety of people and aircraft
		AVIF3006B	Respond to abnormal and emergency situations within the aircraft
		AVIF3016A	Marshal aircraft
		HLTFA301B	Apply first aid
		TLIF307C	Implement and monitor occupational health and safety procedures
H	Route Planning and Navigation	AVIH3002B	Advise on major services and attractions at aviation destinations
I	Customer Service	AVII3002B	Carry out food preparation and service on an aircraft
		AVII3005B	Apply knowledge of the structure, products and services of the airline operator
		AVII3010B	Carry out aircraft business/first class beverage service
		AVII3011A	Provide quality customer service
		BSBCUS301A	Deliver and monitor a service to customers
		TLII907C	Provide on-board services to customers

L	Resource Management	BSBWOR301A	Organise personal work priorities and development
		TLIL307C	Conduct induction process
N	Leadership and Supervision	TLIG207C	Lead a work team or group
O	Security	TLIO707C	Undertake emergency response action to a security threat
		TLIO1207C	Manage disruptive and/or unlawful behaviour
		TLIO1607B	Apply and monitor workplace security procedures
P	Administration and Finance	TLIQ707C	Prepare and process financial documents

Employability Skills Summary

Employability Skills Summary for

AVI30408 Certificate III in Aviation (Ground Operations and Service)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Implement and monitor communication systems and procedures required for aviation ground operations• Read and interpret relevant regulations, instructions, signs and labels applicable to the supervision of aviation ground operations• Speak clearly and directly on matters related to aviation ground operations• Listen to and interpret verbal information related to aviation ground operations• Write documents as part of duties, including completion of relevant forms, timesheets, service logs and incident reports• Negotiate issues with others in the course of aviation ground operations• Recognise and interpret non-verbal signs, signals and behaviour• Use relevant communication equipment.
Teamwork	<ul style="list-style-type: none">• Collaborate with others in the course of aviation ground operations• Provide leadership to other personnel in the aviation ground workplace• Motivate others in the workplace• Assist others in the workplace to achieve and maintain competence• Assist in the resolution of any interpersonal conflicts that may arise during aviation ground operations• Avoid and prevent the harassment of others in the workplace• Work with persons of different ages, gender, race, religion, political persuasion, etc.
Problem solving	<ul style="list-style-type: none">• Identify and solve or report problems arising in the course of aviation ground operations

Employability Skill

Industry/enterprise requirements for this qualification include:

- Monitor and anticipate problems that may occur in the course of aviation ground operations including hazards and risks and take appropriate action to report or resolve the problems within limits of responsibility
- Identify and control hazards and risks in a range of aviation ground situations and take appropriate precautions
- Use mathematics to solve various calculations related to aviation ground operations.

Initiative and enterprise

- Modify activities dependent on differing aviation ground situations and contingencies
- Take appropriate initiatives in a range of operational situations such as those above
- Respond appropriately to any changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Follow and apply operational and emergency plans, systems and procedures
- Monitor systems and procedures for compliance with regulations and codes of practice
- Implement the workplace security and safety management systems
- Monitor and evaluate operational performance and compliance
- Collect and interpret information needed in the course of aviation ground operations
- Organise and plan own work activities
- Manage time and priorities in the course of aviation ground operations.

Self management

- Interpret and apply regulations and instructions
- Establish and follow own work plans and schedules
- Evaluate own work performance.

Learning

- Contribute to learning and assessment activities in the workplace
- Assist others to adapt to any changes in workplace systems, equipment, procedures and the workplace operating environment
- Assist in the instruction, coaching or mentoring of others in the workplace
- Contribute to the assessment of the competence

Employability Skill

Industry/enterprise requirements for this qualification include:

of others in the workplace

- Assist in the creation of a learning environment in the warehouse and storage workplace
- Adapt own competence in response to any changes in aviation ground operations
- Update own knowledge and skills required for aviation ground activities.

Technology

- Use equipment and materials required during aviation ground operations
- Follow and apply operational and servicing instructions for equipment used during aviation ground operations
- Follow and apply OH&S procedures when using and servicing aviation ground equipment and facilities.

Packaging Rules

Requirements for completion of the qualification:

A successful assessment outcome for a total of **21 units** comprising:

- at least 5 and up to 7 units from Certificate I in Aviation
- where less than seven units are selected, the remaining units should be drawn from a relevant Certificate I qualification from any currently endorsed national Training Package or Accredited Course

plus

- at least 5 and up to 7 units from Certificate II in Aviation
- where less than seven units are selected, the remaining units should be drawn from a relevant Certificate II qualification from any currently endorsed national Training Package or Accredited Course

plus

- at least 5 and up to 7 units from Certificate III listed in the following table
- where less than seven units are selected, the remaining units should be drawn from a relevant Certificate III qualification from any currently endorsed national Training Package or Accredited Course.

E	Communication and Calculations	AVIE3003B	Complete a Notice to Airmen (NOTAM)
		AVIE3004B	Maintain radio communications as part of airport operations
		TLIE1207C	Consolidate manifest documentation
		TLIE207C	Estimate/calculate mass, area and quantify dimensions
		TLIE407C	Prepare workplace documents
		TLIE1807B	Maintain freight records
F	Safety Management	AVIF3004B	Supervise the safety of aerodrome works and general access
		AVIF2010B	Implement regulations and policies during aircraft safety and service operations
		AVIF3011B	Apply relevant laws and regulations to the management of an aerodrome
		AVIF3016A	Marshal aircraft
		HLTFA301B	Apply first aid
		TLIF307C	Implement and monitor occupational health and safety procedures
I	Customer Service	TLII907C	Provide on-board services to customers
		BSBCUS301A	Deliver and monitor a service to customers
J	Quality	TLIJ207C	Apply quality systems
		TLIJ707C	Conduct internal quality audits

L	Resource Management	AVIL3002B	Complete aircraft despatch duties
		AVIL3003B	Plan an aircraft load
		AVIL3004B	Assess pavement concessions
		BSBWOR301A	Organise personal work priorities and development
		SITTTSL007A	Receive and process reservations
		SITTTSL009A	Process travel-related documentation
		SITTTSL010A	Control reservations or operations using a computerised system
		SITTTSL012A	Construct domestic airfares
		SITTTSL013A	Construct normal international airfares
		SITTTSL014A	Construct promotional international airfares
		SITTTSL015A	Construct advanced international airfares
		TLIL307C	Conduct induction process
N	Leadership and Supervision	TLIG207C	Lead a work team or group
O	Security	TLIO707C	Undertake emergency response action to a security threat
		TLIO1207C	Manage disruptive and/or unlawful behaviour
		TLIO1607B	Apply and monitor workplace security procedures
P	Administration and Finance	TLIQ1307B	Advise on and construct fares for customers
		TLIT207C	Document a records system

		TLIT307C	Identify and classify records to be captured
R	Contract Procurement	AVIR3001B	Service customer airline contracts
W	Equipment and Systems Operations	AVIW3003B	Operate aircraft embarkation and disembarkation equipment
		AVIW3004B	Operate ramp equipment
		AVIW3005B	Operate aircraft push-out tug
		AVIW3006B	Refuel aircraft
		AVIW3011B	Defuel aircraft
		AVIW3021A	Coordinate aircraft ground operations
		AVIW3023A	Implement wildlife hazard control measures

AVI30510 Certificate III in Aviation (Rescue Crewman)

Modification History

Not applicable.

Description

Rationale:

This qualification reflects the role of a rescue crewman working in the helicopter operational environment. Successful completion will require competency in units that relate to work defined as aligned at AQF Level 3.

Qualifications should be structured to align with licensing and regulatory requirements applicable to the occupation concerned.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Pathways Information

Employability Skills Summary

Employability Skills Summary for AVI30510 Certificate III in Aviation (Rescue Crewman)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Implement and monitor communication systems and procedures required for rescue operations• Read and interpret relevant regulations, instructions, signs and labels applicable to aviation rescue operations• Speak clearly and directly on matters related to aviation rescue operations• Listen to and interpret verbal information related to rescue operations• Write documents as part of duties, including completion of relevant forms and reports• Negotiate issues with others in the course of rescue operations• Recognise and interpret non-verbal signs, signals and behaviour• Use relevant communication equipment.
Teamwork	<ul style="list-style-type: none">• Collaborate with others in the course of rescue operations• Provide situational leadership as appropriate in the flight workplace• Motivate others in the workplace• Assist others in the workplace to achieve and maintain competence• Assist in the resolution of any interpersonal conflicts that may arise during rescue operations• Avoid and prevent the harassment of others in the workplace• Work with persons of different ages, gender, race, religion, political persuasion, etc.
Problem solving	<ul style="list-style-type: none">• Identify and solve or report problems arising in the course of rescue operations• Monitor and anticipate problems that may occur in the course of rescue operations including

Employability Skill**Industry/enterprise requirements for this qualification include:**

hazards and risks and take appropriate action to report or resolve the problems within limits of responsibility

- Identify and control hazards and risks in a range of aviation flight situations and take appropriate precautions
- Use mathematics to solve various calculations related to rescue operations.

Initiative and enterprise

- Modify activities dependent on differing rescue situations and contingencies
- Take appropriate initiatives in a range of operational situations
- Respond appropriately to any changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Follow and apply operational and emergency plans, systems and procedures
- Monitor systems and procedures for compliance with regulations and codes of practice
- Implement the workplace security and safety management systems
- Monitor and evaluate operational performance and compliance
- Collect and interpret information needed in the course of rescue operations
- Organise and plan own work activities
- Manage time and priorities in the course of rescue operations.

Self management

- Interpret and apply regulations and instructions
- Establish and follow work plans and schedules where applicable
- Evaluate own work performance.

Learning

- Contribute to learning and assessment activities in the workplace
- Assist others to adapt to any changes in workplace systems, equipment, procedures and the workplace operating environment
- Assist in the instruction, coaching or mentoring of others in the workplace
- Contribute to the assessment of the competence of others in the workplace
- Adapt own competence in response to any

Employability Skill**Industry/enterprise requirements for this qualification include:**

changes in rescue operations

- Update own knowledge and skills required for rescue activities.
- Use equipment and materials appropriately as required during rescue operations
- Follow and apply operational and servicing instructions for equipment used during rescue operations
- Follow and apply OH&S procedures when using flight equipment and facilities.

Technology**Packaging Rules****Requirements for completion of the qualification:**

A successful assessment outcome for a total of **14 units** comprising:

- **9 core units** listed below

plus

- **5 elective units.** At least **3 of the elective units** must be selected from the elective units list below. Up to **2 elective units** with appropriate contextualisation may be selected from any currently endorsed national Training Package or accredited course. Where the choice of a unit from another currently endorsed national Training Package or accredited course is made, this unit must come from a qualification or course at Certificate II or above and must contribute towards the vocational outcome of the qualification.

Core Units

Field		Unit	
A	Handling Cargo/Stock	TLIA107C	Secure Cargo
F	Safety Management	AVIF4001B	Manage human factors in aircraft flight
		AVIF3005B	Maintain the safety of people and aircraft
		AVIF3006B	Respond to abnormal and emergency situations within the aircraft

		AVIF2014A	Undertake aircraft underwater escape and survival
		PUAFIR209B	Work safely around aircraft
W	Equipment and Systems Operations	AVIW3024A	Perform wireman duties
		AVIW3025A	Complete aircraft/equipment pre- and post-flight actions
Z	Situation Awareness	AVIZ1005B	Maintain basic situation awareness in the aviation workplace

Elective Units

Field		Unit	
E	Communication Calculations	AVIE4001B	Maintain aircraft radio communications
F	Safety Management	AVIF3016A	Marshal aircraft
		HLTFA201A	Provide basic emergency life support
		HLTFA404A	Apply advanced resuscitation techniques
O	Security	TLIO207D	Follow security procedures
W	Equipment and Systems Operations	AVIW3006B	Refuel aircraft
		AVIW3026A	Conduct night aided vision aviation operations
		AVIW3027A	Deliver pyrotechnics and hand held stores
		AVIW4028A	Manage aircraft sensor systems
Y	Aircraft Operation and Traffic Management	AVIY4051A	Conduct external load-lift operations
		AVIY3052A	Conduct Helicopter Landing Site and Unprepared Helicopter Landing Site operations

AVIY4054A	Conduct hoisting operations
-----------	-----------------------------

AVI40108 Certificate IV in Aviation (Commercial Pilot Aeroplane Licence)

Modification History

Not applicable.

Description

Rationale:

A general qualification for the Aviation Industry. Successful completion will require competency in units that relate to work defined as aligned at Certificate 4. This qualification has been structured to align with applicable aviation licensing and regulatory requirements.

Note: additional requirements must be fulfilled in line with the current Civil Aviation Safety Regulations before a licence will be issued. These requirements include theory tests, flying hours and a flight test.

Performance of a broad range of skilled applications including requirements to evaluate and analyse current practices, develop new criteria and procedure for performing current practices, and provision of some leadership and guidance to others in the application and planning of the skills.

Occupations include:

Commercial aeroplane pilot.

This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Establish and implement communication systems and procedures required for aeroplane flight operations• Listen to and interpret verbal information related to aeroplane flight operations• Read and interpret relevant regulations, instructions, signs and labels applicable to aeroplane flight operations• Speak clearly and directly on diverse and complex matters related to aeroplane flight operations• Write documents as part of duties, including completion of relevant forms, maintenance schedules and accident and incident reports• Negotiate complex issues with others in the course of aeroplane flight operations• Recognise and interpret non-verbal signs, signals and behaviour• Use relevant communication equipment.
Teamwork	<ul style="list-style-type: none">• Provide leadership to aeroplane flight personnel• Motivate others in the workplace• Collaborate with others in the course of aeroplane flight operations• Manage the resolution of any interpersonal conflicts that may arise during aeroplane flight operations• Manage the avoidance and prevention of harassment of others in the workplace• Manage persons of different ages, gender, race, religion, political persuasion, etc.
Problem solving	<ul style="list-style-type: none">• Identify and solve or report complex problems arising in the course of aeroplane flight operations

Employability Skill**Industry/enterprise requirements for this qualification include:**

- Monitor and anticipate problems that may occur in the course of aeroplane flight operations including hazards and risks and take appropriate action to report or resolve the problems within limits of responsibility
- Manage the control of hazards and risks in a range of complex and diverse situations that may arise during aeroplane flight operations
- Use mathematics to solve problems such as various calculations related to a wide range of aeroplane flight operations.

Initiative and enterprise

- Modify activities dependent on differing aeroplane flight situations and contingencies
- Take appropriate initiatives in a diverse range of operational situations such as those above
- Manage the response to any changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Implement and monitor operational and emergency plans, systems and procedures
- Implement and monitor systems and procedures for maintaining compliance with regulations and codes of practice
- Monitor the implementation of the workplace security and safety management systems (where applicable)
- Monitor and evaluate operational performance and compliance
- Collect and interpret information needed when supervising aeroplane flight operations
- Organise and plan own supervisory activities
- Manage time and priorities in the course of aeroplane flight operations.

Self management

- Interpret and apply relevant regulations and instructions
- Establish and follow own work plans and schedules
- Evaluate and monitor own work performance.

Packaging Rules

Requirements for completion of the qualification:

To gain the Certificate IV in Aviation (Commercial Pilot Aeroplane Licence) a successful assessment outcome for the following **15 core units** must be achieved:

Field	Unit
E Communication and Calculations	AVIE4001B Maintain aircraft radio communications
F Safety Management	AVIF4001B Manage human factors in aircraft flight
H Route Planning and Navigation	AVIH4001B Navigate aircraft - VFR
I Customer Service	AVII4012B Manage aircraft passengers and cargo
W Equipment and Systems Operations	AVIW4001B Manage pre- and post-flight actions
Y Aircraft Operation and Traffic Management	AVIY4001B Control aeroplane on the ground
	AVIY4002B Take off aeroplane
	AVIY4003B Control aeroplane in normal flight
	AVIY4004B Land aeroplane
	AVIY4005B Execute advanced aeroplane manoeuvres and procedures
	AVIY4006B Manage abnormal aeroplane flight situations
	AVIY4007B Manage aircraft fuel
	AVIY4008B Control aircraft solely by reference to full instrument panel
	AVIY4009B Control aircraft solely by reference to limited instrument panel
Z Situation Awareness	AVIZ4001B Manage situation awareness in aircraft flight

Employability Skills Summary

Employability Skills Summary for

AVI40508 Certificate IV in Aviation (Leadership and Supervision)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill

Industry/enterprise requirements for this qualification include:

Communication

- Establish and implement communication systems and procedures required for leadership and supervisory activities
- Listen to and interpret verbal information related to leadership and supervisory activities
- Read and interpret relevant regulations, instructions, signs and labels applicable to leadership and supervisory activities
- Speak clearly and directly on diverse and complex matters related to leadership and supervisory activities
- Write documents as part of duties, including completion of relevant forms, maintenance schedules and accident and incident reports
- Negotiate complex issues with others in the course of leadership and supervisory activities
- Recognise and interpret non-verbal signs, signals and behaviour
- Use relevant communication equipment.

Teamwork

- Provide leadership during leadership and supervisory activities
- Motivate others in the workplace
- Collaborate with others in the course of leadership and supervisory activities
- Manage the resolution of any interpersonal conflicts that may arise during leadership and supervisory activities
- Manage the avoidance and prevention of harassment of others in the workplace
- Manage persons of different ages, gender, race, religion, political persuasion, etc.

Employability Skill**Industry/enterprise requirements for this qualification include:****Problem solving**

- Identify and solve or report complex problems arising in the course of leadership and supervisory activities
- Monitor and anticipate problems that may occur in the course of leadership and supervisory activities including hazards and risks and take appropriate action to report or resolve the problems within limits of responsibility
- Manage the control of hazards and risks in a range of complex and diverse situations that may arise during leadership and supervisory activities
- Use mathematics to solve problems such as various calculations related to a wide range of leadership and supervisory activities.

Initiative and enterprise

- Modify activities dependent on differing situations and contingencies
- Take appropriate initiatives in a diverse range of operational situations such as those above
- Manage the response to any changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Implement and monitor operational and emergency plans, systems and procedures
- Implement and monitor systems and procedures for maintaining compliance with regulations and codes of practice
- Monitor the implementation of the workplace security and safety management systems (where applicable)
- Monitor and evaluate operational performance and compliance
- Collect and interpret information needed when undertaking leadership and supervisory activities
- Organise and plan own supervisory activities
- Manage time and priorities in the course of leadership and supervisory activities.

Self management

- Interpret and apply relevant regulations and instructions
- Establish and follow own work plans and

Employability Skill**Industry/enterprise requirements for this qualification include:**

schedules

Learning

- Evaluate and monitor own work performance.
- Organise learning and assessment activities for others in the workplace
- Manage adaptation of others in the workplace to any changes in helicopter flight systems, equipment and procedures and the workplace operating environment
- Instruct, coach or mentor others in the workplace as required
- Contribute to the assessment of the competence of others in the workplace
- Assist in creating a learning environment in the workplace
- Adapt own competence in response to any changes in leadership and supervisory activities
- Update own knowledge and skills required for leadership and supervisory activities.
- Use complex equipment and systems required during leadership and supervisory activities
- Implement and monitor operational and maintenance procedures and systems for equipment used during leadership and supervisory activities
- Implement and monitor the application of OH&S procedures while undertaking leadership and supervisory activities.

Technology**Packaging Rules****Requirements for completion of the qualification:**

A successful assessment outcome for a total of **15 units** comprising:

12 core units listed below

plus

3 elective units from the elective units list.

Core Units

Field	Unit
F Safety Management	BSBOHS407A Monitor a safe workplace
G Teamwork	BSBMGT401A Show leadership in the workplace
	BSBMGT402A Implement operational plan
	BSBWOR402A Promote team effectiveness
	TLIG707B Work in a socially diverse environment
I Customer Service	AVII4015A Monitor and enhance customer service excellence
L Resource Management	TLIL507D Apply conflict/grievance resolution strategies
	TLIL3207B Implement equal employment equity strategies
	TLIL3307B Promote effective workplace practice
O Security	TLIO707C Undertake emergency response action to a security threat
P Administration and Finance	TLIP207C Facilitate and capitalise on change in the workplace
	TLIP507C Manage workplace information
Elective Units	
Field	Unit
E Communication and Calculation	TLIE607D Collect, analyse and present workplace data and information
F Safety Management	AVIF3005B Maintain the safety of people and aircraft
	AVIF3006B Respond to abnormal and emergency situations within the aircraft
	AVIF4008A Supervise cabin safety and security

	HLTFA301B	Apply first aid
	HLTFA402B	Apply advanced first aid
	HLTFA404A	Apply advanced resuscitation techniques
	TLIF707C	Implement and coordinate accident-emergency procedures
G Teamwork	BSBMGT502B	Manage people performance
I Customer Service	AVII4012B	Manage aircraft passengers and cargo
	AVII4013A	Supervise cabin operations
	TLII107D	Coordinate quality customer service
	TLII507C	Market services and products to clients
L Resource Management	AVIL3003B	Plan an aircraft load
	BSBHRM402A	Recruit, select and induct staff
	SITXHRM008A	Manage workplace relations
P Administration and Finance	TLIP107C	Develop plans to meet customer and organisation needs
	TLIP707C	Contribute to the development of a workplace learning environment
U Environment	TLIU107B	Implement and monitor environmental protection policies and procedures
W Equipment and Systems Operations	AVIW4034A	Supervise aircraft refuelling

AVI40610 Certificate IV in Aviation (Aircrewman)

Modification History

Not applicable.

Description

Rationale:

This qualification reflects the role of an Aircrewman working in the helicopter operational environment. Successful completion will require competency in units that relate to work defined as aligned at AQF Level 4. Qualifications should be structured to align with licensing and regulatory requirements applicable to the occupation concerned.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Employability Skills Summary for AVI40610 Certificate IV in Aviation (Aircrewman)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Implement communication systems and procedures required for Aircrewman functions • Listen to and interpret verbal information related to Aircrewman tasks • Read and interpret relevant regulations, instructions, signs and labels applicable to Aircrewman functions • Speak clearly and directly on diverse and complex matters • Write documents as part of duties, including completion of relevant forms, maintenance schedules and accident and incident reports • Negotiate complex issues with others in the course of carrying out Aircrewman tasks • Recognise and interpret non-verbal signs, signals and behaviours • Use relevant communication equipment.
Teamwork	<ul style="list-style-type: none"> • Provide leadership as required • Motivate self and others in the workplace • Collaborate with others in the course of Aircrewman functions • Resolve any interpersonal conflicts that arise • Manage the avoidance and prevention of harassment of others in the workplace • Manage persons of different ages, gender, race, religion, political persuasion, etc.
Problem solving	<ul style="list-style-type: none"> • Identify and solve and/or report complex problems arising in the course of work • Monitor and anticipate problems that may occur in the course of Aircrewman functions including hazards and risks and take appropriate action to report or resolve the problems within limits of responsibility

Employability Skill**Industry/enterprise requirements for this qualification include:**

- Manage the control of hazards and risks in a range of complex and diverse situations that may arise
- Use mathematics to solve problems such as various calculations related to a wide range of Aircrewman functions.

Initiative and enterprise

- Modify activities dependent on differing flight situations and contingencies
- Take appropriate initiatives in a diverse range of operational situations such as those above
- Manage the response to any changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Implement and monitor operational and emergency plans, systems and procedures
- Implement and monitor systems and procedures for maintaining compliance with regulations and codes of practice
- Monitor the implementation of the workplace security and safety management systems (where applicable)
- Monitor and evaluate operational performance and compliance
- Organise and plan own supervisory activities
- Manage time and priorities in the course of Aircrewman functions.

Self management

- Interpret and apply relevant regulations and instructions
- Establish and follow own work plans and schedules
- Evaluate and monitor own work performance.

Learning

- Manage adaptation of others in the workplace to any changes in flight systems, equipment and procedures and the workplace operating environment
- Instruct, coach or mentor others in the workplace as required
- Contribute to the assessment of the competence of others in the workplace as required
- Adapt own competence in response to any changes in Aircrewman functions
- Update own knowledge and skills required for

Employability Skill**Industry/enterprise requirements for this qualification include:**

flight supervisory activities.

Technology

- Use complex equipment and systems required during Aircrewman tasks
- Implement and monitor operational and maintenance procedures and systems for equipment used during Aircrewman functions
- Implement and monitor the application of OH&S procedures when using flight equipment and facilities.

Packaging Rules**Requirements for completion of the qualification:**

A successful assessment outcome for a total of **21 units** comprising:

- **14 core units** listed below

plus

- **7 elective units.** At least **4 of the elective units** must be selected from the elective units list below. Up to **3 elective units** with appropriate contextualisation may be selected from any currently endorsed national Training Package or accredited course. Where the choice of a unit from another currently endorsed national Training Package or accredited course is made, this unit must come from a qualification or course at Certificate III or above and must contribute towards the vocational outcome of the qualification.

Core Units

Field	Unit	
A Handling Cargo/Stock	TLIA107C	Secure cargo
E Communication and Calculations	TLIE207C	Estimate/calculate mass, area and quantify dimensions
F Safety Management	AVIF4001B	Manage human factors in aircraft flight
	AVIF3005B	Maintain the safety of people and aircraft
	AVIF3006B	Respond to abnormal and emergency situations within the aircraft

	AVIF2014A	Undertake aircraft underwater escape and survival
	PUAFIR209B	Work safely around aircraft
L Resource Management	AVIL3003B	Plan an aircraft load
N Leadership and Supervision	BSBMGT401A	Show leadership in the workplace
W Equipment and Systems Operations	AVIW3025A	Complete aircraft/equipment pre- and post-flight actions
Y Aircraft Operation and Traffic Management	AVIY4051A	Conduct external load-lift operations
	AVIY3052A	Conduct Helicopter Landing Site and Unprepared Helicopter Landing Site operations
	AVIY4054A	Conduct hoisting operations
Z Situation Awareness	AVIZ1005B	Maintain basic situation awareness in the aviation workplace

Elective Units

Field	Unit	
E Communication and Calculations	AVIE4001B	Maintain aircraft radio communications
	AVIE3003B	Complete a Notice to Airmen (NOTAM)
F Safety Management	AVIF3016A	Marshal aircraft
	HLTFA201A	Provide basic emergency life support
	HLTFA404A	Apply advanced resuscitation techniques
J Quality	AVIJ4002B	Conduct quality control operations related to refuelling/defuelling aircraft

O Security	TLIO207D	Follow security procedures
W Equipment and Systems Operations	AVIW3006B	Refuel aircraft
	AVIW3024A	Perform wireman duties
	AVIW3026A	Conduct night aided vision aviation operations
	AVIW3027A	Deliver pyrotechnics and hand held stores
	AVIW4028A	Manage aircraft sensor systems
Y Aircraft Operation and Traffic Management	AVIY4053A	Perform aircrewman cockpit duties
	AVIY4055A	Conduct airborne extraction operations
	AVIY4056A	Conduct airborne rappelling operations

AVI50308 Diploma of Aviation (Air Traffic Control)

Modification History

Not applicable.

Description

Rationale:

A specialist qualification for the aviation industry. Successful completion will require competency in units that relate to work defined as aligned at AQF Level 5. Qualifications should be structured to align with licensing and regulatory requirements applicable to Air Traffic Controllers.

The self-directed application of knowledge and skills, with substantial depth in some areas where judgement is required in planning and selecting appropriate equipment, services and techniques for self and others. Applications involve participation in the development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams, including those concerned with planning and evaluation functions. Group or team coordination may be involved.

Pathways Information

Employability Skills Summary

Employability Skills Summary for AVI50308 Diploma of Aviation (Air Traffic Control)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Communicate effectively with managers, staff, clients and suppliers in the course of air traffic control• Listen to and interpret complex verbal information related to air traffic control including the clarification and confirmation of work requirements and the receiving of operational feedback• Read and interpret applicable regulations, policy documents, strategic plans, technical data, signage, labels, safety management systems, tenders, contracts, project plans, etc.• Speak clearly and directly on diverse and complex matters related to air traffic control including sharing data, requirements and procedures relevant to operations, issuing clear and timely instructions, communicating operational details to internal and external stakeholders, and providing support and feedback to staff• Write complex documents including communicating with internal and external stakeholders and preparing reports, project plans, specifications and technical reports• Responsibly negotiate complex issues with others in the course of air traffic control including resolving conflict, obtaining resources necessary to achieve objectives and negotiating processes and procedures appropriate to statutory and legal requirements• Recognise and interpret non-verbal signs, signals and behaviour• Establish and implement the organisation's

Employability Skill**Industry/enterprise requirements for this qualification include:**

communication systems and procedures

- Establish and use networks including active involvement in business or professional networks and the building of relationships to provide benefits for the team and organisation
- Use numeracy effectively to understand operational and data, perform calculations, forecast resource requirements, and audit performance.

Teamwork

- Provide situational leadership in appropriate circumstances
- Manage the resolution of any interpersonal conflicts that may arise in the course of air traffic control
- Motivate self and others
- Provide opportunities for staff to achieve and maintain competence
- Coach, mentor and give feedback to colleagues
- Provide information, instruction, training and supervision where required
- Manage the avoidance and prevention of harassment of others in the workplace
- Ensure the active participation of team members in meeting goals and objectives
- Collaborate with staff and others in the course of air traffic control
- Work collaboratively with stakeholders in the context of air traffic control
- Work with staff and other persons of different ages, gender, race, religion, political persuasion, etc.

Problem solving

- Develop practical solutions for problems arising in the course of air traffic control including assessing hazards and ensuring there are plans or processes to manage identified risks, monitoring issues which arise in the course of operations and creating, implementing and applying risk management systems
- Manage hazards and risks in complex and diverse situations that may occur in the

Employability Skill**Industry/enterprise requirements for this qualification include:**

course of air traffic control

- Solve problems in teams including responding to changes in environment or circumstances, coordinating requirements and issues, and evaluating and monitoring performance
- Show independence and initiative in identifying problems and solving them.

Problem solving (continued)

- Test assumptions taking the context of data and circumstances into account
- Audit and review systems and plans
- Use applicable mathematics to solve complex problems related to air traffic control.

Initiative and enterprise

- Modify activities dependent on differing work situations and contingencies
- Take appropriate initiatives in complex and diverse situations such as those above
- Recognise and respond to changes in internal and external operating environments
- Contribute to and manage continuous improvement processes
- Be creative in approaches to change and innovation, in response to conflicts in coordination and allocation of resources
- Translate ideas into action including applying consultative processes, developing plans, applying new technologies and concepts
- Value input from colleagues
- Manage the response to any contingencies and changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Implement operational and emergency plans, systems and procedures for the organisation
- Establish and implement systems and procedures for maintaining compliance with applicable regulations and codes of practice
- Establish and implement workplace security and safety management systems (where applicable)

Employability Skill**Industry/enterprise requirements for this qualification include:**

- Contribute to the monitoring, evaluation and reporting on operational performance and compliance
- Collect, analyse, interpret and organise information needed during air traffic control activities

**Planning and organising
(continued)**

- Prepare scope of work and work plans for self and team members where required
- Be resourceful in planning for and assessing risk
- Ensure feedback and other data contribute to improvements in operational effectiveness
- Manage time and priorities in the course of air traffic control
- Ensure feedback and other data contribute to improvements in operational effectiveness.

Self management

- Interpret and apply relevant regulations and instructions
- Establish and follow own work plans and schedules
- Evaluate and monitor own work performance
- Take responsibility for meeting own objectives
- Have confidence in own vision and goals
- Develop trust and confidence in staff and other stakeholders
- Maintain effective networks.

Learning

- Adapt to any changes in systems, equipment and procedures and the workplace operating environment
- Be open to new ideas and change and in particular facilitate and support change processes with staff and apply previous experience and feedback in formulating improvements to practice
- Provide opportunities for instruction, coaching and mentoring others in the workplace as required
- Contribute to the assessment of the competence of others in the workplace
- Identify personal training needs

Employability Skill**Industry/enterprise requirements for this qualification include:**

- Adapt own competence in response to any changes in air traffic control processes
- Update own knowledge and skills required for air traffic control activities.
- Use complex equipment and IT systems required during air traffic control activities
- Apply a range of IT skills
- Use IT to organise and access data including the monitoring of air traffic control processes, including the tracking of aircraft and the recording and reporting of system status
- Applying IT as a management tool to store and organise data
- Implement and monitor operational and maintenance procedures and systems for equipment used during air traffic control activities
- Implement and monitor the application of OH&S procedures when using IT and office equipment and facilities.

Technology

Packaging Rules

Requirements for completion of the qualification:

A successful assessment outcome for a total of at least **8 units** comprising:

- all **7 units** from the **core units** listed below
- plus
- at least **1 elective unit** from the elective units list.

Core Units

Field	Unit
E Communication and Calculation	AVIE5002B Apply air traffic control communication procedures and services
F Safety Management	AVIF5003B Manage human performance and team resources during air traffic control operations
	AVIF5013A Provide SAR alerting and emergency control
G Teamwork	AVIG5001B Work professionally in an air traffic control workplace
W Equipment and Systems Operations	AVIW5013B Operate air traffic control equipment and workstations
Y Aircraft Operation and Traffic Management	AVIY5022B Manage traffic flow
Z Situation Awareness	AVIZ5049A Manage situational awareness in the air traffic control environment

Elective Units

Field	Unit
Y Aircraft Operation and Traffic Management	AVIY5048A Provide approach control services
	AVIY5049A Provide area control services
	AVIY5050A Provide aerodrome control services

AVI50408 Diploma of Aviation (Instrument Flight Operations)

Modification History

Employability Skills Summary

Employability Skills Summary for

AVI50408 Diploma of Aviation (Instrument Flight Operations)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Communicate effectively with others while in flight• Listen to and interpret complex verbal information related to the flight including the clarification and confirmation of work requirements and the receiving of operational feedback• Read and interpret applicable regulations, policy documents, flight plans, instrument panels, technical data, signage, labels, safety management systems, charts, project plans, etc.• Speak clearly and directly on diverse and complex matters related to the flight including sharing data, requirements and procedures relevant to operations, issuing clear and timely instructions and information, communicating operational details to internal and external stakeholders, and providing support and feedback to crew• Write complex documents including preparing reports, plans, specifications and technical reports• Responsibly negotiate complex issues with others in the course of flight including obtaining information necessary to achieve objectives and negotiating processes and procedures appropriate to statutory and legal requirements• Recognise and interpret non-verbal signs, signals and behaviours• Implement communication systems, protocols and procedures• Use networks including active involvement

Employability Skill**Industry/enterprise requirements for this qualification include:**

in professional networks and the building of relationships to provide benefits for the team and organisation

- Use numeracy effectively to understand operational flight data, perform calculations, forecast requirements and measure performance.

Teamwork

- Provide situational leadership in appropriate circumstances
- Motivate self and others
- Coach, mentor and give feedback to colleagues
- Provide information, instruction, training and supervision where required
- Manage the avoidance and prevention of harassment of others in the workplace
- Collaborate with others in the flight course
- Work collaboratively with stakeholders in the flight context
- Work with others of different ages, gender, race, religion, culture etc.

Problem solving

- Develop practical solutions for problems arising in the course of flight including assessing hazards and ensuring there are plans or processes to manage identified risks, monitoring issues which arise in the course of operations and implementing and applying risk management systems
- Manage hazards and risks in complex and diverse situations that may occur in the course of flight
- Respond to changes in environment or circumstances, coordinating requirements and evaluating and monitoring ongoing performance
- Show independence and initiative in identifying problems and solving them.
- Review systems and plans
- Use applicable mathematics to solve complex problems related to flight.

Initiative and enterprise

- Modify activities dependent on differing work situations and contingencies

Employability Skill**Industry/enterprise requirements for this qualification include:**

- Take appropriate initiatives in complex and diverse situations such as those above
- Recognise and respond to changes in internal and external operating environments
- Contribute to and manage continuous improvement processes
- Be creative in approaches to change and innovation, in response to conflicts in coordination and allocation of resources
- Translate ideas into action including applying consultative processes, developing plans, applying new technologies and concepts
- Value input from colleagues
- Manage the response to any contingencies and changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Implement operational and emergency plans, systems and procedures
- Implement systems and procedures for maintaining compliance with applicable regulations and codes of practice as far as practicable
- Implement workplace security and safety management systems (where applicable)
- Contribute to the monitoring, evaluation and reporting on operational performance and compliance
- Collect, analyse, interpret and organise information needed during flight activities
- Prepare scope of work and work plans for self and team members where required
- Be resourceful in planning for and assessing risk
- Ensure feedback and other data contribute to improvements in operational effectiveness
- Manage time and priorities in the course of flight
- Ensure feedback and other data contribute to improvements in operational effectiveness.
- Interpret and apply relevant regulations and

Self management

Employability Skill**Industry/enterprise requirements for this qualification include:**

instructions

- Establish and follow own work plans and schedules
- Evaluate and monitor own work performance
- Take responsibility for meeting own objectives
- Have confidence in own vision and goals
- Develop trust and confidence in staff and other stakeholders
- Maintain effective networks.
- Adapt to any changes in systems, equipment and procedures and the workplace operating environment
- Be open to new ideas and change and in particular facilitate and support change processes with staff and apply previous experience and feedback in formulating improvements to practice
- Provide opportunities for instruction, coaching and mentoring others in the workplace as required
- Contribute to the assessment of the competence of others in the workplace
- Identify personal training needs
- Adapt own competence in response to any changes in operational environment
- Update own knowledge and skills required for flight activities.

Learning**Technology**

- Use complex equipment and IT systems required during flight
- Apply a range of IT skills
- Use IT to organise and access data including the monitoring of the flight including the instrument and the recording and the reporting of system status
- Applying IT as a management tool to store and organise data
- Implement and monitor operational and maintenance procedures and systems for equipment used during flight
- Implement and monitor the application of

Employability Skill**Industry/enterprise requirements for this qualification include:**

OH&S procedures when using IT and other equipment and facilities.

Packaging Rules**Requirements for completion of the qualification:**

A successful assessment outcome for a total of at least **9 units** comprising:

- **8 core units** listed below

plus

- at least **1 of the elective units** listed below.

NB: An **optional units list** is also provided so as to allow organisations the flexibility to meet specific needs beyond the mandatory 9 units which make up the qualification.

Core Units

Field	Unit
H Route Planning and Navigation	AVIH5016A Plan a flight under Instrument Flight Rules (IFR)
	AVIH5017A Navigate aircraft -IFR
W Equipment and Systems Operations	AVIW5018A Operate and manage aircraft systems
Y Aircraft Operation and Traffic Management	AVIY5020A Conduct full instrument panel manoeuvres
	AVIY5021A Conduct limited instrument panel manoeuvres
	AVIY5025A Perform an instrument arrival
	AVIY5027A Perform instrument departure - non published procedure
	AVIY5033A Perform visual circling approach

Elective Units

Field	Unit
Y Aircraft Operation and Traffic Management	AVIY5034A Perform non-directional beacon (NDB) instrument approach
	AVIY5035A Perform VHF omni-directional radio range (VOR) instrument approach

Optional Units

Field	Unit
Y Aircraft Operation and Traffic Management	AVIY5023A Operate multi-engine fixed wing aeroplane
	AVIY5026A Perform standard arrival route (STAR)
	AVIY5028A Perform instrument departure - published procedure (SIDSRD)
	AVIY5036A Perform instrument landing system (ILS) instrument approach
	AVIY5037A Perform distance measuring equipment (DME)/global positioning system arrival
	AVIY5038A Perform global positioning system (GPS)/non-precision approach (NPA)
	AVIY5065A Operate a multi-engine helicopter

AVI50510 Diploma of Aviation (Flight Instructor)

Modification History

Not applicable.

Description

Rationale:

A specialist qualification for the aviation industry. Successful completion will require competency in units that relate to work defined as aligned at AQF Level 5. Qualifications should be structured to align with licensing and regulatory requirements applicable to Flight Instruction.

The self-directed application of knowledge and skills, with substantial depth in some areas where judgement is required in planning and selecting appropriate equipment, services and techniques for self and others. Applications involve participation in the development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams, including those concerned with planning and evaluation functions. Group or team coordination may be involved.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Entry requirements:

Entrants to the Diploma must have either the AVI40108 Certificate IV in Aviation (Commercial Pilot Aeroplane Licence) or AVI40208 Certificate IV in Aviation (Commercial Pilot Helicopter Licence) or be able to demonstrate equivalent competence.

Employability Skills Summary

Employability Skills Summary for

AVI50510 Diploma of Aviation (Flight Instructor)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill

Industry/enterprise requirements for this qualification include:

Communication

- Communicate effectively with others while in flight and conducting flight instruction
- Utilise a range of communication skills such as: listening, questioning, reading, interpreting and writing documents
- Use effective facilitation and interpersonal skills including verbal and non-verbal signs, signals and behaviours
- Provide feedback to students and colleagues
- Listen to and interpret complex verbal information related to flight training including the clarification and confirmation of work requirements and the receiving of operational feedback
- Read and interpret applicable regulations, policy documents, flight plans, training plans, safety management systems, charts, etc.
- Responsibly negotiate complex issues with others in the course of flight training including obtaining information necessary to achieve training objectives and negotiating processes and procedures appropriate to statutory and legal requirements
- Use networks including active involvement in professional networks and the building of

Employability Skill**Industry/enterprise requirements for this qualification include:**

relationships to provide benefits for the individual, the team and organisation

- Use numeracy effectively to understand operational flight data, perform calculations, forecast requirements and measure performance.

Teamwork

- Provide leadership in appropriate circumstances
- Motivate self and others
- Coach, mentor and provide feedback to colleagues and students
- Provide information, instruction, training, assessment and supervision where required
- Manage the avoidance and prevention of harassment of others in the workplace
- Collaborate with colleagues to compare, review and evaluate assessment processes and outcomes
- Manage work relationships and seek feedback from stakeholders on professional performance
- Work with others of different ages, gender, race, religion, culture etc.
- Actively participate in assessment validation sessions.

Problem solving

- Develop practical solutions for problems arising in the course of flight training including assessing hazards and ensuring there are plans or processes to manage identified risks, monitoring issues which arise in the course of flight training and implementing and applying risk management systems
- Identify and manage hazards and risks in complex and diverse situations that may occur in the course of flight training
- Respond to changes in environment or circumstances, coordinating requirements and evaluating and monitoring ongoing performance
- Show independence and initiative in identifying problems and solving them
- Use applicable mathematics to solve

Employability Skill**Industry/enterprise requirements for this qualification include:****Initiative and enterprise**

complex problems related to flight training.

- Interpret the learning environment and select delivery approaches which motivate and engage learners
- Modify activities dependent on differing work situations and contingencies
- Monitor and improve work practices to enhance inclusivity and learning
- Take appropriate initiatives in complex and diverse situations
- Recognise and respond to changes in internal and external operating environments
- Contribute to continuous improvement processes
- Be creative in approaches to change and innovation
- Translate ideas into action including applying consultative processes, developing plans, applying new technologies and concepts
- Value input from colleagues
- Implement the response to any contingencies and changes in equipment, standard operating procedures and the working environment.

Planning and organising

- Develop training and assessment plans and procedures that maintain compliance with applicable regulations and codes of practice
- Contribute to the monitoring, evaluation and reporting of training performance and compliance
- Research, read, analyse, interpret and organise information needed during flight training activities
- Interpret collected evidence and make judgements of competency
- Prepare scope of work and work plans for self and team members where required
- Be resourceful in planning for and assessing risks in training
- Manage time and priorities in the course of flight training

Employability Skill**Industry/enterprise requirements for this qualification include:****Self management**

- Ensure feedback and other data contribute to improvements in training effectiveness.
- Interpret and apply relevant regulations and instructions
- Establish and follow own work plans and schedules
- Adhere to ethical and legal responsibilities
- Evaluate and monitor own work performance
- Take responsibility for meeting own objectives including the planning, delivery and review of training
- Have confidence in own vision and goals
- Be a role model for inclusiveness and demonstrate professionalism
- Develop trust and confidence in staff and other stakeholders
- Maintain effective networks.

Learning

- Undertake self evaluation and reflection
- Research and adapt to any changes in systems, equipment, policies and procedures to maintain currency of knowledge and skills
- Be open to new ideas and change and in particular promote a culture of learning in the workplace including seeking feedback in formulating improvements to practice
- Provide instruction, coaching and mentoring of staff and students
- Assess the competence of others in the workplace
- Identify personal, staff and student training needs
- Adapt own competence in response to any changes in operational environment
- Facilitate individual and work based learning.

Technology

- Use technology to enhance outcomes i.e. online delivery, synthetic training devices, research using the web
- Apply a range of IT skills
- Use complex equipment and IT systems required for flight training

Employability Skill**Industry/enterprise requirements for this qualification include:**

- Use student information management systems to record assessments
- Use IT to organise and access data including the monitoring of flight training
- Applying IT as a management tool to store and organise data
- Implement and monitor operational and maintenance procedures and systems for equipment used during flight training
- Implement and monitor the application of OH&S procedures when using IT and other equipment and facilities.

Packaging Rules**Requirements for completion of the qualification:**

A successful assessment outcome for a total of at least **12 units** comprising:

- **8 core units** listed below

plus

- **4 elective units.** At least **2 of the elective units** must be selected from the elective units list below. Up to **2 elective units** with appropriate contextualisation may be selected from any currently endorsed national Training Package or accredited course. Where the choice of a unit from another currently endorsed national Training Package or accredited course is made, this unit must come from a qualification or course at Certificate IV or above and must contribute towards the vocational outcome of the qualification.

Core Units

Field	Unit
M Training and Assessment	AVIM5002A Conduct aeronautical knowledge training
	AVIM5003A Conduct flight training
	AVIM5005A Conduct training for the issue of an endorsement
	AVIM5008A Conduct flight review
	BSBCMM401A Make a presentation

	TAED301A	Provide work skill instruction
	TAED402A	Plan, organise and facilitate learning in the workplace
	TAEASS402A	Assess competence
Elective Units		
Field	Unit	
F Safety Management	TLIF1007C	Apply fatigue management strategies
	TLIF6307A	Administer the implementation of fatigue management strategies
L Resource Management	TLIL507D	Apply conflict/grievance resolution strategies
	TLIL907C	Manage personal work priorities and professional development
M Training and Assessment	AVIM5001A	Operate a simulator
	AVIM5004A	Facilitate training in a synthetic environment
	TAEASS401A	Plan assessment activities and processes
	TAEASS403A	Participate in assessment validation
	TAEASS502A	Design and develop assessment tools
	TAED401A	Plan, organise and deliver group-based learning
	TAED402A	Use training packages and accredited courses to meet client needs
	TAELLN401A	Address adult language, literacy and numeracy skills
	TAESUS501A	Analyse and apply sustainability skills to learning programs

N Leadership and Supervision

BSBLED401A	Develop teams and individuals
BSBMGT401A	Show leadership in the workplace
TLIG207C	Lead a work team or group

AVI60110 Advanced Diploma of Aviation (Flight Instruction)

Modification History

Not applicable.

Description

Rationale:

A specialist qualification for the aviation industry. Successful completion will require competency in units that relate to work defined as aligned at AQF Level 6. Qualifications should be structured to align with applicable licensing and regulatory requirements. *The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved, knowledge and skills, with substantial depth in some areas where judgement is required in planning and selecting appropriate equipment, services and techniques for self and others. Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.*

Pathways Information

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Entry requirements:

Entrants to the Advanced Diploma must have the core units of competency of the AVI50510 Diploma of Aviation (Flight Instructor) or be able to demonstrate equivalent competence.

Employability Skills Summary

Employability Skills Summary for

AVI60110 Advanced Diploma of Aviation (Flight Instruction)

The following table contains a summary of the employability skills as identified by the Aviation Industry for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that may vary depending on packaging options.

Employability Skill

Industry/enterprise requirements for this qualification include:

Communication

- Apply high level language and literacy skills including the ability to communicate effectively and to develop and enhance student performance
- Establish and maintain strategies for communication and networking
- Listen to and interpret complex verbal information related to flight training including the clarification and confirmation of work requirements and the receiving of operational feedback
- Read and interpret applicable regulations, policy documents, flight plans, training plans, safety management systems, charts, project plans, etc.
- Write complex documents including preparing reports, plans, specifications and technical reports
- Responsibly negotiate complex issues with others in the course of flight training including obtaining information necessary to achieve training objectives and negotiating processes and procedures appropriate to statutory and legal requirements
- Implement communication systems, protocols and procedures
- Use networks including active involvement

Employability Skill**Industry/enterprise requirements for this qualification include:**

in professional networks and the building of relationships to provide benefits for the individual, the team and the organisation

- Use advanced facilitation techniques with students and training staff
- Determine training needs and prepare proposals and written reports to meet client needs
- Consult via interviews, meetings, etc.
- Provide management and leadership of flight training staff and students
- Coordinate training and assessment systems
- Coach, mentor and give feedback to flight training staff and students
- Provide information, instruction and training where required
- Manage the avoidance and prevention of harassment of others in the workplace
- Provide collaborative facilitation to assist others to improve their performance in the flight training environment
- Organise and manage training staff to meet client needs based on skills and personal attributes
- Develop and evaluate learning programs customised for individual or group needs
- Work collaboratively with stakeholders in the flight training context
- Maintain effective relationships with staff, students and stakeholders
- Work with others of different ages, gender, race, religion, culture etc.

Teamwork**Problem solving**

- Design training programs and learning strategies based on characteristics of individuals or target groups
- Calculate, identify and manage resource issues related to training, i.e. facilities, equipment, staff, time and cost
- Manage flight training including identifying and assessing hazards and ensuring there are plans or processes to manage identified risks, monitoring issues which arise in the course of operations and implementing and

Employability Skill**Industry/enterprise requirements for this qualification include:**

applying risk management systems

- Manage hazards and risks in complex and diverse situations that may occur in the course of flight training
- Conduct risk analyses and contingency planning for new and existing training delivery
- Respond to changes in environment or circumstances, coordinate requirements, evaluate and monitor ongoing performance
- Investigate, analyse and evaluate scope of training services
- Show independence and initiative in identifying problems and solving them
- Review systems and plans.
- Develop innovative and responsive approaches to improve professional practice which motivate and engage staff and students
- Modify activities dependent on differing work situations and contingencies
- Monitor and improve work practices to enhance inclusivity and learning
- Take appropriate initiatives in complex and diverse situations such as those above
- Recognise and respond to changes in internal and external operating environments
- Manage continuous improvement processes including exploring options and evaluating processes to ensure continuous improvement
- Role model, develop and promote innovation
- Translate ideas into action including applying consultative processes, developing plans, applying new technologies and concepts
- Value input from staff and students
- Manage and lead the response to any contingencies and changes in equipment, standard operating procedures and the working environment
- Apply design skills to develop innovative and flexible cost effective programs.

Initiative and enterprise

Employability Skill**Industry/enterprise requirements for this qualification include:****Planning and organising**

- Manage operations and develop policies, procedures, emergency plans and systems and maintain appropriate documentation
- Manage systems and procedures for maintaining compliance with applicable regulations and codes of practice
- Manage workplace security, fatigue management systems and safety management systems (where applicable)
- Monitor, evaluate and report on training, operational performance and compliance
- Collect, research, read, analyse, interpret and organise information for a range of purposes including meeting compliance and other legal requirements required for the conduct of flight training
- Determine training schedules, maintenance and resource requirements applicable to the conduct of flight training
- Plan, prioritise and organise workflow
- Interpret collected evidence and make judgements of competency
- Manage the planning and assessment of risks in flight training
- Manage time and priorities in the course of flight training
- Ensure feedback and other data contribute to improvements in training and operational effectiveness
- Work with clients in designing learning programs that address individual and/or group needs
- Determine training schedules, human, physical and material resources required for learning and assessment.

Self management

- Interpret and apply relevant regulations and instructions
- Ensure ethical, legal and organisational requirements underpin all training and operational practices
- Establish and manage staff work plans and schedules
- Reflect on, evaluate and monitor own

Employability Skill**Industry/enterprise requirements for this qualification include:**

professional performance

- Role model high standards of performance, inclusiveness, professionalism and participate in professional development activities
- Take responsibility for staff meeting work objectives
- Have confidence in own vision and goals
- Develop trust and confidence in staff and other stakeholders
- Maintain effective networks.

Learning

- Develop and extend own expertise in facilitation
- Source opportunities including researching information and accessing policies and frameworks to maintain currency and increase own of knowledge and skills
- Adapt to any changes in systems, equipment and procedures and the workplace operating environment
- Be open to new ideas and change and in particular manage, facilitate and support change processes with staff and apply previous experience and feedback in formulating improvements to practice
- Provide instruction, coaching and mentoring of staff and students as required
- Assess competence of others in the training environment and workplace
- Develop learner independence, extend their learning styles and readiness to learn
- Identify personal, staff, and student training needs and professional development opportunities
- Reflect on own learning
- Adapt own competence in response to any changes in operational environment
- Facilitate individual, group based and work based learning.

Technology

- Use complex equipment and IT systems required for flight training
- Apply a range of IT skills

Employability Skill**Industry/enterprise requirements for this qualification include:**

- Use student information management systems to record assessments and monitor assessment processes and practices
- Use technology to distribute information to staff, students and clients
- Identify and organise technology and equipment needs prior to training
- Develop feedback tools and collate feedback using technology
- Prepare presentations, submissions, reports and other documentation using a wide range of software packages
- Use the web to conduct research
- Use IT to organise and access data including the monitoring of the flight training, fatigue management systems and safety management systems
- Applying IT as a management tool to store and organise data
- Manage and monitor operational and maintenance procedures and systems for equipment used during flight training
- Manage and monitor the application of OH&S procedures when using IT and other equipment and facilities.

Packaging Rules**Requirements for completion of the qualification:**

A successful assessment outcome for a total of at least **15 units** comprising:

- **10 core units** listed below

plus

- **5 elective units.** At least **3 of the elective units** must be selected from the elective units list below. Up to **2 elective units** with appropriate contextualisation may be selected from any currently endorsed national Training Package or accredited course. Where the choice of a unit from another currently endorsed national Training Package or accredited course is made, this unit must come from a qualification or course at Diploma or above and must contribute towards the vocational outcome of the qualification.

Core Units

Field	Unit
M Training and Assessment	TAADES501B Design and develop learning strategies
	TAAENV501B Maintain and enhance professional practice
	TAEDES401A Design and develop learning programs
	TAE LLN401A Address adult language, literacy and numeracy skills
N Leadership and Supervision	AVIN6003A Manage flight training
	BSBMGT502A Manage people performance
	BSBLED401A Develop teams and individuals
	TAAASS501B Lead and coordinate assessment systems and services
	TAACMQ503B Lead and conduct training and/or assessment evaluations
P Administration and Finance	BSBRKG502B Manage and monitor business or records systems

Elective Units

Field	Unit
G Teamwork	BSBHRM402A Recruit, select and induct staff
	BSBMKG501B Identify and evaluate marketing opportunities
	BSBWOR502A Ensure team effectiveness
	BSBW RK509A Manage industrial relations
	CHCCAR501B Conduct career guidance interview

J	Quality	BSBAUD402B	Participate in a quality audit
M	Training and Assessment	AVIM5001A	Operate a simulator
		AVIM5004A	Facilitate training in a synthetic environment
		AVIM6006A	Deliver operational flight management training
		TAACMQ501B	Develop training and/or assessment organisational policies and procedures
		TAEDEL401A	Plan, organise and deliver group-based learning
		TAADEL503B	Provide advanced facilitation to support learning
		TAADES502B	Design and develop learning resources
		TAATAS502B	Prepare a tender bid
		TAATAS503B	Manage contracted work
		TAATAS504B	Facilitate group processes
		TAESUS501A	Analyse and apply sustainability skills to learning programs
N	Leadership and Supervision	TAACMQ504B	Determine and manage scope of training and/or assessment services
		TAACMQ505B	Lead a team to foster innovation
		TAADEL504B	Lead and coordinate training services
P	Administration and Finance	BSBFIM501A	Manage budgets and financial plans

AVISS00001 Aerobatic Pilot Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units	
AVIY4061A	Perform aerobatic manoeuvres
AVIY4062A	Perform an aerobatic sequence
AVIY4066A	Control aircraft in advanced flight manoeuvres
Pathway	
The Skill Set is to be undertaken in addition to either the Certificate IV in Aviation (Commercial Pilot Aeroplane Licence) or Certificate IV in Aviation (Commercial Pilot Helicopter Licence) and targets those pilots who work specifically in the Aerobatic Pilot operational environment.	
Suggested words for Statement of Attainment	
These competencies from the AVI08 Aviation Training Package meet the needs of Aerobatic Pilots. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working as an Aerobatic Pilot in the aviation operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.	

Target Group

Not applicable.

Suggested words for Statement of Attainment

Not applicable.

AVISS00005 Airborne Rappelling Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set may form part of the Certificate II in Aviation (Flight Operations) or be achieved separately.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units	
AVIW2032A	Fast rope from a helicopter
AVIW2033A	Rappel from a helicopter
PUAFIR209B	Work Safely around aircraft

Target Group

Target Group:

This is a Skill Set covering the role of an Airborne Rappeller within the aviation operational environment.

A total of **3** units of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies from the AVI08 Aviation Training Package meet the needs of Airborne Rappellers. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working as an Airborne Rappeller in the aviation operational environment.

AVISS00006 Airborne Rappelling Supervisor Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set may form part of the Certificate IV in Aviation (Aircrewman), or be achieved separately.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units	
AVIY4055A	Conduct airborne extraction operations
AVIY4056A	Conduct airborne rappelling operations

Target Group

Target Group:

This is a Skill Set covering the role of an Airborne Rappelling Supervisor within the aviation operational environment.

A total of 2 units of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment
<p>These competencies from the AVI08 Aviation Training Package meet the needs of Airborne Rappelling Supervisors. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working as an Airborne Rappelling Supervisor in the aviation operational environment.</p>

AVISS00007 Airborne Recovery Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set may form part of the Certificate II in Aviation (Flight Operations) or be achieved separately.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units	
AVIW2030A	Be airborne extracted by suspended rope
AVIW2031A	Be airborne extracted using suspended extraction equipment
PUAFIR209B	Work Safely around aircraft

Target Group

Target Group:

This is a Skill Set covering the role of personnel engaged in airborne recovery activities within the aviation operational environment.

A total of **3** units of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies from the AVI08 Aviation Training Package meet the needs of personnel engaged in airborne recovery activities. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons engaged in airborne recovery activities in the aviation operational environment.

AVISS00008 Aircraft Underwater Escape Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set may form part of the Certificate II in Aviation (Flight Operations), the Certificate III in Aviation (Rescue Crewman), the Certificate IV in Aviation (Aircrewman), or be achieved separately. This Skill Set targets those personnel who work specifically in the aviation operational environment who require aircraft underwater escape skills.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units	
AVIF2014A	Undertake aircraft underwater escape and survival
HLTFA201A	Provide basic emergency life support
PUAFIR209B	Work Safely around aircraft

Target Group

Target Group:

This is a Skill Set covering a range of roles in the aviation operational environment that require aircraft underwater escape skills including: flight crew, emergency services occupations, airborne observer and other roles not related to flight crew.

A total of 3 units of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies from the AVI08 Aviation Training Package meet the needs of personnel working in the helicopter operational environment who require aircraft underwater escape skills. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working in the aviation operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

AVISS00009 Aviation Operator Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set may form part of the Certificate III in Aviation (Ground Operations and Service), the Certificate III in Aviation (Flight Operations), or be achieved separately.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of 4 units of competency must be completed.	
Core	
AVIZ1005B	Maintain basic situation awareness in the aviation workplace
PUAFIR209B	Work safely around aircraft
TLIE707B	Use communication systems
TLIO207D	Follow security procedures

Target Group

Target Group:

This is a Skill Set covering a range of support roles in the Helicopter operational environment including: ground support personnel, maintenance personnel, emergency services occupations, airborne observer and other roles not related to flight crew.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies meet the needs of the Aviation Operator. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working as aviation operators in the Helicopter operational environment.

AVISS00010 Aviation Supervisory Cabin Crew Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set is to be undertaken in addition to the Certificate IV in Aviation (Leadership and Supervision) and targets those supervisors who work specifically in the Cabin Crew operational environment.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of 4 units of competency must be completed.	
Core	
AVIF3005B	Maintain the safety of people and aircraft
AVIF3006B	Respond to abnormal and emergency situations within the aircraft
HLTFA404A	Apply advanced resuscitation techniques
TLIH107D	Coordinate quality customer service

Target Group

Target Group:

This is a Skill Set covering the role of the Supervisor in the Cabin Crew within the aviation operational environment.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies from the AVI08 Aviation Training Package meet the needs of Supervisory Cabin Crew. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working as in a supervisory role of cabin crew in the aviation operational environment.

AVISS00011 Emergency Breathing System Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set is to be undertaken in addition to the Aircraft Underwater Escape Skill Set and targets those personnel who work specifically in the aviation operational environment who utilise emergency breathing systems.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Unit	
AVIF2015A	Utilise emergency breathing system

Target Group

Target Group: This is a Skill Set covering a range of roles in the aviation operational environment where Emergency Breathing Systems are utilised including: flight crew, emergency services occupations, airborne observer and other roles not related to flight crew.
A total of 1 unit of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment
<p>This competency from the AVI08 Aviation Training Package meets the needs of personnel working in the helicopter operational environment who utilise emergency breathing systems. The competency is drawn from nationally endorsed Training Packages, and provides the skills and knowledge required by persons working in the aviation operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.</p>

AVISS00012 External Load Pilot Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set is to be undertaken in addition to the Certificate IV in Aviation (Commercial Pilot Helicopter Licence) and targets those pilots who work specifically in the External Load Pilot operational environment.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Unit	
AVIY4058A	Pilot a helicopter during external load operations

Target Group

Target Group: This is a Skill Set covering the role of an External Load Pilot within the aviation operational environment.
A total of 1 unit of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment
<p>This competency from the AVI08 Aviation Training Package meets the needs of External Load Pilots. The competency is drawn from nationally endorsed Training Packages, and provides the skills and knowledge required by persons working as an External Load Pilot in the aviation operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.</p>

AVISS00013 Formation Pilot Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set is to be undertaken in addition to either the Certificate IV in Aviation (Commercial Pilot Aeroplane Licence) or Certificate IV in Aviation (Commercial Pilot Helicopter Licence) and targets those pilots who work specifically in the Formation Pilot operational environment.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units	
AVIY4063A	Perform close formation flight
AVIY4064A	Lead an aircraft formation flight

Target Group

Target Group:

This is a Skill Set covering the role of the Formation Pilot within the aviation operational environment.

A total of **2** units of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies from the AVI08 Aviation Training Package meet the needs of Formation Pilots. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working as a Formation Pilot in the aviation operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

AVISS00015 Helicopter Wireman Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set may form part the Certificate III in Aviation (Flight Operations), or be achieved separately.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Unit	
AVIW3024A	Perform wireman duties

Target Group

Target Group:
This is a Skill Set required as part of occupational roles involved in performing wireman duties from a rotary wing aircraft.
A total of 1 unit of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment
<p>This competency from the AVI08 Aviation Training Package meets the needs of the helicopter wireman. The competency is drawn from a nationally endorsed Training Package, and provides the skills and knowledge required by persons involved in performing wireman duties from a rotary wing aircraft. Licensing, legislative, regulatory or certification requirements are applicable to this unit.</p>

AVISS00016 Manual Handle Freight/Baggage in Aircraft Cargo Hold Confined Spaces Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
This Skill Set may form part of the Certificate II in Aviation (Ground Operations and Service) or be achieved separately.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units	
AVID2006A	Load and secure aviation freight and baggage
AVID2007A	Unload aviation freight and baggage
AVIF2019A	Work in aircraft confined spaces

Target Group

Target Group:

This Skill Set targets those ground operations personnel who specifically load, secure and unload aviation freight and baggage in an aircraft cargo hold confined space.

A total of 3 units of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies from the AVI08 Aviation Training Package meet the needs of ground operations personnel who load, secure and unload aviation freight and baggage in an aircraft cargo hold confined space. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working in an aircraft cargo hold confined space who load, secure and unload aviation freight and baggage. Licensing, legislative, regulatory or certification requirements are applicable to this Skill Set.

AVISS00017 Marine Transfer Pilot Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set is to be undertaken in addition to the Certificate IV in Aviation (Commercial Pilot Helicopter Licence) and targets those pilots who work specifically in the Marine Transfer Pilot operational environment.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Unit	
AVIY4057A	Perform helicopter deck landing operations

Target Group

Target Group: This is a Skill Set covering the role of the Marine Transfer Pilot within the aviation operational environment.
A total of 1 unit of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment
<p>This competency from the AVI08 Aviation Training Package meets the needs of Marine Transfer Pilots. The competency is drawn from nationally endorsed Training Packages, and provides the skills and knowledge required by persons working as a Marine Transfer Pilot in the aviation operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.</p>

AVISS00018 Night Aided Vision Aviation Operations Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set may form part the Certificate III in Aviation (Flight Operations), or be achieved separately.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Unit	
AVIW3026A	Conduct night aided vision aviation operations

Target Group

Target Group: This is a Skill Set covering roles involved in conducting fixed and rotary wing night aided vision aviation operations.
A total of 1 unit of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment
<p>This competency from the AVI08 Aviation Training Package meets the needs of personnel involved in night aided vision aviation operations as part of their broader job role. The competency is drawn from a nationally endorsed Training Package, and provides the skills and knowledge required to plan and conduct fixed and rotary wing night aided vision aviation operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.</p>

AVISS00019 Night Visual Flight Rules (NVFR) Pilot Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set is to be undertaken in addition to either the Certificate IV in Aviation (Commercial Pilot Aeroplane Licence) or Certificate IV in Aviation (Commercial Pilot Helicopter Licence) and targets those pilots who specifically require NVFR Pilot rating in the aviation operational environment.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units	
AVIH4012A	Plan a flight under Night Visual Flight Rules (NVFR)
AVIH4013A	Navigate aircraft - NVFR
AVIY5020A	Conduct full instrument panel manoeuvres
AVIY5021A	Conduct limited instrument panel manoeuvres
AVIY4024A	Operate aircraft in the traffic pattern at night

Target Group

Target Group:

This is a Skill Set covering the role of the Night Visual Flight Rules (NVFR) Pilot within the aviation operational environment. This Skill Set does not meet the requirements of a Private Pilot operating under NVFR.

A total of **5** units of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies from the AVI08 Aviation Training Package meet the needs of NVFR Pilots. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working as a NVFR Pilot in the aviation operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this Skill Set.

AVISS00021 Rappelling and Winching Pilot Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set is to be undertaken in addition to the Certificate IV in Aviation (Commercial Pilot Helicopter Licence) and targets those pilots who work specifically in the Rappelling and Winching Pilot aviation operational environment.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Units	
AVIY4059A	Pilot a helicopter during roping operations
AVIY4060A	Pilot a helicopter during winching operations

Target Group

Target Group: This is a Skill Set covering the role of a Rappelling and Winching Pilot within the aviation operational environment.
A total of 2 units of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment
<p>These competencies from the AVI08 Aviation Training Package meet the needs of Rappelling and Winching Pilots. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working as a Rappelling and Winching Pilot in the aviation operational environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.</p>

AVISS00022 Simulator Operator Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set targets those personnel who work specifically in the Simulator Operator operational environment.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Unit	
AVIM5001A	Operate a simulator

Target Group

Target Group:
This is a Skill Set covering the role of the Simulator Operator within the aviation operational environment.
A total of 1 unit of competency must be completed

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment
<p>This competency from the AVI08 Aviation Training Package meets the needs of Simulator Operators. The competency is drawn from nationally endorsed Training Packages, and provides the skills and knowledge required by persons working as a Simulator Operator in the aviation operational environment.</p>

AVISS00023 Simulator Operator/Trainer Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set targets those personnel who work specifically in the Simulator Operator/Trainer operational environment. Additionally personnel who are employed in this role should hold the required licencing, qualifications and/or competencies relevant for the training that they are conducting.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Unit	
AVIM5001A	Operate a simulator
AVIM5004A	Facilitate training in a synthetic environment
TAEDEL301A	Provide work skill instruction

Target Group

Target Group:

This is a Skill Set covering the role of the Simulator Operator/Trainer within the aviation operational environment.

A total of **3** units of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

These competencies from the AVI08 Aviation Training Package meet the needs of Simulator Operators/Trainers. The competencies are drawn from nationally endorsed Training Packages, and provide the skills and knowledge required by persons working as a Simulator Operator/Trainer in the aviation operational environment.

AVISS00024 Simulator Trainer Skill Set

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

Pathway
The Skill Set targets those personnel who work specifically in the Simulator Trainer operational environment. Additionally personnel who are employed in this role should hold the required licencing, qualifications and/or competencies relevant for the training that they are conducting.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

Unit	
AVIM5004A	Facilitate training in a synthetic environment
TAEDEL301A	Provide work skill instruction

Target Group

Target Group:

This is a Skill Set covering the role of the Simulator Trainer within the aviation operational environment.

A total of **2** units of competency must be completed.

Suggested words for Statement of Attainment

Suggested words for Statement of Attainment

This competency from the AVI08 Aviation Training Package meets the needs of Simulator Trainers. The competency is drawn from nationally endorsed Training Packages, and provides the skills and knowledge required by persons working as a Simulator Trainer in the aviation operational environment.

AVIA3001B Package dangerous goods for air transport

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to package dangerous goods for air transport in accordance with IATA and other relevant regulatory requirements, including selecting appropriate packing instructions, identifying and selecting packing, packaging the dangerous goods, labelling and marking dangerous goods, and stowing the packaged dangerous goods in accordance with regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant IATA, CASA and other relevant regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and relevant regulations during packaging of dangerous goods for air transport across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Select appropriate packing instructions	<p>1.1 Type of dangerous goods to be transported is identified in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Appropriate packing instructions for the identified type of dangerous goods are selected in accordance with the relevant regulatory requirements</p>
2 Identify and select packing	<p>2.1 Required packing materials are identified and selected in accordance with workplace procedures and regulatory requirements</p> <p>2.2 Checks are made to confirm that the selected packing has undergone all required tests in accordance with the relevant regulatory requirements</p> <p>2.3 Where required, combination of packing is checked to confirm that it has been appropriately tested in accordance with the relevant regulatory requirements</p>
3 Package the dangerous goods	<p>3.1 Dangerous goods are packaged using the selected packing materials in accordance with workplace procedures and regulatory requirements</p> <p>3.2 Approved absorbent materials and cushioning is used in accordance with the relevant regulatory requirements</p>
4 Label and mark the packaged dangerous goods	<p>4.1 Packaged dangerous goods are labelled and marked in accordance with workplace procedures and regulatory requirements</p>
5 Stow the packaged dangerous goods	<p>5.1 Packaged dangerous goods are stowed in a warehouse in accordance with workplace procedures and regulatory requirements</p> <p>5.2 Relevant personnel are advised of the disposition of the stowed packaged dangerous goods in accordance with workplace procedures and regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory requirements pertaining to packaging, packing, marking, labelling, documenting, storing and despatching of dangerous goods designated for air transport, including IATA and CASA requirements
- Relevant OH&S and environmental procedures and regulations
- Safety principles for the packaging of dangerous goods for air transport
- Characteristics and ways of identifying various types of dangerous goods
- Workplace procedures for packaging, packing, marking, labelling, documenting, storing and despatching of dangerous goods designated for air transport
- Documentation requirements for the transport of appropriate dangerous goods by air
- Risks that exist when packaging dangerous goods for air transport and related risk control procedures and precautions
- Problems that may occur when packaging of dangerous goods for air transport and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when packaging dangerous goods for air transport
- Read and interpret instructions, labels, regulations, procedures and other information relevant to packaging dangerous goods for air transport
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to packaging dangerous goods for air transport, including labelling and marking the packaged dangerous goods
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when packaging dangerous goods for air transport
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when packaging dangerous goods for air transport in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when packaging dangerous goods for air transport
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during packaging dangerous goods for air transport
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule

REQUIRED KNOWLEDGE AND SKILLS

- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to package dangerous goods for air transport

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Packaging of dangerous goods for air transport may be carried out:	<ul style="list-style-type: none"> • in any allowable operating and weather conditions • at freight depots, terminals and airports • in relation to any aircraft types in service in Australia on domestic and international flights • in accordance with regulatory and workplace requirements
Performance may be demonstrated:	<ul style="list-style-type: none"> • in appropriately simulated air freight packaging situations, and/or • in an operational air freight packaging situation at an airport
Persons consulted during packaging of dangerous goods for air transport may include:	<ul style="list-style-type: none"> • customers • other members of the work team(s) • supervisors and managers • flight crew • dangerous goods experts and advisors • technical staff
Personal protection equipment may include:	<ul style="list-style-type: none"> • gloves • safety footwear • safety glasses • mask or respirator • high visibility clothing
Hazards may include:	<ul style="list-style-type: none"> • hazardous or dangerous materials • contamination of, or from, materials being handled • spill, leakages, ruptures • dust/vapours
Hazard management is:	<ul style="list-style-type: none"> • consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> • Civil Aviation Safety Regulations relevant to packaging of dangerous goods for air transport • relevant IATA dangerous goods regulations • relevant Australian Standards and the Industry Safety

RANGE STATEMENT

	Code
	<ul style="list-style-type: none">• manifests, bar codes, goods and product identification• goods identification numbers and codes• supplier and/or client instructions• OH&S regulations• workplace procedures and instructions and job specification• workplace checklists for packaging of dangerous goods for air transport• emergency procedures• flight schedules• local instructions• induction and training materials• conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:	<ul style="list-style-type: none">• Australian and international regulations and codes of practice for the transport of dangerous goods by air• relevant IATA dangerous goods regulations• IATA standard for air cargo packaging (TACT Rules)• relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to packaging of dangerous goods for air transport• Air Cargo Tariff (IATA)• Australian Civil Aviation Safety Regulations relevant to packaging of dangerous goods for air transport• Civil Aviation Act• local instructions• relevant OH&S legislation• environmental protection legislation• relevant security regulations• relevant Australian Standards• industrial relations and workplace compensation legislation

Unit Sector(s)

Competency field

Competency Field A - Handling Cargo/Stock

AVIB3001B Inspect and report on an aerodrome

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to inspect and report on an aerodrome, including performing an aerodrome inspection, reporting hazardous situations, facilitating repairs, and reporting the restoration of aerodrome serviceability. Required performance includes compliance with all relevant regulatory requirements and protocols. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

Work involves the application of relevant principles, regulations, protocols and procedures when inspecting and reporting on an aerodrome as part of commercial airport activities across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Perform an aerodrome inspection	<p>1.1 Access to the aerodrome is arranged with appropriate authorities</p> <p>1.2 Aerodrome is inspected for serviceability, identifying situations resulting in the unserviceability of the aerodrome</p> <p>1.3 Where appropriate, the hazardous situation is rectified or made safe using suitable procedures</p> <p>1.4 Aircraft parking control is completed in accordance with workplace communication procedures and regulatory requirements</p>
2 Report hazardous situations	<p>2.1 Any requirements for official notification of the hazardous situation on the movement area and Obstacle Restriction Areas are assessed</p> <p>2.2 Relevant authorities or organisations are notified of the hazardous situation in accordance with workplace communication procedures and regulatory requirements</p>
3 Facilitate repairs	<p>3.1 Any requirement for official notification of the hazardous situation on the movement area and Obstacle Restriction Areas are assessed</p> <p>3.2 Relevant authorities or organisations are notified of the hazardous situation in accordance with workplace communication procedures and regulatory requirements</p>
4 Report the restoration of aerodrome serviceability	<p>4.1 Restoration of aerodrome serviceability is inspected and confirmed in accordance with workplace communication procedures and regulatory requirements</p> <p>4.2 Unserviceability markings are removed</p> <p>4.3 Relevant authorities are notified of the restoration of aerodrome serviceability in accordance with workplace communication procedures and regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to inspecting and reporting on aerodromes (i.e. CAR 89)
- Relevant OH&S and environmental procedures and regulations
- Aerodrome inspection procedures
- Aerodrome operating procedures
- Functions of a works safety officer (as defined in Civil Aviation Safety Regulations)
- Reporting procedures
- Relevant equipment used in aerodrome inspection and reporting
- Aircraft schedules and their use in aerodrome inspection and reporting
- Purpose and application of unserviceability markers
- Purpose and application of Method of Working Plans (MOWPs)
- Aerodrome emergency response procedures
- Safety hazards and risks that exist when inspecting an aerodrome and related risk control procedures and precautions
- Problems that may occur when inspecting and reporting on an aerodrome and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when inspecting and reporting on an aerodrome
- Read and interpret instructions, regulations, procedures and other information relevant to inspecting and reporting on an aerodrome
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to inspecting and reporting on an aerodrome
- Report hazardous situations that may arise on an aerodrome
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when inspecting and reporting on an aerodrome
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when inspecting and reporting on an aerodrome in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when inspecting and reporting on an aerodrome

REQUIRED KNOWLEDGE AND SKILLS

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the inspection and reporting on an aerodrome
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct an inspection and reporting on an aerodrome

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|--|--|
| Inspections may need to occur: | <ul style="list-style-type: none"> • by day or by night • in any weather conditions • and will include movement areas, Obstacle Restriction Areas, animal and bird hazards and objects becoming hazards within obstacle limitation areas |
| Aerodrome serviceability inspections should occur: | <ul style="list-style-type: none"> • at least one hour prior to the first commercial transport operation of the day, or as determined by the aerodrome operator, or • after any significant phenomenon which could reasonably be expected to affect the serviceability of the aerodrome, or • otherwise as determined by the aerodrome operator |
| Situations requiring reporting may include: | <ul style="list-style-type: none"> • changes to temporary or permanent published aerodrome information • hazardous situations resulting in some or all of the aerodrome becoming unserviceable • aerodrome works • restoration of aerodrome serviceability |
| Relevant authorities for accessing and reporting purposes may include: | <ul style="list-style-type: none"> • aerodrome operator or delegated person • NOTAM Office (Airservices Australia) • Civil Aviation Safety Authority • Air Traffic Control (ATC) • Australian Defence Forces Command for military bases • aerodrome users |
| Aerodromes may include: | <ul style="list-style-type: none"> • licensed aerodromes • unlicensed aerodromes • Aircraft Landing Areas (ALAs) |
| Aerodrome movement area includes: | <ul style="list-style-type: none"> • apron • taxiway • runway • Obstacle Restriction Area (ORA) |
| Aerodrome surrounds may include: | <ul style="list-style-type: none"> • fences and gates • buildings • permanent or temporary structures under flight paths (including runway approaches, take-off areas and circuit areas or Obstacle Limitation Surfaces [OLS]) • drainage systems |

RANGE STATEMENT

Obstacle Restriction Areas may include:	<ul style="list-style-type: none">• areas surrounding navigational aids• obstacle limitation surfaces
Visual aids may include:	<ul style="list-style-type: none">• runway strips• clearways• taxiway strips• runway end safety areas• wind indicator• signal circles• markers and markings
Signs and notices may include:	<ul style="list-style-type: none">• authorised entry• speed restrictions• no smoking• limited access• hazard warnings• movement area guidance signs• underground electrical reticulation
Navigational aids may include:	<ul style="list-style-type: none">• Non-directional Beacons (NDBs)• VHF Omni-directional Radio Range (VOR)• Distance Measuring Equipment (DME)• Instrument Landing System (ILS)
Hazardous situations leading to the unserviceability of sealed movement areas may include:	<ul style="list-style-type: none">• changes or loss of runway surface frictional characteristics• excessive loose materials• potholes or cracks• unsatisfactory pavement bearing capacity• loss of runway shape• loss of visibility of markings• stripping• flooding• runway edge fretting• bird or animal activity• disabled aircraft, vehicles, and equipment• fuel and oil spills
Hazardous situations leading to the unserviceability of unsealed movement areas may include:	<ul style="list-style-type: none">• pot holes, scouring, ruts• excessive loose materials• unsatisfactory surface bearing capacity (e.g. becoming too soft, slippery or rough)• long grass, surface cracks, stones and debris• loss of runway shape• loss of visibility of markers• bird or animal activity

RANGE STATEMENT

<p>Hazardous situations leading to the unserviceability of the Obstacle Restriction Areas may include:</p>	<ul style="list-style-type: none"> • disabled aircraft, vehicles, and equipment • fuel and oil spills • flooding • long grass • surface cracks • large rocks • vehicles plant and equipment on the movement area • bird or animal activity • unduly rough surface that may cause damage to an aircraft (not including an aircraft becoming bogged)
<p>Hazardous situations leading to the unserviceability of the aerodrome surrounds may include:</p>	<ul style="list-style-type: none"> • structures extending beyond the Obstacle Limitation Surfaces (OLS) • broken fences or open gates • faulty drains • erosion or other damage to the shoulder of the movement area • incorrect or unclear markers and unclear runway markings • damaged wind assembly • long grass, surface cracks, stones and debris • aerodrome works (e.g. Time Limited Work, major works requiring Method of Working Plan (MOWP)) • situations restricting the effective operation of navigational aids such as: <ul style="list-style-type: none"> • vehicle movements within restricted areas • obstructions (e.g. grass, trees, vehicles, buildings) • inappropriate or faulty restriction markers or fences • electrical power lines infringing on clearance zones • power cables incorrectly laid
<p>Procedures for making movement and Obstacle Restriction Areas safe may involve:</p>	<ul style="list-style-type: none"> • marking the unserviceable area by day or night • partial closure of the movement area • closing the movement area (aerodrome closure) • extinguish lighting in the hazardous section of the movement area • contacting the aerodrome users • reporting of the above by NOTAM
<p>Serviceability markings/advice may include:</p>	<ul style="list-style-type: none"> • signal circle markers • unserviceability cross markers • unserviceability cones • displaced threshold markers • unserviceability lighting • glider markers

RANGE STATEMENT

Suitable means of reporting will include some or all of the following:

- dumb bell markers
- verbal communications
- other written means of communication as is appropriate (e.g. fax)
- NOTAMs
- Method of Working Plan (MOWP)

Procedures for initiating repairs or hazard removal may include:

- notifying relevant aerodrome personnel
- undertaking the repairs
- removing the hazard
- notifying appropriate contractors

Procedures for appropriate bird and animal management may include:

- maintaining perimeter fencing
- harassment procedures including explosives sounds, sirens etc.
- culling
- environmental controls (e.g. dumping of rubbish)
- habitat management in accordance with the Bird/Wildlife Hazard Management Program

Emergency response procedures may include:

- implementing aerodrome emergency procedures
- reporting to the local police service
- reporting to the Australian Transport Safety Bureau

Hazards in the work areas may include:

- aircraft noise
- aircraft movements
- other vehicles in the vicinity of the aircraft
- personnel in the vicinity of the aircraft
- jet blast
- fumes
- dust

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to inspecting and reporting on aerodromes (i.e. CAR 89)
- aerodrome manuals
- workplace operating procedures manuals
- Manual of Standards - Aerodromes (previously Rules and Practices for Aerodromes [RPA])
- En Route Supplement Australia (ERSA)
- Departure and Approach Procedures (DAP)

RANGE STATEMENT

Applicable regulations and legislation may include:

- manufacturers specifications for equipment used when inspecting and reporting on aerodromes
- Civil Aviation Advisory Publications (CAAPs)
- airline timetables
- induction and training materials
- sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to inspecting and reporting on aerodromes (i.e. CAR 89)
- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to airport reporting
- Manual of Standards - Aerodromes (previously Rules and Practices for Aerodromes [RPA])
- Australian Dangerous Goods (ADG) Code and Mines Regulation Act for fuel
- applicable state, territory and commonwealth regulations concerning:
 - occupational health and safety
 - workplace relations
 - workers compensation
 - ADG Code and Mines Regulation Act for fuel
 - environmental protection
 - equal opportunity
 - wildlife management (including culling)

AVIB3002B Inspect and report on aerodrome lighting systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to inspect and report on aerodrome lighting systems, including inspecting and reporting faults in aerodrome lighting, making any identified unserviceable condition safe, and confirming and reporting the return of the aerodrome lighting to serviceable condition. Required performance includes compliance with all relevant regulatory requirements, conventions and protocols, i.e. CAR 94 and 95. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

Work involves the application of relevant principles, regulations, protocols and procedures when inspecting and reporting on aerodrome lighting systems as part of commercial airport activities across a variety of operational contexts within the Australian aviation industry.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Inspect the aerodrome lighting	<p>1.1 Access to the aerodrome is arranged with appropriate authorities</p> <p>1.2 Lighting systems are prepared for inspection</p> <p>1.3 Lighting systems are inspected for serviceability, and faults or hazardous situations which may affect aircraft safety are identified</p> <p>1.4 Where appropriate, the hazardous situation created by faulty lighting systems is rectified or made safe in accordance with workplace procedures and regulatory requirements</p>
2 Report faults in aerodrome lighting	<p>2.1 Any requirement for official notification of lighting faults is assessed</p> <p>2.2 Suitably qualified electrical contractors are contacted for repairs where appropriate</p> <p>2.3 Relevant authorities or organisations are notified of damage to aerodrome lighting, switching mechanisms and circuits in accordance with workplace communication procedures and regulatory requirements</p>
3 Make any unserviceable condition safe	<p>3.1 Faulty lights are replaced or repaired in accordance with workplace procedures and regulatory requirements, with minimal disruption to aircraft movements</p> <p>3.2 Relevant authorities or organisations are notified of aerodrome works in accordance with workplace communication procedures and regulatory requirements</p> <p>3.3 Temporary lighting is installed as required</p>
4 Report the return of the aerodrome lighting to serviceable condition	<p>4.1 Restored aerodrome lighting systems are inspected and confirmed for serviceability</p> <p>4.2 Relevant authorities or organisations are notified of the restoration of lighting serviceability in accordance with workplace communication procedures and regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders, i.e. CAR 94 and 95
- Relevant OH&S and environmental procedures and regulations
- Features and characteristics of aerodrome lighting systems
- Aerodrome operating procedures
- Reporting procedures
- Relevant equipment used in the inspection and reporting on aerodrome lighting systems
- Effects on the serviceability of the aerodrome caused by lighting faults
- Allowable minor repairs under electrical codes and regulations and procedures for engaging a qualified electrician to carry out major repairs
- Purpose and application of unserviceability markers
- Purpose and application of Method of Working Plans (MOWPs)
- Safety hazards and risks that exist when inspecting aerodrome lighting systems and related risk control procedures and precautions
- Problems that may occur when inspecting and reporting on aerodrome lighting systems and appropriate action that should be taken

Required skills:

- Communicate effectively with others when inspecting and reporting on an aerodrome lighting system
- Read and interpret instructions, regulations, procedures and other information relevant to inspecting and reporting on an aerodrome lighting system
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to inspecting and reporting on an aerodrome lighting system
- Report faults in aerodrome lighting
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when inspecting and reporting on an aerodrome lighting system
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when inspecting and reporting on an aerodrome lighting system in accordance with regulatory requirements and workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

- Implement contingency plans for unexpected events that may arise when inspecting and reporting on an aerodrome lighting system
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during inspecting and reporting on an aerodrome lighting system
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to inspect and report on an aerodrome lighting system and when facilitating any required repairs

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|--|---|
| Lighting inspections may need to occur: | <ul style="list-style-type: none"> • by day or by night • in any weather conditions |
| Aerodrome lighting serviceability inspections should occur in accordance with the Manual of Standards - Aerodromes, including: | <ul style="list-style-type: none"> • at least one hour prior to the first commercial transport operation of the day, or • prior to the last light of the day (dusk) • immediately after any significant phenomenon which could reasonably be expected to affect the serviceability of the aerodrome, or • otherwise as determined by the aerodrome operator |
| Situations requiring reporting may include: | <ul style="list-style-type: none"> • changes to temporary or permanent published aerodrome information • hazardous situations resulting in some or all of the aerodrome becoming unserviceable • aerodrome works • restoration of aerodrome serviceability |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Perform a visual inspection of the Obstacle Limitation Surfaces

- 1.1 The Obstacle Limitation Surfaces are inspected visually, and objects or structures which have or may become obstacles are identified
- 1.2 Where appropriate, obstacles in the Obstacle Limitation Surfaces are removed without notification in accordance with workplace procedures
- 1.3 Where an obstacle cannot be removed, a determination for the reporting, marking or lighting of the obstacle is made in accordance with workplace procedures

2 Report obstacles in the Obstacle Limitation Surfaces

- 2.1 Where an obstacle cannot be removed, declared distances and supplementary take off distances are calculated and are appropriately reported to relevant authorities and organisations in accordance with workplace procedures
- 2.2 All relevant authorities or organisations are notified of the (1) status of the obstacle (i.e. permanent or temporary), (2) declared distances for the obstacle, (3) location of the obstacle, where there is no requirement for reporting declared distances, and (4) appropriate marking and lighting requirements using suitable means of communication

3 Report the return of the aerodrome to the previous status

- 3.1 The Obstacle Limitation Surfaces are inspected visually to confirm removal of temporary obstacles
- 3.2 Relevant authorities or organisations are notified of the removal of the temporary obstacle, using suitable means of communication

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders, including CAR 89W to 89Z inclusive
- Relevant OH&S and environmental procedures and regulations
- Procedures for inspecting and reporting on OLS
- Aerodrome operating procedures
- Functions of a works safety officer (as defined in Civil Aviation Safety Regulations CAR 89)
- Reporting procedures
- Relevant equipment used in aerodrome inspection and reporting on OLS
- Aircraft schedules and their use in inspection and reporting on OLS
- Purpose and application of unserviceability markers
- Purpose and application of Method of Working Plans (MOWPs)
- Basic mathematics underlying the survey of OLS and the calculation of the declared distances
- Principles of shielding of objects and the impact of multiple critical obstructions on Supplementary Take-off Distances
- Safety hazards and risks that exist when inspecting and reporting on OLS and related risk control procedures and precautions
- Problems that may occur when inspecting and reporting on OLS and appropriate action that should be taken in each case, including when objects protrude on OLS

Required skills:

- Communicate effectively with others when inspecting and reporting on the OLS
- Read and interpret instructions, regulations, procedures and other information relevant to inspecting and reporting on the OLS
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to inspecting and reporting on the OLS
- Report any obstacles in the OLS of an aerodrome and when the aerodrome has been returned to its previous status
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when inspecting and reporting on the OLS
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when inspecting and reporting on the OLS in accordance with regulatory requirements and workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

- Implement contingency plans for unexpected events that may arise when inspecting and reporting on the OLS
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during inspecting and reporting on the OLS
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to inspect and report on the OLS

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|--|
| Inspections may need to occur: | <ul style="list-style-type: none"> • by day or by night • in any weather conditions |
| Obstacle Limitation Surfaces inspections will occur: | <ul style="list-style-type: none"> • at least one hour prior to the first commercial transport operation of the day, or • immediately after any significant phenomenon which could reasonably be expected to affect the serviceability of the aerodrome, or • otherwise as determined by the aerodrome operator |
| Relevant authorities for accessing and reporting purposes include: | <ul style="list-style-type: none"> • aerodrome operator or delegated person • NOTAM Office (Airservices Australia) • Civil Aviation Safety Authority • Air Traffic Control (ATC) • Australian Defence Forces Command for military bases • aerodrome users |
| Aerodromes may include: | <ul style="list-style-type: none"> • licensed aerodromes • unlicensed aerodromes • Aircraft Landing Areas (ALAs) |
| Obstacles may be: | <ul style="list-style-type: none"> • existing objects or structures • proposed objects or structures |
| Obstacles may occur within the: | <ul style="list-style-type: none"> • movement area • Obstacle Restriction Area (ORA) • Obstacle Limitation Surfaces (OLS) |

| Declared distances include: | <ul style="list-style-type: none"> • take-off run available (TORA) • take-off distance available (TODA) • accelerate stop distance (ASDA) • landing distance available (LDA) • TODA gradient • Supplementary Take-off Distances (STODA) and |

RANGE STATEMENT

Procedures for making the aerodrome surrounds safe may involve:	<ul style="list-style-type: none"> associated gradients marking the unserviceable area or obstacle by day or night partial closure of the aerodrome aerodrome closure contacting the aerodrome user marking and lighting of obstacles
Serviceability markers and cones include:	<ul style="list-style-type: none"> signal circle markers unserviceability cross markers unserviceability cones displaced threshold markers work limit markers glider markers dumb bell markers
Suitable means of reporting include:	<ul style="list-style-type: none"> verbal communications NOTAMs other written means of communication as is appropriate (e.g. fax) Method of Working Plan (MOWP)
Initiating repairs or hazard removal procedures includes:	<ul style="list-style-type: none"> notifying relevant aerodrome personnel undertaking the repairs negotiating with the owner of the obstacle to remove the hazard notifying appropriate contractors post-works serviceability inspection
Hazards in the work areas may include:	<ul style="list-style-type: none"> aircraft noise aircraft movements other vehicles in the vicinity of the aircraft personnel in the vicinity of the aircraft jet blast fumes dust
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> company procedures enterprise procedures organisational procedures established procedures standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to inspecting and reporting on the Obstacle Limitation Surfaces aerodrome manuals

RANGE STATEMENT

Applicable regulations and legislation may include:

- workplace operating procedures manuals
- Manual of Standards - Aerodromes (previously Rules and Practices for Aerodromes [RPA])
- En Route Supplement Australia (ERSA)
- Departure and Approach Procedures (DAP)
- manufacturers specifications for equipment used when inspecting and reporting on the Obstacle Limitation Surfaces
- Civil Aviation Advisory Publications (CAAPs)
- airline timetables
- induction and training materials
- relevant Civil Aviation Act (1988) and Civil Aviation Regulations and Orders, including CAR 89w to 89Z inclusive
- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to airport reporting
- Manual of Standards - Aerodromes (previously Rules and Practices for Aerodromes [RPA])
- Airports Act
- applicable state, territory and commonwealth regulations concerning:
 - occupational health and safety
 - workplace relations
 - workers compensation
 - ADG Code and Mines Regulation Act for fuel
 - environmental protection
 - equal opportunity
 - wildlife management (including culling)

Competency field

Competency Field

B - Equipment Checking and Maintenance

AVIB3004B Manage and carry out pre- and post-flight cabin checks

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to manage and carry out pre- and post-flight cabin safety, security and service checks on a commercial aircraft, including conducting required pre-flight checks, preparing the aircraft cabin for service, carrying out required post-flight checks, and carrying out all required administrative procedures related to the necessary cabin checks. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant legislative and regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision usually within a team environment.

