*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Social implications</i></b> may include:	<ul style="list-style-type: none"> <li>• ethical dilemmas or issues</li> <li>• unintended social consequences and costs.</li> </ul>
<b><i>Market research</i></b> may include:	<ul style="list-style-type: none"> <li>• focus groups</li> <li>• interviews</li> <li>• mystery shopping</li> <li>• product tests</li> <li>• surveys.</li> </ul>
<b><i>Delivery strategies</i></b> may refer to decisions about:	<ul style="list-style-type: none"> <li>• consumers' perception of value for money and pricing</li> <li>• design of products or services to meet customer needs</li> <li>• distribution strategies to ensure the product or service can be delivered to or obtained easily by consumers</li> <li>• support services to ensure customer satisfaction.</li> </ul>

## Unit Sector(s)

General ICT

## ICAICT702A Direct ICT services

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to direct internal and external information and communications technology (ICT) services within a medium to large organisation.

### Application of the Unit

Chief information officers in medium to large organisations apply the skills and knowledge in this unit to direct the strategic planning, risk management and security of internal and external ICT infrastructure of their organisation.

Their job roles combine high-level management and business skills to perform strategic planning and direction of emerging and converging technologies within the ICT industry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Direct strategic planning for IT resources	1.1 Analyse <b>organisational environment</b> 1.2 Ensure compliance with legislative and social requirements 1.3 Establish priorities based on organisational need 1.4 Establish required <b>IT infrastructure</b> 1.5 Lead the development and implementation of a <b>strategic plan</b> for IT resourcing
2. Lead risk management of IT resources and processes	2.1 Lead development of strategy for <b>risk assessment</b> 2.2 Ensure risk assessment complies with <b>organisational policy</b> 2.3 Ensure <b>risk mitigation</b> based on identified risks
3. Direct quality assurance processes for IT services	3.1 Lead the development of a quality assurance strategic plan 3.2 Monitor <b>quality processes</b> 3.3 Oversee the implementation of quality assurance strategies 3.4 Ensure <b>continuous improvement</b>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - assess deficiencies in project processes and set-up
  - conduct enterprise resource planning and management
  - determine the validity of arguments
  - formulate a logical plan of action based on proposed solutions
  - investigate situations and provide recommendations and remedies
  - make effective decisions
  - probe for consistency in information or data presented
- communication, teamwork and leadership skills to:
  - act as a positive role model
  - liaise with people working across different levels and in different contexts
  - negotiate
  - prepare reports to senior management
  - read and interpret an organisation's reports, policies and procedures in order to establish and review business continuity management framework
  - resolve conflicts
- initiative, enterprise and problem-solving skills to:
  - assess vulnerabilities in organisational processes and infrastructure set-up
  - evaluate competitive technologies
  - solve problems individually and in teams in response to changing environments
  - translate a range of ideas into appropriate action
- literacy skills to:
  - interpret reports dealing with complex ideas and concepts
  - read and interpret complex technical and non-technical information from a range of sources
  - review complex and unfamiliar information
- numeracy skills to:
  - negotiate adjustments to operational budgets based on benefits-realisation plans
  - validate project estimation and cost-benefit analysis
- planning and organisational skills to:
  - apply project management methods to reduce project and financial risks
  - establish and monitor the organisation's continuous improvement and planning processes
  - oversee project programs
- research skills to undertake the necessary background research for the development and monitoring of the strategic management plans
- technology skills to:
  - compare and recommend new technology solutions to improve organisational outcomes

- evaluate complex information technology issues within the organisation's environment.

### **Required knowledge**

- AS/NZS ISO 31000:2009 Risk management
- business continuity issues for the organisation
- organisation's industry and current functionality, including existing data and information systems
- organisation's internal and external dependencies and interdependencies
- organisational policies and procedures, including risk-management strategy
- past and current internal, external and industry disruptions
- relevant legislation and regulations that impact on business continuity, such as OHS, environment, duty of care, contract, company, freedom of information, industrial relations, privacy and confidentiality, due diligence, and records management.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop a strategy to align IT services with organisational goals</li> <li>• conduct risk analysis, including security for IT assets and implement procedures that identify where risk occurs and what measures need to be taken to handle the risk</li> <li>• produce contingency plans for business continuity</li> <li>• establish warning systems and an ongoing process that includes regular or programmed reviews of the risk profile</li> <li>• confirm sufficient knowledge of security products and organisational security policy</li> <li>• develop strategy for the implementation of appropriate processes and procedures that ensure that quality expectations are met.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• relevant strategic level enterprise documentation, including planning, financial, and IT infrastructure documentation</li> <li>• relevant legislative policies.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans</li> <li>• portfolio of the project work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Organisational environment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• business or management structure</li> <li>• conglomerate of business entities</li> <li>• external environment in which a business is operating, including contractors and externally provided services</li> <li>• specific business entity</li> <li>• way in which organisational members perceive and characterise their environment in an attitudinal and value-based manner.</li> </ul>
<p><b><i>IT infrastructure</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• architecture requirements:             <ul style="list-style-type: none"> <li>• hardware</li> <li>• software</li> </ul> </li> <li>• business, system, application, network, or people in the organisation</li> <li>• comparing and contrasting expected performance criteria against vendor proposed offerings</li> <li>• databases, applications, servers, operating system, gateways, application service provider (ASP) and internet service provider (ISP)</li> <li>• work stations, personal computers, modems or other connectivity devices, networks, remote sites, and servers.</li> </ul>
<p><b><i>Strategic plan</i></b> may relate to:</p>	<ul style="list-style-type: none"> <li>• components from separate disciplines, such as IT or human resources</li> <li>• mission, vision and values</li> <li>• objectives and targets</li> <li>• organisational environment</li> <li>• part of organisational strategic plan or a stand-alone document</li> <li>• process of the organisation's definition of its strategy or direction, and making decisions on allocating its resources to pursue this strategy, including its capital and people.</li> </ul>
<p><b><i>Risk assessment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• coordinated and economical application of resources to minimise, monitor and control the probability or impact of unfortunate events or to maximise the realisation of opportunities</li> <li>• establishment of a secure environment for IT assets</li> </ul>

	<ul style="list-style-type: none"> <li>• identification, assessment and prioritisation of risks</li> <li>• risk plans, gathering information, identifying threats, evaluating threats, developing scenarios, ranking risk, identifying counter measures, reporting and following up.</li> </ul>
<b>Organisational policy</b> may refer to:	<ul style="list-style-type: none"> <li>• documentation internal to the organisation that guides actions that are particular to the organisation issuing the policy, and guides processes that are most likely to achieve a desired outcome</li> <li>• process of making important organisational decisions, including the identification of different alternatives, such as programs or spending priorities, and choosing among them on the basis of the impact they will have</li> <li>• political, management, financial and administrative mechanisms arranged to reach explicit goals.</li> </ul>
<b>Risk mitigation</b> may include:	<ul style="list-style-type: none"> <li>• identification of one or more potential solutions to reduce or remove each risk if it arises</li> <li>• implementation of policies or actions that identify risks in an existing or planned process.</li> </ul>
<b>Quality processes:</b>	<ul style="list-style-type: none"> <li>• may refer to: <ul style="list-style-type: none"> <li>• processes that analyse quality to make sure it conforms to specific requirements and complies with established plans</li> <li>• processes, authorisations and responsibilities for quality control, quality assurance, continuous improvement, communications and responsibilities</li> </ul> </li> <li>• may contain: <ul style="list-style-type: none"> <li>• critical success factors</li> <li>• measurement criteria</li> <li>• inspection, audit, report and review procedures.</li> </ul> </li> </ul>
<b>Continuous improvement</b> may include:	<ul style="list-style-type: none"> <li>• efforts that seek incremental improvement over time or breakthrough improvement at once</li> <li>• ongoing effort to improve products, services or processes</li> <li>• processes that are constantly evaluated and improved in the light of their efficiency, effectiveness and flexibility.</li> </ul>

## Unit Sector(s)

General ICT

# ICAICT703A Endorse business plan components for a new initiative

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to construct a business plan for a new initiative, including marketing, operations, organisational and financial plans within a medium to large organisation.

## Application of the Unit

Chief information officers in medium to large organisations apply the skills and knowledge in this unit to direct the strategic planning, risk management and security of internal and external information and communications technology (ICT) infrastructure of their organisation.

Their job roles combine high-level management and business skills to perform strategic planning and direction of emerging and converging technologies within the ICT industry.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Endorse a marketing plan for IT business	1.1 Ensure internal and external <b><i>environmental issues</i></b> are addressed 1.2 Review feasibility of target market projections 1.3 Endorse selection of advertising and promotional strategies
2. Endorse the operation plan	2.1 Verify <b><i>scope</i></b> of business operation plan 2.2 Ensure business plan complies with business needs 2.3 Endorse criteria for <b><i>quality processes</i></b> against <b><i>organisational standards</i></b>
3. Endorse the organisational plan	3.1 Analyse and review the organisational structure 3.2 Ensure the organisational structure meets the organisation's strategic plans and directions
4. Endorse the financial plan	4.1 Endorse financial strategy for the new initiative 4.2 Evaluate expected cash-flow projections 4.3 Analyse and evaluate the effects of financial decisions on the ability of the organisation to meet planned outcomes 4.4 Ensure financial risk-management procedures according to organisational requirements 4.5 Ensure early detection and remedial action plans for deviations in budget objectives and projections

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to conduct enterprise resource planning and management
- communication skills to:
  - resolve conflict
  - negotiate with clients and internal staff
  - prepare reports to senior management
  - read and interpret an organisation's reports, policies and procedures to establish and review business continuity-management framework
- initiative, enterprise and problem-solving skills to:
  - act as a positive role model
  - assess vulnerabilities in organisational processes and infrastructure set-up
  - evaluate competitive technologies
  - solve problems individually and in teams in response to changing environments
  - translate a range of ideas into appropriate action
- planning and organisational skills to:
  - establish and monitor the organisation's continuous improvement and planning processes
  - manage teams
  - undertake the necessary background research for the development and monitoring of the strategic management plans
- technology skills to:
  - compare and recommend new technology solutions to improve organisational outcomes
  - evaluate complex information technology issues within the organisation's environment.

### Required knowledge

- AS/NZS ISO 31000:2009 Risk management
- business continuity issues for the organisation
- organisation's industry and current functionality, including existing data and information systems
- organisation's internal and external dependencies and interdependencies
- organisational policies and procedures, including risk-management strategy
- past and current internal, external and industry disruptions
- relevant legislation and regulations that impact on business continuity, such as OHS, environment, duty of care, contract, company, freedom of information, industrial relations, privacy and confidentiality, due diligence and records management.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop a strategy to align IT services with organisational goals</li> <li>• conduct risk analysis, including security for IT assets and implement procedures that identify where risk occurs and what measures need to be taken to handle the risk</li> <li>• produce contingency plans for business continuity</li> <li>• establish warning systems and an ongoing process that includes regular or programmed reviews of the risk profile</li> <li>• confirm sufficient knowledge of security products and organisational security policy</li> <li>• develop strategy for the implementation of appropriate processes and procedures that ensure that quality expectations are met.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• relevant strategic-level enterprise documentation, including planning, financial and IT infrastructure documentation</li> <li>• relevant legislative policies.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning of candidate to assess required knowledge and skills</li> <li>• review of reports and implementation plans</li> <li>• review of a portfolio of the project work prepared by candidate.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Environmental issues</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• auditing</li> <li>• workplace culture</li> <li>• legal</li> <li>• markets</li> <li>• multiple languages</li> <li>• policy</li> <li>• regulation.</li> </ul>
<p><b><i>Scope</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• customer acceptance criteria</li> <li>• description of outcomes (deliverables)</li> <li>• equipment and software to be installed</li> <li>• financials</li> <li>• milestones and timelines</li> <li>• project constraints</li> <li>• project objectives</li> <li>• resources required</li> <li>• roles of involved parties.</li> </ul>
<p><b><i>Quality processes</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• AS 3925.1-1994 Software quality assurance - plans</li> <li>• AS/NZS4258:1994 Software user documentation process</li> <li>• AS/NZS ISO/IEC 12207:1997 Information technology - Software life cycle processes</li> <li>• AS/NZS 14102:1998 Information technology guideline for evaluation and selection of CASE tools</li> <li>• cost savings</li> <li>• performance</li> <li>• quality</li> <li>• technical</li> <li>• various processes, depending on type of organisation.</li> </ul>
<p><b><i>Organisational standards</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• audit requirements</li> <li>• codes, including codes of practice</li> <li>• credit procedures</li> <li>• customer protection and trade practices</li> <li>• duty of care</li> <li>• enterprise agreements</li> <li>• equal employment opportunity (EEO)</li> </ul>

## Unit Sector(s)

General ICT

## ICAICT704A Direct ICT in a supply chain

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to direct information and communications technology (ICT) in the supply chain for a medium to large organisation.

### Application of the Unit

Chief information officers in medium to large organisations apply the skills and knowledge in this unit to direct the effective use of ICT in the support of critical supply chain processes.

Their job roles combine high-level management and business skills to perform strategic planning and direction of emerging and converging technologies within the ICT industry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify current or proposed supply chain infrastructure	<p>1.1 Critically evaluate key principles of <b><i>supply chain</i></b> management</p> <p>1.2 Identify supply chain processes in the organisation from operational and business perspectives</p> <p>1.3 Identify and review management and operational links to external organisations</p> <p>1.4 Identify current chains, network processes, service and performance objectives</p>
2. Direct ICT strategy to support supply chain processes	<p>2.1 Develop strategy to align ICT technical resources with identified supply chain processes</p> <p>2.2 Build <b><i>communication model</i></b> to improve the integration and sharing of critical business information between decision makers, operations and technical divisions</p> <p>2.3 Identify the <b><i>key performance indicators</i></b> that will track progress against the strategic company objectives</p>
3. Lead risk management of supply chain ICT support services	<p>3.1 Lead development of strategy for <b><i>risk assessment</i></b> of internal and external supply chain processes</p> <p>3.2 Assess risk assessment to ensure it complies with <b><i>organisational policy</i></b></p> <p>3.3 Mitigate identified risks</p>
4. Direct quality assurance processes for supply chain ICT support services	<p>4.1 Implement strategies to monitor <b><i>performance levels</i></b> of supply chain ICT support services</p> <p>4.2 Ensure <b><i>continuous improvement</i></b> of supply chain ICT support services</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - conduct enterprise resource planning and management
  - investigate a critical incident and provide recommendations and remedies
- communication skills to:
  - resolve conflict
  - negotiate prices and support with vendors
- literacy skills to:
  - prepare reports to senior management
  - present and articulate complex information and ideas clearly to an appropriate audience
  - read and interpret an organisation's reports, policies and procedures in order to establish and review business continuity management framework
- initiative, enterprise and problem-solving skills to:
  - act as a positive role model
  - assess vulnerabilities in organisational processes and infrastructure set-up
  - evaluate competitive technologies
  - solve problems individually and in teams in response to changing environments
  - translate a range of ideas into appropriate action
- planning and organisational skills to:
  - establish and monitor the organisation's continuous improvement and planning processes
  - undertake the necessary background research for the development and monitoring of strategic management plans
- technology skills to:
  - compare and recommend new technology solutions to improve organisational outcomes
  - evaluate complex information technology issues within the organisation's environment.

### Required knowledge

- business continuity issues for the organisation
- organisation's industry and current functionality, including existing data and information systems
- organisation's internal and external dependencies and interdependencies
- organisational policies and procedures, including risk-management strategy
- past and current internal, external and industry disruptions

- relevant legislation and regulations that impact on business continuity, such as OHS, environment, duty of care, contract, company, freedom of information, industrial relations, privacy and confidentiality, due diligence and records management.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop strategic directions for supply chain management in alignment with organisational goals</li> <li>• develop policy for supply chain processes</li> <li>• conduct risk analysis on ICT support of supply chain processes and implement procedures that identify where risk occurs and what measures need to be taken to mitigate the risk</li> <li>• develop continuous improvement plan for ICT support of supply chain processes.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• relevant strategic level enterprise documentation, including planning, financial and ICT infrastructure documentation</li> <li>• relevant legislative policies.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans</li> <li>• a portfolio of the project work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to direct information and communications technology (ICT) procurement for a medium to large organisation.

### Application of the Unit

Chief information officers in medium to large organisations apply the skills and knowledge in this unit to direct ICT procurement strategy and policy.

Their job roles combine high-level management and business skills to perform strategic planning and direction of emerging and converging technologies within the ICT industry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Evaluate the procurement processes of the organisation	1.1 Identify existing IT <b>procurement</b> processes in the organisation 1.2 Establish evaluation criteria for procurement processes 1.3 Evaluate procurement processes against criteria
2. Direct strategic planning to support IT procurement	2.1 Establish priorities based on organisational need 2.2 Lead the development of strategy to align IT procurement with the organisational goals and objectives 2.3 Implement IT procurement <b>strategic plan</b> 2.4 Develop procurement policy, including vendor selection based on strategic plan
3. Lead risk management of IT procurement	3.1 Lead development of strategy for <b>risk assessment</b> of IT procurement activities 3.2 Ensure IT procurement complies with <b>organisational policy</b> 3.3 Ensure <b>risk mitigation</b> based on identified risks 3.4 Ensure <b>continuous improvement</b> of IT procurement processes

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - conduct enterprise resource planning and management
  - critically evaluate the key principles of procurement
  - determine the validity of arguments
  - evaluate procurement contract proposals
  - formulate a logical plan of action based on proposed solutions
  - investigate situations and provide recommendations and remedies
  - make effective decisions
  - probe for consistency in information or data presented
- communication, teamwork and leadership skills to:
  - liaise with people working across different levels and in different contexts (e.g. operational staff, government officials)
  - prepare reports to senior management
  - read and interpret an organisation's reports, policies and procedures to establish and review business continuity management framework
  - resolve conflicts
- initiative, enterprise and problem-solving skills to:
  - assess vulnerabilities in organisational processes and infrastructure set-up
  - develop and refine strategies to ensure that procurement processes align with organisational needs
  - evaluate competitive technologies
  - solve problems individually and in teams in response to changing environments
  - translate a range of ideas into appropriate action
- literacy skills to:
  - interpret reports dealing with complex ideas and concepts
  - review complex and unfamiliar information
- numeracy skills to:
  - negotiate adjustments to operational budgets based on benefits realisation plans
  - validate procurement estimation and cost-benefit analysis
- planning and organisational skills to establish and monitor the organisation's procurement processes
- research skills to:
  - locate and interrogate complex and varied sources of information
  - undertake the necessary background research for the development and monitoring of the strategic procurement plans
- technology skills to:
  - compare and recommend new technology solutions to improve organisational outcomes

- apply understanding of complex information technology issues within the organisation's environment.

