Assessment Requirements for HLTAMB003 Transport emergency patients

Release: 2

Assessment Requirements for HLTAMB003 Transport emergency patients

Modification History

Release	Comments
Release 2	This version was released in <i>HLT Health Training Package release 4.1</i> . Updated Assessment Conditions to permit assessment to be performed in simulation.
Release 1	This version was released in <i>HLT Health Training Package release 3.0</i> and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment including volume and frequency requirements. Removal of pre-requisites Supersedes HLTAMBT402C.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- checked the safety of transport vehicle and safely transported 3 emergency patients under operational conditions including:
 - loading and unloading
 - performing driving skills suited to specific situations and the case being attended
 - assessing and analysing available driving routes and available resources
 - making decisions that ensure the efficient and safe driving of vehicles under different operational conditions for safe transport of emergency patients.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- methods of loading and unloading patients under life-threatening conditions

- organisation policy and procedures related to vehicle being used for transportation, equipment in vehicle and vehicle checks
- relevant Acts, regulations and organisation policies and procedures related to transport of patients including:
 - handling, lifting and transport of patients
 - care and restraint of patient during transportation
 - patient care during transportation
 - road rules in accordance with the State/Territory regulations when driving emergency vehicles
- use of communications equipment and systems for transporting emergency patients.

Assessment Conditions

Skills must be demonstrated in an operational vehicle used for the transport of an emergency patient. This may be in the workplace or in a simulated environment on 3 separate occasions. Driving skills must have been demonstrated at least once using simulation prior to any demonstration in the workplace.

Assessment must ensure the use of:

- suitable facilities, resources and equipment as per local governing body including:
- transport vehicle (emergency or non-emergency)
- communication protocols, devices and equipment used in emergency vehicles
- modelling of industry operating conditions including access to real people for simulations and scenarios in transporting emergency patients.

Emergency patient is defined as an individual requiring active treatment by a clinician while en route to a receiving facility (i.e. hospital) - simulation. It does not necessarily require activation of warning signals (emergency siren and lights).

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.