Work involves the application of safety and operational principles, procedures and regulatory requirements to the management and conduct of pre- and post-flight cabin safety, security and service checks on commercial aircraft across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Carry out pre-flight safety and security checks	<p>1.1 Pre-flight cabin safety and security checks are carried out in accordance with regulatory requirements and workplace procedures</p> <p>1.2 Where a problem related to aircraft safety or security is identified, appropriate action is taken to promptly address the problem and/or report it to relevant personnel in accordance with regulatory requirements and workplace procedures</p> <p>1.3 Crew Resource Management (CRM) principles are applied in order to establish and maintain awareness of the impact of time and/or commercial pressure on safety-sensitive tasks</p> <p>1.4 Tasks are prioritised during pre-flight checks in order to ensure that critical safety tasks are addressed prior to service checks</p> <p>1.5 Appropriate action is taken in accordance with workplace procedures to report or rectify situations where cabin safety resources are faulty or inadequate in accordance with regulatory requirements and workplace procedures</p>
2 Prepare aircraft cabin for service	<p>2.1 Preparation of the cabin for passenger arrival is conducted in accordance with workplace procedures</p> <p>2.2 Pre-flight cabin service checks are carried out in accordance with regulatory requirements and workplace procedures</p> <p>2.3 Cabin resources are accessed to replenish depleted stocks when necessary</p> <p>2.4 Difficulties in the preparation of the cabin are reported/rectified in accordance with workplace procedures</p>
3 Carry out post-flight checks	<p>3.1 Cabin is inspected and post-flight cabin safety, security and service checks are carried out in accordance with regulatory requirements and workplace procedures</p> <p>3.2 Any safety or security issues, damage to the aircraft cabin and resources, defective cabin systems and depleted stocks are identified and reported in accordance with workplace procedures</p>
4 Carry out administrative procedures	<p>4.1 Workplace administrative procedures concerning cabin safety, security and service checks and related action are identified and interpreted</p> <p>4.2 Administrative procedures are implemented in accordance with regulatory requirements and workplace procedures</p> <p>4.3 All required pre-flight and post-flight cabin safety, security and service checking documentation is completed in accordance with regulatory requirements and workplace requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S, security hygiene and environmental procedures/regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Regulatory requirements concerning passenger and aircraft safety and security
- Crew Resource Management (CRM) and Human Factors (HF) principles
- Regulatory requirements and airline procedures and standards for managing and conducting pre- and post-flight cabin safety and security checks on aircraft
- Airline procedures and standards for managing and conducting pre- and post-flight cabin service checks on aircraft
- Action to be taken during pre- and post-flight cabin checks in response to senior aircrew instructions
- Airline administrative procedures
- Cabin service features and amenities for various types of aircraft
- Cabin safety resources for various types of aircraft
- Risks that exist when conducting pre- and post-flight cabin checks and related risk control procedures and precautions
- Problems that may occur when managing and conducting pre- and post-flight cabin checks and action that should be taken in each case

Required skills:

- Communicate effectively with others when managing and carrying out pre- and post-flight cabin checks
- Read and interpret instructions, regulations, procedures and other information relevant to managing and carrying out pre- and post-flight cabin checks
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to managing and carrying out pre- and post-flight cabin checks
- Report difficulties in the preparation of the cabin
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing and carrying out pre- and post-flight cabin checks
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

REQUIRED KNOWLEDGE AND SKILLS

- Promptly report and/or rectify any identified problems that may occur when managing and carrying out pre- and post-flight cabin checks in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when managing and carrying out pre- and post-flight cabin checks
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of pre- and post-flight cabin checks
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to manage and carry out pre- and post-flight cabin checks

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|---|
| <p>Safety, security and service checks may be conducted as a member of an aircrew team:</p> | <ul style="list-style-type: none"> • on any passenger-carrying aircraft type in commercial service • during short and/or long haul/international services • in any category of service for which the crew member has been trained • in any allowable operating and weather conditions • in accordance with relevant regulatory and operational requirements |
| <p>Performance may be demonstrated:</p> | <ul style="list-style-type: none"> • on an approved cabin service simulator • in a suitably simulated work environment • on a passenger-carrying aircraft |
| <p>Pre- and post-flight cabin safety and security checks may include checking:</p> | <ul style="list-style-type: none"> • safety resources and equipment in accordance with relevant procedures and regulations, including first aid equipment • security of aircraft cabin in accordance with relevant procedures and regulations |
| <p>Pre- and post-flight cabin service checks may include checking:</p> | <ul style="list-style-type: none"> • cabin facilities for supplies and cleanliness • cabin to ensure that pillows, blankets and headrest covers and other passenger resources meet passenger service standards • stock of newspapers and magazines to ensure they are adequate and tidy • stocks of special resources required for children and infants • resources needed for passengers with special needs |
| <p>Aircraft features and amenities may include:</p> | <ul style="list-style-type: none"> • toilets • wheelchairs and equipment for aiding disabled passengers • seat controls and adjustments • equipment for use with babies • audio-visual equipment • overhead lockers • telephone • movie screens • in-seat video and entertainment resources |
| <p>Persons consulted may include:</p> | <ul style="list-style-type: none"> • other members of the aircrew team • ground staff • security personnel |

RANGE STATEMENT

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:

- technical staff
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to pre- and post-flight checks of aircraft
- airline procedures and instructions and job specifications
- pre- and post-flight checking procedures and checklists
- operational manuals
- manufacturers instructions for aircraft cabin equipment and facilities
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- civil Aviation Act
- relevant standards and recommended practices (SARPS) of the International Civil Aviation Organization (ICAO) pertaining to the pre- and post flight safety, security and service checks of an aircraft cabin
- relevant Australian Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the pre- and post-flight safety, security and service checks of an aircraft cabin
- relevant OH&S legislation
- environmental protection legislation
- equal opportunity and anti-discrimination legislation
- relevant customs and quarantine regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

B - Equipment Checking and Maintenance

AVIC2001A Drive on the airside

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to drive on the airside while meeting all relevant licence and aerodrome access requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

This unit applies to aerodromes that operate across a variety of operational contexts within the Australian aviation industry.

This unit must be assessed in accordance with individual aerodrome licensing requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate II.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Drive on the airside

- 1.1 Vehicle airside requirements are complied with including vehicle condition, lighting and licences
- 1.2 Driving is conducted in accordance with airside driving rules and regulatory requirements
- 1.3 Airport markings, markers, signs and signals are correctly interpreted and followed
- 1.4 Appropriate air traffic control clearances are obtained and/or a listening watch is maintained

2 Drive safely on the airside

- 2.1 Risks and hazards associated with driving airside are identified and managed
- 2.2 Breaches of airside driving rules are logged and reported
- 2.3 Airside driving incidents (including runway incursions) are reported when required

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Airside access requirements
- Procedures for operating electronic communications equipment
- Airside driving requirements for specified aerodrome
- Requirements for completing relevant documentation
- Procedures to be followed in the event of an emergency
- Relevant OH&S and environmental procedures and regulations
- Procedures for managing and controlling hazardous situations when carrying out work activities
- Standard operating procedures relating to driving airside
- Safe operating systems of vehicle being driven airside
- Circumstances where airside driving is not permitted

Required skills:

- Communicate effectively with others when driving on the airside
- Read and interpret instructions, regulations, procedures and other information relevant to driving on the airside
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to driving on the airside
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when driving on the airside
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when driving on the airside in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when driving on the airside
- Apply precautions and required action to minimise, control or eliminate hazards that may exist while driving on the airside
- Monitor and anticipate operational problems and hazards and take appropriate action
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures

REQUIRED KNOWLEDGE AND SKILLS

- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when driving on the airside

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and

Competency Field C - Driving Vehicle

AVIC4002A Administer airside driving

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to administer the procedures which authorise driving on the airside. This includes testing drivers, issuing permits and investigating airside driving incidents. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

This unit applies to aerodromes that operate across a variety of operational contexts within the Australian aviation industry.

The work must be carried out in accordance with applicable operational standards as required by CASA when administering airside driving.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Test applicants to drive airside

1.1 Airside driving tests are administered and results recorded in accordance with established procedures

1.2 Documentation is issued to the appropriate authorities when required and recorded

2 Administer vehicle permits (where applicable)

2.1 Permit is issued in accordance with aerodrome procedures

2.2 Conditions of use of permit are explained to applicant

3 Investigate airside driving incidents

3.1 Reports on incidents and accidents are prepared and escalated appropriately

3.2 Procedures and any rules for driving airside are reviewed

3.3 Recommendations are made to aerodrome management

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Code of practice for working collaboratively with others
- Procedures for servicing and minor maintenance
- Typical defects that can occur and related action that should be taken
- Procedures for identifying equipment defects and assessing for appropriate action
- External features of equipment that must be checked during a pre-operational visual inspection
- Procedures for checking fluid levels and carrying out lubrication processes
- Principles, purpose and location of controls, monitoring devices, and systems
- Steps involved in planning the work activities
- Procedures for adjusting controls to optimise the operation of the equipment
- Procedures to be followed in the event of an emergency
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Procedures for managing and controlling hazardous situations when carrying out work activities
- Sources of information on differences in equipment and related standard operating and servicing procedures
- Controls, instruments and indicators and their purpose, location and use
- Visual inspection procedures
- Pre-operational checks
- Start-up procedures
- Operating procedures
- Braking and safety system procedures
- Operating controls
- Functions of all supervisory indicators and controls and related checks for correct operation
- Lubrication requirements
- Cleaning requirements
- Functions of ancillary systems and related checks for correct operation
- Procedures for starting and operating ancillary systems
- Fuel tank capacity and range (where applicable)

REQUIRED KNOWLEDGE AND SKILLS

- Communication equipment checks

Required skills:

- Communicate effectively with others when administering airside driving
- Read and interpret instructions, regulations, procedures and other information relevant to airside driving
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to administering airside driving
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when administering airside driving
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when administering airside driving in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when administering airside driving
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during airside driving
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to administer airside driving

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures (SOPs)

Competency Field C - Driving Vehicle

AVID2001B Accept dangerous goods for air transport

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to accept dangerous goods for air transport in accordance with IATA and other relevant regulatory requirements, including interpreting freight documentation, recognising dangerous goods, accepting appropriate dangerous goods, declining to accept prohibited and improperly prepared dangerous goods, preparing required dangerous goods documentation, and stowing dangerous goods. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant IATA, CASA and other relevant regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and relevant regulations during acceptance of dangerous goods for air transport across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Interpret freight documentation	<p>1.1 Received documentation for the transport of freight by air is examined and interpreted in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Types of freight to be transported are identified in accordance with workplace procedures and regulatory requirements</p>
2 Recognise dangerous goods	<p>2.1 Freight containing dangerous goods is recognised in accordance with workplace procedures and regulatory requirements</p> <p>2.2 All types of dangerous goods and items containing dangerous goods are correctly identified</p> <p>2.3 Workplace policies and regulatory requirements concerning the types of dangerous goods are identified, interpreted and applied</p>
3 Accept appropriate dangerous goods	<p>3.1 Where the identified dangerous goods are not permitted to be transported by air, the shipper is courteously advised that the freight cannot be accepted</p> <p>3.2 The shipper is given an explanation of reasons why prohibited dangerous goods freight cannot be accepted and is referred to the relevant regulatory requirements in accordance with workplace procedures</p> <p>3.3 Where the identified dangerous goods are permitted to be transported by air, the requirements for packaging, labelling and handling are confirmed in accordance with workplace procedures and regulatory requirements</p> <p>3.4 Dangerous goods accepted for air transport are checked to ensure that they are packaged and labelled in accordance with regulatory requirements</p> <p>3.5 Dangerous goods accepted for air freight are handled in accordance with the regulatory requirements including procedures for emergencies and spills</p>
4 Prepare dangerous goods documentation	<p>4.1 Relevant documentation, including an air waybill and check sheets are prepared and signed in accordance with workplace procedures and regulatory requirements</p> <p>4.2 Relevant documentation is attached to the freight, processed and filed in accordance with workplace procedures and regulatory requirements</p>
5 Stow dangerous goods	<p>5.1 All dangerous goods are stowed in a warehouse in accordance with workplace procedures and regulatory requirements</p> <p>5.2 Relevant personnel are advised of the disposition of the stowed dangerous goods in accordance with workplace procedures and regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory requirements pertaining to acceptance, packing, marking, labelling, documenting, storing and despatching of dangerous goods designated for air transport, including IATA and CASA requirements
- Relevant OH&S and environmental procedures and regulations
- Safety principles for the acceptance of dangerous goods for air transport
- Characteristics and ways of identifying various types of dangerous goods
- Workplace procedures for acceptance, packing, marking, labelling, documenting, storing and despatching of dangerous goods designated for air transport
- Documentation requirements for the transport of appropriate dangerous goods by air
- Risks that exist when carrying out acceptance of dangerous goods for air transport and related risk control procedures and precautions
- Problems that may occur when carrying out acceptance of dangerous goods for air transport and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when accepting dangerous goods for air transport
- Read and interpret documents, instructions, regulations, procedures and other information relevant to accepting dangerous goods for air transport
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to accepting dangerous goods for air transport
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when accepting dangerous goods for air transport
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when accepting dangerous goods for air transport in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when accepting dangerous goods for air transport
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the acceptance of dangerous goods for air transport
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments

REQUIRED KNOWLEDGE AND SKILLS

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to accept dangerous goods for air transport

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Acceptance of dangerous goods for air transport may be carried out:	<ul style="list-style-type: none"> • in any allowable operating and weather conditions • at freight depots, terminals and airports • in relation to any aircraft types in service in Australia on domestic and international flights • in accordance with regulatory and workplace requirements
Performance may be demonstrated:	<ul style="list-style-type: none"> • in appropriately simulated air freight acceptance situations, and/or • in an operational air freight acceptance situation at an airport
Persons consulted during acceptance of dangerous goods for air transport may include:	<ul style="list-style-type: none"> • customers • other members of the work team(s) • supervisors and managers • flight crew • dangerous goods experts and advisors • technical staff
Personal protection equipment may include but is not limited to:	<ul style="list-style-type: none"> • gloves • safety footwear • safety glasses • mask or respirator • high visibility clothing • hearing protection • sun protection
Hazards may include:	<ul style="list-style-type: none"> • hazardous or dangerous materials • contamination of, or from, materials being handled • spill, leakages, ruptures • dust/vapours
Hazard management is:	<ul style="list-style-type: none"> • consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may	<ul style="list-style-type: none"> • Civil Aviation Safety Regulations relevant to acceptance

RANGE STATEMENT

include:

- of dangerous goods for air transport
- relevant IATA dangerous goods regulations
- relevant Australian Standards and the Industry Safety Code
- manifests, bar codes, goods and product identification
- goods identification numbers and codes
- supplier and/or client instructions
- air waybill
- materials safety data sheets
- OH&S regulations
- workplace procedures and instructions and job specification
- workplace checklists for acceptance of dangerous goods for air transport
- emergency procedures including procedures for handling spills
- flight schedules
- local instructions
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- Australian and international regulations and codes of practice for the transport of dangerous goods by air, including Australian and International Dangerous Goods Codes
- relevant IATA dangerous goods regulations
- IATA standard for air cargo acceptance (TACT Rules)
- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to acceptance of dangerous goods for air transport
- Air Cargo Tariff (IATA)
- Australian Civil Aviation Safety Regulations relevant to acceptance of dangerous goods for air transport
- Civil Aviation Act
- local instructions
- relevant state/territory regulations pertaining to the transport of dangerous goods by air
- relevant OH&S legislation
- environmental protection legislation
- relevant security regulations
- relevant Australian Standards

Applicable regulations and legislation may include:

RANGE STATEMENT

- industrial relations and workplace compensation legislation

Unit Sector(s)

Not applicable.

Competency field

Competency Field	D - Load Handling
-------------------------	-------------------

AVID2003B Prepare freight for flight

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to prepare aviation freight for air transport in accordance with OH&S and other regulatory requirements, including identifying the freight, packaging and labelling the freight and assembling the freight ready for loading onto the aircraft. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant IATA, CASA and other relevant regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and relevant regulations when preparing aviation freight across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify freight	<p>1.1 Documentation for the transport of freight by air is examined and interpreted in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Types of freight to be transported are identified in accordance with workplace procedures and regulatory requirements</p>
2 Package freight	<p>2.1 Requirements for the packaging of freight are identified and interpreted in accordance with workplace procedures</p> <p>2.2 Materials and resources required for packaging are selected in accordance with workplace procedures</p> <p>2.3 Freight is securely packaged in accordance with identified requirements</p> <p>2.4 Live freight is packaged and handled in accordance with workplace procedures and regulatory requirements</p>
3 Label freight	<p>3.1 Requirements for the labelling of the freight are identified and interpreted in accordance with workplace procedures</p> <p>3.2 Freight is correctly labelled in accordance with workplace procedures and regulatory requirements</p>
4 Assemble freight ready for loading onto aircraft	<p>4.1 Freight is consolidated in accordance with loading plan</p> <p>4.2 Freight is loaded into containers where required in accordance with workplace procedures and regulatory requirements</p> <p>4.3 Loose freight is appropriately assembled for transfer to aircraft in accordance with workplace procedures and regulatory requirements</p> <p>4.4 Live freight is placed in the appropriate assembly area and correctly cared for in accordance with workplace procedures and regulatory requirements</p> <p>4.5 Freight containing allowable dangerous goods is appropriately segregated and stored in preparation for loading in accordance with workplace procedures and relevant regulatory requirements</p> <p>4.6 Freight is screened by security for explosives in accordance with workplace procedures and relevant regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory requirements pertaining to the preparation of freight for air transport, including IATA and CASA requirements
- Relevant OH&S and environmental procedures and regulations
- The loading principles for air freight
- Features and differences in various types of freight handling and packaging equipment used at Australian airports and freight terminals
- Workplace procedures for freight preparation operations for various categories of air freight
- Manufacturers instructions for relevant equipment and packing used during freight preparation operations
- Manual handling procedures
- Risks that exist when carrying out freight preparation operations and related risk control procedures and precautions
- Problems that may occur when carrying out freight preparation operations and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when preparing freight for flight
- Read and interpret instructions, regulations, procedures and other information relevant to preparing freight for flight
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to preparing freight for flight
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when preparing freight for flight
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when preparing freight for flight in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when preparing freight for flight
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the preparation of freight for flight
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule

REQUIRED KNOWLEDGE AND SKILLS

- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to prepare freight for flight

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|--|---|
| Preparation of freight for air transport may be carried out: | <ul style="list-style-type: none">• in any allowable operating and weather conditions• at freight depots, terminals and airports• in relation to any aircraft types in service in Australia on domestic and international flights• in accordance with regulatory and workplace requirements |

Competency Field D - Load Handling

AVID2004B Conduct aviation freight weighing operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to conduct aviation freight weighing operations in accordance with OH&S and other regulatory requirements, including interpreting freight documentation, weighing freight, measuring dimensions of freight, confirming measurements against freight documentation and completing and signing off the air waybill. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and relevant IATA, CASA and other regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and IATA, OH&S and other relevant regulations during aviation freight weighing operations at freight terminals/depots or commercial airports across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Interpret freight documentation	1.1 Freight documentation is accessed and interpreted in accordance with workplace procedures and regulatory requirements
2 Weigh freight	2.1 Weighing machine is prepared for use in accordance with manufacturers instructions and workplace procedures 2.2 Freight is weighed in accordance with manufacturers instructions and workplace procedures 2.3 Correct manual lifting procedures are used when transferring the freight to and from the weighing machine in accordance with OH&S regulations and workplace procedures 2.4 Measured weight of freight is accurately recorded in accordance with workplace procedures
3 Measure dimensions of freight	3.1 Physical dimensions of the freight are measured in accordance with workplace procedures 3.2 Measured dimensions of the freight are recorded in accordance with workplace procedures 3.3 Freight with unusual shape is noted and an appropriate record is kept in accordance with workplace procedures
4 Confirm measurement against freight documentation	4.1 Weight and physical dimensions, as measured, are compared with those contained within the received documentation 4.2 Where the measured weight and physical dimensions correspond with those in the documentation, appropriate confirmation is recorded on the air waybill in accordance with workplace procedures and regulatory requirements 4.3 Where there is a discrepancy between the measured weight and physical dimensions and those in the documentation, appropriate action is taken to contact the client and report and record the discrepancy in accordance with workplace procedures and regulatory requirements
5 Sign off air waybill	5.1 The air waybill is completed in accordance with workplace procedures and regulatory requirements 5.2 The air waybill is signed off and processed in accordance with workplace procedures and regulatory requirements noting the outcomes of all measurements 5.3 The processed freight is transferred to the despatch area

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- The principles of aviation freight transport and the importance of load planning and aircraft trim
- Features and differences in various types of weighing equipment used at Australian airports and aviation freight terminals
- Workplace procedures for aviation freight weighing operations
- Manufacturers instructions for relevant equipment used during aviation freight weighing operations
- Manual lifting precautions and procedures
- Risks that exist when conducting aviation freight weighing operations and related risk control procedures and precautions
- Problems that may occur when conducting aviation freight weighing operations and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when conducting aviation freight weighing operations
- Read and interpret instructions, regulations, procedures and other information relevant to aviation freight weighing operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to aviation freight weighing operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting aviation freight weighing operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when conducting aviation freight weighing operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when conducting aviation freight weighing operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during aviation freight weighing operations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule

REQUIRED KNOWLEDGE AND SKILLS

- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct aviation freight weighing operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Aviation freight weighing operations may be carried out:

- in any allowable operating and weather conditions
- at an aviation freight depot/terminal, or freight check-in point at either a major airport or regional airport
- within a fully manual process, or in conjunction with automated freight handling/management equipment
- in relation to either domestic or international aviation freight transport
- in accordance with relevant regulatory and operational requirements

Performance may be demonstrated:

- in appropriately simulated freight weighing situations, and/or
- in an operational aviation freight weighing situation at an airport/freight terminal

Types of freight may include but are not limited to:

- general freight
- loose freight
- allowable dangerous goods
- perishable goods
- fragile goods
- live freight
- unaccompanied baggage
- valuables
- mail/express
- diplomatic
- human remains

Persons consulted during acceptance of freight for air transport may include:

- customers
- other members of the work team(s)
- supervisors and managers
- flight crew
- dangerous goods experts and advisors
- perishable goods experts and advisors
- experts and advisors on the transport of animals and livestock
- experts on other special categories of air freight
- technical staff

Personal protection equipment may include but is not limited to:

- gloves
- safety footwear
- safety glasses

RANGE STATEMENT

- mask or respirator (where applicable)
 - high visibility clothing
 - hearing protection
 - sun protection
- Hazards may include:
- hazardous or dangerous materials
 - contamination of, or from, materials being handled
 - spill, leakages, ruptures
 - dust/vapours
- Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:
- company procedures
 - enterprise procedures
 - organisational procedures
 - established procedures
 - standard operating procedures
- Information/documents may include:
- sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to aviation freight weighing operations
 - OH&S regulations
 - workplace procedures and instructions and job specification
 - freight manifest, air waybill and other relevant freight documentation
 - aircraft loading/trim sheet
 - aviation freight weighing checklists
 - emergency procedures
 - flight schedules
 - local instructions
 - manufacturers specifications and instructions relevant weighing equipment
 - induction and training materials
 - conditions of service, legislation and industrial agreements including workplace agreements and awards
- Applicable regulations and legislation may include:
- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to aviation freight weighing operations
 - relevant Australian Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to aviation freight weighing operations

RANGE STATEMENT

- Civil Aviation Act
- local instructions
- relevant OH&S legislation
- environmental protection legislation
- relevant security regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Unit Sector(s)

AVID2005B Accept freight for air transport

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to accept freight for air transport in accordance with IATA and other relevant regulatory requirements, including interpreting freight documentation; recognising dangerous goods, perishable freight, live freight, and freight in other special categories; accepting appropriate freight; declining to accept prohibited and improperly prepared freight; preparing required freight documentation; and stowing freight appropriately. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant IATA, CASA and other relevant regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and IATA, OH&S and other relevant regulations during acceptance of freight for air transport across a variety of operational contexts within the Australian and international aviation industry.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Interpret freight documentation	<p>1.1 Received documentation for the transport of freight by air is examined and interpreted in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Types of freight to be transported are correctly identified in accordance with workplace procedures and regulatory requirements</p>
2 Recognise dangerous goods	<p>2.1 Freight containing dangerous goods is recognised in accordance with workplace procedures and regulatory requirements</p> <p>2.2 All types of dangerous goods and items containing dangerous goods are correctly identified</p> <p>2.3 Workplace procedures and regulatory requirements concerning the types of dangerous goods and their acceptance, handling, packing, storage, labelling etc. are interpreted and applied</p>
3 Recognise perishable freight	<p>3.1 Freight containing perishable goods is recognised in accordance with workplace procedures and regulatory requirements</p> <p>3.2 Workplace procedures and regulatory requirements concerning the various types of perishable goods and their acceptance, handling, packing, storage, labelling, etc. are interpreted and applied</p>
4 Accept appropriate freight	<p>4.1 Where the identified freight is not permitted to be transported by air, the shipper is courteously advised that the freight cannot be accepted</p> <p>4.2 The consignee is given an explanation of reasons why prohibited freight cannot be accepted and is referred to the relevant regulatory requirements in accordance with workplace procedures</p> <p>4.3 Where the identified freight is permitted to be transported by air, the requirements for packaging, labelling and handling are confirmed in accordance with workplace procedures and regulatory requirements for the type of goods concerned</p> <p>4.4 Freight accepted for air transport is checked to ensure that it is packaged and labelled in accordance with regulatory requirements</p> <p>4.5 Freight accepted for air freight is handled in accordance with the relevant regulatory requirements for the type of goods concerned</p>
5 Prepare freight documentation	<p>5.1 Relevant documentation, including an air waybill and check sheets are prepared and signed in accordance with workplace procedures and regulatory requirements</p> <p>5.2 Relevant documentation is attached to the freight, processed and filed in accordance with workplace procedures and regulatory</p>

ELEMENT

PERFORMANCE CRITERIA

requirements

6 Stow freight

- 6.1 All freight is stowed in a warehouse and monitored in accordance with the workplace procedures and regulatory requirements for the types of goods concerned
- 6.2 Relevant personnel are advised of the disposition of the stowed freight in accordance with workplace procedures and regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory requirements pertaining to acceptance, packing, marking, labelling, documenting, storing and despatching of freight designated for air transport, including IATA and CASA requirements
- Relevant OH&S and environmental procedures and regulations
- Safety principles for the acceptance of freight for air transport
- Characteristics and ways of identifying various types of freight
- Workplace procedures for acceptance, packing, marking, labelling, documenting, storing and despatching of various types of freight designated for air transport
- Dangerous goods including potential hidden or undeclared dangerous goods and the regulatory requirements procedures, checklists and guidelines for dangerous goods identification, acceptance (or otherwise), handling, packing, storage, labelling, etc.
- Cold chain checklists and guidelines for the air transport of perishable goods
- Documentation requirements for the transport of various types of freight by air
- Risks that exist when accepting freight for air transport and related risk control procedures and precautions
- Problems that may occur when carrying out acceptance of freight for air transport and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when accepting freight for air transport
- Read and interpret instructions, regulations, procedures and other information relevant to accepting freight for air transport
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to accepting freight for air transport
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when accepting freight for air transport
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when accepting freight for air transport in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when accepting freight for air transport
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the acceptance of freight for air transport

REQUIRED KNOWLEDGE AND SKILLS

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when accepting freight for air transport

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Acceptance of freight for air transport may be carried out:

- in any allowable operating and weather conditions
- at freight depots, terminals and airports
- in relation to any aircraft types in service in Australia on domestic and international flights
- in accordance with regulatory and workplace requirements

Performance may be demonstrated:

- in appropriately simulated air freight acceptance situations, and/or
- in an operational air freight acceptance situation at an airport

Types of freight may include but are not limited to:

- general freight
- loose freight
- allowable dangerous goods
- perishable goods
- fragile goods
- live freight
- unaccompanied baggage
- valuables
- mail/express
- diplomatic
- human remains

Persons consulted during acceptance of freight for air transport may include:

- customers
- other members of the work team(s)
- supervisors and managers
- flight crew
- dangerous goods experts and advisors
- perishable goods experts and advisors
- experts and advisors on the transport of animals and livestock
- experts on other special categories of air freight
- technical staff

Personal protection equipment may include but is not limited to:

- gloves
- safety footwear
- safety glasses
- mask or respirator (where applicable)
- high visibility clothing
- hearing protection

RANGE STATEMENT

Hazards may include:

- sun protection
- hazardous or dangerous materials
- contamination of, or from, materials being handled
- spill, leakages, ruptures
- dust/vapours

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- Civil Aviation Safety Regulations relevant to acceptance of freight for air transport
- relevant IATA regulations
- relevant Australian Standards and the industry codes of practice relevant to various categories of air freight
- manifests, bar codes, goods and product identification
- goods identification numbers and codes
- supplier and/or client instructions
- OH&S regulations
- workplace procedures and instructions and job specification
- workplace checklists for acceptance of various types of freight for air transport
- cold chain checklists and guidelines for the air transport of perishable goods
- emergency procedures
- flight schedules
- local instructions
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- Australian and international regulations and codes of practice for the transport of various types of freight by air
- relevant IATA regulations
- IATA standard for air cargo acceptance (TACT Rules)
- relevant requirements, standards and recommended practices of the International Civil Aviation Organization

RANGE STATEMENT

(ICAO) pertaining to acceptance of dangerous goods for air transport

- Air Cargo Tariff (IATA)
- Australian Civil Aviation Safety Regulations relevant to the identification and acceptance of dangerous goods for air transport
- Civil Aviation Act
- standards and codes of practice related to the acceptance of perishable goods for air transport
- standards and codes of practice related to the acceptance of live freight for air transport
- local instructions
- relevant OH&S legislation
- environmental protection legislation
- relevant security regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

D - Load Handling

AVID2006A Load and secure aviation freight and baggage

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to load and secure aviation freight/baggage in accordance with workplace procedures, aircraft manufacturers instructions and regulatory requirements. It includes using in-hold aircraft loading systems and procedures to load, stow and secure aviation freight/baggage on an aircraft and identifying, responding and reporting any malfunctions with the in-hold aircraft loading system and/or problems in the loading, stowing and securing of aviation freight/baggage. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant International Air Transport Association (IATA), Civil Aviation Safety Authority (CASA) and other relevant regulatory requirements.

Use for Australian Defence Force (ADF) Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and IATA, OH&S and other regulations relevant to the loading and securing of aviation freight and baggage onto aircraft across a variety of operational contexts within the Australian aviation industry.

This unit of competency is nominally packaged at Certificate II.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Use in-hold aircraft loading system to load and stow aviation freight/baggage onto an aircraft	<p>1.1 Pre-operational checks of in-hold aircraft loading systems are conducted in accordance with workplace procedures</p> <p>1.2 In-hold aircraft loading system is prepared for operation in accordance with workplace procedures and manufacturers' instructions</p> <p>1.3 In-hold aircraft loading system is used to facilitate loading and stowing of in-hold freight/baggage in accordance with workplace procedures, aircraft load instruction report and/or aircraft load/trim sheet and regulatory requirements</p>
2 Stow and secure aviation freight/baggage onto an aircraft	<p>2.1 Correct manual handling techniques and procedures are used when stowing freight/baggage in aircraft hold in accordance with OH&S requirements</p> <p>2.2 Freight/baggage is secured and restrained in aircraft hold in accordance with workplace procedures, aircraft manufacturers' instructions and regulatory requirements</p> <p>2.3 Cargo hold door/s is/are secured in accordance with workplace procedures, aircraft manufacturers' instructions and regulatory requirements</p> <p>2.4 Security seals are placed on aircraft cargo hold door/s when required in accordance with workplace procedures and regulatory requirements</p>
3 Respond to problems in loading aircraft freight/baggage onto an aircraft	<p>3.1 A problem in loading, stowing and securing freight/baggage in the aircraft hold is correctly and promptly identified and an appropriate solution is determined in conjunction with other team members and/or load supervisor/team leader in accordance with workplace procedures and regulatory requirements</p> <p>3.2 Any malfunction of in-hold aircraft loading system is correctly and promptly identified and appropriate action is taken to rectify and/or report the problem in accordance with workplace procedures and regulatory requirements</p> <p>3.3 Where an identified problem cannot be readily resolved by the load team, it is reported and referred to appropriate personnel</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Principles for the safe and effective handling, loading and securing of freight/baggage into an aircraft cargo hold
- Principles and procedures relevant to trimming and balancing the load on an aircraft
- Purpose, use and interpretation of aircraft load instruction reports and aircraft load/trim sheets
- Features and differences of in-hold loading systems used in various aircraft types
- Workplace procedures for loading and securing freight/baggage onto an aircraft
- Layout of airport and location of aircraft gates
- Relevant local instructions pertaining to the operation of in-hold loading systems and the loading of aircraft cargo holds
- Manufacturers instructions for relevant in-hold loading systems
- Risks that exist when loading and securing aviation freight/baggage, and related risk control procedures and precautions
- Problems that may occur when loading and securing aviation freight/baggage, and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when loading and securing aviation freight/baggage
- Read and interpret instructions, regulations, procedures and other information relevant to loading and securing aviation freight/baggage
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to loading and securing aviation freight/baggage
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when loading and securing aviation freight/baggage
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when loading and securing aviation freight/baggage in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when loading and securing aviation freight/baggage
- Apply precautions and required action to minimise, control or eliminate hazards that may exist

REQUIRED KNOWLEDGE AND SKILLS

during the loading and securing of aviation freight

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to load and secure aviation freight/baggage

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - safe manual handling techniques
 - correct techniques for loading an aircraft in accordance with aircraft load instruction reports and/or aircraft load/trim sheets
 - relevant regulations, legislation and workplace procedures applicable to the loading and securing of aviation freight/baggage
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Loading and securing of freight/baggage may be carried out:	<ul style="list-style-type: none"> • in any allowable operating and weather conditions • at international airports, domestic airports, regional airports and remote airfields • in relation to any aircraft types in service in Australia • in accordance with relevant regulatory and operational requirements
Performance may be demonstrated in:	<ul style="list-style-type: none"> • appropriately simulated in-hold loading situations, and/or • when loading and securing freight/baggage onto an aircraft
Aviation freight/baggage may include:	<ul style="list-style-type: none"> • unaccompanied baggage • Unit Load Device (ULD) loaded with freight/baggage • containers/pallets loaded with freight/baggage • air cargo/freight • loose freight • live freight • allowable dangerous goods • fragile and perishable goods • valuables • aircraft components • mail • diplomatic items • human remains
Hazards that may exist when loading and securing aviation freight/baggage may include but are not restricted to:	<ul style="list-style-type: none"> • incorrect lifting and manoeuvring techniques (manual handling) for the types of freight/baggage concerned, usually in aircraft cargo hold confined spaces • heavy freight/baggage • overweight freight/baggage • incorrectly labelled freight/baggage • falling freight/baggage • poorly stacked/stowed/secured freight/baggage • freight/baggage of unusual shape or physical size • freight/baggage containing illegal substances • freight/baggage containing dangerous goods (both declared and/or undeclared) • freight/baggage found to be a security risk • moving equipment within hold (where applicable) including belt loaders

RANGE STATEMENT

	<ul style="list-style-type: none"> • uneven surfaces or gaps in the floor of the aircraft hold • protruding surfaces in the aircraft's bulkhead and hold structures • noise • dust • fire • climatic conditions/extreme temperature
Personal protective equipment may include but is not restricted to:	<ul style="list-style-type: none"> • hearing protection • safety gloves • safety footwear • safety glasses • protective clothing • high visibility clothing • sun protection
Persons consulted during the loading and securing of aviation freight/baggage may include:	<ul style="list-style-type: none"> • other members of the freight/baggage loading and ramp teams • aircrew • load controllers • load supervisors, team leaders and managers • check-in staff • ground support staff • technical staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • standard operating procedures • established procedures • workplace instructions • in Defence context, relevant Defence Orders and Instructions
Information/documents may include:	<ul style="list-style-type: none"> • relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the loading and securing of aviation freight/baggage • in Defence context, relevant Defence Orders and Instructions • workplace procedures and instructions and job specification • aircraft load instruction report • aircraft load/trim sheets • load manifests • air waybills

RANGE STATEMENT

Applicable regulations and legislation may include:

- operational checklists for in-hold loading systems
- procedures for handling special freight/baggage such as live freight, dangerous goods, oversized baggage, fragile freight/baggage and perishable freight/baggage
- pre/post operational equipment checklists
- equipment logs/records
- OH&S regulations
- emergency procedures
- flight schedules and gate allocations
- manufacturers specifications and instructions for the in-hold loading system for the aircraft type
- induction and training materials
- conditions of service, legislation and industrial/workplace agreements and awards
- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to the loading and securing of aviation freight/baggage
- relevant IATA regulations
- relevant Australian Civil Aviation Safety Regulations pertaining to the loading and securing of aviation freight/baggage
- Civil Aviation Act
- relevant Department of Infrastructure, Transport, Regional Development and Local Government (DOTARS) policy
- relevant OH&S legislation
- environmental protection legislation
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to unload aviation freight/baggage in accordance with workplace procedures, aircraft manufacturers instructions and regulatory requirements. It includes preparing for aircraft arrival; using in-hold aircraft loading systems to unload freight/baggage from an aircraft; and identifying, responding and reporting any malfunctions with the in-hold aircraft loading system and/or problems in the unloading of the freight/baggage. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant International Air Transport Association (IATA), Civil Aviation Safety Authority (CASA) and other relevant regulatory requirements.

Use for Australian Defence Force (ADF) Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and IATA, OH&S and other regulations relevant to the unloading of aviation freight and baggage from an aircraft across a variety of operational contexts within the Australian aviation industry.

This unit of competency is nominally packaged at Certificate II.

personnel

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Principles for the safe and effective handling and unloading of freight/baggage from an aircraft cargo hold
- Purpose, use and interpretation of aircraft off-load instruction report
- Features and differences of aircraft in-hold loading systems used in various aircraft types
- Workplace procedures for unloading freight/baggage from an aircraft
- Layout of airport and location of aircraft gates
- Relevant local instructions pertaining to the operation of aircraft in-hold loading systems and the unloading of aircraft cargo holds
- Manufacturers instructions for relevant aircraft in-hold loading systems
- Risks that exist when unloading aviation freight/baggage, and related risk control procedures and precautions
- Problems that may occur when unloading aviation freight/baggage, and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when unloading aviation freight/baggage
- Read and interpret instructions, regulations, procedures and other information relevant to unloading aviation freight/baggage
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to unloading aviation freight/baggage
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when unloading aviation freight/baggage
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when unloading aviation freight/baggage in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when unloading aviation freight/baggage
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the unloading of aviation freight/baggage
- Monitor and anticipate operational problems and hazards and take appropriate action

REQUIRED KNOWLEDGE AND SKILLS

- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to unload aviation freight/baggage

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - safe manual handling techniques
 - correct techniques for unloading an aircraft in accordance with aircraft off-load instruction report
 - relevant regulations, legislation and workplace procedures applicable to the unloading of aviation freight/baggage
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Unloading of aviation freight/baggage may be carried out:	<ul style="list-style-type: none"> • in any allowable operating and weather conditions • at international airports, domestic airports, regional airports and remote airfields • in relation to any aircraft types in service in Australia • in accordance with relevant regulatory and operational requirements

AVIE3003B Complete a Notice to Airmen (NOTAM)

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to complete a Notice to Airmen (NOTAM), including preparing and processing the required NOTAM. Required performance includes compliance with all relevant regulatory requirements, conventions and protocols. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant air traffic control regulatory requirements of the Civil Aviation Safety Authority.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

Work involves the application of relevant communication principles, regulations, conventions, protocols and procedures when completing a NOTAM as part of commercial activities across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare a Notice to Airmen (NOTAM)

- 1.1 Situations requiring the issue of a NOTAM are identified
- 1.2 Specific information required for inclusion in the NOTAM is calculated or otherwise identified in accordance with workplace procedures
- 1.3 NOTAM containing appropriate information, formatting, terminology and abbreviations for the notifiable situation is raised and issued to relevant authorities or organisations in accordance with workplace procedures and regulatory requirements

2 Process NOTAM

- 2.1 The prepared NOTAM is filed in accordance with workplace procedures and regulatory requirements
- 2.2 NOTAM is distributed to relevant personnel in accordance with workplace procedures and regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the completion of NOTAMs
- Relevant OH&S and environmental procedures and regulations
- Aerodrome operating procedures
- Reporting procedures
- Aircraft schedules and their use in aerodrome inspection and reporting
- Purpose and application of Method of Working Plans (MOWPs)
- Safety hazards and risks that exist when completing a NOTAM and related risk control procedures and precautions
- Problems that may occur when completing a NOTAM and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when completing a Notice to Airmen (NOTAM)
- Read and interpret instructions, regulations, procedures and other information relevant to a Notice to Airmen (NOTAM)
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to a Notice to Airmen (NOTAM)
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when completing a Notice to Airmen (NOTAM)
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when completing a Notice to Airmen (NOTAM) in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when completing a Notice to Airmen (NOTAM)
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the completion of a Notice to Airmen (NOTAM)
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or

REQUIRED KNOWLEDGE AND SKILLS

damage to goods or equipment

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct complete a Notice to Airmen (NOTAM)

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

AVIE3004B Maintain radio communications as part of airport operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to maintain radio communications using English language as part of airport operations, including the operation, management and maintenance of radio equipment under normal and emergency conditions. It also covers the skills and knowledge needed when taking appropriate action in the event of radio failure, including maintenance of communications with aircraft using light signals. Required performance includes compliance with all relevant regulatory requirements (i.e. CAR Part 5 Div 3 and CAR 82-85 inclusive). Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

Work involves the application of aircraft radio communication principles, regulations, standard phraseology, safety codes, protocols and procedures to maintain radio communications with aircraft as part of commercial airport activities across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Carry out radio communications	<p>1.1 Transmission and receipt of radio telephone messages is carried out using English language in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Emergency and urgency transmissions and procedures are made in accordance with the En Route Supplement Australia (ERSA) (current edition) and the Aeronautical Information Publication (AIP)</p> <p>1.3 Appropriate responses are made to all received messages in accordance with workplace procedures and regulatory requirements</p> <p>1.4 A listening watch is maintained in accordance with workplace procedures</p>
2 Maintain radio equipment	<p>2.1 System checks are performed prior to radio use to confirm that it is operational in accordance with manufacturers specifications and operational procedures</p> <p>2.2 The aircraft radio system is maintained in accordance with manufacturers specifications and operational requirements.</p> <p>2.3 Faults in the radio performance are identified and reported in accordance with company procedures</p> <p>2.4 For minor faults not requiring special tools or instruments, appropriate fault-finding procedures and corrective actions are employed in accordance with workplace procedures</p>
3 Take appropriate action in event of radio failure	<p>3.1 In the event of a loss of radio transmission or reception, radio equipment failure procedures are followed in accordance with workplace procedures and the Flight Manual/Pilot's Operating Handbook (POH)</p> <p>3.2 In the advent of radio failure, light signals from Air Traffic Control where applicable are correctly interpreted and appropriate responses made in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Regulations, Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to aircraft radio communications including CAR Part 5 Div 3 and CAR 82-85 inclusive
- Relevant OH&S and environmental procedures and regulations
- Principles of effective radio communications
- Functions of radiotelephone equipment as used to communicate with aircraft
- Operating and maintenance procedures for aircraft radiotelephone equipment
- Standard radiotelephony phraseology as detailed in the Aeronautical Information Publication (AIP)
- Critical messages including a Distress Message (Mayday call) and an Urgency Message (Pan call)
- International distress frequencies for radiotelephone (R/T)
- Problems that may occur during radio communications and action that can be taken to overcome them
- Faults that may occur in radio equipment and appropriate fault reporting, fault detection and remedial action that can be taken
- Fault-finding procedures and corrective actions for radio not involving special tools or instruments

Required skills:

- Communicate effectively with others when maintaining radio communications as part of airport communication procedures and using standard aviation terminology
- Read and interpret instructions, regulations, procedures and other information relevant to radio communications as part of airport operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to maintaining radio communications as part of airport operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when maintaining radio communications as part of airport operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when maintaining radio communications as part of airport operations in accordance with regulatory requirements and

REQUIRED KNOWLEDGE AND SKILLS

workplace procedures

- Implement contingency plans for unexpected events that may arise when maintaining radio communications as part of airport operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during radio communications as part of airport operations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct radio communications as part of airport operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|--|
| Operations are conducted: | <ul style="list-style-type: none"> • daily • in variable weather conditions |
| Aerodromes may include: | <ul style="list-style-type: none"> • licensed aerodromes • unlicensed aerodromes • Aircraft Landing Areas (ALAs) |
| Radio equipment may include: | <ul style="list-style-type: none"> • HF radio • VHF radio |
| An aircraft radio system may include: | <ul style="list-style-type: none"> • battery switch • radio master switch • indicating meters • fuses and circuit breakers • microphone and voice activated • transmitter • receiver • headphones and speaker • antenna systems appropriate to the radio |
| Radio operations may include: | <ul style="list-style-type: none"> • maintaining the aircraft radio system • transmitting and receiving on VHF and HF • using squelch controls • establishing a listening watch • conducting a communication check • use of Automatic Terminal Information Services (ATIS) • use of an Emergency Locator Transmitter (ELT) |
| Relevant frequencies (as per ERSA) are: | <ul style="list-style-type: none"> • Mandatory Broadcast Zones (MBZ) • Common Traffic Advisory Frequency (CTAF) • other air traffic agencies (e.g. air traffic control) • Automatic Terminal Information Services (ATIS) |
| Phraseology and phonetic considerations include but are not limited to: | <ul style="list-style-type: none"> • standard procedural words and phrases • pronunciation of phonetic alphabet and numbers • correct use of aircraft call signs • transmission of numbers • transmission of time • radio test procedure/reliability scale • listening to the radio (avoiding over transmissions) • establishing and maintaining communications • clipped transmission and consequences |

RANGE STATEMENT

- Emergency radio procedures are:
- a Distress Message (Mayday call)
 - an Urgency Message (Pan call)
- Appropriate responses to emergency transmission include:
- establishing priority of calls
 - imposing radio silence
- At aerodromes with air traffic control:
- alternative communication methods, in the advent of radio failure, will include the use of light signals
- Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
 - enterprise procedures
 - organisational procedures
 - established procedures
 - standard operating procedures
- Information/documents may include:
- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to radio communications (including CAR Part 5 Div 3 and CAR 82-85 inclusive)
 - Manual of Standards - Aerodromes (previously Rules and Practices for Aerodromes [RPA])
 - workplace procedures and instructions and job specification
 - Flight Manual/Pilot's Operating Handbook (POH)
 - Manual of Standards - Pilot Licensing (MOS-PL)
 - Aeronautical Information Publication (AIP)
 - En Route Supplement Australia (ERSA)
 - Civil Aviation Advisory Publication (CAAP) No. AIRWAYS - 3(0)
 - manufacturers specifications for the operation and maintenance of radio equipment
 - relevant operations manuals
 - approved checklists for radio operation and minor maintenance
 - induction and training materials
 - conditions of service, legislation and industrial agreements including workplace agreements and awards
- Applicable regulations and legislation may include:
- relevant Civil Aviation Regulations, Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to radio communications (including CAR Part 5 Div 3 and CAR 82-85 inclusive)
 - relevant state/territory OH&S legislation
 - relevant state/territory environmental protection legislation
 - relevant Australian Standards

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to maintain radio communications using English language and to operate and manage radiotelephone, transponder and intercom equipment under normal and emergency flight conditions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and aircraft operations; and aircraft control principles, regulations, safety codes, protocols and procedures relevant to maintaining aircraft radio communications.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Conduct radio communications	<ul style="list-style-type: none">1.1 Transmission and receipt of radio telephone messages is carried out using English language in accordance with workplace procedures and regulatory requirements1.2 Emergency and urgency transmissions and procedures are made in accordance with the En Route Supplement Australia (ERSA) (current edition) and the Aeronautical Information Publication (AIP)1.3 All messages are reacted to appropriately in accordance with workplace procedures and regulatory requirements1.4 A listening watch is maintained throughout a flight in accordance with workplace procedures
2 Manage radio equipment malfunctions	<ul style="list-style-type: none">2.1 Radiotelephone equipment failure procedures are performed in the event of a loss of radio transmission or reception in accordance with Flight Manual/Pilot's Operating Handbook (POH)2.2 Fault finding procedures and corrective actions not involving special tools or instruments are employed
3 Operate transponder	<ul style="list-style-type: none">3.1 Aircraft transponder is operated and monitored in accordance with the AIP during normal operations3.2 Aircraft transponder is operated and monitored in accordance with the AIP during non-normal and emergency operations

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Sections of Civil Aviation Orders and regulations pertaining to aircraft radio communications
- In ADF context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Principles of effective radio communications
- Functions of radiotelephone equipment as used on aircraft
- Operating procedures for aircraft radiotelephone equipment
- Standard radiotelephony phraseology as per Aeronautical Information Publication (AIP)
- International distress frequencies for R/T
- Recall distress, radio failure and unlawful interference transponder code
- Problems that may occur during radio communications and action that can be taken to overcome them
- Faults that may occur in radiotelephone equipment and appropriate fault detection and remedial action that can be taken
- Fault finding procedures and corrective actions for radiotelephone equipment not involving special tools or instruments

Required skills:

- Use oral and written English language communication skills sufficient to support situation awareness within flight radio operations
- Operate aircraft radiotelephone equipment in accordance with manufacturers instructions, workplace procedures and regulatory requirements
- Communicate effectively under operating conditions using standard phraseology and communication protocols
- Use English language to a standard which enables requests and instructions to be understood by Air Traffic Service and other stations and ensures compliance with received instructions
- Conduct basic faultfinding of defective radiotelephone equipment
- Comply with regulatory requirements pertaining to aircraft radiotelephone communications
- Manipulate any switch or device requiring the release of flight controls without changes to height, heading, speed, attitude, exceeding RPM or power limits
- Interpret and react appropriately to light signals from air traffic control
- Interpret instructions, regulations, procedures and other information relevant to maintaining aircraft radio communications
- Interpret and follow operational instructions and prioritise work

REQUIRED KNOWLEDGE AND SKILLS

- Complete documentation related to maintaining aircraft radio communications
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when maintaining aircraft radio communications
- Adapt to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when maintaining aircraft radio communications in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when maintaining aircraft radio communications
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during aircraft radio communications
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to maintain aircraft radio communication

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Tasks may be undertaken in:	<ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules • VMC with simulated IMC • IMC
Performance may be demonstrated in:	<ul style="list-style-type: none"> • an aircraft with appropriate radiotelephone equipment • single engine aircraft • multi engine aircraft • variable air traffic conditions • variable flight situations • abnormal situations • classes of airspace as designated by the Civil Aviation Safety Authority
Aircraft may include:	<ul style="list-style-type: none"> • fixed wing • helicopters • commercial balloons • other commercial or military aircraft which incorporate radio communications equipment
Crew may include:	<ul style="list-style-type: none"> • single pilot • multi crew
Classes of airspace may be:	<ul style="list-style-type: none"> • as designated by the regulator • restricted and danger areas • military control zones • Air Defence Identification Zones
Radiotelephony equipment may include:	<ul style="list-style-type: none"> • HF radio • VHF radio • UHF radio • transponder • intercom system
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> • relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders, including Day Visual Flight Rules (Day VFR)

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to communicate effectively in an air traffic services environment. This includes clear and concise communication to pilots using all forms of communication media, the communication of information to coordinate with other air traffic services units and communication within a team to achieve effective teamwork. It also includes providing flight information with which the aircraft commander makes decisions concerning the operational control of flight. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

This unit is critical to achieving safe, efficient and regular air traffic services. In the application of this unit, all media is considered including electronic means such as Controller-Pilot Datalink Communication (CPDLC), voice channels and light signals as used in control towers. It also includes the use of visual aids to communicate messages.

Operational control of the aircraft will include the initiation, continuation, termination, diversion or cancellation of the flight. Flight information provided by air traffic services will include critical operational information that enables the flight crew to make informed decisions regarding their flight.

Persons exercising competence in this unit will need to fulfil the licensing and regulatory requirements of the Civil Aviation Safety Authority pertaining to air traffic controllers and/or the relevant military authority and any corporate requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under various levels of supervision dependent on workplace context, and in a team environment.

Communication is conducted across a variety of operational air traffic control contexts within the Australian aviation industry.

Work includes providing a flight information service (FIS) including directed traffic information, meteorological information, NOTAM and any other operational information associated with safe flight operations. FIS also includes issuing hazard and safety alerts to aircraft, and separating aircraft which, at times, will include passing on accurate traffic information and keeping this updated.

This unit of competency is packaged at Diploma level.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Communicate accurate operational messages	1.1 Communication delivery is clear, timely and delivered to a satisfactory standard 1.2 Standard phrases are used 1.3 Non-standard phrases are unambiguous and concise 1.4 Active listening watch is maintained for all communication channels 1.5 Readbacks are provided and obtained 1.6 Delivery of voice messages are adjusted to suit receiver 1.7 Messages are formatted and interpreted correctly 1.8 Messaging protocols are followed 1.9 Messages are correctly acknowledged 1.10 Most effective method of communication is used 1.11 Language is fluently spoken with no impediments 1.12 Communication with airspace users is maintained by effective management of communication facilities 1.13 Operational messages are coordinated and recorded when required
2 Communicate in a team	2.1 Handover-takeover is performed to achieve continuity of teamwork and service 2.2 Team members communications are acknowledged as received and understood 2.3 Observations are verbalised to team members 2.4 Inquiries are made with team members 2.5 Frequency of communications with team members is adjusted to the circumstances
3 Provide operational information and coordination	3.1 Position and navigation information is provided when requested or required taking into account the method of control and surveillance 3.2 Meteorological information is provided when required or requested 3.3 Changes in the operational status of aids to navigation, air routes and airspaces affecting flight operations are provided when required or requested 3.4 Changes in the operational status of communication facilities affecting flight operations are provided when required or requested 3.5 Changes to air traffic services procedures affecting flight operations are provided when required or requested 3.6 Hazard alerts concerning flight are issued when required in

ELEMENT

PERFORMANCE CRITERIA

- accordance with standard operating procedure
- 3.7 Hazard alerts concerning flights are cancelled when able
- 3.8 Safety alerts concerning flight are issued when required in accordance with standard operating procedure
- 3.9 Safety alerts concerning flights are cancelled when able
- 3.10 Operational flight information is coordinated if required
- 3.11 Operational information issued is appropriately recorded
- 3.12 Flight following is provided when requested and able
- 4 Issue and coordinate traffic information**
- 4.1 Information concerning conflicting traffic is issued in accordance with standard operating procedure
- 4.2 Information concerning other relevant traffic is issued in accordance with standard operating procedure
- 4.3 Traffic avoidance advice is issued when appropriate and in accordance with standard operating procedure
- 4.4 Traffic information is coordinated when required
- 4.5 Traffic information and advice issued is appropriately recorded
- 5 Respond to pilot requests**
- 5.1 Sufficient information is obtained from relevant sources to determine the nature and implications of the pilot request
- 5.2 An appropriate response is made to pilot requests

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations
- Relevant OH&S and environmental protection procedures and regulations
- Principles of effective communication
- Communications procedures applicable in air traffic control services
- Sections of the air traffic procedures manual and local instructions relevant to air traffic control communication procedures
- Standard aviation radiotelephony and coordination phrases, including standard abbreviations as detailed in the Aeronautical Information Publication (AIP)
- Non-standard forms of communication to aircraft and other control elements
- Messaging formats and protocols
- Communication media including voice, electronic, visual and written, including the capabilities, advantages and disadvantages of each
- Handover-takeover procedures
- Communication types including acknowledgements, inquiries and observations
- Barriers to communication including sex, age, race, seniority, status and culture
- Influences on communication including personal beliefs, attitudes, needs and personality
- Misinterpretation of words such as frequently, likely, sometimes, never, usually and often
- Communication error case studies
- Interference with communication including workload, noise, expectations and distortion
- Qualitative aspects of verbal communication including tone, emphasis, stress and frustration
- Communication techniques including chunking of information
- Communication requirements within teams including acknowledging, inquiring and observing
- Frequencies, rated coverage and footprints of communications facilities within and immediately adjacent to the area of jurisdiction including Flightwatch services
- Communication codes, abbreviations and conventions
- Communications associated with emergency and/or abnormal operations
- Readback requirements
- Coordination procedures, requirements and phraseologies including non-coordination routes
- Prompts and techniques used to assist and cue coordination and communications
- Preferred order of response to incoming and outgoing communications commensurate with the safety imperative and service priorities
- Speech delivery techniques using the English language including techniques for clear and concise delivery of communications

REQUIRED KNOWLEDGE AND SKILLS

- English language to a minimum of ICAO Operational Level 4 standard
- Effects of fatigue on effective communication
- Relevant equipment/facilities used in air traffic communications, its applications and the procedures for its use
- Procedures to be followed in the event of equipment/facility failure
- Safety hazards and risks that exist when using air traffic control communications procedures and related risk control procedures and precautions
- Problems that may occur when using air traffic control communications procedures and appropriate action that should be taken in each case

Required skills:

- Communicate clearly and concisely with others when applying air traffic control communication procedures and services
- Use the most appropriate form of communication for the operational context
- Use communication facilities to maintain contact with airspace users
- Use the language of English to ICAO Operational Level 4 standard
- Prioritise responses in accordance with operational procedures
- Actively listen when applying air traffic control communication procedures and services
- Interpret and record messages
- Relay messages
- Use both standard and non-standard radiotelephony and coordination phrases when applying air traffic control communication procedures and services
- Read and interpret instructions, regulations, procedures and other information relevant to air traffic control communication procedures and services
- Interpret and follow operational instructions and prioritise work
- Perceive incoming information associated with strategic, tactical, geographic, spatial, system and environment components of a complex system
- Comprehend incoming information and develop the current airspace and flight path model
- Complete documentation related to air traffic control communication procedures and services
- Format and issue communication messages
- Work collaboratively with others when applying air traffic control communication procedures and services
- Communicate in a team by exchanging information through assigning responsibility, acknowledgment, inquiring, and by recognising and noting facts that create team rapport and enhance team outputs
- Perform handover-takeover to ensure continuity of teamwork and air traffic service
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

REQUIRED KNOWLEDGE AND SKILLS

- Promptly report and/or rectify any identified problems that may occur when applying air traffic control communication procedures and services in accordance with regulatory requirements and workplace procedures
- Demonstrate temperament reflecting a calm, composed and cooperative characteristic and emotional response under challenging situations
- Make decisions related to the prioritising of tasks and the projection of and planning for traffic and environmental events
- Conduct aeronautical decision making
- Project and develop future airspace and flight path scenarios
- Maintain a strategic traffic management goal for the jurisdiction airspace
- Implement contingency plans for unexpected events that may arise when using air traffic control communication procedures
- Judge and form an opinion or evaluate situations by discerning and comparing information
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when applying air traffic control communication procedures and services
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Implement OH&S procedures and relevant regulations
- Allocate attention according to demand and constantly switch between: managing the Human-machine Interface (HMI) or equipment use; managing communications; and managing traffic

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:	<ul style="list-style-type: none"> • by day or night • in variable weather conditions
Performance may be demonstrated in:	<ul style="list-style-type: none"> • simulated situations, and/or • an operational air traffic control workplace
Air traffic control workplace may be a workstation in :	<ul style="list-style-type: none"> • Area Control • Approach Control • Aerodrome Control
Key aspects of providing operational information include:	<ul style="list-style-type: none"> • operational control of aircraft will include the initiation, continuation, termination, diversion or cancellation of the flight. Flight information provided by air traffic services officers will include critical operational information that enables the flight crew to make informed decisions regarding the operational control of their flight • flight information can be issued by general broadcasts or by directing information to specific aircraft • operational information will include information regarding aircraft position, navigation, communication, other airways facilities, airspace and air routes and air traffic services
Key aspects of providing traffic information include:	<ul style="list-style-type: none"> • traffic information is derived by surveillance displays or using procedural criteria such as time and distance • Traffic Information Broadcasts by Aircraft (TIBA) procedures are also used in certain airspace requiring the transition to and from such airspace and adjusting ATS procedures • traffic information can be issued by general broadcasts or by directing information to specific aircraft. A general broadcast of traffic information might consist of military low level fast jet operations
Equipment used in air traffic control communications may include:	<ul style="list-style-type: none"> • HF radio • VHF radio • signalling lamps • Controller-Pilot Data Link Communication (CPDLC) equipment • fixed telephone • mobile telephone • computers (email and local area networks) • facsimile

RANGE STATEMENT

Communications may include, but are not limited to:

- provision of current observed and or automatically recorded aerodrome weather information
- provision of prescribed aeronautical information
- provision of navigational information
- responses to requests
- response to SAR alerting/IFER/AEP implementation or facility failure
- instructions to pilots
- provision of NOTAMs
- responses to distress calls

Pilot-controller communications errors can be divided into ten distinct areas:

- misinterpretable statements
- inaccurate statements
- inaccuracies in content
- incomplete content
- ambiguous phraseology
- untimely transmissions
- garbled phraseology
- absent - not sent
- absent - equipment failure
- recipient not monitoring

Pilot-controller communication errors, as viewed from an operational perspective, can result in four main areas of operational error:

- deviations from assigned altitudes and flight levels
- deviations in headings
- failures to 'hold short' of the active runway
- deviations from airways routing

Communication errors tend to occur:

- due to differences between the information-processing (way of thinking) strategies used by the flight crews and ATC. Also differences exist in the social environment within which the communication is taking place. Information processing communication failures might occur as a result of differences in mental models and differences in the perceived importance of the information concerned; this might include any expectations of the parties involved

Miscommunication within teams:

- includes communication errors within flight crew teams, between flight crew and cabin crew and within air traffic control teams
- is more prevalent than a lack of communication. As the aviation environment is highly proceduralised there exists the problem of crews (pilots and controllers) developing expectancy. As procedures are standardised, team members expect that particular procedures and the

RANGE STATEMENT

	<p>relevant communications will take place. This leads to an expectancy of what is to come and when errors are made they are not easily detected. This problem is also known as hearback error</p>
The key elements of communication by air traffic controllers are:	<ul style="list-style-type: none">• the clarity with which the message is delivered• the brevity of the message (say only that which is required)• keeping the communications standard• considering the context within which the message is delivered• intonation (emphasis). Intonation is also important to the way the message is delivered. The variation in the pitch and tone of the communicator's voice can change the meaning of the message by influencing the way the message is interpreted
Critical aspects of communication are:	<ul style="list-style-type: none">• communication should advocate not who is right but what is right• communication requires listening if it is to be effective. Forty-two percent of an air traffic controller's time is spent listening. One of the largest problems contributing to the failure of communication within the aviation environment is the failure to hear or to hear accurately. Listening requires active involvement not passive attention• communication occurs at a cost. Human verbal communication is a resource intensive and consuming task; it degrades the visual image and it diverts attention away from the task(s) at hand. During busy periods of traffic, it is imperative that communications are clear and concise. If messages are not clear and concise and require repeating, excessive resources are likely to be depleted just to achieve a simple task. Workload will increase and the general level of service provided to aircraft will depreciate. In air traffic control, verbal communication constitutes a major medium with which to achieve air safety• effective communication is linked to a high grade of situation awareness• in teams where seniority contributes to a vertical hierarchy, junior members of the team might employ a communication strategy called mitigating language. The problem with this type of communication is that it is deliberately circumspect and is subject to misinterpretation. Therefore, a combination of expectancy and mitigating language might prove to increase the

RANGE STATEMENT

Reasons for communicating include:	<p>possibility of communication errors arising within teams</p> <ul style="list-style-type: none"> • to influence the receiver • to pass instructions • to coordinate ATC operations • to make contact • to confirm information • to link information • to receive feedback • to assist processing of information with which to make decisions
Communication methods include:	<ul style="list-style-type: none"> • voice or verbal • electronic • body language • written words • light and other visual signals and signs
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures • regulatory standards and recommended practices
Information/documents may include:	<ul style="list-style-type: none"> • Civil Aviation Safety Authority (CASA) regulations and Manuals of Standards (MOS) • Local Instructions (LI) and Temporary Local Instructions (TLI) • training curricula and syllabi • equipment manufacturers specifications and instructions • Manual of Air Traffic Services (MATS) • Aeronautical Information Publication (AIP) • workplace procedures, instructions • Training Standards Manual (TSM) • ICAO Document 4444, ATM/501, Procedures for Air Navigation Services, Air Traffic Management • occupational specification for air traffic controllers • industrial certified agreements and awards • training and assessment records • documented learning and assessment strategies
Applicable regulations and legislation may include:	<ul style="list-style-type: none"> • International Civil Aviation Organization (ICAO) Standards and Recommended Practices (SARP) • Civil Aviation Safety Regulations (CASR) and Manuals of Standards (MOS)

RANGE STATEMENT

- relevant Defence Orders and Instructions
- Airservices Act (Commonwealth) 1995
- OH&S Legislation (state and federal)
- Civil Aviation Act (Commonwealth) 1988 and the Civil Aviation Amendment Act 1995

AVIF2007B Implement regulations and policies during check-in procedures

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to ensure compliance with regulations and policies during passenger check-in services for commercial aircraft flights, including compliance with the national and/or international legal obligations of an aircraft operator and staff, local laws and regulations when providing check-in services abroad, and relevant established industrial relations practices and requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements of the Civil Aviation Safety Authority and other relevant regulatory authorities.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of relevant regulations and policies during passenger check-in services for commercial aircraft flights across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Comply with national and international legal obligations	<p>1.1 Sources of information on the legal obligations of an aircraft operator and staff during check-in are identified and accessed in accordance with workplace procedures</p> <p>1.2 An understanding of the legal obligations of an aircraft operator and staff during check-in is developed and applied to day-to-day work in the aviation industry</p> <p>1.3 Compliance is maintained with the legal obligations that bind an aircraft operator and staff during check-in</p>
2 Comply with local laws and regulations	<p>2.1 Relevant national/state OH&S laws and regulations are correctly identified and applied in day-to-day work to ensure compliance in accordance with workplace procedures as applicable</p> <p>2.2 Relevant customs and quarantine regulations are correctly identified and appropriate action is taken in day-to-day work to ensure compliance where applicable</p> <p>2.3 Appropriate advice is provided to passengers on customs and quarantine regulations when necessary</p> <p>2.4 Compliance is maintained with local laws and regulations while providing check-in services in all ports serviced by the airline operator</p>
3 Comply with established industrial relations practices and requirements	<p>3.1 Sources of information on established industrial relations practices and requirements relevant to the aviation industry are identified and accessed in accordance with workplace procedures</p> <p>3.2 An understanding of the established industrial relations practices and requirements relevant to the aviation industry is developed and applied to day-to-day work in the aviation industry</p> <p>3.3 An understanding of the employer/employee obligations and responsibilities is developed and applied to day-to-day work in the aviation industry</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant national and international regulations pertaining to passenger check-in services for commercial domestic and international aircraft flights
- Relevant OH&S, health, quarantine, customs and security procedures and regulations
- Relevant equal opportunity and anti-discrimination regulations
- Workplace procedures and policies related to passenger check-in services for commercial domestic and international aircraft flights
- Emergency and security procedures
- Principles of Crew Resource Management (CRM) and Human Factors (HF) related procedures
- Requirements of relevant regulations and legislation relevant to check-in services
- The industrial award system/trade union system as applicable
- The trade union system
- The concepts of arbitration and conciliation where applicable
- Principles of enterprise bargaining where applicable
- Employer/employee obligations and responsibilities
- Relevant industrial relations institutions, organisations and their functions
- Workplace and government policy on smoking on or in the vicinity of aircraft
- Workplace and government policy on the use of mobile phones or other electronic devices on or in the vicinity of aircraft

Required skills:

- Communicate effectively with others when implementing regulations and policies during check-in procedures
- Read and interpret instructions, regulations, procedures and other information relevant to regulations and policies during check-in procedures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to regulations and policies during check-in procedures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when implementing regulations and policies during check-in procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when implementing regulations and policies during check-in procedures in accordance with regulatory

REQUIRED KNOWLEDGE AND SKILLS

requirements and workplace procedures

- Implement contingency plans for unexpected events that may arise when implementing regulations and policies during check-in procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the implementation of regulations and policies during check-in procedures
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct the implementation of regulations and policies during check-in procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- Check-in service may be provided:
- for any type of commercial aircraft flight including domestic or international, while in home port or in slip port
 - for short and/or long haul services
 - in any category of service including economy, business class and first class
 - in any allowable operating and weather conditions
 - in accordance with enterprise and operational requirements
- Performance may be demonstrated on:
- an approved check-in service simulator
 - a passenger-carrying aircraft
- An understanding of the employer/employee obligations and responsibilities may include but is not limited to:
- the trade union system
 - the industrial awards system
 - the concepts of arbitration and conciliation
 - specific relevant enterprise awards/agreements
- Persons consulted may include:
- passengers
 - aircraft cabin crew and flight crew members
 - ground support staff
 - relevant human resources staff
 - airline supervisory and management staff
 - union representatives
 - relevant technical staff
 - relevant government officials from Australia or other countries, including:
 - aviation industry regulatory staff
 - quarantine authority staff
 - customs authority staff
- Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
 - enterprise procedures
 - organisational procedures
 - established procedures
 - standard operating procedures
- Information/documents may include:
- relevant regulations, including security, customs, quarantine, OH&S security and environmental protection regulations
 - airline procedures and instructions and job specification

RANGE STATEMENT

Applicable regulations and legislation may include:

- workplace policies
- check-in service checklists and procedures
- local laws and regulations when providing check-in services in remote countries
- OH&S security and environmental protection regulations
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant national and international regulations pertaining to passenger check-in services for commercial domestic and international aircraft flights
- relevant OH&S legislation
- relevant environmental protection legislation
- relevant quarantine legislation
- equal opportunity and anti-discrimination legislation
- relevant customs regulations
- relevant security regulations
- 'crimes on aircraft' legislation
- insurance legal requirements
- airline and government policy on smoking on or in the vicinity of aircraft
- airline and government policy on the use of mobile phones and other electronic devices on or in the vicinity of aircraft
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Comply with relevant regulations and legal obligations	<p>1.1 Sources of information on regulatory requirements and legal obligations relevant to interactive aircrew operations are identified and accessed in accordance with workplace procedures</p> <p>1.2 An understanding of regulatory requirements and legal obligations relevant to interactive aircrew operations is developed and applied to day-to-day work in the aviation industry</p> <p>1.3 Compliance is maintained with the regulatory requirements and legal obligations that bind aircraft aircrew in their safety, security and operational tasks</p> <p>1.4 Principles of Crew Resource Management (CRM) are applied as a member of the aircrew during safety, security and service operations on an aircraft</p>
2 Comply with established industrial relations practices and requirements	<p>2.1 Sources of information on established industrial relations practices and requirements relevant to the aviation industry are identified and accessed in accordance with workplace procedures</p> <p>2.2 An understanding of the established industrial relations practices and requirements relevant to the aviation industry is developed and applied to day-to-day work in the aviation industry</p> <p>2.3 An understanding of the employer/employee obligations and responsibilities is developed and applied to day-to-day work in the aviation industry</p>
3 Comply with relevant local laws and regulations	<p>3.1 Quarantine and customs regulations and other local laws relevant to the work activities of aircrew are correctly identified and appropriate action is taken in day-to-day work to ensure compliance where applicable</p> <p>3.2 Appropriate advice is provided to passengers on customs and quarantine regulations and other relevant local laws, when necessary</p> <p>3.3 Compliance is maintained with relevant local laws and regulations while in slip ports</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of regulatory requirements pertaining to aircraft safety, security and service
- Relevant workplace procedures and policies related to aircraft safety, security and service
- Relevant emergency procedures
- Crew Resource Management (CRM) and Human Factors (HF) principles
- Sources of information on relevant regulatory requirements
- Relevant aviation terminology
- Relevant theory of flight, meteorology and principles of load/passenger distribution as they relate to cabin crew functions
- Their position within the industrial award system
- The trade union system
- The concepts of arbitration and conciliation
- Principles of enterprise bargaining
- Employer/employee obligations and responsibilities
- Relevant industrial relations institutions, organisations and their functions

Required skills:

- Communicate effectively with others when implementing regulations and policies during aircraft safety and service operations
- Read and interpret instructions, regulations, procedures and other information relevant to implementing regulations and policies during aircraft safety and service operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to regulations and policies during aircraft safety and service operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when implementing regulations and policies during aircraft safety and service operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when implementing regulations and policies during aircraft safety and service operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when implementing regulations and policies during aircraft safety and service operations

REQUIRED KNOWLEDGE AND SKILLS

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the implementation of regulations and policies during aircraft safety and service operations
- Monitor and anticipate operational problems, including safety and security hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct the implementation of regulations and policies during aircraft safety and service operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|---|
| Safety and service operations may be carried out: | <ul style="list-style-type: none">• on any passenger-carrying aircraft type in commercial service• during short and/or long haul/international services• in any category of service for which the crew member has been trained• in any allowable operating and weather conditions• in accordance with regulatory and operational requirements including OH&S regulations |

AVIF2012A Monitor the transfer of hazardous materials

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to ensure that the transfer of hazardous materials on an aerodrome is monitored appropriately. This includes responding to hazardous incidents that occur during the transfer. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

This unit applies to aerodromes that operate across a variety of operational contexts within the Australian aviation industry.

The work must be carried out in accordance with applicable operational standards as required by CASA when monitoring the transfer of hazardous materials on an aerodrome.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate II.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1 Monitor the transfer of hazardous materials on an aerodrome | 1.1 Location and timing of transfer is determined
1.2 Transfer of hazardous material is monitored to ensure compliance with standard operating procedures
1.3 Breaches of standard operating procedures are logged and reported
1.4 Apron areas are inspected for minor spills and these are reported |
| 2 Respond to a hazardous materials incident | 2.1 Correct category of spill is determined
2.2 Incident is reported to the appropriate emergency response agency as required
2.3 Safety information on handling hazardous materials is located and utilised
2.4 Operational procedures for responding to a hazardous incident are followed
2.5 Notice to Airman (NOTAM) action is initiated/cancelled if and when necessary
2.6 Awareness of the Occupational Health&Safety (OH&S) and environmental implications of a spill is demonstrated
2.7 Clean-up operations are supervised
2.8 The serviceability of the affected area is determined
2.9 Running log book is maintained throughout the duration of the hazardous materials incident |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Aerodrome layout, including access routes
- Use of personal protective equipment and clean up materials for hazardous materials spills
- Procedures to minimise fire hazards
- Safety distances required for transfer of defined hazardous materials
- Steps involved in planning the work activities
- Procedures to be followed in the event of an emergency
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Procedures for managing and controlling hazardous situations when carrying out work activities
- Standard operating procedures for monitoring the transfer of hazardous materials
- Categories of hazardous materials spills, and associated response actions

Required skills:

- Communicate effectively with others when monitoring the transfer of hazardous materials
- Read and interpret instructions, regulations, procedures and other information relevant to monitoring the transfer of hazardous materials
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to monitoring the transfer of hazardous materials
- Use of spill response equipment
- Work collaboratively with others when monitoring the transfer of hazardous materials
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when monitoring the transfer of hazardous materials in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when monitoring the transfer of hazardous materials
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when monitoring the transfer of hazardous materials

REQUIRED KNOWLEDGE AND SKILLS

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when monitoring the transfer of hazardous materials

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for aircraft ditching	1.1 Nature and extent of aircraft situation is communicated and acknowledgment is confirmed 1.2 Personal items within the cabin are secured prior to ditching 1.3 Restraint devices and survival equipment are checked, fastened and secured prior to ditching 1.4 Primary and secondary egress routes, exits and equipment are located 1.5 Brace position is adopted
2 Undertake evacuation from the aircraft	2.1 Spatial orientation is conducted 2.2 Egress points are located 2.3 Exits are jettisoned and cleared 2.4 Restraint devices are released 2.5 Aircraft is egressed 2.6 Surface is cleared
3 Conduct rescue recovery process	3.1 Safety equipment is deployed in accordance with workplace procedures 3.2 Position indicating and signalling devices are deployed 3.3 Rescue recovery techniques are applied
4 Control survival hazards	4.1 Potential hazards are identified and controlled 4.2 Swimming techniques with a life jacket are applied 4.3 Hypothermia management techniques are employed 4.4 Raft boarding and righting techniques are employed 4.5 Emergency supplies and equipment are managed

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, legislation, organisational policy and procedures in relation to aircraft underwater escape and survival
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Aircraft escape techniques
- Aircraft egress and exit systems
- Hazards exiting aircraft during emergency situations
- Inverted and submerged aircraft escape techniques
- Safety equipment operation
- Emergency equipment deployment and operation
- Rescue and recovery techniques
- Workplace procedures for undertaking aircraft underwater escape and survival
- Manufacturers instructions for equipment used for aircraft underwater escape and survival
- Risks that exist when undertaking aircraft underwater escape and survival and related risk control procedures and precautions
- Problems that may occur when undertaking aircraft underwater escape and survival and appropriate action that should be taken in each case

Required skills:

- Perform aircraft egress and exit operation
- Operate emergency equipment
- Operate safety equipment
- Perform inverted and submerged aircraft escape techniques
- Apply hypothermia prevention and reduction techniques
- Perform life jacket swimming techniques
- Communicate effectively with others when undertaking aircraft underwater escape and survival
- Read, interpret and follow instructions, regulations, procedures and other information relevant to undertaking aircraft underwater escape and survival
- Complete documentation related to undertaking aircraft underwater escape and survival
- Work collaboratively with others when undertaking aircraft underwater escape and survival
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and

REQUIRED KNOWLEDGE AND SKILLS

interactions with others

- Promptly report and/or rectify any identified problems that may occur when undertaking aircraft underwater escape and survival in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when undertaking aircraft underwater escape and survival
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when undertaking aircraft underwater escape and survival
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self, others or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to undertake aircraft underwater escape and survival

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - securing all personal items, restraint devices and survival equipment prior to ditching
 - releasing restraint devices and egressing aircraft
 - applying rescue recovery techniques
 - employing life jacket swimming, raft boarding and raft righting techniques
 - employing hypothermia management techniques

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to utilise emergency breathing systems (EBS) during underwater escape situations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work involves the application of safety and escape policies, regulations, protocols and procedures required to utilise EBS during underwater escape situations.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable Civil Aviation Safety Authority (CASA) compliance.

Work is performed under limited supervision within organisational guidelines.

