**Assessment Requirements for
FBPGRA3001 Work with micronutrients or
additions in stockfeed manufacturing
processes**

Release: 1

Assessment Requirements for FBPGRA3001 Work with micronutrients or additions in stockfeed manufacturing processes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence, on at least one occasion, that the individual has:

- identified and interpreted micronutrients and additives requirements from stockfeed recipes and production schedules
- related micronutrients and additives to correct stockfeed
- added micronutrient or additive to product following correct contamination, quality and sequencing procedures
- liaised with nutritionist and other professional and technical staff on micronutrients and additives requirements of stockfeed
- taken appropriate samples
- recorded use of micronutrient or additive
- generated correct labels
- applied safe work practices and identified work health and safety hazards and controls
- applied food safety procedures to work practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- contamination avoidance, quality and sequencing procedures when using micronutrients or additives in stockfeed manufacturing processes
- risk factors for cross-transference for stockfeed manufacturing
- preparation procedures required for using micronutrients and additives in stockfeed manufacturing
- sampling techniques for using micronutrients and additives in stockfeed manufacturing
- mathematical techniques to determine appropriate volume, measurement or proportion of micronutrient or additive in the manufacture of stockfeed

- withholding periods that may be required when manufacturing stockfeed
- work health and safety procedures for using micronutrients and additives in stockfeed manufacturing.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a grain processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - personal protective equipment relevant to stockfeed manufacturing in the workplace
 - sample micronutrients or additives
 - stockfeed product
 - sample product recording system
- specifications:
 - sample production schedule, customer order or standard operating procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