### **Required knowledge**

- AS/NZS ISO 31000:2009 Risk management
- business continuity issues for the organisation
- organisation's industry and current functionality, including existing data and information systems
- organisation's internal and external dependencies and interdependencies
- organisational policies and procedures, including risk management strategy
- past and current internal, external and industry disruptions
- relevant legislation and regulations that impact on business continuity, such as OHS, environment, duty of care, contract, company, freedom of information, industrial relations, privacy and confidentiality, due diligence and records management
- key principles of procurement.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop a strategy to align IT procurement with organisational goals</li> <li>• undertake direct risk analysis of IT procurement activities and implement procedures that identify where risk occurs and what measures need to be taken to handle the risk</li> <li>• establish warning systems and an ongoing process that includes regular or programmed reviews of the risk profile</li> <li>• develop strategy for the implementation of appropriate processes and procedures that ensure that quality expectations are met.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• relevant strategic level enterprise documentation, including planning, financial and IT infrastructure documentation</li> <li>• relevant legislative policies.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans</li> <li>• review of a portfolio of the project work undertaken.</li> </ul> <p>The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and</p>

	<p>the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Procurement</b> may relate to:	<ul style="list-style-type: none"> <li>• acquisition of appropriate goods and services at the best possible total cost of ownership to meet the needs of the purchaser in terms of:             <ul style="list-style-type: none"> <li>• location</li> <li>• quality</li> <li>• quantity</li> <li>• time.</li> </ul> </li> </ul>
<b>Strategic plan</b> may include:	<ul style="list-style-type: none"> <li>• components from separate disciplines, such as IT or human resources</li> <li>• mission, vision and values</li> <li>• objectives and targets</li> <li>• organisational environment</li> <li>• part of organisational strategic plan or a stand-alone document</li> <li>• process map outlining organisation's decision-making strategies on resource allocation, including its capital and people.</li> </ul>
<b>Risk assessment</b> may include:	<ul style="list-style-type: none"> <li>• coordinated and economical application of resources to minimise, monitor and control the probability or impact of unfortunate events or to maximise the realisation of opportunities</li> <li>• establishment of a secure environment for IT assets</li> <li>• risk plans</li> <li>• gathering information</li> <li>• identifying, assessing and prioritising risks</li> <li>• identifying and evaluating threats</li> <li>• developing scenarios</li> <li>• ranking risk</li> <li>• identifying counter measures</li> <li>• reporting and following up.</li> </ul>
<b>Organisational policy</b> may refer to:	<ul style="list-style-type: none"> <li>• documentation internal to the organisation that guides actions that are particular to the organisation issuing the policy, and guides processes that are most likely to achieve a desired outcome</li> <li>• process of making important organisational decisions,</li> </ul>

	<p>including the identification of different alternatives, such as programs or spending priorities, and choosing among them on the basis of the impact they will have</p> <ul style="list-style-type: none"> <li>• political, management, financial and administrative mechanisms arranged to reach explicit goals.</li> </ul>
<i>Risk mitigation</i> may include:	<ul style="list-style-type: none"> <li>• identification of one or more potential solutions to reduce or remove each risk if it arises</li> <li>• implementation of policies or actions that identify risks in an existing or planned process.</li> </ul>
<i>Continuous improvement</i> may include:	<ul style="list-style-type: none"> <li>• efforts that seek incremental improvement over time or breakthrough improvement at once</li> <li>• ongoing effort to improve products, services or processes</li> <li>• processes that are constantly evaluated and improved in the light of their efficiency, effectiveness and flexibility.</li> </ul>

## Unit Sector(s)

General ICT

## ICAICT706A Direct outsourced ICT services

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICA11 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to direct outsourced information and communications technology (ICT) services for a medium to large organisation.

The management of this new arrangement is through a contract that may include a service level agreement (SLA). Setting, tracking and managing SLAs are an important part of outsourcing relationship management (ORM) discipline.

### Application of the Unit

Chief information officers in medium to large organisations apply the skills and knowledge in this unit to direct the strategic planning, risk management and security of outsourced and virtualised ICT services for their organisation.

Their job roles combine high-level management and business skills to perform strategic planning and direction of emerging and converging technologies within the ICT industry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Direct strategic planning for outsourced IT services	1.1 Identify <b><i>IT services to be outsourced</i></b> 1.2 Establish criteria for <b><i>outsourcing model</i></b> 1.3 Analyse impact on current <b><i>organisational environment</i></b> 1.4 Select an appropriate <b><i>business model</i></b> for outsourcing against identified criteria 1.5 Research appropriate <b><i>IT service providers (vendor evaluation)</i></b> against identified criteria 1.6 Develop the <b><i>strategic plan</i></b> for outsourced IT services
2. Lead risk management of outsourced IT services	2.1 Specify relevant <b><i>security requirements</i></b> 2.2 Lead development of <b><i>change-management strategy</i></b> 2.3 Negotiate performance and <b><i>security strategy</i></b> with IT service provider 2.4 Ensure risk assessment process undertaken for outsourced services complies with <b><i>organisational policy</i></b> 2.5 Ensure <b><i>risk mitigation</i></b> addresses identified risks
3. Monitor performance levels of outsourced IT service performance agreement	3.1 Develop external IT provider <b><i>SLAs</i></b> 3.2 Ensure external IT service provider agreed <b><i>performance levels</i></b> are maintained 3.3 Monitor the setting, tracking and management of SLAs as an important part of <b><i>outsourcing relationship management (ORM)</i></b> 3.4 Ensure <b><i>continuous improvement</i></b> of outsourced IT services

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - conduct enterprise resource planning and management
  - investigate a critical incident and provide recommendations and remedies
- communication skills to:
  - resolve conflict
  - prepare reports to senior management
  - present and articulate complex information and ideas clearly
  - read and interpret an organisation's reports, policies and procedures to establish and review business continuity management framework
- initiative, enterprise and problem-solving skills to:
  - act as a positive role model
  - assess vulnerabilities in organisational processes and infrastructure set-up
  - evaluate competitive technologies
  - solve problems individually and in teams in response to changing environments
  - translate a range of ideas into appropriate action
- planning and organisational skills to:
  - establish and monitor organisation's continuous improvement and planning processes
  - undertake the necessary background research for the development and monitoring of the strategic management plans
- technology skills to:
  - compare and recommend new technology solutions to improve organisational outcomes
  - evaluate complex information technology issues within the organisation's environment.

### Required knowledge

- AS/NZS ISO 31000:2009 Risk management
- business continuity issues for the organisation
- organisation's current functionality, including existing data and information systems
- organisation's internal and external dependencies and interdependencies
- organisational policies and procedures, including risk management strategy
- past and current internal, external and industry disruptions
- relevant legislation and regulations that impact on business continuity, such as OHS, environment, duty of care, contract, company, freedom of information, industrial relations, privacy and confidentiality, due diligence and records management
- organisation's industry.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop strategic directions for outsourcing of IT resources in alignment with organisational goals</li> <li>• conduct risk analysis on outsourced IT services and implement procedures that identify where risk occurs and what measures need to be taken to handle the risk</li> <li>• produce contingency plans in cooperation with external parties</li> <li>• establish warning systems and an ongoing process that includes regular or programmed reviews of the risk profile of outsourced IT services</li> <li>• negotiate and monitor SLAs with external clients.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• relevant strategic level enterprise documentation, including planning, financial and IT infrastructure documentation</li> <li>• relevant legislative policies.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans</li> <li>• review of a portfolio of the project work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level,</p>

	<p>language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>IT services to be outsourced</i></b> may include:	<ul style="list-style-type: none"> <li>• backup or recovery</li> <li>• data cleansing</li> <li>• data storage</li> <li>• disaster recovery</li> <li>• hardware, software or network support</li> <li>• help desk</li> <li>• network infrastructure</li> <li>• programming.</li> </ul>
<b><i>Outsourcing model</i></b> refers to:	<ul style="list-style-type: none"> <li>• business model for the procurement of external services approved by the organisation</li> <li>• financial penalties and the right to terminate if SLAs are consistently missed</li> <li>• transfer of responsibility from an organisation to a supplier.</li> </ul>
<b><i>Organisational environment</i></b> may include:	<ul style="list-style-type: none"> <li>• business or management structure</li> <li>• conglomerate of business entities</li> <li>• external environment in which a business is operating, including contractors and externally provided services</li> <li>• specific business entity</li> <li>• way in which organisational members perceive and characterise their environment in an attitudinal and value-based manner.</li> </ul>
<b><i>Business model</i></b> may include:	<ul style="list-style-type: none"> <li>• broad range of formal and informal descriptions to represent core aspects of a business, including purpose, offerings, strategies, infrastructure, organisational structures, trading practices, and operational processes and policies</li> <li>• business, system, application, network or people in the organisation</li> <li>• framework or strategy to enable business targets to be met.</li> </ul>
<b><i>IT service providers (vendor evaluation)</i></b> may include:	<ul style="list-style-type: none"> <li>• individuals or organisations contracted to provide services to the organisation to achieve financial or operational targets</li> <li>• internal departments, external organisations, individual people and employees.</li> </ul>
<b><i>Strategic plan</i></b> may include:	<ul style="list-style-type: none"> <li>• components from separate disciplines, such as IT or human resources</li> </ul>

	<ul style="list-style-type: none"> <li>• mission, vision and values</li> <li>• objectives and targets</li> <li>• organisational environment</li> <li>• part of organisational strategic plan or a stand-alone document</li> <li>• process of the organisation's definition of its strategy or direction, and making decisions on allocating its resources to pursue this strategy, including its capital and people.</li> </ul>
<b><i>Security requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• plans to address theft, viruses, standards (including archival, backup, network), privacy, audits, alerts and usually relate directly to security objectives of organisation</li> <li>• relevant government legislation, organisational security policies, customs, expertise and knowledge</li> <li>• system in terms of databases, applications, servers, operating system, gateways, application service provider (ASP) and internet service provider (ISP)</li> <li>• threats relating to eavesdropping, manipulation, impersonation, penetration, denial of service and by-pass, hackers and viruses</li> <li>• threats to security that are, or are held to be, present in the environment, encryption, passwords, hardware, authentication and policies.</li> </ul>
<b><i>Change-management strategy</i></b> may refer to:	<ul style="list-style-type: none"> <li>• benchmarks that could include technical, cost savings, performance and quality benchmarks</li> <li>• business, system, application, network or people in the organisation</li> <li>• change procedures that are verbal, documented, process-based, socially-based or incremental, and may be the result of an impact on quality, cost or OHS</li> <li>• department within the organisation or a third party</li> <li>• formal procedures that must be adhered to</li> <li>• stakeholders, including end user, internal or external client, government body, corporate body and community groups.</li> </ul>
<b><i>Security strategy</i></b> may include:	<ul style="list-style-type: none"> <li>• person within a department, a department within the organisation or a third party</li> <li>• privacy, authentication, authorisation and integrity, and usually relates directly to the security objectives of the organisation.</li> </ul>
<b><i>Organisational policy</i></b> may refer to:	<ul style="list-style-type: none"> <li>• documentation internal to the organisation that guides actions that are particular to the organisation issuing the policy, and guides processes that are most likely to achieve a desired outcome</li> <li>• process of making important organisational decisions, including the identification of different alternatives, such as programs or spending priorities, and choosing among them</li> </ul>

	<p>on the basis of the impact they will have</p> <ul style="list-style-type: none"> <li>political, management, financial and administrative mechanisms arranged to reach explicit goals.</li> </ul>
<b>Risk mitigation</b> may include:	<ul style="list-style-type: none"> <li>identification of one or more potential solutions to reduce or remove each risk if it arises</li> <li>implementation of policies or actions that identify risks in an existing or planned process.</li> </ul>
<b>SLAs</b> may refer to:	<ul style="list-style-type: none"> <li>common understanding about services, priorities, responsibilities, guarantees and warranties</li> <li>negotiated agreement between two parties where one is the customer and the other is the service provider; this can be a legally binding formal or informal 'contract'</li> <li>part of a service contract where the level of service is formally defined</li> <li>specific SLAs that are negotiated up front as part of the outsourcing contract, and are used as one of the primary tools of outsourcing governance.</li> </ul>
<b>Performance levels</b> may refer to:	<ul style="list-style-type: none"> <li>contracted delivery time or performance of the service</li> <li>levels of availability, serviceability, performance, operation, or other attributes of the service, such as billing.</li> </ul>
<b>Outsourcing relationship management</b> may refer to:	<ul style="list-style-type: none"> <li>elements of organisational structure, management strategy and information technology infrastructure</li> <li>management of one or more external service providers as part of an outsourcing strategy</li> <li>the three aspects of ORM that companies typically pursue as part of their outsourcing strategy: <ul style="list-style-type: none"> <li>IT infrastructure</li> <li>management strategy</li> <li>organisational structure.</li> </ul> </li> </ul>
<b>Continuous improvement</b> may relate to:	<ul style="list-style-type: none"> <li>efforts that seek incremental improvement over time or breakthrough improvement at once</li> <li>ongoing effort to improve products, services or processes</li> <li>processes that are constantly evaluated and improved in the light of their efficiency, effectiveness and flexibility.</li> </ul>

## Unit Sector(s)

General ICT

# ICAICT707A Direct research and business response to new ICT technology

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to direct the research, and plan the business response, to new and emerging technologies in the information and communications technology (ICT) sector. It includes the directing of research, vendor evaluation, feasibility study and proof of concept of these new and emerging ICT technologies.

## Application of the Unit

Chief information officers in medium to large organisations apply the skills and knowledge in this unit to direct the investigation and future business direction of new ICT technology in their organisation.

Their job roles combine high-level management and business skills combined with technical experience to perform investigations into the business direction for new and emerging ICT technologies in their organisation.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Direct initial research into new ICT technologies</p>	<p>1.1 Establish and implement procedures to identify <i>new ICT technology</i> that may support <i>business innovation</i></p> <p>1.2 Confirm <i>research purpose</i> for the evaluation of new ICT technology as it relates to possible <i>business opportunities</i></p> <p>1.3 Ensure a <i>structured research plan</i> is prepared in line with the defined research purpose</p> <p>1.4 Monitor the implementation of the structured research plan to ensure its outcomes meets the identified research purpose</p> <p>1.5 Formulate <i>business case</i> relating to new ICT technology, including consideration of <i>organisational environment</i></p> <p>1.6 Present business case to the <i>business stakeholders</i> so that the future business direction is established and agreed</p>
<p>2. Direct evaluation of new ICT technology</p>	<p>2.1 Establish <i>evaluation criteria</i> and methods of measurement</p> <p>2.2 Ensure suitable <i>suppliers and vendors</i> are appropriately evaluated to provide credibility, quality and support for implementation</p> <p>2.3 Oversee the preparation of <i>feasibility study</i> report into new ICT technology ensuring critical <i>risks</i> are identified</p> <p>2.4 Ensure feasibility study of new ICT technology is accurately presented to business stakeholders so that the future business direction is established and agreed</p>
<p>3. Direct the proof of concept evaluation of new ICT technology</p>	<p>3.1 Ensure vendor's new ICT technology is legally acquired for <i>proof of concept</i> (POC) evaluation of new ICT technology</p> <p>3.2 Establish <i>project requirements</i>, including <i>deliverables</i>, for POC evaluation</p> <p>3.3 Endorse <i>project plan</i> for POC evaluation</p> <p>3.4 Monitor implementation of POC evaluation project to ensure project deliverables are met</p>
<p>4. Determine future business response to new ICT technology</p>	<p>4.1 Oversee preparation of report on evaluation of new ICT technology, including the consequences of not implementing it</p> <p>4.2 Ensure results of new ICT technology evaluation are accurately presented to stakeholders so that the future <i>business response</i> is established and agreed</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate and synthesise information from diverse range of sources
- communication skills to:
  - convey complex and abstract concepts and information in plain English
  - liaise with internal and external personnel on technical, operational and business-related matters
- group facilitation and presentation skills to:
  - gain consensus on concepts and new proposals
  - transfer and collect information
- literacy skills to:
  - interpret manuals
  - process and present written and verbal information to a diverse range of people
  - write reports, design solutions, summarise findings and recommendations in required formats in plain English
- numeracy skills to assess costs, benefits and business options
- planning skills to:
  - estimate scope, time, cost and quality
  - plan communications and risk management
- problem-solving skills to:
  - resolve unpredictable problems, with reference to the new ICT technology
  - solve unknown problems in a range of contexts, particularly in developing new approaches with new ICT technology
- research skills to:
  - determine requirements
  - source information from a diverse range of resources
- safety awareness skills to:
  - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
  - ensure required level of attention to detail to work without injury to self or others, or damage to goods or equipment
  - foresee the possible OHS implications of the new ICT technology
- teamwork skills to contribute to investigating new ICT technology for new roles in the workplace.