This unit of competency is nominally packaged at Certificate II.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare an EBS for use | 1.1 EBS pre-flight inspection is conducted
1.2 Preparations for flight are completed in accordance with workplace procedures
1.3 EBS defects are reported in accordance with workplace procedures |
| 2 Operate an EBS | 2.1 EBS is fitted in accordance with established procedures
2.2 EBS purging techniques are employed
2.3 Breathing techniques are employed during ascent
2.4 EBS malfunctions are responded to in accordance with workplace procedures |
| 3 Complete EBS after flight procedures | 3.1 EBS after use inspection is conducted
3.2 EBS after flight defects are reported
3.3 EBS is packed up in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, legislation, organisational policy and procedures in relation to emergency breathing systems
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- EBS operating procedures
- Underwater breathing techniques
- Hazards associated with the use of EBS
- EBS malfunctions and defects including their management and reporting procedures
- Defect reporting procedures of the organisation
- EBS pre- and post-use inspection procedures
- Workplace procedures for utilising emergency breathing systems
- Manufacturers instructions for emergency breathing system equipment
- Risks that exist when utilising emergency breathing systems and related risk control procedures and precautions
- Problems that may occur when utilising emergency breathing systems and appropriate action that should be taken in each case

Required skills:

- Demonstrate EBS operating procedures
- Perform underwater breathing techniques
- Conduct EBS malfunction and defect management and reporting procedures
- Conduct flight preparation procedures
- Perform safety procedures for breathing compressed air underwater
- Communicate effectively with others when utilising emergency breathing systems
- Read, interpret and follow instructions, regulations, procedures and other information relevant to utilising emergency breathing systems
- Complete documentation related to utilising emergency breathing systems
- Work collaboratively with others when utilising emergency breathing systems
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when utilising emergency breathing systems
- Implement contingency plans for unexpected events that may arise when utilising emergency

REQUIRED KNOWLEDGE AND SKILLS

breathing systems

- Apply precautions and required action to minimise, control or eliminate hazards that may exist when utilising emergency breathing systems
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self, others or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use emergency breathing system equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - the underpinning knowledge and skills
 - conducting pre-flight inspection of EBS including reporting of defects
 - operating EBS including purging techniques, breathing techniques and responding to EBS malfunctions
 - conducting inspection of EBS after use including reporting of defects, and pack up

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare for work in an aircraft confined space	<p>1.1 Work instructions relevant to the task being performed are obtained, confirmed and applied to the allocated task in accordance with established workplace procedures</p> <p>1.2 Safety requirements are applied to the allocated task in accordance with established workplace procedures</p> <p>1.3 Authorisation to enter the confined space is obtained in accordance with established workplace procedures</p> <p>1.4 Tools, equipment and personal protective equipment are selected to carry out task consistent with the requirements of the job</p> <p>1.5 Serviceability of tools, equipment and personal protective equipment is checked and any faults are rectified or reported in accordance with established workplace procedures</p>
2 Enter and work in an aircraft confined space	<p>2.1 Access cover/cargo hold door is removed or opened as required</p> <p>2.2 Confined space is entered in accordance with established workplace procedures</p> <p>2.3 Communication is maintained with appropriate personnel in accordance with established workplace procedures</p> <p>2.4 Designated work in confined space is conducted in accordance with established workplace procedures</p>
3 Exit aircraft confined space	<p>3.1 Confined space is exited according to established workplace procedures</p> <p>3.2 Tools, equipment, material and personal protective equipment are recovered from the confined space</p> <p>3.3 Access cover/cargo hold door is replaced or closed as required</p>
4 Complete confined space activities	<p>4.1 Tools, equipment and personal protective equipment are checked and stored in accordance with established workplace procedures</p> <p>4.2 Unserviceable tools, equipment and personal protective equipment are fixed or reported in accordance with established workplace procedures</p> <p>4.3 Documentation is completed in accordance with established workplace procedures</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, legislation, organisational policy and procedures in relation to working in aircraft confined spaces
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Common hazards associated with working in aircraft confined spaces
- Safe manual handling techniques in confined spaces
- Aircraft confined spaces management and reporting procedures
- Defect reporting procedures of the organisation
- Workplace procedures for working in an aircraft confined space
- Manufacturer instructions for aircraft confined space tools and personal protective equipment
- Risks that exist when working in an aircraft confined space, and related risk control procedures and precautions
- Problems that may occur when working in an aircraft confined space, and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when working in aircraft confined spaces
- Read, interpret and follow instructions, regulations, procedures and other information relevant to working in aircraft confined spaces
- Complete documentation related to working in aircraft confined spaces
- Work collaboratively with others when working in aircraft confined spaces
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when working in aircraft confined spaces
- Implement contingency plans for unexpected events that may arise when working in aircraft confined spaces
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when working in aircraft confined spaces
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self, others or damage

REQUIRED KNOWLEDGE AND SKILLS

to goods or equipment

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use aircraft confined spaces tools and equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - location, interpretation and application of relevant information, standards and specifications
 - compliance with work instructions, OH&S regulations and state/territory legislation applicable to working in aircraft confined spaces
 - compliance with organisational policies and procedures
 - safe preparation, entry and exit performance and application of all appropriate procedures
 - safe and effective operational use of tools, equipment and personal protective equipment

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Tools and equipment may include but are not limited to:	<ul style="list-style-type: none">• harness and lifeline• signs and barriers• self contained breathing apparatus• atmospheric testing equipment• communications equipment• tools and equipment relevant to the work to be performed
Personal protective equipment may include but is not limited to:	<ul style="list-style-type: none">• hearing protection• safety gloves• safety footwear• safety glasses• protective clothing• high visibility clothing• sun protection
Hazards that may exist when working in an aircraft confined space may include but are not limited to:	<ul style="list-style-type: none">• moving equipment within aircraft• uneven surfaces or gaps in the floor of the aircraft• protruding surfaces in the aircraft's bulkhead and hold structures• height of confined aircraft space• noise• vibration• dust• fire• climatic conditions/extreme temperatures• hazardous materials• contaminated atmosphere• toxic gases
Communications may include:	<ul style="list-style-type: none">• two-way radio• hand signals• mobile phone• verbal instructions• written instructions
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none">• company procedures• enterprise procedures• organisational procedures• established procedures• standard operating procedures

RANGE STATEMENT

Information/documents may include:

- manufacturer instructions
- in Defence context, relevant Defence Orders and Instructions
- operations manuals
- workplace procedures and instructions and job specification
- induction and training materials

Applicable regulations and legislation may include:

- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Unit Sector(s)

Competency Field

F - Safety Management

AVIF3004B Supervise the safety of aerodrome works and general access

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to supervise the safety of aerodrome works and general access, including preparing for aerodrome works, supervising aerodrome access by vehicles and personnel, and supervising and completing aerodrome works. Required performance includes compliance with all relevant regulatory requirements (i.e. CAR 89 I, Schedule 10). Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

Work involves the application of relevant principles, regulations, protocols and procedures when supervising the safety of aerodrome works and general access as part of commercial activities across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for aerodrome works	<p>1.1 Official notification of impending start to the works is confirmed with appropriate aerodrome personnel</p> <p>1.2 Processes for the safe conduct of the aerodrome works are developed or adapted from relevant plans, drawings, procedures documents, and Method of Working Plans (MOWPs) in accordance with workplace procedures</p>
2 Supervise aerodrome access by vehicles and personnel	<p>2.1 Access requirements and relevant authorisation for all vehicles and personnel are determined in accordance with workplace procedures</p> <p>2.2 Personnel, vehicles and equipment entering the airside are inspected to ensure compliance with aerodrome requirements</p> <p>2.3 Appropriate supervision of airside personnel and vehicles is maintained throughout period on airside</p> <p>2.4 Vehicles are inspected to ensure they are marked in an appropriate manner</p>
3 Supervise aerodrome works	<p>3.1 Unserviceability markers and barriers are positioned in accordance with workplace procedures and regulations</p> <p>3.2 Aerodrome work procedures are supervised in accordance with MOWPs or other workplace procedures</p> <p>3.3 The activities of personnel, vehicles and plant on the movement area are managed to ensure the safety of aircraft</p> <p>3.4 Works are completed in accordance with relevant MOWP</p> <p>3.5 Updated notification information is issued to ensure continued safe conduct of aerodrome works and aircraft operations</p> <p>3.6 At such times as required by aircraft, the aerodrome is temporarily restored to operational status in accordance with workplace procedures</p>
4 Complete aerodrome works	<p>4.1 The work area is cleared of personnel, vehicles and plant in a safe and timely manner, ensuring the aerodrome has been restored to full operational status</p> <p>4.2 The works-affected area is inspected for serviceability in accordance with workplace procedures</p> <p>4.3 The aerodrome overall is inspected for serviceability in accordance with workplace procedures</p> <p>4.4 Relevant authorities or organisations are notified of the restoration of aerodrome serviceability in accordance with workplace procedures, using suitable means of communication</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Aerodrome operating procedures
- Functions of a works safety officer (as defined in Civil Aviation Safety Regulations)
- Aircraft schedules and their use in aerodrome inspection and reporting
- Purpose and application of unserviceability markers
- Purpose and application of MOWPs
- Safety hazards and risks that exist when supervising the safety of aerodrome works and general access and related risk control procedures and precautions, including policies and local instructions concerning airside access and Notices to Airmen (NOTAMs), guidelines concerning runway visual range, policies/procedures related to works integrity at an aerodrome, policies/guidelines concerning manoeuvring area serviceability, and safety and security policies and procedures related to bird and animal hazards
- Problems that may occur when supervising the safety of aerodrome works and general access and action that should be taken in each case
- Aviation weather forecasts products and services and their potential impact on operations

Required skills:

- Communicate effectively with others when supervising the safety of aerodrome works and general access
- Read and interpret instructions, regulations, procedures and other information relevant to supervising the safety of aerodrome works and general access
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the safety of aerodrome works and general access
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when supervising the safety of aerodrome works and general access
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when supervising the safety of aerodrome works and general access in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when supervising the safety of aerodrome works and general access

REQUIRED KNOWLEDGE AND SKILLS

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the supervision of the safety of aerodrome works and general access
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct the supervision of the safety of aerodrome works and general access

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Works may need to occur:	<ul style="list-style-type: none"> • by day or by night • in any weather conditions
Relevant authorities for reporting purposes include:	<ul style="list-style-type: none"> • aerodrome operator or delegated person • NOTAM Office (Airservices Australia) • Civil Aviation Safety Authority • Air Traffic Control (ATC) • Australian Defence Forces Command for military bases • aerodrome users
Aerodromes may include:	<ul style="list-style-type: none"> • licensed aerodromes • unlicensed aerodromes
Aerodrome works are classified as:	<ul style="list-style-type: none"> • Time Limited Works not affecting normal aircraft operations (movement area operational in less than 10 minutes) • Time Limited Works requiring a NOTAM, where normal aircraft operations are not affected (movement area not operational within 10 minutes) • works requiring NOTAM, with attached MOWP • MOWP, where regular public transport (RPT) or other regular users are disrupted (movement area not operable within 30 minutes)
Aerodrome works may include:	<ul style="list-style-type: none"> • maintenance of markings and lights • mowing grass • rolling surfaces • sweeping pavements • minor repairs to pavements • surveys and inspections • major construction or repairs to the movement area • painting and repainting
Processes for the safe conduct of works includes:	<ul style="list-style-type: none"> • work procedures • identifying safe work vehicle movement areas • instructing work personnel
Relevant works information include:	<ul style="list-style-type: none"> • MOWP • NOTAM • other written or verbal notification
Procedures for making the movement area safe for aerodrome	<ul style="list-style-type: none"> • marking the unserviceable area • partial closure of the movement area

RANGE STATEMENT

works include:	<ul style="list-style-type: none"> • closing the movement area (aerodrome closure) • contacting the aerodrome user • extinguish lighting to the hazardous section of the movement area • lighting required to carry out works does not represent a hazard to aircraft operations • accessing and promulgating as appropriate public weather and aviation forecasts and current weather products applicable to the worksite
Inspection of vehicles includes:	<ul style="list-style-type: none"> • roadworthiness • fuel and oil leakage • appropriate markings and lights
Assessment of personnel includes:	<ul style="list-style-type: none"> • confirmation of authorisation to enter the airside • confirmation of appropriate licences to operate vehicles and equipment • checking of understanding of: <ul style="list-style-type: none"> • aerodrome terminology, signs and radio instructions • aerodrome markings and signage • vehicle restriction zones around aircraft, navigation beacons, lights • required vehicle marking and lighting requirements • aerodrome speed limits • directions from the safety officer • current and forecast aerodrome weather conditions
Vehicle or other mobile obstacle markings and equipment include:	<ul style="list-style-type: none"> • orange or yellow paint (for vehicles regularly used on movement area) • warning lights (orange/amber/yellow) • radio equipment as required • company colours
Unserviceability markers and cones include:	<ul style="list-style-type: none"> • signal circle markers • unserviceability cross markers • unserviceability cones • displaced threshold markers • unserviceability lighting
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may	<ul style="list-style-type: none"> • relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to supervising the safety

RANGE STATEMENT

include:

of aerodrome works and general access (i.e. CAR 89 I, Schedule 10)

- aerodrome manuals
- workplace operating procedures manuals
- Manual of Standards - Aerodromes (previously Rules and Practices for Aerodromes [RPA])
- En Route Supplement Australia (ERSA)
- manufacturers specifications for equipment
- RPT routes and timetables
- MOWPs
- induction and training materials
- relevant documents from Bureau of Meteorology, International Civil Aviation Organization (ICAO) and the World Meteorological Organization (WMO)

Applicable regulations and legislation may include:

- relevant Civil Aviation Act (1988) and Civil Aviation Regulations and Orders (i.e. CAR 89 I, Schedule 10)
- Manual of Standards - Aerodromes (previously Rules and Practices for Aerodromes [RPA])
- applicable state, territory and commonwealth regulations concerning:
 - OH&S
 - workplace relations
 - workers compensation
 - ADG Code and Mines Regulation Act for fuel
 - environmental protection
 - equal opportunity

AVIF3005B Maintain the safety of people and aircraft

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to contribute to the safety of people and aircraft as a member of the aircrew on a commercial aircraft flight, including carrying out required safety procedures, managing safety risks and hazards, following flight crew directions, aiding and assisting passengers during an emergency, and carrying out administrative procedures related to safety matters. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements of the Civil Aviation Safety Authority and other relevant regulatory authorities.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of relevant regulations, principles and procedures to the maintenance of the safety of passengers, aircrew and aircraft on commercial aircraft across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Carry out safety procedures	<p>1.1 Pre-take-off safety and security checks are conducted in accordance with regulatory requirements and workplace procedures</p> <p>1.2 Safety demonstration and checks are conducted in accordance with regulatory requirements and workplace procedures</p> <p>1.3 Safety hazards are identified and are reported and/or acted upon in accordance with risk management procedures and regulatory requirements</p> <p>1.4 Appropriate hazard mitigation strategies are determined and implemented in conjunction with other aircrew members in accordance with risk management procedures and regulatory requirements</p>
2 Follow flight crew directions	<p>2.1 Flight crew instructions are followed at all times</p> <p>2.2 Cabin crew positions are taken during landing and take-off when directed by the flight crew</p> <p>2.3 Safety belts and seats are used during landing and take-off in accordance with flight crew directions, workplace procedures and safety regulations</p>
3 Aid and assist passengers during an emergency	<p>3.1 In conjunction with other members of the flight and cabin crew, passengers are advised of hazardous conditions and potential emergencies at appropriate time and related safety and emergency procedures during flight in accordance with regulatory requirements, orders and operations manual</p> <p>3.2 In the event of an emergency, passengers are advised, as far as possible, of the nature of the emergency and the procedures and precautions to be followed</p> <p>3.3 Clear communication is established and maintained with passengers</p> <p>3.4 Passengers are organised during the emergency in accordance with regulatory requirements, flight crew instructions and workplace procedures</p> <p>3.5 Passengers are assisted as required during emergency situation</p> <p>3.6 First aid and/or medical attention is organised if necessary in conjunction with other crew members during an emergency situation in accordance with workplace procedures</p>
4 Carry out administrative procedures	<p>4.1 Workplace administrative procedures related to safety are identified and interpreted</p> <p>4.2 Administrative procedures related to safety and emergency procedures and incidents are implemented in accordance with workplace and regulatory requirements</p> <p>4.3 All required aircraft safety documentation is completed in</p>

ELEMENT

PERFORMANCE CRITERIA

accordance with workplace requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of regulations pertaining to the integrated safety responsibilities and roles of aircrew
- Relevant OH&S, hygiene and environmental procedures and regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Principles of passenger and aircraft safety
- Airline and regulatory standards and procedures for maintaining safety requirements during aircraft cabin operations
- Procedures to be followed during safety demonstrations and emergencies
- Hazard identification and mitigation procedures and related regulatory requirements
- Crew Resource Management (CRW) principles
- Relevant airline administrative procedures
- Cabin features, safety equipment and amenities for various types of aircraft
- Risks that exist during aircraft flight and related risk control procedures and precautions
- Problems that may occur when maintaining safety requirements during aircraft cabin operations and appropriate action that should be taken in each case
- Basic knowledge of aviation medicine, the atmosphere and hypoxia

Required skills:

- Communicate effectively with others when maintaining the safety of people and aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to the safety of people and aircraft
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the safety of people and aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when maintaining the safety of people and aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when maintaining the safety of people and aircraft in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when maintaining the safety of people and aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist

REQUIRED KNOWLEDGE AND SKILLS

when maintaining the safety of people and aircraft

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to maintain the safety of people and aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Integrated activities to maintain the safety of passengers, aircrew and aircraft may be provided:

- on any aircraft type in commercial service
- during short and/or long haul services
- in any allowable operating and weather conditions
- in accordance with regulatory and operational requirements

Performance may be demonstrated:

- in an approved cabin service simulator
- in a suitably simulated work environment
- on a passenger-carrying aircraft

Resources required when maintaining the safety of passengers and aircraft may include but are not restricted to:

- safety instruction sheets
- safety demonstration videos
- first aid kit/equipment
- aircraft intercom and communications equipment
- lifejackets, life rafts, seat cushions
- defibrillator
- escape devices
- personal breathing equipment
- oxygen equipment including masks, fixed, portable
- fire fighting equipment
- restraint equipment
- survival equipment
- emergency lighting equipment

Types of aircraft emergencies may include but are not limited to:

- depressurisation of cabin
- severe air turbulence
- loss of aircraft power
- malfunctioning aircraft equipment
- collision
- ditching of aircraft
- emergency landing
- explosion or fire on aircraft
- illness or injury amongst passenger(s) or crew
- smoke/fire in cabin
- aborted takeoff
- disruptive/unruly passengers

Persons consulted/interacted with when maintaining the safety of passengers and aircraft may

- passengers
- other aircrew members
- emergency services personnel

RANGE STATEMENT

include:

- ground staff

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- sections of regulations pertaining to the safety responsibilities and roles of cabin crew
- airline procedures and instructions and job specification
- pre-flight safety demonstration procedures
- cabin safety checklists and procedures
- Air Safety Incident Reports (ASIRs)
- Australian Transport Safety Bureau (ATSB) safety reports
- enterprise specific safety reports
- emergency procedures
- flight passenger schedules
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- Civil Aviation Act
- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to the integrated safety responsibilities and roles of aircrew
- relevant Australian Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the integrated safety responsibilities and roles of aircrew
- relevant OH&S legislation
- relevant food handling and hygiene legislation
- equal opportunity and anti-discrimination legislation
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to respond to abnormal and emergency situations on a commercial aircraft flight, including responding to a medical emergency during a flight, to adverse weather and/or flying conditions and to various forms of aircraft emergency. It also covers the skills and knowledge required to respond to fire on board the aircraft, assist in or direct the evacuation of the aircraft, and complete all necessary documentation following an emergency or abnormal incident. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision usually within a team environment.

Work involves the application of emergency procedures, regulations, safety codes and protocols when responding to abnormal and emergency on-board situations on commercial aircraft across a variety of operational contexts within the Australian aviation industry.

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Respond to a medical emergency during a flight	<p>1.1 Illness or injury amongst passengers or crew is identified in accordance with workplace procedures</p> <p>1.2 Identified illness or injury is reported to pilot-in-command (PIC) and/or a senior crew member and appropriate action is taken in accordance with workplace procedures</p> <p>1.3 Directions of senior crew members are followed in accordance with workplace procedures</p> <p>1.4 First aid is applied if applicable</p> <p>1.5 Medical assistance is sought from amongst other crew members and passengers if necessary in accordance with workplace procedures</p> <p>1.6 Where applicable, medilink and other means of remote medical advice and assistance are accessed in accordance with workplace procedures</p>
2 Respond to adverse weather and/or flying conditions	<p>2.1 Directions of PIC and/or senior crew members are followed in the event of adverse weather and/or flying conditions or turbulence</p> <p>2.2 Passengers are instructed to fasten seat belts and take required precautions in accordance with workplace procedures and regulatory requirements</p> <p>2.3 Where possible, passengers are assisted and reassured where necessary during adverse conditions</p> <p>2.4 Dependent on the circumstances involved, appropriate action may be initiated in response to perceived hazardous situations in accordance with Crew Resource Management (CRM) principles</p> <p>2.5 As far as possible, communication is maintained with passengers and other aircrew members during the abnormal conditions</p> <p>2.6 Personal initiative and experience is utilised in securing self and equipment in turbulence</p>
3 Respond to aircraft emergency	<p>3.1 Directions of senior crew members are followed in the event of an aircraft emergency</p> <p>3.2 Dependent on the circumstances involved, appropriate action may be self-initiated in response to emergency situations in accordance with Crew Resource Management (CRM) principles</p> <p>3.3 Emergency procedures are implemented in accordance with regulatory requirements and consistent with the nature of the emergency</p> <p>3.4 Passengers are assisted and reassured where necessary during the emergency</p> <p>3.5 As far as possible, communication is maintained with</p>

ELEMENT	PERFORMANCE CRITERIA
4 Assist in or the evacuation of the aircraft	<p>passengers and other aircrew members during the emergency</p> <p>4.1 Directions of senior crew members are followed in the event of an aircraft evacuation</p> <p>4.2 Evacuation procedures for the type of aircraft involved are implemented in accordance with workplace and regulatory requirements</p> <p>4.3 Dependent on the type of evacuation, passengers are appropriately assisted and reassured where necessary during the evacuation process</p> <p>4.4 As far as possible, communication is maintained with passengers and other aircrew members during the evacuation</p>
5 Respond to fire on board the aircraft	<p>5.1 Appropriate fire protection procedures are implemented in accordance with workplace and regulatory requirements</p> <p>5.2 Relevant regulatory and workplace fire emergency procedures are followed in the event of fire</p> <p>5.3 Directions of senior crew members are followed in the event of an aircraft fire</p> <p>5.4 Where possible, passengers are assisted and reassured where necessary during the fire emergency</p> <p>5.5 As far as possible, communication is maintained with passengers and other aircrew members during the fire emergency</p>
6 Complete required documentation for an emergency or abnormal incident	<p>6.1 Workplace administrative procedures relevant to an abnormal or emergency cabin service incident are identified and interpreted</p> <p>6.2 Administrative procedures are implemented in accordance with workplace and regulatory requirements</p> <p>6.3 All required aircraft documentation relevant to an abnormal or emergency cabin service incident is completed in accordance with workplace requirements including requirements for OH&S and/or safety incident reports</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S, environmental protection procedures and regulations
- Airline procedures for responding to an abnormal or emergency situation on an aircraft, including fire response and aircraft evacuation
- Crew Resource Management (CRM) principles
- Procedures to be followed during safety demonstrations
- Action to be taken in response to instructions from senior crew members during various abnormal or emergency situations that may occur on an aircraft
- Airline administrative procedures
- Cabin emergency features and equipment for various types of aircraft
- Risks that exist during abnormal and emergency situations on an aircraft and related risk control procedures and precautions
- Problems that may occur during abnormal and emergency situations on an aircraft and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when responding to abnormal and emergency situations within the aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to abnormal and emergency situations within the aircraft
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to abnormal and emergency situations within the aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when responding to abnormal and emergency situations within the aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when responding to abnormal and emergency situations within the aircraft in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when responding to abnormal and emergency situations within the aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during abnormal and emergency situations within the aircraft

REQUIRED KNOWLEDGE AND SKILLS

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to respond to abnormal and emergency situations within the aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Responses to emergency and abnormal situations may be required:

- on relevant aircraft types in commercial service
- during short and/or long haul services
- in any category of service, including economy, business and first class
- in any allowable operating and weather conditions

Performance may be demonstrated:

- in an approved cabin service simulator
- in a suitably simulated work environment
- on a passenger-carrying aircraft

Examples of abnormal or emergency cabin service situations may include:

- passenger or crew illness
- injury to passenger or crew
- severe air turbulence
- changes in the wind and weather conditions enroute
- hazardous problems with aircraft air conditioning systems
- aircraft engine or equipment malfunction or failure
- aircraft instrument malfunction or failure
- aircraft low fuel quantity emergency
- security threat on board aircraft
- ditching of aircraft
- emergency landing
- explosion or fire in cabin
- disruptive/unruly passengers
- depressurisation of cabin

Workplace operational procedures may include but are not limited to:

- pre-flight passenger briefing
- cabin preparation
- on-board safety
- door procedures
- precautions during abnormal weather/flying conditions
- security procedures
- aircraft refuelling with passengers on board
- smoking regulations briefing
- equipment stowage
- excess carry-on baggage
- take-off and landing
- emergency procedures

Evacuation procedures may include but are not limited to:

- day or night evacuations
- ditching in water, including both prepared and unprepared

RANGE STATEMENT

- emergency landing, including both prepared and unprepared
 - precautionary evacuation
 - search and rescue
 - slide descents
 - raft management
 - emergency exit from aircraft by any available means
- Fire procedures may include:
- fire prevention and protection procedures
 - basic fire drill
 - cabin crew fire response procedures during flight
 - cabin crew fire response procedures when aircraft is on the ground
- Persons consulted may include:
- passengers
 - passengers identified as having medical skills
 - pilot-in-command (PIC)
 - other cabin crew and flight crew members
 - ground staff
 - emergency services personnel
 - technical staff
- Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:
- company procedures
 - enterprise procedures
 - organisational procedures
 - established procedures
 - standard operating procedures
- Information/documents may include:
- sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to aircraft abnormal and emergency situations
 - airline operational and emergency procedures and instructions
 - directions and instructions of the PIC and/or senior crew members
 - job specification
 - aircraft evacuation procedures
 - aircraft fire prevention and response procedures
 - cabin service checklists and procedures
 - cabin emergency equipment operational manuals
 - induction and training materials
 - conditions of service, legislation and industrial agreements including workplace agreements and awards
- Applicable regulations and
- Civil Aviation Act
 - relevant Civil Aviation Safety Regulations and Civil

RANGE STATEMENT

legislation may include:

- Aviation Orders pertaining to cabin crew response to abnormal and emergency situations on board an aircraft
- relevant OH&S legislation
 - environmental protection legislation
 - relevant food handling and hygiene legislation
 - equal opportunity and anti-discrimination legislation
 - relevant Australian Standards
 - industrial relations and workplace compensation legislation

Unit Sector(s)

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Comply with relevant regulations and legal obligations	<p>1.1 Sources of information on regulatory requirements and legal obligations relevant to aerodrome operations and management are identified and accessed in accordance with workplace procedures</p> <p>1.2 An understanding of regulatory requirements and legal obligations relevant to aerodrome operations and management is developed and applied to day-to-day work at an aerodrome</p> <p>1.3 Compliance is maintained with the regulatory requirements and legal obligations that bind the operations and management of an aerodrome</p>
2 Comply with established industrial relations practices and requirements	<p>2.1 Sources of information on established industrial relations practices and requirements relevant to the aerodrome operations are identified and accessed in accordance with workplace procedures</p> <p>2.2 An understanding of the established industrial relations practices and requirements relevant to the aviation industry is developed and applied to day-to-day work at an aerodrome</p> <p>2.3 An understanding of the employer/employee obligations and responsibilities is developed and applied to day-to-day work at an aerodrome</p>
3 Comply with relevant local laws and regulations	<p>3.1 Customs and quarantine regulations and other pertinent regulations and local instructions relevant to the work activities of aerodrome personnel are correctly identified and appropriate action is taken in day-to-day work to ensure compliance where applicable</p> <p>3.2 Appropriate advice is provided to staff, passengers and visitors, contractors, airline operators and other personnel on compliance requirements of applicable regulations and other relevant local laws, when necessary</p> <p>3.3 Relevant documentation and reports are prepared and processed in accordance with workplace procedures and relevant regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory requirements pertaining to aerodrome operations and management
- Relevant workplace procedures and policies related to aerodrome safety, security, management and operations
- Relevant emergency procedures
- Aerodrome safety and security policies, principles and related guidelines, including policies and local instructions concerning Notices to Airmen (NOTAMs) and airside access, guidelines concerning runway visual range, policies/procedures related to works integrity at an aerodrome, policies/guidelines concerning manoeuvring area serviceability, and safety and security policies and procedures related to wildlife management
- Sources of information on relevant regulatory requirements
- The industrial award system
- The trade union system
- The concepts of arbitration and conciliation
- Principles of enterprise bargaining
- Employer/employee obligations and responsibilities
- Relevant industrial relations institutions, organisations and their functions
- Risks that exist when carrying out operational and/or management tasks at an aerodrome and related risk control procedures and precautions
- Problems that may occur when carrying out operational and/or management tasks at an aerodrome and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when applying relevant laws and regulations to the management of an aerodrome
- Read and interpret instructions, regulations, procedures and other information relevant to applying relevant laws and regulations to the management of an aerodrome
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to relevant laws and regulations to the management of an aerodrome
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when applying relevant laws and regulations to the management of an aerodrome
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

REQUIRED KNOWLEDGE AND SKILLS

- Promptly report and/or rectify any identified problems that may occur when applying relevant laws and regulations to the management of an aerodrome in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when applying relevant laws and regulations to the management of an aerodrome
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the application of relevant laws and regulations to the management of an aerodrome
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to apply relevant laws and regulations to the management of an aerodrome

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Management and operations may be carried out:	<ul style="list-style-type: none"> • at any aerodrome in Australia • in any allowable operating and weather conditions • in accordance with regulatory and operational requirements
Performance may be demonstrated:	<ul style="list-style-type: none"> • in approved simulated workplace situations • at an operational aerodrome
An understanding of the employer/employee obligations and responsibilities may include but is not limited to:	<ul style="list-style-type: none"> • aviation safety and security legislation • OH&S and environmental legislation • the trade union system • the industrial awards system • the concepts of arbitration and conciliation • specific relevant enterprise awards/agreements
Persons consulted may include:	<ul style="list-style-type: none"> • airline passengers • visitors to the aerodrome • contractors • other aerodrome personnel and managers • security personnel • safety personnel • relevant human resources staff • airline personnel and managers • emergency services personnel • union representatives • relevant technical staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> • relevant regulations • aerodrome standard operating procedures and instructions and job specifications • workplace policies • aerodrome safety and security policies, principles and related guidelines and documentation • OH&S and environmental protection regulations • operational, safety and service checklists and procedures

RANGE STATEMENT

Dependent upon context, applicable regulations and legislation may include, but are not limited to:

- local laws and regulations
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- Civil Aviation Act
- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to aerodrome operations and management
- relevant Australian Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to aerodrome operations and management
- IATA regulations
- local instructions and regulations
- aircraft navigation laws
- relevant security regulations
- relevant OH&S legislation
- relevant health, food handling and hygiene legislation
- equal opportunity and anti-discrimination legislation
- relevant customs and quarantine regulations
- relevant privacy regulations
- trade practices legislation
- state/federal/international liquor legislation
- insurance legal requirements
- relevant laws related to the consumption of alcohol and drugs
- relevant roads and transport regulations and license requirements
- relevant Australian Standards
- environmental protection legislation
- industrial relations and workplace compensation legislation

AVIF3016A Marshal aircraft

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to marshal aircraft during start/shutdown phases, by day and night, and to direct aircraft movements as ground personnel using standard aircraft marshalling signals. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and other relevant regulatory authorities.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision within organisational guidelines. Work may be conducted as part of a team.

This unit of competency is nominally packaged at Certificate III.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for marshalling	1.1 Arrival/departure information is received and processed in accordance with workplace procedures 1.2 Marshalling requirements for different aircraft types are determined and requirements are clarified where required 1.3 Personal protective equipment is selected and fitted 1.4 Occupational health and safety (OH&S) requirements and recognised safety precautions are applied throughout the operation 1.5 Allocated aircraft parking position is confirmed 1.6 Marshalling, aircraft parking and ancillary support equipment is selected and checked for serviceability 1.7 Relevant documentation is completed in accordance with workplace procedures
2 Establish/disestablish aircraft parking position	2.1 Marshalling, aircraft parking, and ancillary support equipment is positioned and used in accordance with manufacturers instructions and workplace procedures 2.2 Movement is conducted in a safe manner in accordance with workplace procedures 2.3 Environmental factors are monitored to ensure safety is maintained
3 Conduct aircraft marshalling	3.1 Special circumstances/procedures during aircraft marshalling are allowed for 3.2 Standard marshalling signals and/or communications are employed 3.3 Visual contact with the pilot, other aircrew and/or ground staff is maintained 3.4 Safety distances between aircraft and ground personnel/obstructions are identified and maintained 3.5 Emergency actions are conducted in the event of an aircraft fire or other incident, in accordance with workplace procedures 3.6 Aircraft is secured/unsecured in accordance with workplace procedures 3.7 Allowances are made for wind direction and velocity 3.8 Effects of rotor wash and/or engine thrust on personnel and unsecured objects are taken into consideration

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, legislation, organisational policy and procedures in relation to marshalling aircraft
- Aircraft danger zones
- Day and night marshalling signals
- Effects of wind on aircraft
- Landing/taking-off and starting of aircraft
- Marshalling, ground support and aircraft equipment selection and serviceability
- Procedures in the event of an aircraft fire, accident and emergency
- Aircraft operating restrictions in confined areas
- Security and access requirements
- Workplace procedures applicable to marshalling aircraft
- Manufacturers instructions for equipment used for marshalling aircraft
- Risks that exist when marshalling aircraft and related risk control procedures and precautions
- Problems that may occur when marshalling aircraft and appropriate action that should be taken in each case

Required skills:

- Implement aircraft security and access procedures
- Use standard hand signals
- Identify and correctly use marshalling and ancillary support equipment
- Communicate effectively with others when marshalling aircraft
- Read, interpret and follow instructions, regulations, procedures and other information relevant to marshalling aircraft
- Complete documentation related to marshalling aircraft
- Work collaboratively with others when marshalling aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when marshalling aircraft in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when marshalling aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when marshalling aircraft

REQUIRED KNOWLEDGE AND SKILLS

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self, others or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - preparing marshalling including selecting and fitting personal protective equipment
 - conducting movement in a safe manner in accordance with workplace procedures
 - monitoring environmental factors to ensure safety is maintained
 - employing standard marshalling signals and/or communications
 - maintaining visual contact and safety distances
 - conducting emergency actions in the event of an aircraft fire or other incident in accordance with workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or

EVIDENCE GUIDE

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Aircraft may include:	<ul style="list-style-type: none"> • fixed wing • in any weather conditions • other airborne vehicles
Marshalling operations may include:	<ul style="list-style-type: none"> • day and night • variable weather conditions • international, domestic and regional airports • helidecks
Marshalling context may include:	<ul style="list-style-type: none"> • start-up • shutdown • rotor engagement • taxiing • hover • hover taxiing • allocating and prioritising aircraft parking • parking
Arrival and departure information may include:	<ul style="list-style-type: none"> • formalised tasking information • informal tasking information for action in accordance with localised procedures • informal information received by other means such as hand signals, phone, facsimile, email, text message or radio communications regarding aircraft safety (e.g. hot brakes, fuel leak, security)
Marshalling requirements for different aircraft types may include:	<ul style="list-style-type: none"> • access • security
Personal protective equipment may include:	<ul style="list-style-type: none"> • eye goggles • head protection • hearing protection • high visibility clothing • protective overalls • protective boots • respiratory protection equipment
Marshalling equipment may include	<ul style="list-style-type: none"> • wands • paddles • flags • torches

RANGE STATEMENT

Aircraft parking equipment may include:

- covers and intake inserts (bungs)
- earthing leads
- flags
- magnetic pins
- mechanical locking devices
- tie-down devices
- wheel chocks

Ancillary support equipment may include:

- access/egress equipment
- external aircraft power facilities
- fire extinguisher
- first aid kit
- parking markers and barriers

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- Defence Instructions
- organisational policies
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures
- written and verbal instructions

Special circumstances/procedures may include:

- negative rotation
- power sources
- safety requirements e.g. fire bottle attendants
- aircraft with no prop or rotor brake
- installation of locking, protection or security devices
- undercarriage lock pins
- safety pin requirements for aircraft carrying ordnance

Emergency actions may include:

- basic fire fighting
- basic first aid
- crowd control
- aircraft evacuation procedures
- notifying emergency services

Standard marshalling signals include:

- standard hand signals
- International Civil Aviation Organization (ICAO) signals

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- operations manuals

RANGE STATEMENT

Applicable regulations and legislation may include:

- workplace procedures and instructions and job specification
- induction and training materials
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- relevant licence and aircraft requirements of the Civil Aviation Safety Authority such as:
 - Day VFR syllabus
 - Manual of Standards
- relevant Defence documentation such as:
 - Defence Orders and Instructions
- approved curricula and training documentation

Performance includes tolerances specified in either of:

Unit Sector(s)

Not applicable.

Competency field

Competency Field F - Safety Management

AVIF4001B Manage human factors in aircraft flight

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills, knowledge and attitudes required to manage human factors in aircraft flight including monitoring own performance, recognising errors and managing corrective action, and managing own physiological and psychological condition. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); Instrument Flight Rules (IFR); and aircraft control principles, regulations, safety codes, protocols and procedures relevant when managing human factors in aircraft flight.

Work involves the management of human factors before and during an aircraft flight as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Manage personal performance	<p>1.1 Pre- and post-flight personal condition is managed to ensure safe outcome of flight</p> <p>1.2 Own performance in flight is monitored against workplace standards, procedures and requirements</p> <p>1.3 Degradation of personal condition and/or limitations are recognised and appropriate strategies are implemented to ensure the safe outcome of a flight</p>
2 Recognise threats and errors, and manage preventative and corrective action	<p>2.1 Relevant environmental or operational threats that are likely to affect the safety of the flight are identified</p> <p>2.2 Countermeasures to manage threats are developed and implemented</p> <p>2.3 Flight progress is monitored and assessed to ensure a safe outcome, or actions are modified when a safe outcome is not assured</p> <p>2.4 Checklists and standard operating procedures are applied to prevent aircraft handling, procedural or communication errors; and committed errors are identified before safety is affected or aircraft enters an undesired aircraft state</p> <p>2.5 Aircraft systems, flight environment and crewmembers are monitored, and information is collected and analysed to identify potential or actual errors</p> <p>2.6 Countermeasures are implemented to prevent errors, or action is taken in the time available to correct errors before the aircraft enters an undesired aircraft state</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S procedures and regulations
- Human factors that may influence pilot performance during a flight
- Potential errors that may occur during a flight and procedures for taking appropriate preventative and corrective action
- Strategies for management of fatigue
- Aspects of lifestyle that may adversely influence a pilot's physiological/psychological condition and/or fatigue during a flight
- The adverse effects of alcohol and prescription and non prescription drugs and regulation concerning alcohol and drug use by pilots
- Effects of stress on pilot performance and ways of managing and controlling the various stressors that may impact on a pilot
- Explain how the use of checklists and standard procedures prevents errors
- Explain how prioritising and managing workload can reduce the commission of errors
- Requirements for reporting and documenting any safety incidents and safety critical errors that may have occurred during a flight
- An understanding of principles of threat and error management
- Recognition of undesired aircraft states

Required skills:

- Recognise threats and errors and take appropriate corrective action to avoid an undesired aircraft state
- Manage own physiological and psychological condition
- Manage and control stress before and during a flight
- Maintain compliance with relevant regulatory requirements including the avoidance of alcohol and drugs before and during a flight
- Monitor own performance before and during a flight
- Set priorities and manage workload to ensure safe task completion in the time available
- Manage aspects of lifestyle that may impact upon pilot performance
- Recognise signs of fatigue and apply appropriate fatigue management techniques
- Identify symptoms of deterioration in physiological/psychological condition and recognise signs of error that might endanger the safety of a flight and take appropriate corrective action

REQUIRED KNOWLEDGE AND SKILLS

- Apply relevant air safety practices and regulations
- Communicate effectively with others when managing human factors in aircraft flight
- Read and interpret instructions, regulations, procedures and other information relevant to managing human factors in aircraft flight
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to human factors in aircraft flight
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing human factors in aircraft flight
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when managing human factors in aircraft flight in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when managing human factors in aircraft flight
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the management of human factors in aircraft flight
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to manage human factors in aircraft flight

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Tasks may be undertaken in:	<ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules • VMC with simulated IMC • IMC
Performance may be demonstrated in:	<ul style="list-style-type: none"> • single engine aircraft • multi engine aircraft • synthetic training device approved by the appropriate authority • variable air traffic conditions • variable flight situations • abnormal situations • classes of airspace as designated by the Civil Aviation Safety Authority
Aircraft may include:	<ul style="list-style-type: none"> • fixed wing • helicopter • commercial balloons • other commercial or military aircraft
Crew may include:	<ul style="list-style-type: none"> • single pilot • multi crew
Instruments may be:	<ul style="list-style-type: none"> • fitted flight instruments • head up displays
Limitations may be imposed by:	<ul style="list-style-type: none"> • local noise abatement requirements and curfews • airspace endorsements
Classes of airspace may be:	<ul style="list-style-type: none"> • as designated by the regulator • restricted and danger areas • military control zones • Air Defence Identification Zones
Deterioration of physiological condition may result from such causes as:	<ul style="list-style-type: none"> • physical illness • injury • disease • fatigue • lack of oxygen due to cabin depressurisation or problems with air supply • deep vein thrombosis (DVT) and other potential physiological hazards of air flight
Deterioration of psychological	<ul style="list-style-type: none"> • mental illness

RANGE STATEMENT

condition may result from such causes as:

- grief
- trauma
- interpersonal conflict
- overwork
- anxiety
- uncontrolled stress
- secondary effects of illness, disease or injury

Causes of stress may include:

- emergency situations
- poor planning and prioritisation of tasks
- interpersonal conflict
- fear and anxiety
- lack of sufficient knowledge to adequately manage flight tasks and contingencies
- inability to carry out simultaneous multiple tasks
- time pressures
- weather conditions
- unfamiliar environments/situations
- illness

Types of errors may include:

- incorrect heading
- incorrect speed
- incorrect altitude
- incorrect rotation of aircraft
- incorrect rate of descent
- incorrect power relative to maintain speed and altitude
- incorrect bank in turn
- incorrect bank in descending turn
- incorrect approach speed
- incorrect turn onto nominal heading
- climb outside of allowable tolerances
- stalling of aircraft
- ballooning and bouncing upon landing
- excessive deviation from centerline during take-off or landing
- navigation errors
- misinterpretation of communications
- non compliance with instructions

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

RANGE STATEMENT

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to human factors and their effect on pilot performance
- civil Aviation Safety Regulations concerning limitations on drug and alcohol use by pilots
- in Defence context, relevant Defence Orders and Instructions
- Manual of Standards - Pilot Licensing (MOS-PL)
- Flight Manual/Pilot's Operating Handbook (POH)
- Aeronautical Information Publication (AIP)
- relevant sections of the Civil Aviation Advisory Publications (CAAP)
- performance charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to human factors and their effect on pilot performance
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant regulations limiting the use of drugs and alcohol by pilots
- relevant Australian Standards

Performance includes tolerances specified in either of:

- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
 - Day VFR Syllabus
 - Manual of Standards
- relevant Defence documentation such as:
 - Defence Orders and Instructions
 - approved curricula and training documentation

Unit Sector(s)

Not applicable.

Competency field

Competency Field F - Safety Management

AVIF4008A Supervise cabin safety and security

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to implement and maintain cabin safety and security standards and to respond to first aid situations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements of the Civil Aviation Safety Authority and other relevant regulatory authorities.

Work is performed under some supervision usually within a team environment.

It involves the application of cabin services supervision principles and procedures, regulations, safety codes and protocols to the provision of a range of services on commercial aircraft flights across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify, supervise and action emergency procedures	1.1 Emergency situation type is recognised and reported to appropriate personnel 1.2 Emergency procedures are actioned according to airline and regulatory requirements 1.3 Safety checks are implemented according to airline and regulatory requirements
2 Assess and respond to emergency first aid situations	2.1 Emergency first aid situations are quickly recognised and reported to appropriate personnel 2.2 The first aid situation is assessed and a prompt decision is made following liaison with appropriate personnel and/or crew 2.3 Appropriate assistance from emergency services/colleagues/customers is organised
3 Provide appropriate treatment	3.1 Assessment of patient's physical condition from visible vital signs is undertaken in liaison with appropriate personnel and/or crew 3.2 First aid is provided, in accordance with airline policy
4 Monitor the situation	4.1 Back-up medical or emergency services appropriate to the situation are notified in liaison with appropriate personnel and/or crew 4.2 Situation is constantly monitored and appropriate adjustments to service are made
5 Respond to incidents which affect the safety and security of passengers and crew	5.1 Appropriate incident handling techniques according to the type of incident are used according to regulatory requirements and airline policy and procedure
6 Maintain safety and security records	6.1 All required documentation relating to safety, security and first aid incidents is accurately completed and provided to the relevant department 6.2 Feedback to improve safety and security processes is provided to appropriate personnel

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to emergency procedures
- Relevant OH&S regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Airline structure, products, policies, procedures and service standards
- Use of cabin medical equipment
- Individual crew responsibility
- Airline emergency procedures
- Relevant airline divisional business plans
- Needs and expectations of different types of customers, including internal and external customers
- Customer service records/documentation
- Appropriate service for customers with a range of disabilities and special needs
- Cabin features and amenities for various types of aircraft
- Features, amenities and departure gate locations of terminals at designated airports
- Risks that exist when providing customer service to passengers on aircraft flights and related risk control procedures and precautions
- Problems that may occur when providing customer service to passengers on aircraft flights and appropriate action that should be taken in each case
- Complaint handling procedures
- Service quality and continuous improvement principles
- Airline leadership principles

Required skills:

- Communicate effectively with others when providing leadership and supervising cabin safety and security
- Read and interpret instructions, regulations, procedures and other information relevant to cabin supervision, safety and security
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to cabin supervision, safety and security
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when supervising cabin safety and security
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and

REQUIRED KNOWLEDGE AND SKILLS

interactions with others

- Use medical equipment appropriately as per manufacturers instructions and airline policy
- Promptly report and/or rectify any identified problems that may occur when supervising cabin safety and security in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when supervising cabin safety and security
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when supervising cabin safety and security
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S and security procedures according to relevant regulations
- Identify and correctly use equipment required when supervising cabin safety and security

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Supervision of cabin safety and security may be provided:	<ul style="list-style-type: none"> • by day or night • on international, domestic and regional flights or at airports • for both short and/or long haul services • in any category of service, including economy, business class, first class • in accordance with enterprise, operational and regulatory requirements
Cabin security incidents may include but are not limited to:	<ul style="list-style-type: none"> • aggressive or violent customers • intoxicated customers • incidents at slip ports • industrial disputes affecting crew
Performance may be demonstrated:	<ul style="list-style-type: none"> • in an appropriately simulated workplace situation • at an operational airport
Types of emergencies may include but are not limited to:	<ul style="list-style-type: none"> • fire • evacuation • hijack • injury to or illness of crew or customer
Persons consulted may include:	<ul style="list-style-type: none"> • other cabin crew and flight crew members • ground staff • catering staff • aircraft resourcing staff • technical staff • security staff • emergency services staff
Emergency equipment may include but is not limited to:	<ul style="list-style-type: none"> • fire fighting equipment • oxygen equipment • first aid equipment • general safety equipment
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • local instructions
Information/documents may	<ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to emergency procedures

RANGE STATEMENT

include:

- airline boarding manifests, procedures and instructions and job specifications including both manual and computerised processes where applicable
- workplace supervision and customer service standards, policies and procedures
- lists of items prohibited for carriage on aircraft
- cabin operations, customer service and other operational manuals
- emergency procedures
- flight passenger schedules
- information on terminal facilities, club lounges and departure gates
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- Cabin Crew Feedback Form
- incident handling reports
- injury to personnel forms
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- relevant OH&S legislation
- environmental protection legislation
- equal opportunity and anti-discrimination legislation
- dangerous goods and hazardous substances codes and regulations
- relevant customs and quarantine regulations
- relevant Australian standards
- industrial relations and workplace compensation legislation

Applicable regulations and legislation may include:

Unit Sector(s)

Not applicable.

Competency field

Competency Field

F - Safety Management

AVIF5003B Manage human performance and team resources during air traffic control operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to manage human performance and team resources during air traffic control operations. This includes maximising personal performance in the air traffic control (ATC) workplace by minimising human error, working effectively and providing leadership within a team, and monitoring and managing behaviour influenced by psychological and physiological factors. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

This unit will prepare the operator to monitor their performance, manage human error and deal with external threats to operational services such as weather, emergencies, reduced airways facilities and degraded modes of operation. It also prepares the operator to work within an ATC team with the necessary duty of care, work ethic and the efficient use of resources.

Work must be carried out in compliance with relevant air traffic services regulatory requirements of the Civil Aviation Safety Authority.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under various levels of supervision dependent on workplace context, and in a team environment. Team performance is as important as individual performance.

Operations are undertaken across a variety of operational contexts within the Australian aviation industry.

Work is performed by air traffic control staff who are both technically competent and aware of the human factors involved while working in complex systems such as ATS. Human factors will not replace technical competence but will complement specialist knowledge, skills and attitudes. Training in the technical specialty and in human factors will provide the system's imperative for total interaction.

An inevitable consequence of human-operated systems and work is that human error will occur randomly. The nature of these errors will differ according to the environment in which they are made. In aviation, which is generally considered to be a stable environment, errors are likely to result from a normal variation in human performance - from acceptable to good and poor - and will form a normal distribution. Errors can involve practices that omit critical procedural steps and attempts to generalise situations that are significantly different.

This unit is packaged at Diploma level.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Maximise personal performance

- 1.1 Factors affecting personal human performance are monitored and managed
- 1.2 Appropriate assertiveness is used
- 1.3 Personal workload is regulated by prioritising work tasks
- 1.4 Human-machine Interface (HMI) is optimised to enhance human performance
- 1.5 Aeronautical decision-making techniques are practised to improve overall performance
- 1.6 Appropriate work ethic is practised
- 1.7 Where an identified loss of personal performance is attributable to health or other uncontrollable causes, and may prejudice the safety of personnel and/or aircraft, the situation is reported and appropriate emergency action is taken

2 Manage error

- 2.1 Error prevention techniques are practised
- 2.2 Errors are recognised and rectified
- 2.3 Undesired states resulting from errors are recovered
- 2.4 Personal responsibility for the commission of any errors is acknowledged and accepted

3 Participate as a team member

- 3.1 Roles and responsibilities of others are considered
- 3.2 Duty of care is practised
- 3.3 Factors affecting the human performance of others are monitored
- 3.4 Situational leadership and followership skills are practised to increase team output
- 3.5 Team behaviours are practised to improve group performance

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations
- Relevant OH&S procedures and regulations
- Psychological factors affecting human performance including stress, workload, situation awareness, information processing, fatigue, vigilance, decision making and attention; and the management of these factors
- Physiological factors affecting human performance including effects of hypoxia; use of medication and/or drugs including alcohol; sleep; vision and auditory limitations; and the management of these factors
- Incident and accident causation models, including Reason and SHELL
- Teamwork and synergy, including team resource management
- Principles and practices for leadership and followership within work teams
- Threat and error management
- HMI setup to enhance performance
- Duty of care principles and application in the air traffic services workplace
- Just culture policy and principles including individual and organisational accountabilities surrounding the reporting and investigation of ATS attributable safety occurrences
- Organisational structure, culture and business aims
- Medical requirements for an air traffic controller licence, including responsibilities for fitness for duty
- Refresher or recurrent training requirements to maintain competency
- Recency and currency requirements
- Fatigue management systems and the effects of shift work
- Regulatory requirements covering length of shift and break requirements
- Aeronautical decision-making techniques

Required skills:

- Actively listen when managing human performance and team resources during air traffic control operations
- Acknowledge, inquire and observe in the course of managing human performance and team resources during air traffic control operations
- Read and interpret instructions, regulations, procedures and other information relevant to the management of human performance and team resources during air traffic control operations
- Process information by sampling all information inputs; perceiving, comprehending and

REQUIRED KNOWLEDGE AND SKILLS

projecting that information; making decisions; implementing the decisions through control actions; and monitoring the outputs including making fine adjustments as necessary

- Communicate in a team by exchanging information through assigning responsibility, acknowledgment, inquiring, and by recognising and noting facts that create team rapport and enhance team outputs
- Request assistance from others when required
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when managing human performance and team resources during air traffic control operations in accordance with regulatory requirements and workplace procedures
- Adhere to procedures through a series of steps followed in a regular definite order or a traditional or established way of doing things when this is required
- Judge and form an opinion or evaluate situations by discerning and comparing information
- React to some form of treatment or stressful situation by a considered and measured response in a timely fashion
- Take action to mitigate the effects of external threats to personal performance such as weather, terrain, traffic volume, emergencies and abnormal situations through sound control practices, procedures and techniques and personal limitations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Use an appropriate level of assertiveness during air traffic control operations
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Be receptive to training for the skills, knowledge, or experiences acquired or gained over a career
- Implement OH&S procedures and relevant regulations
- Apply human reasoning to airspace and flight path scenarios
- Allocate attention according to demand and constantly switch between: managing the Human-machine Interface or equipment use; managing communications; and managing traffic

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|--|--|
| Operations may be conducted: | <ul style="list-style-type: none">• by day and night in variable weather conditions that will be associated with particular psychological and/or physiological limitations to performance |
| Performance may be demonstrated in: | <ul style="list-style-type: none">• simulated air traffic control situations• an operational air traffic control environment through a range of real or simulated problem-based scenarios at air traffic service operational units and/or aerodrome control towers |
| Acute stress is: | <ul style="list-style-type: none">• stress suffered in the short term |
| Chronic stress is: | <ul style="list-style-type: none">• stress suffered over a long period of time. Chronic stress must be treated clinically or it might lead to medical conditions that render a person incapable of performing ATS duties |
| Air traffic control operations may be conducted: | <ul style="list-style-type: none">• in both normal and emergency/abnormal situations leading to some stress related behaviours |
| Air traffic control workplace may be a workstation in: | <ul style="list-style-type: none">• Area Control• Approach Control• Aerodrome Control |
| Deterioration of physiological condition may result from such causes as: | <ul style="list-style-type: none">• physical illness• injury• disease• fatigue• poor posture• lack of rest• substance abuse (e.g. drugs and alcohol)• other potential physiological hazards of prolonged sedentary activity |
| Deterioration of psychological condition may result from such causes as: | <ul style="list-style-type: none">• mental illness• grief• trauma• interpersonal conflict• overwork• anxiety• uncontrolled stress• psychological effects of substance abuse (e.g. drugs and alcohol) |

RANGE STATEMENT

Causes of stress may include:	<ul style="list-style-type: none">• secondary effects of illness, disease or injury• emergency situations• poor planning and prioritisation of tasks• interpersonal conflict• fear and anxiety• insufficient knowledge to adequately manage tasks and contingencies• inability to carry out simultaneous multiple tasks• time pressures• weather conditions• unfamiliar situations• illness
Errors are made:	<ul style="list-style-type: none">• either unintentionally or intentionally and need to be managed
Intentional errors are termed:	<ul style="list-style-type: none">• violations, and are underpinned by cultural and attitudinal factors. The remedial strategies to address intentional error are different to those addressing unintentional error. Intentional error or violation can be treated by addressing motivation, shifting culture and beliefs and/or reviewing the construction of written procedures to improve understanding and application such that workaround tactics are not necessary
Unintentional error is treated by:	<ul style="list-style-type: none">• training to improve competence through increased knowledge and practice, recency, improved communication and decision-making ability
Threat and error management categorises error into:	<ul style="list-style-type: none">• intentional non-compliance (violations)• procedural error (operational deviation)• communication error (miscommunications or lack thereof)• proficiency-based error (lack of recency or currency)• operational decision error (flawed decision-making processes)
Intentional non-compliances involve:	<ul style="list-style-type: none">• a wilful deviation from regulation and/or operator procedures and might include using non-standard phrases (when standard phrases are available) or conducting checklists from memory
Procedural errors are:	<ul style="list-style-type: none">• unintentional operating deviations from regulations and/or operator procedures in which the intention is correct but the execution is flawed
Communication errors include:	<ul style="list-style-type: none">• miscommunications, incorrect interpretations, or failure to communicate pertinent information. Typically in ATS this might involve failure to read back and hear back correct instructions

RANGE STATEMENT

- Proficiency errors involve:
- a deficiency of knowledge or skills in the application of ATS duties. This might involve insufficient knowledge of ATS systems and equipment to produce a safe and efficient air traffic service
- Operational decision errors result from:
- a non-standard decision making process and might include ignoring a more conservative option for a risky decision, taking a decision and not communicating this, or not effectively using the available time to make a decision. Decisions made in teams might be affected by group think
- Teamwork in an air traffic control environment includes:
- coordinating operational information with the wider air traffic services community. The concept of a team should be extended beyond the immediate working team to include adjacent sectors and pilots within the jurisdiction airspace. This wider concept of teamwork will improve synergies and increase effectiveness and efficiencies. The immediate working team should exhibit shared situation awareness. For example, the Terminal Control Area (TMA) team will know the runway mode/Automatic Terminal Information Service regardless of the endorsed position worked
- Aeronautical decision making (ADM) enhances:
- the basic concept of the conventional decision-making process by providing a structured and systematic approach to analysing changes. This includes an awareness of the importance of attitudes in the decision-making process; the need to assess alternatives; the ability to seek and consider all relevant information; the motivation to consider alternatives and to action the least commercially desirable but safest strategy. Furthermore, the time constraints that often characterise the nature of safety critical decisions also form an integral part of the ADM process
- Operators have a duty of care to:
- take reasonable care to give all instructions and advice as is necessary to promote the safety of aircraft within the ATC area of responsibility. In practical terms this includes the obligation to comply with the operational responsibilities contained in operator s manuals and any other relevant instructions. The duty of care also includes an obligation to: (a) provide information that is accurate and not misleading, (b) warn of known hazards and (c) warn of potential hazards
- Situational leadership is:
- is the skill needed to influence other members of the team and external people by using local knowledge and conditions. Situational leadership might exist in a position offered by the organisation. Furthermore, this type of leadership might exist only within certain situations that

RANGE STATEMENT

	require a particular skill or knowledge as in a particular type of emergency
Followership is important in the evaluation of team performance, the efficient use of team resources and improving team outputs, and is exhibited by:	<ul style="list-style-type: none"> • being non-reactive • offering information • making particular suggestions • offering constructive criticism • solving confrontation and conflict
Team behaviours will involve and should manifest as:	<ul style="list-style-type: none"> • interaction between members with high levels of communication • cohesion and team spirit resulting in high morale • high productivity • high levels of energy • common and purpose-centred team activity • shared responsibility and rewards within the team • regular monitoring of team s performance by all members
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • regulatory standards and recommended practices
Information/documents may include:	<ul style="list-style-type: none"> • training curricula and syllabi • Civil Aviation Safety Authority (CASA) regulations and Manuals of Standards (MOS) • Local Instructions (LI) and Temporary Local Instructions (TLI) • equipment manufacturers specifications and instructions • Manual of Air Traffic Services (MATS) • Aeronautical Information Publication (AIP) • workplace procedures, instructions • Training Standards Manual (TSM) • ICAO Document 4444, ATM/501, Procedures for Air Navigation Services, Air Traffic Management • occupational specification for air traffic controllers • industrial certified agreements and awards • training and assessment records • documented learning and assessment strategies
Applicable regulations and legislation may include:	<ul style="list-style-type: none"> • International Civil Aviation Organization (ICAO) Standards and Recommended Practices (SARP) • Civil Aviation Safety Regulations (CASR) and Manuals of Standards (MOS) • relevant Defence Orders and Instructions

RANGE STATEMENT

- Airservices Act (Cth) 1995
- OH&S Legislation (state and federal)
- Civil Aviation Act (Cth) 1988 and the Civil Aviation Amendment Act 1995

AVIF5013A Provide SAR alerting and emergency service

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit provides the knowledge and an inventory of skills required to alert appropriate authorities to the need for search and rescue (SAR) action, and to provide the necessary assistance to aircraft in abnormal or emergency situations that helps to resolve such situations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with relevant air traffic services regulatory requirements of the Civil Aviation Safety Authority.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under various levels of supervision, dependent on workplace context, and might be in a team environment.

By providing SAR alerting and emergency service to aircraft. The goal of which is to assist in the resolution of the emergency situation. The possible outcomes of the emergency situation are that the aircraft will land safely or an aircraft accident occurs. If an accident occurs, the emergency situation is transferred to the relevant search and rescue organisation for rescue.

This unit of competency is packaged at Diploma level.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Provide search and rescue alerting	<ul style="list-style-type: none">1.1 Search and rescue information is coordinated and/or relayed1.2 Critical event times for search and rescue alerting are monitored and actioned1.3 Appropriate emergency phase is declared when required1.4 Search and rescue information and/or actions are appropriately recorded
2 Provide emergency service	<ul style="list-style-type: none">2.1 Critical initial actions are carried out in accordance with emergency plans and checklists2.2 Appropriate emergency phase is declared in accordance with standard operating procedure2.3 Overt or covert response to emergencies or unusual situations is provided using standard operating procedure2.4 Emergency or abnormal situations are coordinated and transferred to other responsible units when necessary2.5 Emergency situations are recorded and/or logged and events reported in accordance with emergency plans and/or standard operating procedure2.6 Priority service is provided to emergency situations2.7 Aircraft separation is maintained during emergency and/or abnormal situations2.8 Critical information is relayed to emergency aircraft and updated2.9 Standard emergency phraseologies are used

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations
- Relevant OH&S and environmental procedures and regulations
- Principles of effective air traffic control
- Search and rescue organisations and infrastructures
- Jurisdictions related to the search and rescue of different aircraft operations
- SARTIME and SARWATCH criteria
- Emergency aviation phases and criteria and declaration
- Emergency services, IFER management process, IFER roles and responsibilities, IFER techniques, IFER resource management and intercept and escort
- Emergency communications
- Emergency checklists and documentation
- Emergency and abnormal HMI indications including alarms and alerts
- Emergency separation standards
- Aerodrome emergency plan (AEP)
- Types of in-flight emergencies including unlawful interference, general aircraft failures and problems, landing, pilot incapacitation, military emergencies, uncertain of position, VFR emergencies, emergencies declared by data link
- Fuel jettison during emergency and practice including ATS response for practice jettison

Required skills:

- Communicate effectively with others when providing SAR alerting and emergency service
- Actively listen
- Declare emergency phases
- Communicate clearly and concisely using standard and non-standard phrases to emergency aircraft
- Use overt and covert emergency messages, phrases and signals
- Use management communication with emergency traffic and other aircraft
- Perceive incoming information associated with strategic, tactical, geographic, spatial, system and environment components of a complex system
- Comprehend incoming information and develop the current airspace and flight path model
- Read and interpret instructions, regulations, procedures and other information relevant to the provision of SAR alerting and emergency service

REQUIRED KNOWLEDGE AND SKILLS

- Interpret and follow operational instructions and prioritise work
- Coordinate emergency and/or abnormal related information
- Use checklists and other documentation
- Provide navigational and traffic information to the pilot during emergencies and unusual situations
- Complete documentation related to the provision of SAR alerting and emergency service including the recording of emergency and/or abnormal flight related information
- Operate electronic communication equipment to required protocol
- Provide leadership and work collaboratively with others when providing SAR alerting and emergency service
- Communicate in a team by exchanging information through assigning responsibility, acknowledgment, inquiring, and by recognising and noting facts that create team rapport and enhance team outputs
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when providing SAR alerting and emergency service in accordance with regulatory requirements and workplace procedures
- Judge and form an opinion or evaluate situations by discerning and comparing information
- Make decisions relevant to the provision of SAR alerting and emergency service
- Conduct aeronautical decision making
- Implement decisions using knowledge-based, rule-based and skill-based activities
- Demonstrate temperament reflecting a calm, composed and cooperative characteristic and emotional response under challenging situations
- React to some form of treatment or stressful situation by a considered and measured response in a timely fashion
- Implement contingency plans for unexpected events that may arise when providing SAR alerting and emergency service
- Maintain air traffic services to other traffic during emergencies and unusual flights
- Anticipate and prepare for work tasks
- Project and develop future airspace and flight path scenarios
- Maintain a strategic traffic management goal for the jurisdiction airspace
- Initiate emergency actions
- Monitor critical search and rescue event times
- Provide priority service to emergency aircraft
- Apply emergency separation and restore normal separation
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when providing SAR alerting and emergency service
- Demonstrate an attitude to error management that limits unintentional deviation from work

REQUIRED KNOWLEDGE AND SKILLS

practices and maintains accuracy through application of disciplined procedures and practices and a methodical work ethic

- Monitor and anticipate operational problems and hazards and take appropriate action
- Regulate workload in emergency situations
- Adhere to procedures through a series of steps followed in a regular definite order or a traditional or established way of doing things when this is required
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to aircraft or equipment
- Adapt to differences in aircraft, equipment and operating environment in accordance with standard operating procedures
- Be receptive to training for the skills, knowledge, or experiences acquired or gained over a career
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when providing SAR alerting and emergency service
- Apply human reasoning to airspace and flight path scenarios
- Allocate attention according to demand and to constantly switch between: managing the Human-machine Interface (HMI) or equipment use; managing communications; and managing traffic

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|---|
| Emergency situations can occur: | <ul style="list-style-type: none"> • in flight and on the ground. The assistance provided by air traffic services aims to resolve the emergency situation to achieve a favourable outcome. Generally, this will involve in-flight emergency responses and/or the activation of aerodrome emergency plans |
| Performance may be demonstrated in: | <ul style="list-style-type: none"> • simulated situations, and/or • an operational air traffic control workplace |
| Air traffic control workplace may be a workstation in : | <ul style="list-style-type: none"> • Area Control • Approach Control • Aerodrome Control |
| The requirements of the management of the emergency are that : | <ul style="list-style-type: none"> • during an emergency the ATS officer actively controlling the airspace should not manage the emergency response • ATS officers should be familiar and understand the work pressures involved in piloting an aircraft during an emergency • air traffic services provided to aircraft under normal operations while dealing with an emergency should be appropriately managed by transferring jurisdiction to other ATS units if appropriate • initial actions and response during an emergency should attempt to stabilise the situation. Reference to workplace checklists is recommended • types of emergency will include unlawful interference, general aircraft failures and problems, landing, pilot incapacitation, military emergencies, uncertain of position, VFR emergencies, emergencies declared by data link. Fuel jettison might be required during emergencies, creating possible environmental damage. At times, aircraft might also include a request to ATS for practising fuel jettison. Regulations and organisational advice should be followed in the case of such a request • if the aircraft in the emergency situation will leave the area of jurisdiction, every attempt should be made to retain the aircraft on the original communication frequency for as long as possible to provide consistency of service and to relieve pilot workload |
| Dependent on the type of organisation concerned and the local terminology used, workplace | <ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures |

RANGE STATEMENT

procedures may include:

- established procedures
- standard operating procedures
- regulatory standards and recommended practices

Information/documents may include:

- relevant Civil Aviation Safety Authority (CASA) regulations and Manuals of Standards (MOS)
- Local Instructions (LI) and Temporary Local Instructions (TLI)

- training curricula and syllabi
- equipment manufacturers specifications and instructions
- Manual of Air Traffic Services (MATS)
- Aeronautical Information Publication (AIP)
- workplace procedures, instructions
- Training Standards Manual (TSM)
- ICAO Document 4444, ATM/501, Procedures for Air Navigation Services, Air Traffic Management
- occupational specification for air traffic controllers
- industrial certified agreements and awards
- training and assessment records
- emergency reference manuals, guides and checklists
- documented learning and assessment strategies

Applicable regulations and legislation may include:

- International Civil Aviation Organization (ICAO) Standards and Recommended Practices (SARP)
- Civil Aviation Safety Regulations (CASR) and Manuals of Standards (MOS)
- relevant Defence Orders and Instructions
- Airservices Act (Commonwealth) 1995
- OH&S Legislation (state and federal)

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| 1 Demonstrate initiative | 1.1 Specified work tasks are correctly interpreted
1.2 Specified work tasks are completed within the formal requirements of job safety
1.3 Additional tasks are carried out, if directed, or if required to maintain operational safety
1.4 Appropriate initiatives consistent with the limits of responsibility are taken in abnormal or unusual situations to maintain operational safety |
| 2 Conform to a professional code of conduct | 2.1 Professional code of conduct is understood and correctly interpreted in terms of own work role and functions
2.2 Own air traffic control work role and functions are carried out in accordance with identified elements of the professional code of conduct |
| 3 Support organisational objectives | 3.1 Organisational objectives are correctly understood and appropriately interpreted in terms of own work role and functions
3.2 Own controller work role and functions are carried out in a manner consistent with the identified organisational objectives and relevant regulatory requirements |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental protection procedures and regulations
- Principles of effective air traffic control
- Workplace procedures applicable in air traffic control services
- Relevant sections of the air traffic procedures manual and local instructions
- Code of conduct for air traffic controllers
- Safety hazards and risks that exist when using air traffic control communications procedures and related risk control procedures and precautions
- Problems that may occur when using air traffic control communications procedures and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when working professionally in an air traffic control workplace
- Actively listen when working in an air traffic control workplace
- Read and interpret instructions, regulations, procedures and other information relevant to an air traffic control workplace
- Interpret and follow operational instructions and prioritise work
- Perceive incoming information associated with strategic, tactical, geographic, spatial, system and environment components of a complex system
- Comprehend incoming information and develop the current airspace and flight path model
- Complete documentation related to working professionally in an air traffic control workplace
- Provide leadership and work collaboratively with others when working professionally in an air traffic control workplace
- Communicate in a team by exchanging information through assigning responsibility, acknowledgment, inquiring, and by recognising and noting facts that create team rapport and enhance team outputs
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when working professionally in an air traffic control workplace in accordance with regulatory requirements and workplace procedures
- Demonstrate temperament reflecting a calm, composed and cooperative characteristic and emotional response under challenging situations

REQUIRED KNOWLEDGE AND SKILLS

- Make decisions related to the prioritising of tasks and the projection of and planning for traffic and environmental events
- Conduct aeronautical decision making
- Project and develop future airspace and flight path scenarios
- Maintain a strategic traffic management goal for the jurisdiction airspace
- Adhere to procedures through a series of steps followed in a regular definite order or a traditional or established way of doing things when this is required
- Implement contingency plans for unexpected events that may arise when working professionally in an air traffic control workplace
- Judge and form an opinion or evaluate situations by discerning and comparing information
- React to some form of treatment or stressful situation by a considered and measured response in a timely fashion
- Apply precautions and required action to minimise, control or eliminate hazards that may exist in an air traffic control workplace
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Be receptive to training for the skills, knowledge, or experiences acquired or gained over a career
- Implement OH&S procedures and relevant regulations
- Be confident but not complacent or reliant on automation and technology, and readily apply human reasoning to airspace and flight path scenarios
- Allocate attention according to demand and to constantly switch between: managing the Human-machine Interface (HMI) or equipment use; managing communications; and managing traffic

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be completed:	<ul style="list-style-type: none"> • by day or night • in variable weather conditions
Performance may be demonstrated in:	<ul style="list-style-type: none"> • simulated work situations, and/or • an operational air traffic control workplace
Air traffic control workplace may be a workstation in:	<ul style="list-style-type: none"> • Area Control • Approach Control • Aerodrome Control
Professionalism is reflected in the way in which:	<ul style="list-style-type: none"> • the controller approaches his/her work. In particular, the controller must demonstrate ethical behaviour and acceptance of responsibility at all times
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures • regulatory standards and recommended practices
Information/documents may include:	<ul style="list-style-type: none"> • training curricula and syllabi • relevant sections of Civil Aviation Safety Regulations • relevant CASA Manuals of Standards (MOS) • air traffic control Local Instructions (LI) and Temporary Local Instructions (TLI) • Manual of Air Traffic Services (MATS) • Aeronautical Information Publication (AIP) • Training Standards Manual (TSM) • ICAO Document 4444, ATM/501, Procedures for Air Navigation Services, Air Traffic Management • workplace procedures and instructions • occupational specification for air traffic controllers • equipment manufacturers specifications and instructions • induction and training materials • conditions of service, legislation and industrial agreements including workplace agreements and awards • training and assessment records • operator s handbook and system manuals • documented learning and assessment strategies

AVIH3002B Advise on major services and attractions at aviation destinations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to advise on major services and attractions at aviation destinations, including researching information about airline destinations and responding appropriately to passenger requests for information on relevant aspects of airline flight destinations, including referring the passenger to appropriate sources of information. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with relevant workplace procedures and policies.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of customer service principles and procedures and appropriate research methods when responding to requests from passengers for information on aspects of major services, culture and attractions at aviation destinations across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Research information about airline destinations	<p>1.1 Appropriate sources of information about airline destinations for relevant routes are identified in accordance with workplace procedures</p> <p>1.2 Appropriate reference material is accessed from identified sources and organised in a form suitable for use when responding to passenger requests on aspects of airline destinations in accordance with workplace procedures and expectations</p> <p>1.3 Appropriate persons are consulted for advice and assistance in researching information about airline destinations</p>
2 Respond to requests for information on airline destinations	<p>2.1 Requests for information about airline destinations are courteously received and interpreted in accordance with workplace procedures</p> <p>2.2 Where appropriate, accurate, current and relevant information about airline destinations is provided at a level/depth appropriate to the passenger's needs</p> <p>2.3 Where a response cannot be immediately provided to a passenger's request, either assistance and advice is sought from other appropriate airline personnel or the passenger is courteously referred to appropriate sources where they may be able to obtain the required information</p> <p>2.4 Information is presented in a manner which shows sensitivity to both host and visiting cultures</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S, hygiene and environmental procedures and regulations
- Principles of customer service
- Airline procedures and standards for responding to requests from passengers for information on aspects of airline destinations
- Relevant information on pertinent aspects of airline destinations on specific routes
- Sources of information on pertinent aspects of airline destinations on specific routes and ways and means of accessing information from those sources
- Problems that may occur when responding to passengers' requests for information on aspects of airline destinations and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when advising on major services and attractions at aviation destinations
- Read and interpret instructions, regulations, procedures and other information relevant to major services and attractions at aviation destinations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to major services and attractions at aviation destinations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when advising on major services and attractions at aviation destinations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when advising on major services and attractions at aviation destinations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when advising on major services and attractions at aviation destinations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when advising on major services and attractions at aviation destinations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or

REQUIRED KNOWLEDGE AND SKILLS

damage to goods or equipment

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to advise on major services and attractions at aviation destinations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Responses to requests for information on aspects of destinations may be provided:	<ul style="list-style-type: none"> • on any aircraft type in commercial service • during short and/or long haul services • in any category of service, including economy, business and first class • in any allowable operating and weather conditions • in accordance with regulatory, enterprise and operational requirements, including OH&S regulations
Performance may be demonstrated:	<ul style="list-style-type: none"> • in an approved cabin service simulator • in a suitably simulated work environment • on a passenger-carrying aircraft
Sources of information on aspects of airline destinations may include:	<ul style="list-style-type: none"> • airline product information • tourism brochures • information provided by diplomatic embassies and consulates • authoritative travel books and journals dealing with specific countries and locations • travel agents • tourist information bureaus and agents at destination points • government tourism offices at destination points • authoritative encyclopedias and other relevant reference books • appropriate websites on the internet
Information that may be requested by passengers about airline destinations may include:	<ul style="list-style-type: none"> • transport • public holidays • currency and exchange rates • accommodation options • customs and immigration requirements • education • major tourist areas • sports • food • general lifestyle and customs • shopping • tipping • geographic features • history

RANGE STATEMENT

	<ul style="list-style-type: none"> • Australian aboriginal culture • government and politics • economy • natural history • culture
Persons consulted to enable appropriate responses to requests from passengers for information on major services and attractions at aviation destinations may include:	<ul style="list-style-type: none"> • passengers • other cabin crew and flight crew members • tourism and travel agencies • ground staff • relevant government agencies and diplomatic embassies/consulates • librarians
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> • relevant regulatory requirements • airline procedures and instructions and job specification • airline customer service procedures • airline product information • tourism brochures • airline and tourism videos and audio-visual information resources • information provided by diplomatic embassies and consulates • authoritative travel books and journals dealing with specific countries and locations • authoritative encyclopedias and other relevant reference books • induction and training materials • conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:	<ul style="list-style-type: none"> • relevant regulatory requirements pertaining to the provision of customer service on aircraft • equal opportunity and anti-discrimination legislation • relevant OH&S regulations • industrial relations and workplace compensation legislation

Competency field

Competency Field	H - Route Planning and Navigation
-------------------------	-----------------------------------

AVIH4001B Navigate aircraft - VFR

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to navigate an aircraft including completing pre-flight planning; obtaining, acting on and complying with air traffic information and clearances; departing from and arriving at an aerodrome; navigating under normal and abnormal conditions; and carrying out emergency procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures related to the navigation of an aircraft.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare chart and flight plan	1.1 Charts suitable for the intended flight are selected and prepared 1.2 Applicable information is obtained, analysed and applied to produce a flight plan which details tracks, distances, times and fuel requirements to reach a destination 1.3 Pre-flight planning is used to minimise in-flight navigational work load 1.4 A decision to proceed with the cross country flight is made after analysis of meteorological and air traffic control conditions 1.5 Hazards are marked on charts where applicable
2 Comply with airspace procedures	2.1 Air traffic clearances are obtained and compliance with them is maintained 2.2 Compliance is maintained with airspace procedures 2.3 Controlled airspace is only entered with a clearance 2.4 Traffic separation is maintained
3 Conduct departure procedures	3.1 Pre-flight planning and cockpit organisation is conducted to ensure charts, documentation and navigational equipment are accessible from the control seat 3.2 Departure administration and communication is conducted 3.3 Track is intercepted within five nautical miles of airfield and departure time is recorded 3.4 Orientation is always maintained 3.5 Priority is given to controlling the aircraft before conducting navigation administration or communication 3.6 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and terrain 3.7 Local and published noise abatement requirements and curfews are observed
4 Navigate aircraft en route	4.1 Planned route is maintained in accordance with regulatory requirements and procedures 4.2 In-flight documentation and communication is completed in accordance with regulatory requirements and workplace procedures 4.3 Estimated Time of Arrivals (ETAs) are checked and revised as required 4.4 Fuel consumption is monitored and reserves are revised 4.5 Pre-descent or navigation turning point checks are executed 4.6 A navigation cycle which ensures accurate navigation is used 4.7 Separation with air traffic is maintained 4.8 Emphasis is placed on controlling the aircraft before conducting

ELEMENT

PERFORMANCE CRITERIA

- navigation administration or communication
- 4.9 Deteriorating meteorological and navigation situations are recognised and early corrective action is taken
- 4.10 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and terrain
- 5 Navigate at low level and in reduced visibility**
- 5.1 Compliance with Visual Flight Rules (VFR) is maintained during navigation at low level or in reduced visibility
- 5.2 Pre-descent and/or navigation turning point checks are executed in accordance with regulatory requirements
- 5.3 Planned route is maintained in accordance with regulatory requirements and procedures
- 5.4 In-flight documentation is completed
- 5.5 ETAs are checked and revised as required and a safe alternate plan is formulated and applied if required
- 5.6 Aircraft is operated and configured to maintain minimum height AGL and safe separation from terrain
- 5.7 Awareness of current and forecast weather conditions is maintained
- 5.8 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and terrain
- 5.9 Low flying hazards and threats are identified and avoided
- 5.10 Effects of wind velocity, false horizons, rising ground, adverse environmental conditions (e.g. setting sun) and mountainous terrain are managed, and contingency actions are planned where appropriate
- 5.11 Situation awareness is maintained at all times
- 6 Perform lost procedure**
- 6.1 Position is fixed and new track to destination attainable within limits of fuel and daylight is determined
- 6.2 Track to destination is re-established or replanned with consideration of fuel usage and reserves
- 6.3 ETAs are re-calculated
- 6.4 Radio, navigation aids, transponder and ATC services are used for assistance
- 6.5 A timely precautionary search and landing is planned for possible circumstances of being lost or having no fuel or no light
- 6.6 Emotional stability is maintained
- 7 Perform diversion procedure**
- 7.1 Requirement to perform diversion is identified and a decision is made in accordance with procedures, regulatory requirements, and current and forecast weather conditions
- 7.2 New route is determined and maintained

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------------------|---|
| | 7.3 ETAs are calculated |
| | 7.4 Fuel requirements are recalculated |
| | 7.5 Operational information is reviewed |
| | 7.6 Compliance with airspace procedures is maintained |
| | 7.7 Air traffic control is advised of action where possible |
| | 7.8 All required 'airways clearances' are obtained |
| | 7.9 SARWATCH is cancelled after arrival |
| 8 Use navigation aids | 8.1 Navigation aids/systems are utilised to confirm position, track and navigation information |
| | 8.2 ATC radar is used for position information and tracking assistance |
| | 8.3 Integrity of navigation aid/systems information is monitored and maintained |
| 9 Execute arrival procedures | 9.1 Applicable aviation weather and traffic information is obtained and applied |
| | 9.2 Radio communications are established and maintained in accordance with regulatory requirements |
| | 9.3 Descent point is calculated |
| | 9.4 Arrivals and circuit procedures are executed at aerodromes in accordance with airspace and regulatory requirements |
| | 9.5 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and terrain |
| | 9.6 Airfield markings/lights/signals/indicators are interpreted, applied and followed |
| | 9.7 Situation awareness is maintained |
| | 9.8 Local and published noise abatement requirements and curfews are observed |
| | 9.9 SARWATCH is cancelled |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In ADF context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- The characteristics of different chart types
- Flight planning requirements
- Use of the navigational computer
- The aircraft fuel usage rates
- Relevant sections of CAAP 234-1 (Civil Aviation Advisory Publication)
- Traffic rules and procedures
- Air navigation techniques
- Factors affecting en route performance, range and endurance
- Critical point and point of no return
- DR navigation technique
- Identification by shape, dimensions, contrast and colour, and uniqueness of ground features
- Low level navigation techniques
- Allowances for changed visual aspects of ground features at low level
- En route navigation technique
- Chart reading techniques
- Procedures for requesting clearances from and into controlled airspace
- Identification of CTA, CTR, Prohibited, Restricted and Danger areas
- The principles of operation of navigation aids/systems
- The limitations of navigation aids/systems
- Controlled airspace requirements
- Circuit and circuit joining procedures
- The potential impacts of specific weather phenomena on aviation operations

Required skills:

- Perform the navigational functions within the parameters of the applicable regulations, orders and operations manual procedures
- Prepare charts and flight plans
- Plan applicable altitudes/flight levels and tracking tolerances to avoid controlled airspace when required

REQUIRED KNOWLEDGE AND SKILLS

- Carry out DR navigation technique
- Determine DR position
- Maintain compliance with regulatory requirements
- Maintain Navigation Log
- Select and use appropriate navigational instruments and aids
- Source and interpret aviation weather forecast products and services appropriate to flight planning and navigation procedures
- Adjust aircraft performance to achieve desired timings
- Calculate fuel endurance
- Calculate distance and rate of closure rates to/from ground features
- Fix aircraft position
- Apply air safety practices and regulations
- Recognise significant variances from forecast meteorological conditions and take appropriate actions, including the issue of an AIREP
- Maintain construction, communication and execution of a traffic deconfliction plan
- Communicate effectively with others when navigating aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to the navigation of an aircraft
- Interpret and follow operational instructions and prioritise workload
- Complete documentation related to navigating aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when navigating aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when navigating aircraft in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when navigating aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the navigation of an aircraft
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

REQUIRED KNOWLEDGE AND SKILLS

- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to navigate an aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Tasks may be undertaken in:	<ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules
Performance may be demonstrated in:	<ul style="list-style-type: none"> • single engine aircraft • multi engine aircraft • variable air traffic conditions • variable flight situations • abnormal situations • classes of airspace as designated by the Civil Aviation Safety Authority
Aircraft may include:	<ul style="list-style-type: none"> • fixed wing • helicopter • other commercial or military aircraft
Crew may include:	<ul style="list-style-type: none"> • single pilot • multi crew
Instruments may be:	<ul style="list-style-type: none"> • fitted flight instruments • head up displays
Limitations may be imposed by:	<ul style="list-style-type: none"> • local noise abatement requirements and curfews • airspace endorsements
Classes of airspace may be:	<ul style="list-style-type: none"> • as designated by the regulator • restricted and danger areas • military control zones • Air Defence Identification Zones
Production methods for flight plans may utilise:	<ul style="list-style-type: none"> • manual planning methods, and • Automated Flight Planning Systems
Navigation aids may include electronic, mechanical and/or radio systems such as:	<ul style="list-style-type: none"> • ADF (Automatic Direction Finder) • VOR (VHF Omni-directional Radio Range) • DME (Distance Measuring Equipment) • RADAR • GPS (Global Positioning System) • FMS (Flight Management Systems) • Moving Map Displays • TACAN • INS
Operation of navigation aids/systems may include:	<ul style="list-style-type: none"> • normal mode • degraded mode

RANGE STATEMENT

Low flying hazards and threats may include:

- man-made e.g. power lines, masts
- terrain
- birds/wildlife
- environmental
- other airspace operations

Circuits procedures at an aerodrome may include:

- upwind
- crosswind
- downwind
- base
- finals
- joining/departing

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the navigation of an aircraft
- in ADF context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA) or equivalent
- relevant sections of the Civil Aviation Advisory Publications (CAAP)
- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant Bureau of Meteorology, International Civil Aviation Organization (ICAO) and/or World Meteorology Organization (WMO) publications

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in ADF context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation

RANGE STATEMENT

Performance includes tolerances specified in either of:

- relevant state/territory environmental protection legislation
- relevant Australian Standards
- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
 - Day VFR Syllabus
 - Manual of Standards
- relevant Defence documentation such as:
 - Defence Orders and Instructions
- approved curricula and training documentation

AVIH4012A Plan a flight under Night Visual Flight Rules (NVFR)

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to plan and make flight notification for a Night Visual Flight Rules (NVFR) flight using all applicable current operational documents, after obtaining and applying pre-flight briefing information and allowing for operational requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA); relevant airspace control requirements and Night Visual Flight Rules (NVFR); and aircraft control principles, regulations, safety codes, protocols and procedures required to plan a flight under Night Visual Flight Rules as part of commercial aircraft activities.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is packaged at AQF V.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Determine aircraft meets requirements for NVFR flight	<p>1.1 Aircraft requirements for NVFR flight are determined</p> <p>1.2 Flight and navigation instruments, minimum electrical lighting and navigation equipment and any other requirements which are fitted to the aircraft are checked to ensure they are suitable and serviceable for NVFR flight</p>
2 Obtain and use current operational documents	<p>2.1 Operational documents applicable to the flight are obtained and checked for currency</p> <p>2.2 Applicable information contained in documents for flight planning and management is interpreted and applied</p> <p>2.3 Documents required for the flight are stowed and accessibility for the pilot during flight is ensured</p>
3 Prepare flight plan for NVFR flight	<p>3.1 Charts suitable for intended NVFR flight are selected and prepared</p> <p>3.2 Applicable information to prepare a flight plan which details tracks, distances, times, altitudes to be flown and fuel requirements to reach destination are obtained, analysed and applied</p> <p>3.3 Meteorological, airways facilities, aerodrome and NOTAM information applicable to planning and conducting a flight is obtained, interpreted and applied</p> <p>3.4 Routes to optimise options in the event of an engine failure are planned</p>
4 Determine operational requirements	<p>4.1 Suitability of the aerodrome lighting for night operations is determined</p> <p>4.2 Curfew requirements are complied with</p> <p>4.3 Duration of flight is determined</p> <p>4.4 Holding, alternate and reserve fuel requirements due to weather, navigation aid availability and aerodrome lighting are determined in accordance with operational requirements</p> <p>4.5 Total fuel requirements are calculated</p>
5 Make flight notification	<p>5.1 Flight notification is prepared for planned NVFR flight</p> <p>5.2 Completed flight notification is submitted</p> <p>5.3 Flight notification acceptance is confirmed</p>
6 Program navigation system	<p>6.1 Prepare data for transfer to approved airborne navigation system</p> <p>6.2 Navigation data is loaded and checked</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Pilot medical fitness and qualifications necessary for night visual flight
- Privileges of the Night VFR rating
- Specification of the aircraft flight instruments required for night visual flight
- Specification of the aircraft electrical lighting, radio communication and navigation equipment required for night visual flight
- Limit of Night VFR operations in a single-engine aircraft
- Requirements for submission of flight notification and SARWATCH
- Speed restrictions for night visual flight
- Requirements for in-flight progress reports
- Procedures for flight plan amendments and revised estimates for a night visual flight
- Documents required to be carried on a night visual flight
- Validity of a given meteorological forecast for a night visual flight
- Aerodrome lighting and curfew requirements for night operations
- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In ADF context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Airspace requirements and procedures under NVFR conditions
- NVFR route planning requirements
- Use of the navigational computer
- Aircraft fuel planning including holding, alternate, fixed reserve and usage rates
- Visual and instrument flight rules and procedures
- Factors affecting en route performance, range and endurance
- Critical point and point of no return
- Meteorological considerations for a NVFR flight
- Requirements for an alternate aerodrome
- Aerodrome and en route holding procedures
- NVFR cruising levels, selection and hazards
- Limitations and errors of navigations aids/systems
- Icing conditions and hazards

Required skills:

REQUIRED KNOWLEDGE AND SKILLS

- Determine the currency of operational documents
- Extract and apply relevant information from operational documents
- Determine the meteorological forecasts required for a night visual flight
- Determine whether a flight should proceed based on available meteorological forecasts
- Determine alternate aerodrome requirements and suitability for a night visual flight to a specified destination given relevant information including NOTAMs
- Determine holding requirements due to weather, traffic or traffic advisory
- Determine fuel quantity required for a night visual flight
- Interpret navigation charts
- Interpret meteorological forecasts
- Calculate fuel requirements
- Select suitable navigation aids/systems
- Communicate effectively with others when planning a flight under NVFR
- Read and interpret instructions, regulations, procedures and other information relevant to planning a flight under NVFR
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to planning a flight under NVFR
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when planning a flight under NVFR
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when planning a flight under NVFR in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when planning a flight under NVFR
- Apply precautions and required action to minimise, control or eliminate hazards that may exist while planning a flight under NVFR
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when planning a flight under NVFR

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Select, operate and monitor navigation aids/systems	<p>1.1 Appropriate navigation aids/systems for the planned NVFR flight are selected and operated in accordance navigation aid/system requirements</p> <p>1.2 Integrity of navigation aid/systems information is monitored and maintained</p>
2 Navigate the aircraft in Night VFR	<p>2.1 Cockpit and instrument lighting are adjusted to allow reference to documentation, instruments and lookout</p> <p>2.2 Aircraft position fix is determined visually or with reference to navigation aid/system</p> <p>2.3 Tracks are intercepted to and from visually or with reference to navigation aids/systems</p> <p>2.4 Track is maintained within tolerances specified in AIP</p> <p>2.5 Timings are recorded, assessed and revised as required</p> <p>2.6 Station passage is recognised</p> <p>2.7 GPS/DME arc procedure is performed within tolerances specified in AIP if applicable</p> <p>2.8 Planned route above Lowest Safe Altitude (LSALT) is maintained in accordance with NVFR</p> <p>2.9 Route and destination weather conditions are monitored and appropriate actions are executed</p> <p>2.10 Descent point is calculated and/or amended</p>
3 Conduct a diversion to revised route or alternate aerodrome at night	<p>3.1 Requirement for an unplanned diversion is recognised and confirmed</p> <p>3.2 Route to alternate aerodrome, navigation aid and /or revised track is determined</p> <p>3.3 Planned route maintains height above LSALT in accordance with regulations while flying under NVFR</p> <p>3.4 Flight planned route is diverted to track to alternate aerodrome, navigation aid and/or aerodrome</p> <p>3.5 Operational information for alternate aerodrome/s is reviewed and applied according to regulations and/or operator procedures</p> <p>3.6 Fuel plan is reviewed and amended according to regulations and/or operator procedures</p>
4 Make visual departure at night	<p>4.1 Obstacle clearance is ensured until reaching LSALT</p> <p>4.2 Departure track is intercepted within 5 nm of aerodrome</p>
5 Make visual approach at night	<p>5.1 Descent below LSALT is conducted in accordance with instructions in AIP</p> <p>5.2 Track is maintained to destination aerodrome in accordance with instructions in AIP</p>

ELEMENT	PERFORMANCE CRITERIA
6 Comply with Air Traffic Control rules and procedures for NVFR flights	<p>6.1 Separation from other air traffic under NVFR is maintained</p> <p>6.2 Airspace requirements are complied with utilising NVFR procedures</p> <p>6.3 Two-way communication is maintained with ATS and other aircraft in accordance with NVFR procedures</p> <p>6.4 ATC clearances and/or radar vectoring instructions are complied with</p>
7 Manage hazardous weather conditions	<p>7.1 Hazardous weather conditions are identified and avoided</p> <p>7.2 Procedures for avoidance of hazardous weather are demonstrated and/or explained</p> <p>7.3 Aircraft systems are employed to mitigate the effects of hazardous weather</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Navigation requirements for a night visual flight using radio, self-contained or long-range navigation systems
- Navigation requirements for a night visual flight using visual reference to ground and water
- Navigation tolerance for a night visual flight avoiding CTA
- Requirements for positive radio fixing and the most precise track guidance
- Navigation requirements for night visual flight with respect to time interval between fixes, accuracy of time reference, and accuracy and procedures in track-keeping
- Procedures of night visual flight in all classes of airspace when diverting from track due to navigation or weather
- Compulsory reporting points for route selected
- Dimensions of the significant safety sector when calculating LSALT for a route not published on a chart
- Methods of calculating LSALT for a route not published on a chart
- Explanation of conditions for descent below LSALT
- Pre-flight altimeter accuracy check for a night visual flight
- ATC rules and procedures:
 - Airways clearance requirements for operating in all classes of airspace, including lead time required for flight plan submission, contents, 'clearance void time', and 'readback' requirement
 - Airways clearance requirements for entering, operating in and departing CTA and CTR, including what details to provide to ATC, and what details to expect from ATC
- Controlled area protection
- ATC requirements for a change of level in CTA, including in an emergency situation
- Departure, climb, transition to cruise (levelling out), cruise, change of levels, descent and visual approach procedures at night, in CTA, CTR, Class G airspace and at non-controlled aerodromes
- Separation provisions between NVFR flights, and IFR and VFR flights in the various classes of CTA
- Separation provisions between NVFR flights, and IFR and VFR flights in GAAP CTR
- Radio procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes
- Loss of radio communication procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes
- Abnormal operations and/or emergency procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes
- Radar services that are provided by ATC

REQUIRED KNOWLEDGE AND SKILLS

- Radar vectoring procedures, including radio procedures and phraseologies
- Maximum permissible time interval in between ATC transmissions during radar vectoring
- Radar emergency procedures, including loss of radio communication, radar failure, transponder emergency codes, and aircraft emergencies
- Operation of VHF aerodrome lighting (PAL)
- Requirements and procedure for a diversion to an alternate aerodrome
- Navigation aids/systems as applicable to rating/endorsement requirements may include:
 - NDB
 - Effects of coastal refraction, night error, thunderstorms, mountainous areas, types of terrain and altitude of aircraft on NDB indications or range
 - Methods of selecting and using the most appropriate NDB for tracking during navigation
 - NDB position fixing, tracking techniques, procedures and limitations
 - VOR
 - VOR instrument settings required to provide command indications when flying on given tracks both to and from the VOR
 - VOR tracking techniques, procedures and limitations
 - DME
 - DME or GPS arrival procedures and limitations in all classes of airspace
 - DME or GPS arrival information
 - Pilot's responsibilities when DME or GPS arrival is conducted outside controlled airspace
 - Conditions permitting descent below LSALT
 - Procedure for joining the circuit using a DME or GPS arrival
 - Principles of operation of DME or the GPS radio equipment
 - Procedures for handling loss of radio communication during a DME or GPS arrival
 - GPS
 - Principles of operation, performance limitations and errors of a GPS system
 - Methods of position fixing using a GPS system
 - GPS operating procedures which provide safeguards against navigational errors and loss of situational awareness
 - GPS operating procedures for typical navigational tasks using a specific type of aircraft equipment
 - Indications of waypoint passage
 - GPS operational and serviceability checks
 - Human factors limitations associated with the use of GPS equipment
 - Requirements applicable to pilots and equipment for GPS operations
 - Parameters applicable to tracking tolerances, automatic waypoint sequencing, CDI sensitivity and RAIM availability

REQUIRED KNOWLEDGE AND SKILLS

- Mode of operation required during each segment of a GPS/NPA, the conditions required to transition to and operate in that mode, and the associated CDI sensitivity and RAIM protection provided
- Parameters applicable to RAIM warnings in the en route, terminal and approach modes
- Effect of availability or otherwise of baro-aiding on RAIM availability and prediction
- Effect of satellite unserviceability on the reliability of each type of prediction
- Effect of each type of RAIM prediction operational requirements
- Operational requirements which apply to planning a flight on the basis of conducting a RNAV (GNSS) procedure at the destination
- Factors that may adversely affect the conduct of a GPS/NPA and explain suitable pilot procedures to minimise such effects
- Operating procedures for GNSS equipment which reduce or eliminate errors due to any of these factors

Required skills:

- Determine route for night visual flight with respect to forecast weather, controlled airspace, Prohibited, Restricted and Danger Areas, specified route limitations, airways operational requirements, and availability of published routes, en route alternate aerodromes, navigation aids, rated coverage and radio communication
- Determine whether a flight may proceed based on route, aircraft equipment and night VFR navigation requirements
- Calculate LSALT for a night visual flight for a route published on a chart
- Calculate LSALT when uncertain of position
- Apply altimetry procedures to all stages of a night visual flight
- Perform the navigational functions within the parameters of the applicable regulations, orders and operations manual procedures
- Maintain compliance with regulatory requirements
- Select and use appropriate navigational instruments and aids
- Source and interpret aviation weather forecast products and services appropriate to flight planning and navigation procedures
- Apply air safety practices and regulations
- Recognise significant variances from forecast meteorological conditions and take appropriate actions, including the issue of an AIREP
- Use navigation aids/systems, as applicable to rating/endorsement requirements, which may include:
 - NDB
- Determine NDB station passage, abeam NDB station, NDB bearing the aircraft is on, track error and/or drift experienced, from ADF relative bearing indications

REQUIRED KNOWLEDGE AND SKILLS

- Calculate track to and from the NDB, given heading and relative bearings
- Calculate heading to steer to intercept a new or original track to or from a NDB
- Calculate heading to steer to intercept desired inbound track before reaching the NDB
- Calculate relative bearing which will indicate that a desired track to or from a NDB has been intercepted, given the intercept heading
- Fix position, given relative bearing indications utilising two NDB stations
- VOR
- Determine scalloping, VOR station passage, abeam VOR station, VOR radial the aircraft is on, track error and/or drift experienced, from VOR cockpit indications
- Determine off-track distance experienced from VOR and DME cockpit indications
- Calculate the heading to steer to intercept a new or original track to or from a VOR
- Fix position, given cockpit instrument indications utilising two VOR stations
- Fix position, given instrument indications utilising combinations of VOR, NDB and DME
- DME
- Interpret DME or GPS arrival information
- GPS
- Interpret typical GPS navigational displays LAT/Long, distance and bearing to waypoint, CDI
- Maintain interception and maintenance of GPS defined tracks
- Determine TMG, GS, ETA, time and distance to WPT, WV in flight
- Recognise and take appropriate action for GPS warnings and messages
- Predict RAIM availability at destination and ETA
- Predict within 1 hour before departure the availability of approach RAIM at the destination or alternate aerodrome within 15 minutes of ETA, and limitations that apply to the prediction
- Apply operational requirements which apply to planning a flight on the basis of conducting a RNAV (GNSS) procedure at the destination
- Communicate effectively with others when navigating an aircraft - NVFR
- Read and interpret instructions, regulations, procedures and other information relevant to navigating an aircraft - NVFR
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to navigating an aircraft - NVFR
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when navigating an aircraft - NVFR
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when navigating an aircraft - NVFR in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when navigating an aircraft - NVFR

REQUIRED KNOWLEDGE AND SKILLS

- Apply precautions and required action to minimise, control or eliminate hazards that may exist while navigating an aircraft - NVFR
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when navigating an aircraft - NVFR

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Tasks may be undertaken in:	<ul style="list-style-type: none"> • night VFR conditions
Performance may be demonstrated in:	<ul style="list-style-type: none"> • single engine aircraft • multi engine aircraft • synthetic training device approved by the relevant authority • variable air traffic conditions • variable weather conditions • variable flight situations • abnormal situations • classes of airspace as designated by the Civil Aviation Safety Authority
Aircraft may include:	<ul style="list-style-type: none"> • fixed wing • helicopter • other commercial or military aircraft
Crew may include:	<ul style="list-style-type: none"> • single pilot • multi crew
Instruments may be:	<ul style="list-style-type: none"> • fitted flight instruments suitable for NVFR flight • head up display suitable for NVFR flight
Limitations may be imposed by:	<ul style="list-style-type: none"> • local noise abatement requirements and curfews • airspace endorsements
Classes of airspace may be:	<ul style="list-style-type: none"> • as designated by the regulator • restricted and danger areas • military control zones • Air Defence Identification Zones
Diversion requirement may include:	<ul style="list-style-type: none"> • meteorological hazard • fuel requirements • aircraft or airfield system failure/degrade • airspace • ATC direction • operational hazard
Operational information may include:	<ul style="list-style-type: none"> • meteorological • NOTAMS • lighting • Approach Aids
Navigation aids/systems may	<ul style="list-style-type: none"> • ADF (Automatic Direction Finder)

RANGE STATEMENT

include:

- VOR (VHF Omni-directional Radio Range)
- DME (Distance Measuring Equipment)
- RADAR
- GPS (Global Positioning System)
- FMS (Flight Management Systems)
- Moving Map Displays
- TACAN
- INS (Inertial Navigation System)
- FDS (Flight Director System)
- Autopilot system
- Weather Radar
- navigation computers

Conditions may include:

- simulated icing conditions
- moderate turbulence
- simulated hazardous weather
- Autopilot/Flight Director
- FMS/ other NAV system
- simulation of emergency and abnormal procedures

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders

RANGE STATEMENT

legislation may include:

- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Performance includes tolerances specified in either of:

- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
- Manual of Standards
- relevant Defence documentation such as:
- Defence Orders and Instructions
- approved curricula and training documentation

H - Route Planning and Navigation

AVIH5016A Plan a flight under Instrument Flight Rules (IFR)

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to plan and make flight notification for an Instrument Flight Rules (IFR) flight using all applicable current operational documents, after obtaining and applying pre-flight briefing information and allowing for operational requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA); relevant airspace control requirements and Instrument Flight Rules (IFR); and aircraft control principles, regulations, safety codes, protocols and procedures relevant to planning a flight under Instrument Flight Rules as part of commercial aircraft activities.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is packaged at AQF V.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Determine aircraft meets requirements for IFR flight	1.1 Aircraft requirements for IFR flight are determined 1.2 Flight and navigation instruments, minimum electrical lighting and navigation equipment and any other requirements which are fitted to the aircraft are checked to ensure they are suitable and acceptable for IFR flight
2 Obtain and use current operational documents	2.1 Operational documents applicable to the flight are obtained and checked for currency 2.2 Applicable information contained in documents for flight planning and management is interpreted and applied 2.3 Documents required for the flight are stowed and accessibility for the pilot during flight is ensured
3 Prepare charts and flight plan for IMC flight	3.1 Charts suitable for intended IFR flight are selected and prepared 3.2 Applicable information to prepare a flight plan which details tracks, distances, times, altitudes to be flown and fuel requirements to reach destination are obtained, analysed and applied 3.3 Meteorological, airways facilities, aerodrome and NOTAM information applicable to planning and conducting a flight is obtained, interpreted and applied 3.4 Routes to optimise options in the event of an engine failure are planned
4 Determine operational requirements	4.1 Duration of flight is determined 4.2 Holding, alternate and reserve fuel requirements due to weather, navigation aid availability and aerodrome lighting are determined in accordance with operational requirements 4.3 Total fuel requirements are calculated
5 Make flight notification	5.1 Flight notification is prepared for planned IFR flight 5.2 Completed flight notification is submitted 5.3 Flight notification acceptance is confirmed
6 Program navigation system	6.1 Data for transfer to approved airborne navigation system is prepared 6.2 Navigation data is loaded and checked

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Determining the currency of operational documents
- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In ADF context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Airspace requirements and procedures under IFR conditions
- IFR route planning requirements
- Use of the navigational computer
- Aircraft fuel planning including holding, alternate, fixed reserve and usage rates
- Relevant sections of CAAP 234-1 (Civil Aviation Advisory Publication)
- Visual and instrument flight rules and procedures
- Factors affecting en route performance, range and endurance
- Critical point and point of no return
- Meteorological considerations for an IFR flight
- Requirements for an alternate aerodrome
- Aerodrome and en route holding procedures
- IFR cruising levels, selection and hazards
- Limitations and errors of navigations aids/systems
- Icing conditions and hazards

Required skills:

- Interpret IFR charts
- Interpret meteorological forecasts
- Calculate fuel requirements
- Select suitable navigation aids/systems
- Communicate effectively with others when planning a flight under IFR
- Read and interpret instructions, regulations, procedures and other information relevant to planning a flight under IFR
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to planning a flight under IFR
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when planning a flight under IFR

REQUIRED KNOWLEDGE AND SKILLS

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when planning a flight under IFR in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when planning a flight under IFR
- Apply precautions and required action to minimise, control or eliminate hazards that may exist while planning a flight under IFR
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to plan a flight under IFR

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Tasks may be undertaken in:	<ul style="list-style-type: none"> • IMC • VMC with simulated IMC conditions
Performance may be demonstrated in:	<ul style="list-style-type: none"> • single engine aircraft • multi engine aircraft • synthetic training device approved by the appropriate authority
Aircraft may include:	<ul style="list-style-type: none"> • fixed wing • helicopter • other commercial or military aircraft
Crew may include:	<ul style="list-style-type: none"> • single pilot • multi crew
Instruments may be:	<ul style="list-style-type: none"> • fitted flight instruments suitable for instrument flight • head up display suitable for instrument flight
Limitations may be imposed by:	<ul style="list-style-type: none"> • local noise abatement requirements and curfews • airspace endorsements

Operational documents may include:	<ul style="list-style-type: none"> • relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders • in Defence context, relevant Defence Orders and Instructions • Flight Manual/Pilot's Operating Handbook (POH) • Manual of Standards - Pilot Licensing (MOS-PL) • Aeronautical Information Publication (AIP) • En Route Supplement Australia (ERSA)

RANGE STATEMENT

- approved operators manuals
 - approved checklists
 - workplace procedures and instructions and job specification
 - induction and training materials
 - conditions of service, legislation and industrial agreements including workplace agreements and awards
- Charts may include:
- Departure and Approach procedures (DAP East & West)
 - Terminal Area Chart (TAC)
 - En Route Chart (ERC High, ERC Low)
 - Planning Chart (AUS PCA)
 - Visual Terminal Chart (VTC)
 - Designated Airspace Handbook
 - Visual Navigation Chart (VNC)
- Airways facilities may include
- air-traffic control
 - navigational aids
 - radio communications
 - meteorological services
 - fire and rescue services
- Navigation aids/systems may include:
- ADF (Automatic Direction Finder)
 - VOR (VHF Omni-directional Radio Range)
 - DME (Distance Measuring Equipment)
 - RADAR
 - GPS (Global Positioning System)
 - FMS (Flight Management Systems)
 - Moving Map Displays
 - TACAN
 - INS
- Conditions may include:
- a method of simulating IMC
 - simulated icing conditions
 - moderate turbulence
 - simulated hazardous weather
 - Autopilot/Flight Director
 - FMS/ other NAV system
 - simulation of emergency and abnormal procedures
- Applicable regulations and legislation may include:
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
 - in Defence context, relevant Defence Orders and Instructions
 - relevant state/territory OH&S legislation

RANGE STATEMENT

Performance includes tolerances specified in either of:

- relevant state/territory environmental protection legislation
- relevant Australian Standards
- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Select, operate and monitor navigation aids/systems	<p>1.1 Appropriate navigation aids/systems for the planned IFR flight are selected and operated in accordance navigation aid/system requirements</p> <p>1.2 Integrity of navigation aid/systems information is monitored and maintained</p>
2 Navigate the aircraft in IMC/simulated IMC	<p>2.1 Aircraft position fix is determined solely with reference to navigation aid/system</p> <p>2.2 Tracks are intercepted to and from navigation aids/systems</p> <p>2.3 Track is maintained within tolerances specified in AIP</p> <p>2.4 Timings are recorded, assessed and revised as required</p> <p>2.5 Station passage is recognised</p> <p>2.6 GPS/DME arc procedure is performed within tolerances specified in AIP if applicable</p> <p>2.7 Planned route above Lowest Safe Altitude (LSALT) is maintained in accordance with IFR</p> <p>2.8 IMC to visual flight transition is performed before descending below the lesser of LSALT/MSA</p> <p>2.9 Route and destination weather conditions are monitored and appropriate actions are executed</p> <p>2.10 Descent point is calculated and/or amended</p>
3 Conduct a diversion to revised route or alternate aerodrome	<p>3.1 Requirement for an unplanned diversion is recognised and confirmed</p> <p>3.2 Route to alternate aerodrome, navigation aid and /or revised track is determined</p> <p>3.3 Planned route maintains height above LSALT in accordance with regulations while flying under IFR</p> <p>3.4 Flight planned route is diverted to track to alternate aerodrome, navigation aid and/or aerodrome</p> <p>3.5 Operational information for alternate aerodrome/s is reviewed and applied according to regulations and/or operator procedures</p> <p>3.6 Fuel plan is reviewed and amended according to regulations and/or operator procedures</p>
4 Conduct holding pattern in IMC	<p>4.1 Holding pattern is entered at or above LSALT/MSA appropriate to inbound heading using sector entry according to AIP</p> <p>4.2 Published holding pattern is flown not below the specified minimum altitude, allowing for wind effect, turning inbound on the prescribed track</p> <p>4.3 Holding pattern is departed in accordance with ATC instructions</p>

ELEMENT	PERFORMANCE CRITERIA
5 Comply with Air Traffic Control rules and procedures for IFR flights	<p>5.1 Separation from other air traffic in IMC/simulated IMC is maintained</p> <p>5.2 Airspace requirements are complied with utilising IFR procedures</p> <p>5.3 Two-way communication is maintained with ATS and other aircraft in accordance with IFR procedures</p> <p>5.4 ATC clearances and/or radar vectoring instructions are complied with</p>
6 Manage hazardous weather conditions	<p>6.1 Hazardous weather conditions are identified and avoided</p> <p>6.2 Procedures for penetration of hazardous weather are demonstrated and/or explained</p> <p>6.3 Aircraft systems are employed to mitigate the effects of hazardous weather</p>
7 Demonstrate turbulence penetration technique	<p>7.1 Aircraft is configured to comply with turbulence penetration procedures in accordance with Flight Manual/POH</p> <p>7.2 Passenger and crew are restrained in accordance with regulations</p> <p>7.3 Procedures for penetrating turbulence are explained and demonstrated</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- ATC rules and procedures:
- Airways clearance requirements for operating in all classes of airspace, including lead time required for flight plan submission, contents, 'clearance void time', and 'readback' requirement
- Airways clearance requirements for entering, operating in and departing CTA and CTR, including what details to provide to ATC, and what details to expect from ATC
- Controlled area protection
- ATC requirements for a change of level in CTA, including in an emergency situation
- Departure, climb, transition to cruise (levelling out), cruise, change of levels, descent and visual approach procedures, day and night, in CTA and CTR
- Separation provisions between IFR flights, and IFR and VFR flights in the various classes of CTA
- Separation provisions between IFR flights, and IFR and VFR flights in GAAP CTR
- Radio procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes
- Loss of radio communication procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes
- Abnormal operations and/or emergency procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes
- Radar services that are provided by ATC
- Radar vectoring procedures, including radio procedures and phraseologies
- Maximum permissible time interval is between ATC transmissions during radar vectoring
- Radar emergency procedures, including loss of radio communication, radar failure, transponder emergency codes, and aircraft emergencies
- Departure, climb, transition to cruise (levelling out), cruise, change of levels, descent, and arrival procedures in Class G airspace and at non-controlled aerodromes
- Visual approach procedures, day and night, in Class G airspace and at non-controlled aerodromes, including landing manoeuvres, cancellation of SARWATCH, and operation of VHF aerodrome lighting (PAL)
- Requirements and procedure for a diversion to an alternate aerodrome
- NDB:
 - Effects of coastal refraction, night error, thunderstorms, mountainous areas, types of terrain and altitude of aircraft on NDB indications or range
 - Methods of selecting and using the most appropriate NDB for tracking during navigation
 - NDB tracking techniques, procedures and limitations
 - Procedures for sector entry and holding using the NDB

REQUIRED KNOWLEDGE AND SKILLS

- VOR:
- VOR instrument settings required to provide command indications when flying on given tracks both to and from the VOR
- VOR tracking techniques, procedures and limitations
- Procedures for sector entry and holding using the VOR
- GPS:
- Principles of operation, performance limitations and errors of a GPS system
- Methods of position fixing using a GPS system
- GPS operating procedures which provide safeguards against navigational errors and loss of situational awareness
- GPS operating procedures for typical navigational tasks using a specific type of aircraft equipment
- Indications of waypoint passage
- GPS operational and serviceability checks
- Human factors limitations associated with the use of GPS equipment
- Requirements applicable to pilots and equipment for GPS operations
- Parameters applicable to tracking tolerances, automatic waypoint sequencing, CDI sensitivity and RAIM availability
- Mode of operation required during each segment of a GPS/NPA, the conditions required to transition to and operate in that mode, and the associated CDI sensitivity and RAIM protection provided
- Parameters applicable to RAIM warnings in the en route, terminal and approach modes
- Effect of availability or otherwise of baro-aiding on RAIM availability and prediction
- Effect of satellite unserviceability on the reliability of each type of prediction
- Effect of each type of RAIM prediction operational requirements
- Operational requirements which apply to planning a flight on the basis of conducting a RNAV (GNSS) procedure at the destination
- Factors that may adversely affect the conduct of a GPS/NPA and explain suitable pilot procedures to minimise such effects
- Operating procedures for GNSS equipment which reduce or eliminate errors due to any of these factors

Required skills:

- Perform the navigational functions within the parameters of the applicable regulations, orders and operations manual procedures
- Maintain compliance with regulatory requirements
- Select and use appropriate navigational instruments and aids
- Source and interpret aviation weather forecast products and services appropriate to flight

REQUIRED KNOWLEDGE AND SKILLS

planning and navigation procedures

- Apply air safety practices and regulations
- Recognise significant variances from forecast meteorological conditions and take appropriate actions, including the issue of an AIREP
- NDB:
 - Determine NDB station passage, abeam NDB station, NDB bearing the aircraft is on, track error and/or drift experienced, from ADF relative bearing indications
 - Calculate track to and from the NDB, given heading and relative bearings
 - Calculate heading to steer to intercept a new or original track to or from a NDB
 - Calculate heading to steer to intercept desired inbound track before reaching the NDB
 - Calculate relative bearing which will indicate that a desired track to or from a NDB has been intercepted, given the intercept heading
 - Fix position, given relative bearing indications utilising two NDB stations
- VOR:
 - Determine scalloping, VOR station passage, abeam VOR station, VOR radial the aircraft is on, track error and/or drift experienced, from VOR cockpit indications
 - Determine off-track distance experienced from VOR and DME cockpit indications
 - Calculate the heading to steer to intercept a new or original track to or from a VOR
 - Fix position, given cockpit instrument indications utilising two VOR stations
 - Fix position, given instrument indications utilising combinations of VOR, NDB and DME
- GPS:
 - Interpret typical GPS navigational displays LAT/Long, distance and bearing to waypoint, CDI
 - Maintain interception and maintenance of GPS defined tracks
 - Determine TMG, GS, ETA, time and distance to WPT, WV in flight
 - Recognise and take appropriate action for GPS warnings and messages
 - Predict RAIM availability at destination and ETA
 - Predict within 1 hour before departure the availability of approach RAIM at the destination or alternate aerodrome within 15 minutes of ETA, and limitations that apply to the prediction
 - Apply operational requirements which apply to planning a flight on the basis of conducting a RNAV (GNSS) procedure at the destination
- Communicate effectively with others when navigating an aircraft - IFR
- Read and interpret instructions, regulations, procedures and other information relevant to navigating an aircraft - IFR
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to navigating an aircraft - IFR
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when navigating an aircraft - IFR
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and

REQUIRED KNOWLEDGE AND SKILLS

interactions with others

- Promptly report and/or rectify any identified problems that may occur when navigating an aircraft - IFR in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when navigating an aircraft - IFR
- Apply precautions and required action to minimise, control or eliminate hazards that may exist while navigating an aircraft - IFR
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when navigating an aircraft - IFR

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|--------------------------------------|--|
| Tasks may be undertaken in: | <ul style="list-style-type: none"> • IMC • VMC with simulated IMC conditions |
| Performance may be demonstrated in: | <ul style="list-style-type: none"> • single engine aircraft • multi engine aircraft • synthetic training device approved by the relevant authority • variable air traffic conditions • variable weather conditions • variable flight situations • abnormal situations • classes of airspace as designated by the Civil Aviation Safety Authority |
| Aircraft may include: | <ul style="list-style-type: none"> • fixed wing • helicopter • other commercial or military aircraft |
| Crew may include: | <ul style="list-style-type: none"> • single pilot • multi crew |
| Instruments may be: | <ul style="list-style-type: none"> • fitted flight instruments suitable for instrument flight • head up display suitable for instrument flight |
| Limitations may be imposed by: | <ul style="list-style-type: none"> • local noise abatement requirements and curfews • airspace endorsements |
| Classes of airspace may be: | <ul style="list-style-type: none"> • as designated by the regulator • restricted and danger areas • military control zones • Air Defence Identification Zones |
| Diversion requirement may include: | <ul style="list-style-type: none"> • meteorological hazard • fuel requirements • aircraft or airfield system failure/degrade • airspace • ATC direction • operational hazard |
| Operational information may include: | <ul style="list-style-type: none"> • meteorological • NOTAMS • lighting • Approach Aids |

RANGE STATEMENT

Navigation aids/systems may include:

- ADF (Automatic Direction Finder)
- VOR (VHF Omni-directional Radio Range)
- DME (Distance Measuring Equipment)
- RADAR
- GPS (Global Positioning System)
- FMS (Flight Management Systems)
- Moving Map Displays
- TACAN
- INS (Inertial Navigation System)
- FDS (Flight Director System)
- Autopilot system
- Weather Radar
- navigation computers

Conditions may include:

- a method of simulating IMC
- simulated icing conditions
- moderate turbulence
- simulated hazardous weather
- Autopilot/Flight Director
- FMS/ other NAV system
- simulation of emergency and abnormal procedures

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements

RANGE STATEMENT

Applicable regulations and legislation may include:

- including workplace agreements and awards
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
 - Manual of Standards
 - relevant Defence documentation such as:
 - Defence Orders and Instructions
 - approved curricula and training documentation

Performance includes tolerances specified in either of:

Unit Sector(s)

H - Route Planning and Navigation

AVII2001B Provide customer service on an aircraft

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to provide high quality customer service to passengers on a commercial aircraft, including providing appropriate assistance to passengers in conjunction with other members of cabin service team prior to departure, during flight and on arrival at a destination. It also includes advising passengers on cabin features and amenities, using cabin facilities and amenities, providing support to other crew members, and carrying out required administrative procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and relevant regulatory requirements including OH&S.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of customer service principles and procedures, regulations, safety codes, security regulations and protocols to the provision of customer service to passengers on commercial aircraft across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Provide customer service prior to departure	<p>1.1 Passengers are met and welcomed on boarding the aircraft in accordance with regulatory requirements and workplace procedures</p> <p>1.2 Boarding passes are checked to confirm correct flight and seating, and passengers are directed to their seat locations in accordance with regulatory requirements and workplace procedures</p> <p>1.3 Carry-on baggage is monitored to ensure that it does not exceed allowable limits, and if limits are exceeded appropriate action is taken to remove it to hold stowage</p> <p>1.4 Passengers are assisted to stow cabin baggage and personal items in accordance with regulatory requirements</p> <p>1.5 Action is taken to ensure passengers are promptly seated with their seat belts correctly fastened in accordance with regulatory requirements</p> <p>1.6 Passengers with special needs are appropriately assisted</p> <p>1.7 Passengers sitting over the wings and passengers with special needs are given individual briefings in accordance with regulatory requirements and workplace procedures</p> <p>1.8 Appropriate responses are made to passengers' queries and requests</p> <p>1.9 Passenger pre-departure cabin service items are offered as appropriate</p> <p>1.10 Customer service is suspended during take-off of the aircraft</p>
2 Advise on and use cabin features and amenities	<p>2.1 Passengers are advised on the relevant features and amenities available including those available for passengers with special needs</p> <p>2.2 Cabin equipment and amenities are used in accordance with regulatory requirements and workplace procedures</p> <p>2.3 Cabin equipment and amenities are correctly stowed after use in accordance with regulatory requirements and workplace procedures</p>
3 Provide customer service during flight	<p>3.1 Toilets and facilities are periodically checked and serviced to ensure that they meet workplace standards and are adequately stocked with relevant resources</p> <p>3.2 Passengers' safety, security and comfort needs are anticipated and appropriate action is taken and responses made</p> <p>3.3 Aircraft cabin is patrolled to confirm passengers' safety and comfort needs are being adequately satisfied in accordance with regulatory requirements and workplace procedures</p>

ELEMENT

PERFORMANCE CRITERIA

4 Provide customer service on arrival

- 4.1 Passengers are assisted in accessing baggage and personal items
- 4.2 Advice is provided on local time and weather conditions where applicable
- 4.3 Appropriate information is provided about terminal facilities and transport options
- 4.4 Passengers with special needs are assisted as appropriate in accordance with workplace procedures and regulatory requirements
- 4.5 Passengers are farewelled courteously in accordance with workplace procedures
- 4.6 Passengers are guided to the appropriate exit

5 Provide support to other members of the aircraft crew

- 5.1 Appropriate assistance is provided to other team members of the cabin crew in accordance with workplace procedures
- 5.2 Other members of the crew are advised of any variations to workplace procedures
- 5.3 Meals and refreshments are served to the flight crew in accordance with workplace procedures and flight schedule

6 Carry out administrative procedures

- 6.1 Workplace administrative procedures are identified and interpreted
- 6.2 Administrative procedures are implemented in accordance with workplace and regulatory requirements
- 6.3 All required aircraft documentation/data capture is completed in accordance with workplace requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory requirements
- Relevant OH&S, hygiene and environmental procedures and regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Principles of customer service
- Airline standards for providing appropriate assistance and advice to passengers prior to take-off, during flight and on arrival
- Action to be taken in response to flight crew instructions
- The requirements for cabin crew to suspend customer service and be seated during both take-off and landing and when otherwise directed by the pilot in command, or other senior air crew
- Airline administrative procedures
- Cabin features and amenities for various types of aircraft
- Features and amenities of terminals at designated airports
- Transport options at designated airports
- Problems that may need to be addressed when providing customer service and action that can be taken to address them

Required skills:

- Communicate effectively with others when providing customer service on an aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to providing customer service on an aircraft
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to providing customer service on an aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing customer service on an aircraft
- Adapt appropriately to individual differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when providing customer service on an aircraft in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when providing customer service on an aircraft
- Apply precautions and required actions to minimise, control or eliminate hazards that may

REQUIRED KNOWLEDGE AND SKILLS

exist when providing customer service on an aircraft

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to provide customer service on an aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Customer service may be provided:

- on any passenger-carrying aircraft type in commercial service
- during short and/or long haul services
- in any category of service, including economy, business and first class
- in any allowable operating and weather conditions
- in accordance with regulatory and operational requirements

Performance may be demonstrated:

- on an approved cabin service simulator
- in a suitably simulated work environment
- on a passenger-carrying aircraft

Aircraft features and amenities may include:

- toilets
- cabin crew alert buttons
- wheelchairs and equipment for aiding disabled passengers
- seat controls and adjustments
- equipment for use with babies
- audio-visual equipment
- overhead lockers
- telephone
- movie screens
- in-flight entertainment resources such as in-seat videos

Terminal facilities may include:

- baggage carousel locations
- transit lounges
- airline clubs/lounges
- food outlets and restaurants
- ATMs, banks and money/travellers' cheques exchange services
- duty free shopping
- customs services

Transport options may include:

- buses
- trains
- taxis
- hire cars
- shuttle buses
- rental vehicle services

Persons consulted may include:

- passengers

RANGE STATEMENT

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none">• other cabin crew and flight crew members• ground staff• catering staff• aircraft resourcing staff• technical staff• company procedures• enterprise procedures• organisational procedures• established procedures• standard operating procedures
Information/documents may include:	<ul style="list-style-type: none">• sections of Civil Aviation Safety Regulations and Civil Aviation Orders and other regulations relevant to cabin service and safety operations• airline procedures and instructions and job specification• OH&S regulations and procedures• cabin service checklists and procedures• cabin equipment operational manuals• emergency procedures• flight passenger schedules• information on terminal facilities and transport options at designated airports• induction and training materials• conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:	<ul style="list-style-type: none">• relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO)• relevant Australian Civil Aviation Safety Regulations and Civil Aviation Orders• Civil Aviation Act• relevant OH&S legislation• environmental protection legislation• relevant food handling and hygiene legislation• equal opportunity and anti-discrimination legislation• relevant customs and quarantine regulations• relevant Australian Standards• industrial relations and workplace compensation legislation

Competency Field	I - Customer Service
-------------------------	----------------------

AVII2003C Carry out beverage service on an aircraft

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to provide beverage service to passengers on a commercial aircraft, including handling stock and materials, advising passengers on beverages, taking drink orders, preparing and serving drinks, using trays, clearing and cleaning carts/tables and equipment, and preparing and using tea and coffee making equipment. It also covers the skills and knowledge needed to ensure compliance with legal requirements, including monitoring the level of intoxication of passengers and taking appropriate action. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements including OH&S regulations.

Use for Australian Defence Force (ADF) Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of beverage service principles and procedures and relevant regulations to the provision of beverage service to passengers on commercial aircraft across a variety of operational contexts within the Australian aviation industry.

This unit of competency is nominally packaged at Certificate II.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Handle stock and materials	<p>1.1 Where applicable, bar is checked and restocked at scheduled times using correct documentation in accordance with workplace procedures and customs regulations</p> <p>1.2 Items are stored in the correct place at the correct temperature</p> <p>1.3 A suitable range of paperware and garnishes are prepared and stocked in accordance with workplace procedures</p> <p>1.4 Products are checked to ensure quality is to required standard in accordance with workplace procedures</p> <p>1.5 Bar area is kept clean, attractive and complete in accordance with workplace procedures and standards</p> <p>1.6 Glassware is kept hygienically clean, free from chips and cracks and stored correctly where applicable in accordance with workplace procedures</p> <p>1.7 Familiarity with products to be offered is undertaken prior to service provision</p> <p>1.8 Customs documentation is completed where applicable in accordance with regulatory requirements and workplace procedures</p>
2 Advise passengers	<p>2.1 Advice is offered to passengers to assist them in an appropriate selection of products</p> <p>2.2 Passengers' complaints are resolved to their satisfaction within the limits of authority in accordance with workplace procedures and regulatory requirements</p> <p>2.3 Passengers' complaints which require further action are referred to the supervisor in accordance with workplace procedures and regulatory requirements</p>
3 Take drink orders	<p>3.1 Orders are taken accurately and are either written or memorised</p> <p>3.2 Clear and helpful advice is given to passengers on selection of drinks</p>
4 Prepare and serve drinks	<p>4.1 Drinks are prepared to legal and airline standards, using the correct ingredients and measures, and are made to passenger requests</p> <p>4.2 Drinks are served promptly and courteously</p>
5 Use trays	<p>5.1 Drink trays are loaded skilfully and safely, ensuring correct balance</p> <p>5.2 Drink trays are carried and unloaded in accordance with regulatory requirements</p> <p>5.3 Drinks are poured and served in accordance with workplace procedures and regulatory requirements</p>

ELEMENT	PERFORMANCE CRITERIA
6 Clear and clean carts/tables and equipment	<p>6.1 Tables are cleared at an appropriate time in a polite manner</p> <p>6.2 Tables and carts are cleaned hygienically and prepared for further service in accordance with workplace procedures and standards</p> <p>6.3 Utensils and glassware are stowed ready for cleaning where applicable</p>
7 Prepare and use tea and coffee making equipment	<p>7.1 Tea and coffee making equipment is prepared ready for use in accordance with workplace procedures and regulatory requirements</p> <p>7.2 Passengers are offered a range of different teas and coffees and these are made to passengers' requests giving consideration to strength, texture and presentation</p>
8 Comply with legal requirements	<p>8.1 Compliance is maintained at all times with the primary provisions and legal requirements relating to liquor service</p>
9 Monitor level of intoxication of passengers and take suitable action	<p>9.1 The level of intoxication of passengers is monitored using appropriate methods in accordance with workplace procedures and regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant legislation and regulations including those concerning the serving of alcoholic beverages on aircraft
- Relevant OH&S, hygiene and environmental procedures, standards and regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Principles of passenger service
- Airline procedures and standards for serving alcoholic and non-alcoholic beverages on aircraft
- Typical service flows within an aircraft beverage service environment
- Features and characteristics of various types of alcoholic and non-alcoholic beverages served on commercial aircraft
- Hygiene and safety issues of specific relevance to beverage service
- Risks that exist when serving alcoholic and non-alcoholic beverages, and related risk control procedures and precautions
- Problems that may occur when serving alcoholic and non-alcoholic beverages, and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when carrying out beverage service on an aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to beverage service on an aircraft
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to beverage service on an aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out beverage service on an aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when carrying out beverage service on an aircraft in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when carrying out beverage service on an aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when carrying out beverage service on an aircraft
- Monitor and anticipate operational problems and hazards and take appropriate action

REQUIRED KNOWLEDGE AND SKILLS

- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when carrying out beverage service on an aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Beverage service may be provided:	<ul style="list-style-type: none"> • on any passenger-carrying aircraft type in commercial service • during short and/or long haul services • in any category of service, including economy, business and first class • in any allowable operating and weather conditions • in accordance with regulatory and operational requirements, including OH&S regulations
Performance may be demonstrated:	<ul style="list-style-type: none"> • in an approved cabin service simulator • in a suitably simulated work environment • on a passenger-carrying aircraft
Advice provided to passengers on beverages may include:	<ul style="list-style-type: none"> • types of alcoholic beverages • service of alcoholic beverages • restrictions on use of alcoholic beverages at the appropriate time in a polite manner • assistance to passengers to drink within appropriate limits by providing them with a range of options including the following: <ul style="list-style-type: none"> • low alcohol and non-alcoholic drinks • mineral water • pure water • coffee • nibbles/snacks
Legal requirements relating to liquor service may include but are not restricted to:	<ul style="list-style-type: none"> • the prohibited sale of alcohol to minors • identification of, and refusal to serve, persons who present indications of being intoxicated • advice to passengers on strengths of alcoholic beverages
Methods of monitoring the level of intoxication of passengers may include:	<ul style="list-style-type: none"> • observations in changes of behaviour • monitoring noise levels • monitoring drink orders
Persons consulted concerning beverage service may include:	<ul style="list-style-type: none"> • passengers • other cabin crew and flight crew members • ground staff • catering staff • aircraft resourcing staff
Dependent on the type of	<ul style="list-style-type: none"> • company procedures

RANGE STATEMENT

organisation concerned and the local terminology used, workplace procedures may be referred to as:

- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- relevant regulatory requirements pertaining to the serving of alcoholic and non-alcoholic beverages on aircraft, including OH&S regulations
- airline procedures and instructions and job specification
- airline beverage service procedures
- beverage service checklist
- relevant customs regulations
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant regulatory requirements pertaining to the serving of alcoholic and non-alcoholic beverages on aircraft
- relevant OH&S legislation
- environmental protection legislation
- relevant food handling and hygiene legislation
- equal opportunity and anti-discrimination legislation
- relevant customs and quarantine regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Discuss menu items and selections	<p>1.1 Culinary styles and cooking methods of menu items are discussed with passengers using appropriate language, terminology and correct pronunciation according to the passenger's needs</p> <p>1.2 Passengers are advised on the selection of menu items available, providing options and possible variations where appropriate to passenger and operational needs</p>
2 Advise passengers on food	<p>2.1 Information is accessed from appropriate sources in order to advise passengers on menu items in accordance with workplace procedures</p> <p>2.2 Passengers are advised on a range of foods, in terms of varieties, quality factors, ingredients and cooking methods, where applicable, using standard airline descriptions and in accordance with workplace procedures</p> <p>2.3 Foods are described using standard industry descriptions in terms of preparation methods and styles of service</p>
3 Advise passengers on special menu items	<p>3.1 Passengers are advised on special menu items using standard airline descriptions and the appropriate terminology in accordance with workplace procedures</p> <p>3.2 Appropriate responses are made to passenger requests for information on dietary features of special menu items in accordance with workplace procedures</p>
4 Contribute to menu development	<p>4.1 Trends in passenger needs are identified and interpreted based on direct contact and workplace experience</p> <p>4.2 Advice on hygiene approaches is provided upon request</p> <p>4.3 Suggestions and feedback on possible changes to menu development is provided to relevant personnel in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory requirements
- Relevant equal opportunity and anti-discrimination regulations
- Principles of customer service
- Airline procedures and standards for providing advice on cuisine to passengers
- Standard airline menus and menu items
- Features and characteristics of various types of food served on commercial aircraft including special menu items
- Relevant information on meal ingredients, special dietary requirements and food allergies
- Food presentation for different types of airline service
- Hygiene and safety issues of specific relevance to food and beverage service
- Risks that exist when providing advice on cuisine to passengers and related risk control procedures and precautions
- Problems that may occur when providing advice on cuisine to passengers, and to passengers with special needs, and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when providing advice on cuisine on an aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to providing advice on cuisine on an aircraft
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to providing advice on cuisine on an aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing advice on cuisine on an aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when providing advice on cuisine on an aircraft in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when providing advice on cuisine on an aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when providing advice on cuisine on an aircraft
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule

REQUIRED KNOWLEDGE AND SKILLS

- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when providing advice on cuisine on an aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Meal service may be provided:	<ul style="list-style-type: none"> • on any passenger-carrying aircraft type in commercial service • during short and/or long haul services • in any category of service, including economy, business and first class • in any allowable operating and weather conditions • in accordance with regulatory and operational requirements, including OH&S requirements
Performance may be demonstrated:	<ul style="list-style-type: none"> • in an approved cabin service simulator • in a suitably simulated work environment • on a passenger-carrying aircraft
Types of food upon which advice may be provided may include:	<ul style="list-style-type: none"> • appetisers and hors d'oeuvres • soups • meat and fish • vegetables • sweets and desserts • cheeses • fruit salads • sauces • pasta • noodles
Advice on special menu items may include:	<ul style="list-style-type: none"> • origins • ingredients • methods of preparation • presentation styles
Sources of information on menu items may include:	<ul style="list-style-type: none"> • menu galley guide • catering checklist • special meal information
Persons consulted on menu items may include:	<ul style="list-style-type: none"> • passengers • other crew members • catering staff • ground support staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures

RANGE STATEMENT

Information/documents may include:

- standard operating procedures
- sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to food service on aircraft
- airline procedures and instructions and job specification
- standard airline menus
- airline meal service procedures checklists and procedures
- menu galley guide
- catering checklist
- special meal information
- relevant information on meal ingredients, special dietary requirements and food allergies
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to food service on aircraft
- relevant Australian Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to food service on aircraft
- Civil Aviation Act
- relevant OH&S legislation
- relevant food handling and hygiene legislation
- equal opportunity and anti-discrimination legislation
- relevant Australian Standards
- industrial relations and workplace compensation legislation

I - Customer Service

AVII2006B Conduct in-flight retailing

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to conduct in-flight retailing on a commercial aircraft in accordance with relevant regulatory requirements, including assessing customer needs, promoting products and customer services, handling payments, handling complaints, completing administrative requirements, carrying out stocktaking procedures, reconciling money/stock, ordering and storing stock, and maintaining security of goods and revenue. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements, including OH&S, customs and security regulations along with customer service principles and protocols to the conduct of in-flight retailing.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of customer service principles and procedures, relevant regulations and protocols to the conduct of in-flight retailing on commercial aircraft across a variety of operational contexts within the Australian aviation industry.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Assess customer needs	<p>1.1 Appropriate questioning techniques are used to determine customers' needs and product preferences in accordance with workplace procedures</p> <p>1.2 Individual needs of customers are accurately assessed and suitable products are identified</p> <p>1.3 Advice is courteously provided to customers on products available for sale in accordance with workplace procedures and trade practices regulations</p>
2 Promote products and customer services	<p>2.1 Products and services available to customers are effectively promoted in accordance with workplace procedures</p> <p>2.2 Selling techniques appropriate to the product and customer are employed, in order to make sale in accordance with workplace procedures</p>
3 Handle payments	<p>3.1 Customers are courteously advised of amount due in accordance with workplace procedures</p> <p>3.2 Payments for products are processed in accordance with workplace procedures, including credit card transactions where applicable</p> <p>3.3 Currency conversion rates are correctly applied during transactions where applicable</p> <p>3.4 Correct change is returned to customer, where appropriate</p> <p>3.5 Appropriate precautions are taken to minimise/identify incidences of credit card fraud in accordance with workplace procedures</p>
4 Handle complaints	<p>4.1 Complaints are promptly and sensitively identified and received in accordance with workplace procedures</p> <p>4.2 Complaints are handled and/or reported to senior personnel in accordance with workplace procedures</p> <p>4.3 Appropriate follow-up action is taken to ensure a positive outcome in accordance with workplace procedures</p>
5 Complete administrative requirements	<p>5.1 Reconciliation of money and stock is completed in accordance with workplace procedures</p> <p>5.2 Appropriate documentation of financial transactions and reconciliations is completed, in accordance with workplace procedures and customs requirements</p> <p>5.3 Pay-in procedures are accurately performed in accordance with workplace operational and security procedures</p>
6 Carry out stocktaking procedures	<p>6.1 Stocktaking procedures are carried out accurately, in a timely manner and in accordance with workplace procedures and regulatory requirements</p>

ELEMENT

PERFORMANCE CRITERIA

- 6.2 Any shortfalls are checked and reported as required
- 6.3 Required stocktaking documentation is completed in accordance with workplace procedures and customs requirements
- 7 Order and store stock**
 - 7.1 Internal requisitions are correctly placed in accordance with workplace procedures and customs requirements
 - 7.2 Uplifted stock is received and checked for quality and quantity
 - 7.3 Faulty or incorrect goods delivered are promptly identified and appropriate action taken in accordance with workplace procedures
 - 7.4 Uplifted stock is correctly stored and in accordance with workplace procedures
 - 7.5 Stock is handled and stored using safe manual handling methods in accordance with OH&S regulations
- 8 Maintain security**
 - 8.1 Compliance is maintained with security procedures for the protection of saleable amenities and revenue at all times in accordance with workplace procedures
 - 8.2 Breaches in security are promptly identified and reported and appropriate action is taken in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory requirements pertaining to in-flight retailing
- Relevant OH&S, hygiene and environmental procedures and regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Principles of customer service and effective selling
- Airline procedures and standards for in-flight retailing, including selling, stocktaking, stock/money reconciliation, customs, security and administrative processes
- Saleable products, amenities and services including their features, characteristics and pricing
- Risks that exist when conducting in-flight retailing and related risk control procedures and precautions
- Problems that may occur when conducting in-flight retailing and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when conducting in-flight retailing
- Read and interpret instructions, regulations, procedures and other information relevant to in-flight retailing
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to in-flight retailing
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting in-flight retailing
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when conducting in-flight retailing in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when conducting in-flight retailing
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when conducting in-flight retailing
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

REQUIRED KNOWLEDGE AND SKILLS

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when conducting in-flight retailing

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|--|
| Service may be provided: | <ul style="list-style-type: none"> • on any passenger-carrying aircraft type in commercial service • during short and/or long haul services • in any category of service including economy, business class and first class • in any allowable operating and weather conditions • in accordance with regulatory and operational requirements |
| Performance may be demonstrated on: | <ul style="list-style-type: none"> • an approved cabin service simulator • a passenger-carrying aeroplane |
| Payments for products may be made: | <ul style="list-style-type: none"> • in Australian currency • in foreign currency • by credit card • by travellers cheque |
| Questioning techniques may include: | <ul style="list-style-type: none"> • open questions (useful for gaining new information) • closed questions (useful for gaining commitment or confirming needs/understanding) • limiting questions (useful for offering alternatives, such as to verify/clarify information before recommending, to enable focus on particular passenger's needs, to provide control and direction) • leading/rhetorical questions (useful for focusing on a particular need; answer is implied in question) • active listening • checking understanding |
| Advice to passengers on aspects of saleable products/amenities may include: | <ul style="list-style-type: none"> • features • benefits • match to customer's needs • price • payment methods |
| Security procedures for the protection of saleable amenities may include: | <ul style="list-style-type: none"> • stock procedures • stowage • bond store locks and keys |
| Persons consulted during in-flight retailing may include: | <ul style="list-style-type: none"> • passengers • other crew members • relevant ground staff |

RANGE STATEMENT

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:

Information/documents may include:

Applicable regulations and legislation may include:

- aircraft resourcing staff
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures
- relevant regulations pertaining to in-flight retailing including regulations pertaining to trade practices and the operation of carts in aisles
- airline in-flight retailing and security procedures and instructions including procedures and precautions for credit card transactions
- job specification
- OH&S procedures
- operational manuals for equipment used during in-flight retailing
- information on saleable products, amenities and services
- information on currency conversion/exchange rates
- sale catalogues
- stocktake checklists and procedures
- customs requirements
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant regulations pertaining to in-flight retailing, including CASA regulations relating to retail operations on aircraft (i.e. the operation of carts in aisles)
- relevant OH&S legislation
- taxation legislation including GST
- relevant trade practices regulations
- equal opportunity and anti-discrimination legislation
- relevant customs and quarantine regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Greet passenger	<p>1.1 Passenger is greeted in accordance with workplace customer service procedures</p> <p>1.2 Passenger is asked for their name and details of their flight</p> <p>1.3 Photographic identification is requested from the passenger and their identity is confirmed</p>
2 Check in passenger using manual process	<p>2.1 When manual procedures are being followed, passenger's name is identified and confirmed on the passenger list for the nominated flight</p> <p>2.2 Where possible, passenger's seating preference on the aircraft is sought</p> <p>2.3 Passenger's check-in is recorded on the passenger list and a suitable and available aircraft seat is allocated</p> <p>2.4 Passenger is advised of any changes in flight arrangements including delays, cancellations and gate changes</p>
3 Check in passenger using computerised process	<p>3.1 When computerised procedures are being followed, passenger's name and indicated flight are entered into the system using relevant workplace procedures</p> <p>3.2 Passenger's booking for the flight is confirmed on the system</p> <p>3.3 Should the passenger's name not be found in bookings for the flight, appropriate action is taken in discussion with the passenger to resolve the problem in accordance with workplace procedures</p> <p>3.4 Where relevant, passenger's seating preference on the aircraft is sought or if in a loyalty program confirmed from their preference profile</p> <p>3.5 Passenger is advised of prohibited items that are not allowed to be carried onto an aircraft or carried in baggage in accordance with workplace procedures and regulatory requirements</p> <p>3.6 Passenger's check-in is confirmed on the system and a suitable and available aircraft seat is allocated using appropriate workplace procedures</p>
4 Check in baggage	<p>4.1 Where applicable, passenger is requested to present her/his baggage for check-in</p> <p>4.2 Items of cabin baggage are checked to ensure that they fall within number, size and weight requirements, and if not, the passenger is courteously advised that relevant items must be checked in together with any other items for carriage in the aircraft's hold</p> <p>4.3 Passenger's checked-in baggage is weighed on the scales in accordance with workplace procedures</p>

ELEMENT

PERFORMANCE CRITERIA

- 4.4 Baggage weight is compared to allowable limits for the passenger's class of travel
- 4.5 If baggage is above the allowable limit but still permissible under excess baggage rules, passenger is advised and arrangements are made for excess baggage payment in accordance with workplace procedures
- 4.6 If baggage is above the allowable limit and the excess is not permissible under regulatory requirements, passenger is advised in accordance with workplace procedures and requested to take appropriate action to reduce baggage weight to within the allowable limit
- 4.7 Baggage details are recorded on the aircraft's baggage list and entered into the computer system dependent on the workplace procedures for the type of check-in process being used
- 4.8 Baggage is labelled in accordance with workplace procedures using either manually or printer-produced tags dependent on the system being used, including overweight, oversize or fragile labels where applicable
- 4.9 Where loyalty services apply, baggage is tagged with the appropriate label
- 4.10 Passenger's baggage is placed on the baggage belt or cart, as applicable
- 4.11 Passenger's baggage check-in record is attached to their ticket or boarding pass sleeve
- 4.12 Baggage is handled at all times in accordance with OH&S regulations and workplace procedures
- 5 Respond to problems during check-in**
 - 5.1 A problem arising during check-in is promptly identified and clarified in accordance with workplace procedures
 - 5.2 Options for the resolution of the identified problem are explored in consultation with the passenger and other staff in accordance with workplace procedures and any relevant regulatory requirements
 - 5.3 Where a problem cannot be immediately resolved, the problem is referred to an appropriate supervisor or other relevant staff for action in accordance with workplace procedures
- 6 Issue boarding pass**
 - 6.1 On finalisation of check-in procedures, a manual or computer-produced boarding pass is issued and presented to the passenger in accordance with workplace procedures
 - 6.2 Passenger's attention is drawn to relevant details on the boarding pass including the flight code, the boarding gate and the required boarding time
- 7 Direct passenger to**
 - 7.1 Passenger is directed to the security gate in accordance with

ELEMENT

security gate

PERFORMANCE CRITERIA

workplace procedures

7.2 Where applicable, passengers subscribing to a loyalty scheme and/or airline club are advised of the location of the club lounge and the facilities available in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to check-in procedures
- Relevant OH&S regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Principles of customer service
- Airline standards for providing appropriate check-in services for passengers
- Check-in records/documentation
- Baggage check-in limits and requirements
- Features, amenities and departure gate locations of terminals at designated airports
- Risks that exist when checking in passengers for aircraft flights and related risk control procedures and precautions
- Problems that may occur when checking in passengers for aircraft flights and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when checking in aircraft passengers
- Read and interpret instructions, regulations, procedures and other information relevant to checking in aircraft passengers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to aircraft passengers
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when checking in aircraft passengers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when checking in aircraft passengers in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when checking in aircraft passengers
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when checking in aircraft passengers
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments

REQUIRED KNOWLEDGE AND SKILLS

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when checking in aircraft passengers

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Greet transit passenger	<p>1.1 Transit passenger is greeted in accordance with workplace customer service procedures</p> <p>1.2 Transit passenger is asked for their boarding pass and/or their name and details of their flight and destination and directed to the relevant terminal/check-in area</p> <p>1.3 Transit passenger's queries concerning their flight and transit arrangements are answered accurately, courteously and in accordance with workplace customer service standards and procedures</p>
2 Greet arriving passenger	<p>2.1 Arriving passenger is greeted in accordance with workplace customer service procedures</p> <p>2.2 Arriving passenger is directed to the baggage carousel area and/or terminal exit and transport services</p> <p>2.3 Arriving passenger with international connections is directed to the relevant terminal/check-in area</p> <p>2.4 Arriving passenger's queries and concerns are answered courteously in accordance with workplace customer service standards and procedures</p>
3 Check in passenger for next leg using manual process	<p>3.1 When manual procedures are being followed, passenger's name is identified and confirmed on the passenger list for the nominated flight</p> <p>3.2 Should the passenger's name not be found in bookings for the flight, appropriate action is taken in discussion with the passenger to resolve the problem in accordance with workplace procedures</p> <p>3.3 Passenger is advised of any changes in flight arrangements including delays, cancellations and gate changes</p> <p>3.4 Where possible, passenger's seating preference on the aircraft is sought</p> <p>3.5 Passenger is advised of prohibited items that are not allowed to be carried onto an aircraft or carried in baggage in accordance with workplace procedures and regulatory requirements</p> <p>3.6 Passenger's check-in is confirmed on the system and a suitable and available aircraft seat is allocated using appropriate workplace procedures and regulatory requirements</p>
4 Check in transit passenger for next leg using computerised process	<p>4.1 When computerised procedures are being followed, passenger's name and indicated flight are entered into the system using relevant workplace procedures</p> <p>4.2 Passenger's booking for the next leg of the flight is confirmed on the system and the passenger is advised of any changes in flight arrangements</p>

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| | 4.3 Should the passenger's name not be found in bookings for the flight, appropriate action is taken in discussion with the passenger to resolve the problem in accordance with workplace procedures |
| | 4.4 Where relevant, passenger's seating preference on the aircraft is sought or if in a loyalty program confirmed from their preference profile |
| | 4.5 Passenger is advised of prohibited items that are not allowed to be carried onto an aircraft or carried in baggage in accordance with workplace procedures and regulatory requirements |
| | 4.6 Passenger's check-in is confirmed on the system and a suitable and available aircraft seat is allocated using appropriate workplace procedures |
| 5 Respond to a passenger's problems | 5.1 A problem arising for an arriving or transit passenger is promptly identified and clarified in accordance with workplace procedures |
| | 5.2 Options for the resolution of the identified problem are explored in consultation with the passenger and appropriate other staff in accordance with workplace procedures and any relevant regulatory requirements |
| | 5.3 Where a problem cannot be immediately resolved, the problem is referred to appropriate supervisor or other relevant staff for appropriate action in accordance with workplace procedures |
| 6 Issue boarding pass for next leg of flight | 6.1 On finalisation of check-in procedures, a manual or computer-produced boarding pass is issued and presented to the transit passenger in accordance with workplace procedures |
| | 6.2 Passenger's attention is drawn to relevant details on the boarding pass including the flight code, the boarding gate and the required boarding time |
| 7 Direct transit passenger to transit lounge | 7.1 Passenger is directed to the transit lounge and facilities in accordance with workplace procedures |
| | 7.2 Where applicable, passengers subscribing to a loyalty scheme and/or airline club are advised of the location of the club lounge and the facilities available in accordance with workplace procedures |

Required Skills and Knowledge

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to check-in procedures
- Relevant OH&S regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Principles of customer service
- Airline standards and procedures for providing appropriate services for transit and arriving passengers
- Check-in records/documentation
- Baggage check-in limits and requirements
- Features, amenities, transit club lounges and departure gate locations at designated airports
- Risks that exist when assisting transit and arriving passengers and related risk control procedures and precautions
- Problems that may occur when assisting transit and arriving passengers and appropriate action that should be taken in each case

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required skills:

- Communicate effectively with others when providing assistance to transit and arriving passengers
- Read and interpret instructions, regulations, procedures and other information relevant to transit and arriving passengers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to transit and arriving passengers
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing assistance to transit and arriving passengers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when providing assistance to transit and arriving passengers in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when providing assistance to transit and arriving passengers
- Apply precautions and required actions to minimise, control or eliminate potential hazards that may exist with the transit and arrival of passengers
- Monitor and anticipate operational problems and hazards and take appropriate action

Required knowledge:

- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when providing assistance to transit and arriving passengers

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|---|
| Assistance to transit and arriving passengers may be provided: | <ul style="list-style-type: none"> • by day or night • at international, domestic and regional airports • at an arrival gate, transit lounge or service desk • for both short and/or long haul services • in any category of service, including economy, business class, first class • in accordance with regulatory and operational requirements |
| Performance may be demonstrated: | <ul style="list-style-type: none"> • in an appropriately simulated workplace situation • at an operational airport |
| Check-in procedures may include: | <ul style="list-style-type: none"> • manual check-in processes • computerised check-in processes |
| Problems during passenger arrival/transit check-in may include: | <ul style="list-style-type: none"> • lack of understanding of terminal layout • possession or prohibited items on person or in cabin or checked-in baggage • late arrival of incoming flight • no record of the passenger's booking for next leg of flight • delayed or cancelled flight |
| Persons consulted may include: | <ul style="list-style-type: none"> • passengers • other cabin crew and flight crew members • ground staff, including those in supervisory positions • catering staff • ground support staff • technical staff |
| Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include: | <ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures |
| Information/documents may include: | <ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to passenger check-in processes • airline transit service checklists, procedures and instructions and job specifications including both manual and computerised processes where applicable • workplace customer service standards, policies and procedures |

RANGE STATEMENT

Applicable regulations and legislation may include:

- lists of items prohibited for carriage on aircraft
- check-in equipment operational manuals
- emergency procedures
- flight passenger schedules
- information on terminal facilities, club lounges and departure gates
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- relevant OH&S legislation
- environmental protection legislation
- equal opportunity and anti-discrimination legislation
- relevant customs and quarantine regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Competency field

Competency Field I - Customer Service

AVII2009B Serve wine to aircraft passengers

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to serve wine and carry out wine service for passengers on a commercial aircraft, including storing and handling wines, setting a bar or cocktail unit, organising glassware, advising passengers on wines and wine choice, taking orders, and serving wine. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and relevant regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of a knowledge and understanding of Australian and overseas wines, customer service principles and procedures and relevant regulatory requirements to the serving of wines to passengers on commercial aircraft across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Store and handle wines	<p>1.1 Wines are stored for optimum quality as recommended by the manufacturer and within the possible parameters of the workplace</p> <p>1.2 Quality problems are promptly identified and rectified in accordance with workplace procedures</p>
2 Set bar or cocktail unit	<p>2.1 Bar glassware is selected and checked for cleanliness, chips and cracks in accordance with workplace procedures and standards</p> <p>2.2 Ice buckets are inspected and cleaned hygienically in accordance with workplace procedures and regulatory requirements</p> <p>2.3 Napkins are prepared in accordance with workplace procedures and standards</p>
3 Organise glassware	<p>3.1 Appropriate glassware is correctly placed on tables in accordance with workplace procedures and standards</p> <p>3.2 Appropriate styles of glassware are selected for use with particular wines</p> <p>3.3 Glassware is selected, checked for cleanliness, chips and cracks and placed on passengers' tables in accordance with workplace procedures and standards</p> <p>3.4 Where necessary, suitable glassware is selected to match a passenger's choice of wine and exchanged with that set on table</p> <p>3.5 Used and unused glassware is removed at the appropriate time in accordance with workplace procedures and standards</p>
4 Converse with passengers about wine	<p>4.1 Appropriate communication techniques are used to converse with passengers about wine</p> <p>4.2 A sufficient knowledge and understanding of wine appreciation is appropriately applied to conversation with passengers for the purpose of assisting them in making choices according to the food to be consumed</p>
5 Advise passengers on their wine choice	<p>5.1 Where applicable, wine list is discussed in terms of the wine areas of Australia and overseas using standard industry information including grape variety, notable producers and vintage</p> <p>5.2 Passengers are correctly and courteously advised on their wine choice in terms of traditional combinations, seasonal and special occasions and contemporary cuisine</p> <p>5.3 Feedback on composition of wine list is relayed to the passenger service supervisor/passenger service manager or appropriate department for product development in accordance with workplace procedures</p>

ELEMENT

PERFORMANCE CRITERIA

- 5.4 Wine irregularities are appropriately followed up with appropriate personnel
- 5.5 The level of intoxication of passengers is monitored using appropriate methods in accordance with workplace procedures and regulatory requirements
- 5.6 Legislative requirements concerning the serving of alcoholic beverages are followed when providing advice to passengers on wine choice
- 6 Take orders**
- 6.1 Wine list is presented in a courteous manner at the appropriate time in accordance with workplace procedures and standards
- 6.2 Orders are taken accurately in accordance with workplace procedures
- 7 Serve wine**
- 7.1 Wine is presented in accordance with a passenger's order and workplace procedures
- 7.2 Wine is opened and checked for soundness in accordance with workplace procedures and regulatory requirements
- 7.3 Correct workplace procedures are followed if wine is refused after tasting
- 7.4 Wine is served and glasses refilled promptly and with minimal disruption in accordance with workplace procedures and regulatory requirements
- 7.5 Correct glassware is used when serving fortified wines in accordance with workplace procedures and standards

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S, food hygiene, equal opportunity and anti-discrimination regulations
- Airline procedures and standards for the provision of wine service on an aircraft
- Principles of wine production and distribution including different wine styles, label terminology and interpretation
- Features and characteristics of a suitably wide selection of Australian and imported wines typically selected for in-flight wine lists on an aircraft, including major wine types, major grape varieties, major wine producers and wine producing areas of Australia and overseas, regional characteristics of Australian wines, style names, varieties and label terminology
- Basic rules to assist in the enjoyment of wine with food
- Compatibility of different wines to different food types
- Legislation and regulations concerning the serving of alcoholic beverages on an aircraft
- Risks that exist when providing wine service on an aircraft and related risk control procedures and precautions
- Problems that may occur when providing wine service on an aircraft and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when serving wine to aircraft passengers
- Read and interpret instructions, regulations, procedures and other information relevant to serving wine to aircraft passengers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to serving wine to aircraft passengers
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when serving wine to aircraft passengers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when serving wine to aircraft passengers in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when serving wine to aircraft passengers
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when serving wine to aircraft passengers
- Monitor and anticipate operational problems and hazards and take appropriate action

REQUIRED KNOWLEDGE AND SKILLS

- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when serving wine to aircraft passengers

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|---|
| Wine service may be provided: | <ul style="list-style-type: none"> • on any passenger-carrying aircraft type in commercial service • during short and/or long haul services • in economy, business class and first class service categories • in any allowable operating and weather conditions • in accordance with regulatory and operational requirements, including OH&S regulations |
| Performance may be demonstrated: | <ul style="list-style-type: none"> • in an approved cabin service simulator • in a suitably simulated work environment • on a passenger-carrying aircraft |
| Advice and assistance provided to passengers to assist them in their choice of wine may include information on: | <ul style="list-style-type: none"> • wine types • style names, varieties, label terminology • basic rules to assist in the enjoyment of wine with food • other relevant wine quality criteria |

I - Customer Service

AVII2014B Provide transport services to passengers with special needs

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to provide appropriate, effective and courteous transport services to passengers with special needs in accordance with relevant government regulations, including identifying passengers with special needs; communicating effectively with the passengers; and providing appropriate assistance to them in both normal and emergency situations that may arise during their journey. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulatory requirements, including manual handling procedures and other relevant OH&S procedures and regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed individually or in a team environment with guidance and advice available where necessary.

Work involves the application of customer service principles and procedures and relevant regulatory requirements to the provision of appropriate transport services to passengers with special needs across a variety of commercial transport contexts including both normal and emergency situations that may arise.

Services to passengers with special needs may include any required assistance and support prior to, during and post the journey.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify passengers with special needs	<p>1.1 Passengers with special needs are identified and appropriate action taken to ensure that relevant workplace procedures and regulatory requirements are followed</p> <p>1.2 If necessary, information on workplace policies and procedures and related regulatory requirements relevant to the special need concerned are accessed and interpreted</p> <p>1.3 Applicable OH&S principles, policies and procedures relevant to assisting passengers with special needs are identified, accessed and interpreted, in particular those related to manual handling principles</p>
2 Communicate effectively with the passenger(s) and/or relevant personnel	<p>2.1 Appropriate communication methods are selected and used to meet the requirements of the passengers with special needs</p> <p>2.2 Appropriate and effective verbal and non-verbal communication skills are used including appropriate body language and language style</p> <p>2.3 Effective listening skills are demonstrated</p> <p>2.4 Questions are used to gain appropriate information</p> <p>2.5 All communications with passengers and other relevant personnel such as carers, guardians, parents, escorts, medical staff, etc. are conducted in a manner which is consistent with the workplace procedures and policy</p> <p>2.6 Where relevant, passengers/escorts are briefed in accordance with relevant regulations</p>
3 Provide assistance to passengers with special needs	<p>3.1 Workplace procedures and relevant regulatory requirements are followed when providing transport services to passengers with special needs in both normal and emergency situations</p> <p>3.2 Individual customer needs and expectations are identified so that appropriate products and services may be provided in a consistent and timely manner</p> <p>3.3 Any limitations to service provision is identified, communicated to passengers and checked for understanding</p> <p>3.4 Appropriate equipment/resources are selected and used to assist passengers with special needs</p> <p>3.5 Anticipated problems are correctly identified and monitored, and action is taken to minimise their effect on customer safety and satisfaction</p> <p>3.6 Risks involved in providing transport services to passengers with special needs are identified and appropriate risk control precautions are adopted in accordance with workplace procedures and relevant regulatory requirements, including manual handling principles and procedures</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant international, Australian and state/territory regulatory requirements pertaining to the provision of transport services to persons with special needs
- Relevant OH&S and environmental procedures and regulations
- Implications for customer service of various types of special needs
- Customer service procedures as they relate to passengers with special needs
- Relevant equal opportunity, privacy and anti-discrimination legislation
- Any special safety/security regulatory requirements and procedures pertaining to the various applicable categories of persons with special needs
- Duty of care responsibilities when providing transport services to passengers with various types of special needs
- Products, services and operations of the transport service concerned
- Fare structures (where relevant)
- Types of equipment/resources required to assist passengers with various types of special need
- Risks that exist when providing services to passengers with special needs and related risk control procedures and precautions
- Problems that may occur when providing transport services to passengers with special needs and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when providing transport services to passengers with special needs
- Interact appropriately with passengers with a range of special needs
- Read and interpret instructions, regulations, procedures and other information relevant to the provision of transport services to passengers with special needs
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of transport services to passengers with special needs
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing transport services to passengers with special needs
- Adapt appropriately to differences in the workplace, including cultural differences, modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when providing transport services to passengers with special needs

REQUIRED KNOWLEDGE AND SKILLS

- Implement contingency plans for unexpected events that may arise when providing transport services to passengers with special needs
- Apply precautions and required actions to minimise, control or eliminate hazards that may exist when providing transport services to passengers with special needs
- Solve problems that might arise when providing transport services to passengers with special needs
- Monitor and anticipate operational problems, risks and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operation procedures
- Implement OH&S procedures and relevant regulations
- Identify, select and correctly use equipment required to provide transport services to passengers with special needs

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|---|
| Passenger transport operation may be conducted: | <ul style="list-style-type: none"> • by day or night • in any allowable weather conditions |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare galley for service	<p>1.1 Galley equipment, bar carts and other applicable food service items are checked to ensure levels of stock and equipment are appropriate to the level of service and sector requirements</p> <p>1.2 Menus are checked against catering supplied and prepared for distribution where applicable</p> <p>1.3 Dry stores are checked for availability</p> <p>1.4 Tea and coffee making equipment and materials are prepared for service in accordance with regulatory requirements and workplace procedures and standards</p>
2 Receive, check and store goods	<p>2.1 Food and equipment are checked against passenger load figures and checklists</p> <p>2.2 Defects and shortages are identified and reported to the appropriate person/department in accordance with workplace procedures</p> <p>2.3 Non-exchange equipment is inspected for defects and appropriate action is taken if required</p> <p>2.4 Dry stores are received and stowed in accordance with regulatory requirements and workplace procedures</p> <p>2.5 Appropriate action is initiated/taken to minimise effect on service when problems with stock or equipment are identified</p>
3 Check and maintain galley	<p>3.1 Galley is inspected and maintained to ensure that it is clean, well lit and at the correct temperature</p> <p>3.2 Defects and problems with galley equipment are identified and reported in accordance with workplace procedures</p> <p>3.3 Catering checklist is used with required levels of speed and accuracy</p> <p>3.4 Foods and goods are correctly issued according to passengers' requests</p> <p>3.5 Security in the galley area is maintained in accordance with regulatory requirements and workplace procedures</p> <p>3.6 Familiarity with store area is maintained and used to enable smooth workflow</p> <p>3.7 Identified galley equipment irregularities and defects are followed up with relevant personnel in accordance with workplace procedures</p>
4 Respond to breakdown in galley or cabin equipment	<p>4.1 Breakdown in galley or cabin equipment is identified, recorded in the log of equipment failure and notified to a senior crew member in accordance with workplace procedures</p> <p>4.2 Appropriate strategy for dealing with the breakdown is formulated in conjunction with the pilot-in-command (PIC)</p>

ELEMENT

PERFORMANCE CRITERIA

- and/or other flight or cabin crew in accordance with workplace procedures
- 4.3 Where applicable, passengers are kept informed of the nature of the problem and the action being taken to deal with it in accordance with workplace procedures
- 4.4 Alternative action is taken as appropriate to maintain cabin service in accordance with the agreed strategy
- 5 Prepare equipment for use**
- 5.1 Equipment needed for service is checked for cleanliness and is prepared for use in accordance with workplace procedures and regulatory requirements for safety and hygiene
- 5.2 Carts and/or serving equipment are set up in accordance with workplace procedures for the relevant menus
- 6 Prepare and present food for service**
- 6.1 Food items are prepared in accordance with workplace procedures and recipes and regulatory requirements for food hygiene
- 6.2 Food for menu items is correctly identified
- 6.3 Oven temperatures are at appropriate levels and food is transferred at appropriate times in accordance with workplace procedures and recipes and regulatory requirements for food hygiene
- 6.4 Food is monitored to ensure the quality of food is in accordance with workplace procedures
- 6.5 Sufficient supplies of clean, undamaged crockery are available at temperatures appropriate to food being served
- 6.6 Food is portioned in accordance with workplace procedures, recipes, product and service standards
- 6.7 Food items are arranged and presented without drips or spills in accordance with regulatory requirements and workplace procedures
- 7 Carry out galley service**
- 7.1 Crew are advised when meal service is due to commence
- 7.2 Meal service operations are monitored and additional food is prepared as required
- 7.3 Work is completed effectively in conjunction with other crew members to ensure timely, quality service of food
- 7.4 Quality of food items is regularly monitored in accordance with workplace procedures and appropriate action is taken if required
- 7.5 Towels are prepared hygienically at the appropriate time and forwarded as required to cabin staff for service in accordance with regulatory requirements and workplace procedures
- 7.6 Galley operations are adjusted as required to meet service and operational requirements and contingencies in accordance with workplace procedures

ELEMENT

PERFORMANCE CRITERIA

8 Clean galley and equipment

- 8.1 Unused food items are returned to correct storage area in accordance with workplace procedures
- 8.2 Soiled and used linen and towels are collected, sorted and removed in accordance with workplace procedures and regulatory requirements
- 8.3 Appropriate cleaning materials are identified and selected in accordance with workplace procedures and regulatory requirements
- 8.4 Equipment is cleaned in accordance with workplace procedures, manufacturers instructions and regulatory requirements
- 8.5 Cleaning materials and equipment are correctly and safely stored in accordance with regulatory requirements and workplace procedures
- 8.6 Waste is identified and sorted in accordance with regulatory requirements and workplace procedures

9 Prepare galley for landing

- 9.1 Galley facilities and equipment are checked and secured for landing in accordance with workplace procedures and regulatory requirements
- 9.2 Stock levels are checked and additional stock ordered if required to meet passenger load requirements for the next sector
- 9.3 Appropriate action is taken to ensure that compliance with quarantine regulations is maintained
- 9.4 Non-exchange items are sorted and stored in accordance with workplace procedures
- 9.5 Feedback on galley service provided is sought from other crew members and any problems that may have been experienced are appropriately documented
- 9.6 Suggestions are made to supervisory personnel in accordance with workplace procedures on options for possible improvements to food service operations
- 9.7 Galley administrative and feedback documentation is completed and stored in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory requirements
- Relevant OH&S, hygiene, quarantine and environmental procedures and regulations
- Principles of food preparation and galley service
- Airline standards for the food preparation and galley service
- Galley service procedures
- Relevant airline administrative procedures and related documentation
- Features of galley and equipment for various types of aircraft
- Menus and food presentation requirements for various classes of air travel service offered by airlines
- Procedures for cleaning galley and equipment and disposing of waste
- Risks that exist when carrying out food preparation and galley service and related risk control procedures and precautions
- Problems that may occur when carrying out food preparation and galley service and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when carrying out food preparation and service on an aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to food preparation and service on an aircraft
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to food preparation and service on an aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out food preparation and service on an aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when carrying out food preparation and service on an aircraft in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when carrying out food preparation and service on an aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when carrying out food preparation and service on an aircraft

REQUIRED KNOWLEDGE AND SKILLS

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when carrying out food preparation and service on an aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Food preparation and galley service may be provided:	<ul style="list-style-type: none"> • on any aircraft type in commercial service • during short and/or long haul services • in any category of service, including economy, business and first class • in any allowable operating and weather conditions • in accordance with regulatory and operational requirements, including OH&S and food hygiene regulations
Performance may be demonstrated:	<ul style="list-style-type: none"> • on an approved galley/cabin service simulator • in a suitably simulated work environment • on a passenger-carrying aircraft with galley/food preparation facilities
Persons consulted during galley operations may include:	<ul style="list-style-type: none"> • passengers • pilot-in-command (PIC) • other crew members • ground staff • catering staff • technical staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to galley service and safety operations • regulations relevant to OH&S and food hygiene and preparation • airline procedures and instructions and job specification • food preparation procedures • pre-landing checklists and procedures • galley service checklists and procedures • galley equipment operational manuals • flight passenger schedules • passenger load figures and checklists • stock inventory and ordering documentation • galley cleaning checklists and procedures

RANGE STATEMENT

Applicable regulations and legislation may include:

- checklist and procedures for pre-landing galley operations
- manufacturers instructions for the use of cleaning equipment and materials
- galley administrative and feedback documentation
- meal menus
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to food service on aircraft
- relevant Australian Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to food service on aircraft
- Civil Aviation Act
- regulations relevant to food hygiene and preparation
- regulations relevant to handling of dangerous goods and cleaning materials
- relevant OH&S legislation
- environmental protection legislation
- relevant food handling and hygiene legislation
- equal opportunity and anti-discrimination legislation
- relevant customs and quarantine regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

I - Customer Service

AVII3005B Apply knowledge of the structure, products and services of the airline operator

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to develop and apply an understanding of the structure, products and services of the aviation industry overall, and more specifically a particular airline operator, when working in the aviation industry. It includes developing and applying an understanding of the structure of (a) the aviation and tourism industries, (b) the economic and social significance of aviation and tourism in Australia, and (c) the structure, markets and operations of a particular airline. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements of the Civil Aviation Safety Authority and other relevant regulatory authorities.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the development of a knowledge and understanding of the aviation/tourism industries, and airline structures, functions, products, services and operations and their application to the day-to-day operations of a commercial airline across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop and apply an understanding of the structure of the aviation and tourism industries	<p>1.1 Sources of information on the structures and functions of the Australian aviation and tourism industries are identified and accessed in accordance with workplace procedures</p> <p>1.2 An understanding of the broad structures of the aviation industry and their relationship with each other is developed and appropriately applied to day-to-day work in the aviation industry</p> <p>1.3 An understanding of the sectors of the aviation industry and their relationship with each other is developed and appropriately applied to day-to-day work</p> <p>1.4 The roles of individual airlines with the aviation industry are correctly identified and explained</p>
2 Develop and apply an understanding of the economic and social significance of aviation and tourism in Australia	<p>2.1 Sources of information on the economic and social significance of the aviation and tourism industries are identified and accessed in accordance with workplace procedures</p> <p>2.2 An understanding of the economic and social significance of the aviation and tourism industries is developed and appropriately applied to day-to-day work</p> <p>2.3 For a given airline, an understanding of the scope of its operations and the economic and social significance of its contribution to the aviation and tourism industries is developed and appropriately applied to day-to-day work</p>
3 Identify markets for a particular airline	<p>3.1 For a particular airline, the products and services offered by that airline for specific markets are correctly identified and explained</p> <p>3.2 An understanding of the characteristics of domestic and overseas markets served by Australian international, domestic, regional and charter airlines is developed and applied as appropriate to day-to-day work</p>
4 Develop and apply an understanding of the structure and operations of an airline	<p>4.1 Sources of information on the structures, history and functions of a particular airline are identified and accessed in accordance with workplace procedures</p> <p>4.2 An understanding of the structure and day-to-day operations of a particular airline is developed and applied to day-to-day work</p> <p>4.3 The history and operational culture of a particular airline are researched, explained and applied to day-to-day work</p> <p>4.4 An understanding of the importance of the principles of Crew Resource Management (CRM) and Human Factors (HF) is developed and applied to day-to-day work</p> <p>4.5 The ways in which aircrew work together as a team are correctly identified and explained</p>

ELEMENT

PERFORMANCE CRITERIA

4.6 An understanding of the employment conditions, benefits and responsibilities for relevant positions within an airline are developed and applied to day-to-day work

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S, hygiene and environmental procedures and regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Principles and philosophies underpinning the operation of the aviation industry
- Airline operational standards and procedures
- Broad structures of the Australian aviation and tourism industries
- The economic and social significance of the aviation and tourism industries
- Key sectors in the commercial aviation industry including international, domestic, regional and charter airline operations
- Airline administrative procedures
- Structures, history and functions of relevant airline(s)
- Crew Resource Management (CRM) principles
- Ways in which aircrew work together as a team in flight and on the ground
- Human Factors (HF) principles

Required skills:

- Communicate effectively with others when applying knowledge of the structure, products and services of the airline operation and the aviation and tourism industries
- Read and interpret instructions, regulations, procedures and other information relevant to applying knowledge of the structure, products and services of the airline operation and the aviation and tourism industries
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to applying knowledge of the structure, products and services of the airline operation and the aviation and tourism industries
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when applying knowledge of the structure, products and services of the airline operation and the aviation and tourism industries
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when applying knowledge of the structure, products and services of the airline operation and the aviation and tourism industries in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when applying knowledge

REQUIRED KNOWLEDGE AND SKILLS

to the structure, products and services of the airline operation and the aviation and tourism industries in accordance with regulatory requirements and workplace procedures

- Monitor and anticipate operational problems and hazards and take appropriate action
- Modify activities dependent on differing workplace contingencies, situations and environments
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Monitor work activities in terms of planned schedule of an airline operation
- Identify and correctly use equipment required when applying knowledge to the structure, products and services of the airline operator and aviation and tourism industries
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when applying knowledge of the structure, products and services of the airline operation and the aviation and tourism industries
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Implement OH&S procedures and relevant regulations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Application of knowledge and understanding of relevant aspects of the aviation and tourism industries may be provided:

- to any aircraft type in commercial service
- during short and/or long haul services
- in any category of service, including economy, business class and first class
- in any allowable operating and weather conditions
- in accordance with enterprise and operational requirements

Performance may be demonstrated on:

- an approved cabin service simulator
- a passenger-carrying aircraft
- a suitably simulated work environment

The required understanding of the structures of the Australian aviation and tourism industries may include:

- roles and functions of the various industry sectors
- services offered by each sector and major industry bodies
- nature of the relationships between different sectors in the two industries
- the features of the airline industry
- the challenges facing the airline and tourism industries and strategies used by airlines and enterprises to meet these challenges

Key sectors in the tourism industry may include:

- hospitality and accommodation
- entertainment
- transport
- ticketing
- call centres
- travel agencies

Key sectors in the commercial aviation industry cover international, domestic, regional and charter airline operations and may include:

- aircraft flight operations (flight and cabin service crew)
- aircraft maintenance
- aviation emergency services
- ground customer service staff (check-in, arrivals, transit, etc.)
- air traffic control
- baggage handling
- freight services
- aviation training
- ground support to aircraft
- airport management
- aircraft catering and resourcing
- security personnel

RANGE STATEMENT

Persons consulted may include:	<ul style="list-style-type: none">• aviation regulatory authorities• passengers• other cabin crew and flight crew members• ground staff• training staff• airline contractors• airline supervisors and managers
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none">• company procedures• enterprise procedures• organisational procedures• established procedures• standard operating procedures
Information/documents may include:	<ul style="list-style-type: none">• regulatory requirements of the Civil Aviation Safety Authority• other regulations relevant to airline operations• airline information on structure, history, policies and operations• industry information describing the structures and the economic and social significance of the aviation and tourism industries• job descriptions and work specifications for occupations within the aviation industry• Crew Resource Management (CRM) principles• induction and training materials• conditions of service, legislation and industrial agreements including workplace agreements and awards• Human Factors (HF) principles
Applicable regulations/legislation may include:	<ul style="list-style-type: none">• relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO)• relevant Australian Civil Aviation Safety Regulations and Civil Aviation Orders• Civil Aviation Act• relevant OH&S legislation• environmental protection legislation• relevant food handling and hygiene legislation• equal opportunity and anti-discrimination legislation• relevant customs and quarantine regulations• relevant trade practices and consumer affairs legislation• relevant Australian Standards• relevant taxation legislation (including GST) as it impacts

Competency Field I - Customer Service

AVII3010B Carry out aircraft business/first class meal and beverage service

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to provide business/first class meal and beverage service on a commercial aircraft in accordance with regulatory requirements, including preparing for meal service; preparing, laying and setting tables; cleaning, preparing and displaying a mobile service unit; describing food and dishes to passengers; advising passengers on beverage selection; and plating and serving a range of foods from mobile service unit. It also includes the skills and knowledge required when working in cooperation with the galley operator; rectifying spillages, clearing and re-laying tables, re-setting a mobile service unit; and appropriately handling passenger complaints. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision usually within a team environment.