### Required knowledge

- business knowledge in:
  - client business domain, business function, processes and organisation

- components of the business planning process relevant to the investigation of the particular new ICT technology
- current business practices related to conducting investigation into new ICT technology
- customer and business liaison
- information gathering and presentation techniques
- quality assurance practices, to promote reliable investigation processes
- client business needs, with a view to expanding into new possibilities, as presented by new ICT technology
- ICT knowledge in:
  - broad knowledge of vendor product directions
  - current ICT industry-accepted technologies, including broad knowledge of general features and capabilities, with particular reference to emerging ICT trends
  - current industry and technology information sources
  - industry networks, key individuals and organisations within the ICT industry
  - evaluating new ICT technology.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• research and evaluate appropriate new ICT technology for an organisational need</li> <li>• convey and access conceptual information regarding new ICT technology in relation to organisational needs.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• relevant documentation, feasibility studies and equipment manuals</li> <li>• other site-related documentation.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• the preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace project</li> <li>• direct observation of the candidate carrying out project work</li> <li>• review of reports and plans completed by the candidate</li> <li>• verbal or written questioning to assess knowledge of organisational procedures</li> <li>• review of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>New ICT technology</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• hardware technologies:             <ul style="list-style-type: none"> <li>• cloud computing appliances such IBM Cloudburst</li> <li>• hardware enterprise service bus (ESB)</li> <li>• multi-core or multi-threading processors</li> <li>• service-oriented architecture (SOA) appliances</li> </ul> </li> <li>• mobile technologies:             <ul style="list-style-type: none"> <li>• third generation cellular radio for mobile technology (3G)</li> <li>• digital signature technology for mobile phone users</li> <li>• global system for mobile (GSM) communications</li> <li>• location-based services for mobiles</li> </ul> </li> <li>• networking technologies:             <ul style="list-style-type: none"> <li>• access gateways</li> <li>• Bluetooth chips for wireless connections over short distances</li> <li>• computer telephony integration</li> <li>• enhanced data rates for GSM evolution (EDGE) to increase GSM network capacity and data rates</li> <li>• fax gateways</li> <li>• general packet radio services (GPRS)</li> <li>• internet telephony</li> <li>• universal mobile telephony system (UMTS)</li> <li>• wireless application protocol (WAP)</li> <li>• xDSL technologies, such as asymmetric digital subscriber line (ADSL)</li> </ul> </li> <li>• software technologies:             <ul style="list-style-type: none"> <li>• virtualisation</li> <li>• voice verification technology</li> </ul> </li> <li>• web technologies:             <ul style="list-style-type: none"> <li>• cloud computing</li> <li>• business to business electronic data transfer:                 <ul style="list-style-type: none"> <li>• United Nations Electronic Data Interchange for Administration Commerce and Transport</li> </ul> </li> </ul> </li> </ul>
--	--

	<p>(UN/EDIFACT)</p> <ul style="list-style-type: none"> <li>• web browsers</li> <li>• XML via internet.</li> </ul>
<b><i>Business innovation</i></b> may relate to:	<ul style="list-style-type: none"> <li>• adaptation or change to a process, procedure, product, service or system</li> <li>• new initiatives to the organisation.</li> </ul>
<b><i>Research purpose</i></b> may be contained in documents:	<ul style="list-style-type: none"> <li>• agreements</li> <li>• business strategy documents</li> <li>• ICT strategy documents</li> <li>• project brief</li> <li>• research brief.</li> </ul>
<b><i>Business opportunities</i></b> may relate to:	<ul style="list-style-type: none"> <li>• ideas for the general development or advancement of an organisation and its programs, services and products through business process re-engineering</li> <li>• ideas to create profits or assets for an organisation.</li> </ul>
<b><i>Structured research plan</i></b> may relate to:	<ul style="list-style-type: none"> <li>• planning document, outlining the methods and proposed areas of research into the new ICT technology</li> <li>• information on new ICT technology sourced from a wide range: <ul style="list-style-type: none"> <li>• archives</li> <li>• community organisations</li> <li>• computer data, including internet</li> <li>• discussions with current industry practitioners</li> <li>• discussions with industry personnel, manufacturers, and technical and sales personnel</li> <li>• government departments</li> <li>• industry associations and organisations</li> <li>• industry journals</li> <li>• libraries (such as text, film, video, sound, graphic)</li> <li>• media (such as film, television, radio, newspapers, multimedia)</li> <li>• media archives</li> <li>• museums and galleries</li> <li>• organisational policies, procedures and journals</li> <li>• personal observations and experience</li> <li>• professional organisations</li> <li>• reference books</li> <li>• technical publications and manuals.</li> </ul> </li> </ul>
<b><i>Business case</i></b> may relate to:	<ul style="list-style-type: none"> <li>• analysis of potential impact of research on organisational environment</li> <li>• initial costing and return on investment for the adoption of</li> </ul>

	<p>the technology</p> <ul style="list-style-type: none"> <li>report identifying the suitability and potential application of new ICT technology based on the research findings.</li> </ul>

<p><b>Business stakeholders</b> may include:</p>	<ul style="list-style-type: none"> <li>customers</li> <li>departments within organisation</li> <li>federal government</li> <li>local government</li> <li>management</li> <li>non-government organisations</li> <li>shareholders</li> <li>staff</li> </ul>

	<ul style="list-style-type: none"> <li>state government</li> <li>suppliers.</li> </ul>
<b>Evaluation criteria</b> may relate to:	<ul style="list-style-type: none"> <li>measures for monitoring and evaluating the efficiency and effectiveness of new ICT technology.</li> </ul>
<b>Suppliers and vendors</b> may include:	<ul style="list-style-type: none"> <li>businesses, organisations or bodies providing new ICT technology to the organisation</li> <li>commercial or open-source technologies</li> <li>profit or not-for-profit</li> <li>local, national or international businesses.</li> </ul>
<b>Feasibility study</b> may relate to:	<ul style="list-style-type: none"> <li>study conducted to determine whether feasible solutions exist to a business problem, prior to the commitment of substantial resources.</li> </ul>
<b>Risks</b> may include:	<ul style="list-style-type: none"> <li>damage to property or equipment</li> <li>environmental</li> <li>equipment or system failures</li> <li>financial, such as economic loss or failure</li> <li>industrial disputation</li> <li>natural disasters</li> <li>OHS, including disease</li> <li>political events</li> <li>product failure</li> <li>professional incompetence</li> <li>security failure, including criminal or terrorist activities.</li> </ul>
<b>Proof of concept</b> refers to:	<ul style="list-style-type: none"> <li>gathering evidence to demonstrate that new ICT technology is viable in the organisation's business environment</li> <li>partially or fully-developed prototype of the application of the new ICT technology.</li> </ul>
<b>Project requirements</b> may include:	<ul style="list-style-type: none"> <li>budget</li> <li>outage requirements</li> <li>preferred vendor and vendor product</li> <li>project plan</li> <li>SLAs</li> <li>specific customer requirements</li> <li>timelines</li> <li>urgency.</li> </ul>
<b>Deliverables</b> may refer to:	<ul style="list-style-type: none"> <li>unique and verifiable product, result or task that is produced to complete a particular project</li> <li>measurable, tangible, verifiable item produced as part of a project</li> <li>agreed upon set of evaluation criteria.</li> </ul>
<b>Project plan</b> refers to:	<ul style="list-style-type: none"> <li>broad project description</li> </ul>

	<ul style="list-style-type: none"><li>• cost-benefit studies as a guide to the decision-making process</li><li>• costing estimates and operating budget</li><li>• preferred equipment and vendors</li><li>• proposed project timing</li><li>• resources.</li></ul>
<i>Business response</i> refers to:	<ul style="list-style-type: none"><li>• agreed future direction for the business operations of an organisation with respect to the use or implementation of a specific new ICT technology</li><li>• direction for further research or development.</li></ul>

## Unit Sector(s)

General ICT

## ICAICT708A Direct the development of a knowledge management strategy for a business

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI11 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop a knowledge management strategy for a business.

### Application of the Unit

Senior management, including strategic business analysts and chief information officers use the skills and knowledge in this unit to set up a strategy to establish knowledge management as a key business enabler.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Analyse existing knowledge management systems</p>	<p>1.1 Evaluate <i>existing arrangements</i> for the capture and use of business knowledge from internal and external sources</p> <p>1.2 Differentiate between knowledge management and information management systems within the organisation</p> <p>1.3 Ensure the effectiveness of existing procedures and systems is evaluated in terms of meeting the needs of clients, organisational aims, objectives and standards</p> <p>1.4 Identify the need for improvements in the organisation's strategic use of knowledge</p>
<p>2. Evaluate knowledge management options</p>	<p>2.1 Investigate <i>barriers to capturing knowledge</i> within the organisation</p> <p>2.2 Review evaluations and recommendations regarding knowledge management software with respect to its usefulness and likeliness to benefit the organisation</p> <p>2.3 Review investigations into incentives and reward systems to support knowledge management</p> <p>2.4 Ensure that the required <i>processes for maintaining an integrated knowledge management system</i> are considered</p> <p>2.5 Facilitate development of a business case to determine the viability of selected options and recommend a way forward for the organisation</p>
<p>3. Develop a knowledge-management strategy</p>	<p>3.1 Develop the knowledge management business strategy in consultation with senior staff for the capture and use of organisational knowledge</p> <p>3.2 Ensure that business processes are designed to support knowledge management according to organisational needs and budget</p> <p>3.3 Ensure that technology requirements for implementation of the strategy are costed and included in the organisational budget cycle</p> <p>3.4 Ensure that the processes for the periodic review of <i>knowledge management metrics</i> within the business are in place to maintain ongoing effectiveness and continuous improvement</p> <p>3.5 Ensure that the knowledge management strategy meets organisational requirements identified in its overall business plan and business strategy</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical and research skills to determine and document current business processes and knowledge sources
- coaching, mentoring and teamwork skills to ensure support of knowledge management as an ongoing initiative
- communication, negotiation and personal networking skills to influence the adoption of knowledge management disciplines
- initiative and enterprise skills to proactively seek out knowledge management opportunities
- literacy and numeracy skills to review and present statistical data and business cases
- problem-solving and decision-making skills to deal with issues in an acceptable timeframe
- project, planning and organisational change-management skills to ensure the success of knowledge management programs
- technical skills to apply information technology solutions in support of knowledge management initiatives.

### Required knowledge

- knowledge management concepts, processes and trends
- relevant organisational policies and legislation that affect business operations, specifically privacy legislation
- internal and external sources of information
- legal, ethical and security issues relating to knowledge management
- organisational change-management theory and methods
- records management and database-management principles as they relate to knowledge management, particularly meta-data.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>analyse and document the effectiveness of existing knowledge management systems</li> <li>research knowledge management options in marketplace</li> <li>recommend an approach that meets organisational needs.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>workplace of sufficient complexity to enable the required level of analysis to be carried out in relation to current business processes, existing knowledge management systems and organisational culture</li> <li>relevant enterprise strategic documentation, including strategic planning documents, financial, IT infrastructure and relevant organisational objectives and policies.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>direct observation of the candidate carrying out the required work</li> <li>verbal or written questioning to assess required knowledge and skills</li> <li>review of reports and proposals prepared by the candidate</li> <li>review of a portfolio of the work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Existing arrangements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• organisational structures that may support knowledge management:             <ul style="list-style-type: none"> <li>• communities of practice (CoPs)</li> <li>• customer relationship management systems</li> <li>• intranets</li> <li>• libraries</li> <li>• online analytical processing systems</li> <li>• records management systems</li> </ul> </li> <li>• personal knowledge management through the use of:             <ul style="list-style-type: none"> <li>• checklists</li> <li>• local databases</li> <li>• personal files</li> <li>• spreadsheets.</li> </ul> </li> </ul>
<p><b><i>Barriers to capturing knowledge</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• little or no motivation to share knowledge</li> <li>• management not seeing the benefits over the costs</li> <li>• no awareness of the value of knowledge to others, or lack of trust</li> <li>• no process or infrastructure to enable easy capture and retrieval of knowledge</li> <li>• no time</li> <li>• poor communication within the organisation or departmental silos.</li> </ul>
<p><b><i>Processes for maintenance of an integrated knowledge management system</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• alignment of business and knowledge management goals</li> <li>• business culture that supports teamwork, communication and continuous improvement</li> <li>• IT systems allowing for easy capture, retrieval and collaboration</li> <li>• senior management commitment to knowledge management</li> <li>• staff performance rewards related to sharing knowledge.</li> </ul>
<p><b><i>Knowledge management metrics</i></b> could include:</p>	<ul style="list-style-type: none"> <li>• measures of knowledge capture, e.g. a staff member's number of contributions</li> <li>• measures of quality, e.g. feedback rating on usefulness, age of information</li> <li>• measures of system usage, e.g. number and type of users,</li> </ul>

	what knowledge is being used.
--	-------------------------------

## Unit Sector(s)

General ICT

## ICAICT709A Facilitate business analysis

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to direct internal and external information and communications technology (ICT) services within a medium to large organisation.

### Application of the Unit

Chief information officers in medium to large organisations apply the skills and knowledge in this unit to direct the strategic planning, risk management and security of internal and external ICT infrastructure of their organisation.

Their job roles combine high-level management and business skills to perform strategic planning and direction of emerging and converging technologies within the ICT industry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Facilitate the elicitation of stakeholder business requirements for enhancements	<p>1.1 Ensure business requirements documentation is complete and according to <i>enterprise</i> standards</p> <p>1.2 Ensure that proposed project <i>benefits</i> align with strategic directions</p> <p>1.3 Determine the scope, complexity, deliverables and time lines of the <i>business process</i> enhancements to be undertaken</p>
2. Prioritise enhancements that add value to business operations	<p>2.1 Identify the business operations necessary to analyse the <i>business domain</i></p> <p>2.2 Negotiate requirements definition with <i>stakeholders</i></p> <p>2.3 Develop a process for addressing <i>change requests</i> in a dynamic environment</p>
3. Provide interface between technical and business stakeholders	<p>3.1 Facilitate the selection of a <i>modelling tool</i> for a business system</p> <p>3.2 Facilitate the selection of <i>information-gathering tools</i></p> <p>3.3 Ensure requirements-analysis content addresses the project objectives</p> <p>3.4 Participate in the development of a <i>technical specification</i></p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate enterprise resource planning and management
- communication skills to:
  - resolve conflict
  - negotiate requirements with stakeholders
  - prepare reports to senior management
  - read and interpret organisational reports, policies and procedures to establish and review business continuity management framework
- initiative, enterprise and problem-solving skills to:
  - act as a positive role model
  - assess vulnerabilities in organisational processes and infrastructure set-up
  - evaluate competitive technologies
  - solve problems individually and in teams in response to changing environments
  - translate a range of ideas into appropriate action
- planning and organisational skills to:
  - establish and monitor the organisation's continuous improvement and planning processes
  - manage teams
  - undertake necessary background research for the development and monitoring of strategic management plans
- technology skills to:
  - compare and recommend new technology solutions to improve organisational outcomes
  - evaluate complex information technology issues within the organisational environment.

### Required knowledge

- AS/NZS ISO 31000:2009 Risk management
- business continuity issues for the organisation
- organisation's industry and current functionality, including existing data and information systems
- organisation's internal and external dependencies and interdependencies
- organisational policies and procedures, including risk management strategy
- past and current internal, external and industry disruptions
- relevant legislation and regulations that impact on business continuity, such as OHS, environment, duty of care, contract, company, freedom of information, industrial relations, privacy and confidentiality, due diligence and records management.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop a strategy to align IT services with organisational goals</li> <li>• conduct risk analysis, including security for IT assets, and implement procedures that identify where risk occurs and what measures need to be taken to handle the risk</li> <li>• produce contingency plans for business continuity</li> <li>• establish warning systems and an ongoing process that includes regular or programmed reviews of the risk profile</li> <li>• confirm sufficient knowledge of security products and organisational security policy</li> <li>• develop strategy for the implementation of appropriate processes and procedures that ensure that quality expectations are met.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• relevant strategic level enterprise documentation, including planning, financial and IT infrastructure</li> <li>• relevant legislative policies.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans</li> <li>• review of a portfolio of the project work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Enterprise</b> may relate to:	<ul style="list-style-type: none"> <li>• business or management structure</li> <li>• conglomerate of business entities</li> <li>• external environment in which a business is operating, including contractors and externally provided services</li> <li>• specific business entity</li> <li>• way in which organisational members perceive and characterise their environment in an attitudinal and value-based manner.</li> </ul>
<b>Benefits</b> may include:	<ul style="list-style-type: none"> <li>• better quality product</li> <li>• cost reduction</li> <li>• creation of solutions</li> <li>• greater market share</li> <li>• improved:             <ul style="list-style-type: none"> <li>• competitiveness</li> <li>• customer service</li> <li>• efficiency</li> <li>• profitability</li> </ul> </li> <li>• increased security</li> <li>• reduced risks</li> <li>• reduced waste</li> <li>• up-to-date documentation.</li> </ul>
<b>Business process</b> may relate to:	<ul style="list-style-type: none"> <li>• collection of related and structured activities or tasks that produce a specific service</li> <li>• product for a customer or customers.</li> </ul>
<b>Business domain</b> may include:	<ul style="list-style-type: none"> <li>• automotive</li> <li>• education</li> <li>• finance</li> <li>• health</li> <li>• hospitality</li> <li>• information technology</li> <li>• manufacturing</li> <li>• recreation</li> <li>• services</li> <li>• tourism</li> </ul>

	<ul style="list-style-type: none"> <li>• other transport.</li> </ul>
<b>Stakeholders</b> may include:	<ul style="list-style-type: none"> <li>• community</li> <li>• creditors</li> <li>• employees</li> <li>• government</li> <li>• internal and external customers</li> <li>• owners and shareholders</li> <li>• senior management</li> <li>• suppliers</li> <li>• trade unions.</li> </ul>
<b>Change requests</b> may originate from:	<ul style="list-style-type: none"> <li>• document containing a call for an adjustment of a system</li> <li>• changes in underlying structures or standards</li> <li>• identified inefficiencies</li> <li>• internal or external customer complaints</li> <li>• management process.</li> </ul>
<b>Modelling tool</b> may refer to:	<ul style="list-style-type: none"> <li>• activity diagrams</li> <li>• business process modelling notation (BPMN)</li> <li>• cognition-enhanced natural language information analysis method (CogNIAM)</li> <li>• event-driven process chain (EPC)</li> <li>• extended business modelling language (xBML)</li> <li>• ICAM DEFinition (IDEF0)</li> <li>• simulation</li> <li>• tool to facilitate the representation of the business processes of an enterprise</li> <li>• unified modelling language (UML)</li> <li>• use case diagrams.</li> </ul>
<b>Information-gathering tools</b> may include:	<ul style="list-style-type: none"> <li>• quantitative tools: <ul style="list-style-type: none"> <li>• competitor analysis</li> <li>• market analysis</li> <li>• queuing theory</li> <li>• statistics</li> </ul> </li> <li>• qualitative tools: <ul style="list-style-type: none"> <li>• interviews</li> <li>• observation</li> <li>• questionnaires</li> <li>• reviews of existing documentation</li> <li>• SWOT analysis.</li> </ul> </li> </ul>
<b>Technical specification:</b>	<ul style="list-style-type: none"> <li>• may relate to explicit set of requirements to be satisfied by: <ul style="list-style-type: none"> <li>• material</li> <li>• product</li> </ul> </li> </ul>

	<ul style="list-style-type: none"><li>• service</li><li>• is derived from a requirements analysis.</li></ul>

## Unit Sector(s)

General ICT

## ICAICT710A Synchronise IT projects

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to synchronise IT projects in a medium to large organisation, with an emphasis on costs.

### Application of the Unit

Chief information officers in medium to large organisations apply the skills and knowledge in this unit to ensure internal and external information and communications technology (ICT) projects fit within the strategic and economic constraints of the organisation and deliver the expected financial benefits.

Their job roles combine high-level ICT management and business financial skills to perform strategic evaluation and direction of projects within the ICT industry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Evaluate project opportunities	1.1 Evaluate <b><i>project proposals</i></b> in a strategic context 1.2 Review <b><i>financial criteria</i></b> to determine economic feasibility of project 1.3 Prioritise projects to leverage financial resources
2. Monitor project performance	2.1 Direct project schedule and budget development 2.2 Direct <b><i>integration of project activities</i></b> 2.3 Evaluate project performance using earned value techniques 2.4 Proactively manage strategic projects' risks and issues 2.5 Determine need and direct project audits 2.6 Identify and take action to address unsatisfactory performance
3. Manage project completion activities	3.1 Direct financial completion 3.2 Establish benefits realisation plans 3.3 Apply project lessons learned strategically

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - assess deficiencies in project processes and set-up
  - determine the validity of arguments
  - formulate a logical plan of action based on proposed solutions
  - investigate situations and provide recommendations and remedies
  - make effective decisions
  - probe for consistency in information or data presented
  - validate competitive technologies in a strategic context
- financial skills to:
  - negotiate adjustments to operational budgets based on benefits realisation plans
  - validate project estimation and cost-benefit analysis
- management skills to:
  - apply project-management methods to reduce project and financial risks
  - delegate and communicate
  - maintain an overview of projects and programs
  - oversee project programs
  - plan and organise resources
- interpersonal skills to:
  - maintain appropriate communication
  - negotiate appropriate outcomes
  - provide high-level leadership and personnel management
  - resolve conflict situations
- technology skills to evaluate complex information technology issues within the organisational environment.