Work involves the application of passenger service principles and procedures, regulations, safety codes and protocols to the provision of meal and beverage service on commercial aircraft across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare for meal service | 1.1 Food is prepared hygienically in accordance with workplace procedures and regulatory requirements
1.2 Equipment used in food preparation is maintained in a safe and hygienic condition at all times in accordance with workplace procedures and regulatory requirements
1.3 Equipment, implements and utensils are used in a safe manner throughout the preparation and serving of food or dishes
1.4 Work practices and methods of service adopted during meal service operations is in accordance with workplace procedures and standards, ensuring the safety of both staff and passengers
1.5 Menus/wine lists are sourced and consulted on to ensure product knowledge |
| 2 Prepare, lay and set tables | 2.1 Where applicable, tables are laid with appropriate cloths in accordance with workplace procedures and standards
2.2 Where applicable, tables are prepared to workplace standards, with the appropriate equipment and utensils for a given menu |
| 3 Clean, prepare and display mobile service unit | 3.1 Mobile service unit is checked to ensure that it is cleaned to workplace standards in preparation for service
3.2 Equipment is checked to ensure it is clean and positioned correctly on mobile service unit
3.3 Items for salad preparation and garnishing are prepared and displayed on mobile service unit in accordance with regulatory requirements and workplace procedures and standards
3.4 Mobile service unit is set up in accordance with regulatory requirements and workplace procedures and standards |
| 4 Describe food and dishes to passengers | 4.1 Dish names and specialities are explained to passengers
4.2 Where applicable, ingredients of dishes and preparation methods are correctly explained and shown to passengers to assist them in selecting dishes appropriately relative to their dietary requirements |
| 5 Advise passengers on beverage selection | 5.1 Appropriate advice is politely given to passengers to assist them in selection of beverages at the appropriate time
5.2 The level of intoxication of passengers is accurately assessed using a number of standard methods in accordance with workplace procedures and regulatory requirements
5.3 Legislative requirements concerning the serving of alcoholic beverages are followed when providing advice to passengers on beverages |
| 6 Plate and serve a range of foods from mobile | 6.1 Appropriate portions of foods are correctly positioned on plates in accordance with workplace procedures and standards prior to |

ELEMENT	PERFORMANCE CRITERIA
service unit	leaving the galley
	6.2 Appropriate accompaniments are selected to suit the passenger's choice of meal/beverage
	6.3 The choice of meal/beverage is presented to the passenger in accordance with regulatory requirements and workplace procedures and standards
	6.4 Mobile service unit is placed at an appropriate distance from the passenger
7 Work in cooperation with galley operator	7.1 Liaison with galley staff is established and maintained to ensure correct preparation, presentation and timing of meals and meal service to passengers is appropriately adjusted when necessary
	7.2 An appropriate relationship is established between the galley operator and cabin operators to ensure service is maintained correctly in accordance with regulatory requirements and workplace procedures and standards
8 Rectify spillages, clear and re-lay	8.1 Spillages are promptly identified and dealt with in accordance with workplace procedures and standards
	8.2 Spilt food/beverage is replaced when appropriate with minimum disruption to passengers and crew
	8.3 Debris is removed and linen changed safely and promptly after spillage
	8.4 Passengers' needs are attended to in a polite and friendly manner in accordance with workplace procedures and standards
	8.5 Tables are cleaned and re-laid where required promptly after the completion of meals ensuring minimum disruption to the passenger
9 Re-set mobile service unit	9.1 Mobile service unit is cleaned at the appropriate time in accordance with workplace procedures and standards
	9.2 Mobile service unit is re-set correctly with appropriate equipment
	9.3 Mobile service unit is re-stocked correctly with clean implements, utensils and linen in accordance with regulatory requirements and workplace procedures and standards
10 Handle passenger complaints	10.1 Compliments on service or meals are received promptly and in a courteous manner from passengers
	10.2 Passenger complaints are handled in a timely and courteous manner in accordance with workplace procedures and standards
	10.3 Passengers are promptly advised on the course of action that will be taken in response to their complaints
	10.4 Appropriate follow-up action is taken and passenger satisfaction is checked in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S, hygiene and environmental procedures and regulations
- Principles of customer service
- Airline procedures and standards for providing a meal and beverage service on an aircraft
- Typical service flows within an aircraft food and beverage service environment
- Features and characteristics of various types and styles of food and beverages served in business/first class on commercial aircraft
- Hygiene and safety issues relevant to food and beverage service
- Legislation and regulations concerning the serving of alcoholic beverages on aircraft
- Risks that exist when providing a meal and beverage service on an aircraft and related risk control procedures and precautions
- Problems that may occur when providing a meal and beverage service on an aircraft and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when carrying out aircraft business/first class meal and beverage service
- Read and interpret instructions, regulations, procedures and other information relevant to aircraft business/first class meal and beverage service
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to aircraft business/first class meal and beverage service
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out aircraft business/first class meal and beverage service
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when carrying out aircraft business/first class meal and beverage service in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when carrying out aircraft business/first class meal and beverage service
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during aircraft business/first class meal and beverage service
- Monitor and anticipate operational problems and hazards and take appropriate action

REQUIRED KNOWLEDGE AND SKILLS

- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to carry out aircraft business/first class meal and beverage service

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Food and beverage service may be provided:	<ul style="list-style-type: none">• on relevant passenger-carrying aircraft types in commercial service• during short and/or long haul services• in business class and/or first class• in any allowable operating and weather conditions• in accordance with regulatory and operational requirements, including OH&S regulations
Performance may be demonstrated:	<ul style="list-style-type: none">• in an approved cabin service simulator• in a suitably simulated work environment• on a passenger-carrying aircraft
Advice in the selection of beverages may include but is not restricted to:	<ul style="list-style-type: none">• types of beverages available• service of beverages• restrictions on use of alcoholic beverages
Items for salad preparation and garnishing may include:	<ul style="list-style-type: none">• condiments• oils• vinegars• sauces• fruit• herbs
Legal requirement relating to liquor service may include but is not restricted to:	<ul style="list-style-type: none">• prohibited sale of alcohol to minors• identification of, and refusal to serve, intoxicated persons and other excluded categories• advice to passengers on strengths of alcoholic beverages
Methods of assessing the level of intoxication of passengers may include:	<ul style="list-style-type: none">• observations in changes of behaviour• monitoring noise levels• monitoring drink orders
Persons consulted may include:	<ul style="list-style-type: none">• passengers• galley staff• other cabin crew and flight crew members• catering staff• ground support staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none">• company procedures• enterprise procedures• organisational procedures• established procedures

RANGE STATEMENT

Information/documents may include:

- standard operating procedures
- relevant regulatory requirements pertaining to the serving of food and alcoholic/non-alcoholic beverages on aircraft
- airline procedures and instructions and job specification
- airline food and beverage service procedures checklists and procedures
- food and beverage service checklist
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant regulatory requirements pertaining to the serving of food and alcoholic/non-alcoholic beverages on aircraft
- relevant OH&S legislation
- environmental protection legislation
- relevant food handling and hygiene legislation
- equal opportunity and anti-discrimination legislation
- relevant customs and quarantine regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify and assess the needs and expectations of customers	<p>1.1 Different types of customers are accurately identified according to age, personality and cultural background</p> <p>1.2 Individual customer needs and expectations are correctly identified and products and services appropriate to those needs and expectations are provided</p>
2 Deliver high quality service	<p>2.1 Customers are greeted in a polite and friendly manner</p> <p>2.2 Trust, goodwill and satisfaction are developed through appropriate communication strategies</p> <p>2.3 Customer requests are met whenever possible and within reasonable limits</p> <p>2.4 Customer service is delivered in a manner that is appropriate to customer's cultural/religious background</p> <p>2.5 Customer dissatisfaction is promptly recognised and necessary action to resolve the problem is taken</p> <p>2.6 Potential problems are anticipated and action is taken to minimise the effect on customer satisfaction</p> <p>2.7 Opportunities to enhance the delivery of quality customer service are identified and appropriate actions, such as offers of assistance, building of rapport, and intuitive identification of unstated customer needs, are implemented</p> <p>2.8 Non-verbal communication is used appropriately</p>
3 Deal with difficult customer situations	<p>3.1 Customer complaints are handled sensitively, courteously and discretely in accordance with workplace procedures and in a manner that is appropriate to the customer's cultural background</p> <p>3.2 The nature and details of the customer's complaints are established and agreed upon</p> <p>3.3 Action to resolve the customer's complaint to their satisfaction is taken whenever possible and within the appropriate level of responsibility</p> <p>3.4 Unresolved customer complaints are referred to a higher authority</p> <p>3.5 All associated documentation is accurately and legibly completed in accordance with workplace procedures</p>
4 Provide service to customers with special needs	<p>4.1 Customers with special needs are promptly and discretely identified</p> <p>4.2 Customers are informed of special services and amenities appropriate to their needs</p> <p>4.3 Service is appropriately adjusted according to the needs of the customer</p> <p>4.4 Unaccompanied minors are provided with extra service</p>

ELEMENT

PERFORMANCE CRITERIA

5 Provide service to customers with physical disabilities

appropriate to their needs according to company policy

- 5.1 Customers with physical disabilities are identified and appropriately responded to
- 5.2 Customers are informed of special services and amenities appropriate to their needs
- 5.3 Service is appropriately adjusted according to the physical needs of the customer and may include special services including moving, feeding and toileting

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to check-in and customer service procedures
- Relevant OH&S regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Airline structure, products, services, policies and procedures
- Importance of customer service to airline and to individual crew responsibility
- Airline standards, principles and philosophies for providing quality customer service to passengers
- Needs and expectations of different types of customers, including internal and external customers
- Customer service records/documentation
- Appropriate service for customers with physical disabilities and special needs
- Cabin features and amenities for various types of aircraft
- Features, amenities and departure gate locations of terminals at designated airports
- Risks that exist when providing customer service to passengers on aircraft flights and related risk control procedures and precautions
- Problems that may occur when providing customer service to passengers on aircraft flights and appropriate action that should be taken in each case
- Complaint handling procedures

Required skills:

- Communicate effectively with others when providing customer service
- Read and interpret instructions, regulations, procedures and other information relevant to customer service
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to customer service and aircraft passengers
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing customer service
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when providing customer service in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when providing customer

REQUIRED KNOWLEDGE AND SKILLS

service

- Apply precautions and required action to minimise, control or eliminate hazards that may exist when providing customer service
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when providing customer service

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Customer services may be provided:	<ul style="list-style-type: none"> • by day or night • on international, domestic and regional flights or at airports • at a boarding gate, baggage check-in, service desk or valet service check-in • for both short and/or long haul services • in any category of service, including economy, business class, first class • in accordance with enterprise and operational requirements
Customers may include:	<ul style="list-style-type: none"> • internal and external customers • passengers • unaccompanied minors • customers with babies or small children • customers with a range of disabilities, including hearing or sight impairment • customers with special dietary and other needs • non-English speaking customers • customers with a range of cultural and religious backgrounds • elderly customers
Performance may be demonstrated:	<ul style="list-style-type: none"> • in an appropriately simulated workplace situation • at an operational airport
Problems during customer service may include:	<ul style="list-style-type: none"> • no record of the passenger's claimed booking • delayed or cancelled flight • passenger or staff illness
Persons consulted may include:	<ul style="list-style-type: none"> • other cabin crew and flight crew members • ground staff • catering staff • aircraft resourcing staff • technical staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures
Information/documents may	<ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil

RANGE STATEMENT

include:

- Aviation Orders relevant to passenger check-in processes
- airline check-in checklists, procedures and instructions and job specifications including both manual and computerised processes where applicable
- workplace customer service standards, policies and procedures
- lists of items prohibited for carriage on aircraft
- customer service and other operational manuals
- emergency procedures
- flight passenger schedules
- information on terminal facilities, club lounges and departure gates
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- relevant OH&S legislation
- environmental protection legislation
- equal opportunity and anti-discrimination legislation
- dangerous goods and hazardous substances codes and regulations
- relevant customs and quarantine regulations
- relevant Australian standards
- industrial relations and workplace compensation legislation

Applicable regulations and legislation may include:

Unit Sector(s)

Competency Field

I - Customer Service

AVII4012B Manage aircraft passengers and cargo

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to manage aircraft passengers and cargo, including pre-flight briefing, management of passenger safety and comfort during flight, and providing aid and assistance to passengers during an emergency. It also includes the skills and knowledge required to calculate and safely manage an aircraft's cargo (where applicable), including acceptance, handling, labelling, loading, securing and unloading the cargo. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; and aircraft management principles, safety codes and protocols relevant when managing aircraft passengers and cargo.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Manage passengers during normal operations	<p>1.1 Passengers are briefed on safety, normal and emergency procedures before flight in accordance with regulatory requirements, orders and operations manual</p> <p>1.2 Passenger safety, comfort and well-being is provided for in accordance with regulatory requirements and workplace procedures</p> <p>1.3 Passengers are managed on the ground and in the air in accordance with regulatory requirements, orders and operations manual</p>
2 Manage passengers during an abnormal or emergency situation	<p>2.1 Passengers are warned of potential hazardous conditions and emergencies during flight and related safety and emergency procedures in accordance with regulatory requirements, orders and operations manual</p> <p>2.2 In the event of an emergency, passengers are advised of nature of emergency and the procedures and precautions to be followed</p> <p>2.3 Clear communication is established and maintained with passengers</p> <p>2.4 Passengers are managed during the emergency in accordance with regulatory requirements and workplace procedures</p>
3 Manage cargo	<p>3.1 Cargo is managed in accordance with regulatory requirements and workplace procedures</p> <p>3.2 Cargo calculations are completed in accordance with workplace procedures and regulatory requirements</p> <p>3.3 Dangerous goods are identified and procedures applied to ensure safety and security of people and cargo</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the briefing of passengers and the management of passengers and cargoes including dangerous goods (DG) where applicable
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Principles of good customer service
- Policies and procedures for passenger safety before, during and after flight
- Responsibilities and authority of a pilot in command
- Applicable emergency procedures
- Regulatory requirements and workplace procedures for briefing passengers
- Procedures for accepting, managing and calculating aircraft cargo including dangerous goods
- Hazards that may arise during a flight and related action that should be taken to alert passengers and advise them of precautionary measures
- Problems that may occur when managing aircraft passengers and cargoes and appropriate action that should be taken in each case
- Security requirements

Required skills:

- Understand and anticipate the needs of passengers
- Brief passengers on safety and emergency procedures before a flight in accordance with regulatory requirements, orders and operations manual
- Ensure that passengers are aware of hazardous conditions and emergencies during flight and related safety and emergency procedures
- Aid and assist passengers appropriately during an emergency
- Organise first aid when required during an in-flight emergency
- Operate emergency equipment applicable to flight
- Calculate and manage aircraft cargo (where required)
- Accept, manage, safely handle, load and unload aircraft cargo (where required)
- Use loading and cargo securing devices
- Maintain compliance with regulatory requirements
- Communicate effectively with others when managing aircraft passengers and cargo
- Read and interpret instructions, regulations, procedures and other information relevant to the management of aircraft passengers and cargo

REQUIRED KNOWLEDGE AND SKILLS

- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the management of aircraft passengers and cargo
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing aircraft passengers and cargo
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when managing aircraft passengers and cargo in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when managing aircraft passengers and cargo
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when managing aircraft passengers and cargo
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when managing aircraft passengers and cargo

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- Tasks may be undertaken in:
- variable weather conditions in accordance with Day Visual Flight Rules
 - VMC with simulated IMC
 - IMC
- Performance may be demonstrated in:
- single engine aircraft
 - multi engine aircraft
 - synthetic training device
 - variable air traffic conditions
 - variable flight situations
 - abnormal situations
 - classes of airspace as designated by the Civil Aviation Safety Authority
- Aircraft may include:
- fixed wing
 - helicopters
 - commercial balloons
 - other commercial or military aircraft
- Crew may include:
- single pilot
 - multi crew
- Limitations may be imposed by:
- local noise abatement requirements and curfews
 - airspace endorsements
- Classes of airspace may be:
- as designated by the regulator
 - restricted and danger areas
 - military control zones
 - Air Defence Identification Zones
- Briefings must include:
- briefing passengers on details of the flight
 - explaining precautions to avoid interference with flight controls
 - briefing the location of emergency exits
 - explaining smoking requirements
 - demonstrating the secure stowage of hand luggage
 - demonstrating the use of flotation devices where applicable
 - explaining operation of doors and escape hatches
 - demonstrating the securing and release of seat belts and/or safety harnesses
 - demonstrating the use of oxygen equipment if applicable

RANGE STATEMENT

	<ul style="list-style-type: none">• demonstrating the use of safety equipment• briefing passengers on emergency procedures on the ground and in the air• aiding and assisting passengers• demonstrating the use of fresh air vents• demonstrating the position of airsickness bags• exercising control of passengers on the ground and in the aircraft• managing passengers in an emergency• controlling the cabin temperature• identifying and labelling of cargo• conducting cargo calculations including weight, balance and deck loading• identifying dangerous goods and applying dangerous goods procedures• determining and applying safety and security requirements• managing the load planning and the storage, loading, handling, securing, unloading and security of the cargo• implementing decisions for carriage or non-carriage and management of load
Procedures for calculating and managing cargo (where applicable) may include:	<ul style="list-style-type: none">• company procedures• enterprise procedures• organisational procedures• established procedures• standard operating procedures
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none">• relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the briefing and management of passengers and the management and calculation of aircraft cargoes• in Defence context, relevant Defence Orders and Instructions• IATA regulations related to air cargo• instructions for cargo securing devices and handling equipment• Cargo Flight Manual/Pilot's Operating Handbook (POH)• Manual of Standards - Pilot Licensing (MOS-PL)• Dangerous Goods Manual• Aeronautical Information Publication (AIP)• En Route Supplement Australia (ERSA)• charts• operations manuals
Information/documents may include:	

RANGE STATEMENT

- Applicable regulations and legislation may include:
- approved passenger safety checklists
 - approved checklists and guidelines, including checklists for special cargo such as perishable cargo, dangerous goods, fragile items, live freight, etc.
 - aircraft cargo documentation
 - aircraft passenger documentation
 - workplace procedures and instructions and job specification
 - induction and training materials
 - conditions of service, legislation and industrial agreements including workplace agreements and awards
 - relevant Civil Aviation Safety Regulations and Civil Aviation Orders
 - in Defence context, relevant Defence Orders and Instructions
 - IATA cargo regulations
 - relevant state/territory OH&S legislation
 - relevant state/territory environmental protection legislation
 - relevant Australian Standards
- Performance includes tolerances specified in either of:
- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
 - Day VFR Syllabus
 - Manual of Standards
 - relevant Defence documentation such as:
 - Defence Orders and Instructions
 - approved curricula and training documentation

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare for flight	1.1 Liaison with customer service manager is undertaken and departure tasks are confirmed according to airline procedures and crew development needs
2 Supervise cabin service and resources	2.1 The standard of cabin service is monitored throughout the flight according to airline standards 2.2 Crew members are assisted with prioritisation of workload 2.3 Consultation with customer service manager and crew is undertaken to determine improvements in efficiency and service levels 2.4 Aircraft stores and supplies are managed to achieve a cost effective result for the airline, while maintaining high quality customer service 2.5 Operational difficulties and problems are anticipated and resolved
3 Use and maintain aircraft cabin equipment	3.1 Cabin equipment is used in accordance with manufacturers instructions and airline procedures 3.2 Faults are accurately diagnosed and promptly reported according to airline procedures
4 Complete administrative requirements	4.1 All necessary administrative documentation is completed at the appropriate time according to airline procedures and regulatory requirements 4.2 Input regarding operational requirements is provided to appropriate personnel as per airline procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to cabin operations
- Relevant OH&S regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Airline structure, products, policies, procedures and service standards
- Cabin product and service procedures
- Importance of customer service to airline and to individual crew responsibility
- Airline standards, principles and philosophies for providing quality customer service to passengers
- Relevant airline divisional business plans
- Needs and expectations of different types of customers, including internal and external customers
- Customer service records/documentation
- Appropriate service to customers with a range of disabilities and special needs
- Cabin features and amenities for various types of aircraft
- Features, amenities and departure gate locations of terminals at designated airports
- Risks that exist when providing customer service to passengers on aircraft flights and related risk control procedures and precautions
- Problems that may occur when providing customer service to passengers on aircraft flights and appropriate action that should be taken in each case
- Complaint handling procedures
- Service quality and continuous improvement principles

Required skills:

- Communicate effectively with others when providing leadership and supervising cabin operations
- Read and interpret instructions, regulations, procedures and other information relevant to cabin operations and customer service
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to supervising cabin operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when supervising cabin operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour,

REQUIRED KNOWLEDGE AND SKILLS

communication and interactions with others

- Promptly report and/or rectify any identified problems that may occur when supervising cabin operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when supervising cabin operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when supervising cabin operations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when supervising cabin operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Deliver excellence in customer service	<p>1.1 Customer service expectations are consistently exceeded</p> <p>1.2 Quality, safety, resource and delivery standards are consistently met</p> <p>1.3 Airline records are maintained accurately in accordance with airline systems and procedures</p>
2 Monitor and adjust customer service performance	<p>2.1 Customer service performance standards are monitored and reviewed using a range of systems and techniques</p> <p>2.2 Appropriate adjustments to ensure customer satisfaction is maintained are made decisively and promptly and as an accurate reflection of company procedures</p> <p>2.3 Resource requirement changes are organised in advance wherever and whenever possible in accordance with company procedures</p> <p>2.4 Negative impact events and factors are promptly identified and actions are taken to minimise effect and prevent recurrence</p> <p>2.5 Peer coaching and mentoring support is provided to assist colleagues to meet and enhance company customer service standards</p>
3 Seek information from customers and staff	<p>3.1 Regular feedback on service quality is sought and obtained from internal and external customers using a variety of data collection methods</p> <p>3.2 Devising improved methods for ensuring service excellence is encouraged among customers and colleagues</p> <p>3.3 Customer and colleague feedback is acknowledged and followed up as appropriate</p>
4 Develop approaches to enhance customer service	<p>4.1 Initiatives to enhance the quality of customer service are identified and forwarded to appropriate personnel</p> <p>4.2 Reasons for exchanging customer service performance information are communicated clearly with colleagues</p> <p>4.3 Participation in the development of new approaches/initiatives to customer service is undertaken</p>
5 Encourage staff to take responsibility for customer service problems	<p>5.1 Coaching and support is provided to assist colleagues in handling difficult customer situations</p> <p>5.2 Responsibility for service delivery and customer satisfaction is assumed</p> <p>5.3 Opportunities for improving customer relationships are discussed among the whole team and constructive suggestions are made</p> <p>5.4 Appropriate responses are made to colleagues' suggestions in a timely manner</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant duty of care responsibilities
- Relevant OH&S and environmental procedures and regulations
- Airline company structure, products, services, policies and procedures
- Airline company customer service principles and philosophies
- Leadership principles
- Workplace procedures relevant to work activities
- Customer service, quality and continuous improvement principles, policies and procedures
- Feedback and coaching techniques
- Resource management (human and financial)
- Legal issues that relate to quality service management
- Types of operations carried out in the workplace concerned
- Sources of information and documentation needed for workplace operations

Required skills:

- Communicate effectively with others when monitoring and enhancing customer service excellence, including the use of telephone techniques, public speaking system and other communication devices
- Effectively use interpersonal skills
- Effectively handle customer queries and complaints
- Read and interpret instructions, procedures, information and labels relevant to the provision of customer service
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the monitoring and enhancing of customer service excellence
- Write simple reports and records of inquiries
- Work collaboratively with others when monitoring and enhancing customer service excellence
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour, communication and interactions with others
- Promptly report and/or rectify any identified problems that may arise when monitoring and enhancing customer service excellence, in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when monitoring and enhancing service excellence

REQUIRED KNOWLEDGE AND SKILLS

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S and security procedures according to relevant regulations
- Identify and correctly use equipment required when monitoring and enhancing customer service excellence

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to contribute to the achievement of on-time performance standards during preparations for the departure of a commercial aircraft flight, including contributing to on-time performance through efficiency and effectiveness in work activities, identifying and minimising potential causes of delays to flight departure, and taking appropriate action in the event of unavoidable delays. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of customer service principles and procedures, regulations, safety codes and protocols when contributing to the achievement of on-time performance standards across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Contribute to on-time performance	<p>1.1 Procedures and checklists to facilitate on-time performance are closely followed when carrying out work activities</p> <p>1.2 Work activities in preparation for flight departure are commenced on time and are conducted efficiently and effectively in accordance with workplace procedures</p> <p>1.3 Appropriate assistance is provided to others to overcome problems and to enable the achievement of on-time performance targets</p>
2 Identify and minimise potential causes of delays	<p>2.1 Potential causes of delays to flight departure arising within area of responsibility are promptly identified and communicated to relevant personnel</p> <p>2.2 Safe action to minimise or eliminate potential causes of delays is determined and taken in conjunction with other relevant staff in accordance with workplace procedures</p> <p>2.3 Supervisors and other relevant staff are advised of any potential problems and any action taken to address them and/or avoid potential delays</p>
3 Take action in the event of unavoidable delays	<p>3.1 Where delays in preparation for flight departure have been unavoidably experienced, appropriate safe action is taken in conjunction with other staff to make up the lost time and thereby enable the on-time departure of the aircraft if possible</p> <p>3.2 Action being taken to make up lost time due to unavoidable problems is communicated to passengers, supervisors and other relevant staff in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Pertinent sections of relevant regulations
- Relevant OH&S and environmental protection regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Principles of customer service and on-time performance
- Workplace standards for on-time performance
- Roles and responsibilities of staff involved in the achievement of on-time performance standards
- Procedures for relevant workplace activities carried out in preparation for flight departure
- Potential causes of delays that may occur when preparing for aircraft departure and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when contributing to the achievement of on-time performance standards
- Read and interpret instructions, regulations, procedures and other information relevant to the achievement of on-time performance standards
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the achievement of on-time performance standards
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when contributing to the achievement of on-time performance standards
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when contributing to the achievement of on-time performance standards in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when contributing to the achievement of on-time performance standards
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when contributing to the achievement of on-time performance standards
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments

REQUIRED KNOWLEDGE AND SKILLS

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when contributing to the achievement of on-time performance standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work activities in preparation for aircraft departure may be carried out:	<ul style="list-style-type: none"> • for any commercial aircraft flight • during short and/or long haul services • in any allowable operating and weather conditions • in accordance with enterprise and operational requirements
Performance may be demonstrated:	<ul style="list-style-type: none"> • in approved simulated work conditions • at an operational airport
Potential causes of flight delays may include:	<ul style="list-style-type: none"> • delays in commencing check-in operations • malfunctioning check-in systems • power failure at the airport • staff shortages due to illness or other reasons • aircraft malfunction • delays in cleaning and preparing aircraft • security alert • late arrival of connecting aircraft • late passengers or passengers who have missed flight • unruly behaviour or disturbance amongst passengers • accidental double booking • airport emergency • passengers with excess baggage or oversize/weight cabin baggage • delays in loading baggage • delays in catering/resourcing services for the aircraft
Action to overcome delays may include:	<ul style="list-style-type: none"> • accessing additional staff • accelerating other pre-departure activities • assisting other staff as required • developing and implementing appropriate strategies to overcome/minimise delays
Persons consulted may include:	<ul style="list-style-type: none"> • passengers • other crew members • other ground support staff • catering staff • aircraft resourcing staff • baggage handling staff • supervisors and managers • technical staff

RANGE STATEMENT

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to workplace activities
- workplace procedures and instructions and job specifications
- work activity checklists and procedures
- workplace customer service standards, policies and procedures
- relevant operational manuals
- emergency procedures
- flight passenger schedules
- manufacturers instruction relevant to the servicing and operation of equipment used in work activities in preparation for flight departure
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- relevant OH&S legislation
- environmental protection legislation
- relevant food handling and hygiene legislation
- equal opportunity and anti-discrimination legislation
- relevant customs and quarantine regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Conduct dispenser sampling processes	1.1 Fuel samples are taken from the dispenser for visual testing at the commencement of daily operations and during fuelling operations in accordance with workplace procedures and regulatory requirements
2 Conduct fueller sampling processes	2.1 Fuel samples are taken from the fueller for visual testing at the commencement of daily operations and during fuelling operations in accordance with workplace procedures and regulatory requirements 2.2 Additional samples are taken from the fueller after defuelling operations, vehicle washing, maintenance and heavy rain
3 Conduct visual check of fuel samples	3.1 Fuel sample is inspected and the colour correctly identified and interpreted to determine the grade of fuel in accordance with workplace procedures and established colour criteria 3.2 Sample is correctly inspected for free water and dirt particles in accordance with workplace procedures and established manual or automated processes 3.3 Water detector capsules are correctly used to check for suspended water in accordance with manufacturers instructions and workplace procedures 3.4 Results of visual checks are recorded/reported in accordance with workplace procedures and regulatory requirements
4 Test membrane filtration (millepore sampling)	4.1 Hydrant dispenser vehicle is correctly positioned at the test rig and interlocked/chocked in accordance with workplace procedures 4.2 Fuellers are correctly tested independent of the test rig by circulating product through the delivery hose back to tank to achieve required flow rates 4.3 Bonding leads are attached in accordance with workplace procedures 4.4 In the case of fuellers/dispensers, the delivery hoses are connected to achieve a flow rate of at least 50% of rated flow of filter 4.5 In the case of a hydrant dispenser, lanyard is connected to the pit valve and inlet hose is correctly connected in accordance with workplace procedures 4.6 Colorimetric capsule is loaded in accordance with manufacturers instructions and workplace procedures (Note: for gravimetric testing and microbiological testing [black millepore] capsules are generally pre-loaded in a laboratory) 4.7 Checks are made to ensure capsule is correctly located in the housing with the millepore monitor inlet facing upstream

ELEMENT

PERFORMANCE CRITERIA

- 4.8 Apparatus is correctly connected to filter outlet millepore sample connection or nozzle millepore sample point
- 4.9 Pressure and flow rate are adjusted to workplace specifications
- 4.10 Apparatus is flushed
- 4.11 In case of monthly calorimetric test, sample is drawn
- 4.12 In case of three-monthly gravimetric and microbiological tests, initial sample is drawn for gravimetric test then gravimetric capsule is replaced with microbiological capsule and another sample drawn in accordance with workplace procedures
- 4.13 Apparatus is disconnected and capsule is removed
- 4.14 Gravimetric and microbiological samples are labelled and despatched to laboratory in accordance with workplace procedures
- 4.15 Colorimetric assessment is conducted in accordance with manufacturers instructions and workplace procedures
- 4.16 Results of tests are documented in accordance with workplace procedures and regulatory requirements

5Measure pressure differential on filter vessels

- 5.1 Gauge is checked in accordance with manufacturers instructions and workplace procedures
- 5.2 Flow through vessel into aircraft or test rig is started in accordance with workplace procedures
- 5.3 Pressure differential at maximum flow rate obtained is read
- 5.4 Results are analysed and recorded in accordance with workplace procedures and regulatory requirements
- 5.5 In situations where the differential pressure exceeds filter manufacturers recommended differential pressure, at flow rates above 50% of the maximum rated flow of the filter vessel, the situation is to be reported immediately to supervisor in accordance with workplace procedures and regulatory requirements for investigation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders and other regulations pertaining to quality control processes carried out when refuelling/defuelling aircraft
- Relevant OH&S and environmental procedures and regulations
- Knowledge of quality control principles and processes as they apply to aircraft fuelling/defuelling operations
- Workplace procedures for conducting various quality control operations related to refuelling/defuelling aircraft
- Manufacturers instructions for equipment used in quality control processes
- Risks that exist when conducting quality control operations during the refuelling/defuelling of aircraft and related risk control procedures and precautions
- Problems that may occur when conducting quality control operations during the refuelling/defuelling of aircraft and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when conducting quality control operations related to refuelling/defuelling aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to quality control operations related to refuelling/defuelling aircraft
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to quality control operations related to refuelling/defuelling aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting quality control operations related to refuelling/defuelling aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when conducting quality control operations related to refuelling/defuelling aircraft in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when conducting quality control operations related to refuelling/defuelling aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when conducting quality control operations related to refuelling/defuelling aircraft

REQUIRED KNOWLEDGE AND SKILLS

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when conducting quality control operations related to refuelling/defuelling aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sampling and quality control operations may be carried out:	<ul style="list-style-type: none">• for any aircraft types• at major or minor airports• in any allowable operating and weather conditions• in accordance with regulatory and operational requirements
Performance may be demonstrated:	<ul style="list-style-type: none">• in approved simulated quality control processes• during quality control operations during the refuelling/defuelling of aircraft at an airport
Quality control processes may include:	<ul style="list-style-type: none">• dispenser sampling• fueller sampling• visual checks of fuel samples• membrane filtration tests (millepore sampling)• measurement of pressure differential on filter vessels
Personal protection equipment may include:	<ul style="list-style-type: none">• gloves• safety headwear and footwear• hearing protection• safety glasses• mask or respirator• safety vest• high visibility clothing• approved uniform
Hazards may include:	<ul style="list-style-type: none">• sparks and other forms of ignition• contamination of, or from, materials being handled• spill, leakages, ruptures• fuel vapours• other vehicles on tarmac• jet blast• rotating propellers• hazardous or dangerous materials• noise• dust
Hazard management is:	<ul style="list-style-type: none">• consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Persons consulted during quality	<ul style="list-style-type: none">• aircrew

RANGE STATEMENT

control operations may include:

- airline engineers or representatives
- other refuelling staff
- supervisors and managers
- ground support staff
- technical staff

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to quality control operations when refuelling/defuelling aircraft
- IATA Guidelines for Aviation Fuel Quality Control and Operating Procedures for Joint Inter Plane Fuelling Services (JIG Guidelines)
- OH&S and environmental protection regulations
- workplace procedures and instructions and job specification
- quality control process checklists
- emergency procedures
- flight schedules
- manufacturers specifications and instructions for the quality control equipment
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- IATA Guidelines for Aviation Fuel Quality Control and Operating Procedures for Joint Inter Plane Fuelling Services (JIG Guidelines)
- Australian Dangerous Goods Code (ADG Code)
- relevant OH&S legislation
- environmental protection legislation
- relevant Australian Standards
- industrial relations and workplace compensation legislation

AVIL2001B Manage a check-in queue

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to manage a check-in queue, including organising the queue, combing the queue for passengers requiring urgent service, identifying and moving passengers to the front of the queue whose flights are about to start boarding, providing information to passengers in the queue and responding to queries from queue members. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with relevant workplace procedures.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of customer service principles and procedures and protocols to manage check-in queues across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Organise queue	<p>1.1 Queue is organised using appropriate signage, barriers and other resources in accordance with workplace procedures</p> <p>1.2 Any breaches of queue protocol are identified and appropriate action is taken to courteously advise the passengers concerned of the correct procedures to be followed</p> <p>1.3 Progress of the queue is monitored and appropriate action is taken to adjust servicing resources and/or reorganise queue in situations where the queue becomes excessively long/short or requires reorganisation due to late boarding passengers</p>
2 Comb queue for passengers requiring urgent or express service	<p>2.1 Queue is combed at appropriate times to identify passengers who have priority need for rapid check-in in accordance with workplace procedures</p> <p>2.2 Passengers identified as having priority needs for check-in are moved to the head of the queue</p> <p>2.3 Passengers without baggage are directed to proceed to express check-in or the gate customer service desk</p> <p>2.4 Appropriate explanations are provided to other passengers in the queue of the reasons for the priority service</p>
3 Provide information/special assistance to passengers in queue	<p>3.1 Passengers are provided with relevant information on queuing arrangements and boarding progress using public address systems and other communication systems in accordance with workplace procedures</p> <p>3.2 Where appropriate, information is provided to individual passengers on matters relevant to their check-in</p> <p>3.3 Passengers are given appropriate information on delays and cancelled or re-organised flight progress using public address systems and other communication systems in accordance with workplace procedures</p> <p>3.4 Passengers that require special assistance, such as the elderly, families with infants or people with disabilities, are identified</p>
4 Respond to queries from queue members	<p>4.1 Queries from passengers in a queue are courteously received and interpreted in accordance with workplace customer service standards</p> <p>4.2 Appropriate responses are given to passenger enquiries in accordance with workplace procedures</p> <p>4.3 Where a response cannot be immediately provided, the query is referred to an appropriate supervisor or other staff for appropriate action</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S procedures and regulations
- Relevant equal opportunity and anti-discrimination regulations
- Principles of customer service
- Airline standards and procedures for managing a check-in queue
- Workplace procedures for providing appropriate assistance and advice to passengers awaiting check-in for an aircraft flight
- Resources and equipment used during queue management
- Risks that exist when communicating with passengers during check-in procedures and related risk control procedures and precautions
- Problems that may occur when communicating with passengers during check-in procedures and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when managing a check-in queue
- Read and interpret instructions, regulations, procedures and other information relevant to a check-in queue
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to a check-in queue
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing a check-in queue
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when managing a check-in queue in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when managing a check-in queue
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when managing a check-in queue
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or

REQUIRED KNOWLEDGE AND SKILLS

damage to goods or equipment

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when managing a check-in queue

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Queue management may be conducted:	<ul style="list-style-type: none"> • at international, domestic and regional airports • for both short and/or long haul services • in any category of service, including economy, business class, first class and airline club • in accordance with enterprise and operational requirements
Performance may be demonstrated:	<ul style="list-style-type: none"> • in an appropriately simulated workplace situation • at an operational airport
Queuing resources may include:	<ul style="list-style-type: none"> • signs • fixed barriers • portable barriers • queuing carpets • public address systems • two-way radios and mobile phones
Persons consulted may include:	<ul style="list-style-type: none"> • passengers • other crew members • ground staff • catering staff • aircraft resourcing staff • technical staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to check-in operations • airline procedures and instructions and job specifications • emergency procedures • flight passenger schedules • induction and training materials • conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:	<ul style="list-style-type: none"> • relevant Civil Aviation Safety Regulations and Civil Aviation Orders • relevant OH&S legislation

AVIL3002B Complete aircraft despatch duties

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to complete despatch duties for a commercial aircraft flight, including providing appropriate assistance to passengers with special needs, boarding passengers, resolving boarding problems, communicating with cabin/customer service manager and command pilot/captain, processing all required paperwork and despatching the aircraft in accordance with workplace procedures and regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements of the Civil Aviation Authority and other relevant regulatory authorities.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational principles and procedures, regulations, safety codes and protocols to the completion of aircraft despatch duties across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Provide assistance to passengers with special needs	<p>1.1 Special needs passengers are identified and their boarding passes checked and processed in accordance with workplace procedures</p> <p>1.2 Special needs passengers are assisted to board the aircraft in accordance with workplace procedures and relevant regulatory requirements</p>
2 Board passengers	<p>2.1 Upon the boarding announcement, passengers are greeted at the gate and their boarding passes either checked manually, or fed into the automated reader</p> <p>2.2 If using manual processes, the passenger's details are added to the passenger list and loading sheet and their boarding pass processed and returned in accordance with workplace procedures</p> <p>2.3 If using computerised processes, the passenger's boarding pass is returned, upon confirmation</p> <p>2.4 In the event of a problem with the boarding pass, appropriate action is taken in consultation with the passenger to resolve the problem</p> <p>2.5 If a problem with a boarding pass cannot be readily resolved, the passenger is referred to appropriate customer service staff</p> <p>2.6 Passengers' cabin baggage is monitored for size and weight and, where necessary, checked with the aid of the cabin baggage size gauge</p> <p>2.7 Where cabin baggage is found to be oversize/overweight, the passenger is courteously advised that it must be carried in the hold and arrangements are made to have it appropriately tagged and transferred to the baggage handling section</p> <p>2.8 Passengers are directed to the aircraft via the aerobridge/aircraft stairs dependent on type of aircraft and airport facility</p>
3 Communicate with cabin/customer service manager and command pilot/captain	<p>3.1 Appropriate communications are maintained with the cabin/customer service manager on the aircraft to facilitate smooth and timely boarding of passengers</p> <p>3.2 Printouts or manually-completed passenger list, manifest, load sheet and special meals list are provided to the cabin/customer service manager on the aircraft in accordance with workplace procedures</p> <p>3.3 Once the provisional load sheet has been signed by the command pilot/captain, a copy is retained in accordance with workplace procedures</p>
4 Despatch aircraft	<p>4.1 Upon closing of aircraft door, authority is given to retract the aerobridge/stairs, where applicable</p>

ELEMENT

PERFORMANCE CRITERIA

4.2 Copies of passenger list and load sheet are processed/filed in accordance with workplace procedures and regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S, hygiene and environmental procedures and regulations
- Relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- Principles of customer service
- Airline's on-time performance standards
- Workplace standards and procedures for the completion of aircraft despatch duties
- Procedures for assisting passengers with special needs
- Policies and procedures concerning oversize/overweight cabin baggage
- Risks that exist when completing aircraft despatch duties and related risk control procedures and precautions
- Problems that may occur when completing aircraft despatch duties and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when completing aircraft despatch duties
- Read and interpret instructions, regulations, procedures and other information relevant to aircraft despatch duties
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to aircraft despatch duties
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when completing aircraft despatch duties
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when completing aircraft despatch duties in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when completing aircraft despatch duties
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when completing aircraft despatch duties
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or

REQUIRED KNOWLEDGE AND SKILLS

damage to goods or equipment

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when completing aircraft despatch duties

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Aircraft despatch operations may be completed:	<ul style="list-style-type: none"> • on any aircraft type in commercial service • for domestic and international flights • for short and/or long haul services • in any allowable operating and weather conditions • in accordance with enterprise and operational requirements
Performance may be demonstrated:	<ul style="list-style-type: none"> • in an approved simulated aircraft despatch situation • during the despatch of a passenger-carrying aircraft
Problems during the despatch of an aircraft may include:	<ul style="list-style-type: none"> • failed-to-board passengers • seating problem such as non-notified seat changes or an accidental double booking • crew rest seat no longer available • need to wait for passengers from a connecting flight • passengers who have lost their boarding pass • passengers with oversize/overweight cabin baggage • malfunctioning aircraft • cancellation of flight • security alert
Special needs passengers may include:	<ul style="list-style-type: none"> • children travelling alone or under supervision • pregnant women • nursing mothers • the elderly • persons with a physical and/or intellectual disability • prisoners being transported under escort • non-English speaking passengers
Equipment/resources required to assist passengers with various types of special need may include:	<ul style="list-style-type: none"> • wheelchairs • transport carts • personal elevators • ramps • special restraints • bassinets and other relevant baby equipment • appropriate medical equipment • translators or text information in appropriate languages • identification tags (where relevant)
Persons consulted during the despatch of an aircraft may	<ul style="list-style-type: none"> • passengers • customer service manager on the aircraft

RANGE STATEMENT

include:

- command pilot/captain
- other cabin crew and flight crew members
- ground support staff
- baggage handling staff
- aircraft resourcing staff
- supervisors and managers
- technical staff

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to the completion of aircraft despatch duties
- workplace procedures and instructions and job specification
- passenger list/manifest and aircraft load sheet
- special meals list
- emergency procedures
- flight passenger schedules
- manufacturers instructions for equipment used during aircraft dispatch operations
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the despatch of aircraft
- relevant OH&S legislation
- environmental protection legislation
- equal opportunity and anti-discrimination legislation
- relevant customs and quarantine regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Unit Sector(s)

Competency Field L - Resource Management

AVIL3003B Plan an aircraft load

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to plan an aircraft load in accordance with OH&S and other relevant regulatory requirements, including gathering data on the aircraft load, reviewing and analysing data, preparing load sheet/plan, and completing and processing required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and relevant IATA, CASA and other regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and relevant regulations to the planning of an aircraft load across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| 1 Gather data on the aircraft load | 1.1 Data required to plan an aircraft load is collected using appropriate techniques and technology in accordance with workplace procedures and regulatory requirements
1.2 Types of freight to be transported are identified in accordance with workplace procedures and regulatory requirements |
| 2 Review and analyse data | 2.1 Collected data is reviewed using manual and/or computer techniques in accordance with workplace procedures and regulatory requirements
2.2 Analysis of data includes appropriate consideration of aircraft destination, time, weather, duration of flight, mix of load, aircraft fuel weight and other relevant parameters |
| 3 Prepare load sheet/plan | 3.1 An appropriate load sheet/plan is prepared using manual and/or computerised techniques for the aircraft concerned in accordance with workplace procedures, aircraft loading manual and relevant regulatory requirements
3.2 Prepared load sheet/plan provides for due consideration of aircraft trim and balance requirements in accordance with the relevant aircraft loading manual |
| 4 Complete and process required documentation | 4.1 Relevant documentation is prepared and signed in accordance with workplace procedures and regulatory requirements
4.2 Documentation is processed and despatched to relevant personnel in accordance with workplace procedures, local airport instructions and relevant regulatory requirements |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory requirements pertaining to the transport of dangerous goods by air
- Relevant OH&S and environmental procedures and regulations
- Safety principles for the planning of an aircraft load
- Characteristics and ways of identifying various types of dangerous goods
- Workplace procedures for the planning of an aircraft load
- Documentation requirements for the transport of appropriate dangerous goods by air
- Risks that exist when carrying out planning of an aircraft load and related risk control procedures and precautions
- Problems that may occur when carrying out planning of an aircraft load and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when planning an aircraft load
- Read and interpret instructions, regulations, procedures and other information relevant to an aircraft load
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to an aircraft load
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when planning an aircraft load
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when planning an aircraft load in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when planning an aircraft load
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when planning an aircraft load
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard

REQUIRED KNOWLEDGE AND SKILLS

operating procedures

- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when planning an aircraft load

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|---|
| Planning of an aircraft load may be carried out: | <ul style="list-style-type: none">• in any allowable operating and weather conditions• at freight depots, terminals and airports• in relation to any aircraft types in service in Australia on domestic and international flights• accordance with regulatory and workplace requirements |
| Performance may be demonstrated: | <ul style="list-style-type: none">• in appropriately simulated air freight acceptance situations• in an operational air freight acceptance situation at an airport |
| Types of freight may include but are not limited to: | <ul style="list-style-type: none">• general freight• loose freight• allowable dangerous goods• perishable goods• fragile goods• live freight• passengers baggage• valuables• mail/express• diplomatic• human remains |
| Persons consulted during acceptance of freight for air transport may include: | <ul style="list-style-type: none">• customers• other members of the work team(s)• supervisors and managers• flight crew• dangerous goods experts and advisors• perishable goods experts and advisors• experts and advisors on the transport of animals and livestock• experts on other special categories of air freight• technical staff |
| Personal protection equipment may include but is not limited to: | <ul style="list-style-type: none">• gloves• safety footwear• safety glasses• mask or respirator (where applicable)• high visibility clothing• hearing protection• sun protection |

RANGE STATEMENT

Hazards may include:

- hazardous or dangerous materials
- contamination of, or from, materials being handled
- spill, leakages, ruptures
- dust/vapours

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- Civil Aviation Safety Regulations relevant to the planning of an aircraft load
- relevant IATA regulations
- NOTOC, for load notification to aircraft captain
- manifests
- weight and balance documentation
- fuel dockets
- load instruction reports
- workplace checklists for the planning of an aircraft load
- cold chain checklists and guidelines for the air transport of perishable goods
- emergency procedures
- flight schedules
- local instructions
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- Australian and international regulations and codes of practice for the transport of dangerous goods by air
- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to the planning of an aircraft load
- relevant Australian Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the planning of an aircraft load
- Civil Aviation Act
- local instructions
- relevant OH&S legislation

RANGE STATEMENT

- environmental protection legislation
- relevant security regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Unit Sector(s)

Competency field

Competency Field L - Resource Management

AVIL3004B Assess pavement concessions

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to assess pavement concessions, including receiving and evaluating request for pavement concession, conducting an analysis of overload significance, and communicating and documenting the outcomes of the pavement concession request. Required performance includes compliance with all relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

Work involves the application of relevant principles, regulations, protocols and procedures to assess requests for pavement concessions as part of commercial activities across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Receive a request for pavement concession	<p>1.1 Request for a pavement concession for a specific airport is received from an aircraft operator and interpreted in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Airport pavement classification number for the airport concerned is established through reference to the En Route Supplement Australia (ERSA)</p>
2 Evaluate a request for pavement concession	<p>2.1 Specifications for the aircraft concerned are accessed and interpreted to establish the aircraft classification number</p> <p>2.2 A comparison is made between the airport pavement classification number and the aircraft classification number</p> <p>2.3 Where the aircraft classification number is less than or equal to airport pavement classification number, the pavement concession is issued</p> <p>2.4 Where the aircraft classification number is more than the airport pavement classification number a more detailed analysis of overload significance is carried out in accordance with workplace procedures and regulatory requirements</p>
3 Conduct an analysis of overload significance	<p>3.1 Relevant information required for an assessment of overload significance of the pavement concession request is obtained from relevant sources</p> <p>3.2 Reference is made to the pavement concession manual to conduct an assessment of the overload significance</p> <p>3.3 The potential impact of the pavement overload is established and an appropriate decision is made to either issue a concession, decline a concession or issue a conditional concession in accordance with workplace procedures and regulatory requirements</p>
4 Communicate outcomes of a pavement concession request	<p>4.1 The outcomes of the decision on a pavement concession request is communicated to the aircraft operator in accordance with workplace procedures and regulatory requirements</p> <p>4.2 In the case of a conditional concession being issued, details of the applicable conditions are communicated to the operator in accordance with workplace procedures and regulatory requirements</p>
5 Document the outcomes of a pavement concession request	<p>5.1 The outcomes of the decision on a pavement concession request, including details of any applicable conditions, is documented in accordance with workplace procedures and regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders (i.e. Cars 89 1, Schedule 10)
- Relevant OH&S and environmental procedures and regulations
- Aerodrome operating procedures
- Procedures for assessing a request for a pavement concession
- Aircraft specifications
- Relevant sections of ERSA pertaining to the assessment of requests for pavement concessions
- Safety hazards and risks that exist when assessing requests for pavement concessions and related risk control procedures and precautions
- Problems that may occur when assessing requests for pavement concessions and action that should be taken in each case

Required skills:

- Communicate effectively with others when assessing pavement concessions
- Read and interpret instructions, regulations, procedures and other information relevant to assessing pavement concessions
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to assessing pavement concessions
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when assessing pavement concessions
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when assessing pavement concessions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when assessing pavement concessions
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when assessing pavement concessions
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

REQUIRED KNOWLEDGE AND SKILLS

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when assessing pavement concessions

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Requests for pavement concessions may need to be considered for operations that may occur:	<ul style="list-style-type: none"> • by day or by night • in any weather conditions
Aerodromes may include:	<ul style="list-style-type: none"> • licensed aerodromes • unlicensed aerodromes
Relevant information required for an assessment of overload significance of a pavement concession request may include but is not limited to:	<ul style="list-style-type: none"> • aircraft weight • aircraft tyre pressure • time of air craft arrival • frequency of aircraft operations at the airport concerned • pavement temperature at the airport concerned
Conditions on a concession may include but are not limited to:	<ul style="list-style-type: none"> • turning on a particular node • following specified routes when taxiing at the airport concerned • operating on lower tyre pressures • operating and parking in restricted areas of the airport concerned
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> • relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the issuing of pavement concessions • aerodrome manuals • workplace operating procedures manuals • Manual of Standards - Aerodromes (previously Rules and Practices for Aerodromes [RPA]) • En Route Supplement Australia (ERSA) • manufacturers specifications for specified aircraft • regular public transport (RPT) routes and timetables • induction and training materials
Applicable regulations and legislation may include:	<ul style="list-style-type: none"> • relevant Civil Aviation Act (1988) and Civil Aviation Regulations and Orders (i.e. CAR 89 I, Schedule 10) • Manual of Standards - Aerodromes (previously Rules and

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Apply simulation operations safety	1.1 Access and egress to simulator is conducted in accordance with workplace procedures 1.2 Safety and emergency procedures are communicated and actioned as required 1.3 Simulator serviceability is monitored in accordance with workplace procedures 1.4 Simulation sickness effects are communicated in accordance with workplace procedures 1.5 Simulation sickness effects are treated in accordance with workplace procedures 1.6 Workplace safety communications are followed in accordance with workplace procedures
2 Conduct pre-operation planning	2.1 Appropriate simulation equipment is selected 2.2 Simulation equipment is employed 2.3 Operating manuals are used to support work practices 2.4 Simulation data is accessed to suit work practices, in accordance with workplace procedures 2.5 Simulation data is manipulated to suit work requirements, in accordance with workplace procedures 2.6 Simulation data is saved in accordance with workplace procedures 2.7 Simulation data is stored to suit work requirements, in accordance with workplace procedures
3 Control a simulation activity	3.1 Liaison with relevant personnel is conducted to determine simulation activity requirements 3.2 Simulation activity plan is developed in accordance with activity requirements 3.3 Simulation activity is commenced 3.4 Communication with simulation activity participants is maintained 3.5 Abnormal/unusual conditions are monitored and addressed 3.6 Variations to activity conditions are made as requested/required 3.7 Activity is ceased in accordance with simulation activity plan
4 Perform post-operation activities	4.1 Simulation results are saved in accordance with workplace procedures 4.2 Activity participants are debriefed as required 4.3 Simulator faults are recorded in accordance with workplace procedures 4.4 Simulation equipment is refurbished/maintained in accordance

ELEMENT

PERFORMANCE CRITERIA

with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S and environmental procedures and regulations applicable to simulation operations and personnel safety
- Broad knowledge of the application of simulation and synthetic activities including live, virtual and constructive (LVC) simulations
- Broad knowledge of information communication technology within the simulation and synthetic environment
- Established procedures applicable to simulation operations
- Abnormal conditions, including hardware, software and equipment malfunction/failure and poor/unusual participant performance
- The effects of simulation sickness
- Functions of single-user, multi-user and distributed user operating systems
- Documentation production and safe storage
- Basic database management

Required skills:

- Read, comprehend and interpret written technical English
- Select and employ simulation equipment
- Apply fine physical motor skills
- Coordinate activities that involve a range of complex tasks
- Create and store documents using information communication technology
- Coordinate information communication technology related activities
- Demonstrate briefing/debriefing skills

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - communicating safety and emergency procedures
 - communicating simulation sickness effects
 - manipulating, saving and storing simulation data in accordance with workplace procedures
 - monitoring and addressing abnormal/unusual conditions
 - recording simulator faults
 - refurbishing/maintaining simulator equipment in accordance with workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|-----------------------------------|--|
| Access and egress may include: | <ul style="list-style-type: none"> • appropriate and safe entry to simulator in accordance with organisation's OH&S and security policies • appropriate and safe exit methodologies from simulators • interpretation of signage, safety warnings and simulator status • monitoring access of visitors to simulator and providing safety/security briefs as required |
| Simulator may include | <ul style="list-style-type: none"> • full motion simulator • flight training device • synthetic training device • virtual reality training system • single, multiple or team operator simulator • simulator • part-task simulator • desktop simulator • operating system • associated simulator computer hardware and software |
| Workplace procedures may include: | <ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • standard operating procedures • manufacturers guidelines • established procedures • workplace instructions |
| Motion system may include: | <ul style="list-style-type: none"> • a system that provides motion cues, where fitted, and associated safety practices • system safety requirements • location and operation of emergency stop buttons, and resetting of buttons |
| Safety and emergency may include: | <ul style="list-style-type: none"> • simulation sickness • equipment malfunction/failure • smoke or overheat warnings • emergency communication • loading stops • motion stops |
| Safety and emergency procedures | <ul style="list-style-type: none"> • established procedures |

RANGE STATEMENT

may include:

- industry safe practice

Monitoring simulator
serviceability may include:

- ensuring device is maintained to a level satisfactory to comply with organisational requirements
- recording issues which may arise during the course of routine equipment operation
- submission of routine maintenance documentation

Simulation sickness may include:

- visuomotor dysfunctions
- mental disorientation
- nausea including vomiting
- other symptoms such as drowsiness, fatigue, and headache

Workplace communications may
include:

- interpersonal communications
- messages received via simulator/simulated communications
- on-screen messages
- written reports
- phone
- radio
- other information communication technology means (e.g. email, SMS, blogs, text message, facsimile)

Information communication
technology equipment may
include:

- visual display units
- lesson planning and other off-line preparation stations
- electronic communication devices (e.g. desktops, laptops, notebooks, PDAs, cameras, visual monitoring systems)

Pre-operation planning may
include:

- use of pre-operation planning tools
- development of simulation activity plan
- discussion

Appropriate simulation equipment
may include:

- computer software subclass
- software applications
- synthetic environment software (e.g. SETHI)
- gaming software
- digital insertion devices
- compact discs
- universal serial bus devices
- access database
- web based database
- storage strategy within an organisation's databases
- personnel equipment (e.g. hearing protection, eye protection, clothing, footwear)

Simulation activities may include:

- scenarios
- pre-planned training sorties

RANGE STATEMENT

- Operating manuals may include:
 - pre-planned training operations
 - manufacturer information manuals
 - organisation operations manuals
 - drop-down menus within software applications
 - a system troubleshooting capability
- Accessed may include:
 - downloading from database
 - opening applications, directories and files
 - inserting a digital storage device
- Work practices may include:
 - operations conducted by training staff
 - operations conducted by simulator operators
 - scenarios utilised to support a simulated activity
- Data may include:
 - scenario content
 - representations of facts, concepts and instructions
- Saved may include:
 - information sent to storage within an organisation's database
 - information sent to storage within an internal hard drive
 - information sent to storage within an external hard drive
- Stored may include:
 - information retained within an organisation's database
 - information retained within an internal hard drive
 - information retained within an external hard drive
- Relevant personnel may include:
 - Instructional staff
 - coaching staff
 - experienced personnel
 - subject matter experts (e.g. pilots, aircrew)
 - technical staff
 - trainees
 - other simulator operators
- Simulation activity plan may include:
 - written or electronic variable or set scenarios
 - guidance and control within a range of pre-programmed characteristics
 - information which may be saved on a digital storage device
 - a pre-programmed range of variables
 - programming of entities into a simulator activity
 - geophysical conditions
- Abnormal/unusual conditions may include:
 - hardware malfunction/failure
 - software malfunction/failure
 - simulation sickness
 - poor/unusual participant performance
 - personnel equipment malfunction/failure

RANGE STATEMENT

Variations to activity conditions may include:

- changes made in response to a training need
- changes made in response to a strategic requirement

Debrief may include:

- providing feedback to relevant personnel on conclusion of simulator activity
- providing feedback to relevant organisational authorities
- providing feedback to manufacturers, contracted suppliers, and contracted maintainers

AVIM5002A Conduct aeronautical knowledge training

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to plan, conduct and review aeronautical knowledge training for flight crew. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA); relevant airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles and regulations.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged at Diploma.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan training	<p>1.1 Trainee's readiness for training is confirmed</p> <p>1.2 Training objectives, including Threat and Error Management, training plan and other appropriate training resources are identified</p> <p>1.3 Lesson and delivery method appropriate to training objectives are planned</p> <p>1.4 Assessment procedures are specified</p> <p>1.5 Theory training with flight training lessons are appropriately scheduled and integrated</p> <p>1.6 Availability of facilities, equipment, training aids and reference materials is confirmed</p>
2 Conduct knowledge training	<p>2.1 Learning environment and motivation suitable to trainee characteristics is established</p> <p>2.2 Materials are presented</p> <p>2.3 Training objectives are stated</p> <p>2.4 Lesson plan is followed and modified where applicable to achieve training objectives and transfer of knowledge</p> <p>2.5 New knowledge to previous knowledge is linked and presented within a meaningful and logical framework</p> <p>2.6 Training aids are used to illustrate and enhance explanations</p> <p>2.7 Accurate technical knowledge is presented clearly and to the required standard</p> <p>2.8 Opportunities for trainee participation and practice are provided</p> <p>2.9 Applicable Threat and Error Management issues are discussed</p> <p>2.10 Trainees ability to apply Threat and Error Management principles to the material presented is confirmed</p> <p>2.11 Achievement of training objectives is confirmed by questioning, review and other suitable methods</p> <p>2.12 Feedback on trainee performance is provided</p> <p>2.13 Trainee self-assessment skills are developed</p> <p>2.14 Training objectives are completed in the time available</p> <p>2.15 Training is conducted effectively and safely</p>
3 Review training	<p>3.1 Training objectives and transfer of knowledge are achieved</p> <p>3.2 Training delivery and effectiveness using self-assessment, peers and supervisors is reviewed</p> <p>3.3 Records of assessment and progress of trainee are maintained and reviewed in accordance with established workplace procedures</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Requirements for completing relevant documentation
- Adult learning principles
- Fundamentals of instructing, questioning, engaging and motivating learners
- Effective use of a course of training, curricula/syllabus and lesson plans
- Training and assessment standards
- Debriefing and feedback techniques
- Principles of flight
- Crew Resource Management (CRM) principles
- Scenario-based training and its advantages in aeronautical knowledge training
- Risk management principles applicable to emergency procedure simulations in flight
- Operational concept of Threat and Error Management in relation to flight training in terms of:
 - managing threats
 - managing errors
 - managing undesired aircraft state
- Suitable procedures for developing trainee Threat and Error Management skills
- Task prioritisation system to assist the development of trainee task management skills in terms of:
 - aircraft control
 - navigation
 - communication
- Suitable procedures for making decisions in-flight and for developing trainee decision making skills
- How goal fixation affects good decision making
- Three types of stress likely to affect trainee performance and methods of assisting trainees to cope with stress:
 - physical
 - physiological
 - psychological

REQUIRED KNOWLEDGE AND SKILLS

Required skills:

- Communicate effectively with others when conducting aeronautical knowledge training
- Assess learning and performance
- Evaluate instructional effectiveness
- Manage an environment that fosters learning and performance
- Demonstrate flight instructor role modelling
- Apply Crew Resource Management (CRM) skills applicable to flight training and the role of the instructor in assisting the trainee to develop these skills
- Apply situational awareness and methods of developing and monitoring trainee situational awareness skills in terms of:
 - monitoring current environmental factors
 - evaluating their possible effects on the flight
 - anticipating the need for alternative actions
- Read and interpret instructions, regulations, procedures and other information relevant to aeronautical knowledge training
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to aeronautical knowledge training
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when conducting aeronautical knowledge training in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during aeronautical knowledge training
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct aeronautical knowledge training

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
- developing an appropriate training plan that includes Threat and Error Management
- conducting training effectively and safely and meeting the training objectives
- achieving transfer of knowledge and training objectives
- maintaining and reviewing assessment records and trainee progress

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|--|
| The instructor will deliver training to: | <ul style="list-style-type: none"> • persons undertaking aeronautical knowledge or flight training for the issue of a flight crew licence, rating, endorsement or category |
| Lessons will present: | <ul style="list-style-type: none"> • aeronautical knowledge required for the units and elements of competency applicable to the Civil Aviation Safety Authority licence, rating, or Defence category being sought |
| The training environment includes: | <ul style="list-style-type: none"> • suitable classroom • briefing facilities • training aids |
| Training is delivered in accordance with: | <ul style="list-style-type: none"> • appropriate and documented lesson plans |
| Training resources may include: | <ul style="list-style-type: none"> • audio visual aids • aircraft models • synthetic training devices • regulatory publications • aircraft and operations manuals |
| Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as: | <ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • standard operating procedures • manufacturers guidelines • established procedures • workplace instructions |
| Information/documents may include: | <ul style="list-style-type: none"> • relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to aeronautical knowledge training • in Defence context, relevant Defence Orders and Instructions • Flight Manual/Pilot's Operating Handbook (POH) • Manual of Standards - Pilot Licensing (MOS-PL) • Aeronautical Information Publication (AIP) • En Route Supplement Australia (ERSA) • relevant sections of the Civil Aviation Advisory Publications (CAAP) • charts |

RANGE STATEMENT

- Applicable regulations and legislation may include:
- operations manuals
 - approved checklists
 - workplace procedures and instructions and job specification
 - induction and training materials
 - conditions of service, legislation and industrial agreements including workplace agreements and awards
 - relevant Bureau of Meteorology, International Civil Aviation Organization (ICAO) and/or World Meteorology Organization (WMO) publications
 - relevant Civil Aviation Safety Regulations and Civil Aviation Orders
 - in Defence context, relevant Defence Orders and Instructions
 - relevant state/territory OH&S legislation
 - relevant state/territory environmental protection legislation
 - relevant Australian Standards
- Training outcomes are reviewed as applicable to:
- the needs of the trainee and against the standards specified for the issue of the licence, rating, endorsement or category

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to plan, conduct and review flight training in an aircraft or approved flight simulator. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA); relevant airspace control requirements; and aircraft control principles and regulations.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged at Diploma.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan flight training	<p>1.1 Trainee's records are reviewed, including confirmation of appropriate pre-requisite training and performance</p> <p>1.2 Training objectives based on performance/assessment are identified in accordance with workplace procedures</p> <p>1.3 An appropriate lesson plan is developed and/or reviewed, including remedial training if required</p> <p>1.4 Potential threats and errors are identified, including those associated with simulation of abnormal or emergency procedures or aircraft mishandling by trainee, and suitable countermeasures are planned</p> <p>1.5 Availability of suitable flight training resources is confirmed</p> <p>1.6 Suitability of environmental conditions is determined</p>
2 Conduct pre-flight briefing	<p>2.1 Trainee's mental and physical preparation for flight training is confirmed</p> <p>2.2 Trainee's underpinning knowledge required for the flight exercise is checked</p> <p>2.3 Trainee is briefed on the training objectives, performance/assessment criteria and the actions required during the flight</p> <p>2.4 Trainee is briefed on how the flight will be conducted to meet the training objectives</p> <p>2.5 Threat and Error Management issues applicable to the proposed flight are discussed and trainee's responsibility for managing relevant Threat and Error Management issues (airmanship) is confirmed</p> <p>2.6 Trainee's understanding of the training objectives, underpinning knowledge, handling techniques and planned flight scenario is confirmed</p>
3 Conduct airborne training	<p>3.1 Hand-over/take-over procedures for control of aircraft are implemented</p> <p>3.2 Complex tasks are introduced in manageable segments</p> <p>3.3 Segmented tasks are integrated progressively in accordance with established workplace procedures</p> <p>3.4 Instructions are provided in a clear, concise and timely manner</p> <p>3.5 Coordinated control inputs are made using accepted techniques</p> <p>3.6 Manoeuvres are performed to specified standards utilising appropriate instructional techniques</p> <p>3.7 Trainee is provided with sufficient practice</p> <p>3.8 Interventions are made where appropriate to assist trainee's progress or to maintain flight safety</p>

ELEMENT	PERFORMANCE CRITERIA
4 Manage trainee performance	<p>3.9 Trainee's cognitive load is assessed, monitored and managed</p> <p>4.1 Trainee's strengths and development needs are identified</p> <p>4.2 Feedback is provided to assist trainee in achieving the required standard</p> <p>4.3 Additional instruction and demonstration as necessary to assist trainee is provided and is varied accordingly</p> <p>4.4 Trainee is encouraged to develop self-assessment skills</p> <p>4.5 Trainee's aviation skills are developed</p> <p>4.6 Training events are recorded for debriefing and assessment where required</p>
5 Manage the flight	<p>5.1 Responsibilities as Pilot-in-command (PIC) are managed for the safe operation of the aircraft</p> <p>5.2 Situational awareness is maintained while providing instruction</p> <p>5.3 Threats and errors are identified and managed</p> <p>5.4 Intervention to recover the aircraft is applied if an undesired aircraft state is not managed by trainee</p> <p>5.5 Crew Resource Management (CRM) principles are applied</p>
6 Conduct post-flight actions	<p>6.1 Trainee's achievement against the training objectives for the lesson and associated performance criteria is assessed</p> <p>6.2 Significant details of trainee's performance are clearly and accurately debriefed</p> <p>6.3 Threat and Error Management issues encountered during the flight are discussed</p> <p>6.4 Trainee is briefed on the details of the next training event</p> <p>6.5 Results for the flight are recorded and post-flight administration is completed in accordance with workplace procedures</p> <p>6.6 Relevant staff are kept informed about trainee's progress</p>
7 Review training	<p>7.1 Training effectiveness is evaluated with relevant stakeholders</p> <p>7.2 Final session outcomes are evaluated against desired session outcomes</p> <p>7.3 Review and reflection on instructional performance is conducted</p> <p>7.4 Adjustments to delivery, presentation and content of training are identified and incorporated where appropriate</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Instruction, questioning, engaging and motivating learners
- Performing and learning complex skills including cognitive and developmental issues and observational learning
- Cognitive basis of airmanship, situational awareness, captaincy, prioritisation, load shedding and decision making
- Rate of learning, enforced automaticity and the foundations of expertise
- Instructor professionalism including interpersonal skills, implications of being a role-model, self-reflection and self-managed professional development
- Effective use of a course of training, curricula/syllabus and lesson plans
- Training and assessment standards
- Debriefing and feedback techniques
- Transfer of control (hand-over/take-over or follow-through) drills and procedures
- Principles of flight
- Crew Resource Management (CRM) principles
- Techniques for introducing tasks in manageable segments to avoid overloading a trainee and principles for integrating task segments
- Appropriate use of scenario-based training in flight instruction
- Application of risk management principles to emergency procedure simulations in flight
- Checklists for single pilot or multi-crew operations as applicable
- Common student errors and suggested suitable remedial instruction
- Operational concept of Threat and Error Management in relation to flight training in terms of:
 - managing threats
 - managing errors
 - managing undesired aircraft state
- Procedures and strategies for developing trainee Threat and Error Management skills
- Task prioritisation system to assist the development of trainee task management skills in terms of:
 - aircraft control
 - navigation

REQUIRED KNOWLEDGE AND SKILLS

- communication
- Suitable procedures for making decisions in-flight and for developing trainee decision making skills
- Goal fixation effects on good decision making
- Three types of stress likely to affect trainee performance and methods of assisting trainees to cope with stress:
- physical
- physiological
- psychological
- Requirements for completing relevant documentation
- Principles, purpose and location of controls, monitoring devices, and systems
- Procedures to be followed in the event of an emergency

Required skills:

- Demonstrate procedures and manoeuvres to the required skill level while giving effective flight instruction
- Demonstrate effective briefing and de-briefing skills to a representative range of trainees
- Demonstrate appropriate level of responsibility for student progress and welfare
- Communicate effectively with others when conducting flight training
- Conduct timely assessment of learning and performance
- Evaluate instructional effectiveness and develop strategies for continuous improvement
- Readily identify errors in the performance of flight manoeuvres and suggest a variety of effective strategies for improvement
- Manage an environment that fosters learning
- Demonstrate flight instructor role modelling
- Apply Crew Resource Management (CRM) skills applicable to flight training and the role of the instructor in assisting the trainee to develop these skills
- Maintain levels of situational awareness and methods of developing and monitoring trainee situational awareness skills in terms of:
- monitoring current environmental factors
- evaluating their possible effects on the flight
- anticipating the need for alternative actions
- Read and interpret instructions, regulations, procedures and other information relevant to flight training
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to flight training
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and

REQUIRED KNOWLEDGE AND SKILLS

interactions with others

- Promptly identify, report and/or rectify any problems that may occur when conducting flight training in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during flight training
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct flight training

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
- developing an appropriate lesson plan based on performance/assessment of training objectives
- identifying potential threats and errors, including those associated with simulation of abnormal or emergency procedures or aircraft mishandling by trainee, and planning suitable countermeasures
- pre-flight briefing covering all aspects of the training event being undertaken including Threat and Error Management issues
- implementing hand-over/take-over procedures for control of aircraft
- intervening where appropriate to assist trainee's progress or to maintain flight safety
- recording and debriefing of training events
- managing Pilot-in-command (PIC) responsibilities
- maintaining situational awareness whilst providing instruction
- applying Crew Resource Management (CRM) principles
- debriefing significant details of trainee's performance including any Threat and Error Management issues encountered
- recording results for the flight and post-flight administration in accordance with workplace procedures
- reviewing and reflecting on instructional performance

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and

EVIDENCE GUIDE

Method of assessment

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Flight training, using a suitable training aircraft or approved synthetic flight trainer, leads to the issue of a:

- flight crew licence
- rating or endorsement

Flight training and aircraft operation are conducted in accordance with:

- regulatory requirements
- safe operational practices
- administrative procedures associated with authorising and recording flight training and maintaining training records

Approved flight simulator includes:

- full motion simulator
- flight training device
- synthetic training device
- virtual reality training system
- single, multiple or team operator simulator
- simulator
- part-task simulator
- desktop simulator
- operating system
- associated simulator computer hardware and software

Workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- standard operating procedures
- manufacturers guidelines
- established procedures
- workplace instructions
- in Defence context, relevant Defence Orders and Instructions

Suitable flight training resources may include:

- aircraft
- approved flight simulator
- debriefing rooms
- classrooms

Environmental conditions may include:

- weather
- hazards and threats such as power lines and masts
- terrain
- birds/wildlife
- other airspace operations

RANGE STATEMENT

Instructional techniques may include:

- demonstrate, direct and monitor
- follow me through

Trainee's cognitive load may be affected by:

- lack of preparation
- physical discomfort
- anxiety
- fatigue
- unreasonable expectations
- apathy
- impatience
- inadequate demonstration
- task complexity
- inadequate opportunity to practice
- inadequate fault analysis
- information overload

Training events may include:

- aircraft sorties
- simulator sessions

Significant details of trainee's performance may include:

- strengths
- deficiencies
- remedial actions
- self-awareness and insight
- self-management

Relevant stakeholders may include:

- management staff
- instructional staff
- maintenance staff
- logistics staff
- administrative staff
- trainee

AVIM5004A Facilitate training in a synthetic environment

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to facilitate training in a synthetic environment including planning a synthetic learning activity; preparing the trainee for these activities; guiding, facilitating and monitoring learning; conducting post-training activities and reviewing facilitation processes. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

This unit has application for the use of synthetic devices for training in the workplace.

Learning in a synthetic environment often takes place in conjunction with other modes of delivery, e.g. face-to-face.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions.

Work is performed under various levels of supervision dependent on workplace context, and in a team environment.

This unit of competency is nominally packaged at Diploma.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan a synthetic learning activity	<ul style="list-style-type: none"> 1.1 The learning strategy and/or learning program is accessed, read and interpreted to determine learning outcomes or objectives to be met and relevant delivery requirements 1.2 Potential risks including those associated with human factors aspects of synthetic training devices are identified 1.3 Limitations of the synthetic training device are identified 1.4 A delivery plan is developed to plan, manage and sequence synthetic training activities and events to ensure logical progression of learning content, trainee safety and continuity of trainee progress 1.5 Technical and human factors requirements for the synthetic environment including safety and emergency procedures are confirmed
2 Prepare trainee for synthetic training activities	<ul style="list-style-type: none"> 2.1 Availability of suitable resources is confirmed 2.2 Mental and physical preparedness of the trainee to undertake training in the synthetic environment is confirmed 2.3 An introduction to the synthetic environment is provided including training objectives and relevant workplace procedures 2.4 Instructional relationships are established between trainer/facilitator and trainees using appropriate communication tools and skills 2.5 Trainee is briefed on how the synthetic training activity will be conducted to meet the training objectives 2.6 Risk management issues applicable to the synthetic training activity are discussed and the trainee's responsibility for managing relevant risks is confirmed 2.7 Trainee's ability to comprehend and/or recall the training objectives, underpinning knowledge, handling techniques and planned synthetic training activity/scenario are confirmed
3 Guide and facilitate learning in a synthetic environment	<ul style="list-style-type: none"> 3.1 Liaison with relevant personnel is conducted to determine simulation activity requirements 3.2 Learning is facilitated in accordance with the delivery plan using relevant synthetic devices and facilitation skills 3.3 Good practice in facilitating learning in a synthetic environment is demonstrated to ensure an effective and safe transfer of learning to the real world 3.4 Technical issues are addressed where required using relevant technical support mechanisms and/or personnel 3.5 Opportunities for authentic learning, practice and formative assessment are built into the learning experience

ELEMENT	PERFORMANCE CRITERIA
	<p>3.6 Pre-loaded automatic demonstrations are employed where appropriate</p> <p>3.7 Abnormal/unusual conditions are monitored and addressed</p> <p>3.8 Variations to activity conditions are implemented where applicable</p> <p>3.9 Hand-over/take-over procedures for control of the synthetic device are implemented in accordance with workplace procedures</p>
4 Monitor learning in a synthetic environment	<p>4.1 Trainee progress is monitored and documented in accordance with workplace procedures</p> <p>4.2 Trainee's cognitive load is assessed, monitored and managed</p> <p>4.3 Support and guidance are provided within the synthetic environment as appropriate</p> <p>4.4 Trainee is encouraged to develop self-assessment skills</p> <p>4.5 Trainee interaction with others and participation in synthetic training activities is continuously monitored and interventions are made where appropriate</p> <p>4.6 Opportunities are provided for trainees to reflect on their learning progress</p>
5 Conduct post-training activities	<p>5.1 Significant details of trainee's performance are clearly and accurately debriefed</p> <p>5.2 Playback devices are employed during debriefing to illustrate key learning points when appropriate</p> <p>5.3 Trainee is briefed on the details of the next training event as appropriate</p> <p>5.4 Trainee records are maintained in accordance with workplace procedures</p> <p>5.5 Relevant stakeholders are kept informed about trainee progress</p> <p>5.6 Synthetic device faults are recorded and/or rectified in accordance with workplace procedures</p> <p>5.7 Support and guidance are provided post synthetic environment activities as appropriate</p>
6 Review synthetic environment facilitation processes	<p>6.1 Synthetic training session outcomes are evaluated against desired session outcomes</p> <p>6.2 A review is undertaken post-completion of the learning program/course/qualification</p> <p>6.3 Time is taken to reflect on own performance as a trainer/facilitator, and ways to improve performance are explored</p> <p>6.4 Recommendations for improvements in facilitating training and appropriateness of synthetic systems, tools and resources are</p>

ELEMENT

PERFORMANCE CRITERIA

identified and documented, and discussed with relevant personnel for future action

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations applicable to simulation operations and personnel safety
- Fundamentals of instructing, questioning, engaging and motivating trainees
- Effective use of a course of training, curricula/syllabus and lesson plans
- Training and assessment standards
- Debriefing and feedback techniques
- Techniques for introducing tasks in manageable segments to avoid overloading a trainee
- Common trainee errors and suggested suitable remedial instruction
- Intervention strategies, principles and implications for the synthetic environment
- Sequencing and developing synthetic training activities and their relationship with real world training activities
- The application of simulation and synthetic activities including live, virtual and constructive (LVC) simulations
- Advantages and limitations of synthetic training environments in facilitating learning
- Information communication technology within the simulation and synthetic environment
- Established procedures applicable to simulation operations
- Abnormal conditions, including hardware, software and equipment malfunction/failure and poor/unusual trainee performance
- Human factors implication and risks in the synthetic training environment
- The effects of simulation sickness
- Functions of single-user, multi-user and distributed user operating systems
- Documentation production and safe storage
- Technical knowledge sufficient to distinguish between a technical problem and a content problem, and to respond accordingly
- Relevant learning management systems
- Structure and content of relevant training resources
- Hand-over/take-over procedures for the control of synthetic device/s

Required skills:

- Apply flexibility in facilitation skills using synthetic devices, for example:

REQUIRED KNOWLEDGE AND SKILLS

- knowing when to intervene/when to let trainees direct themselves
- being able to effectively use a variety of activities or provide directions for different trainee needs
- interpreting trainee needs and directing them to new learning opportunities
- Assess learning and performance
- Apply intervention techniques
- Evaluate instructional effectiveness
- Manage an environment that fosters learning and performance
- Demonstrate an ability to read, comprehend and interpret written technical English
- Demonstrate appropriate selection and employment of simulation equipment
- Coordinate activities involving a range of complex tasks
- Coordinate information communication technology related activities
- Apply briefing/debriefing skills
- Read and interpret instructions, regulations, procedures and other information relevant to flight training and facilitating training in a synthetic environment
- Promptly report and/or rectify any identified problems that may occur when facilitating training in a synthetic environment in accordance with regulatory requirements and workplace procedures
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - identifying potential risks including those associated with human factors aspects of synthetic training devices
 - developing a delivery plan that ensures logical progression of learning content, trainee safety and continuity of trainee progress
 - confirming technical and human factors requirements for the synthetic environment including safety and emergency procedures
 - preparing the trainee for synthetic training activities including trainee preparedness, instructional relationships, risk management and trainee responsibility
 - monitoring and addressing abnormal/unusual conditions
 - implementing hand-over/take-over procedures for control of synthetic device in accordance with workplace procedures
 - monitoring and documenting trainee progress in accordance with workplace procedures
 - debriefing significant details of trainee's performance
 - maintaining trainee records in accordance with workplace procedures
 - recording and/or rectifying synthetic device faults in accordance with workplace procedures
 - reviewing and reflecting on instructional performance

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and

EVIDENCE GUIDE

Method of assessment

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|--|
| Potential risks may include: | <ul style="list-style-type: none">• effects on what is learned and the relationship with the real world• negative learning |

Workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- standard operating procedures
- manufacturers guidelines
- established procedures
- workplace instructions
- in Defence context, relevant Defence Orders and Instructions

Trainer/facilitator may include:

- instructional staff
- coaching staff
- experienced personnel
- subject matter experts (e.g. pilots, aircrew)
- technical staff
- simulator operators

Risk management issues may include:

- threat and error management
- simulation/motion sickness
- equipment malfunction/failure
- smoke or overheat warnings
- simulator access/egress
- emergency communication
- loading stops
- motion stops
- negative learning

Good practice in facilitating learning may include:

- fidelity and resolution constraints/limitations
- guiding learning activities through setting up questions, issues, scenarios to be addressed
- observing trainee interaction and intervening when necessary to maintain focus/momentum/engagement
- knowing when to intervene/when to let trainees direct themselves
- moderating disruptive, abusive or dominant trainees
- facilitating group work
- assisting trainees in locating, using and evaluating online information
- maintaining momentum and motivation of trainees through ongoing individual contact and feedback

Abnormal/unusual conditions may include:

- hardware malfunction/failure
- software malfunction/failure
- simulation sickness
- poor/unusual participant performance

RANGE STATEMENT

Variations to activity conditions may include:

- personnel equipment malfunction/failure
- changes made in response to a training need
- changes made in response to a strategic requirement

Trainee's cognitive load may be affected by:

- lack of preparation
- physical discomfort
- anxiety
- fatigue
- unreasonable expectations
- apathy
- impatience
- inadequate demonstration
- task complexity
- inadequate opportunity to practice
- inadequate fault analysis
- information overload
- outside pressures

Interventions may be made to:

- maintain momentum
- engage trainee
- address safety
- highlight a key learning point
- initiate remedial actions

Debrief may include:

- providing feedback to relevant personnel on conclusion of simulator activity
- providing feedback to relevant organisational authorities
- providing feedback to manufacturers, contracted suppliers, and contracted maintainers

Relevant stakeholders may include:

- instructional staff
- coaching staff
- experienced personnel
- subject matter experts (e.g. pilots, aircrew)
- technical staff
- trainees
- other simulator operators

Review may include:

- feedback from trainees, colleagues, learning designers via survey or discussion
- identification of issues in managing/monitoring e-learners and the need for changes to contact/monitoring processes
- identification of issues in using the delivery plan and the need for changes/modifications to the plan
- effectiveness of learning protocols, their application and

RANGE STATEMENT

- Reflect on own performance may include:
- proposed changes
 - technology effectiveness
 - asking critical questions about performance, problems, methods used and success of trainees
 - seeking, listening to and acting on feedback from trainees and others
- Simulation sickness may include:
- visuomotor dysfunctions
 - mental disorientation
 - nausea including vomiting
 - other symptoms such as drowsiness, fatigue, and headache
- Workplace communications may include:
- interpersonal communications
 - messages received via simulator/simulated communications
 - on-screen messages
 - written reports
 - phone
 - radio
 - other information communication technology means (e.g. email, SMS, blogs, text message, facsimile)

AVIM5005A Conduct training for the issue of an endorsement

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to plan, conduct and review flight training for the issue of an endorsement or military equivalent in an aircraft. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA); relevant airspace control requirements; and regulations.

Use for Australian Defence Force (ADF) Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged at Diploma level.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop training and briefing plans	<p>1.1 A training plan is prepared that identifies each ground briefing and flight exercise required to achieve the standard specified for the issue of an endorsement or military equivalent</p> <p>1.2 A briefing plan is produced that addresses the technical and human factors knowledge required for the issue of an endorsement or military equivalent</p> <p>1.3 An airborne training plan is prepared that identifies the sequence and duration of each flight training exercise required to achieve the standard specified for the issue of an endorsement or military equivalent</p>
2 Conduct pre- and post-flight briefings	<p>2.1 A pre-flight briefing is delivered for each flight identified in the training plan</p> <p>2.2 Pilot under training is debriefed on their performance in accordance with established workplace procedures</p>
3 Conduct training	<p>3.1 Briefing(s) are delivered in accordance with both the training plan and established workplace procedures</p> <p>3.2 Airborne training exercises are conducted to the required standards specified in established workplace procedures</p>
4 Assess competence	<p>4.1 Pilot under training is assessed against the competency standards specified for the endorsement or military equivalent</p> <p>4.2 Pilot under training deficiencies are identified and remedial training is planned if required</p>
5 Complete post-training administration	<p>5.1 Pilot under training results are recorded in accordance with established workplace procedures</p> <p>5.2 Relevant staff are informed of pilot under training performance and results</p> <p>5.3 Administration procedures required for issue of an endorsement or military equivalent are completed in accordance with established workplace procedures</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Australian Defence Force context, relevant Defence Orders and Instructions
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Australian national competency standards for pilots
- Relevant OH&S and environmental procedures and regulations
- Common risks that exist when conducting training for the issue of an endorsement or military equivalent
- Common problems that may occur when conducting training for the issue of an endorsement or military equivalent, and appropriate action that should be taken in each case
- Assessment and workplace training competency standards
- Principles of adult teaching and learning
- Human performance and limitations factors relevant to the training tasks
- Psychological factors affecting satisfaction of human needs, defence mechanisms and stress management
- Relevant workplace policies and procedures
- Appropriate methods of analysis and training planning
- Lesson planning and development
- Preparation of training resources
- Principles of assessment
- Assessment of behaviour
- Self-assessment and evaluation
- Questioning techniques
- Requirements for completing relevant documentation

Required skills:

- Demonstrate effective briefing and de-briefing skills
- Communicate effectively with others when conducting training for the issue of an endorsement
- Conduct timely assessment of learning and performance
- Evaluate instructional effectiveness and develop strategies for continuous improvement
- Demonstrate flight instructor role modelling
- Apply Crew Resource Management (CRM) skills applicable to conducting training for the

REQUIRED KNOWLEDGE AND SKILLS

issue of an endorsement or military equivalent

- Apply Threat and Error Management Skills applicable to conducting training for the issue of an endorsement or military equivalent
- Read and interpret instructions, regulations, procedures and other information relevant to conducting training for the issue of an endorsement or military equivalent
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to conducting training for the issue of an endorsement or military equivalent
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly identify, report and/or rectify any problems that may occur when conducting training for the issue of an endorsement or military equivalent in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when conducting training for the issue of an endorsement or military equivalent
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of training for the issue of an endorsement or military equivalent
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct training for the issue of an endorsement or military equivalent

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
- developing an appropriate training plan, briefing plan and airborne training plan based on performance/assessment of the standards required for the issue of an endorsement or military equivalent
- including pre-flight briefing for each flight in the training plan covering all aspects of the training event being undertaken
- intervening where appropriate to maintain flight safety or to assist pilot under training progress
- recording and debriefing of training events
- managing Pilot-in-Command (PIC) responsibilities
- maintaining situational awareness whilst providing instruction
- applying Crew Resource Management (CRM) principles
- debriefing significant details of pilot under training performance including any Threat and Error Management issues encountered
- recording results in accordance with workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Training and aircraft operations are conducted in accordance with:	<ul style="list-style-type: none"> • regulatory requirements • safe operational practices • administrative procedures associated with authorising and recording flight training and maintaining training records
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • standard operating procedures • manufacturers' guidelines • established procedures • workplace instructions • in Defence context, relevant Defence Orders and Instructions
Information/documents may include:	<ul style="list-style-type: none"> • relevant sections of Civil Aviation safety Regulations and Civil Aviation Orders pertaining to the conduct of training for the issue of an endorsement • in Defence context, relevant Defence Orders and Instructions • Flight Manual/Pilot's Operating Handbook (POH) • Manual of Standards-Pilot Licensing (MOS-PL) • Aeronautical Information Publication (AIP) • En Route Supplement Australia (ERSA) • charts • operations manuals • workplace procedures and instructions and job specification • induction and training materials • conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:	<ul style="list-style-type: none"> • relevant Civil Aviation Safety Regulations and Civil Aviation Orders • in Defence context, relevant Defence Orders and Instructions • relevant state/territory OH&S legislation • relevant state/territory environmental protection legislation • relevant Australian Standards
Suitable flight training resources	<ul style="list-style-type: none"> • aircraft

RANGE STATEMENT

may include:

- debriefing rooms
- classrooms

Environmental conditions may include:

- weather
- hazards and threats such as power lines and masts
- terrain
- birds/wildlife
- other airspace operations

Instructional techniques may include:

- demonstrate, direct and monitor
- follow me through

Training events may include:

- aircraft sorties
- simulator sorties

Significant details of pilot under training performance may include:

- strengths
- deficiencies
- remedial actions
- self-awareness and insight
- self-management

Relevant staff may include:

- management staff
- instructional staff
- maintenance staff
- logistics staff
- administrative staff
- pilot under training

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish pre-assessment procedure	1.1 Units and elements to be pre-assessed are identified 1.2 Applicable standards for pre-assessment are reviewed 1.3 Pre-assessment procedures are planned to be valid, reliable, flexible and fair 1.4 Pre-assessment is integrated with other training and assessment activities where applicable 1.5 Pre-assessment procedures and standards are discussed with trainee 1.6 Necessary changes to planned pre-assessment due to training or other factors are identified 1.7 Changes are discussed with trainee and supervisor
2 Review evidence	2.1 Evidence requirements specified in applicable standards are reviewed 2.2 Available evidence is confirmed as being valid, sufficient, authentic and current 2.3 Evidence demonstrating consistency of performance in pre-assessment is included
3 Assist trainee	3.1 Trainee's ability to self-assess performance against applicable standards is developed 3.2 Two-way communication and feedback on the pre-assessment process is ensured 3.3 Adjustments are made based on trainee characteristics if they do not compromise the integrity of the competency standards 3.4 Supervisor or other relevant opinions are sought when more expertise is needed to assist with pre-assessment 3.5 Timely Threat and Error Management procedures are applied during skills pre-assessment where the trainee fails to manage an undesired aircraft state
4 Make pre-assessment	4.1 Assistance is sought from relevant persons in providing additional evidence when required 4.2 Competence is pre-assessed against the standards using the available evidence 4.3 The application of Threat and Error Management is pre-assessed through demonstration 4.4 Pre-assessment decision is completed in compliance with regulatory requirements and procedural fairness 4.5 Clear and comprehensive feedback is provided to the trainee, together with recommended additional training if required
5 Record pre-assessment	5.1 Pre-assessment is recorded promptly and accurately in

ELEMENT

PERFORMANCE CRITERIA

accordance with regulatory requirements and training organisation procedures

5.2 Relevant personnel are notified and any additional training requirements are recorded

6 Review pre-assessment

6.1 Pre-assessment process is reviewed by self-assessment, consultation with peers and supervisors

6.2 Opportunities for improvement are identified

6.3 The review is documented and recorded

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Structure and purpose of Australian national competency-based standards
- Methods of assessment including both knowledge and competency-based assessment
- Effective use of a course of training, curricula/syllabus and lesson plans
- Assessment standards
- Debriefing and feedback techniques
- Handing-over/taking-over procedures and circumstances in which an assessor should assume control
- Requirements for completing relevant documentation
- Threat and Error Management procedures
- Procedures to be followed in the event of an emergency

Required skills:

- Communicate effectively with others when conducting pre-assessment of aeronautical knowledge and competency
- Assess learning and performance
- Plan pre-assessment procedures
- Review and evaluate evidence
- Apply Threat and Error Management procedures
- Evaluate instructional effectiveness
- Identify errors in the performance of flight manoeuvres and suggest a variety of effective strategies for improvement
- Manage an environment that fosters learning and performance
- Demonstrate flight instructor role modelling
- Apply Crew Resource Management (CRM) skills applicable to flight training and the role of the assessor in assisting the trainee to develop these skills
- Apply situational awareness and methods of developing and monitoring trainee situational awareness skills in terms of: monitoring current environmental factors, evaluating their possible effects on the flight, and anticipating the need for alternative actions
- Read and interpret instructions, regulations, procedures and other information relevant to conducting pre-assessment of aeronautical knowledge and competency

REQUIRED KNOWLEDGE AND SKILLS

- Interpret and follow operational instructions and prioritise work
- Complete documentation related to pre-assessment of aeronautical knowledge and competency
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when conducting pre-assessment of aeronautical knowledge and competency in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during pre-assessment of aeronautical knowledge and competency
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct pre-assessment of aeronautical knowledge and competency

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - the underpinning knowledge and skills
 - planning pre-assessment procedures ensuring validity, reliability, flexibility and fairness
 - confirming evidence ensuring validity, sufficiency, authenticity and currency
 - conducting pre-assessment against applicable competency standards including application of relevant Threat and Error Management
 - completing decision regarding pre-assessment in compliance with regulatory requirements and procedural fairness
 - providing feedback to the trainee together with recommended additional training if required
 - recording pre-assessment promptly and accurately in accordance with regulatory requirements and training organisation procedures
 - reviewing pre-assessment process including documentation and recording

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be

EVIDENCE GUIDE

conducted through appropriate written/oral tests

- Practical assessment must occur:
- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Pre-assessment may include:

- aeronautical knowledge
- skill of a person training for the issue of flight crew licence, rating or endorsement
- flying skills by direct observation in a suitable aircraft or approved synthetic training device
- knowledge of tools developed and administered by the assessor, including oral and written tests and exercises
- written examination conducted by CASA, confirming the trainee's knowledge at a sufficient standard in all elements of aeronautical knowledge specified for the examination
- concurrent pre-assessment of interdependent elements as appropriate
- Threat and Error Management applicable to the units or elements being assessed
- competency standards outlining
- element
- performance criteria
- range statement
- required knowledge and skills
- evidence guide
- the process of making an objective assessment against a standard

The pre-assessment of the role of a flight crew member may include:

- direct observation
- simulation
- projects
- problem solving exercises
- oral and written questioning
- written examinations
- log books and training records

Evidence used to determine an individual's competency against a standard may show:

- validity
- authenticity
- sufficiency
- currency
- consistency

Examples used for pre-assessment in flight training may be:

- formative
- diagnostic
- summative

RANGE STATEMENT

Assessors may also explain:

- holistic
- consistency of performance and context of assessment
- requirements for assessing consistency of performance of flight crew standards
- differences in standards for consistency of performance at different licence levels
- application of the range of variables in making an assessment

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Conduct pre-flight discussion

- 1.1 Pre-flight discussion plan is prepared that covers the topics required for the rating being reviewed
- 1.2 Pre-flight discussion plan is delivered
- 1.3 Opportunities to actively participate in the discussion are provided to the applicant
- 1.4 Discussion is reviewed to determine whether the aims of the discussion were achieved

2 Conduct review

- 2.1 Flight review is conducted in accordance with flight review standards as specified in applicable regulations
- 2.2 Applicant's performance against the standards specified in applicable regulations is identified
- 2.3 Remedial training for those elements performed below the specified standard is determined
- 2.4 Remedial training is conducted where applicable in accordance with established workplace procedures

3 Complete post-review briefing and administration

- 3.1 Post-review briefing is conducted that includes assessment of applicant's competence against the standards specified in applicable regulations
- 3.2 Post-review administration is completed in accordance with established workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Australian Defence Force context, relevant Defence Orders and Instructions
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Australian national competency standards for pilots
- Relevant OH&S and environmental procedures and regulations
- Common risks that exist when conducting flight reviews
- Common problems that may occur when conducting flight reviews and appropriate action that should be taken in each case
- Assessment and workplace training competency standards
- Principles of adult teaching and learning
- Human performance and limitations factors relevant to the training tasks
- Psychological factors affecting satisfaction of human needs, defence mechanisms and stress management
- Relevant workplace policies and procedures
- Appropriate methods of analysis and training planning
- Lesson planning and development
- Preparation of training resources
- Principles of assessment
- Assessment of behaviour
- Self-assessment and evaluation
- Questioning techniques
- Requirements for completing relevant documentation

Required skills:

- Communicate effectively with others when conducting a flight review
- Demonstrate flight instructor role modelling
- Apply Crew Resource Management (CRM) skills applicable to conducting a flight review
- Apply Threat and Error Management skills applicable to conducting a flight review
- Read and interpret instructions, regulations, procedures and other information relevant to conducting a flight review
- Interpret and follow operational instructions and prioritise work

REQUIRED KNOWLEDGE AND SKILLS

- Complete documentation related to conducting a flight review
- Work collaboratively with others when conducting a flight review
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when conducting a flight review in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when conducting a flight review
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during a flight review
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct flight review

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - the underpinning knowledge and skills
 - developing and delivering an appropriate pre-flight discussion plan
 - ensuring aircraft is operated in accordance with aircraft operating parameters
 - assessing applicant's competence against required standards
 - conducting a post-review briefing
 - completing appropriate post-review administration

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan an operational flight management training scenario	<ul style="list-style-type: none"> 1.1 Typical commercial or military flight operation conditions including normal and abnormal operations are identified 1.2 Training scenarios that require management of planned and unplanned in flight situations are designed including simulated abnormal and emergency operations 1.3 Training scenarios that involve knowledge based solutions and flight management activities that assess and resolve less defined events are designed 1.4 Sufficient time frames and realistic workloads are allocated in the scenario design to enable trainee/s to meet objectives without being overloaded 1.5 A realistic scenario plan is developed with sufficient detail to ensure learning outcomes can be achieved without improvisation when airborne 1.6 Learning activities are designed that ensure components of competency are emphasised and reinforced
2 Prepare trainee/s for scenario based flight training	<ul style="list-style-type: none"> 2.1 Trainee/s existing level of subject matter knowledge is identified and gaps in knowledge are rectified if required 2.2 Scenario based session plan is discussed with trainee/s 2.3 Objectives and outcomes of session plan are explained to trainee/s 2.4 Application and context of session is explained and confirmed to trainee/s 2.5 Trainee/s role with regard to command status, decision implementation and trainer assumption of control are confirmed 2.6 Scenario based learning including multiple solutions to problems and that the session is not formally assessed is explained and confirmed to trainee/s
3 Deliver training	<ul style="list-style-type: none"> 3.1 Presentation and delivery methods are adjusted to cater for trainee/s characteristics and to meet learning outcomes 3.2 Trainee/s responsibility for planning and conduct of the flight is explained 3.3 An environment that simulates a typical air transport or military air operation is established as applicable 3.4 Components of competency are emphasised and reinforced during presentation of training sessions 3.5 Flight scenarios are logically sequenced with clear transition and linking of events that provides variety, encourages participation and reinforces competencies 3.6 Verbal feedback and motivation is provided to assist trainee/s in

ELEMENT

PERFORMANCE CRITERIA

achieving session outcomes

3.7 Trainer intervention and assumption of control is applied when necessary to ensure safety of flight

3.8 Situational awareness is maintained to ensure situations that might jeopardise safety are not allowed to develop

3.9 A detailed record of flight events is maintained

3.10 Training sessions are reviewed and modified as required to meet trainee/s needs

4 Conduct post-flight discussion

4.1 Process, rationale and benefits of post-flight discussion are explained to trainee/s

4.2 Trainee/s are encouraged to lead discussion including evaluation of their own performance and quality of self-assessment

4.3 Assistance in recalling the sequence of events is provided as required

4.4 Flight events, actions and results of decisions are identified, analysed and feedback is provided to trainee/s

4.5 Trainee/s are encouraged to examine whether alternative actions may have resulted in better outcomes

4.6 Constructive feedback and reinforcement is provided to trainee/s

5 Review delivery of scenario based flight training

5.1 Training delivery is assessed against program goals, session plans and training outcomes

5.2 Delivery and effectiveness of training session is discussed with appropriate personnel

5.3 Adjustment of scenarios and delivery are incorporated as appropriate to improve learning outcomes

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Australian Defence Force context, relevant Defence Orders and Instructions
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations applicable to operational flight management training
- Common risks that exist when delivering operational flight management training
- Common problems that may occur when delivering operational flight management training, and appropriate action that should be taken in each case
- Manual of Standards-Pilot Licensing (MOS-PL)
- Assessment and workplace training competency standards
- Principles of adult teaching and learning
- Human performance and limitations factors relevant to the training tasks
- Psychological factors affecting satisfaction of human needs, defence mechanisms and stress management
- Relevant workplace policies and procedures
- Appropriate methods of analysis and training planning
- Lesson planning and development
- Preparation of training resources
- Principles of assessment
- Assessment of behaviour
- Self-assessment and evaluation
- Questioning techniques

Required skills:

- Communicate effectively with others when delivering operational flight management training
- Read and interpret instructions, regulations, procedures and other information relevant to operational flight management training
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to operational flight management training
- Provide leadership and work collaboratively with others when delivering operational flight management training
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and

REQUIRED KNOWLEDGE AND SKILLS

interactions with others

- Promptly identify, report and/or rectify any identified problems that may occur when delivering operational flight management training in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when delivering operational flight management training
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the delivery of operational flight management training
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to deliver operational flight management training

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - identifying typical commercial or military flight operation conditions including normal and abnormal operations
 - designing training scenarios that require management of planned and unplanned in flight situations that involve knowledge based solutions and flight management activities that assess and resolve less defined events and include simulated abnormal and emergency operations
 - developing a realistic scenario plan with sufficient detail to ensure learning outcomes can be achieved without improvisation when airborne
 - preparing trainee/s for scenario based flight training including explaining the objectives, outcomes, application and context of the session
 - confirming trainee/s role with regard to command status, decision implementation and trainer assumption of control
 - explaining scenario based learning to trainee/s
 - establishing an environment that simulates a typical air transport or military air operation
 - emphasising and reinforcing components of competency during presentation of training sessions
 - logically sequencing flight scenarios including clear transition and linking of events that provide variety, encourage participation and reinforce competencies
 - applying trainer intervention and assumption of control where necessary to ensure safety of flight
 - maintaining situational awareness to ensure situations that might jeopardise safety are not allowed to develop
 - conducting post-flight discussion including process, rationale and benefits of the discussion
 - providing constructive feedback to trainee/s on each event that occurred during the flight including analysis of actions and results of decisions

EVIDENCE GUIDE

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Simulated abnormal and emergency operations must require the trainee to:

- maintain situation awareness
- assess situations and make decisions
- set priorities and manage tasks
- manage threats and errors
- maintain effective communications and interpersonal relationships

A realistic scenario plan must provide the trainee with the ability to:

- independently complete all associated tasks
- conduct the flight without assistance

Components of competency must include:

- task management skills
- contingency management skills
- task skills
- transfer and application of skills and knowledge to new contexts
- job/role environment skills
- threat and error management skills

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:

- company procedures
- enterprise procedures
- organisational procedures
- standard operating procedures
- manufacturers guidelines
- established procedures
- workplace instructions
- in Defence context, relevant Defence Orders and Instructions

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the delivery of operational flight management training
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards-Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- workplace procedures and instructions and job

RANGE STATEMENT

Applicable regulations and legislation may include:	<p>specification</p> <ul style="list-style-type: none">• induction and training materials• conditions of service, legislation and industrial agreements including workplace agreements and awards• relevant Civil Aviation Safety Regulations and Civil Aviation Orders• in Defence context, relevant Defence Orders and Instructions• relevant state/territory OH&S legislation• relevant state/territory environmental protection legislation• relevant Australian Standards
Appropriate personnel may include:	<ul style="list-style-type: none">• instructional staff• coaching staff• mentors• experienced personnel• subject matter experts (e.g. pilots, aircrew)• technical staff• trainees

Competency field

Competency Field	M - Training and Assessment
-------------------------	-----------------------------

AVIN6003A Manage flight training

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to lead instructional and support staff, and manage flight training operations at a flying training organisation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant flight training operations regulatory requirements of the Civil Aviation Safety Authority (CASA); relevant airspace control requirements; and regulations.

Use for Australian Defence Force (ADF) Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted within a variety of flying training organisation contexts within the Australian aviation industry.

Work is performed without supervision.

This unit of competency is packaged at Advanced Diploma level.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Demonstrate compliance with applicable flight operations regulatory requirements	<p>1.1 Regulatory requirements for obtaining an aviation operators certificate (or military equivalent) allowing flight training are explained where applicable</p> <p>1.2 Operations manual, training plan and other flight training operations documentation are explained including how they apply to the conduct of operations</p> <p>1.3 A training plan and all relevant lesson plans that integrate ground and flight training are developed for the issue of a licence or rating or military equivalent</p> <p>1.4 Application of the training plan by a flight training operator is explained</p> <p>1.5 Requirements of flight training operator facilities, including aircraft are explained</p> <p>1.6 Role and responsibilities of a manager flight training in a typical flight training operation are explained</p>
2 Record and monitor flight training	<p>2.1 Maintenance of current and complete flight exercise and student progress records is demonstrated using a suitable record keeping system</p> <p>2.2 Recording of training information and monitoring of student progress is described</p> <p>2.3 Links between recording system, student training and assessment against appropriate specified standards is explained</p> <p>2.4 Instructor analysis of student progress records is described in order to plan training exercises</p>
3 Program and supervise flight training operations	<p>3.1 Methods of programming, supervision and ensuring the safe conduct of flight training operations are described</p> <p>3.2 Fatigue management of students and instructors is described</p> <p>3.3 Instructor's activities, performance and flight instruction are directed, controlled and standardised against published competency standards</p> <p>3.4 Fatigue Management System (FMS) and Safety Management System (SMS) are explained including how they enhance the safety and effectiveness of flight training operations</p>
4 Conduct interview with regulator	<p>4.1 Requirements for the issue of a flight training management endorsement or military equivalent are demonstrated including an operational or compliance record that does not indicate a history of continuing breaches</p> <p>4.2 Examples of flight training management documentation are provided</p> <p>4.3 Ability to meet flight training management standards is</p>

ELEMENT

PERFORMANCE CRITERIA

demonstrated using appropriate documentation

4.4 Safe, effective and compliant flight operations are explained for particular operational aspects as nominated by the interviewer

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Australian Defence Force context, relevant Defence Orders and Instructions
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental protection procedures and regulations
- Common risks that exist when managing flight training
- Common problems that may occur when managing flight training, and appropriate action that should be taken in each case
- Australian national competency standards for pilots or military equivalent
- Assessment and workplace training competency standards
- Principles of adult teaching and learning
- Human performance and limitations factors relevant to the training tasks
- Psychological factors affecting satisfaction of human needs, defence mechanisms and stress management
- Relevant workplace policies and procedures
- Appropriate methods of analysis and training planning
- Lesson planning and development
- Preparation of training resources
- Principles of assessment
- Assessment of behaviour
- Self-assessment and evaluation
- Questioning techniques
- Role and responsibilities of a manager flight training
- Requirements for completing relevant documentation
- Regulatory requirements for obtaining an aviation operators certificate or military equivalent
- Aviation Fatigue Management Systems (FMS) and Safety Management Systems (SMS)

Required skills:

- Communicate effectively with others when managing flight training
- Read and interpret instructions, regulations, procedures and other information relevant to the management of flight training
- Interpret and follow operational instructions and prioritise work

REQUIRED KNOWLEDGE AND SKILLS

- Complete documentation related to the management of flight training
- Provide leadership and work collaboratively with others when managing flight training
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when managing flight training in accordance with regulatory requirements and workplace procedures
- Make decisions related to the prioritising of tasks and the planning of flight training
- Implement contingency plans for unexpected events that may arise when managing flight training
- Apply precautions and required action to minimise, control or eliminate hazards that may exist in a flight training workplace
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to manage flight training
- Manage an aviation Fatigue Management System (FMS) and Safety Management System (SMS)

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - applying relevant legislation and workplace procedures for obtaining an aviation operators certificate or military equivalent
 - explaining an operations manual, training plan and other flight training operations documentation and how they apply to the conduct of operations
 - developing a training plan and lesson plans that integrate ground and flight training relevant to the issue of a licence or rating or military equivalent
 - maintaining current and complete flight exercise and student progress records and explaining the link between the record system, student training and assessment against the appropriate specified standards
 - directing, controlling and standardising instructor's activities, performance and flight instruction against published competency standards
 - the requirements for the issue of a flight training management endorsement or military equivalent including an operational compliance record that does not indicate a history of continuing breaches
 - the ability to both meet and explain flight training management standards using appropriate documentation including safe, effective and compliant flight operations

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and

EVIDENCE GUIDE

Method of assessment

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Competency Field N - Leadership and Supervision

AVIO2001A Use firearms on an aerodrome to control wildlife hazards

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to safely use firearms on an aerodrome to control wildlife hazards. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

This unit applies to aerodromes that operate across a variety of operational contexts within the Australian aviation industry.

The work must be carried out in accordance with applicable operational standards as required by CASA when using firearms to control wildlife hazards on an aerodrome, including the need to comply with relevant firearms licensing requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate II.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Apply safety precautions in the use of firearms

1.1 The locations on an aerodrome where firearms may be discharged are identified

1.2 Hazards associated with the use of firearms on the aerodrome are identified and managed

1.3 The firearm is carried, loaded and discharged in the correct manner

1.4 The firearm is cleaned effectively and safely

1.5 The firearm is stored in accordance with regulatory requirements

2 Use appropriate firearms and ammunition to control wildlife hazards

2.1 Appropriate wildlife hazard control measures are selected in accordance with standard operating procedures

2.2 Cracker shells are used correctly to disperse a flock of birds in accordance with operating procedures

2.3 Live shot is used in a safe manner in the control of wildlife hazards

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Procedures for safely operating firearms
- Requirements for completing relevant documentation
- Procedures for servicing and minor maintenance
- Steps involved in planning the work activities
- Procedures to be followed in the event of an emergency
- Relevant sections of national and state or territory regulatory requirements
- Relevant OH&S and environmental procedures and regulations
- Procedures for managing and controlling hazardous situations when carrying out work activities
- Standard operating procedures and control methods for wildlife hazards

Required skills:

- Safe use of cracker shells and live shot when using firearms on an aerodrome to control wildlife hazards
- Perform wildlife control measures in a humane fashion
- Communicate effectively with others when using firearms on an aerodrome to control wildlife hazards
- Read and interpret instructions, regulations, procedures and other information relevant to use of firearms on an aerodrome to control wildlife hazards
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to using firearms on an aerodrome to control wildlife hazards
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when using firearms on an aerodrome to control wildlife hazards in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when using firearms on an aerodrome to control wildlife hazards
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when using firearms on an aerodrome to control wildlife hazards
- Monitor and anticipate operational problems and hazards and take appropriate action
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage

REQUIRED KNOWLEDGE AND SKILLS

to goods or equipment

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when using firearms on an aerodrome to control wildlife hazards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures (SOPs)
The work site will include:	<ul style="list-style-type: none"> • airside areas • some landside areas
Equipment appropriate to access may include:	<ul style="list-style-type: none"> • firearms • ammunition • class 2 storage facilities
Documents appropriate to access may include:	<ul style="list-style-type: none"> • the Aerodrome Manual guidance material • wildlife hazard management plan
Operating conditions may involve:	<ul style="list-style-type: none"> • control of bird and animal hazards
Faults may include:	<ul style="list-style-type: none"> • firearm misfires • misuse • mechanical failure
Firearms can be:	<ul style="list-style-type: none"> • shotguns or rifles
Information/documents may include:	<ul style="list-style-type: none"> • relevant OH&S and environmental regulations • workplace procedures and instructions and job specification • relevant operational checklists • emergency procedures • relevant equipment logs/records • manufacturers specifications and instructions for the equipment/materials used • induction and training materials

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Implement airside access procedures

- 1.1 Eligibility for access is determined
- 1.2 Access is permitted or denied
- 1.3 Escorts are provided when required
- 1.4 Appropriate records are maintained

2 Report on airside access

- 2.1 Reported access breaches are addressed in accordance with standard operating procedures
- 2.2 Recommendations and reports on access incidents are made to aerodrome management

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Procedures to be followed in the event of an emergency
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Standard operating procedures relating to implementing airside access procedures

Required skills:

- Communicate effectively with others when implementing airside access procedures
- Read and interpret instructions, regulations, procedures and other information relevant to implementing airside access procedures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to implementing airside access procedures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when implementing airside access procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when implementing airside access procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when implementing airside access procedures
- Implement OH&S procedures and relevant regulations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Problems and irregularities that may occur when implementing airside access procedures may include:

- control and loss of keys
- supply of materials

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures (SOPs)

The work site may include:

- the airside
- the interface with the landside

Equipment may include:

- vehicle
- identity card(s)
- computer
- access locks and keys

Relevant documents may include:

- legislation
- the Aerodrome Manual
- passes and permits
- Transport Security Program
- ASIC program

Operating conditions may involve:

- a range of access scenarios

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- Manual of Standards - Aerodromes (part 139)

AVIR3001B Service customer airline contracts

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to service customer airline contracts in accordance with contract specifications and standards, regulatory requirements and workplace procedures, including interpreting customer contract requirements, coordinating the provision of contracted services, handling problems and issues, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures, contracted service specifications and relevant regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the interpretation and application of operational procedures, contract requirements and regulatory requirements when coordinating the provision of contracted services to customer airlines across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Interpret customer airline contract requirements	<p>1.1 Details of customer airline contract services and provisions are obtained and accurately interpreted</p> <p>1.2 Appropriate action is taken to prepare for and organise the provision of contracted services to the customer airline</p> <p>1.3 Team work is used to maximise efficiency and effectiveness</p>
2 Coordinate the provision of customer airline contract services	<p>2.1 Provision of customer airline contract services is coordinated in accordance with contract specifications and standards, precision timing schedules, regulatory requirements and workplace procedures</p> <p>2.2 Appropriate liaison is maintained with customer airline representatives concerning pertinent issues of service delivery in accordance with workplace procedures and contract arrangements</p> <p>2.3 Correct and safe use of required equipment and materials is monitored in accordance with regulatory requirements and workplace procedures</p> <p>2.4 Appropriate action is taken to ensure that correct manual handling techniques used are in accordance with OH&S requirements</p> <p>2.5 Compliance with safety and security requirements is implemented and monitored throughout the service period</p> <p>2.6 Identified problems and irregularities in service delivery are resolved in consultation with customer airline representatives in accordance with workplace procedures and contract arrangements</p> <p>2.7 Available opportunities are identified to enhance service delivery and appropriate action is taken to suggest and/or implement the identified opportunities in accordance with workplace procedures</p>
3 Handle problems and issues	<p>3.1 Problems and issues with customer airline contracts are identified and processed/reported in accordance with customer airline contract provisions</p> <p>3.2 Identified problems and irregularities in service delivery are resolved in consultation with airline representatives in accordance with workplace procedures and contract arrangements</p>
4 Complete documentation	<p>4.1 Documentation concerning the servicing of customer airline contracts is completed and processed in accordance with workplace procedures, contract specifications to customer airline satisfaction and relevant regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations, including manual handling procedures
- Different airline types and the variations in their requirements
- Customer contract specifications, standards and instructions
- Workplace procedures and standards for contracted services involved
- Relevant operating and safety procedures pertaining to the safe handling and use of equipment/materials
- Customer airline terminal layout and operations area and facilities
- Safety and security requirements of the customer airline
- Risks that exist when servicing customer airline contracts, and related risk control procedures and precautions
- Problems and issues that may occur when servicing customer airline contracts, and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when servicing customer airline contracts
- Read and interpret instructions, regulations, procedures and other information relevant to customer airline contracts
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to customer airline contracts
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when servicing customer airline contracts
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour, communication and interactions with others
- Promptly report and/or rectify any identified problems that may occur when servicing customer airline contracts in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when servicing customer airline contracts
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when servicing customer airline contracts
- Monitor and anticipate operational problems and hazards and take appropriate action

REQUIRED KNOWLEDGE AND SKILLS

- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement and follow OH&S procedures and relevant regulations
- Identify and correctly use equipment required when servicing customer airline contracts

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|---|
| Contracted services may be provided: | <ul style="list-style-type: none"> • in relation to both international and/or domestic airline operations • in accordance with regulatory and contract requirements • in any allowable operating and weather conditions |
| Performance may be demonstrated: | <ul style="list-style-type: none"> • in appropriately simulated situations and/or • in actual contracted service provision at an airport |
| Types of customer airline contract services may include: | <ul style="list-style-type: none"> • loading/unloading aircraft • loading/unloading baggage • cabin cleaning/fleet presentation |
| Types of aircraft may include: | <ul style="list-style-type: none"> • commercial passenger aircraft • freighter aircraft • defence/military aircraft • official government aircraft • commercial charter aircraft |
| Problems and irregularities that may occur during the provision of services to customer airlines may include: | <ul style="list-style-type: none"> • supply of materials • aircraft mechanisms • aircraft configurations • weather phenomena such as wind, storms, fog etc. • security issues |
| Persons consulted when servicing customer airline contracts may include: | <ul style="list-style-type: none"> • members of the contract support teams • supervisors, team leaders and managers • representatives of the customer airline contracting the services • technical staff |
| Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include: | <ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures |
| Information/documents may include: | <ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil Aviation Orders and other regulatory requirements pertaining to the contracted services concerned • relevant OH&S and environmental regulations • customer contract specifications, standards and instructions • workplace procedures and instructions and job |

RANGE STATEMENT

- Applicable regulations and legislation may include:
- specification
 - relevant operational checklists
 - emergency procedures
 - relevant equipment logs/records
 - manufacturers specifications and instructions for the equipment/materials used when delivering contracted services
 - induction and training materials
 - airport specific rules and regulations
 - conditions of service, legislation and industrial agreements including workplace agreements and awards
 - relevant Civil Aviation Safety Regulations and Civil Aviation Orders
 - licence requirements of the relevant licensing authority
 - local instructions
 - relevant OH&S legislation
 - environmental protection legislation
 - relevant Australian Standards
 - applicable Defence regulations
 - industrial relations and workplace compensation legislation

AVIW2002B Operate an aerobridge

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to operate an aerobridge, including pre-positioning the aerobridge, docking with an aircraft on arrival and retracting the aerobridge upon departure. Types of aerobridges may vary from airport to airport and generic performance criteria provided in this unit may therefore need to be adapted, as required, to accommodate the operating procedures recommended by the manufacturers of the aerobridges concerned. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements of the Civil Aviation Authority and other relevant regulatory authorities.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and safety regulations to the operation of aerobridges at relevant commercial airports across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Pre-position aerobridge	<p>1.1 Key is turned to activate the aerobridge in accordance with workplace procedures and manufacturers instructions</p> <p>1.2 Appropriate checks are made to ensure roll-door is down and apron is clear in accordance with workplace procedures and regulatory requirements</p> <p>1.3 Where required, floodlights are activated in accordance with workplace procedures</p> <p>1.4 The aerobridge is pre-positioned for aircraft type in accordance with workplace procedures and manufacturers instructions</p> <p>1.5 Roll-door is left in down position in readiness for aircraft arrival in accordance with regulatory requirements</p> <p>1.6 Dock with aircraft</p>
2 Open roll-door in accordance with workplace procedures and regulatory requirements in preparation for aircraft arrival	<p>2.1 After engine shutdown, aerobridge is manoeuvred towards the aircraft with the joystick in accordance with manufacturers instructions and workplace procedures for the type of aircraft being docked</p> <p>2.2 Position of aerobridge is monitored and once in contact with aircraft, joystick is released</p> <p>2.3 Aerobridge is placed on auto level in accordance with manufacturers instructions</p> <p>2.4 Position is taken at aerobridge controls on arrival of the aircraft</p> <p>2.5 Aerobridge safety strap is retracted in accordance with workplace procedures</p> <p>2.6 Pre-operational checks of aerobridge are conducted in accordance with workplace procedures and manufacturers instructions</p> <p>2.7 Retract from aircraft</p> <p>2.8 Aircraft door is opened and safety shoe positioned in accordance with workplace procedures and regulatory requirements</p>
3 Remove safety shoe and relocate in accordance with workplace procedures	<p>3.1 Aerobridge safety strap is positioned in accordance with regulatory requirements and workplace procedures</p> <p>3.2 Aerobridge is backed off aircraft at least 1800 mm using the joystick in accordance with manufacturers instructions and workplace procedures</p> <p>3.3 Canopy is retracted</p> <p>3.4 Canopy is lowered and locked into position in accordance with workplace procedures and manufacturers instructions</p> <p>3.5 Aerobridge is turned on in accordance with manufacturers instructions</p>

ELEMENT

PERFORMANCE CRITERIA

- 3.6 Once aircraft has departed, the aerobridge's pre-position function is selected and the aerobridge is returned to PARK position
- 3.7 Roll-door is closed to down position in accordance with regulatory requirements
- 3.8 The aerobridge is turned off and the key is removed in accordance with manufacturers instructions and workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Principles of aerobridge operation
- Features and differences in operating characteristics for various types of aerobridges in operation at Australian airports
- Workplace procedures for operating an aerobridge
- Manufacturers instructions for checking and operating an aerobridge
- Risks that exist when operating an aerobridge and related risk control procedures and precautions
- Problems that may occur when operating an aerobridge and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when operating an aerobridge
- Read and interpret instructions, regulations, procedures and other information relevant to an aerobridge
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to an aerobridge
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating an aerobridge
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when operating an aerobridge in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when operating an aerobridge
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating an aerobridge
- Monitor work activities in terms of planned schedule
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

REQUIRED KNOWLEDGE AND SKILLS

- Modify activities dependent on differing workplace contingencies, situations and environments
- Implement OH&S procedures and relevant regulations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Identify and correctly use equipment required when operating an aerobridge
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Aerobridge operation may be carried out:	<ul style="list-style-type: none"> • for aircraft types for which the aerobridge has been programmed • in any allowable operating and weather conditions • in accordance with enterprise and operational requirements
Performance may be demonstrated on:	<ul style="list-style-type: none"> • an operational aerobridge at an airport, and/or • an approved aerobridge simulator
Persons consulted during aerobridge operation may include:	<ul style="list-style-type: none"> • cabin crew and flight crew members • ground support staff • technical staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to aerobridge operation • OH&S regulations • workplace procedures and instructions and job specification • aerobridge operational checklists • emergency procedures • flight schedules • manufacturers specifications and instructions for the aerobridge being operated • induction and training materials • conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:	<ul style="list-style-type: none"> • relevant Civil Aviation Safety Regulations and Civil Aviation Orders • relevant OH&S legislation • environmental protection legislation • relevant Australian Standards • industrial relations and workplace compensation legislation

control strategies

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- The principles of safe and effective baggage handling
- Features and differences in various types of baggage handling equipment used at Australian airports
- Workplace procedures for baggage handling operations
- Manufacturers instructions for relevant equipment used during baggage handling operations
- Risks that exist when carrying out baggage handling operations and related risk control procedures and precautions
- Problems that may occur when carrying out baggage handling operations and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when conducting baggage handling operations
- Read and interpret instructions, regulations, procedures and other information relevant to baggage handling operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to baggage handling operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting baggage handling operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when conducting baggage handling operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when conducting baggage handling operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when conducting baggage handling operations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or

REQUIRED KNOWLEDGE AND SKILLS

damage to goods or equipment

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct baggage handling operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Baggage handling operations may be carried out:	<ul style="list-style-type: none"> • in any allowable operating and weather conditions • at both major airports and regional airports • within a fully manual process or in conjunction with automated baggage handling/management equipment • in relation to any aircraft types in service in Australia • in accordance with enterprise and operational requirements
Performance may be demonstrated on:	<ul style="list-style-type: none"> • appropriately simulated baggage handling situations • an operational baggage handling situation at an airport
Persons consulted during baggage handling operations may include:	<ul style="list-style-type: none"> • other members of the baggage handling team(s) • supervisors and managers • check-in staff • aircrew • technical staff
Baggage may include:	<ul style="list-style-type: none"> • passengers' baggage • containers/cans loaded with passengers' baggage/freight • freight
Hazards that may exist when carrying out baggage handling operations may include, but are not restricted to:	<ul style="list-style-type: none"> • use of incorrect lifting techniques for the baggage concerned • heavy baggage • overweight baggage • baggage of unusual shape or physical size • incorrectly labelled baggage • baggage containing illegal substances • baggage found to be a security risk • moving belts and automated baggage equipment • moving airport vehicles and tugs in the vicinity of baggage handling areas • jet blast • noise • dust
Required personal protective equipment may include, but is not restricted to:	<ul style="list-style-type: none"> • hearing protection • safety gloves • safety footwear • protective clothing
Equipment involved in baggage	<ul style="list-style-type: none"> • baggage cart

RANGE STATEMENT

handling operations may include:

- barrow
- baggage belts
- baggage containers or cans
- automated baggage handling systems

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to baggage handling operations
- OH&S regulations
- workplace procedures and instructions and job specification
- baggage handling checklists
- emergency procedures
- flight schedules
- local instructions
- manufacturers specifications and instructions relevant to baggage handling equipment
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant requirements, standards and recommended practices of the International Civil Aviation Organization (ICAO) pertaining to baggage handling operations
- relevant Australian Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to baggage handling operations
- Civil Aviation Act
- local instructions
- relevant OH&S legislation
- environmental protection legislation
- relevant security regulations
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Conduct pre-operational checks on baggage tug	<p>1.1 Pre-operational checks of baggage tug are conducted in accordance with workplace procedures and manufacturers instructions</p> <p>1.2 Where applicable, fluid levels are topped up where required in accordance with workplace procedures</p> <p>1.3 Faults and malfunctions are identified and appropriate action is taken to rectify and/or report the fault/malfunction in accordance with workplace procedures and regulatory requirements</p>
2 Operate baggage tug	<p>2.1 Baggage tug is manoeuvred to required location in preparation for haulage operations in accordance with workplace procedures, local instructions and relevant regulatory requirements</p> <p>2.2 Baggage tug is coupled to baggage carts or other ramp equipment as directed</p> <p>2.3 Baggage tug is operated in accordance with workplace procedures, OH&S regulations and manufacturers instructions</p> <p>2.4 Hazards associated with the operation of the baggage tug are recognised and appropriate precautions are taken in accordance with OH&S regulations and workplace hazard management strategies</p> <p>2.5 Baggage cart or ramp equipment is hauled to required location and uncoupled in accordance with workplace procedures, local instructions and relevant regulatory requirements</p> <p>2.6 Instructions for the next operation are obtained and the baggage tug driven to the required location in accordance with workplace procedures, local instructions and regulatory requirements</p>
3 Shut down, park and store baggage tug	<p>3.1 At the completion of all scheduled haulage activities, tug is manoeuvred to and parked/stored in storage bay/area in accordance with workplace procedures</p> <p>3.2 Any faults and malfunctions are identified and appropriate action is taken to rectify and/or report the fault/malfunction in accordance with workplace procedures and regulatory requirements</p> <p>3.3 Post-operational checks of baggage tug are conducted in accordance with workplace procedures and manufacturers instructions</p> <p>3.4 Where applicable, baggage tug is refuelled and fluid levels topped up in accordance with workplace procedures, relevant regulatory requirements and manufacturers instructions</p>

ELEMENT

PERFORMANCE CRITERIA

- 3.5 Where applicable, batteries (on an electric baggage tug) are connected for recharge in accordance with workplace procedures
- 3.6 Equipment log or other required documentation is completed in accordance with workplace procedures, local instructions and regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental protection procedures and regulations
- Principles of baggage tug operation
- Features and differences in operating characteristics for various types of baggage tugs in operation at Australian airports
- Workplace procedures for operating a baggage tug
- Layout of airport and location of aircraft gates
- Relevant local instructions pertaining to baggage tug operation
- Manufacturers instructions for checking and operating a baggage tug
- Risks that exist when operating a baggage tug and related risk control procedures and precautions
- Problems that may occur when operating a baggage tug and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when operating baggage tug
- Read and interpret instructions, regulations, procedures and other information relevant to operating baggage tug
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to operating baggage tug
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating baggage tug
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when operating baggage tug in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when operating baggage tug
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating baggage tug
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments

REQUIRED KNOWLEDGE AND SKILLS

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when operating baggage tug

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Baggage tug operations may be carried out:	<ul style="list-style-type: none"> • in any allowable operating and weather conditions • in accordance with regulatory and operational requirements
Performance may be demonstrated:	<ul style="list-style-type: none"> • in approved simulated baggage tug operational situations, and/or • during baggage tug operations at an airport
Types of tow motor/push-out tug may include:	<ul style="list-style-type: none"> • diesel engine baggage tugs and/or • electric battery operated baggage tugs
Hazards that may exist when operating baggage tugs may include but are not restricted to:	<ul style="list-style-type: none"> • other vehicles/aircraft in the vicinity • personnel in the operational area • obstacles in the operational area • jet blast • noise • dust
Personal protective equipment may include but is not restricted to:	<ul style="list-style-type: none"> • hearing protection • safety gloves • safety footwear • protective clothing
Pre-operational checks may include:	<ul style="list-style-type: none"> • fluid levels (where applicable) • battery charge (where applicable) • fuel level where applicable • visual inspection for faults or defects
Persons consulted during baggage tug operation may include:	<ul style="list-style-type: none"> • other members of the baggage handling and ramp teams • aircrew • load controllers • supervisors, team leaders and managers • check-in staff • ground support staff • technical staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may	<ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil Aviation Orders and local instructions relevant to baggage

RANGE STATEMENT

include:

- tug operations
- OH&S regulations
- workplace procedures and instructions and job specification
- baggage tug operational checklists
- pre- and post-operational checklists
- equipment logs/records
- emergency procedures
- flight schedules and aircraft gate schedules
- manufacturers specifications and instructions for the baggage tug being operated
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- licence requirements of the relevant licensing authority
- local instructions
- relevant OH&S legislation
- relevant environmental protection legislation
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Applicable regulations and legislation may include:

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to operate a fuel nozzle for refuelling of aircraft. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work involves the application of quality control procedures and regulatory requirements to the operation of an aircraft refuelling nozzle and conduct of hot refuelling of aircraft across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable Civil Aviation Safety Authority (CASA) compliance.

Work is performed under limited supervision usually within a team environment.

This unit of competency is nominally packaged at Certificate II.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for refuelling operations	1.1 Pre-operational checks of equipment are conducted in accordance with workplace procedures 1.2 Hazards, problems and/or defects identified during pre-operational checks are reported/rectified in accordance with workplace procedures 1.3 Outcomes of pre-operational checks are recorded in accordance with workplace procedures 1.4 Refuelling site is selected 1.5 Personal protective equipment is fitted
2 Carry out refuelling operations	2.1 Clearance to commence refuelling is obtained 2.2 Nozzle is grounded and the bonding lead is connected to the aircraft in accordance with workplace procedures 2.3 Instructions regarding fuel quantity are obtained 2.4 Care is taken that dust caps are not placed inside wing panels 2.5 Aircraft is refuelled in accordance with workplace procedures
3 Complete post-refuelling operations	3.1 Refuelling completion operations are conducted in accordance with workplace procedures 3.2 Fuel sample is taken and visual check is made prior to aircraft departure in accordance with workplace procedures 3.3 Equipment is disconnected and stowed in accordance with workplace procedures 3.4 Post refuelling documentation is completed in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders and other regulations pertaining to quality control processes carried out when operating an aircraft refuelling nozzle
- Relevant OH&S and environmental procedures and regulations
- Knowledge of quality control principles and processes as they apply to the operation of an aircraft refuelling nozzle
- Workplace procedures for conducting various quality control operations related to operating an aircraft refuelling nozzle
- Manufacturers instructions for equipment used in quality control processes
- Risks that exist when operating an aircraft refuelling nozzle and related risk control procedures and precautions
- Problems that may occur when operating an aircraft refuelling nozzle and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when operating an aircraft refuelling nozzle
- Read and interpret instructions, regulations, procedures and other information relevant to operating an aircraft refuelling nozzle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to operating an aircraft refuelling nozzle
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating an aircraft refuelling nozzle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when operating an aircraft refuelling nozzle in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when operating an aircraft refuelling nozzle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating an aircraft refuelling nozzle
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments

REQUIRED KNOWLEDGE AND SKILLS

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when operating an aircraft refuelling nozzle

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
- conducting pre-operational checks and reporting/rectifying identified hazards, problems and/or defects
- refuelling aircraft in accordance with workplace procedures
- taking fuel sample and conducting visual check prior to aircraft departure

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Refuelling operations may include:

- various aircraft types
- international, domestic and regional airports
- variable weather conditions including day and night
- single or team operations

Pre-operational checks may include:

- serviceability of ladder or portable steps
- fire extinguisher
- personal protective equipment (PPE)
- visual inspection for leaks, defects and obstructions
- sufficient fuel
- radio check
- documentation
- auxiliary equipment check

Workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- local instructions
- standard operating procedures
- manufacturers instructions

Hazards, problems and/or defects may include:

- hot engines, static electricity, sparks and other forms of ignition
- contamination of or from materials being handled
- spills, leakages, ruptures
- fuel vapours
- other aircraft or vehicles on tarmac
- jet blast or rotor wash
- rotating propellers
- hazardous or dangerous materials
- noise
- dust
- heat
- other additives (e.g. water, methanol, icing inhibitors)

Personal protective equipment may include:

- gloves
- safety glasses
- hearing protection
- safety headwear and footwear

RANGE STATEMENT

- Clearance to refuel may include:
- mask or respirator
 - high visibility clothing
 - approved clothing
 - air traffic control
 - aircraft pilot
 - aircrew
 - airline engineers
 - supervisors or managers
 - other refuelling staff
 - ground support staff
 - technical staff
- Instructions may include:
- interpersonal communications
 - written
 - radio
 - telephone
 - other electronic means
- Post-refuelling documentation may include:
- written
 - electronic
- Information/documents may include:
- sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to refuelling operations
 - International Air Transport Association (IATA) Guidelines for Aviation Fuel Quality Control, and Operating Procedures for Joint Inter Plane Fuelling Services (JIG Guidelines)
 - OH&S and environmental protection regulations
 - workplace procedures and instructions and job specification
 - airport airside drivers handbook
 - loading and fuelling operational checklists
 - emergency procedures
 - flight schedules
 - manufacturers specifications and instructions for the fueller/dispenser vehicle and auxiliary equipment
 - induction and training manuals
 - conditions of service, legislation and industrial agreements including workplace agreements and awards
- Applicable regulations and legislation may include:
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
 - IATA Guidelines for Aviation Fuel Quality Control, and Operating Procedures for Joint Inter Plane Fuelling Services (JIG Guidelines)

RANGE STATEMENT

- Australian Dangerous Goods Code (ADG Code)
- relevant OH&S legislation
- environmental protection legislation
- relevant Australian Standards
- industrial relations and workplace compensation legislation

AVIW2030A Be airborne extracted by suspended rope

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required by an individual as part of a team to be extracted from the ground by a helicopter using a suspended fixed rope. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work involves the application of safety and suspended rope policies, regulations, protocols and procedures required to be extracted using a suspended fixed rope from a helicopter.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable Civil Aviation Safety Authority (CASA) compliance.

Work is performed under limited supervision as part of a team and within organisational guidelines.

This unit of competency is nominally packaged at Certificate II.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Observe helicopter safety	<p>1.1 Dress and equipment is secured for operating in and around a helicopter</p> <p>1.2 Helicopter is approached and exited in a safe manner in accordance with workplace procedures and/or aircrew instructions</p> <p>1.3 Individual seating is occupied and restraint devices are applied</p> <p>1.4 Identified hazards are communicated to team members</p> <p>1.5 Aircrew and safety officer instructions are followed</p> <p>1.6 Environmental conditions and alternative routes to/from helicopter are identified</p>
2 Prepare for suspended extraction	<p>2.1 Extraction by suspended rope instructions are received and confirmed as required</p> <p>2.2 Workplace procedures, OH&S requirements and safety control measures are applied</p> <p>2.3 Operational and suspended rope extraction equipment including personal protective equipment (PPE) is selected and fitted in accordance with workplace procedures</p> <p>2.4 Damage to operational, suspended extraction and safety equipment is reported and remedial action taken in accordance with workplace procedures</p>
3 Extract using fixed suspended extraction rope	<p>3.1 Extraction point is identified and attended in accordance with instructions</p> <p>3.2 Individual equipment safety checks are conducted in accordance with workplace procedures</p> <p>3.3 Individual extraction equipment is secured to the fixed suspended rope ready for extraction in accordance with workplace procedures</p> <p>3.4 Security device is attached to the individual and operational equipment in accordance with workplace procedures</p> <p>3.5 Extraction techniques are performed in accordance with workplace procedures</p> <p>3.6 Suspended extraction emergency and contingency procedures are applied, as required in accordance with workplace procedures</p> <p>3.7 Extraction and operational equipment are monitored for stability during extraction</p> <p>3.8 Verbal and non-verbal communications are maintained</p> <p>3.9 Situational awareness is maintained</p> <p>3.10 Emergency and contingency procedures are conducted as required</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, legislation, organisational policy and procedures in relation to airborne extraction by suspended rope
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Characteristics of helicopters including their safety features and operating requirements
- Hazards that exist when being airborne extracted by suspended rope
- Safety equipment operation
- Manufacturers instructions for equipment used for airborne extraction by suspended rope
- Risks that exist when being airborne extracted by suspended rope
- Problems that may occur when being airborne extracted by suspended rope

Required skills:

- Operate helicopter restraint, safety and emergency equipment
- Apply the tactics, techniques and procedures applicable to the organisation
- Follow defined organisational and aircraft OH&S policy and procedures
- Identify, operate and control applicable operational equipment
- Communicate effectively with others when being airborne extracted by suspended rope
- Read, interpret and follow instructions, regulations, procedures and other information relevant to being airborne extracted by suspended rope
- Complete documentation related to being airborne extracted by suspended rope
- Work collaboratively with others and as a member of a team when being airborne extracted by suspended rope
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when being airborne extracted by suspended rope in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when being airborne extracted by suspended rope
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when being airborne extracted by suspended rope
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule

REQUIRED KNOWLEDGE AND SKILLS

- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self, others or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - observing helicopter safety including safe approach and exit
 - applying individual equipment safety checks
 - performing extraction techniques in accordance with workplace procedures
 - applying suspended extraction emergency and contingency procedures in accordance with workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Hazards may include:

- wire/powerlines/fences
- livestock
- native fauna
- masts/aerials
- terrain
- weather conditions
- poor visibility
- public
- trees
- dust
- vehicles
- buildings

Environmental conditions may include:

- climate and weather variations
- geographical and geological variations including sloping and unstable ground
- variations due to vegetation and urban structures
- ground conditions including dust and other particles

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures
- manufacturers instructions

Emergency and contingency procedures may include:

- aircraft fire
- aircraft malfunction prior to take-off
- emergency landing procedures
- aircraft crash landing
- aircraft collision
- engine failure over landing site
- (for Defence) procedures to evade hostile action against aircraft or self
- collision with others or obstacles
- loss of visibility
- fixed rope caught in tree
- damaged or kinked rope
- aborted operation

RANGE STATEMENT

Operational and suspended extraction equipment may include:	<ul style="list-style-type: none">• search and rescue equipment• communications equipment• military equipment• commercial in-service rappelling harness• improvised tubular webbing harness• rope attachment device (locking karabiner)• individual load carrying equipment (ILCE)
Personal protective equipment (PPE) may include:	<ul style="list-style-type: none">• hearing protection• eye protection goggles• protective clothing• footwear• life jacket• high visibility clothing• personal lighting and beacons• helmet• rappelling gloves

3 Extract by suspended equipment	<p>3.1 Extraction point is identified and attended in accordance with instructions</p> <p>3.2 Individual equipment checks are conducted in accordance with workplace procedures</p> <p>3.3 Individual extraction equipment is secured to the recovery equipment in accordance with workplace procedures</p> <p>3.4 Security device is attached to the individual and operational equipment in accordance with workplace procedures</p> <p>3.5 Suspended equipment is used to ascend and aircraft is emplaned in accordance with supervisor or aircrew instructions</p> <p>3.6 Extraction and operational equipment are monitored for stability during extraction</p> <p>3.7 Verbal and non-verbal communications are maintained</p> <p>3.8 Situational awareness is maintained</p> <p>3.9 Emergency and contingency procedures are conducted as required</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, legislation, organisational policy and procedures in relation to airborne extraction using suspended extraction equipment
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Characteristics of helicopters including their safety features and operating requirements
- Hazards that exist when being airborne extracted using suspended extraction equipment
- Safety equipment operation
- Manufacturers instructions for equipment used for airborne extraction using suspended extraction equipment
- Risks that exist when being airborne extracted using suspended extraction equipment
- Problems that may occur when being airborne extracted using suspended extraction equipment

Required skills:

- Operate helicopter restraint, safety and emergency equipment
- Apply the tactics, techniques and procedures applicable to the organisation
- Follow defined organisational and aircraft OH&S policy and procedures
- Identify, operate and control applicable operational equipment
- Communicate effectively with others including as a member of a team when being airborne extracted using suspended extraction equipment
- Read, interpret and follow instructions, regulations, procedures and other information relevant to being airborne extracted using suspended extraction equipment
- Complete documentation related to being airborne extracted using suspended extraction equipment
- Work collaboratively with others when being airborne extracted using suspended extraction equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when being airborne extracted using suspended extraction equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when being airborne extracted using suspended extraction equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when being airborne extracted using suspended extraction equipment

REQUIRED KNOWLEDGE AND SKILLS

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self, others or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - observing helicopter safety including safe approach and exit
 - applying individual equipment safety checks
 - ascending suspended equipment and emplaning aircraft in accordance with supervisor or aircrew instructions
 - monitoring extraction and operational equipment stability during extraction

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Hazards may include:

- wire/powerlines/fences

AVIW2032A Fast rope from a helicopter

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required by an individual to deploy from a helicopter as part of a team using fast rope technique(s). Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work involves the application of safety and rappelling policies, regulations, protocols and procedures required to safely fast rope from a helicopter.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable Civil Aviation Safety Authority (CASA) compliance.

Work is performed under limited supervision within organisational guidelines.

This unit of competency is nominally packaged at Certificate II.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Observe helicopter safety	1.1 Dress and equipment is secured for operating in and around a helicopter 1.2 Helicopter is approached and exited in a safe manner in accordance with workplace procedures and/or aircrew instructions 1.3 Individual seating is occupied and restraint devices are applied 1.4 Identified hazards are communicated to fast rope team members 1.5 Aircrew instructions are followed 1.6 Environmental conditions and alternative routes to/from helicopter are identified
2 Prepare for fast roping operation	2.1 Fast roping descent instructions are received and confirmed as required 2.2 Workplace procedures, OH&S requirements and safety control measures are applied 2.3 Operational and fast rope equipment including personal protective equipment (PPE) is selected and fitted in accordance with workplace procedures 2.4 Individual and supervisor pre-flight checks of fast rope equipment are conducted 2.5 Damage to operational, fast rope and safety equipment is reported and remedial action taken in accordance with workplace procedures
3 Emplane and complete onboard procedures	3.1 Aircraft is approached and emplaned in accordance with workplace procedures 3.2 Fast ropes are secured to allocated rope attachment device (RAD), checked and prepared for flight 3.3 Ropers and operational equipment are secured prior to flight 3.4 Aircrew orders and instructions are complied with 3.5 Fast ropes and operational equipment is monitored during flight 3.6 Communications and directions are interpreted and relayed to rappel team members 3.7 Individual in-flight safety checks are conducted
4 Prepare to fast rope from hovering helicopter	4.1 Fast rope exit positions are adopted under supervision of aircrew and safety officer 4.2 Positions are resumed within the aircraft on abort instruction from aircrew
5 Fast rope from helicopter	5.1 Fast ropes are deployed on instruction from safety officer 5.2 Aircraft is exited on instruction of aircrew or safety officer 5.3 Emergency and contingency procedures are completed as

ELEMENT

PERFORMANCE CRITERIA

required

5.4 Situational awareness is maintained

5.5 Fast rope is descended in a controlled manner

5.6 Landing and clearance of roping point is conducted in accordance with workplace procedures

5.7 Individual, team and equipment are gathered at designated assembly point

6 De-service fast rope equipment

6.1 Area is cleared in preparation for de-servicing of fast rope equipment in accordance with workplace procedures

6.2 Fast rope and operational equipment is de-serviced and stowed in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, legislation, organisational policy and procedures in relation to fast roping from a helicopter
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Characteristics of helicopters including their safety features and operating requirements
- Hazards that exist when fast roping from a helicopter
- Safety equipment operation
- Manufacturers instructions for equipment used for fast roping from a helicopter
- Risks that exist when fast roping from a helicopter
- Problems that may occur when fast roping from a helicopter

Required skills:

- Operate helicopter restraint, safety and emergency equipment
- Apply the tactics, techniques and procedures of fast roping applicable to the organisation
- Follow defined organisational and aircraft OH&S policy and procedures
- Identify, operate and control fast rope and operational equipment
- Communicate effectively with others including working as a member of a team when fast roping from a helicopter
- Read, interpret and follow instructions, regulations, procedures and other information relevant to fast roping from a helicopter
- Complete documentation related to fast roping from a helicopter
- Work collaboratively with others when fast roping from a helicopter
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when fast roping from a helicopter in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when fast roping from a helicopter
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when fast roping from a helicopter
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments

REQUIRED KNOWLEDGE AND SKILLS

- Work systematically with required attention to detail without injury to self, others or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - following relevant legislation and workplace procedures
 - approaching and exiting helicopter in a safe manner in accordance with workplace procedures and/or aircrew instructions
 - conducting fast rope equipment and operational equipment individual and supervisor pre-flight and in-flight checks
 - descending fast rope in a controlled manner
 - de-servicing and stowing fast rope and operational equipment in accordance with workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Hazards may include:

- wire/powerlines/fences
- livestock
- native fauna
- masts/aerials
- terrain
- weather conditions
- poor visibility
- public
- trees
- dust
- vehicles
- buildings

Environmental conditions may include:

- climate and weather variations
- geographical and geological variations including sloping and unstable ground
- variations due to vegetation and urban structures
- ground conditions including dust and other particles

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures
- manufacturers instructions

Emergency and contingency procedures may include:

- aircraft fire
- aircraft malfunction prior to take-off
- emergency landing procedures
- aircraft crash landing
- aircraft collision
- engine failure over landing site
- (for Defence) procedures to evade hostile action against aircraft or self
- roper hang-up
- roper lost brake
- roper injury on landing
- roper collision with others or obstacles
- roper inversion

RANGE STATEMENT

Operational and fast rope equipment may include:	<ul style="list-style-type: none">• loss of visibility• fast rope caught in tree• damaged or kinked rope• loss of roper control during descent• aborted operation• emergency retrieval of roper(s)• search and rescue equipment• incident response equipment• communications equipment• military equipment• individual load carrying equipment (ILCE)
Personal protective equipment (PPE) may include:	<ul style="list-style-type: none">• hearing protection• eye protection goggles• protective clothing• footwear• life jacket• high visibility clothing• personal lighting and beacons• helmet• rappelling gloves• leg bags
Communications may include:	<ul style="list-style-type: none">• interpersonal communications• radio• hand signals
Individual in-flight safety checks may include:	<ul style="list-style-type: none">• seatbelt/restraint device• weapons checks• equipment checks• fast roping equipment checks• personal protective equipment checks
Fast rope exit positions may include:	<ul style="list-style-type: none">• sitting• kneeling• crouching
Situational awareness may include:	<ul style="list-style-type: none">• monitoring altitude/height• orientation to ground and/or aircraft• monitoring the position of other team members
Assembly point may include:	<ul style="list-style-type: none">• marshalling area
Information/documents may include:	<ul style="list-style-type: none">• relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders• in Defence context, relevant Defence Orders and

RANGE STATEMENT

Applicable regulations and legislation may include:

- Instructions
- operations manuals
 - workplace procedures and instructions and job specification
 - induction and training materials
 - relevant Civil Aviation Safety Regulations and Civil Aviation Orders
 - in Defence context, relevant Defence Orders and Instructions
 - relevant state/territory OH&S legislation
 - relevant state/territory environmental protection legislation
 - relevant Australian Standards

W - Equipment and Systems Operations

AVIW2033A Rappel from a helicopter

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required by an individual to rappel from a helicopter using a personal rappel line. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work involves the application of safety and rappelling policies, regulations, protocols and procedures required to safely rappel from a helicopter

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable Civil Aviation Safety Authority (CASA) compliance.

Work is performed under limited supervision within organisational guidelines.

This unit of competency is nominally package at Certificate II.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Observe helicopter safety	1.1 Dress and equipment is secured for operating in and around a helicopter 1.2 Helicopter is approached and exited in a safe manner in accordance with workplace procedures and/or aircrew instructions 1.3 Individual seating is occupied and restraint devices are applied 1.4 Identified hazards are communicated to rappel team members 1.5 Aircrew instructions are followed 1.6 Environmental conditions and alternative routes to/from helicopter are identified
2 Prepare for rappelling operation	2.1 Rappelling descent instructions are received and confirmed as required 2.2 Workplace procedures, OH&S requirements and safety control measures are applied 2.3 Operational and rappel equipment including personal protective equipment (PPE) is selected and fitted in accordance with workplace procedures 2.4 Individual and supervisor pre-flight checks of rappel equipment are conducted 2.5 Damage to operational, rappel and safety equipment is reported and remedial action taken in accordance with workplace procedures
3 Emplane and complete onboard procedures	3.1 Aircraft is approached and emplaned in accordance with workplace procedures 3.2 Ropes are secured to allocated rope attachment device (RAD), checked and prepared for flight 3.3 Rappellers and operational equipment are secured prior to flight 3.4 Aircrew orders and instructions are complied with 3.5 Rappelling and operational equipment is monitored during flight 3.6 Communications and directions are interpreted and relayed to rappel team members 3.7 Individual in-flight safety checks are conducted
4 Prepare to rappel from hovering helicopter	4.1 Rappelling exit positions are adopted under supervision of aircrew and safety officer 4.2 Positions are resumed within the aircraft on abort instruction from aircrew
5 Rappel from helicopter	5.1 Aircraft is exited on instruction of aircrew or safety officer 5.2 Rappeller descends in a controlled manner in accordance with

ELEMENT

PERFORMANCE CRITERIA

workplace procedures

5.3 Emergency and contingency procedures are completed as required

5.4 Situational awareness is maintained

5.5 Rappeller lands in a controlled manner in accordance with workplace procedures

5.6 All clear signals are communicated to aircrew once descent is complete

5.7 Rappeller disconnects rope on landing and clears landing area in accordance with workplace procedures

5.8 Individual, team and equipment are gathered at designated assembly point

6 De-service rappel equipment

6.1 Area is cleared in preparation for de-servicing of rappel equipment in accordance with workplace procedures

6.2 Rappelling and operational equipment is de-serviced and stowed in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, legislation, organisational policy and procedures in relation to rappelling from a helicopter
- Relevant OH&S and environmental procedures and regulations
- In Defence context, relevant Defence Orders and Instructions
- Characteristics of helicopters including their safety features and operating requirements
- Hazards that exist when rappelling from a helicopter
- Safety equipment operation
- Manufacturers instructions for equipment used for rappelling from a helicopter
- Risks that exist when rappelling from a helicopter
- Problems that may occur when rappelling from a helicopter

Required skills:

- Operate helicopter restraint, safety and emergency equipment
- Apply the tactics, techniques and procedures of rappelling applicable to the organisation
- Follow defined organisational and aircraft OH&S policy and procedures
- Identify, operate and control rappelling and operational equipment
- Communicate effectively with others including working as a member of a team when rappelling from a helicopter
- Read, interpret and follow instructions, regulations, procedures and other information relevant to rappelling from a helicopter
- Complete documentation related to rappelling from a helicopter
- Work collaboratively with others when rappelling from a helicopter
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when rappelling from a helicopter in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when rappelling from a helicopter
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when rappelling from a helicopter
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments

REQUIRED KNOWLEDGE AND SKILLS

- Work systematically with required attention to detail without injury to self, others or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - following relevant legislation and workplace procedures
 - approaching and exiting helicopter in a safe manner in accordance with workplace procedures and/or aircrew instructions
 - conducting rappel, operational and safety equipment individual and supervisor pre-flight and in-flight checks
 - descending landing in a controlled manner in accordance with workplace procedures
 - de-servicing and stowing rappelling and operational equipment in accordance with workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Hazards may include:

- wire/powerlines/fences
- livestock
- native fauna
- masts/aerials
- terrain
- weather conditions
- poor visibility
- public
- trees
- dust
- vehicles
- buildings

Environmental conditions may include:

- climate and weather variations
- geographical and geological variations including sloping and unstable ground
- variations due to vegetation and urban structures
- ground conditions including dust and other particles

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures
- manufacturers instructions

Emergency and contingency procedures may include:

- aircraft fire
- aircraft malfunction prior to take-off
- emergency landing procedures
- aircraft crash landing
- aircraft collision
- engine failure over landing site
- (for Defence) procedures to evade hostile action against aircraft or self
- rappeller hang-up
- rappeller lost brake
- rappeller injury on landing
- rappeller collision with others or obstacles
- rappeller inversion

RANGE STATEMENT

- loss of visibility
 - rappelling rope caught in tree
 - damaged or kinked rope
 - loss of rappel control during descent
 - aborted operation
 - emergency retrieval of rappeller(s)
 - rappeller lost balance during transition (premature exit)
- Operational and rappel equipment may include:
- search and rescue equipment
 - incident response equipment
 - communications equipment
 - military equipment
 - commercial in-service rappelling harness
 - improvised tubular webbing harness
 - descending device(s)
 - descent rope
 - individual load carrying equipment (ILCE)
- Personal protective equipment (PPE) may include:
- hearing protection
 - eye protection goggles
 - protective clothing
 - footwear
 - life jacket
 - high visibility clothing
 - personal lighting and beacons
 - helmet
 - rappelling gloves
 - leg bags
- Communications may include:
- interpersonal communications
 - radio
 - hand signals
- Individual in-flight safety checks may include:
- seatbelt/restraint device
 - weapons checks
 - equipment checks
 - rappelling equipment checks
 - personal protective equipment checks
- Rappel exit positions may include:
- 'L' position
 - forward exit
- Situational awareness may include:
- monitoring altitude/height
 - orientation to ground and/or aircraft
 - monitoring the position of other team members

RANGE STATEMENT

Assembly point may include:

- marshalling area

Information/documents may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- operations manuals
- workplace procedures and instructions and job specification
- induction and training materials

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to operate aircraft embarkation/disembarkation equipment, including pre- and post-operational checks of the equipment, pre-positioning the equipment prior to the arrival of the aircraft, positioning the equipment against the aircraft on arrival, and retracting the equipment prior to departure. Types of embarkation/disembarkation equipment may vary from airport to airport and may include both manually-operated and motorised equipment. The generic performance criteria provided in this unit may therefore need to be adapted, as required, to accommodate the operating procedures recommended by the manufacturers of the embarkation/disembarkation equipment concerned. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant licensing and regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and applicable licensing and regulatory requirements to the operation and positioning of manually-operated and motorised embarkation/disembarkation equipment across a variety of operational contexts within the Australian aviation industry.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Conduct pre-operational checks	<p>1.1 Pre-operational checks of the embarkation/disembarkation equipment are conducted in accordance with workplace procedures and manufacturers instructions</p> <p>1.2 Fluid levels are topped up where required in accordance with workplace procedures</p> <p>1.3 Faults and malfunctions are identified and appropriate action is taken to rectify and/or report the fault/malfunction in accordance with workplace procedures and regulatory requirements</p>
2 Operate embarkation/disembarkation equipment	<p>2.1 Embarkation/disembarkation equipment is pre-positioned to the assigned location in preparation for the arrival of the aircraft in accordance with workplace procedures, local instructions and relevant regulatory requirements</p> <p>2.2 Embarkation/disembarkation equipment is manoeuvred to aircraft and positioned against the fuselage in preparation for passenger embarkation/disembarkation in accordance with workplace procedures, local instructions and relevant regulatory requirements</p> <p>2.3 Embarkation/disembarkation equipment is operated in accordance with workplace procedures, OH&S regulations and manufacturers instructions</p> <p>2.4 Hazards associated with the operation of the embarkation/disembarkation equipment are recognised and appropriate precautions are taken in accordance with OH&S regulations and workplace hazard management strategies</p>
3 Retract and store embarkation/disembarkation equipment	<p>3.1 At the completion of passenger embarkation/disembarkation activities, equipment is withdrawn from aircraft and manoeuvred to assigned storage bay/area in accordance with workplace procedures and local instructions</p> <p>3.2 Post-operational checks of embarkation/disembarkation equipment are conducted in accordance with workplace procedures and manufacturers instructions</p> <p>3.3 Any faults and malfunctions are identified and appropriate action is taken to rectify and/or report the fault/malfunction in accordance with workplace procedures and regulatory requirements</p> <p>3.4 Where applicable, embarkation/disembarkation equipment is refuelled and fluid levels topped up in accordance with workplace procedures, relevant regulatory requirements and manufacturers instructions</p> <p>3.5 Equipment log or other required documentation is completed in accordance with workplace procedures, local instructions and</p>

ELEMENT

PERFORMANCE CRITERIA

regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Principles of operation of embarkation/disembarkation equipment
- Features and differences in operating requirements for various types of embarkation/disembarkation equipment in operation at Australian airports
- Workplace procedures for operating embarkation/disembarkation equipment
- Layout of airport and location of aircraft gates
- Relevant local instructions pertaining to the operation of embarkation/disembarkation equipment
- Manufacturers instructions for checking and operating embarkation/disembarkation equipment
- Hazards and associated risks that may exist when operating embarkation/disembarkation equipment and related risk control procedures and precautions
- Problems that may occur when operating embarkation/disembarkation equipment and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when preparing, operating, retracting and storing aircraft embarkation and disembarkation equipment
- Read and interpret instructions, regulations, procedures and other information relevant to aircraft embarkation and disembarkation equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to aircraft embarkation and disembarkation equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when preparing, operating, retracting and storing aircraft embarkation and disembarkation equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour, communication and interactions with others
- Promptly report and/or rectify any identified problems that may occur when preparing, operating, retracting or storing aircraft embarkation and disembarkation equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when preparing, operating, retracting or storing aircraft embarkation and disembarkation equipment
- Monitor and anticipate operational problems and hazards and take appropriate action
- Apply precautions and required action to minimise, control or eliminate hazards that may exist

REQUIRED KNOWLEDGE AND SKILLS

when preparing, operating, retracting or storing aircraft embarkation and disembarkation equipment

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Modify activities dependent on differing workplace contingencies, situations and environments
- Monitor work activities in terms of planned schedule
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when operating aircraft embarkation and disembarkation equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operation of the embarkation/disembarkation equipment may be carried out:	<ul style="list-style-type: none"> • in any allowable operating and weather conditions • in accordance with local instructions and regulatory and operational requirements
Performance may be demonstrated:	<ul style="list-style-type: none"> • in an appropriately simulated embarkation/disembarkation equipment workplace situation, and/or • on operational embarkation/disembarkation equipment at an airport
Embarkation/disembarkation equipment may include:	<ul style="list-style-type: none"> • manually operated mobile stairs • motorised mobile stairs • other types of embarkation/disembarkation equipment
Hazards that may exist in the operation of embarkation/disembarkation equipment may include:	<ul style="list-style-type: none"> • personnel in the vicinity of the aircraft • other vehicles in the vicinity of the aircraft • jet blast • noise • dust
Personal protective equipment may include but is not restricted to:	<ul style="list-style-type: none"> • hearing protection • safety gloves • safety footwear • protective clothing
Pre- and post-operational checks may include:	<ul style="list-style-type: none"> • fluid levels (where applicable) • battery charge (where applicable) • fuel level (where applicable) • visual inspection for faults or defects
Persons consulted during embarkation/disembarkation equipment operation may include:	<ul style="list-style-type: none"> • other members of the baggage handling and ramp teams • aircrew • load controllers • supervisors, team leaders and managers • check-in staff • ground support staff • technical staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures (SOPs)

RANGE STATEMENT

Information/documents may include:

- sections of Civil Aviation Safety Regulations and Civil Aviation Orders and licensing requirements relevant to the operation of embarkation/disembarkation equipment
- OH&S regulations
- workplace procedures and instructions and job specification
- embarkation/disembarkation equipment operational checklists
- pre- and post-operational checklists
- equipment log/operational record
- emergency procedures
- flight schedules
- manufacturers specifications and instructions for the embarkation/disembarkation equipment being operated
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- licence requirements of the relevant licensing authority (where applicable)
- relevant OH&S legislation
- environmental protection legislation
- relevant Australian Standards
- industrial relations and workplace compensation legislation

ELEMENT

PERFORMANCE CRITERIA

regulatory requirements and manufacturers instructions
3.5 Equipment log or other required documentation is completed in accordance with workplace procedures, local instructions and regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Principles of ramp equipment operation
- Features and differences in operating characteristics for various types of ramp equipment in operation at Australian airports
- Workplace procedures for operating ramp equipment
- Layout of airport and location of aircraft gates
- Relevant local instructions pertaining to ramp equipment operation
- Manufacturers instructions for checking and operating ramp equipment
- Risks that exist when operating ramp equipment and related risk control procedures and precautions
- Problems that may occur when operating ramp equipment and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when operating ramp equipment
- Read and interpret instructions, regulations, procedures and other information relevant to ramp equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to ramp equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating ramp equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when operating ramp equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when operating ramp equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating ramp equipment
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments

REQUIRED KNOWLEDGE AND SKILLS

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when operating ramp equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Ramp operations may be carried out:	<ul style="list-style-type: none"> • in any allowable operating and weather conditions • in accordance with regulatory and operational requirements
Performance may be demonstrated:	<ul style="list-style-type: none"> • in appropriately simulated ramp equipment situations and/or • on operational ramp equipment at an airport
Types of ramp equipment may include:	<ul style="list-style-type: none"> • belt loader • up-down pallet loader • baggage carts
Hazards that may exist when operating in-hold aircraft baggage systems may include but are not restricted to:	<ul style="list-style-type: none"> • other vehicles in the vicinity of the aircraft • personnel in the vicinity of the aircraft • jet blast • noise • dust
Personal protective equipment may include but is not restricted to:	<ul style="list-style-type: none"> • hearing protection • safety gloves • safety footwear • protective clothing
Pre-operational checks may include:	<ul style="list-style-type: none"> • fluid levels (where applicable) • battery charge level (where applicable) • fuel level where applicable • visual inspection for faults or defects
Persons consulted during ramp equipment operations may include:	<ul style="list-style-type: none"> • other members of the baggage handling and ramp teams • aircrew • load controllers • supervisors, team leaders and managers • ground support staff • technical staff
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil Aviation Orders and licence requirements pertaining to ramp equipment operation

RANGE STATEMENT

Applicable regulations and legislation may include:

- OH&S regulations
- workplace procedures and instructions and job specification
- ramp equipment operational checklists
- emergency procedures
- flight schedules
- pre- and post-operational checklists
- equipment logs/records
- manufacturers specifications and instructions for the ramp equipment being operated
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- licence requirements of the relevant licensing authority
- local instructions
- relevant OH&S legislation
- environmental protection legislation
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Unit Sector(s)

Competency Field

W - Equipment and Systems Operations

AVIW3005B Operate aircraft push-out tug

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to operate an aircraft push-out tug at a commercial airport. This includes conducting pre- and post-operational checks, positioning the tug and coupling it to the aircraft, and safely operating the tug to assist the manoeuvring of the aircraft. Types of aircraft push-out tug and related terminology may vary from airport to airport. Generic performance criteria provided in this unit may therefore need to be adapted, as required, to accommodate the operating procedures recommended by the manufacturers of the aircraft push-out tug concerned. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and the relevant regulatory requirements of the Civil Aviation Authority and other relevant regulatory authorities.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and safety regulations to the operation of aircraft push-out tugs at relevant commercial airports across a variety of operational contexts within the Australian aviation industry.

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Conduct pre-operational checks on the tug	<p>1.1 Pre-operational checks of the tug are conducted in accordance with workplace procedures and manufacturers instructions</p> <p>1.2 Fluid levels are topped up where required in accordance with workplace procedures and manufacturers specifications</p> <p>1.3 Faults and malfunctions are identified and appropriate action is taken to rectify and/or report the fault/malfunction in accordance with workplace procedures and regulatory requirements</p>
2 Operate tug	<p>2.1 Tug is manoeuvred to aircraft and positioned in preparation for aircraft ground manoeuvres and/or push-out operations in accordance with workplace procedures, local instructions and relevant regulatory requirements</p> <p>2.2 Tug is coupled to the aircraft in accordance with workplace procedures and regulatory requirements</p> <p>2.3 Tug is operated in accordance with workplace procedures, OH&S regulations and manufacturers instructions</p> <p>2.4 Aircraft ground manoeuvres and/or push-out of aircraft are conducted in accordance with directions of the ground engineer and aircrew in accordance with workplace procedures, local instructions and regulatory requirements</p> <p>2.5 At completion of required operations, tug is uncoupled from aircraft in accordance workplace procedures and regulatory requirements</p> <p>2.6 At the completion of all scheduled activities, tug is manoeuvred to and parked in storage bay/area in accordance with workplace procedures</p> <p>2.7 Tug is shut down and stored</p>
3 Conduct post-operational checks of tug in accordance with workplace procedures and manufacturers instructions	<p>3.1 Any faults and malfunctions are identified and appropriate action is taken to rectify and/or report the fault/malfunction in accordance with workplace procedures and regulatory requirements</p> <p>3.2 Where applicable, tug is refuelled and fluid levels topped up in accordance with workplace procedures, relevant regulatory requirements and manufacturers instructions</p> <p>3.3 Hazards associated with the operation of the tug are recognised and appropriate precautions are taken in accordance with OH&S regulations and workplace hazard management strategies</p> <p>3.4 Equipment log or other required documentation is completed in accordance with workplace procedures, local instructions and regulatory requirements</p> <p>3.5 Instructions for the next operation are obtained and the tug is</p>

ELEMENT

PERFORMANCE CRITERIA

driven to the next scheduled location in accordance with workplace procedures, local instructions and regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Principles of tug operation as required by the relevant licensing authority
- Features and differences in operating characteristics for various types of aircraft push-out tugs in operation at Australian airports
- Workplace procedures for operating an aircraft push-out tug
- Layout of airport and location of aircraft gates and equipment storage areas
- Relevant local instructions pertaining to tug operation
- Manufacturers instructions for checking and operating the tug concerned
- Risks that exist when operating a tug and related risk control procedures and precautions
- Problems that may occur when operating a tug and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when operating aircraft push-out tug
- Read and interpret instructions, regulations, procedures and other information relevant to aircraft push-out tug
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to aircraft push-out tug
- Operate electronic and radio communication equipment to required protocol
- Work collaboratively with others when operating aircraft push-out tug
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour, communications and interactions with others
- Promptly report and/or rectify any identified problems that may occur when operating aircraft push-out tug in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when operating aircraft push-out tug
- Monitor work activities in terms of planned schedule
- Monitor and anticipate operational problems and hazards and take appropriate action
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating aircraft push-out tug
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures

REQUIRED KNOWLEDGE AND SKILLS

- Select and use required personal protective equipment conforming to industry and OH&S standards
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Implement OH&S procedures and relevant regulations
- Modify activities dependent on differing workplace contingencies, situations and environments
- Identify and correctly use equipment required when operating aircraft push-out tag

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Aircraft push-out operations may be carried out:	<ul style="list-style-type: none"> • in any allowable operating and weather conditions • in accordance with regulatory and operational requirements
Performance may be demonstrated in:	<ul style="list-style-type: none"> • actual push-out operations at an airport • appropriately simulated push-out operations
Type of aircraft push-out tug may include:	<ul style="list-style-type: none"> • electric battery-operated tugs • diesel engine tugs
Dependent on the type of organisation concerned and the local terminology used, aircraft push-out tugs may be referred to by a variety of terms, including but not restricted to:	<ul style="list-style-type: none"> • aircraft push-back tug • tow tug (aircraft) • aircraft tow motor • aircraft tow tractor • push back power unit (PPU)
Aircraft towing manoeuvres may include but are not restricted to:	<ul style="list-style-type: none"> • the push-out of an aircraft from a gate • transport of an aircraft to/from a hanger • movement of an aircraft around an airport • movement of a defective aircraft
Hazards that may exist when operating an aircraft push-out tug may include but are not restricted to:	<ul style="list-style-type: none"> • other vehicles in the vicinity of the aircraft • personnel in the vicinity of the aircraft • jet blast • noise • dust
Personal protective equipment may include but is not restricted to:	<ul style="list-style-type: none"> • hearing protection • safety gloves • safety footwear • protective clothing
Pre-operational checks may include:	<ul style="list-style-type: none"> • fluid levels (where applicable) • battery charge (where applicable) • fuel level where applicable • visual inspection for faults or defects
Persons consulted during tug operations may include:	<ul style="list-style-type: none"> • other members of the baggage handling and ramp teams • aircrew • aircraft schedulers • supervisors, team leaders and managers • ground support staff

RANGE STATEMENT

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may be referred to as:

Information/documents may include:

Applicable regulations and legislation may include:

- technical staff
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures
- licence requirements of relevant regulatory authorities
- local instructions relevant to aircraft tug operations
- workplace procedures and instructions and job specification
- OH&S and environmental protection regulations
- tug operational checklists
- pre- and post-operation checklists
- tug logs/records
- emergency procedures
- flight schedules and gate allocations
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- manufacturers specifications and instructions for the tug being operated
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant licence requirements of the pertinent licensing authority
- local instructions
- relevant OH&S legislation
- relevant environmental protection legislation
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to refuel an aircraft in accordance with workplace procedures and regulatory requirements, including conducting required pre-operational checks on fueller/dispenser vehicle and equipment, loading the fueller, correctly positioning the fueller/dispenser vehicle and carrying out the required refuelling operations. It also includes the skills and knowledge required to complete all post-refuelling operations and required refuelling documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in accordance with workplace procedures and relevant regulatory requirements.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under some supervision usually within a team environment.

Work involves the application of operational procedures and regulatory requirements to the refuelling of aircraft across a variety of operational contexts within the Australian aviation industry.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Conduct pre-operational checks on fueller/dispenser vehicle and equipment	<p>1.1 Pre-operational checks of fueller/dispenser vehicle and auxiliary equipment are conducted in accordance with workplace procedures and manufacturers requirements</p> <p>1.2 Problems and/or defects identified during pre-operational checks are reported/rectified in accordance with workplace procedures and manufacturers requirements</p> <p>1.3 Outcomes of pre-operational checks are recorded in accordance with workplace procedures, regulatory requirements and manufacturers requirements</p>
2 Load fueller	<p>2.1 Vehicle is positioned at the loading bay and all precautionary and reporting requirements are carried out in accordance with workplace procedures</p> <p>2.2 Vehicle is grounded and the loading bay bonding lead is connected to the fueller in accordance with workplace procedures and regulatory requirements</p> <p>2.3 Fueller is dipped and ullage determined</p> <p>2.4 Loading operations and quality control checks are completed in accordance with operational instructions, workplace procedures and regulatory requirements</p>
3 Position fueller/dispenser vehicle	<p>3.1 Fueller/dispenser vehicle is started and driven to aircraft in accordance with workplace procedures, regulatory requirements and local instructions</p> <p>3.2 The aircraft is approached only after checks are made to confirm that aircraft engines have stopped and aircraft wheel chocks are in place</p> <p>3.3 Vehicle is positioned and parked either underwing or standoff depending on aircraft type in accordance with workplace procedures, regulatory requirements and local instructions</p> <p>3.4 Appropriate precautions are taken to avoid risk of collision with aircraft control surfaces and engines</p> <p>3.5 Parking position of fueller/dispenser vehicle provides easiest route for evacuation in the event of an emergency</p>
4 Carry out refuelling operations	<p>4.1 Vehicle is grounded and the bonding lead is connected to the aircraft in accordance with workplace procedures and regulatory requirements</p> <p>4.2 In the case of pressure fuellers, auxiliary equipment is positioned and hose is connected in accordance with workplace procedures, regulatory requirements and local instructions</p> <p>4.3 Care is taken that dust caps are not placed inside wing panels</p> <p>4.4 In the case of hydrant dispensers, delivery hoses and couplings are connected to the aircraft and intake hose is connected to the</p>

ELEMENT

PERFORMANCE CRITERIA

- inlet coupler. This is done in accordance with workplace procedures, regulatory requirements and local instructions
- 4.5 Aircraft is fuelled in accordance with the workplace fuelling checklist and procedures, airline instructions, regulatory requirements and local instructions
- 5 Complete post-refuelling operations**
- 5.1 Fuelling completion operations are conducted in accordance with workplace procedures, regulatory requirements and local instructions
- 5.2 Fuel sample is taken from the filter sump/inlet and visual check is made prior to aircraft departure in accordance with workplace procedures, regulatory requirements and local instructions
- 5.3 Hoses, couplings and auxiliary equipment are disconnected and stowed in accordance with workplace procedures
- 5.4 In the case of hydrant dispensers, lanyard is disconnected and pit valve dust cover and hydrant pit lid are replaced. This is done in accordance with workplace procedures, regulatory requirements and local instructions
- 5.5 Reel hoses are rewound
- 6 Complete documentation**
- 6.1 In case of hard copy documentation, all required paperwork is completed and the airline representative's signature is obtained in accordance with workplace procedures
- 6.2 In case of computerised systems, touch PC functions are completed, the airline representative's signature is obtained and fuel delivery docket is printed in accordance with workplace procedures and local instructions
- 6.3 Fueller/dispenser vehicle is driven either to the depot or to the next aircraft in accordance with workplace procedures, regulatory requirements and local instructions

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders and other regulations pertaining to the refuelling of aircraft
- Relevant OH&S and environmental procedures and regulations
- Principles and processes of aircraft refuelling
- Differences in refuelling procedures for various types of aircraft
- Workplace procedures for loading a fueller and refuelling aircraft
- Manufacturers instructions for fueller vehicle and auxiliary equipment
- Risks that exist when refuelling an aircraft and related risk control procedures and precautions
- Problems that may occur when refuelling an aircraft and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when refuelling aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to refuelling aircraft
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to refuelling aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when refuelling aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when refuelling aircraft in accordance with regulatory requirements and workplace procedures and local instructions
- Implement contingency plans for unexpected events that may arise when refuelling aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when refuelling aircraft
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures

REQUIRED KNOWLEDGE AND SKILLS

- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when refuelling aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Refuelling operations may be carried out:

- for any aircraft types
- at major or minor airports
- in any allowable operating and weather conditions
- in accordance with regulatory and operational requirements and local instructions

Performance may be demonstrated:

- in an approved simulated refuelling situation
- during refuelling operations at an airport

Pre-operational checks may include:

- serviceability of ladder or portable steps (cracks or damage that would render them unsafe)
- fire extinguishers (correctly stowed and fully charged)
- personal protection equipment (PPE)
- sampling equipment and water detection capsules
- visual inspection for leaks, defects and obstructions
- sufficient fuel in fueller for planned refuelling job (fueller must be manually dipped prior to shift and measured volume recorded and reported)
- radio check with base
- required documentation (printer paper, log sheet forms, etc.)
- air-pressure after start-up prior to moving
- check that brake interlock override switch seal is intact
- auxiliary equipment is functional
- vehicle parked correctly in designated area
- brake test (after moving but before leaving depot)

Personal protection equipment may include:

- gloves
- safety headwear and footwear
- hearing protection
- safety glasses
- mask or respirator
- high visibility clothing
- approved uniform

Persons consulted during refuelling operations may include:

- aircrew
- airline engineers or representatives
- other refuelling staff
- supervisors and managers
- ground support staff

RANGE STATEMENT

Hazards may include:	<ul style="list-style-type: none"> • technical staff • hot engines, static electricity, sparks and other forms of ignition • contamination of, or from, materials being handled • spill, leakages, ruptures • fuel vapours • other vehicles on tarmac • jet blast • rotating propellers • hazardous or dangerous materials • noise • dust • other additives (e.g. water, methanol, icing inhibitors)
Hazard management is:	<ul style="list-style-type: none"> • consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • local instructions • standard operating procedures
Information/documents may include:	<ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to refuelling operations • IATA Guidelines for Aviation Fuel Quality Control, and Operating Procedures for Joint Inter Plane Fuelling Services (JIG Guidelines) • OH&S and environmental protection regulations • workplace procedures and instructions and job specification • airport airside drivers handbook • loading and fuelling operational checklists • emergency procedures • flight schedules • manufacturers specifications and instructions for the fueller/dispenser vehicle and auxiliary equipment • induction and training materials • conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and	<ul style="list-style-type: none"> • relevant Civil Aviation Safety Regulations and Civil

RANGE STATEMENT

legislation may include:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Complete preliminary checks and operations	<p>1.1 Reason for defuelling and the quantity of fuel to be defuelled is confirmed</p> <p>1.2 Type of aircraft and requirement for overwing or underwing operation is confirmed</p> <p>1.3 Pre-operational checks on vehicle and auxiliary equipment are made</p> <p>1.4 Ullage in fueller/defuelling vehicle is checked</p>
2 Position fueller/dispenser vehicle	<p>2.1 Fueller vehicle is started and driven to aircraft in accordance with workplace procedures, regulatory requirements and local instructions</p> <p>2.2 The aircraft is approached only after checks are made to confirm that aircraft engines have stopped and aircraft wheel chocks are in place</p> <p>2.3 Vehicle is positioned and parked either underwing or standoff depending on aircraft type in accordance with workplace procedures, regulatory requirements and local instructions</p> <p>2.4 Appropriate precautions are taken to avoid risk of collision with aircraft control surfaces, aircraft engines and other vehicles</p> <p>2.5 Parking position of fueller vehicle provides easiest route for evacuation in the event of an emergency</p>
3 Conduct quality checks on product	<p>3.1 Required documentation is obtained from airline engineer/representative</p> <p>3.2 Sample of product on board aircraft is obtained and visual quality checks are made in accordance with workplace procedures</p> <p>3.3 If quality checks are satisfactory, decision is made to proceed with defuelling</p> <p>3.4 If quality checks are unsatisfactory, action is taken to report situation to supervisor. If defuelling is to continue, aircraft fuel is defuelled into either an empty tank or into a drained fueller and, if approved, the fuel is delivered back to the same airline</p>
4 Defuel aircraft	<p>4.1 Vehicle is grounded and the bonding lead is connected to the aircraft in accordance with workplace procedures and regulatory requirements</p> <p>4.2 All required pre-defuelling safety precautions are taken in accordance with workplace procedures and regulatory requirements</p> <p>4.3 Defuelling operations are commenced either using the auxiliary power unit (APU) or the ground power unit (GPU) in accordance with workplace procedures and regulatory</p>

ELEMENT

PERFORMANCE CRITERIA

- requirements
- 4.4 At the completion of defuelling operations, the quantity defuelled is verified in accordance with workplace procedures
- 5 Complete documentation**
- 5.1 All required defuelling documentation is completed in accordance with workplace procedures
- 6 Complete post-defuelling operations**
- 6.1 Hoses are disconnected, retracted and stowed in accordance with workplace procedures
- 6.2 Defuelled fuel confirmed as acceptable for return to storage is either discharged into designated segregated storage tank or retained in fueller for delivery back to airline concerned
- 6.3 Defuelled fuel found to be contaminated is disposed of in accordance with workplace procedures and regulatory requirements
- 6.4 Fueller used to transfer contaminated fuel is de-contaminated in accordance with workplace procedures and regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders and other regulations pertaining to the defuelling of aircraft
- Relevant OH&S and environmental procedures and regulations
- Principles of aircraft defuelling
- Differences in defuelling procedures for various types of aircraft
- Workplace procedures for defuelling aircraft
- Manufacturers instructions for fueller vehicle and auxiliary equipment
- Risks that exist when defuelling an aircraft and related risk control procedures and precautions
- Problems that may occur when defuelling an aircraft and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when defuelling aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to defuelling aircraft
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to defuelling aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when defuelling aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour, communication and interactions with others
- Promptly report and/or rectify any identified problems that may occur when defuelling aircraft in accordance with regulatory requirements, workplace procedures and local instructions
- Implement contingency plans for unexpected events that may arise when defuelling aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when defuelling aircraft
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures

REQUIRED KNOWLEDGE AND SKILLS

- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when defuelling aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Regulate aircraft engine ground running | 1.1 Appropriate ground engine running locations are selected
1.2 Engine ground running is checked in relation to time, duration and level
1.3 Ground running activities are reported |
| 2 Control aircraft parking | 2.1 Compliance with aircraft parking restrictions is checked
2.2 Aircraft push-backs are monitored
2.3 Marshalling services are provide (if applicable)
2.4 Parking breaches are logged and reported, and appropriate action is taken |
| 3 Provide 'follow-me' services to aircraft | 3.1 The need for the service is appropriately assessed
3.2 Appropriate communications are established and maintained
3.3 Appropriate routes are taken |
| 4 Provide for security of aircraft on the ground | 4.1 Parked aircraft are routinely observed
4.2 Suspicious or unusual activity in the vicinity of parked aircraft is investigated, logged and reported |
| 5 Monitor aircraft refuelling | 5.1 The use of correct procedures and standards in refuelling activities is monitored
5.2 Correct disposal of fuel samples is ensured
5.3 Breaches are logged and reported |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Purpose and application of unserviceability markers
- Steps involved in planning the work activities
- Procedures to be followed in the event of an emergency
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Procedures for managing and controlling hazardous situations when carrying out work activities
- Physical characteristics of aircraft
- Standard operating procedures for coordinating aircraft ground operations
- Communication equipment checks

Required skills:

- Communicate effectively with others when coordinating aircraft ground operations
- Read and interpret instructions, regulations, procedures and other information relevant to coordinating aircraft ground operations
- Prepare, process and complete a Notice to Airmen (NOTAM) in accordance with relevant regulatory requirements and procedures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to aircraft ground operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when coordinating aircraft ground operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when coordinating aircraft ground operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when coordinating aircraft ground operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist while coordinating aircraft ground operations

REQUIRED KNOWLEDGE AND SKILLS

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to coordinate aircraft ground operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|---|
| Types of aircraft may include: | <ul style="list-style-type: none"> • commercial passenger aircraft • freighter aircraft • commercial charter aircraft |
| Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include: | <ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures (SOPs) • the airside |
| The work site may include: | |
| Information/documents may include: | <ul style="list-style-type: none"> • aerodrome manuals • workplace operating procedures manuals • workplace procedures and instructions and job specification • Manual of Standards - Aerodromes (part 139) • En Route Supplement Australia (ERSA) • airline timetables • induction and training materials |

W - Equipment and Systems Operations

AVIW3023A Implement wildlife hazard control measures

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to implement measures for controlling wildlife hazards on or in the vicinity of an aerodrome to minimise the risk to aircraft operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

This unit applies to aerodromes that operate across a variety of operational contexts within the Australian aviation industry.