### Required knowledge

- appropriate cost management and estimating methodologies, techniques and tools, their capabilities and limitations, applicability and outcomes
- business and commercial issues
- cost schedule control systems
- delegation and management of responsibilities for cost management
- differences in work content, risk, processes, tools and techniques that apply in the various phases of recurring project life cycles within a volatile program environment
- direction of project development and management of program budgets
- human resource management policies
- how to apply principles and techniques relating to:
  - negotiation
  - risk management, including risk sharing and transfer

- organisational guidance and attitudes to cost management
- organisational procurement guidelines
- organisational policies, including project governance policies
- principles of program project-cost management and its application
- project management systems, tools and techniques
- project specifications and objectives
- public relations policies and strategies
- relationship between cost, time and resources to the project management framework
- political climate and organisation's culture
- use of the budget as a control mechanism.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• select project opportunities that align with organisational strategic and financial goals</li> <li>• identify and justify high priority projects to be undertaken based on trade-offs between benefits, risks and scarce financial resources</li> <li>• develop schedule and budget for selected projects to enable ongoing earned value performance measurement</li> <li>• review project performance and initiate appropriate corrective actions and audit activity where necessary</li> <li>• establish and monitor an agreed project benefits realisation plan.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• relevant strategic level enterprise documentation, including planning, financial and IT infrastructure</li> <li>• relevant organisational policies.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out the work of overseeing projects being managed by others</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans</li> <li>• review of a portfolio of the project work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Project proposals</i></b> may include:	<ul style="list-style-type: none"> <li>documents designed to seek authorisation and support for initiating a project within an organisation.</li> </ul>
<b><i>Financial criteria</i></b> may include:	<ul style="list-style-type: none"> <li>internal rate of return (IRR)</li> <li>net present value (NPV)</li> <li>payback period</li> <li>return on investment (RoI).</li> </ul>
<b><i>Integration of project activities</i></b> may include:	<ul style="list-style-type: none"> <li>project activities that are necessary to ensure the project's components are coordinated</li> <li>change control processes</li> <li>project plan development and execution.</li> </ul>

## Unit Sector(s)

General ICT

## ICAICT711A Manage an information architecture project

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge to manage a web-based information architecture project. This includes information transmission media.

### Application of the Unit

Senior managers in medium to large organisations apply analytical and strategic business knowledge to direct the strategic planning to meet current and future business needs.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Define content needs	<p>1.1 Identify strategic intent of website or system from business requirements and <i>client</i> expectations</p> <p>1.2 Provide <i>direction</i> to develop information requirements based on the business and client requirements</p> <p>1.3 Identify required information and group into business schemes related to the <i>business structure</i></p> <p>1.4 Direct determination of content requirements for each process</p>
2. Contribute to description of system and transmission media	<p>2.1 Consult with network and system specialists</p> <p>2.2 Analyse features of physical environment to interface information system architecture</p> <p>2.3 Estimate <i>traffic content and volumes</i> based on business requirements</p>
3. Supervise development of content structure and navigation plan	<p>3.1 Cluster information in related topics</p> <p>3.2 Ensure that information hierarchy is in a valid sequence</p> <p>3.3 Provide direction for clear, valid and intuitive labelling</p> <p>3.4 Review and commit to feasibility of architecture design</p> <p>3.5 Develop acceptance criteria</p>
4. Implement navigation system development	<p>4.1 Coordinate fit of navigational systems with business requirements</p> <p>4.2 Supervise development of navigational search subsystems</p> <p>4.3 Lead development of consistent and logical labelling systems</p>
5. Finalise testing and accept information architecture model	<p>5.1 Lead construction of information architecture prototype</p> <p>5.2 Ensure a broad sample of business clients are engaged</p> <p>5.3 Ensure site content meets business needs</p> <p>5.4 Lead testing of information architecture prototype to test that it operates on chosen system and transmission media</p> <p>5.5 Supervise user-acceptance test</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate information
- literacy skills to:
  - conduct presentations to a group
  - work effectively in a group
  - prepare reports
- conflict management skills to deal with grievances, disputes or disagreements
- information technology skills for word processing and desktop research
- initiative and enterprise skills to identify improvements to quality
- literacy skills to prepare reports
- planning and organisational skills to plan, prioritise and organise own work
- problem-solving skills to resolve issues in the workplace
- research skills to gather data and information.

### Required knowledge

- equity and diversity principles to apply to project
- OHS requirements
- organisational policy and procedures as they apply to the project
- personal safety issues
- public sector legislation, codes of practice and other formal agreements that directly impact on business operations
- technical knowledge of telecommunications networks
- workplace and industry environment as it applies to project.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• determine the human factors that need to be analysed when managing people and groups</li> <li>• conduct business meetings applying effective communication techniques</li> <li>• determine essential requirements of a product applying quality management principles</li> <li>• monitor and implement training for staff</li> <li>• resolve problems and conflicts in a business environment</li> <li>• support human resource management program.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• computer system and web-host workplace</li> <li>• relevant enterprise documentation, including human resource (HR) and quality management policies.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate running a productive business meeting and effective interview techniques</li> <li>• verbal or written questioning to assess the required knowledge and skills</li> <li>• review of quality reports prepared by the candidate</li> <li>• evidence of consultations with staff and management.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• internal or external customer</li> <li>• owner, management or shareholders.</li> </ul>
<b><i>Direction</i></b> may include:	<ul style="list-style-type: none"> <li>• intended audiences</li> <li>• long and short-term goals for the site</li> <li>• types of client interactions</li> <li>• website intent.</li> </ul>
<b><i>Business structure</i></b> may include:	<ul style="list-style-type: none"> <li>• branch</li> <li>• business unit</li> <li>• conglomerate.</li> </ul>
<b><i>Traffic content and volumes</i></b> may include:	<ul style="list-style-type: none"> <li>• hits</li> <li>• page views</li> <li>• packet sniffing</li> <li>• network traffic.</li> </ul>

## Unit Sector(s)

General ICT

## ICAICT712A Develop a business intelligence framework

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge to manage business intelligence, including data mining and analysis.

### Application of the Unit

Senior managers in medium to large organisations apply analytical and strategic business knowledge to direct the strategic planning to meet current and future business needs.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Elicit business intelligence requirements	<p>1.1 Articulate the benefits of <i>business intelligence</i></p> <p>1.2 Select appropriate <i>system development methodology</i> from a range of options</p> <p>1.3 Evaluate impact of business intelligence on the enterprise</p> <p>1.4 Select appropriate business model for data repository</p> <p>1.5 Adopt a <i>metadata standard</i> for the enterprise</p> <p>1.6 Establish appropriate data analysis techniques</p>
2. Direct business intelligence data manipulation	<p>2.1 Identify data sources and scope</p> <p>2.2 Endorse selected data-manipulation methods</p> <p>2.3 Review and commit to feasibility of architecture design</p> <p>2.4 Develop acceptance criteria</p> <p>2.5 Endorse selected <i>data-modelling techniques</i> and processes</p> <p>2.6 Endorse a <i>load balancing algorithm</i> for optimum processing</p> <p>2.7 Sign off design specifications</p>
3. Endorse business intelligence solution architecture	<p>3.1 Ensure data-warehousing management techniques and processes are according to specifications</p> <p>3.2 Lead scoping of logical data models</p> <p>3.3 Supervise selection of <i>middleware</i> tools</p> <p>3.4 Review and commit to searchable <i>data repository</i> solution</p>
4. Finalise testing and accept framework	<p>4.1 Finalise physical data model</p> <p>4.2 Complete testing overall model</p> <p>4.3 Test security</p> <p>4.4 Test integrity</p> <p>4.5 Perform user-acceptance test</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate information
- literacy skills to:
  - conduct oral presentations to a group
  - demonstrate leadership in a group
  - prepare and overview reports
- conflict-management skills to deal with grievances, disputes or disagreements
- information technology skills to analyse and oversee research
- initiative and enterprise skills to identify improvements to quality
- planning and organisational skills to plan, prioritise and organise own work
- problem-solving skills to resolve issues in the workplace
- research skills to validate data and information.

### Required knowledge

- equity and diversity principles as they apply to the project
- OHS requirements
- organisational policy and procedures as they apply to the project
- overview knowledge of behaviour theories:
  - responsibility, achievement as in Herzberg's two factor
  - affiliation management after McClelland
  - motivation after Vroom
- personal safety issues
- public sector legislation, codes of practice and other formal agreements that directly impact on business operations
- technical knowledge of business intelligence procedures
- workplace and industry environment as it applies to project.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• determine the human factors that need to be analysed when managing people and groups</li> <li>• conduct business meetings applying effective communication techniques</li> <li>• determine essential requirements of a product, applying quality management principles</li> <li>• monitor and implement training for staff</li> <li>• resolve problems and conflicts in a business environment</li> <li>• support human resource management program.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• a business intelligence focus</li> <li>• relevant enterprise documentation, including HR and quality management policies.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate running a productive business meeting and using effective interview techniques</li> <li>• verbal or written questioning to assess the candidate's required knowledge of: <ul style="list-style-type: none"> <li>• business intelligence</li> <li>• data warehousing</li> <li>• data modelling</li> <li>• business domain</li> </ul> </li> <li>• review of quality reports prepared by the candidate on the development of the business intelligence framework</li> <li>• evidence of candidate's consultations with staff and management.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Business intelligence</i></b> may include:	<ul style="list-style-type: none"> <li>• analytics</li> <li>• benchmarking</li> <li>• business performance management</li> <li>• data mining</li> <li>• online analytical processing</li> <li>• predictive analytics</li> <li>• reporting</li> <li>• text mining.</li> </ul>
<b><i>System development methodology</i></b> may include:	<ul style="list-style-type: none"> <li>• agile unified process (AUP)</li> <li>• prop-typing</li> <li>• rational unified process (RUP)</li> <li>• spiral</li> <li>• systems development life cycle (SDLC)</li> <li>• waterfall.</li> </ul>
<b><i>Metadata standard</i></b> may include:	<ul style="list-style-type: none"> <li>• common warehouse meta-model (CWM)</li> <li>• data documentation initiative (DDI)</li> <li>• digital object identifier (DOI)</li> <li>• Dublin core</li> <li>• eGovernment Metadata Standard (E-GMS)</li> <li>• ISO 23081</li> <li>• ISO/IEC 11179</li> <li>• multimedia content description interface (MPEG-7)</li> <li>• online information exchange (ONIX).</li> </ul>
<b><i>Data-modelling techniques</i></b> may include:	<ul style="list-style-type: none"> <li>• Bachman diagrams</li> <li>• Barker's notation</li> <li>• Chen's notation</li> <li>• data vault modelling (DVM)</li> <li>• Extended Backus-Naur form</li> <li>• IDEF1X</li> <li>• object role modelling (ORM)</li> <li>• object-relational mapping</li> <li>• relational model.</li> </ul>
<b><i>Load balancing</i></b>	<ul style="list-style-type: none"> <li>• biasing algorithm</li> <li>• round-robin algorithm.</li> </ul>

<i>algorithm</i> may include:	
<i>Middleware</i> may include:	<ul style="list-style-type: none"><li>• application servers</li><li>• web servers.</li></ul>
<i>Data repository</i> may include:	<ul style="list-style-type: none"><li>• component-repository management</li><li>• digital repository</li><li>• information repository</li><li>• repository open-service interface definition</li><li>• software repository.</li></ul>

## Unit Sector(s)

General ICT

## ICAICT713A Manage IT services

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to apply the principles of service quality management and to develop a code of practice for information technology (IT) service management.

### Application of the Unit

This unit applies to individuals who work in senior IT service roles and are responsible for managing an IT service.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare to manage IT services	1.1 Identify <b>quality requirement principles</b> to provide IT service provision according to business needs and expectations 1.2 Research and evaluate appropriate service processes 1.3 Analyse continual improvement processes to align and realign IT services to business needs
2. Develop quality requirements for IT service management	2.1 Identify specific quality requirements to improve <b>service management processes</b> 2.2 Align IT services with the business, applying <b>service management concepts</b> 2.3 Develop strategies for control, delivery and support of <b>IT services</b>
3. Develop a code of practice for IT service management	3.1 Research and evaluate best practice processes 3.2 Document best practice for IT service management 3.3 Implement identified best practice processes 3.4 Evaluate, monitor and improve IT service management

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate best practice processes in IT service management
- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - develop enterprise procedures, manuals and specifications
  - interpret technical documentation
  - write reports in required formats
- planning and organisational skills to plan, prioritise and monitor own work and that of others
- problem-solving and contingency-management skills to adapt procedures to local requirements and reconfigure depending on differing operational contingencies, risk situations and environments
- research skills to research industry best practice.

### Required knowledge

- detailed knowledge of:
  - IT service management
  - quality assurance procedures in IT services
  - industry best practice processes in IT services
- overview knowledge of:
  - basic technical terminology in relation to service management.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop and implement procedures and processes to improve the quality of IT service management</li> <li>• evaluate, monitor and improve IT service management.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• current service organisational chart</li> <li>• current service logs and procedures</li> <li>• organisational mission statement</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of service management principles</li> <li>• review of candidate's documented strategies for delivery and support of IT services</li> <li>• evaluation of candidate's code of practice for IT service management.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Quality requirement principles</i></b> may include:	<ul style="list-style-type: none"> <li>• Capability Maturity Model Integration (CMMI)</li> <li>• ISO standard 17025/IEC standard 20000.</li> </ul>
<b><i>Service management processes</i></b> may include:	<ul style="list-style-type: none"> <li>• availability management</li> <li>• capacity management</li> <li>• change management</li> <li>• configuration management</li> <li>• continuity management</li> <li>• incident management</li> <li>• problem management</li> <li>• release management</li> <li>• security management.</li> </ul>
<b><i>Service management concepts</i></b> may include:	<ul style="list-style-type: none"> <li>• CMMI</li> <li>• Six Sigma Business Process Management</li> <li>• total quality management (TQM).</li> </ul>
<b><i>IT services</i></b> may include:	<ul style="list-style-type: none"> <li>• application management</li> <li>• information and communications technology (ICT) infrastructure management</li> <li>• security management</li> <li>• service delivery</li> <li>• service support</li> <li>• software asset management.</li> </ul>

## Unit Sector(s)

General ICT

# ICANWK301A Provide network systems administration

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to technically manage elements of a network, including contributing to disaster recovery plan.

## Application of the Unit

This unit applies to frontline technical support personnel responsible for administering a network.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Provide client access and security	<p>1.1 Provide logons, passwords and applications file access to <b>users</b> and prepare <b>documentation</b> in line with <b>organisational requirements</b></p> <p>1.2 Examine records of user accounts to determine access privileges and usage</p> <p>1.3 Take necessary action to ensure maintenance of <b>system</b> integrity and security</p>
2. Provide input into and disseminate disaster recovery plan	<p>2.1 Provide input into the organisation's <b>disaster recovery plan</b></p> <p>2.2 Disseminate disaster recovery plan to users as required</p>
3. Monitor network performance	<p>3.1 Perform diagnostic tests associated with administering the network or system</p> <p>3.2 Analyse and respond to diagnostic information</p> <p>3.3 Monitor <b>software</b> usage, including inappropriate or illegal use</p> <p>3.4 Delete illegal software from the system</p> <p>3.5 Monitor <b>hardware</b> response time and other performance indicators</p> <p>3.6 Determine and action methods for improving network and systems efficiency according to <b>organisational guidelines</b></p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - investigate and assess client needs
  - provide one-to-one instruction
- customer-service skills to communicate with clients in a range of contexts at various levels
- literacy skills to:
  - develop reports
  - interpret technical manuals
- planning and organisational skills to provide input into the disaster recovery plan
- technical skills to perform:
  - diagnostic tests to monitor network performance
  - system administration tasks.

### Required knowledge

- advanced knowledge of software features supported by the organisation
- approaches to backup and restoring computer data
- disaster recovery policy
- features and functions of file access
- in-house and vendor support
- OHS legislation relating to the use of equipment
- operating systems:
  - functions and basic features
  - supported by the organisation
- organisational access and security procedures
- organisational and technical systems
- organisational procedures for protection against and elimination of computer viruses
- policy and procedures for deleting, restoring and archiving files
- procedures for creating logons
- security and network guidelines and procedures
- software copyright responsibilities.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• sustain the operation of the network through maintenance of network integrity and perform diagnostic tests</li> <li>• contribute to the formulation of a disaster recovery plan and provide the client with an optimised network that complies with organisational guidelines</li> <li>• improve network and systems efficiency according to organisational guidelines</li> <li>• provide appropriate access to the network for users</li> <li>• maintain, limit or enhance user access according to authorised requests.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• live network</li> <li>• systems administration tools currently used in industry</li> <li>• organisational policy and procedures</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of documentation completed by candidate for provision of client access and security</li> <li>• documented input into disaster recovery plan</li> <li>• direct observation of candidate:             <ul style="list-style-type: none"> <li>• performing diagnostic tests and responding to diagnostic information</li> <li>• performing user maintenance tasks</li> </ul> </li> <li>• verbal or written questioning to assess candidate's knowledge of methods for improving network and systems efficiency.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level,</p>

	<p>language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Users</i></b> may include:	<ul style="list-style-type: none"> <li>• contractors</li> <li>• departments within an organisation</li> <li>• persons within a department</li> <li>• support staff</li> <li>• third parties.</li> </ul>
<b><i>Documentation</i></b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training</li> <li>• equipment inventory maintenance</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project-management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b><i>Organisational requirements</i></b> may be in reference to:	<ul style="list-style-type: none"> <li>• diagnostic policy</li> <li>• preventative maintenance</li> <li>• problem solution processes</li> <li>• roles and technical responsibilities in the IT department</li> <li>• vendor and product service level support agreements</li> <li>• work environment.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• computers</li> <li>• financial system</li> <li>• information system</li> <li>• management system</li> <li>• network</li> <li>• software.</li> </ul>
<b><i>Disaster recovery plan</i></b> may include:	<ul style="list-style-type: none"> <li>• backup plans</li> <li>• disaster recovery activities</li> <li>• impact assessment</li> <li>• key roles and responsibilities</li> <li>• maximum tolerable outage</li> </ul>

	<ul style="list-style-type: none"> <li>• recovery time</li> <li>• risk analysis</li> <li>• zero data loss.</li> </ul>
<i>Software</i> may include:	<ul style="list-style-type: none"> <li>• application: <ul style="list-style-type: none"> <li>• database</li> <li>• internet browser</li> <li>• spreadsheet</li> <li>• word-processing</li> </ul> </li> <li>• commercial</li> <li>• customised</li> <li>• in-house</li> <li>• programming: <ul style="list-style-type: none"> <li>• assembler</li> <li>• compiler</li> <li>• development tools</li> </ul> </li> <li>• system: <ul style="list-style-type: none"> <li>• computer security</li> <li>• device drivers</li> <li>• operating system.</li> </ul> </li> </ul>
<i>Hardware</i> may include:	<ul style="list-style-type: none"> <li>• modems or other connectivity devices</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>
<i>Organisational guidelines</i> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>

## Unit Sector(s)

Networking

## ICANWK302A Identify and resolve network problems

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to document network-related problems, determine the resources required, solve the client problem or escalate the problem to a new support level.