The work must be carried out in accordance with relevant regulatory requirements and operational standards when implementing wildlife hazard control measures on an aerodrome.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

The unit is nominally packaged at Certificate III.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Implement wildlife hazard control measures

- 1.1 Bird and animal counts are undertaken
- 1.2 Records are kept and analysed
- 1.3 Wildlife hazards are reported to relevant notification authorities in accordance with standard operating procedures
- 1.4 Procedures for controlling wildlife hazards are reviewed and implemented
- 1.5 Appropriate control measures for identified wildlife hazards are selected and implemented

2 Report on the implementation of the wildlife hazard control program

- 2.1 Reports on incidents involving birds or animals to aircraft or the infrastructure are prepared
- 2.2 Recommendations on the effectiveness of the wildlife hazard control program and procedures are made to aerodrome management

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Standard operating procedures relating to the wildlife hazard control program
- Requirements for completing relevant documentation
- Steps involved in planning the work activities
- Procedures to be followed in the event of an emergency
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S, risk assessment, and environmental procedures and regulations
- Procedures for managing and controlling hazardous situations when carrying out work activities

Required skills:

- Communicate effectively with others when implementing wildlife hazard control measures
- Read and interpret instructions, regulations, procedures and other information relevant to implementing wildlife hazard control measures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to implementing wildlife hazard control measures
- Work collaboratively with others when implementing wildlife hazard control measures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when implementing wildlife hazard control measures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when implementing wildlife hazard control measures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist while implementing wildlife hazard control measures
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures

REQUIRED KNOWLEDGE AND SKILLS

- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to implement wildlife hazard control measures
- Implement risk management procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare for recovery/deployment

- 1.1 Personal safety equipment is inspected, donned, connected and checked in accordance with organisational policy and procedures
- 1.2 Equipment/personnel to be winched are prepared, inspected, connected and checked in accordance with organisational policy and procedures
- 1.3 Personnel to be winched are briefed where necessary

2 Recover/deploy equipment/personnel

- 2.1 Hand signals are used in accordance with established procedures and practices
- 2.2 Positive control of equipment/personnel is maintained during ascent/descent
- 2.3 Assistance for personnel is provided as required
- 2.4 Disconnection of equipment/personnel is conducted in accordance with organisational policy and procedures
- 2.5 Cable is earthed as required prior to completing descent

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Hoist capabilities and limitations
- Approved operational procedures and processes for different hoisting operations
- Occupational health and safety issues applicable to operations
- Aircraft safety
- Personnel safety
- Communication skills for signalling and briefing
- Correct hoist and equipment configuration
- Organisational policy and procedures in relation to performing wireman duties
- Abnormal/emergency conditions and responses
- Aircraft flight control operation
- Typical problems that may occur when performing wireman duties, actions and appropriate solutions

Required skills:

- Perform hoisting operations
- Perform equipment assembly
- Use verbal and non-verbal communication skills for signalling and briefing
- Complete hoisting recovery equipment operations
- Give and receive instructions related to performing wireman duties
- Maintain situational awareness
- Complete documentation related to performing wireman duties
- Communicate effectively with others when performing wireman duties
- Read and interpret instructions and procedures relevant to performing wireman duties
- Interpret and follow operational instructions and prioritise work
- Identify and use required communication technology
- Work collaboratively with others when performing wireman duties
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when performing wireman duties in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when performing wireman duties

REQUIRED KNOWLEDGE AND SKILLS

- Apply precautions and required action to minimise, control or eliminate hazards that may exist when performing wireman duties
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare flight aircraft and equipment

- 1.1 Aircraft is refuelled as required in accordance with organisational policies and procedures
- 1.2 Personal survival equipment is inspected and prepared for use
- 1.3 Loose equipment is stowed appropriately in aircraft
- 1.4 Applicable aircraft publications are obtained

2 Perform aircraft pre-flight and post-flight actions

- 2.1 Aircraft maintenance documentation is inspected for correct compilation and completion in accordance with organisational policies and procedures
- 2.2 Serviceability of aircraft, engineering limitations, fuel state and configuration are obtained and assessed for flight/mission capability
- 2.3 Aircraft pre-flight inspections are completed in accordance with organisational policies and procedures
- 2.4 Aircraft fluid systems are checked and replenished in accordance with aircraft maintenance manuals
- 2.5 Aircraft post-flight inspections are completed in accordance with organisational policies and procedures
- 2.6 Discrepancies/unserviceabilities are reported in accordance with organisational policies and procedures

3 Complete post-flight requirements

- 3.1 Aircraft publications are accounted for and returned in accordance with organisational policies and procedures
- 3.2 Specialist flight equipment is inspected and re-stowed in accordance with organisational policies and procedures
- 3.3 Personal survival equipment is inspected and re-stowed in accordance with organisational policies and procedures
- 3.4 Unserviceabilities are reported and recorded in accordance with organisational policies and procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Aircraft refuelling procedures
- Personal survival equipment inspection procedures and requirements
- Specialist equipment inspection procedures
- Specialist equipment uses, capabilities and limitations
- Aircraft and aircraft systems configuration and operation
- Aircraft weapons and pyrotechnics safety (where applicable)
- Documentation inspection and compilation procedures
- Pre- and post-flight inspection procedures
- Use of ground support equipment
- Relevant OH&S responsibilities
- Typical problems that may occur when completing aircraft/equipment pre- and post-flight actions, and appropriate solutions

Required skills:

- Complete documentation related to completing aircraft/equipment pre- and post-flight actions
- Identify and use ground support equipment required for the replenishment of aircraft systems
- Interpret and follow aircraft documentation
- Operate specialist equipment
- Communicate effectively with others when completing aircraft/equipment pre- and post-flight actions
- Read and interpret instructions and procedures relevant to completing aircraft/equipment pre- and post-flight actions
- Interpret and follow operational instructions and prioritise work
- Identify and use required communication technology
- Work collaboratively with others when completing aircraft/equipment pre- and post-flight actions
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when completing aircraft/equipment pre- and post-flight actions in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when completing aircraft/equipment pre- and post-flight actions

REQUIRED KNOWLEDGE AND SKILLS

- Apply precautions and required action to minimise, control or eliminate hazards that may exist when completing aircraft/equipment pre- and post-flight actions
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for night aided vision operations	<p>1.1 Pre-flight information is obtained and prepared to identify safe flight routes, weather and operating terrain</p> <p>1.2 Risk assessment and management processes are implemented to minimise risk to safety of flight, personnel and equipment</p> <p>1.3 Night aided lighting limitations/considerations are reviewed</p> <p>1.4 All operating crew are briefed on the conduct of night aided aviation operations</p> <p>1.5 Night aided personal equipment is obtained and pre-operational checks are completed in accordance with organisational policies and procedures</p> <p>1.6 Aircraft night aided sensors, aids and equipment serviceability checks and adjustments are completed, and defects are identified and reported in accordance with organisational policies and procedures</p>
2 Conduct night aided vision operations	<p>2.1 Night aided equipment and systems are used to safely operate aircraft systems</p> <p>2.2 Instrumentation and system checks are completed at appropriate times to identify visual clues</p> <p>2.3 Night aided human physiological conditions are monitored and corrective action is taken where required in accordance with organisational policies</p> <p>2.4 Reconnaissance of operational area is completed to ensure aircraft safety</p> <p>2.5 Night aided emergency and abnormal conditions are identified and reacted to in accordance with organisational procedures and practices</p> <p>2.6 Situational awareness is maintained to ensure safety of aircraft, crew, personnel and equipment</p> <p>2.7 Crew resource management principles and processes are implemented in accordance with organisational policies to ensure operational intent</p>
3 Conclude night aided vision operations	<p>3.1 Post-flight analysis and debriefing is conducted in accordance with organisational policies</p> <p>3.2 Post-flight documentation is complete</p> <p>3.3 After use servicing is completed and identified defects are reported</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Human physiological functions and the electromagnetic spectrum under night aided vision conditions
- Night aided vision equipment imaging systems operations
- Night aided vision equipment components and their functions
- Potential and/or common night aided vision equipment faults and defects
- Organisational policies that apply to storage, handling, usage and control of night aided vision equipment, sensors, aids and devices
- Organisational requirements for night aided vision equipment aircraft compatibility
- Human and aeromedical factors under night aided vision conditions
- Focal and ambient vision
- Night aided vision field of view, field of regard and how they relate to visual scanning techniques
- Night aided vision techniques for visually dark adapting
- Potential night aided vision illusions and misperceptions and their effects on spatial orientation
- Self-imposed and physiological fatigue issues that impact night aided vision operations
- Sources, types and effects of illumination levels in night aided vision operations
- Relationship between illuminance and luminance
- Effects of atmospheric conditions on electromagnetic energy and the resolution of night aided vision sensors, equipment and devices
- Meteorological conditions (rain, cloud, fog, haze, snow, smoke) affect on illumination levels and night aided vision equipment, sensor and/or device performance.
- Key visual cues for identifying and interpreting terrain features and obstacles under night aided vision conditions, including shadow and surface
- Cues and techniques that optimise navigation processes under night aided vision conditions
- Meteorological requirements for night aided vision aviation operations
- Internal and external organisational regulatory requirements for the conduct of night aided vision aviation operations
- Minimum crewing requirements for the conduct of night aided vision aviation operations
- Night aided vision operations qualification, currency and recency requirements
- Risk management processes and procedures applicable to night aided vision operations
- Flight planning considerations, terrain and route selection factors applicable to night aided vision operations
- Procedures and techniques to enhance in-flight navigation during night aided vision operations
- Night aided vision operations crew coordination procedures during pre-flight, flight operations

REQUIRED KNOWLEDGE AND SKILLS

and post-flight activities

- Concepts and procedures relating to blind cockpit and cabin checks
- Emergency and abnormal situation procedures applicable to night aided vision specific operations
- Occupational health and safety issues applicable to conducting night aided aviation operations

Required skills:

- Perform flight planning procedures relevant to the conduct of night aided vision aviation operations
- Interpret and calculate luminance/illumination levels for the conduct of night aided vision operations
- Plan own work including predicting consequences and identifying improvements
- Conduct and/or participate in pre-flight, flight and post-flight briefings and debriefings relevant to night aided vision operations
- Perform night aided vision sensor, equipment and/or device pre- and post-flight inspections and adjustments to ensure optimisation for use and/or future operation
- Conduct night aided vision aviation operations in accordance with organisational policies and procedures
- Apply principles of crew resource management relevant to night aided vision operations during flight
- Work collaboratively with others when conducting night aided aviation operations
- Work systematically with required attention to detail without injury to self or others, or damage to aircraft, crew, personnel and/or equipment
- Monitor work activities in terms of planned schedule
- Interpret and follow operational instructions and prioritise work during the conduct of night aided vision operations
- Maintain and/or regain degraded situational awareness whilst conducting night aided vision operations
- Communicate effectively with others when conducting night aided aviation operations
- Perform blind cockpit and/or cabin checks during relevant flight operational checks and procedures
- Apply visual scanning techniques and procedures during night aided vision operations
- Operate and adapt to differences in communication equipment in accordance with organisational procedures
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur conducting night aided aviation operations in accordance with workplace procedures
- Apply risk management processes, procedures and required actions to minimise, control or eliminate hazards that may exist when conducting night aided vision operations
- Implement contingency plans for unanticipated situations that may arise when conducting

REQUIRED KNOWLEDGE AND SKILLS

night aided aviation operations

- Modify activities depending on differing operational contingencies, risk situations and environments

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|---|
| Aircraft may include: | <ul style="list-style-type: none"> • single or multiple engine • fixed and rotary wing aircraft compatible with and authorised to conduct night aided aviation operations |
| Aircraft publications may include: | <ul style="list-style-type: none"> • checklists • flight manuals • organisational policy and procedures manuals • aviation maintenance documentation |
| Pre-flight information may include: | <ul style="list-style-type: none"> • authorised aviation maps, charts and flight supplements • meteorological information • terrain data • risk assessment and management factors |
| Work environment may include: | <ul style="list-style-type: none"> • by night • over land or over sea • Prepared or Unprepared landing sites |
| Night aided environmental and cultural lighting may include: | <ul style="list-style-type: none"> • lunar • solar • celestial • urban terrain lighting • ambient • maritime lighting • other aircraft |
| Night aided systems equipment preparation will include: | <ul style="list-style-type: none"> • aircraft internal/external night aided lighting checks • aural and visual warning system checks • night aided sensors, aids and devices |
| Night aided vision equipment may include: | <ul style="list-style-type: none"> • night vision goggles • night vision devices • heads up displays • forward looking infra red radars • thermal imaging systems • laser range finders |
| Night aided personal equipment serviceability checks may include: | <ul style="list-style-type: none"> • non operation • intermittent operation • poor or degraded image quality • inability to focus • image obscurations • eyepiece or objective lens cannot be focused |

RANGE STATEMENT

Night aided compatible personal equipment may include:	<ul style="list-style-type: none"> • eye-span and eye relief cannot be achieved • night aided equipment mounting systems unserviceable • low battery indicator will not illuminate during check • night aided sensors fail to initialise/self-test • hand-held torches • IR compatible lighting systems • eye protection • flares, strobes, beacons and IR markers • lip and finger lights • personal life-support equipment
Unusual meteorological conditions may include:	<ul style="list-style-type: none"> • dust and rain • salt laden atmosphere • high humidity • cloud • turbulence • unforecast meteorological events • laser threat environments
Abnormal/emergency situations may include:	<ul style="list-style-type: none"> • aircraft emergencies • night aided aircraft and personal equipment failures • inadvertent IMC • degraded or loss of situational awareness • breakdown in crew coordination and communications
Night aided human physiological conditions may include:	<ul style="list-style-type: none"> • circadian dysrhythmia • mental or physical fatigue • visual illusions
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures
Information/documentation may include:	<ul style="list-style-type: none"> • relevant sections of Civil Aviation Safety Regulations • in Defence context, relevant Defence Orders and Instructions • Flight Manual/Pilot's Operating Handbook (POH) • Aeronautical Information Publication (AIP) • charts • operations manuals • approved checklists • workplace procedures and instructions and job specification • induction and training materials

RANGE STATEMENT

Applicable regulations and legislation may include:

- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

AVIW3027A Deliver pyrotechnics and hand held stores

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to deliver pyrotechnics and hand held / air launched stores equipment from a helicopter. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged at Certificate III.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare pyrotechnics/stores for delivery | 1.1 Pyrotechnics/stores are stored in aircraft in accordance with aircraft flight manuals and organisational policy and procedures
1.2 Pyrotechnics/stores are inspected for serviceability in accordance with preparation procedures
1.3 Pyrotechnics/stores are prepared and armed for use in accordance with preparation instructions |
| 2 Deliver pyrotechnics/stores | 2.1 Pyrotechnics/stores are released in accordance with aircraft flight manuals and operational instructions |
| 3 Respond to pyrotechnics/stores emergency | 3.1 Pyrotechnic/stores emergencies are identified
3.2 Emergency procedures are implemented and appropriate response undertaken in accordance with relevant organisational procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Organisational policies and procedures for the storage of pyrotechnics and hand held / air launched stores
- Practices concerning pyrotechnic and hand held / air launched stores delivery
- Serviceability inspection procedures for pyrotechnics and hand held / air launched stores
- Preparation and arming procedures of pyrotechnics and hand held / air launched stores
- Occupational health and safety policies relating to pyrotechnic and hand held / air launched stores delivery
- Relevant emergency procedures and duty of care requirements
- Relevant OH&S responsibilities
- Procedures and protocols for the use of communication systems during an emergency
- Typical problems that may occur when delivering pyrotechnics and hand held / air launched stores and appropriate action and solutions

Required skills:

- Perform serviceability inspection of pyrotechnics and hand held / air launched stores
- Implement arming and preparation procedures for pyrotechnics and hand held / air launched stores
- Interpret and follow flight and operational manuals and safety policies
- Read and interpret instructions and procedures relevant to the delivery of pyrotechnics and hand held / air launched stores
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities when delivering pyrotechnics and hand held / air launched stores
- Identify and use required communication technology
- Work collaboratively with others when delivering pyrotechnics and hand held / air launched stores
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when delivering pyrotechnics and hand held / air launched stores in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when delivering pyrotechnics and hand held / air launched stores
- Apply precautions and required action to minimise, control or eliminate hazards that may exist

REQUIRED KNOWLEDGE AND SKILLS

during the delivery of pyrotechnics and hand held / air launched stores

- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to obtain required flight information and authority, calculate take-off and landing performance, perform required before and after flight actions/inspections, ensure that the aircraft meets maintenance and safety requirements prior to flight, and complete and certify a daily inspection. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures relevant to managing pre- and post-flight actions.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Complete pre- and post-flight administration	1.1 Pre- and post-flight planning and documentation is completed in accordance with regulatory requirements and/or operations manual 1.2 Aircraft take-off and landing performance is calculated in accordance with performance charts 1.3 Aircraft weight and balance is confirmed 1.4 Pre- and post-flight maintenance release (Flight Technical Log) and flight administration is completed in accordance with regulatory requirements and/or operations manual 1.5 Aircraft serviceability is determined by daily inspection, and certification of daily inspection in maintenance release (Flight and Technical Log) is completed in accordance with regulations
2 Perform pre- and post-flight actions/ inspection	2.1 Equipment and documentation as required by regulation is identified and secured in the aircraft pre-flight 2.2 Internal checks are completed in accordance with approved checklist 2.3 External checks are completed in accordance with approved checklist 2.4 Flight equipment and documentation are removed from aircraft post-flight 2.5 Aircraft is secured in accordance with manufacturers specifications and organisational procedures
3 Perform and certify daily inspection	3.1 Daily inspection of aircraft is performed in accordance with maintenance system approved by CASA or ADF authority 3.2 Appropriate actions are undertaken to rectify discrepancies 3.3 Daily inspection is certified in accordance with regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In ADF context, relevant Defence Orders and Instructions
- Pre- and post-flight planning administration procedures including flight authorisations
- Relevant OH&S and environmental procedures and regulations
- Interpretation of meteorological and NOTAM information
- Aircraft maintenance release requirements and procedures for intended flight
- Minimum equipment list for applicable aircraft type
- Checklist use and procedures
- Aircraft entry and exit procedures
- Safe equipment stowage
- Take-off and landing performance charts
- Daily inspection procedures including rectification actions
- The purpose and procedures for accessing and using pre-flight briefing and information systems such as NAIPS
- Relevant NAIPS and other Aeronautical Information Publications
- Flight specific reports including incident reporting

Required skills:

- Access and apply relevant regulations, orders and information to the performance of the required planning, pre- and post-flight administrative functions
- Understand and meet the obligations and restrictions placed on a pilot with regard to daily inspections and certification
- Calculate aircraft weight and balance
- Identify minimum equipment applicable to aircraft type
- Conduct maintenance and flight briefings
- Perform tie-down, covering and securing of aircraft
- Select and use relevant equipment required during the management of pre- and post-flight actions
- Apply air safety practices and regulations
- Comply with flight authorisations
- Calculate take-off and landing performance
- Calculate aircraft performance for all phases of flight

REQUIRED KNOWLEDGE AND SKILLS

- Determine optimum cruise altitude for operations safety and efficiency requirements
- Perform input and downloading of data from flight planning systems if applicable
- Communicate effectively with others when managing pre- and post-flight actions
- Read and interpret instructions, regulations, procedures and other information relevant to managing pre- and post-flight actions
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to pre- and post-flight actions
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing pre- and post-flight actions
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when managing pre- and post-flight actions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when managing pre- and post-flight actions
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during pre- and post-flight actions
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when managing pre- and post-flight actions

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Tasks may be undertaken in:	<ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules
Performance may be demonstrated in:	<ul style="list-style-type: none"> • single engine aircraft • multi engine aircraft
Aircraft may include:	<ul style="list-style-type: none"> • fixed wing • helicopters • other commercial or military aircraft
Limitations may be imposed by:	<ul style="list-style-type: none"> • local noise abatement requirements and curfews • airspace endorsements
Production methods for flight plans may utilise:	<ul style="list-style-type: none"> • manual planning methods, and • Automated Flight Planning Systems
Pre-flight planning may include consideration of:	<ul style="list-style-type: none"> • consumables required for flight, i.e. oil, food, water • availability of consumables en route and/or at destination
Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:	<ul style="list-style-type: none"> • company procedures • enterprise procedures • organisational procedures • established procedures • standard operating procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1 Initialise aircraft sensor systems | 1.1 Equipment is enabled in accordance with manufacturers instructions and organisational policy and procedures
1.2 Equipment functional checks are performed in accordance with manufacturers instructions and organisational policy and procedures
1.3 System parameters are initialised for anticipated meteorological and/or oceanographic conditions |
| 2 Optimise aircraft sensor performance | 2.1 Sensor output is monitored in accordance with organisational policy and procedures
2.2 Real time environmental conditions are monitored
2.3 System parameters are modified to maintain optimal sensor performance
2.4 System faults are identified, diagnosed and appropriate responses undertaken in accordance with organisational policy and procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Organisational policy and procedures in relation to managing aircraft sensors
- Knowledge of the effects of environmental variations on data received from sensors
- Radar theory
- Sonar theory
- Magnetic Anomaly Detection theory
- Sensor characteristics and operation
- Sensor capabilities and limitations
- Communications emission control
- Abnormal/emergency conditions and responses
- Relevant OH&S responsibilities
- Typical problems that may occur when managing aircraft sensor, actions and appropriate solutions

Required skills:

- Interpret and compile sensor data
- Perform optimisation of sensor system settings
- Recognise sensor jamming
- Determine and implement appropriate counter measures
- Give and receive instructions related to managing aircraft sensors
- Maintain situational awareness
- Complete documentation related to managing aircraft sensors
- Interpret and follow aircraft documentation
- Communicate effectively with others when managing aircraft sensors
- Read and interpret instructions and procedures relevant to managing aircraft sensors
- Interpret and follow operational instructions and prioritise work
- Identify and use required communication technology
- Work collaboratively with others when managing aircraft sensors
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when managing aircraft sensors in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when managing

REQUIRED KNOWLEDGE AND SKILLS

aircraft sensors

- Apply precautions and required action to minimise, control or eliminate hazards that may exist when managing aircraft sensors
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with standard operating procedures

AVIW4034A Supervise aircraft refuelling

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to supervise staff refuelling an aircraft. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work involves the application of quality control procedures and regulatory requirements to the conduct of refuelling of aircraft across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable Civil Aviation Safety Authority (CASA) compliance.

Work is performed under limited or minimum supervision and involves the provision of leadership of others either individually or in teams.

This unit of competency is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare for refuelling operations

- 1.1 Fuel quality control checks are conducted in accordance with workplace procedures
- 1.2 Staff personal protective equipment is checked
- 1.3 Refuelling brief is conducted
- 1.4 Refuelling equipment is grounded and bonded prior to task
- 1.5 Inspection of equipment is conducted

2 Supervise refuelling operations

- 2.1 Clearance to refuel aircraft is obtained
- 2.2 Refuelling staff are directed to commence operations
- 2.3 Safety precautions are maintained
- 2.4 Refuelling contingencies are communicated to refuelling team and aircraft crew
- 2.5 Incident or emergency actions are managed in accordance with workplace procedures

3 Manage post-refuelling operations

- 3.1 Refurbishment and stowing of equipment is observed
- 3.2 Recording and reporting of equipment unserviceabilities are completed
- 3.3 Post-refuelling documentation is completed in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders and other regulations pertaining to quality control processes carried out when supervising aircraft refuelling
- Relevant OH&S and environmental procedures and regulations
- Knowledge of quality control principles and processes as they apply to supervising aircraft refuelling operations
- Workplace procedures for conducting various quality control operations related to supervising aircraft refuelling
- Manufacturers instructions for equipment used in quality control processes
- Risks that exist when supervising refuelling of aircraft and related risk control procedures and precautions
- Problems that may occur when supervising refuelling of aircraft and appropriate action that should be taken in each case

Required skills:

- Communicate effectively with others when supervising refuelling of aircraft
- Read and interpret instructions, regulations, procedures and other information relevant to supervising refuelling of aircraft
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to supervising refuelling of aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when supervising refuelling of aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when supervising refuelling of aircraft in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when supervising refuelling of aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when supervising refuelling of aircraft
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or

REQUIRED KNOWLEDGE AND SKILLS

damage to goods or equipment

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when supervising refuelling of aircraft

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
- conducting fuel quality control checks in accordance with workplace procedures
- conducting refuelling briefs
- communicating to refuelling staff, including information on refuelling contingencies
- supervising refuelling operations, including management of incident or emergency actions
- completing post-refuelling documentation, recording and reporting of equipment unserviceabilities

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Refuelling operations may include:

- various aircraft types
- international, domestic and regional airports
- variable weather conditions including day and night
- single or team operations

Workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- local instructions
- standard operating procedures
- manufacturers instructions

Instructions may include:

- interpersonal communications
- written
- radio
- telephone
- other electronic means

Personal protective equipment may include:

- gloves
- safety glasses
- hearing protection
- safety headwear and footwear
- mask or respirator
- high visibility clothing
- approved clothing

Inspection of equipment may include:

- visual inspection of refuelling equipment
- visual inspection of safety equipment
- serviceability of ground support equipment
- serviceability of personal protective equipment
- visual inspection of fuel availability
- radio check
- visual inspection of documentation
- visual inspection of auxiliary equipment

Clearance to refuel may include:

- air traffic control
- aircraft pilot
- aircrew
- airline engineers
- supervisors or managers

RANGE STATEMENT

Refuelling contingencies may include:	<ul style="list-style-type: none"> • ground support staff • technical staff • hot engines, static electricity, sparks and other forms of ignition • contamination of or from materials being handled • fuel vapours • other aircraft or vehicles on tarmac • jet blast or rotor wash • rotating propellers • hazardous or dangerous materials • noise • dust • heat • other additives (e.g. water, methanol, icing inhibitors) • hot refuelling • multiple refuelling tasks
Incident or emergency actions may include:	<ul style="list-style-type: none"> • spills, leakages, ruptures • injury of personnel • aircraft or fuel fire • aircraft accident/incident • aircraft threat • damage to refuelling equipment
Recording and reporting may include:	<ul style="list-style-type: none"> • written • electronic • phone • facsimile • verbal
Post-refuelling documentation may include:	<ul style="list-style-type: none"> • written • electronic
Information/documents may include:	<ul style="list-style-type: none"> • sections of Civil Aviation Safety Regulations and Civil Aviation Orders relevant to refuelling operations • International Air Transport Association (IATA) Guidelines for Aviation Fuel Quality Control, and Operating Procedures for Joint Inter Plane Fuelling Services (JIG Guidelines) • OH&S and environmental protection regulations • workplace procedures and instructions and job specification • airport airside drivers handbook • loading and fuelling operational checklists

RANGE STATEMENT

Applicable regulations and legislation may include:

- emergency procedures
- flight schedules
- manufacturers specifications and instructions for the fueller/dispenser vehicle and auxiliary equipment
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- IATA Guidelines for Aviation Fuel Quality Control, and Operating Procedures for Joint Inter Plane Fuelling Services (JIG Guidelines)
- Australian Dangerous Goods Code (ADG Code)
- relevant OH&S legislation
- environmental protection legislation
- relevant Australian Standards
- industrial relations and workplace compensation legislation

Unit Sector(s)

Competency field

Competency Field

W - Equipment and Systems Operations

AVIW5013B Operate air traffic control equipment and workstations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to work as part of a team and to manage and operate air traffic control equipment, systems and workstations associated with providing air traffic services. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant air traffic control regulatory requirements of the Civil Aviation Safety Authority (CASA).

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under various levels of supervision dependent on workplace context, and in a team environment.

This unit assesses a controller's ability to interact with a workstation Human-machine Interface (HMI) and to operate the functions of the workstation which are critical to providing safe and efficient air traffic services.

This unit of competency is packaged at Diploma level.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Operate communication equipment	1.1 Air-ground communication channels are operated in accordance with standard operating procedure 1.2 Selective call and priority channels are operated in accordance with standard operating procedure 1.3 Communication equipment is operated in degraded mode 1.4 Communication equipment is appropriately configured for tasks 1.5 Communication malfunctions are recognised, reported and rectified when able 1.6 Communication equipment annunciators are included in scan pattern 1.7 Communication equipment is operated within performance limitations 1.8 Communication alarms and warning messages are actioned
2 Operate surveillance equipment	2.1 Air situation displays are appropriately configured for tasks 2.2 Surveillance equipment is operated in degraded mode 2.3 Surveillance tools are effectively used 2.4 Surveillance malfunctions are recognised, reported and rectified when able 2.5 Surveillance equipment is included in scan pattern 2.6 Surveillance equipment is operated within performance limitations 2.7 Surveillance alarms and warning messages are actioned 2.8 Surveillance system data is interpreted for pertinent operational information
3 Use Flight Progress Strips (FPS) and Flight Data Records (FDR)	3.1 Information is interpreted and recorded on FPS and FDR using prescribed format 3.2 FPS and FDR are updated to reflect current air traffic situation 3.3 FPS and FDR are manipulated to reflect current and/or future air traffic situation 3.4 FPS and FDR are archived in accordance with workplace procedure 3.5 FPS and FDR are included in scan pattern and cross-referenced for accuracy
4 Operate ancillary equipment	4.1 Ancillary equipment is matched and configured to tasks 4.2 Ancillary equipment is included in scan pattern 4.3 Ancillary equipment is operated within performance limitations and/or workplace procedure 4.4 Ancillary equipment data is interpreted for pertinent operational

ELEMENT	PERFORMANCE CRITERIA
	information, and processed as required
	4.5 Aids to navigation are monitored for serviceability when able
	4.6 Ancillary equipment malfunctions are recognised, reported and rectified when able
	4.7 Ancillary equipment alarms and warning messages are actioned
5 Where provided, use graphic facilities for route	5.1 Facilities are used to assist in recognising conflict situations and solving separation problems
	5.2 Graphic facilities are used at appropriate levels of efficiency
6 Where provided, use graphic or other facilities for display	6.1 Graphic or other facilities are used to maintain an accurate traffic picture
	6.2 Graphic or other facilities are used at appropriate levels of efficiency
7 Use mandated memory prompts	7.1 Mandated memory prompts are used in accordance with workplace procedures
	7.2 Mandated memory prompts are used at an appropriate level of efficiency

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations
- Relevant OH&S and environmental procedures and regulations
- Principles of effective air traffic control
- Procedures for the operation of equipment and workstations
- Procedures for the use of flight progress strips and/or running sheets, where applicable
- Appropriate responses in the event of facility failures and alarms, including knowledge of degraded modes and types of facility failures (e.g. use of relevant checklists)
- Responsibilities for system, equipment and facilities operation
- Relevant facilities, HMI/workstation and equipment used, their functions and applications
- Relevant aspects of operational communication/navigation facilities (e.g. voice switch control systems, radar, CPDLC, ADS)
- Protocols and procedures surrounding the use of communication equipment
- Underlying system architecture and processes
- Relevant sections of the Air Traffic Services procedures manual and local instructions relevant to facility use
- Safety hazards and risks that exist when operating equipment and workstations and related risk control procedures and precautions
- Problems that may occur when operating equipment and workstations and appropriate action that should be taken in each case
- Degraded modes of operation for communication, surveillance and ancillary systems, including the availability of this equipment during degraded operations
- HMI states and events associated with the operating system
- Communication equipment functions, configurations, data sources (bias) and limitations
- Surveillance equipment functions, configurations, data sources (bias) and limitations
- Ancillary equipment functions, configurations, data sources (bias) and limitations
- Configuration, uses and limitations of flight progress strips and flight data records
- System architecture and redundancy including ultimate fallback
- Alerts, alarms and warning messages
- Indicators of malfunctioning equipment and degraded modes of operation
- Conflict recognition tools and graphic aids
- Surveillance range and footprints through, and adjacent to, the area of jurisdiction
- Communication range and footprints through, and adjacent to, the area of jurisdiction and adjoining frequencies

REQUIRED KNOWLEDGE AND SKILLS

- Occupational health and safety considerations concerning workplace equipment set up and use
- Aeronautical data bases relevant to providing air traffic services including aeronautical information functions
- Workstation layout and ergonomics
- Requirements for checking and testing equipment including frequencies
- Degraded modes handbook and checklists
- Air situation display default setups
- Sectorisation and combining and de-combining sectors
- Availability and use of maps, including system and private maps
- Bypass RADAR control input
- Allocation of SSR codes including sector specific codes
- Flight progress strips and flight data records
- System functions associated with flight information service and search and rescue alerting services

Required skills:

- Communicate effectively with others when operating air traffic control equipment and workstations
- Actively listen when operating air traffic control equipment and workstations
- Read and interpret instructions, regulations, procedures and other information relevant to air traffic control equipment and workstations
- Interpret and follow operational instructions and prioritise work
- Perceive incoming information associated with strategic, tactical, geographic, spatial, system and environment components of a complex system
- Comprehend incoming information and develop the current airspace and flight path model
- Complete documentation related to the use of air traffic control equipment and workstations
- Operate electronic communication equipment to required protocol
- Format, send and receive electronic messages
- Operate equipment to communicate on appropriate frequencies
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when operating air traffic control equipment and workstations in accordance with regulatory requirements and workplace procedures
- Make decisions related to the use of air traffic control equipment and facilities
- Project and develop future airspace and flight path scenarios
- Maintain a strategic traffic management goal for the jurisdiction airspace

REQUIRED KNOWLEDGE AND SKILLS

- Anticipate and prepare for work tasks
- Adhere to procedures through a series of steps followed in a regular definite order or a traditional or established way of doing things when this is required
- Implement contingency plans for unexpected events that may arise when operating air traffic control equipment and workstations
- Judge and form an opinion or evaluate situations by discerning and comparing information
- React to some form of treatment or stressful situation by a considered and measured response in a timely fashion
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating air traffic control equipment and workstations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Demonstrate an attitude to error management that limits unintentional deviation from work practices and maintains accuracy through application of disciplined procedures and practices and a methodical work ethic
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Be receptive to training for the skills, knowledge, or experiences acquired or gained over a career
- Implement OH&S procedures and relevant regulations
- Identify and correctly use air traffic control equipment and workstations
- Be confident but not complacent or reliant on automation and technology, and readily apply human reasoning to airspace and flight path scenarios
- Allocate attention according to demand and constantly switch between: managing the Human-machine Interface or equipment use; managing communications; and managing traffic
- Operate windows-based menus
- Operate input devices
- Configure voice switching and communications equipment and test for correct operation
- Configure ancillary equipment
- Merge communications equipment functions
- Operate communication equipment, bypass and retransmit facilities
- Configure primary and secondary air situation displays
- Action alerts, alarms and serviceability warnings
- Accept system upgrades
- Operate degraded equipment including in ultimate fallback configuration

REQUIRED KNOWLEDGE AND SKILLS

- Use aeronautical data bases
- Use electronic and mechanical memory prompts
- Monitor the serviceability of equipment
- Recognise faults as required to pass information of value to technicians
- Use flight progress strips and flight data records
- Use graphic on-screen tools and select and display maps
- Manipulate data labels and fields
- Use flow management systems, including incorporating runway changes
- Discriminate between and interpret displayed flight information
- Use conflict recognition tools and graphic aids
- Assess and manipulate message queues

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|--|---|
| Operations may be conducted: | <ul style="list-style-type: none"> • by day or night • in variable weather conditions |
| Performance may be demonstrated in: | <ul style="list-style-type: none"> • simulated situations, and/or • an operational air traffic control workplace |
| HMI configuration could be: | <ul style="list-style-type: none"> • subject to standard operating configurations imposed by the operating authority. It is possible that individual setup for a workstation for enhancing personal performance will need to be constrained within the framework of the operating authority's instructions |
| Air traffic control workplace may be a workstation in: | <ul style="list-style-type: none"> • Area Control • Approach Control • Aerodrome Control |
| Operational facilities may include: | <ul style="list-style-type: none"> • display equipment • navigation systems • communications and surveillance equipment • lighting systems • arresting systems for military use |
| Mandated memory prompts may include: | <ul style="list-style-type: none"> • system prompts • timers • designators for aerodrome works, auto-release, runway-in-use • paper or electronic flight progress strip manipulations etc. |
| Aeronautical information may include but is not necessarily limited to: | <ul style="list-style-type: none"> • meteorological forecasts or reports • NOTAM information • aerodrome information |
| Graphic facilities for route may include but are not necessarily limited to: | <ul style="list-style-type: none"> • velocity vectors • projected position indicators • graphic re-routing functions |
| Graphic facilities for display include but are not necessarily limited to: | <ul style="list-style-type: none"> • varying display symbols • use of colour • use of filters • flight progress strip presentations • map presentations |
| Facility failure may be: | <ul style="list-style-type: none"> • total or partial |

RANGE STATEMENT

Alarms may be aural and/or visual and indicate either:

- aircraft emergency conditions, or
- a discrepancy between expected and observed system conditions

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures
- regulatory standards and recommended practices

Information/documents may include:

- training curricula and syllabi
- relevant sections of Civil Aviation Safety Regulations
- relevant CASA Manuals of Standards (MOS)
- air traffic control Local Instructions (LI) and Temporary Local Instructions (TLI)
- Manual of Air Traffic Services (MATS)
- Aeronautical Information Publication (AIP)
- Training Standards Manual (TSM)
- ICAO Document 4444, ATM/501, Procedures for Air Navigation Services, Air Traffic Management
- workplace procedures and instructions
- occupational specification for air traffic controllers
- equipment manufacturers specifications and instructions
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- training and assessment records
- operator s handbook and system manuals
- documented learning and assessment strategies

Applicable regulations and legislation may include:

- International Civil Aviation Organization (ICAO) Standards and Recommended Practices (SARP)
- Civil Aviation Safety Regulations (CASR) and Manuals of Standards (MOS)
- relevant Defence Orders and Instructions
- Airservices Act (Commonwealth) 1995
- OH&S Legislation (state and federal)
- Civil Aviation Act (Commonwealth) 1988 and the Civil Aviation Amendment Act 1995

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to operate as pilot-in-command of an aircraft during visual, instrument and night conditions. This includes operating and managing aircraft systems, sub-systems (equipment) and devices. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA); relevant airspace control requirements and Visual Flight Rules (VFR) / Night Visual Flight Rules (NVFR) / Instrument Flight Rules (IFR); and aircraft control principles, regulations, safety codes, protocols and procedures required to operate and manage aircraft systems.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is packaged at AQF V.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Operate and manage aircraft systems during normal flight	<p>1.1 Aircraft systems, sub-systems (equipment) and devices applicable to the aircraft type are operated in accordance with manufacturer's Pilot Operator's Handbook(POH)/Flight Manual and company operations manual</p> <p>1.2 Aircraft systems, sub-systems (equipment) and devices are monitored using a systematic scan technique</p> <p>1.3 Aircraft systems and flight environment information is analysed to identify actual and potential threats or errors</p> <p>1.4 Automated aircraft systems are utilised to manage cockpit workload</p> <p>1.5 Checklist procedures are completed as appropriate to the aircraft system</p>
2 Manage aircraft systems during abnormal and emergency procedures	<p>2.1 Non-normal or emergency situations are recognised</p> <p>2.2 Aircraft control is maintained</p> <p>2.3 Affected aircraft system is identified and confirmed</p> <p>2.4 From memory, recall items are stated and performed in accordance manufacturer's Pilot Operator's Handbook(POH)/Flight Manual or company operations manual</p> <p>2.5 Appropriate non-normal or emergency procedures are performed in accordance with relevant workplace and emergency procedures and regulatory requirements</p> <p>2.6 Course of action is decided, implemented, evaluated and revised to achieve safest outcomes</p> <p>2.7 Location and operation of emergency systems applicable to aircraft type are demonstrated and explained</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Aircraft systems as applicable to aircraft rating/endorsement requirements may include:
- Fuel system including:
 - use of a schematic diagram of the fuel system to explain layout and normal operating procedures
 - likely faults that may affect the fuel system
 - emergency operating procedures for the fuel system
 - operation of fuel selector panel
 - use of cross-feed if applicable
 - fuel-dumping procedures if applicable
 - full fuel capacity and fuel grade
 - normal, minimum and maximum fuel pressures
- Hydraulic system (if applicable) including:
 - use of a schematic diagram of the hydraulic system to explain layout and normal operating procedures
 - likely faults that may affect the hydraulic system
 - emergency operating procedures for the hydraulic system
 - units or services operated by hydraulics
 - type of hydraulic fluid, operating pressure and capacity of reservoir
- Electrical system including:
 - use of a schematic diagram of the electrical system to explain type(s) of electrical system (AC/DC)
 - likely faults that may affect the electrical system
 - emergency operating procedures for the electrical system
 - voltage and amperage of battery
 - number and output of generators
 - methods of circuit protection
 - location of fuses and circuit breakers
 - precautions to be taken when operating electrical service
 - instruments operated by electrics
- Oil system including:
 - use of a schematic diagram of the oil system to explain functions of the oil system
 - likely faults that may affect the oil system

REQUIRED KNOWLEDGE AND SKILLS

- emergency operating procedures for the oil system
- number of tanks, capacity and oil grade
- oil sources of auxiliary systems such as CSU, propeller feathering if fitted
- normal, minimum and maximum oil pressure and temperature
- operation of oil cooling system
- Autopilot (if applicable) including:
 - principles of operation of the autopilot system
 - likely faults that may affect the autopilot system
 - emergency operating procedures for the autopilot system
- identification of power sources, voltage or pressure
- procedure to determine gyros are operating normally
- procedure to engage autopilot
- normal and emergency procedure to disengage autopilot
- limits of gyro units
- Anti-icing and de-icing systems (if applicable) including:
 - method of de-icing aerofoils, propeller and carburettor
 - heat or power source of de-icing/anti-icing equipment
 - anti-icing and de-icing system limitations
 - operation and control of the anti-icing and de-icing systems
 - likely faults that may affect the anti-icing and de-icing systems
- emergency operating procedures for the anti-icing and de-icing systems
- Heating, ventilation and pressurisation systems (if applicable) including:
 - normal procedures to operate and control system
 - likely faults that may affect the heating, ventilation and pressurisation system
- emergency procedures for operation of system
- precautions to be complied with
- Pitot/static system including:
 - use of a schematic diagram to explain the layout and operation of the pitot/static system
 - heating source of pitot system if applicable
 - operating procedure for pitot/static system
 - methods of detecting pitot/static system problems
 - procedures to rectify static system problems
 - location of pitot and static pressure source
 - location of static drain points if applicable
- Enhanced Ground Proximity Warning System/Terrain Awareness and Warning System (EGPWS/TAWS) (if applicable):

REQUIRED KNOWLEDGE AND SKILLS

- identification and demonstration or explanation of the function of all cockpit EGPWS/TAWS controls
- information the Terrain Awareness Display shows
- warnings given by the fitted EGPWS/TAWS, including what each warning indicates is happening to the aircraft in flight
- Traffic and Collision Avoidance Systems (TCAS) (if applicable):
 - surveillance and collision avoidance functions of TCAS II
 - system limitations, selectivity and inhibits
 - basic components of TCAS II
- identification and demonstration or explanation of the function of cockpit controls
- TCAS II visual displays and symbology
- functions of audio alerts and annunciations
- appropriate crew response to multiple TCAS II events, and parallel runway approach conflicts
- recall of the radiotelephone procedures following a TCAS II alert
- requirements for a written report of a TCAS II alert and to whom it must be submitted
- Pressurisation systems (if applicable):
 - pressurisation failure warning indications fitted to the aircraft type flown
 - function of bleed air with respect to an aircraft pressurisation system
 - procedure for manual control of cabin pressurisation applicable to the aircraft type flown
 - recall of the maximum pressure differential for the aircraft type flown
 - symptoms, indications and warnings that may indicate failure of the pressurisation system
 - automatic depressurisation system operation procedures after landing
 - physiological symptoms of hypoxia
 - physical and psychological hazards that could occur during a rapid decompression
 - cabin altitude above which supplementary oxygen must be used by crew and passengers
- Retractable undercarriage (if applicable):
 - method of preventing retraction of the undercarriage on the ground
 - cockpit indications for undercarriage down and locked
 - cockpit indications for undercarriage retracted
 - emergency procedures to extend and lock the undercarriage down
- Suction system (if applicable):
 - use of a schematic diagram of the suction system to explain the function of the suction system
 - source of suction pressure
 - normal operating pressure
 - instruments that are operated by suction pressure
 - warning system to indicate suction pump failure

REQUIRED KNOWLEDGE AND SKILLS

- Automated systems (if applicable):
- limitations of automated systems
- operating procedures for systems such as: Flight Management System, auto throttle/engine control, Flight Director System, automated aircraft navigation systems, automated engine condition and monitoring system
- workload management procedures for utilising automated systems
- warning systems/indicators to identify automated systems failure
- Aircraft system checklists:
- explanation of the normal system operating procedures of the aircraft systems, subsystems and devices used to operate the specific aircraft type including: use of published scans and checklists, immediate action items, warnings, limitations

Required skills:

- Perform systematic scan technique for monitoring aircraft systems, sub-systems (equipment) and devices
- Operate manual and automated aircraft systems where applicable
- Interpret aircraft system displays (where applicable)
- Undertake fault finding in aircraft systems
- Use automated systems to manage workload
- Communicate effectively with others when operating and managing aircraft systems
- Read and interpret instructions, regulations, procedures and other information relevant to operating and managing aircraft systems
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to operating and managing aircraft systems
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating and managing aircraft systems
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when operating and managing aircraft systems in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when operating and managing aircraft systems
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and managing aircraft systems
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments

REQUIRED KNOWLEDGE AND SKILLS

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when operating and managing aircraft systems

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

RANGE STATEMENT

local terminology used, workplace procedures may include:

- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Performance includes tolerances specified in either of:

- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
- Manual of Standards
- relevant Defence documentation such as:
- Defence Orders and Instructions
- approved curricula and training documentation

AVIW5022A Coordinate the removal of disabled aircraft

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to coordinate the removal of an aircraft which has become disabled on or near the aerodrome movement area. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

This unit applies to aerodromes that operate across a variety of operational contexts within the Australian aviation industry.

The work must be carried out in accordance with applicable operational standards as required by CASA when coordinating the removal of a disabled aircraft.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Diploma level.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Coordinate the removal of a disabled aircraft	<p>1.1 Appropriate clearances (if relevant and necessary) are obtained prior to the removal process</p> <p>1.2 Established removal procedures are followed</p> <p>1.3 Removal activities are coordinated with aircraft owner and relevant regulatory bodies</p> <p>1.4 The need for recovery equipment is determined and its source identified</p> <p>1.5 Escort services on the airside are provided if required</p> <p>1.6 Airport organisations and others likely to be affected by the removal are notified</p> <p>1.7 An appropriate location to which to move the aircraft and a route to that location is established</p>
2 Maintain operational facilities	<p>2.1 A serviceability inspection is carried out to determine which areas can be restored to operative service</p> <p>2.2 Infringement of the Obstacle Limitation Surfaces (OLS) and any changes to declared distances are determined</p> <p>2.3 Visual aids are provided, installed and removed when no longer required</p> <p>2.4 Notice to Airman (NOTAM) action is initiated/cancelled if and when necessary</p> <p>2.5 A serviceability check of the area is carried out</p>
3 Document and record the removal process	<p>3.1 Records of meetings are minuted</p> <p>3.2 Photographs of the removal process are taken</p> <p>3.3 Appropriate log book entries are made</p> <p>3.4 All necessary reports are prepared</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Types and uses of visual aids
- Typical defects that can occur and related action that should be taken
- Steps involved in planning the work activities
- Procedures to be followed in the event of an emergency
- Relevant sections of national and state or territory regulatory requirements
- Declared distances for aircraft operations
- Declared OH&S and environmental procedures and regulations
- Procedures for managing and controlling hazardous situations when carrying out work activities
- Visual inspection procedures
- Standard Operating Procedures (SOPs) for the removal of a disabled aircraft
- Aerodrome serviceability standards
- Types of removal equipment available
- Obstacle Limitation Surfaces applicable to that aerodrome
- Communication equipment checks

Required skills:

- Calculate declared distances that are defined by CASA
- Conduct serviceability inspections of aerodrome and Obstacle Limitation Surfaces
- Communicate effectively with others when coordinating disabled aircraft removal
- Read and interpret instructions, regulations, procedures and other information relevant to disabled aircraft removal
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to removal of disabled aircraft
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when coordinating the removal of disabled aircraft
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when coordinating the removal of disabled aircraft in accordance with regulatory requirements and workplace

REQUIRED KNOWLEDGE AND SKILLS

procedures

- Implement contingency plans for unexpected events that may arise when coordinating the removal of disabled aircraft
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when coordinating the removal of disabled aircraft
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self, others, or damage to goods or equipment
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|--|
| Removal of disabled aircraft may need to occur: | <ul style="list-style-type: none">• by day or night• in any weather conditions |
| Types of aircraft may include: | <ul style="list-style-type: none">• commercial passenger aircraft• freighter aircraft• commercial charter aircraft |
| Situations requiring removal of disabled aircraft may include: | <ul style="list-style-type: none">• a flat tyre• severe impact with the ground• impact with buildings or vehicles• acts or threats of terrorism |
| Procedures for facilitation of disabled aircraft removal may include: | <ul style="list-style-type: none">• notification of aircraft owner• notification of regulatory authorities• coordination of the removal of the disabled aircraft including returning the aerodrome to full operations |
| Relevant authorities for accessing and reporting purposes include: | <ul style="list-style-type: none">• aircraft owner• aerodrome operator or delegated person• NOTAM Office (Airservices Australia)• Civil Aviation Safety Authority (CASA)• Air Traffic Control (ATC)• Australian Transport Safety Bureau (ATSB)• Department of Transport and Regional Services (DOTARS)• State and Federal Police• Australian Defence Forces Command for military bases• aerodrome users |

| Aerodrome surrounds may include: | <ul style="list-style-type: none">• fences and gates• buildings• waterways• drainage system |

RANGE STATEMENT

- areas surrounding navigational aids
- Obstacle Limitation Surfaces
- Obstacle Restriction Areas may include:
 - runway strips
 - clearways
 - taxiway strips
 - runway end safety areas
- Visual aids may include:
 - wind indicator
 - signal circles
 - aerodrome lighting
 - markers and markings
- Signs and notices may include:
 - authorised entry
 - speed restrictions
 - no smoking
 - limited access
 - hazard warnings
 - movement area guidance signs
 - underground electrical reticulation
- Navigational aides may include:
 - Non Directional Beacons (NDBs)
 - VHF Omni-directional Radio Range (VOR)
 - Distance Measuring Equipment (DME)
 - Instrument Landing Systems (ILS)
- Hazardous situations leading to the unserviceability of sealed movement areas may include:
 - changes or loss of runway surface frictional characteristics
 - excessive loose materials
 - potholes or cracks
 - unsatisfactory pavement bearing capacity
 - loss of runway shape
 - loss of visibility of markings
 - stripping
 - flooding
 - runway edge fretting
 - bird or animal activity
 - disabled aircraft, vehicles and equipment and associated debris
 - fuel and oil spills
- Procedures for making movement and obstacle restriction areas safe may involve:
 - partial closure of the movement area
 - marking the unserviceable area by day or night
 - closing the movement area (aerodrome closure)
 - extinguishing lighting in the hazardous section of the movement area
 - contacting the aerodrome users

RANGE STATEMENT

Serviceability markings/advice may include:

- reporting of the above by NOTAM
- signal circle markers
- unserviceability cross markers
- unserviceability cones
- displaced threshold markers
- unserviceability lighting
- glider markers
- dumb bell markers

Suitable means of reporting will include some or all of the following:

- verbal communications
- other written means of communication as is appropriate (e.g. fax)
- NOTAMS

Emergency response procedures may include:

- implementing aerodrome emergency procedures
- reporting to the local police service
- reporting to the Australian Transport Safety Bureau

Hazards in the work areas may include:

- aircraft movements
- aircraft noise
- other vehicles, including heavy moving equipment and plant, in the vicinity of aircraft
- personnel in the vicinity of aircraft
- jet blast
- fumes
- dust

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures (SOPs)

Information/documents may include:

- aerodrome manuals
- workplace operating procedures manual
- Manual of Standards - Aerodromes (part 139)
- En Route Supplement Australia (ERSA)
- airline timetables
- induction and training manuals

Applicable regulations and legislation may include:

- sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to inspecting aerodromes
- relevant requirements, standards and recommended practices of the International Civil Aviation Organisation (ICAO) pertaining to airport reporting
- Manual of Standards - Aerodromes (part 139)

RANGE STATEMENT

- sections of the Transport Safety Investigations Act pertaining to the reporting of transport safety matters

Competency Field W - Equipment and Systems Operations

AVIY3052A Conduct Helicopter Landing Site and Unprepared Helicopter Landing Site operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to conduct Helicopter Landing Site (HLS) and Unprepared Helicopter Landing Site (UHLS) operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged at Certificate III.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare for HLS/UHLS operations

- 1.1 Helicopter cabin and/or mission equipment is configured for HLS/UHLS operations
- 1.2 Helicopter flight performance calculations are completed and/or considered to meet operational requirements
- 1.3 Weather conditions in the operating environment are identified and the effects on the mission are considered and communicated to other crewmembers
- 1.4 A visual or map reconnaissance of the landing sight is conducted to operational standards
- 1.5 In-flight crew brief is conducted and applicable crew resource management and human factor concerns are addressed
- 1.6 Operational requirements are considered and concerns about the completion of the operation are raised to other crewmembers
- 1.7 Operational environments are identified
- 1.8 Safety hazards are identified and reported in accordance with the organisation's safety risk management procedures and regulatory requirements
- 1.9 Appropriate hazard mitigation strategies are determined and implemented in conjunction with other aircrew members in accordance with safety risk management procedures and regulatory requirements

2 Conduct HLS/UHLS operations

- 2.1 Helicopter position in relation to the HLS/UHLS is assessed and the information is communicated to other crewmembers to meet operational standards
- 2.2 Obstacles are identified and their position, in relation to the aircraft, is related to other crewmembers
- 2.3 Situation awareness is maintained throughout the HLS/UHLS operation
- 2.4 Emergency situations are identified and communicated to the crew in sufficient time to prevent an incident

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Helicopter dimensions
- Helicopter capabilities and limitations
- Helicopter power and performance data factors
- HLS/UHLS operational and safety procedures
- Procedures for operating any electronic communications equipment with required protocol
- Communication procedures and terminologies applicable to HLS/UHLS operations
- Relevant OH&S and environmental protection procedures and guidelines
- CASA regulatory and organisational safety risk management policies and procedures

Required skills:

- Identify and assess vertical, horizontal and relative spatial distances in relation to the aircraft fuselage, rotor system, mission and/or operational stores and equipment, with regard to potential obstacles to the safety of flight
- Communicate any adjustments to the aircraft flight profile where necessary to the applicable/responsible flight crew member, in an efficient and effective manner
- Identify hazardous and/or dangerous situations that pose risks to safety of flight and personnel
- React appropriately to avoid hazardous situations and/or dangerous situations that pose risks to safety of flight and personnel
- Maintain situational awareness
- Complete documentation related to conducting HLS and UHLS operations
- Interpret and follow aircraft documentation
- Communicate, collaborate and interact effectively with others when conducting HLS and UHLS operations
- Read and interpret instructions and procedures relevant to conducting HLS and UHLS operations
- Interpret and follow operational instructions and prioritise work
- Identify and use required communication technology
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when conducting HLS and UHLS operations in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when conducting HLS and UHLS operations

REQUIRED KNOWLEDGE AND SKILLS

- Apply risk management principles and initiate required actions to identify, minimise, control or eliminate hazards that may exist when conducting HLS and UHLS operations
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Aircraft may include:	<ul style="list-style-type: none">• single or multiple engine• rotary wing
Aircraft flight performance calculations may include:	<ul style="list-style-type: none">• engine power• fuel• speed• aircraft weight• environmental conditions• aircraft configuration
Work environment may include:	<ul style="list-style-type: none">• by day or by night• over land or over sea• Prepared or Unprepared rotary wing aircraft landing sites• urban, rural, mountainous, desert and wilderness operational environments
Environmental conditions may include:	<ul style="list-style-type: none">• ambient temperature• prevailing wind direction and speed• sea state• airborne or ground effect turbulence• unforecast meteorological conditions
In-flight conditions may include:	<ul style="list-style-type: none">• day• night• sea states• VMC• IMC• aviation relevant meteorological events
Operational requirements may include:	<ul style="list-style-type: none">• internal/external load lift missions• VIP and general passenger transport• EMS/SAR task and mission support• hoisting• formation flight by day/night• fire-fighting operations• media operations• maritime support tasking
Abnormal/emergency situations may include:	<ul style="list-style-type: none">• degraded or loss of situational awareness• ineffective crew resource management• aircraft fuselage or rotor system obstacle strike• bird/bat strike

RANGE STATEMENT

Safety hazards and obstacles may include:

- aircraft system malfunction or failure
- abnormal or emergency situations related to aircraft, crew or mission factors
- loss of situational awareness, internal and external to the aircraft
- personal equipment failure
- loss of internal/external aircraft communications
- degraded/restricted visibility due to meteorological effect
- aircraft system malfunction and/or failure
- rotor blade strike
- fuselage strike
- undetected proximity to ground obstacles
- ambient light (sun/moon position)
- moon luminance
- cultural lighting
- urban environment structures, both man-made and natural edifices
- rural environment elements including man-made structures, terrain and wildlife
- wilderness environment including vegetation, terrain and wildlife
- maritime environment including sea state, vessels and weather
- other aircraft
- personnel within the vicinity of HLS/UHLS operations
- HLS/UHLS area surface conditions

Helicopter position considerations may include:

- altitude
- rate of descent/climb
- rate of closure (speed)
- aircraft lateral drift during hover sequences
- heading/yaw orientation
- rate of turn related to flight obstacles

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- relevant sections of Civil Aviation Safety Regulations
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Aeronautical Information Publication (AIP)

RANGE STATEMENT

Applicable regulations and legislation may include:

- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

AVIY4001B Control aeroplane on the ground

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to control an aeroplane on the ground including starting and stopping an aeroplane engine, fulfilling all required safety requirements, performing pre-taxi functions and manoeuvring the aeroplane on the ground without incident. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures relating to controlling an aeroplane on the ground.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Start and stop engine	<p>1.1 Pre-start and after-start checks are completed in accordance with Flight Manual/POH</p> <p>1.2 Engine is started and shut down in accordance with Flight Manual/POH</p> <p>1.3 Emergencies are managed in accordance with Flight Manual/POH and regulatory requirements</p> <p>1.4 Pre-and after shutdown checks are completed in accordance with Flight Manual/POH</p> <p>1.5 Complies with manufacturers limitations and reports deviations when appropriate</p> <p>1.6 Aeroplane is positioned to ensure safety when starting engine</p>
2 Taxi aeroplane	<p>2.1 ATIS reports and taxi clearance are obtained where applicable</p> <p>2.2 Aeroplane is taxied at a safe speed and in accordance with prevailing aerodrome, traffic, surface and weather conditions</p> <p>2.3 Brake and instrument checks are performed clear of conflicting traffic and other hazards to confirm serviceability</p> <p>2.4 Engine handling and braking on the ground is in accordance with Flight Manual/POH</p> <p>2.5 Airfield markings/lights/signals/indicators are interpreted and complied with</p> <p>2.6 Maintains lookout and right-of-way rules and complies with ATC or marshalling instructions when applicable</p> <p>2.7 Adverse effect of propeller slipstream or jetwash on other aeroplanes, aerodrome facilities and personnel is avoided</p> <p>2.8 Inspection of taxi path is carried out when surface conditions are obscured</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Relevant aeroplane/equipment characteristics including starter system limitations, fuel system including cause and effect of fuel vaporisation, and aeroplane braking and steering systems
- On-ground control procedures including pre-start checks, clearing of propellers, use of filtered air, hot and cold engine start, after-start checks, pre-shutdown checks, actions in the event of brake or tyre failure, aeroplane emergency management, and engine hand-start procedures where applicable
- Aerodrome markings, lighting and marshalling signals
- Relevant sections of the Flight Manual/POH
- Local air traffic control procedures
- Aeroplane type recognition

Required skills:

- Control an aeroplane on the ground in accordance with Flight Manual/POH
- Control and manage emergencies
- Manoeuvre aeroplane on the ground without incident
- Perform various on-ground functions simultaneously as required
- Interpret marshalling signals
- Interpret airfield diagrams
- Identify suitable parking areas
- Comply with regulatory requirements and local air traffic control instructions
- Interpret and communicate operational information
- Select and use relevant equipment including throttle, steering and brakes
- Use instruments to monitor aeroplane performance
- Communicate effectively with others when controlling an aeroplane on the ground
- Read and interpret instructions, regulations, procedures and other information relevant to controlling an aeroplane on the ground
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to controlling an aeroplane on the ground
- Operate electronic communication equipment to required protocol

REQUIRED KNOWLEDGE AND SKILLS

- Work collaboratively with others when controlling aeroplane on the ground
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when controlling an aeroplane on the ground in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when controlling an aeroplane on the ground
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when controlling an aeroplane on the ground
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when controlling an aeroplane on the ground

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|--|
| Tasks may be undertaken in: | <ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules |

RANGE STATEMENT

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to the control of aircraft on the ground including Day Visual Flight Rules (Day VFR)
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- operations manuals
- local air traffic control instructions
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in ADF context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Performance includes tolerances specified in either of:

- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
 - Day VFR Syllabus
 - Manual of Standards
- relevant Defence documentation such as:
 - Defence Orders and Instructions
 - approved curricula and training documentation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Carry out pre-take-off procedures	<p>1.1 Pre-take-off briefing is completed</p> <p>1.2 Approved pre-take-off and line up checklists are completed in accordance with Flight Manual/POH or company operations manual</p> <p>1.3 Aeroplane is lined up in the centre of the runway in take-off direction</p> <p>1.4 Air Traffic Control clearances are obtained where applicable</p>
2 Take off aeroplane	<p>2.1 Take-off power is applied, aeroplane is maintained aligned with centre of runway with wings maintained level and rotated at manufacturers recommended speed to achieve planned climb performance</p> <p>2.2 Aeroplane is configured for nominated climb profile, and tracking on centreline of runway is maintained</p> <p>2.3 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and terrain</p> <p>2.4 Separation with all circuit traffic is maintained</p> <p>2.5 Radiotelephone listening watch is maintained</p> <p>2.6 Local and published noise abatement requirements and curfews are observed</p> <p>2.7 After take-off checks are performed in accordance with approved checklist</p>
3 Perform rejected take-off	<p>3.1 Rejected take-off requirement is identified</p> <p>3.2 Power is reduced smoothly and promptly</p> <p>3.3 Braking devices are activated</p> <p>3.4 Control is maintained to bring the aeroplane to a safe stop</p> <p>3.5 Associated procedures and/or checklists are initiated and completed</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In ADF context, relevant Defence Orders and Instructions
- Calculation of crosswind components
- Relevant OH&S and environmental procedures and regulations
- Principles of aerodynamics
- Purpose and functions of aeroplane systems
- Functions and effects of all aeroplane controls
- All pre-take-off and after take-off checks
- Aeroplane take-off performance
- Air traffic requirements
- Factors affecting take-off distance and initial climb performance
- Procedures for the use of take-off performance charts
- Factors affecting directional control of the aeroplane
- Problems that may occur when taking off an aeroplane and appropriate action that should be taken in each case
- Manufacturers specifications relating to the operation of aeroplane
- Obstacle clearance requirements

Required skills:

- Apply take-off procedures in accordance with regulatory requirements
- Compensate for the secondary effects of controls
- Interpret windsock indications
- Comply with air traffic instructions and regulatory requirements
- Maintain awareness of the circuit traffic situation
- Manage take-off emergencies
- Identify surface conditions, obstructions, other crossing traffic on runways and taxiways, or other hazards that might hinder a safe take-off
- Communicate effectively with others when taking off an aeroplane
- Read and interpret instructions, regulations, procedures and other information relevant to taking off an aeroplane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to taking off an aeroplane

REQUIRED KNOWLEDGE AND SKILLS

- Operate electronic communication equipment to required protocol
- Work collaboratively with others when taking off an aeroplane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when taking off an aeroplane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when taking off an aeroplane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when taking off an aeroplane
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when taking off an aeroplane

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Tasks may be undertaken in:	<ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules
Performance may be demonstrated in:	<ul style="list-style-type: none"> • single engine aeroplane • multi engine aeroplane • variable air traffic conditions • variable flight situations • abnormal situations • classes of airspace as designated by the Civil Aviation Safety Authority
Performance may be demonstrated on an aeroplane with:	<ul style="list-style-type: none"> • fully functioning dual controls • an electronic intercom system • dual control brakes • (if propeller-driven) a constant speed propeller • a cruise speed of at least 120 kts TAS at cruise power
Aeroplane may include:	<ul style="list-style-type: none"> • fixed wing • other commercial or military aircraft
Crew may include:	<ul style="list-style-type: none"> • single pilot • multi crew
Instruments may be:	<ul style="list-style-type: none"> • fitted flight instruments • head up displays
Limitations may be imposed by:	<ul style="list-style-type: none"> • local noise abatement requirements and curfews
Classes of airspace may be:	<ul style="list-style-type: none"> • as designated by the regulator • restricted and danger areas • military control zones • Air Defence Identification Zones
Runways may include:	<ul style="list-style-type: none"> • sealed • gravel • grass
Take-off must include:	<ul style="list-style-type: none"> • normal • crosswind
Pre-take-off briefings may include:	<ul style="list-style-type: none"> • departure procedures • actions in the event of non-normal or emergency situations
Air Traffic Control clearances may include:	<ul style="list-style-type: none"> • line-up • take-off

RANGE STATEMENT

Competency field

Competency Field Y - Aircraft Operation and Traffic Management

AVIY4003B Control aeroplane in normal flight

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to control an aeroplane in normal flight, including climbing an aeroplane, maintaining straight and level flight, descending an aeroplane, turning an aeroplane, controlling an aeroplane at slow speed, and performing circuits and approaches. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures relevant when controlling an aeroplane in normal flight.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged a Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Climb aeroplane	<p>1.1 Adjustments are made to attitude and power to achieve an increase of altitude at normal, maximum rate (V_y), maximum angle (V_x) and cruise conditions of flight during straight and turning manoeuvres</p> <p>1.2 Aeroplane is maintained in balanced flight and trimmed</p> <p>1.3 Aeroplane is levelled off from climb at nominated altitude using standard aeroplane procedures</p> <p>1.4 Flightpath clearance is ensured</p> <p>1.5 Climb checks are completed</p> <p>1.6 Air traffic control altitude restrictions are observed</p>
2 Maintain straight and level flight	<p>2.1 Power, attitude and configuration are set to achieve straight and level flight</p> <p>2.2 Aeroplane is maintained in balanced flight and trimmed</p> <p>2.3 Altitude and heading are maintained within tolerances</p> <p>2.4 Flightpath clearance is ensured</p>
3 Descend aeroplane	<p>3.1 Power, attitude and configuration are set to achieve descent during glide, power assisted flight and approach profiles</p> <p>3.2 Aeroplane is maintained in balanced flight and trimmed</p> <p>3.3 Aeroplane is levelled from a descent at a nominated altitude</p> <p>3.4 Flightpath clearance is ensured</p> <p>3.5 Air traffic control altitude restrictions are observed</p> <p>3.6 Aeroplane does not exceed operating limits during descent</p> <p>3.7 Effects of undercarriage and flaps are managed</p> <p>3.8 Descent checks are completed</p>
4 Turn aeroplane	<p>4.1 'Airspace cleared' procedure is carried out</p> <p>4.2 Heading is altered in balanced flight during level, climbing, descending and gliding manoeuvres and turns are performed at varying rates to achieve specified tracks</p> <p>4.3 Turn on to nominated heading or geographical feature is achieved</p> <p>4.4 Aeroplane does not exceed operating limits during turns</p>
5 Control aeroplane at slow speed	<p>5.1 Pre-manoeuve checks are completed in accordance with operating procedures</p> <p>5.2 Aeroplane is flown at minimum clean approach speed and at minimum landing configuration approach speed as specified in Flight Manual/POH in balanced flight</p> <p>5.3 Height awareness is maintained during slow speed flight</p> <p>5.4 Recovery to cruise speed is achieved whilst maintaining height</p>

ELEMENT	PERFORMANCE CRITERIA
6 Perform circuits and approaches	<p>6.1 Traffic patterns are conducted in accordance with AIP procedures appropriate to the aeroplane type with allowance for wind velocity on all legs of the circuit</p> <p>6.2 All checklists are completed and radiotelephone procedures followed</p> <p>6.3 The approach path is appropriately intercepted and maintained in a manner applicable to the aeroplane type, whilst remaining clear of other traffic</p> <p>6.4 Traffic conflict or adverse flight conditions are recognised when they arise and a go-around is performed from any position in the traffic pattern</p> <p>6.5 Right of way rules are applied and complied with</p> <p>6.6 Radio listening watch is maintained in accordance with established procedures</p> <p>6.7 Aeroplane is configured for landing</p>
7 Comply with airspace requirements	<p>7.1 While aeroplane is maintained within a specified area, compliance is maintained with air traffic requirements and controlled or restricted airspace conditions or limitations</p> <p>7.2 Appropriate reactions are made to factors which may affect the safe progress of the flight</p> <p>7.3 Awareness of aeroplane position is maintained using charts and geographical features</p> <p>7.4 Radio listening watch is maintained in accordance with established procedures</p> <p>7.5 Weather conditions are monitored and an appropriate action is taken</p> <p>7.6 Local and published noise abatement requirements and curfews are observed</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Regulations and Orders
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Principles of aerodynamics
- Functions and effects of all aeroplane controls
- Procedures for setting power in normally aspirated, turbocharged or supercharged engines as applicable
- Theory and application of best rate and angle of climb
- Use of instruments to monitor aeroplane performance
- Relationship of attitude and power to trim
- Use of trim controls
- Use of autopilot/flight director functions where applicable
- Operation of stall warning devices fitted to aeroplane
- Effects of flap
- Use of flap
- The effects of excessive cooling on engine performance
- Effects of carburettor or intake icing
- The effects and use of carburettor heat or de-icing systems
- The requirements and procedures for maximum rate descent
- Hazards during maximum rate descent
- 'Airspace cleared' procedure to be carried out before all turns
- The effect of turning and acceleration on magnetic compass accuracy
- The tendency to under bank in descending turn and over bank in a climbing turn
- Cause of and compensation for aileron drag
- The effect of angle of bank and load factor on stall speeds
- Circuit patterns and procedures
- Go-around procedures from base leg and final approach
- Pre-landing checks
- After take-off checks
- The dangers of turbulence and wake turbulence when flying at low speed
- The effect of turning and acceleration on magnetic compass accuracy
- Day VFR criteria

REQUIRED KNOWLEDGE AND SKILLS

Required skills:

- Apply the techniques of straight and level, climbing and descending flight to achieve a consistent traffic pattern and approach to landing
- Compensate for the secondary effects of controls
- Perform various functions simultaneously as required
- Maintain separation between aircraft
- Remain within a designated area whilst complying with airspace and air traffic requirements
- Use instruments to monitor aeroplane performance
- Maintain compliance with regulatory requirements
- Communicate effectively with others when controlling an aeroplane in normal flight including use of radio
- Read and interpret instructions, regulations, procedures and other information relevant to controlling an aeroplane in normal flight
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to controlling an aeroplane in normal flight
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when controlling an aeroplane in normal flight
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when controlling an aeroplane in normal flight in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when controlling an aeroplane in normal flight
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when controlling an aeroplane in normal flight
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when controlling an aeroplane in normal flight

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

RANGE STATEMENT

Circuit height may include:

- final
- standard
- low-level

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Procedures maintaining compliance with airspace requirements are:

- geographical limits of the flight area is demonstrated on a chart
- prominent geographical features are identified using a chart
- the limits of the flight area are identified on the ground
- the position of controlled airspace is determined using a chart and geographical features
- restricted areas are identified using a chart and geographical features
- departure from the circuit area and transition to the flight area is completed without incident
- departure from the flight area and transition to the circuit area is completed without incident

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders including Day Visual Flight Rules (Day VFR)
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to land an aeroplane, including controlling the rate of descent, aligning the plane with runway centreline, maintaining directional control, minimising ballooning and bouncing, and stopping the aeroplane within the available runway length. It also includes completion of after-landing checks and the performance of a mishandled landing/go-around when required. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures relevant to landing an aeroplane.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Land aeroplane	<ul style="list-style-type: none">1.1 Aeroplane is landed at a controlled rate of descent with alignment above the runway centreline, within a specified area, without drift, and with directional control maintained1.2 Aeroplane is stopped within the available runway length1.3 Ballooning and bouncing are minimised and controlled in accordance with established aviation practice1.4 After-landing checks are performed in accordance with approved checklist1.5 Separation with conflicting air and ground traffic is maintained1.6 Runway is vacated when practicable1.7 Landing clearance is obtained at applicable airfields1.8 Wake turbulence is avoided1.9 Weather conditions are monitored
2 Manage mishandled landing	<ul style="list-style-type: none">2.1 Decision to perform go-around is made when safe landing cannot be achieved2.2 Power and configuration are selected to safely control aeroplane2.3 Aeroplane is manoeuvred clear of the ground and after take-off procedures are conducted2.4 Allowance for wind velocity is made during go-around2.5 Wake turbulence is avoided

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Principles of aerodynamics
- Circuit and landing procedures
- All required checklist items
- The causes of loss of directional control during landing
- The aerodynamic forces involved during the flare
- The effect of wind on landing performance
- The cross wind limits for the aeroplane type flown
- The techniques used to land an aeroplane in a cross wind
- How to calculate a cross wind component
- The causes of aquaplaning and procedures to avoid aquaplaning
- Aeroplane performance calculation
- Air traffic procedures
- Windssock and other indicators that are used to determine wind velocity
- Wake turbulence considerations
- Steps for landing an aeroplane in normal headwind and crosswind
- Touch&Go procedures

Required skills:

- Exercise sound judgement sufficient to perform landing procedures
- Compensate for the secondary effect of controls
- Recognise and respond to conditions leading to a go-around
- Carry out correct procedures in the event of a go-around
- Calculate landing performance
- Select and use relevant equipment, including trim controls, flaps, carburettor heat and braking devices
- Use of instruments to monitor aeroplane performance
- Maintain compliance with regulatory requirements
- Communicate effectively with others when landing an aeroplane including use of radio

REQUIRED KNOWLEDGE AND SKILLS

- Read and interpret instructions, regulations, procedures and other information relevant to landing an aeroplane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to landing an aeroplane
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when landing an aeroplane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when landing an aeroplane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when landing an aeroplane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when landing an aeroplane
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when landing an aeroplane

Evidence Guide

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Turn aeroplane steeply	1.1 Flightpath is cleared before and during turn 1.2 Level turn of nominated bank angle is achieved without altitude change to nominated heading 1.3 Descending turn of nominated bank angle is achieved to a nominated heading 1.4 Awareness of higher stall speed in turns is demonstrated 1.5 Aeroplane operating limits are not exceeded
2 Sideslip aeroplane	2.1 Yaw is induced to achieve increased rate of descent while maintaining track and airspeed 2.2 Recovery from sideslip is achieved and aeroplane is returned to balanced flight 2.3 Flightpath is cleared before and during manoeuvre 2.4 Glide speed is maintained
3 Execute short take-off	3.1 Take-off performance is calculated in accordance with performance chart 3.2 Pre-take-off, line-up and after take-off checks are performed in accordance with approved checklist and regulatory requirements 3.3 Aeroplane is lined up to enable use of maximum runway length 3.4 Short take-off technique is applied in accordance with Flight Manual/POH requirements 3.5 Separation with other traffic is maintained 3.6 Appropriate allowance is made for surface and wind conditions
4 Execute short landing	4.1 Landing performance is calculated in accordance with performance chart 4.2 Aeroplane is landed at nominated touchdown point using techniques and procedures in accordance with Flight Manual/POH requirements 4.3 Separation with other traffic is maintained 4.4 Appropriate allowance is made for surface and wind conditions 4.5 After landing checks are performed in accordance with approved checklist and regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Regulations and Orders
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Principles of aerodynamics
- Functions and effects of all aeroplane controls
- Procedures for turning an aeroplane steeply
- Procedures for sideslipping an aeroplane
- Procedures for short take-offs and landings
- The increased stalling speed in a steep turn
- The increased induced drag during a steep turn
- The effects of a sideslip on aeroplane performance
- The effects of sideslipping on aeroplane on fuel, pitot and flap systems
- Take-off and landing performance chart calculations
- Ground hazards associated with minimum ground roll operations
- The effects of g forces
- The effects of maximum rate and minimum radius turns
- Application of pre-maneuvre checks in accordance with regulatory requirements and manufacturers procedures
- Procedures and techniques for turning of an aeroplane steeply
- Procedures and techniques for sideslipping of an aeroplane
- Procedures and techniques for short take-offs and landings
- Windsock and other indicators that are used to determine wind velocity
- Local and published noise abatement requirements and curfews

Required skills:

- Recognise flight situations which may require advanced manoeuvres and procedures, and apply the necessary techniques
- Compensate for the secondary effects of controls
- Conduct a steep turn
- Sideslip an aeroplane
- Complete short take-offs and landings
- Monitoring functions of fuel systems

REQUIRED KNOWLEDGE AND SKILLS

- Maintain compliance with regulatory requirements
- Select and use relevant equipment during the execution of advanced aeroplane manoeuvres and procedures
- Use instruments to monitor aeroplane performance
- Communicate effectively with others when executing advanced aeroplane manoeuvres and procedures
- Read and interpret instructions, regulations, procedures and other information relevant to the execution of advanced aeroplane manoeuvres and procedures
- Interpret and follow operational instructions and prioritise workload
- Complete documentation related to advanced aeroplane manoeuvres and procedures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when executing advanced aeroplane manoeuvres and procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when executing advanced aeroplane manoeuvres and procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when executing advanced aeroplane manoeuvres and procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during advanced aeroplane manoeuvres and procedures
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Pre-manoevre checks are performed in accordance with regulatory requirements and manufacturers procedures
- Identify and correctly use equipment required to conduct advanced aeroplane manoeuvres and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|--|
| Tasks may be undertaken in: | <ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules |
| Performance may be demonstrated in: | <ul style="list-style-type: none"> • single engine aeroplane • multi engine aeroplane • variable air traffic conditions • variable flight situations • abnormal situations • classes of airspace as designated by the Civil Aviation Safety Authority |
| Performance may be demonstrated on an aeroplane with: | <ul style="list-style-type: none"> • fully functioning dual controls • an electronic intercom system • dual control brakes • (if propeller-driven) a constant speed propeller • a cruise speed of at least 120 kts TAS at cruise power • a suitable means of simulating instrument flight conditions |

RANGE STATEMENT

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders including Day Visual Flight Rules (Day VFR)
- in ADF context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in ADF context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Performance includes tolerances specified in either of:

- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
 - Day VFR Syllabus
 - Manual of Standards
- relevant Defence documentation such as:
 - Defence Orders and Instructions
- approved curricula and training documentation

Competency field

Competency Field Y - Aircraft Operation and Traffic Management

AVIY4006B Manage abnormal aeroplane flight situations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to accurately assess an abnormal situation and perform immediate actions, configure the aeroplane, select an emergency landing area and land with no injury to personnel or damage to the aeroplane or property. Abnormal situations may include engine failure at take-off or during flight; a stall; an incipient or full spin; a forced landing; or other abnormal operational situations involving equipment, instruments, control, airframe, fire or other onboard emergencies. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures relevant to managing abnormal aeroplane flight situations.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Note:

Where an abnormal situation might potentially cause damage to the aeroplane and/or be harmful to personnel, evidence for assessment purposes should be obtained from other than observation of performance in an actual abnormal operational situation (e.g. through using an appropriate simulator and/or structured questioning, or termination of a simulated forced landing at a point where the assessment of an outcome can be made).

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Manage engine failure after take-off	1.1 (In simulated conditions) Control of aeroplane is maintained 1.2 Immediate actions are performed in accordance with Pilot's Operating Handbook (POH) 1.3 A landing area within gliding distance is selected, and emergency procedures are performed in accordance with Flight Manual/POH 1.4 Flight profile is flown from which a controlled landing could be achieved 1.5 ATS or other agencies capable of providing assistance are advised of situation and intentions
2 Perform forced landing following engine failure	2.1 (In simulated conditions) Control of aeroplane is maintained 2.2 Immediate actions are performed in accordance with Pilot's Operating Handbook (POH) 2.3 A landing area within gliding distance is selected and aeroplane is manoeuvred to nominated landing area 2.4 Consideration is given to restarting the engine when appropriate 2.5 Flight profile is flown from which a controlled landing could be achieved 2.6 ATS or other agencies capable of providing assistance are advised of situation and intentions
3 Recognise and recover from stall	3.1 Stall signs and symptoms are recognised 3.2 Aeroplane attitude and power settings are adjusted to resume normal balanced flight on advent of stall in accordance with established aviation practice 3.3 Height loss is consistent with aeroplane type
4 Recognise and recover from an incipient spin	4.1 Incipient spin signs and symptoms are recognised 4.2 Recovery at incipient spin stage (stall with wing drop) is performed and controlled flight is resumed in accordance with established aviation practice 4.3 Recovery at incipient spin stage during a turn is performed and controlled flight is resumed
5 Conduct precautionary search and landing	5.1 Intentions are communicated to other traffic or agencies when appropriate 5.2 Aeroplane is configured for inspection flight profile 5.3 Landing area is selected and inspected for approach, landing distance, surface, and obstacle clearance to ensure aeroplane could be landed safely
6 Manage on-board abnormal and	6.1 (In simulated conditions) Control of aeroplane is maintained 6.2 Abnormal and emergency situations are identified, and managed

ELEMENT

emergency situations

PERFORMANCE CRITERIA

in accordance with relevant emergency procedures and regulatory requirements

6.3 Appropriate emergency procedures are followed in accordance with Flight Manual/POH and published procedures while maintaining control of the aeroplane

6.4 Requirement for emergency evacuation of aeroplane is identified

6.5 Emergency evacuation of aeroplane is executed when appropriate

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Regulations and Orders pertaining to abnormal flight situations
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Principles of aerodynamics
- Functions and effects of all aeroplane controls
- Controllability checks and external inspection procedures
- Engine failure emergency procedures
- Explain the effects of a partial engine failure on aeroplane performance with respect to straight and level flight and turning while maintaining level flight
- Describe the hazards associated with turning an aeroplane at slow speed using large angles of bank while maintaining level flight following a partial engine failure after take-off
- Explain what factors should be considered when deciding whether to land immediately or proceed to a more suitable landing area after a partial engine failure
- Practical action plans for use in the event of an engine failure after take-off
- A plan of action to be used in the event of an engine failure in flight, other than after take-off
- Factors affecting a stall
- Symptoms of the approach to the stall and the stall
- Causes of stalling
- Recovery techniques
- The potential dangers of unbalanced flight at slow speed
- Actions required to recover from an incipient spin (wing drop at point of stall)
- Action required to recover from a stall during a turn
- Spin entry and recovery techniques
- The difference between a spin and spiral dive
- Symmetrical and rolling g limitations
- Procedures to be followed to recover from a stall
- Procedures to be followed to recover from an incipient spin
- Height loss whilst gliding including minimum height to achieve safe turns towards selected landing area
- Action planning processes
- All applicable checklist items
- Emergency radio procedures

REQUIRED KNOWLEDGE AND SKILLS

- Passenger briefing procedures for abnormal and emergency situations
- Pre-abandonment/emergency evacuation checks
- Survival techniques following an emergency evacuation
- Operation of safety/survival/life support equipment applicable to aeroplane type
- Actions to be conducted following a forced landing
- Poor visibility configuration
- Hazards associated with flying operations at low level
- Ditching procedures when specified in the Flight Manual, Pilot's Operating Handbook (POH) or company operations manual

Required skills:

- Operate the aeroplane within its limitations, achieving optimum performance
- Compensate for the secondary effects of controls
- Demonstrate awareness of appropriate forced landing areas in the aerodrome environs
- Identify symptoms of incipient and developed stalls
- Recognise situations which may require a precautionary landing
- Perform various functions simultaneously as required
- Ensure compliance with relevant emergency procedures and regulatory requirements
- Select and use relevant equipment in abnormal aeroplane flight situations
- Use instruments to monitor aeroplane performance
- Communicate effectively with others when managing abnormal aeroplane flight situations including radio use
- Read and interpret instructions, regulations, procedures and other information relevant to managing abnormal aeroplane flight situations
- Interpret and follow operational instructions and prioritise workload
- Complete documentation related to abnormal aeroplane flight situations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing abnormal aeroplane flight situations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when managing abnormal aeroplane flight situations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when managing abnormal aeroplane flight situations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during abnormal aeroplane flight situations

REQUIRED KNOWLEDGE AND SKILLS

- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to manage abnormal aeroplane flight situations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to manage aircraft fuel, including determining aircraft fuel requirements and performing the necessary calculations, refuelling the aircraft and ensuring the fuel system is configured and operated for maximum safety and efficiency in the prevailing flight conditions. It also includes calculating requirements, configuring the fuel system and making adjustments to achieve best range and best endurance within prescribed safety parameters. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures relevant to managing aircraft fuel.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan fuel requirements	<p>1.1 Total en route and reserve fuel requirement is determined in accordance with regulatory requirements</p> <p>1.2 Allowance is made for possible abnormal or emergency situation</p>
2 Manage fuel system	<p>2.1 Fuel system is operated in accordance with Flight Manual/Pilot's Operating Handbook (POH)</p> <p>2.2 Fuel contents and quality are confirmed before flight</p> <p>2.3 Fuel status is monitored throughout flight and revised as circumstances change</p> <p>2.4 Aircraft is configured to achieve desired profile, best range or endurance</p> <p>2.5 OH&S procedures are followed at all times when carrying out fuel management procedures</p> <p>2.6 Potential hazards are anticipated and precautions applied</p>
3 Refuel aircraft	<p>3.1 Aircraft is refuelled correctly in accordance with Flight Manual/POH, OH&S, regulatory requirements and workplace procedures</p> <p>3.2 Appropriate precautions are taken to ensure the safety of personnel and property during refuelling operations</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Principles of aircraft fuel systems
- The fuel consumption of the aircraft at varying power settings
- Factors affecting fuel consumption
- Calculation of conversion between imperial, United States and metric measures
- Mixture leaning technique, if applicable
- The fuel reserve requirement for aircraft
- Regulations and procedures for refuelling aircraft
- Methods of identifying applicable grade of fuel for aircraft type
- The dangers of using the incorrect grade of fuel
- The operation of the aircraft fuel system
- Procedures for the calculation of Equi Time Point (ETP) and Point of No Return (PNR)
- Aerodynamic, engine and airframe requirements for aircraft to achieve best range and endurance
- Hazards that exist when refuelling aircraft and related hazard control procedures and precautions
- Problems that may occur when managing aircraft fuel and appropriate action that should be taken in each case

Required skills:

- Plan aircraft fuel requirements
- Refuel an aircraft
- Manage the operation of an aircraft fuel system
- Calculate fuel allowances, consumption and endurance
- Recognise deteriorating situations impacting on fuel requirements
- Monitor fuel usage to achieve desired profile, best range or endurance following configuration changes
- Implement safety precautions during aircraft refuelling
- Maintain compliance with regulatory requirements
- Maintain workplace records relevant to aircraft fuel management

REQUIRED KNOWLEDGE AND SKILLS

- Read and interpret instructions, regulations, procedures and other information relevant to managing aircraft fuel
- Calculate Equi Time Point (ETP) and Point of No Return (PNR)
- Identify applicable grade of fuel for aircraft type
- Perform fuel quality control checks
- Apply air safety practices and regulations
- Communicate effectively with others when managing aircraft fuel
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to managing aircraft fuel
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing aircraft fuel
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when managing aircraft fuel in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when managing aircraft fuel
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when managing aircraft fuel
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when managing aircraft fuel

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to perform all normal flight manoeuvres solely using the full instrument panel, including maintenance of straight and level flight, climbing and descending aircraft, performing a rate one turn, recovering from unusual attitudes, and re-establishing VFR conditions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or Defence; relevant airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures relevant to control of an aircraft solely by reference to the full instrument panel as part of commercial aircraft activities.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Perform manoeuvres using the full instrument panel	<p>1.1 Straight and level flight is maintained solely by reference to the full instrument panel</p> <p>1.2 Aircraft is climbed and descended solely by reference to the full instrument panel</p> <p>1.3 A rate one turn is performed onto a nominated heading solely by reference to the full instrument panel</p> <p>1.4 Recovery from unusual attitudes is executed solely by reference to the full instrument panel</p> <p>1.5 Adverse physiological sensations are accepted but ignored in accordance with established aviation practice</p> <p>1.6 Corrective control movements are smooth</p> <p>1.7 Instrument power sources are checked for serviceability and monitored in flight</p> <p>1.8 Heading instruments are synchronised before take-off and regularly throughout the flight</p>
2 Re-establish VFR conditions using the full instrument panel	<p>2.1 Controlled flight is maintained solely by reference to the full instrument panel</p> <p>2.2 Plan is developed that ensures re-establishment of visual flight</p> <p>2.3 Safe altitude is maintained</p> <p>2.4 Assistance is requested from ATS and/or emergency call to maintain safe operations</p> <p>2.5 VFR conditions are re-established in accordance with regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Principles of aerodynamics
- Functions and effects of all aircraft controls
- The function and limitations of flight instruments
- Pitot, airframe and carburettor icing and prevention/removal procedures
- Instrument failure warning flags and indications
- The physiological factors which may affect pilots during instrument flight
- The attitude and power requirements for respective conditions of flight
- Meteorological theory
- Full panel instrument scan technique
- Hazards that exist when controlling an aircraft by reference to the full instrument panel and related hazard control procedures and precautions
- Problems that may occur when controlling an aircraft by reference to the full instrument panel and action that should be taken in each case

Required skills:

- Perform manoeuvres and procedures solely by use of the full instrument panel
- Use instrument scan techniques applicable to the condition of flight
- Perform pitot/static and flight instrument system serviceability and functional checks
- Set the attitude indicator pitch datum for straight and level attitude
- Anticipate instruments lag in performance
- Compensate for the secondary effects of controls
- Perform trimming and balancing of aircraft
- Compensate for turning and acceleration errors
- Maintain orientation under simulated instrument flight conditions
- Control the aircraft by reference to the artificial horizon and gyro compass
- Confirm attitudes using performance instruments
- Interpret meteorological and NOTAM information
- Comply with regulatory requirements
- Communicate effectively with others when controlling an aircraft solely by reference to full

REQUIRED KNOWLEDGE AND SKILLS

instrument panel

- Read and interpret instructions, regulations, procedures and other information relevant to controlling an aircraft solely by reference to full instrument panel
- Interpret and follow operational instructions and prioritise workload
- Complete documentation related to controlling an aircraft solely by reference to full instrument panel
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when controlling an aircraft solely by reference to full instrument panel
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when controlling an aircraft solely by reference to full instrument panel in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when controlling an aircraft solely by reference to full instrument panel
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when controlling an aircraft solely by reference to full instrument panel
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when controlling an aircraft solely by reference to full instrument panel

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|--|--|
| Tasks may be undertaken in: | <ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules • VMC with simulated IMC |
| Performance may be demonstrated in: | <ul style="list-style-type: none"> • single engine aircraft • multi engine aircraft • synthetic training device approved by the appropriate authority • variable air traffic conditions • variable flight situations • abnormal situations • classes of airspace as designated by the Civil Aviation Safety Authority |
| Performance may be demonstrated on an aircraft with: | <ul style="list-style-type: none"> • fully functioning dual controls • an electronic intercom system • dual control brakes • (if propeller-driven) a constant speed propeller • a cruise speed of at least 120 kts TAS at cruise power • a suitable means of simulating instrument flight conditions |
| Aircraft may include: | <ul style="list-style-type: none"> • fixed wing • helicopter • other commercial or military aircraft |
| Crew may include: | <ul style="list-style-type: none"> • single pilot • multi crew |
| Instruments may be: | <ul style="list-style-type: none"> • fitted flight instruments suitable for instrument flight • head up display suitable for instrument flight |
| Limitations may be imposed by: | <ul style="list-style-type: none"> • local noise abatement requirements and curfews |
| Classes of airspace may be: | <ul style="list-style-type: none"> • as designated by the regulator • restricted and danger areas • military control zones • Air Defence Identification Zones |
| Unusual attitudes may include: | <ul style="list-style-type: none"> • nose high and low • varying angles of bank and power settings • unbalanced flight |
| Adverse physiological sensations may include: | <ul style="list-style-type: none"> • leans • disorientation |

RANGE STATEMENT

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- airsickness
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders including Day Visual Flight Rules (Day VFR)
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Performance includes tolerances specified in either of:

- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
- Day VFR Syllabus
- Manual of Standards
- relevant Defence documentation such as:
- Defence Orders and Instructions
- approved curricula and training documentation

Unit Sector(s)

Competency field

Competency Field Y - Aircraft Operation and Traffic Management

AVIY4009B Control aircraft solely by reference to limited instrument panel

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to perform all normal flight manoeuvres using the limited instrument panel, including maintenance of straight and level flight, climbing and descending aircraft, performing a rate one turn, recovering from unusual attitudes, and re-establishing VFR conditions. Limited instrumentation means without the availability of an artificial horizon, attitude indicator or gyro compass. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures relevant to controlling an aircraft by limited instrument panel.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Perform manoeuvres using limited instrument panel	<p>1.1 Straight and level flight is maintained solely by reference to the limited instrument panel</p> <p>1.2 Aircraft is climbed and descended solely by reference to the limited instrument panel</p> <p>1.3 A rate one turn is performed onto a nominated heading solely by reference to the limited instrument panel</p> <p>1.4 Recovery from unusual attitudes is executed solely by reference to the limited instrument panel</p> <p>1.5 Adverse physiological sensations are recognised and ignored where appropriate in accordance with established aviation practice</p> <p>1.6 Corrective control movements are smooth</p> <p>1.7 Time is allowed for performance instruments to stabilise</p>
2 Re-establish VFR conditions using the limited instrument panel	<p>2.1 Controlled flight is maintain solely by reference to the limited instrument panel</p> <p>2.2 Plan is developed that ensures re-establishment of visual flight</p> <p>2.3 Safe altitude is maintained</p> <p>2.4 Assistance is requested from ATS and/or emergency call to maintain safe operations</p> <p>2.5 VFR conditions are re-established in accordance with regulatory requirements</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental procedures and regulations
- Principles of aerodynamics
- Functions and effects of all aircraft controls
- The need for flying using the limited instrument panel
- The function and limitations of limited panel flight instruments
- The interpretation of the limited panel instrument indications
- The physiological factors which may affect pilots during instrument flight
- Limited panel instrument scan techniques
- Meteorological theory
- Hazards that exist when controlling an aircraft by reference to the limited instrument panel and related hazard control procedures and precautions
- Problems that may occur when controlling an aircraft by reference to the limited instrument panel and appropriate action that should be taken in each case

Required skills:

- Perform manoeuvres and procedures solely by use of the limited instrument panel
- Use instrument scan techniques applicable to limited instrument panel flight
- Anticipate and allow for normal adverse physiological reaction to limited panel flight
- Maintain orientation in simulated instrument flight conditions
- Use limited instruments to monitor aircraft performance
- Perform serviceability check of suction gauges and instrument power
- Recognise failure of the attitude indicator and gyro compass or directional gyro (DG)
- Perform trimming and balancing of aircraft
- Anticipate instruments lag in performance
- Determine bank indications utilising the turn needle/coordinator
- Confirm pitch attitude using the airspeed indicator, VSI and altimeter
- Compensate for turning and acceleration errors
- Comply with regulatory requirements
- Interpret meteorological and NOTAM information
- Communicate effectively with others when controlling aircraft solely by reference to limited

REQUIRED KNOWLEDGE AND SKILLS

instrument panel

- Read and interpret instructions, regulations, procedures and other information relevant to controlling aircraft solely by reference to limited instrument panel
- Interpret and follow operational instructions and prioritise workload
- Complete documentation related to controlling aircraft solely by reference to limited instrument panel
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when controlling aircraft solely by reference to limited instrument panel
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when controlling aircraft solely by reference to limited instrument panel in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when controlling aircraft solely by reference to limited instrument panel
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when controlling aircraft solely by reference to limited instrument panel
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments

AVIY4011B Control helicopter on the ground

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to control a helicopter on the ground, including starting and stopping a helicopter engine, engaging the rotor and controlling the main rotor disc and anti-torque system, fulfilling all required safety requirements, performing pre-taxi functions and manoeuvring the helicopter on the ground. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures relating to controlling a helicopter on the ground.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Start and stop engine	<p>1.1 Start/stop checklists are followed in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Helicopter is positioned with a view to safety and rotor clearance when starting engine</p> <p>1.3 Engine is started/stopped in accordance with manufacturers instruction, workplace procedures, regulatory requirements and Flight Manual/Pilot's Operating Handbook (POH)</p> <p>1.4 Pre-start and after-start checks are completed in accordance with Flight Manual/POH</p> <p>1.5 Emergencies are managed in accordance with Flight Manual/POH, emergency procedures and regulatory requirements</p> <p>1.6 Pre- and after-shutdown checks are completed in accordance with approved checklist and Flight Manual/POH</p> <p>1.7 Engine is operated within manufacturers limitations</p> <p>1.8 Compliance is maintained with local and published noise abatement requirements and curfews</p>
2 Engage and stop rotor	<p>2.1 Wind conditions are assessed and appropriate allowance is made in accordance with manufacturers instructions and workplace procedures</p> <p>2.2 Engine RPM is set within limits before rotor engagement</p> <p>2.3 Rotor brake is released/applied in accordance with Flight Manual/POH procedures</p> <p>2.4 Rotor is engaged and stopped in accordance with manufacturers instructions, workplace procedures and Flight Manual/POH</p> <p>2.5 Engine RPM is maintained within limits during rotor engagement in accordance with manufacturers instructions</p> <p>2.6 Disc position is maintained within operating limits both as RPM increases and during rotor stopping operations</p> <p>2.7 Transmission, hydraulic system and engine indications are monitored and appropriate responses are made if necessary</p>
3 Control main rotor disc and anti-torque system	<p>3.1 Collective and cyclic pitch controls are set to maintain main rotor disc parallel to the landing surface at flat pitch and at idle RPM</p> <p>3.2 Anti-torque pedals are set to compensate for main rotor torque</p> <p>3.3 Rotor disc and RPM are controlled while performing any other required tasks or actions</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Relevant helicopter/equipment characteristics including:
 - aircraft operational limitations
 - helicopter starter motor limitations
 - fuel system including cause and effect of fuel vaporisation
 - rotor engagement system
 - fitted fire-fighting equipment and its applications
 - effect of wind on engines and rotor blades
 - dynamic roll over
 - ground resonance
 - helicopter braking and steering systems
- On-ground helicopter control procedures including:
 - pre-start checks
 - clearing of rotor blades
 - rotor engagement
 - use of filtered air
 - hot and cold engine start
 - after-start checks
 - shutdown checks
 - actions in the event of brake or tyre failure
 - fire management
- Aerodrome landing area markings and light and marshalling signals
- Relevant sections of the Flight Manual/POH
- Local air traffic control procedures

Required skills:

- Select and use relevant controls/equipment including throttle, rotor controls, anti-torque pedals and collective and cyclic pitch controls
- Apply the knowledge to the control of a helicopter on the ground
- Use instruments to monitor helicopter performance

REQUIRED KNOWLEDGE AND SKILLS

- Read and interpret instructions, procedures and information relevant to the control of a helicopter on the ground
- Solve problems associated with the control of a helicopter on the ground
- Communicate effectively with others when controlling a helicopter on the ground
- Read and interpret instructions, regulations, procedures and other information relevant to controlling a helicopter on the ground
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to controlling a helicopter on the ground
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when controlling a helicopter on the ground
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when controlling a helicopter on the ground in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when controlling a helicopter on the ground
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when controlling a helicopter on the ground
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when controlling a helicopter on the ground

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

procedures may include:

- organisational procedures
- established procedures
- standard operating procedures

Procedures maintaining compliance with airspace requirements are:

- geographical limits of the flight area is demonstrated on a chart
- prominent geographical features are identified using a chart
- the limits of the flight area are identified on the ground
- the position of controlled airspace is determined using a chart and geographical features
- restricted areas are identified using a chart and geographical features
- departure from the circuit area and transition to the flight area is completed without incident
- ground operations are completed without incident

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders including Day Visual Flight Rules (Day VFR)
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)

AVIY4012B Control helicopter in hovering flight

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to control a helicopter in hovering flight, including lifting off, hovering a helicopter, performing hovering checks; hovering a helicopter in cross and tail winds; performing spot/pedal turns; conducting turns around nose and tail; and performing sideways and backwards flight. It also includes landing from the hover, managing a mislanding, and aborting a lift off. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures required when controlling a helicopter in hovering flight.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit is nominally packaged a Certificate IV.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Lift off, hover helicopter and perform hover checks	<p>1.1 Pre-take-off checks are performed in accordance with workplace procedures, approved checklist and regulatory requirements</p> <p>1.2 Helicopter is established in hovering flight over a hover point</p> <p>1.3 Hover checks are performed in accordance with workplace procedures, approved checklist and regulatory requirements</p> <p>1.4 Helicopter is maintained in flight and kept over a nominated hover point at a nominated height and heading</p> <p>1.5 Helicopter remains clear of the 'avoid' area of the manufacturers height-velocity diagram where possible</p> <p>1.6 Coordinated corrective action is used to counter the effects of wind gusts</p> <p>1.7 Implications of unfavourable weather are assessed and appropriate compensation is made</p> <p>1.8 Helicopter is maintained clear of obstructions</p> <p>1.9 Adverse effect of rotor wash is avoided</p> <p>1.10 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain</p>
2 Hover helicopter in cross and tail winds	<p>2.1 Helicopter is maintained in flight remaining over a nominated hover point at a nominated height and heading in cross and tail winds</p> <p>2.2 Coordinated corrective action is used to control the effects of wind gusts</p>
3 Perform spot/pedal turns	<p>3.1 Helicopter is turned around the mast while maintaining a constant height and specified rate of turn over the hover point</p> <p>3.2 Controlled corrective action is used to control the effects of wind gusts</p> <p>3.3 Helicopter is maintained clear of obstructions/ground</p> <p>3.4 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility, obstructions and terrain</p>
4 Perform turns around nose and tail	<p>4.1 Helicopter is turned around a nominated point on or forward of the nose or on or aft of the tail of the helicopter while maintaining a constant height and specified rate of movement around the point</p> <p>4.2 Controlled corrective action is taken to counter the effects of wind gusts</p> <p>4.3 Helicopter is maintained clear of obstructions/ground during turning manoeuvres</p> <p>4.4 Lookout is maintained using a systematic scan technique at a</p>

ELEMENT	PERFORMANCE CRITERIA
	rate determined by traffic density, visibility, obstructions and terrain
5 Perform sideways and backwards flight	<p data-bbox="587 387 1401 490">5.1 Helicopter is transitioned from static hover to sideways and rearward flight in accordance with workplace procedures, approved checklist and regulatory requirements</p> <p data-bbox="587 506 1434 568">5.2 Transition from static hover to sideways and rearward flight is terminated over a nominated hover point</p> <p data-bbox="587 584 1445 687">5.3 Lookout is maintained in direction of flight using a systematic scan technique at a rate determined by traffic density, visibility, obstructions and terrain</p> <p data-bbox="587 703 1406 766">5.4 Helicopter is maintained clear of obstructions/ground during sideways and backwards flight manoeuvres</p> <p data-bbox="587 781 1433 844">5.5 Rearward movement is only conducted after visually checking behind helicopter, and height is adjusted as required</p>
6 Land from the hover	<p data-bbox="587 871 1410 974">6.1 Helicopter is lowered on to a nominated point from hovering flight without longitudinal, lateral, yawing or rolling movements and without harshness</p> <p data-bbox="587 990 1383 1052">6.2 Confirmation is made that the helicopter is securely on the ground prior to lowering collective fully</p> <p data-bbox="587 1068 1362 1171">6.3 After-landing checks are performed in accordance with workplace procedures, approved checklist and regulatory requirements</p>
7 Manage a mishandled landing	<p data-bbox="587 1198 1445 1261">7.1 Appropriate action is taken to identify when an adverse landing situation has developed</p> <p data-bbox="587 1276 1374 1310">7.2 A decision to achieve a stabilised position is implemented</p> <p data-bbox="587 1326 1347 1388">7.3 Situation is re-evaluated and the landing is continued if appropriate</p> <p data-bbox="587 1404 1458 1467">7.4 In situations where it is considered inappropriate to continue the landing, the helicopter is lifted off and re-positioned for landing</p>
8 Abort a lift off	<p data-bbox="587 1494 1390 1556">8.1 Should circumstances require, a timely decision is made to discontinue a vertical lift off</p> <p data-bbox="587 1572 1345 1635">8.2 Helicopter is appropriately controlled to ensure that the undercarriage is safely lowered onto the ground</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Relevant helicopter/equipment characteristics including:
 - aircraft operational limitations
 - aerodrome and helicopter landing site markings
 - light and marshalling signals
 - helicopter braking and steering systems
 - application of the height/velocity graph
 - effects of rotor wash
- hazards and risks when controlling a helicopter in hovering flight and precautions for controlling the risks
- relevant sections of the Flight Manual/POH
- local air traffic control procedures
- Helicopter hovering procedures including:
 - pre-take-off checks
 - hover checks
 - maintaining hovering flight in a range of operational conditions
 - turning a helicopter around the mast
 - making a transition from static hover to sideways and rearward flight
 - landing the helicopter
 - managing a mislanding

Required skills:

- Select and use relevant controls/equipment including throttle, rotor controls, anti-torque pedals and collective and cyclic pitch controls
- Read and interpret instructions, procedures and information relevant to the control of a helicopter in hovering flight
- Apply the knowledge to the control of a helicopter in hovering flight
- Use instruments to monitor helicopter performance
- Solve any problems when controlling a helicopter in hovering flight
- Communicate effectively with others when controlling helicopter in hovering flight
- Read and interpret instructions, regulations, procedures and other information relevant to

REQUIRED KNOWLEDGE AND SKILLS

controlling helicopter in hovering flight

- Interpret and follow operational instructions and prioritise work
- Complete documentation related to controlling a helicopter in hovering flight
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when controlling a helicopter in hovering flight
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when controlling a helicopter in hovering flight in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when controlling a helicopter in hovering flight
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when controlling a helicopter in hovering flight
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when controlling a helicopter in hovering flight

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|--|
| Tasks may be undertaken in: | <ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules |
| Performance may be demonstrated in: | <ul style="list-style-type: none"> • single engine helicopter • multi engine helicopter • single main rotor helicopter • multi main rotor helicopter • variable air traffic conditions • variable flight situations • abnormal situations |
| Performance may be demonstrated on an helicopter with: | <ul style="list-style-type: none"> • fully functioning dual controls • an electronic intercom system • dual control brakes • wheel and skidded undercarriages |
| Crew may include: | <ul style="list-style-type: none"> • single pilot • multi crew |
| Limitations may be imposed by: | <ul style="list-style-type: none"> • local noise abatement requirements and curfews |

| Checklists may include: | <ul style="list-style-type: none"> • pre-flight • pre-start • engine start • pre-taxi • take-off • after take-off • approach and landing • shutdown • post-flight |
| Hovering procedures may be performed at: | <ul style="list-style-type: none"> • a prepared or unprepared aerodrome • an approved helicopter landing site (HLS) |
| Operational hazards during hovering manoeuvres may include: | <ul style="list-style-type: none"> • variable surface conditions • other aircraft • loose objects • personnel • animals • birds |

RANGE STATEMENT

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- propeller/tail rotor/rotor wash and jet blast
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Procedures maintaining compliance with airspace requirements are:

- geographical limits of the flight area is demonstrated on a chart
- prominent geographical features are identified using a chart
- the limits of the flight area are identified on the ground
- the position of controlled airspace is determined using a chart and geographical features
- restricted areas are identified using a chart and geographical features
- departure from the circuit area and transition to the flight area is completed without incident
- departure from the flight area and transition to the circuit area is completed without incident

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders including Day Visual Flight Rules (Day VFR)
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

RANGE STATEMENT

Performance includes tolerances specified in either of:

- relevant Australian Standards
- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
 - Day VFR Syllabus
 - Manual of Standards
- relevant Defence documentation such as:
 - Defence Orders and Instructions
- approved curricula and training documentation

AVIY4013B Taxi helicopter

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to taxi a helicopter, including performing ground taxiing manoeuvres, air taxiing manoeuvres, and air transiting manoeuvres. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures relating to taxiing a helicopter

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Perform ground taxiing manoeuvres where applicable	<p>1.1 Taxi clearance is obtained and compliance is maintained with clearance conditions and requirements, if applicable</p> <p>1.2 Helicopter is manoeuvred on the ground over a prescribed track with due allowance for prevailing conditions</p> <p>1.3 Speed is adjusted to suit helicopter type, surface conditions, congestion, maintenance of control and to avoid collision with obstacles or other aircraft</p> <p>1.4 Turns in confined spaces are executed without incident</p> <p>1.5 Adverse effects of rotor wash on personnel, aircraft, structures and trees are avoided</p> <p>1.6 Compliance is maintained with workplace procedures, approved marshalling signals, and regulatory requirements throughout ground taxiing manoeuvres</p>
2 Perform air taxiing manoeuvres	<p>2.1 Taxi clearance is obtained and compliance is maintained with clearance conditions and requirements, if applicable</p> <p>2.2 With allowance for prevailing conditions, the helicopter is manoeuvred above the ground over a prescribed track at constant height associated with ground effect and maintaining a ground speed that allows the safe transit of a helicopter</p> <p>2.3 Helicopter is maintained within the taxiway limits</p> <p>2.4 Turns in confined spaces are executed without incident</p> <p>2.5 Speed is adjusted to suit helicopter type, surface conditions, congestion, maintenance of control and to avoid collision with obstacles or other aircraft</p> <p>2.6 Adverse effects of rotor wash on personnel, aircraft, structures and trees are avoided</p> <p>2.7 The use of ram air or carburettor heat during air taxiing manoeuvres is avoided in dusty conditions</p> <p>2.8 Compliance is maintained with workplace procedures, approved marshalling signals, and regulatory requirements throughout air taxiing manoeuvres</p> <p>2.9 Throughout taxiing manoeuvres, helicopter operation is kept outside of the 'avoid area' of the manufacturers height-velocity diagram where possible</p>
3 Perform air transiting manoeuvres	<p>3.1 Transit clearance is obtained and compliance is maintained with clearance conditions and requirements, if applicable</p> <p>3.2 With allowance for prevailing conditions, the helicopter is manoeuvred at a height not above 100 feet over a prescribed track within the aerodrome boundaries that is clear of obstacles, and at air speeds greater than those used for air taxiing</p>

ELEMENT

PERFORMANCE CRITERIA

- 3.3 Throughout air transit manoeuvres, due awareness is maintained of helicopter operation relative to the manufacturers height-velocity diagram, power required/power available margin, loss of tail rotor effectiveness, traffic movements at the aerodrome and air traffic control requirements
- 3.4 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and terrain
- 3.5 Surface traffic conditions are recognised and accommodated
- 3.6 Different aircraft types are identified and appropriate adjustments made to transiting operations to accommodate the situation of the identified aircraft
- 3.7 Minimum clearance of half rotor diameter is maintained from obstacles
- 3.8 Adverse effect of rotor wash on other aircraft, facilities and personnel is avoided
- 3.9 Compliance is maintained with right of way procedures
- 3.10 Compliance is maintained with light signals, if applicable
- 3.11 Compliance is maintained with workplace procedures, approved marshalling signals, and regulatory requirements throughout air transit manoeuvres

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Basic principles of aerodynamics
- Purpose and functions of helicopter systems
- Functions and effects of all helicopter controls
- Aerodrome and helicopter landing site markings and their meanings
- Light and marshalling signals relevant to helicopter operations
- Helicopter braking and steering systems
- Application of the height/velocity diagram/graph
- Causes and effects of ground resonance and related action that should be taken
- Causes and effects of loss of tail rotor effectiveness and related action that should be taken
- Effects of rotor wash and related precautions that should be taken
- Local air traffic control procedures and instructions
- Hazards and risks when taxiing a helicopter and precautions for controlling the risks
- Problems that may occur when taxiing a helicopter and appropriate action that should be taken in each case

Required skills:

- Interpret and apply air traffic control instructions
- Select and use equipment relevant to the taxiing of a helicopter
- Interpret/use a helicopter manufacturers height-velocity diagram/graph
- Use instruments to monitor helicopter performance
- Apply air safety practices and regulations
- Communicate effectively with others when taxiing a helicopter
- Read and interpret instructions, regulations, procedures and other information relevant to taxiing a helicopter
- Interpret and follow operational instructions and prioritise work
- Complete documentation related taxiing a helicopter
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when taxiing a helicopter
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

REQUIRED KNOWLEDGE AND SKILLS

- Promptly report and/or rectify any identified problems that may occur when a taxiing a helicopter in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when taxiing a helicopter
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when taxiing a helicopter
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when taxiing a helicopter

AVIY4014B Take off helicopter and approach to hover

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to take off a helicopter and control its approach to hover at a termination point, including carrying out pre-take-off checks, taking off the helicopter, approaching to hover prior to landing, and performing the go-around procedure. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures required when taking off a helicopter and controlling its approach to hover.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit is nominally packaged a Certificate IV.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Carry out pre-take-off checks	<p>1.1 Pre-take-off checks are completed in accordance with approved checklist, workplace procedures and regulatory requirements</p> <p>1.2 Helicopter is lined up in the take-off direction</p> <p>1.3 Helicopter is positioned at the optimum position within the helicopter landing site (HLS)</p> <p>1.4 Line-up checks are performed in accordance with approved checklist, when appropriate</p>
2 Take off helicopter	<p>2.1 Air traffic control clearances are obtained and compliance is maintained with clearance conditions and requirements</p> <p>2.2 Helicopter is moved from a stationary position in a specified direction passing through translational lift remaining clear of obstructions and establishing a climb</p> <p>2.3 After-take-off checks are completed in accordance with approved checklist</p> <p>2.4 Local and published noise abatement requirements and curfews are observed</p> <p>2.5 Awareness of circuit traffic is maintained and conflict is avoided</p> <p>2.6 Situation awareness is maintained in accordance with workplace procedures and regulatory requirements</p>
3 Approach to hover	<p>3.1 Pre-landing checks are completed in accordance with approved checklist, workplace procedures and regulatory requirements</p> <p>3.2 Helicopter is descended to the hover at the termination point at a reducing closure rate and along a specified track on an approach angle appropriate to the helicopter type and conditions</p> <p>3.3 During the descent to the termination point, helicopter operation is maintained within all specified limitations in accordance with workplace procedures, manufacturers instructions and regulatory requirements</p> <p>3.4 Appropriate approach angle and track is intercepted and approach manoeuvres are conducted in accordance with workplace procedures, air traffic control instructions and regulatory requirements</p> <p>3.5 Approach is terminated at the hover over the termination point</p>
4 Perform go-around procedure	<p>4.1 Critical situations are recognised and timely decisions are made to go-around in circumstances that require discontinuation of a circuit or approach</p> <p>4.2 Climb is initiated from any position in the circuit pattern</p> <p>4.3 Obstructions and traffic are appropriately avoided during the climb following a decision to go-around</p>

ELEMENT

PERFORMANCE CRITERIA

- 4.4 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain
- 4.5 Appropriate decisions affecting safety are implemented in the time available
- 4.6 Awareness of all circuit traffic is maintained and conflict avoided
- 4.7 Different aircraft types are identified and appropriate adjustments made to flight operations to accommodate the situation of the identified aircraft
- 4.8 Radiotelephone (R/T) listening watch is maintained and compliance with requirements is observed
- 4.9 Local and published noise abatement requirements and curfews are observed

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Basic principles of aerodynamics
- Purpose and functions of helicopter systems
- Functions and effects of all helicopter controls
- Aerodynamic factors affecting helicopter flight performance including:
 - ground effect
 - flapback
 - inflow roll
 - translational lift
 - settling with power
 - overpitching
 - loss of tail rotor effectiveness
 - weight and balance
- All pre- and after-take-off and pre- and after-landing checks
- Air traffic requirements
- Factors affecting take-off and climb performance
- Procedures for the use of performance charts
- Application of the height/velocity diagram/graph
- Local air traffic control procedures and instructions
- Hazards and risks when taking off a helicopter and controlling its approach to hover and precautions for controlling the risks
- Problems that may occur when taking off a helicopter and controlling its approach to hover and appropriate action that should be taken in each case

Required skills:

- Apply the knowledge to the taking off of a helicopter and controlling its approach to hover at a termination point
- Select and use relevant controls/equipment relevant to the taking off of a helicopter and controlling its approach to hover
- Read and interpret instructions, procedures and information relevant to the taking off of a helicopter and controlling its approach to hover

REQUIRED KNOWLEDGE AND SKILLS

- Use instruments to monitor helicopter performance
- Interpret/use a helicopter manufacturers height-velocity diagram/graph
- Solve problems associated with the taking off of a helicopter and controlling its approach to hover
- Communicate effectively with others when taking off a helicopter and controlling its approach to hover
- Read and interpret instructions, regulations, procedures and other information relevant to taking off a helicopter and controlling its approach to hover
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to taking off a helicopter and controlling its approach to the hover
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when taking off a helicopter and controlling its approach to the hover
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when taking off a helicopter and controlling its approach to hover in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when taking off a helicopter and controlling its approach to hover
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when taking off a helicopter and controlling its approach to hover
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when taking off a helicopter and controlling its approach to hover

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

| Operational hazards during take-off and approach to the hover may include: | <ul style="list-style-type: none"> • variable surface conditions • other aircraft • loose objects • personnel • animals • birds |

RANGE STATEMENT

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- propeller/tail rotor/rotor wash and jet blast
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Procedures maintaining compliance with airspace requirements are:

- geographical limits of the flight area is demonstrated on a chart
- prominent geographical features are identified using a chart
- the limits of the flight area are identified on the ground
- the position of controlled airspace is determined using a chart and geographical features
- restricted areas are identified using a chart and geographical features
- departure from the circuit area and transition to the flight area is completed without incident
- departure from the flight area and transition to the circuit area is completed without incident

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders including Day Visual Flight Rules (Day VFR)
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

RANGE STATEMENT

Performance includes tolerances specified in either of:

- relevant Australian Standards
- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
 - Day VFR Syllabus
 - Manual of Standards
- relevant Defence documentation such as:
 - Defence Orders and Instructions
- approved curricula and training documentation

Unit Sector(s)

Competency Field Y - Aircraft Operation and Traffic Management

AVIY4015B Control helicopter in normal flight

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to control a helicopter in normal flight, including climbing a helicopter, maintaining straight and level flight, descending a helicopter, turning a helicopter, controlling a helicopter at any speed and performing circuits and approaches. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures required when controlling a helicopter in normal flight.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit is nominally packaged a Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Climb helicopter	<p>1.1 Adjustments are made to attitude and power to achieve an increase of altitude at normal, maximum rate (V_v), maximum angle (V_x) and cruise climb flight configurations from straight flight and turns</p> <p>1.2 Helicopter is maintained in balanced flight during adjustments to attitude and power</p> <p>1.3 Helicopter is levelled off from climb at nominated altitude</p> <p>1.4 Lookout is maintained during climb using a systematic scan technique at a rate determined by traffic density, visibility and terrain</p> <p>1.5 Situation awareness is maintained</p>
2 Maintain straight and level flight	<p>2.1 Attitude and power are adjusted to achieve a constant height, heading and speed while remaining in balanced flight</p> <p>2.2 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain</p> <p>2.3 Natural horizon is used as primary attitude reference</p> <p>2.4 Altitude is maintained within allocated height band</p>
3 Descend helicopter	<p>3.1 Attitude and power are adjusted to enter and maintain a descent from straight flight and turns whilst maintaining balanced flight</p> <p>3.2 Helicopter is levelled from a descent at a nominated altitude</p> <p>3.3 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain</p> <p>3.4 Clearance ahead and below is maintained</p> <p>3.5 Air traffic control altitude restrictions are observed</p> <p>3.6 Helicopter does not exceed design limits during descent</p> <p>3.7 Situation awareness is maintained at all times during helicopter descent</p> <p>3.8 Appropriate precautions are taken to avoid carburettor icing</p>
4 Turn helicopter	<p>4.1 'Airspace cleared' procedure is carried out</p> <p>4.2 Attitude and power are adjusted to enter and maintain turns at varying rates from level, climbing and descending flight to achieve nominated tracks</p> <p>4.3 Helicopter is rolled out from the turn to achieve a nominated heading or geographical feature</p> <p>4.4 Lookout is maintained in direction of turn and above or below using a systematic scan technique at a rate determined by traffic density, visibility and terrain</p> <p>4.5 Engine operating limits are not exceeded</p>
5 Control helicopter at	<p>5.1 Attitude and power are adjusted, accelerated or decelerated to</p>

ELEMENT

PERFORMANCE CRITERIA

any speed

manoeuvre the helicopter at any specified airspeed within the flight envelope while maintaining balanced flight

5.2 Height awareness is maintained at all times and appropriate adjustments are made as required

5.3 Wind conditions are monitored and appropriate allowance is made

5.4 Helicopter is suitably controlled to ensure that it is operated within its design limits

6 Perform circuits and approaches

6.1 Traffic patterns are conducted in accordance with AIP or local procedures at normal and low altitude appropriate to the helicopter type

6.2 When conducting traffic patterns, due allowance is made for the wind and all checklists are completed

6.3 Radiotelephone procedures are followed during circuits in accordance with workplace procedures and regulatory requirements

6.4 The approach path applicable to the helicopter type is intercepted and maintained whilst remaining clear of other traffic

6.5 Lookout is maintained during circuits and approaches using a systematic scan technique at a rate determined by traffic density, visibility and terrain

6.6 Conflicting traffic is recognised and appropriate responses are made

6.7 Right of way rules are applied and compliance with the rules is maintained

6.8 Radio listening watch is maintained in accordance with workplace procedures and regulatory requirements

6.9 Weather conditions are monitored and appropriate responses are made

6.10 Fuel status is monitored and appropriate responses are made

7 Comply with airspace requirements

7.1 Helicopter is maintained within a specified area and/or track while complying with air traffic requirements, controlled or restricted airspace conditions or limitations and reacting to factors that affect the safe progress of a flight

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Principles of aerodynamics
- Functions and effects of all helicopter controls
- Procedures for setting power in normally aspirated, turbocharger, supercharged or turbine engines as applicable
- Forces and moments acting on a helicopter and precautions to manage their effects:
 - in straight and level flight
 - in a climb
 - in a turn
 - during descent
- Rotational and induced airflow
- Application of heading and track
- Theory and application of best rate and angle of climb
- Use of instruments to monitor helicopter performance and significance of colour coding
- Application of the height/velocity diagram/graph
- Procedures for the use of trim controls if appropriate
- Cause and effects of retreating blade stall
- Conditions leading to loss of tail rotor/anti-torque control
- Recognition and avoidance of settling with power/vortex ring state
- The circumstances and procedures for the use of carburettor heat
- Circuit patterns and procedures
- The dangers of wind shear, turbulence and wake turbulence
- The effect of turning and acceleration on magnetic compass accuracy
- Hazards and risks when controlling a helicopter in normal flight and precautions for controlling the risks
- Problems that may occur when controlling a helicopter in normal flight and appropriate action that should be taken in each case

Required skills:

- Apply the knowledge when controlling a helicopter in normal flight
- Select and use relevant controls, including throttle, rotor controls, anti-torque pedals and

REQUIRED KNOWLEDGE AND SKILLS

collective and cyclic pitch controls

- Read and interpret instructions, procedures and information relevant to the control of a helicopter in normal flight
- Use instruments to monitor helicopter performance
- Solve problems associated with controlling a helicopter in normal flight
- Communicate effectively with others when controlling a helicopter in normal flight
- Read and interpret instructions, regulations, procedures and other information relevant to controlling a helicopter in normal flight
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to controlling a helicopter in normal flight
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when controlling a helicopter in normal flight
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when controlling a helicopter in normal flight in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when controlling a helicopter in normal flight
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when controlling a helicopter in normal flight
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when controlling a helicopter in normal flight

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to control the helicopter in a range of situations by the application of advanced manoeuvres and procedures, including turning a helicopter steeply; performing autorotative flight; and executing limited power take-offs, approaches and landings. The situations may also include take-offs and landings on sloping ground or at a pinnacle or ridge line; and take-offs, landings and manoeuvres in confined areas. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures required when executing advanced helicopter manoeuvres and procedures.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit is nominally packaged at Certificate IV.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Turn helicopter steeply	<p>1.1 'Airspace cleared' procedure is carried out before and during turn</p> <p>1.2 Level turn of nominated bank angle is achieved without altitude change to nominated heading</p> <p>1.3 Descending turn of nominated bank angle is achieved to a nominated heading</p> <p>1.4 Awareness of higher stall speed in turns is demonstrated</p> <p>1.5 Helicopter operating limits are not exceeded</p>
2 Perform autorotative flight	<p>2.1 An appropriate action plan is formulated that ensures the safe completion of autorotative manoeuvres</p> <p>2.2 Priorities are set to ensure the safe completion of autorotative manoeuvres</p> <p>2.3 Autorotative flight is entered and maintained at a nominated speed and heading in balanced flight</p> <p>2.4 Heading is altered with the helicopter in balanced flight at a nominated speed</p> <p>2.5 Helicopter is transitioned from autorotative flight to a climb at nominated heading and speed</p> <p>2.6 Autorotative landing is performed into the wind in accordance with Flight Manual/POH, workplace procedures and regulatory requirements</p> <p>2.7 Helicopter is terminated to the hover from autorotative flight, using appropriate power</p> <p>2.8 Autorotative flight is performed at the optimum range and minimum descent rate speeds</p> <p>2.9 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and terrain</p> <p>2.10 Situation awareness is maintained at all times during autorotative flight</p>
3 Lift off and land on sloping ground	<p>3.1 Surface conditions are confirmed to be suitable for the helicopter type</p> <p>3.2 Stakeholders are briefed to ensure safe operations in the vicinity of helicopter</p> <p>3.3 Helicopter is lifted off from sloping ground to a hover in accordance with Flight Manual/POH, workplace procedures and regulatory requirements</p> <p>3.4 Helicopter is landed from the hover onto sloping ground in accordance with Flight Manual/POH, workplace procedures and regulatory requirements</p> <p>3.5 Any abnormal situations are recognised and appropriate</p>

ELEMENT

PERFORMANCE CRITERIA

- controlled corrective action is implemented
- 3.6 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain
- 3.7 Situation awareness is maintained at all times during lift-offs and landings on sloping ground
- 4 Land, take off and manoeuvre in a confined area**
- 4.1 Confined area is assessed, an action plan is formulated and a decision is made to operate in the area
- 4.2 Awareness is demonstrated of pilot's own capabilities and limitations and decisions to take off or land are adjusted accordingly
- 4.3 Helicopter is safely landed in a confined area in accordance with Flight Manual/POH, workplace procedures and regulatory requirements
- 4.4 Helicopter is safely taken off from a confined area in accordance with Flight Manual/POH, workplace procedures and regulatory requirements
- 4.5 Helicopter is manoeuvred in a confined area while remaining clear of obstructions
- 4.6 Situation awareness is maintained at all times during manoeuvres in a confined area
- 4.7 Appropriate allowance is made for the effects of wind during manoeuvres in a confined area
- 5 Execute limited power take-off, approach and landing**
- 5.1 Need for limited power manoeuvres is established
- 5.2 A decision to conduct limited power manoeuvres is implemented and an appropriate action plan is formulated to conduct limited power operations
- 5.3 An appropriate area for a safe take-off and landing suitable for the limited power available is selected in accordance with Flight Manual/POH, workplace procedures and regulatory requirements
- 5.4 Awareness is demonstrated of pilot's own capabilities and limitations and decisions to take off, approach or land are adjusted accordingly
- 5.5 Situation awareness is maintained at all times during limited power manoeuvres
- 5.6 Appropriate allowance is made for the effects of wind during limited power manoeuvres
- 6 Take off and land at a pinnacle or ridge line**
- 6.1 Select and assess a suitable pinnacle or ridge line, formulate a plan and make a decision to operate onto the area
- 6.2 Awareness is demonstrated of pilot's own capabilities and limitations and decisions to take off or land are adjusted accordingly

ELEMENT

PERFORMANCE CRITERIA

- 6.3 Helicopter is safely landed on a pinnacle or ridge line in accordance with Flight Manual/POH, workplace procedures and regulatory requirements
- 6.4 Helicopter is safely lifted and taken off from a pinnacle or ridge line in accordance with Flight Manual/POH, workplace procedures and regulatory requirements
- 6.5 Situation awareness is maintained at all times during take-offs, approaches and landings at a pinnacle or ridge line
- 6.6 Appropriate allowance is made for the effects of wind during take-off, approach and landing at a pinnacle or ridge line

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Basic principles of aerodynamics
- Purpose and functions of helicopter systems
- Functions and effects of all helicopter controls
- Aerodynamic factors affecting helicopter flight performance, including:
 - aerodynamic forces
 - dynamic rollover
 - settling with power
 - recirculation
 - loss of tail rotor (anti-torque) effectiveness
- All applicable checklist items
- The cross wind loss of rotor control limits for the helicopter type flown
- Power required and power available curves
- Pressure altitude and density considerations
- Wind and terrain effects
- Procedures for the use of performance charts
- Application of the height/velocity diagram/graph
- Local air traffic control procedures and instructions
- Emergency radio procedures
- Actions to be conducted following a forced landing
- Hazards and risks when executing advanced helicopter manoeuvres and procedures and precautions for controlling the risks
- Problems that may occur when executing advanced helicopter manoeuvres and procedures and appropriate action that should be taken in each case

Required skills:

- Apply the knowledge to the execution of advanced helicopter manoeuvres and procedures
- Select and use relevant equipment for the execution of advanced helicopter manoeuvres and procedures
- Read and interpret instructions, procedures and information relevant to the execution of advanced helicopter manoeuvres and procedures

REQUIRED KNOWLEDGE AND SKILLS

- Use instruments to monitor helicopter performance
- Interpret/use a helicopter manufacturers height-velocity diagram/graph
- Solve problems associated with the execution of advanced helicopter manoeuvres and procedures
- Follow air traffic control procedures and instructions
- Communicate effectively with others when executing advanced helicopter manoeuvres and procedures
- Read and interpret instructions, regulations, procedures and other information relevant to advanced helicopter manoeuvres and procedures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to executing advanced helicopter manoeuvres and procedures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when executing advanced helicopter manoeuvres and procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when executing advanced helicopter manoeuvres and procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when executing advanced helicopter manoeuvres and procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during advanced helicopter manoeuvres and procedures
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to conduct advanced helicopter manoeuvres and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

RANGE STATEMENT

Checklists may include:

- pre-flight
- pre-start
- engine start
- pre-taxi
- take-off
- after take-off
- approach and landing
- shutdown
- post-flight

Circuit height may include:

- standard
- low-level

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Procedures maintaining compliance with airspace requirements are:

- geographical limits of the flight area is demonstrated on a chart
- prominent geographical features are identified using a chart
- the limits of the flight area are identified on the ground
- the position of controlled airspace is determined using a chart and geographical features
- restricted areas are identified using a chart and geographical features
- departure from the circuit area and transition to the flight area is completed without incident
- departure from the flight area and transition to the circuit area is completed without incident

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders including Day Visual Flight Rules (Day VFR)
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- approved checklists

RANGE STATEMENT

Applicable regulations and legislation may include:

- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Performance includes tolerances specified in either of:

- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
 - Day VFR Syllabus
 - Manual of Standards
- relevant Defence documentation such as:
 - Defence Orders and Instructions
 - approved curricula and training documentation

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to correctly manage abnormal situations that may occur during a helicopter flight. Abnormal situations may include a forced landing from level flight, after take-off or on approach; or an engine failure at the hover or during taxi. Abnormal situations also include a tail rotor malfunction, jammed flight control system, adverse aerodynamic conditions, or a malfunction of one of the helicopter's operating systems. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures required to manage abnormal and emergency helicopter flight situations.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged at Certificate IV.

Note:

Where an abnormal situation might potentially cause damage to the aircraft and/or be harmful to personnel, evidence for assessment purposes should be obtained from other than observation of performance in an actual abnormal operational situation (e.g. through using an appropriate simulator and/or structured questioning, or termination of a simulated forced landing at a point where the assessment of an outcome can be made).

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Manage a forced landing from level flight, after take-off or on approach	<p>1.1 Emergency situation requiring a forced landing is correctly identified</p> <p>1.2 Autorotative flight is entered and established at nominated speed and heading in balanced flight</p> <p>1.3 Immediate actions are performed in accordance with Flight Manual/Pilot's Operating Handbook (POH)</p> <p>1.4 A landing area within autorotative distance is selected and an appropriate action plan is formulated to ensure safety of helicopter</p> <p>1.5 Priorities are allocated to all actions to ensure the safety of helicopter and its passengers</p> <p>1.6 Emergency procedures are performed in accordance with Flight Manual/POH and established action plan</p> <p>1.7 Emergency radio transmissions are executed in accordance with workplace procedures, Flight Manual/POH and regulatory requirements</p> <p>1.8 Helicopter is landed into wind with as slow as practical ground speed while maintaining control of helicopter</p>
2 Manage an engine failure at the hover or during taxi	<p>2.1 Hover and taxi surfaces are suitably selected to maximise options in the event of an engine failure</p> <p>2.2 Emergency situation involving an engine failure is correctly identified</p> <p>2.3 Immediate actions are performed in accordance with Flight Manual/POH</p> <p>2.4 A landing area within autorotative distance is selected and an appropriate pre-determined action plan is implemented to ensure safety of helicopter</p> <p>2.5 Actions comply with established procedures</p> <p>2.6 Priorities are allocated to all actions to ensure safety of helicopter</p> <p>2.7 Emergency procedures are performed in accordance with Flight Manual/POH and established action plan</p> <p>2.8 Air Traffic Service and other traffic are advised of intentions</p> <p>2.9 Helicopter is operated outside the height/velocity diagram avoid area</p> <p>2.10 Situation awareness is maintained at all times during helicopter manoeuvres</p>
3 Manage a tail rotor malfunction	<p>3.1 Hover heights and surfaces are selected to maximise options in the event of tail rotor malfunction</p> <p>3.2 A tail rotor malfunction is correctly identified in accordance</p>

ELEMENT

PERFORMANCE CRITERIA

- with workplace procedures and manufacturers instructions
- 3.3 In the event of a tail rotor malfunction, immediate actions are performed in accordance with Flight Manual/POH
- 3.4 In a tail rotor emergency during the hover or taxi, the helicopter is landed in accordance with Flight Manual/POH, workplace procedures and regulatory requirements
- 3.5 In a tail rotor emergency during flight, control of the helicopter is established and a suitable landing area is selected
- 3.6 All emergency checks are performed in accordance with the Flight Manual/POH and a plan is formulated to achieve an approach and landing
- 3.7 Emergency radio messages of intentions are transmitted
- 3.8 A controlled emergency landing with a malfunctioning tail rotor is performed in accordance with Flight Manual/POH, workplace procedures and regulatory requirements
- 4 Manage a jammed flight control system**
 - 4.1 The jammed flight control malfunction is correctly identified in accordance with workplace procedures and manufacturers instructions
 - 4.2 Control of helicopter is maintained
 - 4.3 All emergency checks are performed in accordance with the Flight Manual/POH
 - 4.4 An appropriate plan is formulated to achieve an approach and landing
 - 4.5 Emergency radiotelephone procedures are correctly followed
 - 4.6 A controlled landing with a jammed flight control is in accordance with Flight Manual/POH, workplace procedures and regulatory requirements
 - 4.7 Situation awareness is maintained at all times during helicopter manoeuvres
- 5 Manage adverse aerodynamic conditions**
 - 5.1 Adverse aerodynamic conditions affecting the helicopter are correctly identified
 - 5.2 Control of the helicopter is regained in accordance with Flight Manual/POH, workplace procedures and manufacturers instructions
 - 5.3 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain
 - 5.4 Situation awareness is maintained at all times during helicopter manoeuvres
- 6 Manage a malfunction of a helicopter operating system**
 - 6.1 Abnormal situations involving a helicopter systems malfunction are correctly identified
 - 6.2 Appropriate emergency procedures are conducted in accordance with Flight Manual/POH and published procedures while

ELEMENT

PERFORMANCE CRITERIA

maintaining control of the helicopter

6.3 Approved Flight Manual/POH and published procedures are consistently applied when managing systems malfunctions

6.4 Situation awareness is maintained at all times during a system malfunction

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders pertaining to abnormal flight situations
- Relevant OH&S and environmental procedures and regulations
- Basic principles of aerodynamics
- Purpose and functions of helicopter systems
- Functions and effects of all helicopter controls
- Aerodynamic factors affecting helicopter flight performance
- Low level weather and topography effects
- Emergency procedures
- All applicable checklist items
- Practical action plans for use in the event of an engine failure
- Procedures for the use of performance charts
- Application of the height/velocity diagram/graph
- Local air traffic control procedures and instructions
- Emergency radio procedures
- Actions to be conducted following a forced landing
- Hazards and risks when managing a helicopter in abnormal and emergency flight situations and precautions for controlling the risks
- Problems that may occur when managing a helicopter in abnormal and emergency flight situations and appropriate action that should be taken in each case

Required skills:

- Apply the knowledge to the management of a helicopter in abnormal and emergency situations
- Select and use relevant equipment for the management of a helicopter in abnormal and emergency situations
- Read and interpret instructions, procedures and information relevant to the management of a helicopter in abnormal and emergency situations
- Use instruments to monitor helicopter performance
- Interpret/use a helicopter manufacturers height/velocity diagram/graph
- Solve problems associated with the management of a helicopter in abnormal and emergency situations
- Communicate effectively with others when managing abnormal and emergency helicopter flight situations

REQUIRED KNOWLEDGE AND SKILLS

- Read and interpret instructions, regulations, procedures and other information relevant to abnormal and emergency helicopter flight situations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to abnormal and emergency helicopter flight situations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing abnormal and emergency helicopter flight situations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when managing abnormal and emergency helicopter flight situations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when managing abnormal and emergency helicopter flight situations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during abnormal and emergency helicopter flight situations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to manage abnormal and emergency helicopter flight situations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|--|--|
| Tasks may be undertaken in: | <ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules |
| Performance may be demonstrated in: | <ul style="list-style-type: none"> • single engine helicopter • multi engine helicopter • single main rotor helicopter • multi main rotor helicopter • variable air traffic conditions • variable flight situations • abnormal situations |
| Performance may be demonstrated on an helicopter with: | <ul style="list-style-type: none"> • fully functioning dual controls • an electronic intercom system • dual control brakes • wheeled or skidded undercarriage |
| Crew may include: | <ul style="list-style-type: none"> • single pilot • multi crew |
| Limitations may be imposed by: | <ul style="list-style-type: none"> • local noise abatement requirements and curfews |
| Classes of airspace are: | <ul style="list-style-type: none"> • those designated by the Civil Aviation Safety Authority |
| Landing areas may include: | <ul style="list-style-type: none"> • sealed • gravel • grass • confined area • sloping ground • sand |
| Abnormal conditions may include: | <ul style="list-style-type: none"> • a forced landing from level flight, after take-off or on approach • an engine failure at the hover or during taxi • a tail rotor malfunction • a jammed flight control system • adverse aerodynamic conditions • a malfunction of one of the helicopter's operating systems |
| Adverse aerodynamic conditions affecting the helicopter may include: | <ul style="list-style-type: none"> • vortex ring state • overpitching • retreating blade stall • loss of tail rotor effectiveness • ground resonance |

RANGE STATEMENT

Systems malfunctions may include:

- mast bumping
- dynamic roll over
- fuel
- electrical
- helicopter airframe
- flight instrument
- flight control
- engine
- radio/navigation aid
- fire
- smoke and fumes
- hydro mechanical systems

Operational hazards during abnormal and emergency helicopter flight situations may include:

- variable surface conditions
- other aircraft
- loose objects
- personnel
- animals
- birds
- propeller/tail rotor/rotor wash and jet blast
- air traffic control instructions
- light signals
- aerodrome markings

Guidance during abnormal and emergency helicopter flight situations may be provided by:

- pre-flight
- pre-start
- engine start
- pre-taxi
- take-off
- after take-off
- approach and landing
- shutdown
- post-flight

Checklists may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- geographical limits of the flight area is demonstrated on a chart
- prominent geographical features are identified using a chart

Procedures maintaining compliance with airspace requirements are:

RANGE STATEMENT

	<ul style="list-style-type: none">• the limits of the flight area are identified on the ground• the position of controlled airspace is determined using a chart and geographical features• restricted areas are identified using a chart and geographical features• departure from the circuit area and transition to the flight area is completed without incident• departure from the flight area and transition to the circuit area is completed without incident
Information/documents may include:	<ul style="list-style-type: none">• relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders including Day Visual Flight Rules (Day VFR)• in Defence context, relevant Defence Orders and Instructions• Flight Manual/Pilot's Operating Handbook (POH)• Manual of Standards - Pilot Licensing (MOS-PL)• Aeronautical Information Publication (AIP)• En Route Supplement Australia (ERSA)• charts• operations manuals• approved checklists• workplace procedures and instructions and job specification• induction and training materials• conditions of service, legislation and industrial agreements including workplace agreements and awards
Applicable regulations and legislation may include:	<ul style="list-style-type: none">• relevant Civil Aviation Safety Regulations and Civil Aviation Orders• in Defence context, relevant Defence Orders and Instructions• relevant state/territory OH&S legislation• relevant state/territory environmental protection legislation• relevant Australian Standards
Performance includes tolerances specified in either of:	<ul style="list-style-type: none">• relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:<ul style="list-style-type: none">• Day VFR Syllabus• Manual of Standards• relevant Defence documentation such as:<ul style="list-style-type: none">• Defence Orders and Instructions• approved curricula and training documentation

Competency field

Competency Field Y - Aircraft Operation and Traffic Management

AVIY4019B Operate helicopter at low level

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to operate a helicopter at low level, including planning low level operations, manoeuvring a helicopter at low level, performing quick stop manoeuvres, executing reversal turns, and executing a forced landing from below 200 feet AGL. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR); and aircraft control principles, regulations, safety codes, protocols and procedures required when operating a helicopter at low level.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit is nominally packaged a Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan low level operations	<p>1.1 The requirement to operate at low level is identified and justified in accordance with workplace procedures and regulatory requirements</p> <p>1.2 The risks in the low level operations are analysed and an appropriate decision is made concerning the safe conduct of these operations</p> <p>1.3 Action plans for the operation are formulated to ensure the safe and effective operation of the helicopter at low level</p> <p>1.4 Unplanned manoeuvres are avoided</p> <p>1.5 Compliance is maintained with air traffic control instructions, regulatory and reporting requirements</p>
2 Manoeuvre helicopter at low level	<p>2.1 Low level flight manoeuvres are performed safely using pre-planned manoeuvres at planned altitudes</p> <p>2.2 Effects of wind velocity, false horizons, rising ground and mountainous terrain are managed, and control of the helicopter is correctly maintained</p> <p>2.3 Pilot's visual attention is focused outside the cockpit</p> <p>2.4 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and/or terrain</p> <p>2.5 Natural horizon is used as primary attitude reference</p> <p>2.6 Nose of aircraft is cleared to ensure forward visibility when appropriate</p> <p>2.7 Situation awareness is maintained at all times during the low level manoeuvres</p> <p>2.8 Helicopter is safely manoeuvred adjacent to power lines and wires</p> <p>2.9 All obstacles are identified and are appropriately and safely avoided</p> <p>2.10 Personnel, animals, vehicles and buildings are identified and are appropriately and safely avoided</p> <p>2.11 Height is maintained by visual reference to the earth's surface when below 500 AGL</p> <p>2.12 Weather conditions are monitored and appropriate responses are made</p> <p>2.13 Fuel status is monitored and appropriate responses are made</p> <p>2.14 Local and published noise abatement requirements and curfews are observed</p>
3 Perform quick stop manoeuvre	<p>3.1 Deceleration of the helicopter from forward flight is initiated while either into wind or down wind to terminate to the hover into wind at a nominated hover point</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2 Deceleration manoeuvre is conducted within the time and distance limitations specified whilst maintaining a constant height above the surface</p> <p>3.3 Wind velocity is estimated and is appropriately taken into account in manoeuvres</p> <p>3.4 Helicopter inertia is anticipated and appropriate allowance is made in manoeuvres</p> <p>3.5 Situation awareness is maintained at all times during a quick stop manoeuvre</p> <p>3.6 Obstructions are identified and are appropriately and safely avoided</p>
4 Execute reversal turn	<p>4.1 Adverse conditions requiring reversal turn are recognised and manoeuvre is commenced without delay</p> <p>4.2 Helicopter is turned steeply through 180° manoeuvring in the horizontal and vertical planes, without exceeding 30° pitch</p> <p>4.3 Straight and level flight is resumed at entry height</p>
5 Execute forced landing from below 200 feet AGL	<p>5.1 Emergency situations requiring a forced landing are identified</p> <p>5.2 Immediate actions are performed in accordance with Flight Manual/POH</p> <p>5.3 A landing area within autorotative distance is selected and an appropriate action plan is formulated</p> <p>5.4 Emergency procedures are performed in accordance with Flight Manual/POH and the established action plan</p> <p>5.5 Air Traffic Service and other traffic are advised of intentions during the emergency</p> <p>5.6 Helicopter is landed in accordance with the Flight Manual/POH and the established action plan</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- Critical operational conditions, including retreating blade stall, vortex ring, overpitching, loss of anti-torque effectiveness, negative g effects
- Purpose and functions of helicopter systems
- Functions and effects of all helicopter controls, including rotor RPM management (governors) and engine acceleration response
- Meteorological factors affecting helicopter flight performance during low level flight
- Terrain following techniques
- Air traffic requirements
- Safety hazards and risks of low level helicopter operations and precautions for controlling the risks
- Procedures for the use of performance charts
- Application of the height/velocity diagram/graph
- Local air traffic control procedures and instructions
- Problems that may occur when operating a helicopter at low level and appropriate action that should be taken in each case

Required skills:

- Solve problems associated with the operation of a helicopter at low level
- Use instruments to monitor helicopter performance during the operation of a helicopter at low level
- Apply knowledge to the operation of a helicopter at low level
- Read and interpret instructions, procedures and information relevant to the operation of a helicopter at low level
- Identify and justify a decision to operate a helicopter at low level
- Use instruments to monitor helicopter performance during the operation of a helicopter at low level
- Communicate effectively with others when operating a helicopter at low level
- Read and interpret instructions, regulations, procedures and other information relevant to a helicopter at low level
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to operating a helicopter at low level

REQUIRED KNOWLEDGE AND SKILLS

- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a helicopter at low level
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when operating a helicopter at low level in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when operating a helicopter at low level
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when a helicopter is at low level
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when operating a helicopter at low level

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to conduct external load-lifting operations in a helicopter. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for load-lifting operations	1.1 External load characteristics and dimensions are determined and calculated 1.2 Aircraft safety hazards are identified using established procedures 1.3 Aircraft power availability is calculated 1.4 Wind speed and direction are determined 1.5 Approach and overshoot paths are determined 1.6 Load-lifting location and surrounds are checked for suitability 1.7 Helicopter cargo hook system is prepared and checked for correct operation 1.8 Aerial delivery equipment is prepared and checked as required in accordance with equipment manuals and publications 1.9 External load-lifting plan is developed and communicated to other crewmembers
2 Perform load-lifting operations	2.1 Helicopter is directed to external load-lifting point 2.2 Pre-take-off lifting checks are conducted in accordance with organisational policy and procedures 2.3 Commentary on the progress of the external load-lifting operation is maintained in accordance with established communication procedures 2.4 External load is attached in accordance with organisational policy and procedures 2.5 External load is monitored during flight for instability, and flight profile is adjusted as required for optimum safety of flight 2.6 External load is released in accordance with organisational policy and procedures and aircraft manuals
3 Conclude load-lifting operations	3.1 Aerial delivery equipment is recovered as required 3.2 Cargo hook equipment and control systems are secured and checked in accordance with manufacturers specifications and organisational policy and procedures
4 Respond to load-lifting emergencies and abnormal situations	4.1 External load-lifting emergencies are identified, communicated and diagnosed as per established procedures 4.2 Emergency and/or remedial actions are undertaken in accordance with aircraft flight manuals and organisational policy and procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Helicopter capabilities and limitations
- Cargo hook system and aerial delivery equipment capabilities and limitations
- Approved operational procedures and processes for different external load-lifting operations
- Occupational health and safety issues applicable to operations, aircraft and personnel safety
- Correct aerial delivery equipment configuration
- External load-lifting emergency procedures
- Approach and overshoot considerations
- External load-lifting verbal/non-verbal communication procedures
- External load safety and configuration
- External load-lifting risk assessment principles
- Organisational policies and procedures for load-lifting operations
- Practices concerning external load-lifting operations
- Procedures and protocols for the use of communication systems during an emergency
- Typical problems that may occur when conducting external load-lifting operations and appropriate action and solutions

Required skills:

- Perform external load-lift operations
- Complete aerial delivery equipment assembly
- Use communication skills for helicopter control
- Determine wind speed and direction
- Operate aerial delivery equipment
- Perform weight calculations
- Apply external load-lifting risk assessment principles
- Interpret and follow flight and operational manuals and safety policies
- Read and interpret instructions and procedures relevant to the conducting load-lifting operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities when conducting load-lifting operations
- Identify and use required communication technology
- Work collaboratively with others when conducting load-lifting operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and

REQUIRED KNOWLEDGE AND SKILLS

interactions with others

- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when conducting external load-lifting operations in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when conducting external load-lifting operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conducting of external load-lifting operations
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

Y - Aircraft Operation and Traffic Management

AVIY4053A Perform aircrewman cockpit duties

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to perform aircrewman cockpit duties including monitoring flight conditions and responding to abnormal/emergency situations. This unit does not include pre-flight inspections, and operation of communications equipment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Monitor flight conditions

- 1.1 Instruments are monitored throughout flight for correct indication and operation as per established procedures
- 1.2 Aircraft altitude, attitude and heading is monitored in accordance with organisational policy and procedures
- 1.3 Situational awareness is maintained to ensure safe flight
- 1.4 Fuel usage is monitored in accordance with organisational policy and procedures
- 1.5 Aircraft operating limits are monitored and advice is provided to the pilot in accordance with organisational policy and procedures
- 1.6 Operational documentation is interpreted and information is provided to the pilot in accordance with organisational policy and procedures
- 1.7 Aircraft operational checks are completed in accordance with aircraft flight manuals

2 Respond to abnormal/emergency situations

- 2.1 Abnormal/emergency situations are identified and diagnosed in accordance with organisational policy and procedures
- 2.2 Abnormal/emergency response is undertaken in accordance with aircraft checklists, pilot's directions and organisational policy and procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Organisational policy and procedures in relation to aircrew carrying out cockpit duties
- Basic theory of flight
- Aircraft capabilities and limitations
- Aircraft systems operation
- Abnormal/emergency conditions and responses
- Aircraft flight control operation
- Aircraft operational checks
- Aircraft operational publication uses and contents
- Relevant OH&S responsibilities
- Typical problems that may occur when performing aircrewman cockpit duties, actions and appropriate solutions

Required skills:

- Monitor the manipulation of aircraft flight controls
- Give and receive instructions related to performing aircrewman cockpit duties
- Perform fuel usage calculations
- Maintain situational awareness
- Complete documentation related to performing aircrewman cockpit duties
- Interpret and follow aircraft documentation
- Communicate effectively with others when performing aircrewman cockpit duties
- Read and interpret instructions and procedures relevant to performing aircrewman cockpit duties
- Interpret and follow operational instructions and prioritise work
- Identify and use required communication technology
- Work collaboratively with others when performing aircrewman cockpit duties
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when performing aircrewman cockpit duties in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when performing aircrewman cockpit duties
- Apply precautions and required action to minimise, control or eliminate hazards that may exist

REQUIRED KNOWLEDGE AND SKILLS

when performing aircrewman cockpit duties

- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for hoisting operations	1.1 Helicopter safety hazards are identified using established procedures 1.2 Aircraft power availability is calculated 1.3 Wind speed and direction are determined 1.4 Approach and overshoot paths are determined 1.5 Hoisting location and surrounds are checked for suitability 1.6 Hoist is prepared and checked for correct operation 1.7 Hoisting operation plan is developed and communicated to other crewmembers 1.8 Hoisting equipment is prepared and checked as required in accordance with relevant equipment manuals and publications
2 Perform hoisting operations	2.1 Helicopter is directed to hoisting point 2.2 Hoisting accessories are attached to the hoist hook and checked 2.3 Down wind checks are conducted in accordance with organisational policy and procedures 2.4 Commentary on the progress of hoisting operation is maintained as per established procedures 2.5 Passengers/stores are attached/removed, monitored, retrieved/dispatched and secured in accordance with organisational policy and procedures 2.6 Hoist is operated in accordance with aircraft operating manuals and organisational policy and procedures
3 Respond to hoisting emergencies and abnormal situations	3.1 Hoist emergencies are identified, communicated and diagnosed as per established procedures 3.2 Emergency and/or remedial actions are undertaken in accordance with aircraft flight manuals and organisational policy and procedures
4 Conclude hoisting operations	4.1 Hoisting equipment and/or accessories are removed from the hoist hook and stowed in accordance with aircraft operating manuals and organisational policy and procedures 4.2 Hoist is secured and checked in accordance with aircraft operating manuals, organisational policy and procedures 4.3 Aircraft maintenance documentation is completed in accordance with organisational policies and procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Helicopter capabilities and limitations
- Hoist capabilities and limitations
- Approved operational procedures and processes for different hoisting operations
- Occupational health and safety issues applicable to hoisting operations
- Aircraft safety
- Personnel safety
- Aircraft control voice and communication procedures
- Correct hoist and equipment configuration
- Approach and overshoot considerations
- Hoist emergency procedures
- Organisational policy and procedures in relation to conducting hoisting operations
- Abnormal/emergency conditions and responses
- Typical problems that may occur when conducting hoisting operations, actions and appropriate solutions
- Risk assessment principles
- CRM principles

Required skills:

- Operate hoist
- Assemble hoisting equipment
- Operate hoisting accessories
- Use communication skills for conning
- Complete hoisting recovery equipment operations
- Determine wind speed and direction
- Maintain situational awareness
- Apply CRM principles
- Complete documentation related to conducting hoisting operations
- Communicate effectively with others when conducting hoisting operations
- Read and interpret instructions and procedures relevant to conducting hoisting operations
- Interpret and follow operational instructions and prioritise work
- Identify and use required communication technology

REQUIRED KNOWLEDGE AND SKILLS

- Work collaboratively with others when conducting hoisting operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when conducting hoisting operations in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when conducting hoisting operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when conducting hoisting operations
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with standard operating procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare helicopter and personnel for airborne extraction	1.1 Helicopter and extraction equipment are pre-flight checked to determine serviceability 1.2 Crew is briefed during mission brief 1.3 Extraction team leader is briefed in accordance with workplace procedures 1.4 Static ground rehearsals are conducted with personnel and equipment
2 Prepare for airborne extraction	2.1 Extraction equipment is attached and checked for security 2.2 Extraction zone characteristics and dimensions are determined and calculated 2.3 Helicopter safety hazards are communicated using workplace procedures 2.4 Extraction checks are conducted prior to extraction equipment deployment 2.5 Wind speed and direction are communicated 2.6 Approach and overshoot paths are communicated
3 Perform airborne extraction operations	3.1 Helicopter is directed to extraction point 3.2 Extraction equipment is deployed in accordance with workplace procedures 3.3 Personnel are directed to attach to extraction equipment in accordance with workplace procedures 3.4 Maintenance of aircraft position is communicated to pilot 3.5 Progress of extraction operation is communicated in accordance with workplace procedures 3.6 Personnel are directed to detach from extraction equipment
4 Respond to airborne extraction emergencies and abnormal situations	4.1 Airborne extraction emergencies are identified, communicated and diagnosed in accordance with workplace procedures 4.2 Emergency and/or remedial actions are undertaken in accordance with aircraft flight manuals, organisational policy and workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, legislation, organisational policy and procedures in relation to conducting airborne extraction operations
- Occupational health and safety issues applicable to operations, aircraft and personnel safety
- Approved operational procedures and processes for different airborne extraction operations
- Procedures and protocols for the use of communication systems during an emergency
- Airborne extraction verbal/non-verbal communication procedures
- Helicopter capabilities and limitations as defined in aircraft publications/documentation
- Airborne extraction equipment capabilities, correct configuration and limitations
- Airborne extraction emergency procedures
- Aircraft earthing procedures
- Helicopter approach and overshoot considerations
- Airborne extraction safety and configuration
- Airborne extraction risk assessment principles
- Typical problems that may occur when conducting airborne extraction operations and appropriate actions and solutions

Required skills:

- Perform airborne extraction operations
- Complete airborne extraction equipment pre-flight serviceability checks
- Use communication skills for helicopter control
- Determine wind speed and direction
- Operate airborne extraction equipment
- Perform weight calculations
- Apply airborne extraction risk assessment principles
- Interpret and follow flight and operational manuals and safety policies
- Read, interpret and apply regulations, legislation, policies and procedures relevant to airborne extraction operations
- Complete documentation related to work activities when conducting airborne extraction operations
- Work collaboratively with others when conducting airborne extraction operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

REQUIRED KNOWLEDGE AND SKILLS

- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when conducting airborne extraction operations in accordance with established procedures
- Implement contingency plans for unanticipated situations that may arise when conducting airborne extraction operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when conducting airborne extraction operations
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with established procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - following relevant legislation and workplace procedures
 - conducting serviceability pre-flight checks of helicopter and extraction equipment
 - briefing crew and extraction team leader in accordance with workplace procedures
 - attaching and security checking extraction equipment
 - determining and calculating extraction zone characteristics and dimensions
 - communicating helicopter safety hazards, wind speed and direction, approach and overshoot paths
 - communicating to pilot maintenance of aircraft position
 - directing personnel to attach and detach from extraction equipment in accordance with workplace procedures
 - communicating extraction operation progress in accordance with workplace procedures
 - identifying, communicating and diagnosing airborne extraction emergencies in accordance with workplace procedures
 - taking actions in a remedial and/or emergency situation in accordance with aircraft flight manuals, organisational policy and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare helicopter and personnel for airborne rappelling operations	1.1 Helicopter and airborne rappelling attachment device are pre-flight checked to determine serviceability 1.2 Crew is briefed during mission brief 1.3 Airborne rappelling team leader is briefed in accordance with workplace procedures 1.4 Static ground rehearsals are conducted with personnel and equipment 1.5 Fitness of rappelling personnel to complete task is confirmed in accordance with established procedures
2 Prepare for airborne rappelling operations	2.1 Ropes are attached to airborne rappelling attachment device and checked for security 2.2 Rappellers are restrained in aircraft prior to take-off 2.3 Fitting of rappellers' personnel protective equipment is checked in accordance with established procedures 2.4 Deployment checks are conducted prior to rope deployment 2.5 Helicopter safety hazards are communicated using workplace procedures 2.6 Airborne rappelling location and surrounds are assessed for suitability 2.7 Wind speed and direction are communicated 2.8 Approach and overshoot paths are communicated
3 Perform airborne rappelling operations	3.1 Helicopter is directed to rappelling point 3.2 Ropes and rappellers are deployed in accordance with workplace procedures 3.3 Progress of the rappelling operation is communicated in accordance with workplace procedures 3.4 Rappelling ropes are recovered or released as required 3.5 Clearance for aircraft departure is provided by airborne rappelling dispatcher once all ropes are clear or secured
4 Respond to airborne rappelling emergencies and abnormal situations	4.1 Airborne rappelling emergencies are identified, communicated and diagnosed in accordance with workplace procedures 4.2 Emergency and/or remedial actions are undertaken in accordance with aircraft flight manuals, organisational policy and workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations, legislation, organisational policy and procedures in relation to conducting airborne rappelling operations
- Occupational health and safety issues applicable to operations, aircraft and personnel safety
- Approved operational procedures and processes for different airborne rappelling operations
- Procedures and protocols for the use of communication systems during an emergency
- Airborne rappelling verbal/non-verbal communication procedures
- Helicopter capabilities and limitations as defined in aircraft publications/documentation
- Airborne rappelling attachment device capabilities and limitations
- Correct airborne rappelling safety equipment configuration
- Airborne rappelling techniques
- Airborne rappelling emergency procedures
- Helicopter approach and overshoot considerations
- Airborne rappelling risk assessment principles
- Typical problems that may occur when conducting airborne rappelling operations and appropriate actions and solutions

Required skills:

- Perform airborne rappelling operations
- Complete airborne rappelling attachment device pre-flight serviceability checks
- Use communication skills for helicopter control
- Determine wind speed and direction
- Operate airborne rappelling attachment device
- Perform weight calculations
- Apply airborne rappelling risk assessment principles
- Interpret and follow flight and operational manuals and safety policies
- Read, interpret and apply regulations, legislation, policies and procedures relevant to airborne rappelling operations
- Complete documentation related to work activities when conducting airborne rappelling operations
- Work collaboratively with others when conducting airborne rappelling operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

REQUIRED KNOWLEDGE AND SKILLS

- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when conducting airborne rappelling operations in accordance with established procedures
- Implement contingency plans for unanticipated situations that may arise when conducting airborne rappelling operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when conducting airborne rappelling operations
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with established procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - following relevant legislation and workplace procedures
 - conducting serviceability pre-flight checks of helicopter and airborne rappelling attachment device
 - briefing crew and airborne rappelling team leader in accordance with workplace procedures
 - attaching and security checking ropes to airborne rappelling device
 - conducting fitting checks of rappellers' personnel protective equipment in accordance with established procedures
 - conducting deployment checks prior to rope deployment
 - assessing suitability of airborne rappelling location and surrounds
 - communicating helicopter safety hazards, wind speed and direction, approach and overshoot paths
 - deploying ropes and rappellers and recovery/release of ropes in accordance with workplace procedures
 - communicating rappelling operation progress in accordance with workplace procedures
 - providing clearance for aircraft departure once all ropes are clear or secured
 - identifying, communicating and diagnosing rappelling emergencies in accordance with workplace procedures
 - taking actions in a remedial and/or emergency situation in accordance with aircraft flight manuals, organisational policy and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace

EVIDENCE GUIDE

- In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Helicopter may include:	<ul style="list-style-type: none"> • single or multiple engine • single or multiple rotors • other airborne vehicles
Airborne rappelling supervisor may include:	<ul style="list-style-type: none"> • aircrewman • rescue crewman • airborne safety officer • loadmaster • observer • airborne team leader • chalk commander
Work environment may include:	<ul style="list-style-type: none"> • by day or by night • over land or over sea • prepared or unprepared helicopter landing sites
Airborne rappelling emergencies may include:	<ul style="list-style-type: none"> • aircraft emergencies • hung-up rappeller • unconscious rappeller • ropes/rappellers/s snagged in trees/obstacles rappeller falling from door after adopting exit position • airborne rappelling attachment device malfunction
Airborne rappelling variations may include:	<ul style="list-style-type: none"> • single or multiple rappellers • basic airborne rappelling • advanced airborne rappelling • airborne fast roping
Rappeller characteristics may include:	<ul style="list-style-type: none"> • beginners • advanced • size • weight • rappeller equipment variations
Airborne rappelling equipment may include:	<ul style="list-style-type: none"> • eye goggles • hearing protection • head protection • rappelling harness • rappelling gloves • rappelling ropes • fast ropes • airborne rappelling attachment device

RANGE STATEMENT

Helicopter safety hazards may include:

- man-made structures
- smoke
- meteorological conditions
- terrain
- other aircraft
- flora
- fauna
- ship structures and rigging
- ship movements
- loss of visual reference
- foreign object damage (FOD)

Locations and surrounds may include:

- helicopter landing site
- unprepared helicopter landing site

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- standard operating procedures

Documentation may include:

- relevant sections of Civil Aviation Safety Regulations
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Aeronautical Information Publication (AIP)
- charts
- operations manuals
- approved checklists
- organisational policy and procedures manuals
- aviation maintenance documentation
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

AVIY4057A Perform helicopter deck landing operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to operate a helicopter during deck landing operations including planning, pre/post briefing, transit, approach, landing, take-off, climb and abnormal operations to/from a helideck. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR), Night VFR, Instrument Flight Rules (IFR); and aircraft control principles, regulations, safety codes, protocols and procedures required when operating a helicopter to/from a helideck.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged a Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan deck landing operations	1.1 Tasking requirements are identified 1.2 Crew, role equipment and safety equipment necessary to ensure safe achievement of task are determined 1.3 Helicopter is certified for the task in accordance with regulations and workplace procedures 1.4 Outbound and return flight loading and flight routes are planned 1.5 Security and care of passengers or equipment for deck landing operations are planned
2 Conduct pre-flight briefings for deck landing operations	2.1 Flight/ground crews and other relevant stakeholders are briefed on allocated duties 2.2 Weather suitability is determined and confirmed against workplace procedures and limitations 2.3 Briefs/self-briefs for deck landing operations are performed
3 Take off and transit to and from vessel	3.1 Appropriate take-off and departure configurations are selected 3.2 Helicopter is navigated to the rendezvous 3.3 Information regarding identified vessel's ability to receive aircraft is obtained 3.4 Vessel is instructed to manoeuvre to achieve optimum deck conditions for landing 3.5 Relative wind, ship pitch and roll information, hover heading and helideck location are obtained and acceptability confirmed 3.6 Pre-descent checks are completed 3.7 Descent profile and circuit pattern are determined
4 Approach and land on vessel helideck	4.1 Control manipulation, instrument scan and visual cues are used to manoeuvre the aircraft safely during approach and landing 4.2 Night interception of glide slope is carried out as appropriate 4.3 Touch-down point and reference markers are identified and confirmed 4.4 Constant angle approach and landing is performed 4.5 Safe termination of approach and stable hover over helideck is performed 4.6 Helideck landing is performed
5 Take off and climb out from vessel helideck	5.1 Safety and security during deck operations is managed 5.2 Stable hover over deck is established 5.3 Obstacles are identified and avoided 5.4 Instrument take-off under no horizon conditions is performed 5.5 Instrument climb-out procedure is performed
6 Manage abnormal and	6.1 Abnormal or emergency situations are identified and confirmed

ELEMENT

**emergency situations
during deck landing
operations**

PERFORMANCE CRITERIA

- 6.2 Helicopter is controlled to maintain safe flight
- 6.3 Abnormal or emergency situations are managed in accordance with workplace procedures, Flight Manual/Pilot's Operating Handbook
- 6.4 Aborted approach from final approach is performed
- 6.5 Ditching and underwater escape procedures are applied as required

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- In Defence context, relevant Defence Orders and Instructions
- Engine performance checks for the helicopter type to be flown
- Aircraft performance calculations (for all phases of flight)
- Functions and effects of all aircraft controls and instruments
- Principles of aerodynamics
- Control effectiveness in all phases of flight
- Hazards that exist when controlling an aircraft during deck landing operations
- Helicopter dimensions
- Communication procedure and terminology applicable to deck landing operations
- Planning and briefing requirements for helicopter deck landing operations
- Post flight de-briefing techniques
- Helicopter underwater escape procedures
- Aircraft evacuation procedures
- Survival equipment location and operation
- Survival skills post ditching
- Crash on deck procedures
- Lighting and marshalling signals
- Helideck markings
- Effects of excessive vessel movement on the serviceability of aircraft
- Vessel movement limitations
- Operation of night vision devices

Required skills:

- Solve problems associated with the operation of a helicopter during deck landing operations
- Identify and assess, vertical, horizontal and relative spatial distances in relation to the aircraft fuselage, rotor system, mission and/or operational stores and equipment with regard to potential obstacles to the safety of flight
- Operate night vision devices if applicable
- Use instruments to monitor helicopter performance during deck landing operations
- Apply knowledge to the operation of a helicopter during deck landing operations

REQUIRED KNOWLEDGE AND SKILLS

- Read and interpret instructions, procedures and information relevant to the operation of a helicopter during deck landing operations
- Identify and justify a decision to operate a helicopter during deck landing operations
- Interpret hover performance and power available/power required from graphs/charts
- Conduct planning, briefing and de-briefing
- Communicate effectively with others when operating a helicopter during deck landing operations
- Complete documentation related to operating a helicopter during deck landing operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a helicopter during deck landing operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Apply reporting procedures for identified problems that may occur when operating a helicopter during deck landing operations
- Implement contingency plans for unexpected events that may arise when operating a helicopter during deck landing operations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when operating a helicopter during deck landing operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - following relevant legislation and workplace procedures
 - planning deck landing operations
 - conducting pre-flight briefs of all relevant stakeholders
 - taking off and transiting to vessel
 - approaching and landing on vessel helideck
 - taking off and climbing out from vessel helideck
 - identifying, confirming and managing abnormal and emergency situations in accordance with workplace procedures and Flight Manual/Pilot's Operating Handbook

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

AVIY4058A Pilot a helicopter during external load operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to operate a helicopter during external load operations including preparation and planning, pre/post briefing, external load and abnormal operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR), Night VFR; and aircraft control principles, regulations, safety codes, protocols and procedures required when operating a helicopter at low level and piloting a helicopter during external load operations.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged a Certificate IV.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare and rig a sling load	<p>1.1 Tasking requirements are identified</p> <p>1.2 External load is secured, stabilised and rigged in accordance with workplace procedures and Flight Manual/Pilot's Operating Handbook</p>
2 Plan external load operations	<p>2.1 External load procedure, equipment and personnel required for task are determined</p> <p>2.2 Helicopter performance data is interpreted and calculated to ensure suitability of aircraft for external load operations</p> <p>2.3 Outbound and return flight routes are planned</p> <p>2.4 Secure and stable load preparations are arranged</p> <p>2.5 Load lifting equipment strength and suitability are assessed</p>
3 Conduct pre-flight briefings for external load operations	<p>3.1 Requirements of the load task are explained and confirmed</p> <p>3.2 Personnel responsible for inspecting the load lifting equipment for serviceability and security are identified</p> <p>3.3 Communication and hook-up procedure is explained</p> <p>3.4 Hook-up person and hook-up procedure is specified</p> <p>3.5 Departure, transit, approach, termination and load release procedures are explained</p> <p>3.6 Emergency procedures are explained and confirmed</p> <p>3.7 Pilot vertical reference (long line) procedure is explained if applicable</p> <p>3.8 Crew and ground loadmaster are briefed on all aspects of the load lifting task</p> <p>3.9 Seating is adjusted to ensure full exercise of the flight controls and the ability to scan the instrument panel</p> <p>3.10 Helicopter performance data is interpreted and calculated to ensure suitability of aircraft for operations</p> <p>3.11 The removal of doors and the security of internal equipment is arranged as required</p>
4 Operate the helicopter during external load operations	<p>4.1 Functional and safety checks on role equipment are performed, and defects are reported</p> <p>4.2 Fuel and cargo load combinations to achieve task are calculated</p> <p>4.3 Adequacy of power margin and directional control are determined</p> <p>4.4 Stable hover over the load during hook-up/delivery procedures is maintained</p> <p>4.5 External load is lifted and transported to a separate location and placed at a specified position</p> <p>4.6 Load is monitored and appropriate actions are taken to ensure</p>

ELEMENT	PERFORMANCE CRITERIA
	load security and stability during flight
	4.7 Excessive load swing during transit is avoided
5 Manage abnormal and emergency situations during external load operations	5.1 Helicopter control is maintained
	5.2 Abnormal or emergency situations are identified and managed in accordance with workplace procedures and Flight Manual/Pilot's Operating Handbook
	5.3 Load is jettisoned when appropriate
6 Conduct post-flight activities for external load operations	6.1 Operating procedures and outcomes of the flight are reviewed and analysed
	6.2 Effectiveness, efficiency and performance of equipment is analysed and reported
	6.3 Inspection, servicing and stowage of equipment is organised

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- In Defence context, relevant Defence Orders and Instructions
- Engine performance checks for the helicopter type to be flown
- Aircraft performance calculations (for all phases of flight)
- Internal and external load limitations for the helicopter type to be flown
- Aerial delivery equipment operation, safe working loads and limitations
- Cargo hook limitations, problems and hazards
- Awareness of load rigging and preparation for flight
- Principles of aerodynamics
- Control effectiveness in all phases of flight
- Hazards that exist and problems that can occur when operating an aircraft during external load operations
- Procedures to address problems associated with a helicopter during external load operations
- Helicopter dimensions
- Vertical reference (long line) operation procedures if applicable
- External load lifting equipment inspection procedures
- Communication procedure and terminology applicable to external load operations

Required skills:

- Solve problems associated with the operation of a helicopter during external load operations
- Identify and assess vertical, horizontal and relative spatial distances in relation to the aircraft fuselage, rotor system, mission and/or operational stores and equipment with regard to potential obstacles to the safety of flight
- Maintain situational awareness
- Perform external load scan techniques
- Use instruments to monitor helicopter performance during external load operations
- Read and interpret instructions, procedures and information relevant to the operation of a helicopter during external load operations
- Apply knowledge to the operation of a helicopter during external load operations
- Interpret hover performance and power available/power required from graphs/charts
- Communicate effectively with others when operating a helicopter during external load

REQUIRED KNOWLEDGE AND SKILLS

operations

- Complete documentation related to operating a helicopter during external load operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a helicopter during external load operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when operating a helicopter during external load operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when operating a helicopter during external load operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when a helicopter is performing external load operations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when operating a helicopter during external load operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - following relevant legislation and workplace procedures
 - preparing and rigging sling load including all sub-tasks in accordance with workplace procedures and Flight Manual/Pilot's Operating Handbook
 - planning external load operations including all sub-tasks
 - conducting pre-flight briefing including all sub-tasks
 - operating the helicopter during external load operations including all sub-tasks
 - identifying and managing abnormal and emergency situations in accordance with workplace procedures and Flight Manual/Pilot's Operating Handbook

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- In Defence context, relevant Defence Orders and Instructions
- Communication procedure and terminology applicable to roping operations
- Engine performance checks for the helicopter type to be flown
- Aircraft performance calculations (for all phases of flight)
- Internal and external load limitations for the helicopter type to be flown including weight and balance consideration
- Functions and effects of all aircraft controls and instruments
- Principles of aerodynamics
- Control effectiveness in all phases of flight
- Hazards, limitations and problems that can occur when operating an aircraft during roping operations
- Rope and attaching point limitations
- Helicopter dimensions

Required skills:

- Solve problems associated with the operation of a helicopter during roping operations
- Identify and assess vertical, horizontal and relative spatial distances in relation to the aircraft fuselage, rotor system, mission and/or operational stores and equipment with regard to potential obstacles to the safety of flight
- React appropriately to avoid hazardous situations and/or dangerous situations that pose risks to safety of flight and personnel
- Maintain situational awareness
- Use instruments to monitor helicopter performance during roping operations
- Read and interpret instructions, procedures and information relevant to the operation of a helicopter during roping operations
- Apply knowledge to the operation of a helicopter during roping operations
- Identify and justify a decision to operate a helicopter during roping operations
- Interpret hover performance and power available/power required from graphs/charts
- Communicate effectively with others when operating a helicopter during roping operations
- Complete documentation related to operating a helicopter during roping operations

REQUIRED KNOWLEDGE AND SKILLS

- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a helicopter during roping operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Apply reporting procedures for identified problems that may occur when operating a helicopter during roping operations
- Implement contingency plans for unexpected events that may arise when operating a helicopter during roping operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when a helicopter is performing roping operations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when operating a helicopter during roping operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - following relevant legislation and workplace procedures
 - planning roping operations including all sub-tasks and actions in the event of abnormal and emergency roping operations situations
 - conducting pre-flight and post-flight roping operations briefings including all sub-tasks
 - operating the helicopter during roping operations including all sub-tasks
 - indentifying and managing abnormal and emergency situations in accordance with workplace procedures and Flight Manual/Pilot's Operating Handbook

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- | | |
|---|--|
| Tasks may be undertaken in: | <ul style="list-style-type: none"> • variable weather conditions in accordance with Day Visual Flight Rules and Night VFR |
| Performance may be demonstrated in: | <ul style="list-style-type: none"> • single engine helicopter • multi engine helicopter • single main rotor helicopter • multi main rotor helicopter • variable air traffic conditions • variable flight situations • abnormal situations |
| Performance may be demonstrated on a helicopter with: | <ul style="list-style-type: none"> • fully functioning dual controls • an electronic intercom system • dual control brakes • wheeled and/or skidded undercarriages • night aided vision devices |
| Night VFR environment may include: | <ul style="list-style-type: none"> • unaided • aided utilising night vision devices |
| Operational environments may include: | <ul style="list-style-type: none"> • unprepared landing sites • confined areas • unknown landing sites • pinnacles • embarked/sea platforms • marine environments |
| Crew may include: | <ul style="list-style-type: none"> • single pilot • multi crew |
| Limitations may be imposed by: | <ul style="list-style-type: none"> • local noise abatement requirements and curfews |
| Roping may include: | <ul style="list-style-type: none"> • rappelling • fast rope |
| Checklists may include: | <ul style="list-style-type: none"> • Flight Manual/Pilot's Operating Handbook • approach and landing • hover • pre-roping |
| Classes of airspace are: | <ul style="list-style-type: none"> • those designated by the Civil Aviation Safety Authority • restricted and danger areas • Military control zones |

RANGE STATEMENT

Operational hazards during low level operations may include:

- Air Defence identification zones
- structures
- other aircraft
- loose objects
- birds
- engine salt ingestion
- trees
- dust
- low visibility
- turbulence
- wind strength
- sea state

Guidance during low level operations may be provided by:

- air traffic control instructions
- light signals
- aerodrome markings

Procedures for maintaining compliance with airspace requirements are:

- geographical limits of the flight area are demonstrated on a chart
- prominent geographical features are identified using a chart
- the limits of the flight area are identified on the ground
- the position of controlled airspace is determined using a chart and geographical features
- restricted areas are identified using a chart and geographical features
- departure from the circuit (roping) area and transition to the flight area is completed without incident
- departure from the flight area and transition to the circuit (roping) area is completed without incident

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders including Day Visual Flight Rules (Day VFR)
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)

RANGE STATEMENT

Applicable regulations and legislation may include:	<ul style="list-style-type: none">• En Route Supplement Australia (ERSA)• charts• operations manuals• approved checklists• workplace procedures and instructions and job specification• induction and training materials• conditions of service, legislation and industrial agreements including workplace agreements and awards• relevant Civil Aviation Safety Regulations and Civil Aviation Orders• in Defence context, relevant Defence Orders and Instructions• relevant state/territory OH&S legislation• relevant state/territory environmental protection legislation• relevant Australian Standards
Performance includes tolerances specified in either of:	<ul style="list-style-type: none">• relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:• Day VFR syllabus• Manual of Standards• relevant Defence documentation such as:• Defence Orders and Instructions• approved curricula and training documentation

Competency Field	Y - Aircraft Operation and Traffic Management
------------------	---

AVIY4060A Pilot a helicopter during winching operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to operate a helicopter during winching operations including planning, pre/post briefing, winching and abnormal operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules (Day VFR), Night VFR; and aircraft control principles, regulations, safety codes, protocols and procedures required when operating a helicopter at low level and piloting a helicopter during winching operations.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged a Certificate IV.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan winching operations	1.1 Tasking requirements are identified 1.2 Crew and equipment required to ensure safe achievement of task are determined 1.3 Helicopter performance data is interpreted and calculated to ensure suitability of aircraft for operations 1.4 Outbound and return flight routes are planned 1.5 Operations at winch site including obstructions, terrain and any factors that may adversely affect lift are planned 1.6 Security and care of passengers and/or equipment to be winched on board is planned
2 Conduct pre-flight briefings for winching operations	2.1 Requirements of the winch operation are explained and confirmed 2.2 Location, terrain features (sea state as applicable) and forecast weather conditions are obtained and confirmed 2.3 Winch and role equipment is checked 2.4 Pilot and crew responsibilities and communication procedures are explained 2.5 Mode of lift (e.g. single strop lift, double lift, net deployment, etc.) is explained 2.6 Arrangements for care and security of passengers and/or equipment to be winched are explained 2.7 Winch emergency procedures are explained
3 Operate the helicopter during winching operations	3.1 Adequacy of hover power margin and control limits to perform winching operations is checked and maintained 3.2 Site inspection, approach and hover heading are determined in accordance with operational requirements 3.3 Descent and approach is controlled to terminate over winch site (both land and water) 3.4 Control is applied to helicopter to maintain position over winch site 3.5 Winch limitations are observed 3.6 Cable fouling is avoided 3.7 Power is applied to lift external load 3.8 Safety and security of passengers and/or cargo is managed
4 Manage abnormal and emergency situations during winching operations	4.1 Helicopter, passengers and load are controlled 4.2 Abnormal or emergency situations are identified and managed in accordance with workplace procedures and Flight Manual/Pilot's Operating Handbook 4.3 Load is jettisoned if/when appropriate

ELEMENT

PERFORMANCE CRITERIA

5 Conduct post-flight briefings for winching operations

- 5.1 Operating procedures and outcomes of the flight are reviewed and analysed
- 5.2 Effectiveness, efficiency and performance of equipment is analysed and reported

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- Relevant OH&S and environmental procedures and regulations
- In Defence context, relevant Defence Orders and Instructions
- Engine performance checks for the helicopter type to be flown
- Aircraft performance calculations (for all phases of flight)
- Internal and external load limitations for the helicopter type to be flown
- Winch limitations
- Functions and effects of all aircraft controls and instruments
- Principles of aerodynamics
- Control effectiveness in all phases of flight
- Hazards that exist and problems that can occur when operating an aircraft during winching operations
- Helicopter dimensions
- Communication procedure and terminology applicable to winching operations

Required skills:

- Solve problems associated with the operation of a helicopter during winching operations
- Identify and assess vertical, horizontal and relative spatial distances in relation to the aircraft fuselage, rotor system, mission and/or operational stores and equipment with regard to potential obstacles to the safety of flight
- Maintain situational awareness
- Use instruments to monitor helicopter performance during winching operations
- Read and interpret instructions, procedures and information relevant to the operation of a helicopter during winching operations
- Apply knowledge to the operation of a helicopter during winching operations
- Identify and justify a decision to operate a helicopter during winching operations
- Interpret hover performance and power available/power required from graphs/charts
- Communicate effectively with others when operating a helicopter during winching operations
- Complete documentation related to operating a helicopter during winching operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a helicopter during winching operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and

REQUIRED KNOWLEDGE AND SKILLS

interactions with others

- Apply reporting procedures for identified problems that may occur when operating a helicopter during winching operations
- Implement contingency plans for unexpected events that may arise when operating a helicopter during winching operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when a helicopter is performing winching operations
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required when operating a helicopter during winching operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - following relevant legislation and workplace procedures
 - planning winching operations including all sub-tasks
 - conducting pre-flight and post-flight winching operations briefing including all sub-tasks
 - operating the helicopter during winching operations including all sub-tasks
 - identifying and managing abnormal and emergency situations in accordance with workplace procedures and Flight Manual/Pilot's Operating Handbook

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

AVIY4061A Perform aerobatic manoeuvres

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to perform looping, rolling and advanced aerobatic manoeuvres while remaining within the aircraft's structural and engine limitations and the pilot's physiological limitations during visual flight. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or ADF; airspace control requirements and Day Visual Flight Rules; and aircraft control principles, regulations, safety codes, protocols and procedures required to perform aerobatic manoeuvres.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted within a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged at Certificate IV.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for aerobatic manoeuvres	<p>1.1 Operating area within suitable airspace is selected that allows for the completion of all aerobatic manoeuvres above the authorised minimum altitude</p> <p>1.2 Pre-manoeuve checks are performed and aircraft is configured for aerobatic manoeuvres</p> <p>1.3 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain</p>
2 Perform looping manoeuvre	<p>2.1 Entry airspeed is achieved that will ensure completion of looping manoeuvre</p> <p>2.2 Aircraft is pitched vertically through 360 degrees in balanced flight</p> <p>2.3 Wings are maintained parallel to the earth's horizon whilst applying positive 'g', without stalling</p> <p>2.4 Alignment with a nominated line feature is maintained</p> <p>2.5 Engine, airframe and physiological limitations are complied with</p> <p>2.6 Direction, altitude control and height loss is maintained within prescribed limits, or as appropriate to the aircraft type</p> <p>2.7 Safe entry and recovery heights are observed</p> <p>2.8 Exit airspeed/height is achieved at the completion of looping manoeuvre</p>
3 Perform rolling manoeuvre	<p>3.1 Entry airspeed is achieved that will ensure completion of rolling manoeuvre</p> <p>3.2 Aircraft is rolled from a nominated airspeed around the fore and aft axis through 360 degrees</p> <p>3.3 Direction, altitude control and height loss is maintained within prescribed limits, or as appropriate to the aircraft type</p> <p>3.4 Engine, airframe and physiological limitations are complied with</p> <p>3.5 Safe entry and recovery heights are observed</p>
4 Perform advanced aerobatic manoeuvre	<p>4.1 Entry speed for aerobatic manoeuvre is achieved</p> <p>4.2 Control inputs are applied to achieve advanced aerobatic manoeuvre</p> <p>4.3 Exit airspeed/height is achieved at the completion of an advanced aerobatic manoeuvre</p> <p>4.4 Engine, airframe and physiological limitations are complied with</p> <p>4.5 Direction, altitude control and height loss is maintained within prescribed limits, or as appropriate to the aircraft type</p>

ELEMENT

PERFORMANCE CRITERIA

4.6 Safe entry and recovery heights are observed

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental protection procedures and regulations
- Aerodynamic principles for performance of aerobatic manoeuvres
- Techniques for entry to and control of aerobatic manoeuvres
- Physiological effects applicable to max performance flight
- Aircraft limitations for the aircraft flown including environmental factors
- Safe manoeuvre entry and recovery heights
- Pre-manoeuve check procedures
- Regulatory requirements applicable to the performance of aerobatic manoeuvres

Required skills:

- Apply unusual attitudes, fully developed and incipient spin and spiral dive recover techniques
- Operate the aircraft within its limitations, achieving optimum performance
- Manoeuvre aircraft on the buffet
- Conduct maximum rate turning
- Compensate for the secondary effects of controls
- Identify symptoms of loss of control
- Select and correctly use relevant equipment in performance of aerobatic manoeuvres
- Use instruments to monitor aircraft performance
- Recognise approaching max performance limitations of the aircraft
- Manage aircraft energy to achieve safe manoeuvre entry and recovery heights
- Communicate effectively with others when performing aerobatic manoeuvres
- Read, interpret and follow instructions, regulations, procedures and other information relevant to performing aerobatic manoeuvres in an aircraft
- Complete documentation related to performing aerobatic manoeuvres
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when performing aerobatic manoeuvres
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when performing aerobatic manoeuvres in accordance with regulatory requirements and workplace procedures

REQUIRED KNOWLEDGE AND SKILLS

- Implement contingency plans for unexpected events that may arise when performing aerobic manoeuvres
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the performance of aerobic manoeuvres
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self, others or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
 - applying the underpinning knowledge and skills
 - following relevant legislation and workplace procedures
 - selecting operating area within suitable airspace that allows for the completion of all aerobatic manoeuvres above the authorised minimum altitude
 - performing pre-manoeuve checks and configuration of aircraft for aerobatic manoeuvres
 - maintaining lookout using appropriate systematic scan technique
 - achieving entry airspeed for completion of all aerobatic manoeuvres
 - observing safe entry and recovery heights for all aerobatic manoeuvres

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
 - In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or

EVIDENCE GUIDE

- in an appropriate range of situations in the workplace

AVIY4062A Perform an aerobatic sequence

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to design and perform an aerobatic sequence while remaining within the aircraft's structural and engine limitations and the pilot's physiological limitations during visual flight. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) and/or AD; airspace control requirements and Day Visual Flight Rules; and aircraft control principles, regulations, safety codes, protocols and procedures required to perform an aerobatic sequence.

Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance.

Operations are conducted within a variety of operational contexts within the Australian aviation industry.

Work is performed under limited supervision.

This unit of competency is nominally packaged at Certificate IV.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Design an aerobatic sequence

- 1.1 Performance parameters are identified based on physical limitations of the pilot and structural limitations of the aircraft
- 1.2 A sequence of aerobatic manoeuvres is designed that meets a specified requirement
- 1.3 Practical transitions are included between aerobatic manoeuvres
- 1.4 Performance parameters are identified based on a combination of aircraft attitude, power setting, altitude and speed that provide go-no-go guidance for safe completion of all manoeuvres above safety height

2 Perform aerobatic sequences above specified safety height

- 2.1 Specified sequences of manoeuvres are completed in accordance with aerobatics design
- 2.2 Performance parameters required for safe completion of the manoeuvre are achieved prior to commencement
- 2.3 Orientation with display axis is maintained
- 2.4 Energy potential of the aircraft is managed to ensure completion of manoeuvres and sequences of manoeuvres within aircraft structure and minimum height limits
- 2.5 Failure to achieve performance parameters (energy requirement) to complete a manoeuvre is recognised and aircraft is managed to regain control above safety height
- 2.6 Height at or above a specified altitude is maintained

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- In Defence context, relevant Defence Orders and Instructions
- Relevant OH&S and environmental protection procedures and regulations
- Energy management principles applicable to aerobatic sequences
- Minimum height requirements to complete nose low (including pull through) to maintain above minimum height within the normal operating parameters of the aircraft
- Minimum height required to recover from a spin in the aircraft type being flown
- Unusual attitude recovery technique
- Aerodynamic principles applicable to the performance of aerobatic sequence
- Aerobatic sequence performance parameters
- Go/no-go performance criteria
- Aircraft limitations for the aircraft flown
- Environmental factors impacting the performance of aerobatic sequence
- Regulatory requirements applicable to the performance of aerobatic sequence

Required skills:

- Compensate for the secondary effects of controls
- Recognise situations which may require a precautionary landing or abandonment
- Compensate for meteorological effects on display sequence
- Operate the aircraft within its limitations, achieving optimum performance
- Identify symptoms of loss of control
- Select and use relevant equipment during aerobatics sequence
- Use instruments to monitor aircraft performance
- Recognise approaching maximum performance limitations of the aircraft
- Recognise approaching minimum safe altitude
- Communicate effectively with others when performing an aerobatic sequence
- Read, interpret and follow instructions, regulations, procedures and other information relevant to performing aerobatic sequence in an aircraft
- Complete documentation related to performing aerobatic sequence
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when performing aerobatic sequence
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and

REQUIRED KNOWLEDGE AND SKILLS

interactions with others

- Promptly report and/or rectify any identified problems that may occur when performing an aerobic sequence in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when performing aerobic sequence
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the performance of aerobic sequence
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self, others or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to perform aerobic sequence