### Application of the Unit

This unit applies to frontline technical support personnel responsible for maintaining network continuity by isolating and rectifying network problems as they arise.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine client requirements and identify if problem exists	1.1 Log calls from help-desk support staff 1.2 Determine and document <b><i>problem</i></b> based on <b><i>client</i></b> requirements
2. Determine whether problem is covered by policy	2.1 Verify the scope and coverage of maintenance and technical <b><i>support agreements</i></b> relative to the problem and client requirements 2.2 Provide assistance according to <b><i>organisational guidelines</i></b>
3. Carry out maintenance support on identified problem	3.1 Conduct diagnostic tests around identified problem 3.2 Complete maintenance according to organisational guidelines 3.3 Obtain new <b><i>components</i></b> as part of the resolution, where necessary 3.4 Store or dispose of components according to organisational guidelines and <b><i>environmental guidelines</i></b>
4. Prepare maintenance report and confirm solution	4.1 Prepare maintenance report according to organisational guidelines and support agreements 4.2 Refer unresolved <b><i>maintenance requirements</i></b> to appropriate higher level service area 4.3 Follow up with the client to determine <b><i>solution</i></b> success and close the report

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - follow up with client
  - provide assistance according to organisational guidelines
  - provide clear and precise advice when logging calls from help-desk support staff
- literacy skills to:
  - document initial problem and recommendations to solve problem
  - prepare maintenance report in line with organisational guidelines and support agreements
- problem-solving skills to:
  - determine problems based on diagnostic tests
  - solve unknown problems in a range of contexts
- team participation skills to escalate maintenance
- technical skills to undertake maintenance tasks

### Required knowledge

- environmentally sound recycling and disposal procedures
- networking procedures, including:
  - call logging
  - contracting and maintenance requirements
  - problem escalation procedures
- inventory processes
- network operating systems
- organisational information relating to network problems
- technical support agreements
- features and functions of technical systems.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• document network-related problems and determine the required resources</li> <li>• solve client problems or escalate the problem according to organisational guidelines</li> <li>• maintain the network with minimal disruption to clients.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• network</li> <li>• hardware</li> <li>• diagnostic tools, components and software</li> <li>• records and reports</li> <li>• organisational guidelines and procedures</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate: <ul style="list-style-type: none"> <li>• identifying client problem and verifying the scope of support agreements</li> <li>• conducting diagnostic tests and carrying out maintenance support</li> </ul> </li> <li>• verbal or written questioning to assess candidate's knowledge of organisational escalation procedures</li> <li>• review of documentation provided by candidate about client's problem and maintenance requirements.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Problem</i></b> may include:	<ul style="list-style-type: none"> <li>• issues affecting immediate work environment:             <ul style="list-style-type: none"> <li>• servers</li> <li>• workstations</li> </ul> </li> <li>• routine and non-routine problems.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employees</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments.</li> </ul>
<b><i>Support agreements</i></b> may include:	<ul style="list-style-type: none"> <li>• cost</li> <li>• performance from escalated support levels</li> <li>• replacement</li> <li>• time</li> <li>• warranty.</li> </ul>
<b><i>Organisational guidelines</i></b> may include:	<ul style="list-style-type: none"> <li>• client-liaison policy</li> <li>• contracting arrangements relating to IT purchasing</li> <li>• logged call procedures</li> <li>• maintenance agreements</li> <li>• preventative maintenance and diagnostic policy</li> <li>• security procedures</li> <li>• warranties.</li> </ul>
<b><i>Components</i></b> may include:	<ul style="list-style-type: none"> <li>• CD and DVD drives</li> <li>• central processing unit (CPU)</li> <li>• complementary metal oxide semiconductor (CMOS) battery</li> <li>• fax or modem cards</li> <li>• interface cards</li> <li>• motherboards</li> <li>• power supply</li> <li>• random access memory (RAM).</li> </ul>
<b><i>Environmental guidelines</i></b> may include:	<ul style="list-style-type: none"> <li>• appropriate disposal or recycling of e-waste:             <ul style="list-style-type: none"> <li>• cathode ray tube (CRT) monitors</li> <li>• printed circuit boards</li> <li>• redundant hardware</li> </ul> </li> <li>• recycling of packaging:</li> </ul>

	<ul style="list-style-type: none"><li>• cardboard</li><li>• paper</li><li>• polystyrene.</li></ul>
<i>Maintenance requirements</i> may include:	<ul style="list-style-type: none"><li>• on-site response</li><li>• remote diagnostics</li><li>• return to depot.</li></ul>
<i>Solution</i> may include:	<ul style="list-style-type: none"><li>• hardware:<ul style="list-style-type: none"><li>• new</li><li>• upgrade</li></ul></li><li>• implementing a new system</li><li>• software:<ul style="list-style-type: none"><li>• new</li><li>• upgrades</li></ul></li><li>• user training.</li></ul>

## Unit Sector(s)

Networking

# ICANWK303A Configure and administer a network operating system

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit defines the competency required to create the network configuration required by a client and to set up and use administrative tools to manage the network.

## Application of the Unit

This unit applies to frontline technical support personnel who are required to maintain network continuity through changing requirements.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Assess network features</p>	<p>1.1 Determine <i>organisational policies</i> and administration arrangements used to administer the <i>network</i></p> <p>1.2 Determine the type of <i>network operating system</i> (NOS) and interfaces used by the existing network and potential compatibility issues caused by integration of other networks</p> <p>1.3 Identify the risks associated with administration of a network to minimise the loss of data or service during operations</p> <p>1.4 Determine network administration tools that can be used with the NOS to manage network performance and enforce organisational policies</p>
<p>2. Administer and support the system using administration interfaces</p>	<p>2.1 Use interfaces to format hard drives, set up security restrictions and establish user log-in information to administer a basic network</p> <p>2.2 Use administration tools to develop a map of <i>system</i> interaction to determine the data required by particular <i>users</i> and how often the data is accessed</p> <p>2.3 Examine existing <i>applications</i> and <i>software</i> and plan required upgrades or reconfigurations to new system or applications</p> <p>2.4 Test reconfiguration for successful interface with existing system to ensure compatibility</p>
<p>3. Set up and manage the network file system</p>	<p>3.1 Create a required file and folder structure using appropriate administration and system tools</p> <p>3.2 Set the security, access and sharing of <i>file system</i> to meet user requirements</p> <p>3.3 Identify and implement the virus protection requirements for the network in line with organisational procedures</p> <p>3.4 Test and document the file system to ensure that appropriate access is available to the user groups according to organisational standards</p>
<p>4. Administer user services and user accounts</p>	<p>4.1 Determine the user services required, and implement using the appropriate administration and system tools</p> <p>4.2 Create users and groups as required to facilitate user security and network access according to user authorisation</p> <p>4.3 Verify successful access by users to authorised</p>

	<p>network data and resources, and record outcomes</p> <p>4.4 Set or modify <i>user settings</i> to ensure compliance with security and access policies</p> <p>4.5 Review procedures and take action to ensure that users who are no longer part of the organisation have their accounts disabled, deleted or modified</p>
5. Provide and support backup security	<p>5.1 Scan and clean the network of viruses before performing <i>backup</i> of the network</p> <p>5.2 Determine <i>security risks</i> to which data is exposed and provide appropriate <i>prevention methods</i> and recovery processes</p> <p>5.3 Report identified security risks to <i>appropriate person</i></p> <p>5.4 Implement systems to provide backup and service restoration capability in the event of a disaster according to organisational policies</p> <p>5.5 Document and disseminate the disaster-recovery procedures</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - determine NOS types and compatibility issues
  - determine risks associated with administration of a network
- communication skills to:
  - inform clients of technical procedures
  - liaise with clients and team members across different levels and in different contexts
  - undertake active listening with clients and team members
  - use open-ended questioning techniques
- literacy skills to:
  - document created file system
  - document disaster-recovery procedures
  - interpret organisational policies
- planning skills to plan upgrades and reconfigurations to new systems or applications
- technical skills to:
  - administer and configure NOS
  - identify security gaps and secure with appropriate hardware and software
  - implement systems to provide backup and service restoration capability
  - monitor user accounts according to organisational policy
  - perform compatibility testing after upgrade or reconfiguration
  - scan and clean the network of viruses before backup
  - test successful access by users to authorised network data and resources
  - test the file system access.

### Required knowledge

- antivirus software, its operation, installation and update procedures
- current industry standard NOS
- facilities available in the operating environment
- features and capabilities of networking technologies
- implementation of network security in a local area network (LAN):
  - file and folder permissions
  - users and group settings
- monitoring aspects of network performance or traffic:
  - system administration tools
  - third-party tools.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• use network administrative tools to carry out system administration tasks</li> <li>• manage the network file system</li> <li>• create the network configuration required by the client</li> <li>• provide user services and user accounts</li> <li>• provide backup and service restoration capability.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• user network requirements</li> <li>• antivirus software</li> <li>• network administration tools</li> <li>• a live network with a representative range of networked environments and operating systems</li> <li>• a server</li> <li>• technical records, organisational policies, access policy and documentation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate: <ul style="list-style-type: none"> <li>• managing a network using network administration and system tools</li> <li>• performing virus scans, virus removal and virus updates</li> </ul> </li> <li>• review of organisational backup schedules created</li> <li>• verbal or written questioning to assess candidate's knowledge of the facilities available in the operating environment.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the</p>

	<p>work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Organisational policies</b> may include:	<ul style="list-style-type: none"> <li>• diagnostic</li> <li>• how and what the organisation will operate</li> <li>• maintenance</li> <li>• OHS</li> <li>• security</li> <li>• user enrolment.</li> </ul>
<b>Network</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• embedded systems</li> <li>• LAN</li> <li>• personal digital assistant (PDA)</li> <li>• radio frequency identification (RFID) network</li> <li>• smartphones</li> <li>• internet</li> <li>• virtual private network (VPN)</li> <li>• voice network</li> <li>• wide area network (WAN)</li> <li>• wireless network.</li> </ul>
<b>Network operating system</b> may include:	<ul style="list-style-type: none"> <li>• embedded OS:             <ul style="list-style-type: none"> <li>• digital media players</li> <li>• PDAs</li> <li>• robots</li> <li>• routers</li> <li>• smartphones:                 <ul style="list-style-type: none"> <li>• Android</li> <li>• BlackBerry</li> <li>• Symbion</li> </ul> </li> <li>• Windows CE</li> </ul> </li> <li>• Fabric or XPATH OS by Brocade</li> <li>• JunOS by Juniper Networks</li> <li>• Linux</li> <li>• Mac</li> <li>• Open Enterprise Server or Netware by Novell</li> <li>• SAN-OS by Cisco</li> </ul>

	<ul style="list-style-type: none"> <li>• Windows Server OS.</li> </ul>
<i>System</i> may include:	<ul style="list-style-type: none"> <li>• application servers</li> <li>• billing system</li> <li>• computers</li> <li>• file servers</li> <li>• financial system</li> <li>• information system</li> <li>• management system</li> <li>• network</li> <li>• printer server</li> <li>• software</li> <li>• storage system</li> <li>• user management system.</li> </ul>
<i>Users</i> may include:	<ul style="list-style-type: none"> <li>• departments within an organisation</li> <li>• persons within a department</li> <li>• third parties.</li> </ul>
<i>Applications</i> may include:	<ul style="list-style-type: none"> <li>• database programs</li> <li>• email programs</li> <li>• internet browsers</li> <li>• multimedia applications</li> <li>• spreadsheets</li> <li>• voice applications</li> <li>• word-processing.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK304A Administer network peripherals

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage an environment of networked peripheral devices, in order to provide services to client users.

## Application of the Unit

This unit applies to frontline technical support personnel responsible for connecting, maintaining and administering peripheral devices attached to networks.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Install peripherals to a network</p>	<p>Plan the location of <i>peripherals</i> to provide appropriate services to <i>users</i> and to take into consideration <i>OHS standards</i></p> <p>Connect peripherals to <i>network</i>, using vendor-approved method and technology</p> <p>Connect peripherals to computers in the network using parallel, serial or other direct connection methods</p> <p>Add peripheral accessories or upgrades to <i>printer</i>, such as memory or high-volume paper trays</p> <p>Test peripherals for correct operation</p>
<p>2. Configure peripheral services to manage peripherals</p>	<p>Install <i>software</i> required to manage local and network-connected peripherals</p> <p>Use meaningful names for peripherals and control queues</p> <p>Configure security and access to allow appropriate users to make use of peripherals</p> <p>Configure workstation for peripherals to allow <i>applications</i> to work with peripherals</p>
<p>3. Administer and support peripheral services</p>	<p>Assign priority to control queues</p> <p>Use peripheral management software supplied as part of the <i>network operating system</i> (NOS) or by third parties</p> <p>Create templates for use on the network</p> <p>Configure settings on the network to create maintenance schedules, usage logs, and cost-centre usage statistics</p> <p>Demonstrate to the user the methods for using peripheral services from their application or workstation</p>
<p>4. Maintain peripherals and fix common problems</p>	<p>Establish and follow a regular maintenance schedule as recommended by peripheral manufacturer</p> <p>Replace <i>consumables</i> and <i>components</i> when required</p> <p>Fix peripheral mishaps and malfunctions</p> <p>Monitor peripheral usage and traffic and recommend additional peripherals if needed</p> <p>Determine failures of peripheral services or devices and rectify as required</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to determine failures of peripheral services or devices
- communication skills to:
  - demonstrate use of peripheral services to users
  - discuss network issues with clients and team members
  - educate users about the causes of network problems and how to minimise their recurrence
  - liaise with clients and team members across different levels and in different contexts
- literacy skills to:
  - follow a regular maintenance schedule as recommended by peripheral manufacturer
  - use meaningful names when configuring the peripheral device's name or new profile
- planning skills to plan the installation of peripherals
- problem-solving skills to:
  - fix peripheral mishaps and malfunctions
  - rectify failures of peripheral services or devices
- technical skills to:
  - administer peripheral services
  - configure network settings
  - configure security and access for users
  - install software
  - replace components
  - test peripherals for correct operation
  - use peripheral management software
  - use the peripheral device's logging or monitoring features to monitor the health of the peripheral.

### Required knowledge

- configuration of peripherals for network use
- current industry standard network peripherals
- general construction and operation of peripheral devices to facilitate troubleshooting.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• plan and install peripherals, and connect to network and test operation</li> <li>• manage the use of peripheral services with workstations</li> <li>• maintain networked peripherals according to a maintenance schedule</li> <li>• rectify faulty peripheral services or devices.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• range of peripherals</li> <li>• network administration tools</li> <li>• live network with a representative range of networked client server environments and operating systems</li> <li>• technical records, organisational policies and documentation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate: <ul style="list-style-type: none"> <li>• managing the use of peripheral services with workstations</li> <li>• rectifying faulty peripherals</li> <li>• maintaining networked peripherals</li> </ul> </li> <li>• verbal or written questioning to assess candidate's knowledge of networked peripherals</li> <li>• review of network peripheral entries prepared by candidate.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Peripherals</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• Bluetooth device</li> <li>• Firewire (IEEE 1394) device</li> <li>• keyboard</li> <li>• laptop</li> <li>• mobile phone</li> <li>• modem</li> <li>• mouse</li> <li>• multimedia kit</li> <li>• pen</li> <li>• personal digital assistant (PDA), such as palmtop</li> <li>• printer</li> <li>• scanner</li> <li>• speaker</li> <li>• tape cartridge</li> <li>• touch pad</li> <li>• universal serial bus (USB) device</li> <li>• wireless fidelity (wi-fi) router.</li> </ul>
<p><b><i>Users</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• departments within an organisation</li> <li>• persons within a department</li> <li>• third parties.</li> </ul>
<p><b><i>OHS standards</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• electrical safety</li> <li>• ergonomics in the workplace:             <ul style="list-style-type: none"> <li>• correct posture</li> <li>• style and adjustments of chair</li> <li>• type of desk</li> <li>• type of monitor</li> <li>• working position</li> </ul> </li> <li>• length of time in front of computer</li> <li>• lighting level</li> <li>• placement of light fittings</li> <li>• repetitive strain injury (RSI) prevention</li> <li>• safe lifting methods</li> <li>• ventilation.</li> </ul>

<b>Network</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• local area network (LAN)</li> <li>• private lines</li> <li>• the internet</li> <li>• use of the public switched telephone network (PSTN) for dial-up modems only</li> <li>• voice</li> <li>• virtual private network (VPN)</li> <li>• wide area network (WAN).</li> </ul>
<b>Printer</b> may include:	<ul style="list-style-type: none"> <li>• ink jet</li> <li>• laser</li> <li>• network.</li> </ul>
<b>Software</b> may include:	<ul style="list-style-type: none"> <li>• application</li> <li>• commercial</li> <li>• customised</li> <li>• in-house</li> <li>• programming: <ul style="list-style-type: none"> <li>• assembler</li> <li>• compiler</li> <li>• development tools</li> </ul> </li> <li>• system: <ul style="list-style-type: none"> <li>• computer security</li> <li>• device drivers</li> <li>• operating system.</li> </ul> </li> </ul>
<b>Applications</b> may include:	<ul style="list-style-type: none"> <li>• database programs</li> <li>• email programs</li> <li>• internet browsers</li> <li>• spreadsheets</li> <li>• system browsers</li> <li>• word-processing.</li> </ul>
<b>Network operating system</b> may include:	<ul style="list-style-type: none"> <li>• Linux</li> <li>• Mac</li> <li>• multi-user capability operating system</li> <li>• Novell NetWare 5 or above</li> <li>• Windows 2000 or above.</li> </ul>
<b>Consumables</b> may include:	<ul style="list-style-type: none"> <li>• disks: <ul style="list-style-type: none"> <li>• CD</li> <li>• DVD</li> </ul> </li> <li>• ink cartridges</li> <li>• toner cartridges.</li> </ul>

<i>Components</i> may include:	<ul style="list-style-type: none"><li>• CD and DVD drives</li><li>• central processing unit (CPU)</li><li>• complementary metal oxide semiconductor (CMOS) battery</li><li>• fax or modem cards</li><li>• interface cards</li><li>• motherboards</li><li>• motherboards</li><li>• power supply</li><li>• random access memory (RAM).</li></ul>
--------------------------------	--

## Unit Sector(s)

Networking

# ICANWK305A Install and manage network protocols

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install and manage network protocols in a networking environment.

## Application of the Unit

This unit applies to network administrators who are required to ensure that appropriate protocols have been installed in networks to allow user functionality. The role will also involve the maintenance of installed protocols.

This unit requires the application of transmission control protocol or internet protocol (TCP/IP) and OSI models. Protocols transcend organisational size and network complexity.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Install and manage network protocols	<p>1.1 Select, test and validate appropriate <b><i>network protocol services</i></b></p> <p>1.2 Design a <b><i>network</i></b> addressing system, with subnet and host IDs, including appropriate <b><i>devices</i></b></p> <p>1.3 Configure hosts and workstations to use IP addresses either manually or through automatic allocation of addresses, such as found with dynamic host configuration protocol (DHCP)</p>
2. Identify network protocol applications	<p>2.1 Review a range of well-known network protocol <b><i>applications</i></b></p> <p>2.2 Evaluate client user requirement and recommend network-protocol services</p> <p>2.3 Apply IP addressing scheme according to approved policy and procedures</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to evaluate client user requirements and map to appropriate protocols
- learning skills to ensure currency with protocols development
- literacy skills to interpret technical manuals
- organisational skills to plan, prioritise and organise work
- problem-solving skills to develop and refine configuration protocols
- technical skills to:
  - configure workstations
  - develop strategic initiatives when designing a network addressing system
  - test components using available technology
  - write detailed technical notes.

### Required knowledge

- client business domain, including client organisation structure and business functionality
- current communications technologies and their associated protocols
- current industry-accepted hardware and software products and general features and capabilities
- network protocols currently in use in organisation and industry
- vendor product range and development directions.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• configure, test and validate network protocols in order to facilitate interconnectivity</li> <li>• install and manage network protocols in a network, and troubleshoot when problems arise.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• a live network</li> <li>• application software and operating system</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• networked computers</li> <li>• organisational guidelines</li> <li>• technical documentation and installation manuals</li> <li>• vendor software.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of communications technologies and network protocols</li> <li>• direct observation of candidate configuring network or application protocols</li> <li>• review of candidate's analysis of client user requirements and final recommendations</li> <li>• evaluation of performance test results conducted by candidate.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Network protocol services</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• address resolution protocol (ARP)</li> <li>• DHCP</li> <li>• electronic mail protocols</li> <li>• file transfer protocol (FTP)</li> <li>• H.323 protocol</li> <li>• hypertext transfer protocol (HTTP)</li> <li>• internet protocol (IP)</li> <li>• internet protocol version 4 (IPv4)</li> <li>• internet protocol version 6 (IPv6)</li> <li>• simple network management protocol (SNMP)</li> <li>• simple object access protocol (SOAP)</li> <li>• TCP/IP</li> <li>• wireless application protocol (WAP).</li> </ul>
<p><b><i>Network</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• large and small local area networks (LANs)</li> <li>• virtual private networks (VPNs)</li> <li>• wide area networks (WANs)</li> <li>• wireless local area networks (WLANs).</li> </ul>
<p><b><i>Devices</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• emulators</li> <li>• gateways</li> <li>• routers.</li> </ul>
<p><b><i>Applications</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• FTP</li> <li>• HTTP</li> <li>• hypertext transfer protocol secure (HTTPS)</li> <li>• secure shell</li> <li>• secure socket layer (SSL)</li> <li>• simple mail transfer protocol (SMTP)</li> <li>• Telnet (not secure).</li> </ul>

Networking

## ICANWK401A Install and manage a server

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install and manage a server. Server management includes initial configuration and testing as well as ongoing administration and troubleshooting. Server management includes initial configuration and testing, ongoing administration, software distribution and updates, profiling and monitoring servers and troubleshooting.

### Application of the Unit

This unit applies to those employed in network management or server administration roles who are required to install and manage server operating systems.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Prepare to install a server</p>	<p>1.1 Prepare for work, according to site-specific safety requirements and enterprise OHS processes and procedures</p> <p>1.2 Obtain <i>server applications</i> and features from <i>appropriate person</i></p> <p>1.3 Choose the most suitable operating system features and <i>network services</i> with reference to required server solution and technical <i>requirements</i></p> <p>1.4 Review required installation options</p> <p>1.5 Analyse data migration requirements</p> <p>1.6 Back up local data in preparation for installation</p> <p>1.7 Arrange access to site and advise client of deployment and potential down time</p>
<p>2. Install server as required by the specification</p>	<p>2.1 Create <i>disk-partitioning scheme</i></p> <p>2.2 Create <i>file systems</i> and virtual memory</p> <p>2.3 Install <i>network operating system</i></p> <p>2.4 Install and configure server applications and network services</p> <p>2.5 Reconnect and reconfigure connectivity devices</p> <p>2.6 Patch the operating system and applications to ensure maximum security and reliability</p> <p>2.7 Restore local data to new server</p>
<p>3. Configure and administer the server</p>	<p>3.1 Configure <i>network directory service</i></p> <p>3.2 Create and manage <i>accounts</i> to facilitate security and network access</p> <p>3.3 Configure <i>user environment</i> using operating system policies and scripts</p> <p>3.4 Create directory structure and quotas to meet client requirements</p> <p>3.5 Configure and manage <i>print services</i></p> <p>3.6 Set the security, access and sharing of <i>system resources</i> to meet client requirements</p> <p>3.7 Implement <i>security policy</i> to prevent unauthorised access to the <i>system</i></p> <p>3.8 Implement <i>backup and recovery</i> methods to enable restoration capability in the event of a disaster</p>

	3.9 Configure <i>update services</i> to provide automatic updates for operating system and applications
4. Monitor and test the server	<p>4.1 Test server for benchmarking against client specification and requirements according to test plan, and record outcomes</p> <p>4.2 Analyse the error report and make changes as required</p> <p>4.3 Use troubleshooting tools and techniques to diagnose and correct <i>server problems</i></p> <p>4.4 Test required changes or additions</p> <p>4.5 Validate changes or additions against specifications</p>
5. Complete documentation and clean up worksite	<p>5.1 Make and document server configuration and operational changes</p> <p>5.2 Complete client report and notification of server status</p> <p>5.3 Clean up and restore worksite to client's satisfaction</p> <p>5.4 Secure sign-off from appropriate person</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports in required formats
- numeracy skills to:
  - take test measurements
  - interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - adapt configuration procedures to requirements of network
  - reconfigure depending on differing operational contingencies, risk situations and environments
- research skills to interrogate vendor databases and websites to implement different configuration requirements to meet security levels
- technical skills to:
  - select and use server and network diagnostics
  - test application software and hardware to suit different network applications.

### Required knowledge

- features of:
  - current network operating systems (NOS)
  - current server applications compatibility issues and resolution procedures
- broad knowledge of:
  - compatibility issues and resolution procedures
  - desktop applications and operating systems as required
  - documentation skills for networks
  - error logging and reporting
  - high availability options for file systems, such as RAID and replication
  - network directory services
  - network service configuration
  - performance tuning options
  - user authentication
- detailed knowledge of:
  - best practice for implementing backup and recovery procedures
  - boot process

- operating system help and support utilities
- operating system installation methods, including installation from: CD or DVD, universal serial bus (USB) boot disk, network and script (automated install)
- print management
- process and task management, including process termination
- task-scheduling utilities
- troubleshooting tools and techniques, including network diagnostic utilities
- user account and password management.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• install and configure server</li> <li>• configure network connectivity</li> <li>• manage the server operating system, including user accounts, file, network directory and print services</li> <li>• perform backup and recovery</li> <li>• update operating system and software</li> <li>• monitor and test server</li> <li>• troubleshoot server and network failures.</li> </ul> <p>Candidates should demonstrate competency in at least two different network operating systems.</p>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where server installation may be conducted</li> <li>• relevant server specifications: <ul style="list-style-type: none"> <li>• cabling</li> <li>• networked (LAN) computers</li> <li>• server diagnostic software</li> <li>• switch</li> <li>• client requirements</li> <li>• WAN service point of presence</li> <li>• workstations</li> </ul> </li> <li>• relevant regulatory documentation that affects installation activities</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing or updating a server</li> <li>• verbal or written questioning of required skills and knowledge</li> </ul>

	<ul style="list-style-type: none"><li>• evaluation of prepared report that outlines testing procedures, test results and recommendation to server changes.</li></ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Server applications</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• database and data warehousing</li> <li>• directory services</li> <li>• file sharing</li> <li>• line of business applications</li> <li>• management</li> <li>• messaging</li> <li>• name services</li> <li>• network and remote access</li> <li>• printer sharing</li> <li>• terminal services</li> <li>• web applications.</li> </ul>
<p><b><i>Appropriate person</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• information technology (IT) support manager</li> <li>• network administrator</li> <li>• network manager</li> <li>• small or medium enterprise (SME) customer</li> <li>• small office home office (SOHO) customer</li> <li>• supervisor.</li> </ul>
<p><b><i>Network services</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• dynamic host configuration protocol (DHCP)</li> <li>• dynamic name system (DNS)</li> <li>• file transfer protocol (FTP)</li> <li>• firewall</li> <li>• hypertext transfer protocol (HTTP or HTTPS)</li> <li>• internet message access protocol (IMAP)</li> <li>• network file system (NFS)</li> <li>• network time protocol (NTP)</li> <li>• post office protocol (POP)</li> <li>• proxy</li> <li>• server messages block (SMB)</li> <li>• simple mail transfer protocol (SMTP)</li> <li>• simple network management protocol (SNMP)</li> <li>• structured query language server (SQLS)</li> <li>• transmission control protocol or internet protocol (TCP/IP).</li> </ul>

<b>Requirements</b> may be in reference to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• database</li> <li>• network</li> <li>• people in the organisation</li> <li>• platform</li> <li>• system.</li> </ul>
<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b>Disk partitioning scheme</b> may include:	<ul style="list-style-type: none"> <li>• extended partitions</li> <li>• logical partitions</li> <li>• logical volumes</li> <li>• partitions</li> <li>• RAID</li> <li>• swap space.</li> </ul>
<b>File systems</b> may include:	<ul style="list-style-type: none"> <li>• EXT</li> <li>• FAT</li> <li>• HFS+</li> <li>• NFS</li> <li>• new technology file system (NTFS).</li> </ul>
<b>Network operating system</b> may include the latest versions of:	<ul style="list-style-type: none"> <li>• Linux</li> <li>• Mac</li> <li>• Unix</li> <li>• Windows.</li> </ul>
<b>Network directory service</b> may include:	<ul style="list-style-type: none"> <li>• Hesiod</li> <li>• Kerberos</li> <li>• LDAP</li> <li>• NIS</li> <li>• Novell Directory Services (NDS)</li> <li>• Red Hat Directory Services</li> <li>• SMB or Samba</li> <li>• Windows Active Directory Services.</li> </ul>
<b>Accounts</b> may include:	<ul style="list-style-type: none"> <li>• computer accounts</li> <li>• groups</li> <li>• other objects defined by the operating system (OS) or network directory service</li> <li>• system and application accounts</li> <li>• user accounts.</li> </ul>
<b>User environment</b> may	<ul style="list-style-type: none"> <li>• automatic mounting or mapping of file systems or network</li> </ul>

include:	<ul style="list-style-type: none"> <li>• shares</li> <li>• login defaults and options</li> <li>• password security, including length, ageing and expiry</li> <li>• user-desktop environment.</li> </ul>
<b>Print services</b> may include:	<ul style="list-style-type: none"> <li>• print drivers</li> <li>• print queues</li> <li>• print server</li> <li>• print spool location</li> <li>• printer pools.</li> </ul>
<b>System resources</b> may include:	<ul style="list-style-type: none"> <li>• applications</li> <li>• databases</li> <li>• files and directories</li> <li>• network file systems or shares</li> <li>• printers</li> <li>• SharePoint sites</li> <li>• websites.</li> </ul>
<b>Security policy</b> may include:	<ul style="list-style-type: none"> <li>• firewall</li> <li>• SE Linux</li> <li>• Windows Group Policy.</li> </ul>
<b>System</b> may include:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• computers</li> <li>• database system</li> <li>• financial system</li> <li>• information system</li> <li>• management system</li> <li>• network</li> <li>• software</li> <li>• website.</li> </ul>
<b>Backup and recovery</b> may include:	<ul style="list-style-type: none"> <li>• automated backups using operating system backup and job scheduling tools</li> <li>• backup and recovery of mail systems</li> <li>• backup and recovery of network directory service objects</li> <li>• backups using third-party software</li> <li>• database backup and recovery</li> <li>• volume-shadow copies.</li> </ul>
<b>Update services</b> may include:	<ul style="list-style-type: none"> <li>• Pup</li> <li>• Red Hat Network</li> <li>• Windows Server Update Services</li> <li>• Yum.</li> </ul>
<b>Server problems</b> may	<ul style="list-style-type: none"> <li>• disk failure</li> </ul>

include:	<ul style="list-style-type: none"><li>• email hostname resolution</li><li>• internet connectivity logged system errors</li><li>• misconfigured networking.</li></ul>

Networking

# ICANWK402A Install and configure virtual machines for sustainable ICT

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop and implement virtualisation technologies with the goal of providing a more sustainable information and communications technology (ICT) environment.

## Application of the Unit

This unit applies to those who work in the network area of organisations and are responsible for the use of virtual machines to increase sustainability.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Identify virtualisation benefits and features</p>	<p>1.1 Research and determine <b>government and industry</b> guidelines and policies for use of desktop and server virtualisation</p> <p>1.2 Identify benefits of virtualisation of desktop and server environments</p> <p>1.3 Identify available features of current <b>virtualisation software</b></p> <p>1.4 Select virtualisation solution based on current and future needs of the client</p>
<p>2. Install and configure virtualisation software</p>	<p>2.1 Identify, clarify and organise requirements of the <b>client</b> relating to virtualisation technologies, following <b>organisational requirements</b></p> <p>2.2 Identify the <b>hardware</b> and software, infrastructure components, required to be installed and configured to meet technical requirements</p> <p>2.3 Install and configure software to provide support for virtualisation of desktop and server operating systems</p> <p>2.4 Configure virtualisation software application features to accommodate required functionality, relating to client and business needs</p>
<p>3. Install and configure virtual machines</p>	<p>3.1 Install virtual machine consistent with client, <b>commercial and business requirements</b></p> <p>3.2 Configure virtual machine consistent with client, commercial and business requirements</p> <p>3.3 Test functionality of installed virtual machine</p>
<p>4. Configure virtual networks of virtual machines</p>	<p>4.1 Configure IP addressing to match chosen network configuration</p> <p>4.2 Configure virtual network as host only configuration</p> <p>4.3 Configure virtual network as bridged configuration</p> <p>4.4 Configure virtual network as network address translation (NAT) configuration</p> <p>4.5 Configure services to operate under current network configuration</p> <p>4.6 Test functionality of virtual network configuration</p>
<p>5. Back up and restore virtual machines</p>	<p>5.1 Back up virtual machine state on shutdown</p> <p>5.2 Restore state on start-up of virtual machine</p>

	5.3 Back up virtual hard drive and software configuration files
	5.4 Restore virtual hard drive and software configuration files

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - convey and clarify information
  - liaise with clients
- literacy skills to:
  - develop and document virtualisation configurations and processes
  - record researched information
- planning skills to plan methods for integrating and maintaining a virtualised machine environment
- problem-solving skills to:
  - apply solutions in networks, including virtualised machine environments
  - deploy rapid deployment of solutions to problems involving virtualised machine environment
- safety awareness skills to apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- technical skills to apply current best practice to implement sustainability options through virtualisation methodologies and technologies.

### Required knowledge

- overview knowledge of:
  - current government and industry policies and guidelines related to developing sustainable ICT environments
  - current technologies and processes designed to produce a sustainable ICT environment
- detailed knowledge of:
  - available tools and software applications required to manage virtual machines
  - structure, function and business organisation of client
  - configuration of software applications required to manage virtual machines
  - configuration required to integrate virtual machines into existing network design.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• display knowledge of current sustainability practice related to ICT network design</li> <li>• develop, implement and maintain virtual machine environments.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where virtual machine environments may be implemented</li> <li>• network technical requirements</li> <li>• software tools to support implementation of virtual machines</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of emerging policies related to:             <ul style="list-style-type: none"> <li>• current recommendations on sustainability options in ICT design</li> <li>• benefits of virtualisation</li> </ul> </li> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• installation and configuration of virtualisation software</li> <li>• installation and configuration of virtual machines</li> <li>• configuration of virtual machines into network design</li> </ul> </li> <li>• direct observation of candidate demonstrating:             <ul style="list-style-type: none"> <li>• installation and configuration of virtualisation software</li> <li>• installation and configuration of virtual machines</li> <li>• configuration of virtual machines into network design</li> </ul> </li> <li>• review of documentation prepared by candidate to:             <ul style="list-style-type: none"> <li>• record research of current recommendations on</li> </ul> </li> </ul>

	<p>sustainability options in ICT design and the benefits of virtualisation</p> <ul style="list-style-type: none"><li>• record the process of installing and configuring virtual machines.</li></ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Government and industry</b> may include:	<ul style="list-style-type: none"> <li>• Australian Computer Society</li> <li>• Australian government</li> <li>• Climate Savers Computing Initiative</li> <li>• state government</li> <li>• The Green Grid:             <ul style="list-style-type: none"> <li>• AMD</li> <li>• APC</li> <li>• Dell</li> <li>• HP</li> <li>• IBM</li> <li>• Intel</li> <li>• Microsoft</li> <li>• Sun Microsystems</li> <li>• VMware.</li> </ul> </li> </ul>
<b>Virtualisation software</b> may include:	<ul style="list-style-type: none"> <li>• KVM</li> <li>• Microsoft Virtual PC</li> <li>• Microsoft Virtual Server</li> <li>• Parallels Desktop for Mac</li> <li>• Sun Virtual Box</li> <li>• VMware</li> <li>• Xen.</li> </ul>
<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b>Organisational requirements</b> may include:	<ul style="list-style-type: none"> <li>• how and what the organisation wants in regard to work environment</li> <li>• preventative maintenance and diagnostic policy</li> <li>• problem-solving processes</li> <li>• roles and technical responsibilities in network management</li> <li>• vendor and product service level support agreements.</li> </ul>
<b>Hardware</b> may include:	<ul style="list-style-type: none"> <li>• personal computers</li> <li>• servers</li> </ul>

	<ul style="list-style-type: none"><li>• workstations.</li></ul>
<i>Commercial and business requirements</i> may include:	<ul style="list-style-type: none"><li>• availability</li><li>• backup and recovery of data</li><li>• confidentiality</li><li>• firewalls</li><li>• hacking prevention</li><li>• integrity</li><li>• password logons</li><li>• remote access to internal network.</li></ul>

## Unit Sector(s)

Networking

## ICANWK403A Manage network and data integrity

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement and manage security functions throughout a network.

### Application of the Unit

This unit applies to middle managers, such as information security managers, network engineers and network technicians, responsible for implementing and managing the organisational disaster recovery and asset protection policy and procedures.

The role involves leading the development of asset protection processes, determining threats and implementing controls to mitigate risk.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Ensure compliance with company network and security policies	1.1 Review company <i>security policies</i> 1.2 Audit and record security access 1.3 Ensure user accounts are controlled 1.4 Ensure secure file and resource access
2. Conduct audit on system assets	2.1 Use appropriate <i>tools</i> and techniques to conduct audit on system hardware and software <i>assets</i> 2.2 Develop a system to record assets 2.3 Use system to develop reports on assets for management
3. Implement an antivirus solution	3.1 Research appropriate <i>antivirus</i> and anti-malware solutions 3.2 Implement antivirus or anti-malware solution 3.3 Test antivirus and anti-malware solution functionality
4. Implement systems to protect assets from threats	4.1 Determine <i>environmental threats</i> to data 4.2 Document systems to protect from environmental threat 4.3 Implement system to protect data from environmental threat
5. Develop a backup solution	5.1 Determine appropriate <i>backup type</i> to meet systems needs 5.2 Investigate current backup media options 5.3 Implement a backup solution 5.4 Demonstrate functionality of backup solution 5.5 Demonstrate restore of data from backup media 5.6 Implement a real time backup and data <i>sync solution</i>
6. Monitor network performance	6.1 Determine available <i>network</i> performance <i>monitoring tools</i> 6.2 Implement network performance monitoring tools to monitor network 6.3 Produce report on network performance

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - convey and clarify information
  - liaise with clients
- initiative and enterprise skills to apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- literacy skills to:
  - develop and document network and data integrity processes
  - interpret and prepare technical documentation
  - record asset audit information
- planning skills to develop methods for maintaining network and data integrity
- problem-solving skills to:
  - apply solutions in networks, including systems management processes
  - deploy rapid solutions to problems involving management of network assets
- technical skills to apply current best practice to methodologies and technologies.

### Required knowledge

- broad knowledge related to:
  - auditing and control of user access
  - asset tracking and auditing
  - backup, restore and rollback procedures
  - current antivirus solutions and techniques
  - system and network monitoring tools and related functions
- detailed knowledge of:
  - client organisation structure and business functionality
  - tools and applications required to manage network and data integrity
  - network management and disaster recovery processes.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify user access control issues</li> <li>• use appropriate tools to conduct audit on system assets</li> <li>• implement and test antivirus solution</li> <li>• employ systems to negate environmental threats</li> <li>• demonstrate features of data backup, restore and system roll back</li> <li>• perform network monitoring using a variety of current standard tools</li> <li>• add network controls according to network and data integrity policies.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where network and data integrity strategies may be implemented and managed</li> <li>• use of network support tools currently used in industry</li> <li>• organisation's security policies, manufacturer recommendations and network and data integrity protection standards</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of emerging policies related to: <ul style="list-style-type: none"> <li>• access control</li> <li>• asset auditing</li> <li>• antivirus protection</li> <li>• fallback and backup strategies</li> <li>• environmental and physical threats</li> <li>• system monitoring</li> </ul> </li> <li>• direct observation of candidate demonstrating management of</li> </ul>

	<p>disaster recovery and related strategies in a range of situations</p> <ul style="list-style-type: none"> <li>• review of documentation prepared by candidate to manage network and data integrity.</li> </ul>
<p><b>Guidance information for assessment</b></p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Security policies</i></b> should include:	<ul style="list-style-type: none"> <li>• data security</li> <li>• physical security</li> <li>• remote access</li> <li>• user logon.</li> </ul>
<b><i>Tools</i></b> should include:	<ul style="list-style-type: none"> <li>• hardware and software audit tools:             <ul style="list-style-type: none"> <li>• MSINFO32</li> <li>• DXdiag</li> <li>• Microsoft Software Inventory Analyzer (MSIA)</li> </ul> </li> <li>• E-Z Audit</li> <li>• hardware and software logs.</li> </ul>
<b><i>Assets</i></b> may include:	<ul style="list-style-type: none"> <li>• company information and branding</li> <li>• computers</li> <li>• data</li> <li>• personal information</li> <li>• servers.</li> </ul>
<b><i>Antivirus</i></b> may include:	<ul style="list-style-type: none"> <li>• AVG</li> <li>• EICAR (test virus string)</li> <li>• McAfee</li> <li>• Microsoft Security Essentials</li> <li>• Norton Antivirus or Endpoint</li> <li>• Trendmicro.</li> </ul>
<b><i>Environmental threats</i></b> may include:	<ul style="list-style-type: none"> <li>• earthquake</li> <li>• fire</li> <li>• flood</li> <li>• power failure, spike or surge</li> <li>• theft.</li> </ul>
<b><i>Backup type</i></b> must include:	<ul style="list-style-type: none"> <li>• copy</li> <li>• differential</li> <li>• folder and drive synchronisation</li> <li>• full and normal incremental</li> <li>• RAID.</li> </ul>
<b><i>Sync solution</i></b> may include:	<ul style="list-style-type: none"> <li>• Folder Sync</li> <li>• Shadowprotect</li> </ul>

	<ul style="list-style-type: none"><li>• Yadis.</li></ul>
<i>Network</i> may include:	<ul style="list-style-type: none"><li>• internet</li><li>• LAN</li><li>• WAN</li><li>• WLANs.</li></ul>
<i>Monitoring tools</i> may include:	<ul style="list-style-type: none"><li>• Microsoft server performance monitor</li><li>• Windows network monitor</li><li>• Windows performance monitor</li><li>• Windows resource monitor</li><li>• Windows task manager</li><li>• Wireshark.</li></ul>

## Unit Sector(s)

Networking

# ICANWK404A Install, operate and troubleshoot a small enterprise branch network

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use appropriate tools, equipment, software and protocols to install, operate and troubleshoot a small enterprise branch network.

## Application of the Unit

This unit demonstrates the skills required for an entry-level network support position. It covers networking fundamentals, wide area network (WAN) technologies, basic security, routing and switching fundamentals, and configuring simple networks.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<p><i>Elements describe the essential outcomes of a unit of competency.</i></p>	<p><i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i></p>

## Elements and Performance Criteria

<p>1. Describe the operation of data networks</p>	<p>1.1 Describe the purpose and functions of various <i>network elements</i></p> <p>1.2 Use the open system interconnections (OSI) and transmission control protocol or internet protocol (TCP/IP) models to explain how data flows in a network</p> <p>1.3 Describe the purpose and basic operation of the protocols in the OSI and TCP/IP models</p> <p>1.4 Identify and correct common network problems at layers 1, 2, 3 and 7 using a layered model approach</p>
<p>2. Implement a small switched network</p>	<p>2.1 Select the appropriate media, cables, ports, and connectors to connect switches to other network devices and hosts</p> <p>2.2 Explain network segmentation, basic traffic management and basic switching concepts</p> <p>2.3 Perform, save and verify initial switch configuration tasks</p> <p>2.4 Verify network status and switch operation using <i>basic utilities</i></p> <p>2.5 Implement and verify <i>basic security for a switch</i></p>
<p>3. Implement an IP addressing scheme and IP services to meet network requirements</p>	<p>3.1 Describe the need and role of addressing in a network</p> <p>3.2 Create and apply an addressing scheme to a network</p> <p>3.3 Assign and verify valid IP addresses to hosts, servers and networking devices in a local area network (LAN) environment</p> <p>3.4 Describe the operation and benefits of using private and public IP addressing</p> <p>3.5 Implement static and dynamic addressing services for hosts in a LAN environment</p> <p>3.6 Enable <i>network address translation (NAT)</i> for a small network with a single internet service provider (ISP) and connection and verify operation</p> <p>3.7 Configure <i>dynamic host configuration protocol (DHCP) and domain name system (DNS)</i> operation on a router</p>
<p>4. Implement a small routed network</p>	<p>4.1 Select the appropriate media, cables, ports, and connectors to connect routers to other network devices and hosts</p>

	<p>4.2 Describe basic routing concepts</p> <p>4.3 Perform, save and verify basic router configuration tasks</p> <p>4.4 Configure and verify a classless routing protocol</p> <p>4.5 Verify device configuration and network connectivity using basic utilities</p> <p>4.6 Implement password and physical security</p>
5. Implement and verify WAN links	<p>5.1 Describe different methods for connecting to a WAN</p> <p>5.2 Configure and verify basic WAN serial connection</p>
6. Troubleshoot a small enterprise branch network	<p>6.1 Identify and resolve common <i>switched network issues</i></p> <p>6.2 Identify and correct IP addressing issues</p> <p>6.3 Troubleshoot DHCP, NAT and DNS operation on a router</p> <p>6.4 Identify and resolve <i>common routing problems</i></p> <p>6.5 Troubleshoot basic <i>WAN connection problems</i></p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to establish client requirements
- problem-solving skills to troubleshoot and debug switch and router network issues
- technical skills to assess and implement security requirements.

### Required knowledge

- overview knowledge of:
  - classless routing protocols
  - WAN link protocols
- detailed knowledge of:
  - basic routing concepts, small enterprise network switches and routers
  - classful routing protocols (RIPv1)
- purpose and basic operation of the protocols in the open system interconnection (OSI) and TCP/IP models.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design an IP addressing scheme to suit requirements</li> <li>• install, configure and test the network elements to ensure interoperability within the network</li> <li>• apply network topologies, protocols and security issues</li> <li>• apply solutions and troubleshoot defined network problems.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network installation may be conducted</li> <li>• small enterprise routers and switches</li> <li>• network design documentation</li> <li>• equipment specifications</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• computers</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of prepared documentation that outlines testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Network elements</i></b> may include:	<ul style="list-style-type: none"> <li>• adaptors</li> <li>• communications cables and connectors</li> <li>• hubs</li> <li>• routers</li> <li>• servers</li> <li>• switches.</li> </ul>
<b><i>Basic utilities</i></b> may include:	<ul style="list-style-type: none"> <li>• ping</li> <li>• traceroute (tracert)</li> <li>• Telnet</li> <li>• secure shell (SSH)</li> <li>• ipconfig.</li> </ul>
<b><i>Basic security for a switch</i></b> may include:	<ul style="list-style-type: none"> <li>• port security</li> <li>• port deactivation.</li> </ul>
<b><i>NAT, DHCP and DNS</i></b> may include:	<ul style="list-style-type: none"> <li>• calling line identification (CLI) configuration</li> <li>• graphical user interface (GUI) configuration.</li> </ul>
<b><i>Switched network issues</i></b> may include:	<ul style="list-style-type: none"> <li>• auto-negotiation problems</li> <li>• configuration issues</li> <li>• media issues</li> <li>• switch-hardware failures.</li> </ul>
<b><i>Common routing problems</i></b> may include:	<ul style="list-style-type: none"> <li>• configuration issues</li> <li>• dynamic-routing protocols</li> <li>• hardware failures</li> <li>• media issues</li> <li>• static routes.</li> </ul>
<b><i>WAN connection problems</i></b> may include:	<ul style="list-style-type: none"> <li>• configuration issues</li> <li>• hardware failures</li> <li>• incorrect passwords</li> <li>• media issues</li> <li>• protocol mismatches.</li> </ul>

## Unit Sector(s)

Networking

## ICANWK405A Build a small wireless local area network

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to build and arrange connectivity to a basic wireless local area network (WLAN).

**Note:** If more than one wireless zone is required, then refer to ICANWK417A Build an enterprise wireless network.

### Application of the Unit

This unit applies to the development of a small wireless local area network where it is appropriate to use one wireless access point or wireless router in a small to medium-sized enterprise.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Confirm client and equipment requirements	<p>1.1 Identify, clarify and organise <i>client</i> requirements according to network needs and <i>organisational requirements</i></p> <p>1.2 Ensure an appropriate person has given the authority for wireless network access</p> <p>1.3 Evaluate requirements along with business needs and translate into technical requirements</p> <p>1.4 Identify <i>components</i> to be installed in order to meet the technical requirements</p> <p>1.5 Select position for access point, based on <i>user</i> requirements and environmental conditions</p> <p>1.6 Arrange for preliminary work to be carried out to meet cabling and power requirements</p>
2. Select, install and configure wireless access point	<p>2.1 Select access point device based on current and future client needs</p> <p>2.2 Install and configure access point to provide wireless access to <i>network</i></p> <p>2.3 Configure services</p> <p>2.4 Test access point and verify wireless connection and security arrangements</p> <p>2.5 Select, install and configure appropriate wireless card where necessary for legacy equipment</p>
3. Configure network	<p>3.1 Configure security and other key parameters consistent with <i>commercial and business requirements</i></p> <p>3.2 Test <i>security</i> and firewall arrangements with appropriate test equipment</p> <p>3.3 Test the network with user equipment for general compatibility and access</p>
4. Train users	<p>4.1 Determine devices to be connected to the network</p> <p>4.2 Demonstrate how pairing and log-on arrangements are established to user</p> <p>4.3 Inform users of wireless network etiquette and traffic capacity issues</p> <p>4.4 Develop user <i>documentation</i></p>
5. Monitor and administer wireless	<p>5.1 Monitor wireless network performance using diagnostic <i>tools</i></p>

network	5.2 Debug networking issues to maintain trouble-free wireless connection 5.3 Document current settings and store securely
---------	--

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with client to determine functional requirements of network
- literacy skills to document client requirements
- problem-solving skills to troubleshoot and debug:
  - connectivity issues
  - security issues
- research skills to determine most suitable solution for client
- technical skills to:
  - design, develop and implement various wireless network solutions
  - implement wireless networking strategies and configure wireless network software and hardware
  - implement WLANs.

### Required knowledge

- features of security threats
- overview knowledge of:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - authentication methods
  - network protocols and operating systems
  - security protocols, standards and data encryption
- detailed knowledge of:
  - bandwidth and quality of service
  - factors affecting signal quality
  - layer 2 and layer 3 design issues
  - SOHO
  - transmission control protocol or internet protocol (TCP/IP) protocols and applications
  - wireless security strategies
  - wireless topologies
  - WLAN solutions.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop, implement and maintain wireless networks</li> <li>• install, configure and test wireless access points</li> <li>• test security and network to business specifications</li> <li>• develop user training material</li> <li>• monitor and resolve wireless network issues.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• network technical requirements</li> <li>• network infrastructure, including wireless hardware and software</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of underpinning knowledge and skills</li> <li>• direct observation of candidate performing the tasks required to successfully create a small WLAN</li> <li>• documentation produced in a small project environment that reflects understanding of client requirements and the technical skills required for a small WLAN.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b><i>Organisational requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• preventative maintenance and diagnostic policy</li> <li>• problem-solving processes</li> <li>• roles and technical responsibilities in network management</li> <li>• vendor and product service level support agreements</li> <li>• work environment.</li> </ul>
<b><i>Components</i></b> may include:	<ul style="list-style-type: none"> <li>• wireless access and software</li> <li>• hardware: <ul style="list-style-type: none"> <li>• asymmetric digital subscriber line (ADSL) modems</li> <li>• antennas and other connectivity devices</li> <li>• mobile equipment</li> <li>• modems</li> <li>• wireless access points</li> <li>• networks</li> <li>• personal computers</li> <li>• power controllers</li> <li>• remote sites</li> <li>• servers</li> <li>• UPS</li> <li>• workstations</li> </ul> </li> <li>• cabling: <ul style="list-style-type: none"> <li>• category 5e</li> <li>• category 6</li> <li>• category 7</li> <li>• coaxial and fibre.</li> </ul> </li> </ul>
<b><i>User</i></b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party</li> <li>• community members.</li> </ul>

<i>Network</i> may include:	<ul style="list-style-type: none"> <li>• domestic</li> <li>• small enterprise WLANs.</li> </ul>
<i>Commercial and business requirements</i> may include:	<ul style="list-style-type: none"> <li>• availability</li> <li>• backup and recovery of data</li> <li>• confidentiality</li> <li>• firewalls</li> <li>• hacking prevention</li> <li>• integrity</li> <li>• password logons</li> <li>• remote access to internal network.</li> </ul>
<i>Security</i> may include:	<ul style="list-style-type: none"> <li>• AAA</li> <li>• Diameter</li> <li>• EAP or LEAP</li> <li>• IPSec</li> <li>• PKM</li> <li>• smart cards</li> <li>• SSL</li> <li>• tokens</li> <li>• WEP</li> <li>• WPA or WPA2.</li> </ul>
<i>Documentation</i> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• maintaining equipment inventory</li> <li>• naming standards</li> <li>• project management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<i>Tools</i> may include:	<ul style="list-style-type: none"> <li>• data and voice integration measurements</li> <li>• network performance software.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK406A Install, configure and test network security

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install, configure and test network security in an information and communications technology (ICT) network.

## Application of the Unit

This unit applies to information technology (IT) professionals who install, configure and test secure networks of any size.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Assess network security threats and vulnerabilities to identify risk</p>	<p>1.1 Assess and report on current <i>system</i> security, according to required <i>asset</i> security level</p> <p>1.2 Determine additional <i>network, software, hardware</i> and system <i>security threats</i> and <i>vulnerabilities</i></p> <p>1.3 Use identified threats and vulnerability information to identify security risks</p> <p>1.4 Make recommendations to management to address security deficiencies, according to current and future <i>commercial and business requirements</i></p>
<p>2. Implement countermeasures for identified vulnerabilities and threats</p>	<p>2.1 Implement required level of <i>perimeter security</i> based on current and future business needs</p> <p>2.2 Assess and implement best practice <i>server</i> and network <i>hardening techniques</i> and measures</p> <p>2.3 Implement secure authentication and user account controls</p> <p>2.4 Secure <i>data integrity</i> and transmission</p>
<p>3. Test and verify functionality and performance of security system implemented</p>	<p>3.1 Design test items to verify key function and performance measures against criteria</p> <p>3.2 Conduct function and performance tests recording results</p> <p>3.3 Modify and debug security system as necessary</p> <p>3.4 Develop documentation on current system settings and file for future reference</p>
<p>4. Provide systems for monitoring and maintaining security</p>	<p>4.1 Monitor current network security, including physical aspects, using appropriate third-party testing software where applicable</p> <p>4.2 Review logs and audit reports to identify and record security incidents, intrusions or attempts</p> <p>4.3 Carry out spot checks and audits to ensure that procedures are not being bypassed</p> <p>4.4 <i>Document</i> newly discovered security threats, vulnerabilities and risks in a report for presentation to <i>appropriate person</i> to gain approval for changes to be made</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse systems evaluation
  - review system security logs for breaches
- communication skills to liaise with clients
- literacy skills to write reports for evaluating system security status according to organisational security policies
- numeracy skills to undertake a cost-benefit comparison
- problem-solving skills to:
  - determine intrusion detection
  - troubleshoot and debug
- research skills to identify and analyse network security methodologies and technologies
- technical skills to:
  - develop enterprise policies strategies and procedures
  - implement local area network (LAN), wide area network (WAN), virtual private network (VPN) and wireless local area network (WLAN) solutions
  - implement security strategies and configure network security software and hardware
  - install hardware and software related to improving network security
  - undertake a network security risk assessment.

### Required knowledge

- authentication issues
- overview knowledge of:
  - client business domain, including client organisation structure and business functionality
  - features and capabilities of networking technologies
  - privacy issues and privacy legislation
  - security information sources
  - risk analysis
- common VPN issues, including bandwidth and dynamic security environment
- configuring routers and switches
- current industry-accepted hardware and software security products, with broad knowledge of general features and capabilities
- function and operation of VPN concepts, including encryption, firewalls, packet tunnelling and authentication
- network protocols and operating systems
- organisational issues surrounding security
- security perimeters and their functions
- security protocols, standards and data encryption

- security threats, including eavesdropping, data interception, data corruption, data falsification
- types of VPNs, including site-to-site, user-to-site internet traffic and extranets
- systems and procedures related to:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - cryptography
  - LAN, WLAN and WAN
  - screened subnets
  - transmission control protocols or internet protocols (TCPs/IPs) and applications
  - use of virus detection software.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• assess and identify security threats, vulnerabilities and risks</li> <li>• determine appropriate countermeasure for threat, vulnerability or risk</li> <li>• implement countermeasure per threat or risk</li> <li>• install, configure and test network elements to ensure perimeter security</li> <li>• test and verify function and performance of selected security measures</li> <li>• monitor network for suspicious activity taking appropriate action where necessary</li> <li>• document newly discovered threats, vulnerabilities and risks, including change recommendations for approval.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where secure network installation may be conducted</li> <li>• network security documentation</li> <li>• equipment specifications</li> <li>• network components</li> <li>• hardware and software</li> <li>• firewalls (hardware and software)</li> <li>• live network</li> <li>• organisational guidelines</li> <li>• networked (LAN) computers</li> <li>• WAN service point of presence</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• documentation of current system security analysis that outlines required enterprise security requirements</li> <li>• identification of additional security threats and vulnerabilities</li> </ul>

	<ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of network security</li> <li>• direct observation of candidate performing tasks required to successfully install, configure and test a secure network</li> <li>• direct observation of candidate performing tasks required to successfully test function and performance of secure network</li> <li>• direct observation of candidate performing tasks required to successfully monitor and document newly discovered security threats, vulnerabilities and risks.</li> </ul>
<p><b>Guidance information for assessment</b></p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• operating systems</li> <li>• servers</li> <li>• WAN communication links</li> <li>• workstations.</li> </ul>
<b><i>Asset</i></b> may include:	<ul style="list-style-type: none"> <li>• data and information</li> <li>• intellectual property</li> <li>• physical assets.</li> </ul>
<b><i>Network</i></b> may include:	<ul style="list-style-type: none"> <li>• intranets</li> <li>• large and small LANs</li> <li>• internet</li> <li>• VPNs</li> <li>• WANs</li> <li>• WLANs.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• applications: <ul style="list-style-type: none"> <li>• commercial</li> <li>• customised</li> <li>• in-house</li> <li>• packaged</li> </ul> </li> <li>• encryption modules</li> <li>• operating systems</li> <li>• security: <ul style="list-style-type: none"> <li>• antivirus</li> <li>• firewall</li> <li>• spyware</li> </ul> </li> <li>• utilities: <ul style="list-style-type: none"> <li>• audit</li> <li>• network monitoring.</li> </ul> </li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• analog modems</li> <li>• digital subscriber line (DSL) modems</li> <li>• firewall devices</li> </ul>

	<ul style="list-style-type: none"> <li>• network cabling</li> <li>• wired and wireless networks</li> <li>• notebooks</li> <li>• personal computers</li> <li>• routers</li> <li>• servers</li> <li>• switches</li> <li>• workstations.</li> </ul>
<b><i>Security threats</i></b> may include:	<ul style="list-style-type: none"> <li>• by-pass</li> <li>• denial of service</li> <li>• eavesdropping</li> <li>• elevation of privilege</li> <li>• hacking</li> <li>• impersonation</li> <li>• manipulation</li> <li>• penetration</li> <li>• repudiation</li> <li>• viruses or malicious code.</li> </ul>
<b><i>Vulnerabilities</i></b> may relate to:	<ul style="list-style-type: none"> <li>• application bugs</li> <li>• communications devices</li> <li>• firmware flaws</li> <li>• firewall misconfigurations</li> <li>• operating system bugs</li> <li>• poor bandwidth control measures</li> <li>• transmitting data in plain text</li> <li>• unnecessary services and protocols</li> <li>• weak authentication techniques</li> <li>• weak permissions</li> <li>• weak physical security.</li> </ul>
<b><i>Commercial and business requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• availability</li> <li>• backup and recovery of data</li> <li>• confidentiality</li> <li>• firewalls</li> <li>• hacking prevention</li> <li>• integrity</li> <li>• password logons</li> <li>• remote access to internal network.</li> </ul>
<b><i>Perimeter security</i></b> may include:	<ul style="list-style-type: none"> <li>• access control</li> <li>• auditing</li> <li>• authentication</li> <li>• authorisation</li> </ul>

	<ul style="list-style-type: none"> <li>• hardware or software firewalls</li> <li>• identification</li> <li>• network address translation (NAT)</li> <li>• surveillance.</li> </ul>
<i>Server</i> may include:	<ul style="list-style-type: none"> <li>• application</li> <li>• web</li> <li>• email</li> <li>• file and print</li> <li>• firewall</li> <li>• file transfer protocol (FTP)</li> <li>• proxy, cache</li> <li>• voice over internet protocol (VoIP).</li> </ul>
<i>Hardening techniques</i> may include:	<ul style="list-style-type: none"> <li>• demilitarised zones (DMZ)</li> <li>• encryption</li> <li>• intrusion detection system (IDS)</li> <li>• operating system patch application and management</li> <li>• rigid shared resource permissions</li> <li>• service pack application</li> <li>• strong firewall configurations, including unused port blocking</li> <li>• strong physical security</li> <li>• strong user authentication techniques</li> <li>• unused services and protocols disablement.</li> </ul>
<i>Data integrity</i> may include:	<ul style="list-style-type: none"> <li>• encryption</li> <li>• hash encoding</li> <li>• protocol control</li> <li>• VPN.</li> </ul>
<i>Document</i> may include:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project management templates</li> <li>• report writing principles</li> <li>• security analysis report</li> <li>• version control.</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>• supervisor</li> <li>• authorised business representative</li> <li>• client.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK407A Install and configure client-server applications and services

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install, configure and maintain client-server application services in a networked environment.

## Application of the Unit

This unit applies to network administrators and network support staff who implement the installation and configuration of client-server based software. This includes installing, maintaining and supporting server-side applications as well as client applications on network workstations, in both Windows-based and Linux-based networks.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine client -server software requirements	<p>1.1 Select a <i>client-server solution</i> that best fits the desired outcome for a given scenario</p> <p>1.2 Select hardware required to implement the client-server solution for the desired outcome</p> <p>1.3 Select an appropriate host operating system for the chosen client -server software</p>
2. Obtain and configure server application software, according to industry best practice	<p>2.1 Investigate the range of client-server products available for the desired outcome, including commercial and open source</p> <p>2.2 Identify hardware requirements</p> <p>2.3 Identify available operating system platforms to host the client-server software</p>
3. Install, configure, and manage services to meet business requirements	<p>3.1 Install client-server software to both server and client hardware according to business guidelines</p> <p>3.2 Configure the client-server software, according to vendor guidelines</p> <p>3.3 Monitor client-server performance to ensure performance, according to business requirements</p> <p>3.4 Manage the installation of upgrades and patches to the client-server software environment</p> <p>3.5 Back up and maintain client-server software</p>
4. Assess configuration effect on overall network design	<p>4.1 Identify <i>appropriate utilities</i> to monitor and determine network performance</p> <p>4.2 Create network performance benchmarks prior to and on completion of client-server software installation</p> <p>4.3 Compare benchmarks to assess performance effect on network after installation of client-server software</p>
5. Test and sign off	<p>5.1 Test operation of the client-server software to ensure client requirements are met</p> <p>5.2 Obtain sign-off from appropriate person</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate business and reporting requirements
- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports in required formats
- planning and organisational skills to analyse and organise business operating system requirements
- problem-solving and management skills to adapt, maintain and troubleshoot configuration and operational requirements of client-server software and reconfigure according to business requirements
- numeracy skills to analyse required memory, hard disk and performance requirements
- research skills to determine best-fit software to satisfy business requirements
- technical skills to:
  - select and use server and network diagnostics
  - test application software and hardware to suit different client server applications.

### Required knowledge

- broad knowledge of:
  - client-server concepts
  - computer hardware and software skills
  - IP addressing
  - networking fundamentals
  - operating systems
- detailed knowledge of:
  - operating system help and support utilities
  - procedures for implementing backup and recovery
  - software installation and configuration, including user account and password management
  - troubleshooting tools and techniques, including network diagnostic utilities.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• install and configure server-based client-server software</li> <li>• install and configure client software to communicate with appropriate server software</li> <li>• test operation of client-server software</li> <li>• identify and implement required updates for client-server software</li> <li>• monitor performance of client server software</li> <li>• backup and maintain client-server software.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• administrative access to a client server-based network</li> <li>• appropriate client-server software</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing or updating client-server software</li> <li>• verbal or written questioning of required skills and knowledge</li> <li>• evaluation of prepared report outlining testing procedures, test results and recommendations.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

Client-server solution may include:	<ul style="list-style-type: none"> <li>• accounting client server software</li> <li>• customer relationship management (CRM)</li> <li>• database management software</li> <li>• enterprise resource planning (ERP)</li> <li>• file transfer protocol (FTP) services</li> <li>• information services software</li> <li>• mail services</li> <li>• payroll</li> <li>• SharePoint services</li> <li>• support desk</li> <li>• web services.</li> </ul>
Appropriate utilities may include:	<ul style="list-style-type: none"> <li>• proprietary</li> <li>• third party</li> <li>• those included with the host operating system.</li> </ul>

## Unit Sector(s)

\_Networking

# ICANWK408A Configure a desktop environment

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install, configure and support a desktop or workstation operating system in a networked environment.

## Application of the Unit

This unit applies to those employed in technical information technology (IT) support roles who are required to install and support desktop operating systems in a networked environment.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Prepare to install a desktop operating system</p>	<p>1.1 Prepare for work according to site-specific safety requirements and enterprise OHS processes and procedures</p> <p>1.2 Obtain <i>desktop applications</i> and features from <i>appropriate person</i></p> <p>1.3 Review required installation options and <i>file systems</i></p> <p>1.4 Determine and apply knowledge of licensing, hardware and system requirements</p> <p>1.5 Analyse data migration requirements</p> <p>1.6 <b>Back up local data</b> in preparation for installation</p> <p>1.7 Arrange access to site and advise <i>client</i> of deployment and potential down times</p>
<p>2. Install desktop operating system</p>	<p>2.1 Install or upgrade <i>desktop operating system</i> using appropriate <i>installation or update method</i></p> <p>2.2 Install desktop applications according to identified requirements</p> <p>2.3 Configure <i>network settings</i> to connect workstation to network</p> <p>2.4 Patch the operating system and applications to ensure maximum security and reliability</p> <p>2.5 Restore local data to new workstation</p>
<p>3. Configure desktop environment</p>	<p>3.1 Configure <i>hardware devices</i></p> <p>3.2 Administer <i>user environment</i></p> <p>3.3 Create file and directory structure using appropriate administration and system tools</p> <p>3.4 Configure access to <i>external data</i></p> <p>3.5 Configure desktop applications according to business requirements</p>
<p>4. Operate command line interface</p>	<p>4.1 Open a command line interface</p> <p>4.2 Run commands and scripts from the command line interface</p> <p>4.3 Manipulate files using the command line</p>
<p>5. Configure desktop security</p>	<p>5.1 Modify default user settings to ensure that they match the organisational security policies</p> <p>5.2 Modify file and directory ownership and permissions</p>

	<p>to ensure data security requirements are met</p> <p>5.3 Ensure password security</p> <p>5.4 Check that the appropriate legal notices are displayed at logon</p> <p>5.5 Implement <i>security options</i> for <i>network protocols</i></p> <p>5.6 Configure <i>security settings</i> for desktop applications according to business requirements</p>
6. Monitor and test the desktop	<p>6.1 Test desktop environment to ensure that client, functionality and <i>performance</i> requirements have been met</p> <p>6.2 Analyse and respond to diagnostic information</p> <p>6.3 Use troubleshooting tools and techniques to diagnose and correct <i>desktop problems</i></p> <p>6.4 Document the desktop environment, according to organisational policy</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel regarding desktop requirements and issues
- literacy skills to interpret technical documentation
- numeracy skills to:
  - take test measurements
  - interpret results
  - evaluate performance of the desktop workstation
- problem-solving skills to address desktop problems reported by the client
- research skills to interrogate vendor databases and websites to resolve desktop problems
- technical skills to select and use desktop operating system and network diagnostics to test desktop functionality and performance.

### Required knowledge

- features of:
  - current desktop applications, compatibility issues and resolution procedures
  - current desktop operating systems
- broad knowledge of:
  - command line interface and scripts
  - controlling the boot process
  - error logging and reporting
  - file naming conventions related to selected operating system
  - guidelines for selecting a secure password
  - network protocols and transmission control protocol or internet protocol (TCP/IP) network connectivity
  - operating systems and their functions, including file system, memory management and process scheduling
  - printer driver and queue management
  - process or task management, including process termination
  - tools available for remote assistance and administration
  - troubleshooting tools and techniques, including network diagnostic utilities
  - user account, group and password administration
- detailed knowledge of:
  - file system navigation and manipulation utilities, including edit, copy, move and search
  - operating system help and support utilities.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• install and configure a desktop operating system</li> <li>• attach the desktop to the network</li> <li>• configure the desktop operating system, including user accounts, file and print services and security</li> <li>• perform backup and recovery</li> <li>• update operating system and software</li> <li>• monitor and troubleshoot the desktop environment.</li> </ul> <p>Candidates should demonstrate competency in at least two different desktop operating systems.</p>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where server installation may be conducted</li> <li>• relevant server specifications: <ul style="list-style-type: none"> <li>• cabling</li> <li>• local area network (LAN)</li> <li>• diagnostic software</li> <li>• switch</li> <li>• client requirements</li> <li>• WAN service point of presence</li> <li>• desktop workstations</li> </ul> </li> <li>• relevant regulatory documentation that affects installation activities</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing or updating a desktop operating system</li> <li>• direct observation of the candidate configuring a desktop operating system</li> </ul>

	<ul style="list-style-type: none"><li>• verbal or written questioning of the required skills and knowledge.</li></ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Desktop applications</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• CAD software</li> <li>• database</li> <li>• email client</li> <li>• internet browser</li> <li>• line-of-business applications</li> <li>• printer sharing</li> <li>• publishing and presentation software</li> <li>• remote-access clients</li> <li>• spreadsheet</li> <li>• technical software</li> <li>• word processor.</li> </ul>
<p><b><i>Appropriate person</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• IT support manager</li> <li>• network administrator</li> <li>• network manager</li> <li>• small office home office (SOHO) customer</li> <li>• small or medium enterprise (SME) customer</li> <li>• supervisor.</li> </ul>
<p><b><i>File systems</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• EXT</li> <li>• FAT</li> <li>• HFS+</li> <li>• NFS</li> <li>• new technology file system (NTFS).</li> </ul>
<p><b><i>Back up</i></b> may be performed using:</p>	<ul style="list-style-type: none"> <li>• operating system backup utilities</li> <li>• third-party software</li> <li>• network copy</li> <li>• zip utilities.</li> </ul>
<p><b><i>Local data</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• files and directories</li> <li>• user home directories</li> <li>• user profiles.</li> </ul>
<p><b><i>Client</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> </ul>

	<ul style="list-style-type: none"> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b><i>Desktop operating system</i></b> may include:	<ul style="list-style-type: none"> <li>• Linux</li> <li>• Mac</li> <li>• Windows.</li> </ul>
<b><i>Installation or update method</i></b> may include:	<ul style="list-style-type: none"> <li>• CD, DVD</li> <li>• installation as a virtual machine</li> <li>• Pup</li> <li>• Red Hat Network</li> <li>• universal serial bus (USB) boot disk</li> <li>• Windows Server Update Services</li> <li>• Yum.</li> </ul>
<b><i>Network settings</i></b> may include:	<ul style="list-style-type: none"> <li>• default gateway</li> <li>• DNS server</li> <li>• firewall</li> <li>• IP address and subnet mask (static or dynamic).</li> </ul>
<b><i>Hardware devices</i></b> may include:	<ul style="list-style-type: none"> <li>• device drivers</li> <li>• disk drives</li> <li>• keyboard</li> <li>• modem</li> <li>• monitor</li> <li>• mouse</li> <li>• network interfaces</li> <li>• printer</li> <li>• scanner</li> <li>• USB drive.</li> </ul>
<b><i>User environment</i></b> may include:	<ul style="list-style-type: none"> <li>• users and groups</li> <li>• login defaults and options</li> <li>• login scripts</li> <li>• graphical environment</li> <li>• environmental variables and prompts</li> <li>• authentication and authorisation</li> <li>• user profiles</li> <li>• unmask</li> <li>• prompt.</li> </ul>
<b><i>External data</i></b> may include:	<ul style="list-style-type: none"> <li>• applications</li> <li>• databases</li> <li>• file transfer protocol (FTP) sites</li> <li>• network file systems or shares</li> <li>• SharePoint sites</li> <li>• USB drives</li> </ul>

	<ul style="list-style-type: none"> <li>websites.</li> </ul>
<b>Security options and security settings</b> may include:	<ul style="list-style-type: none"> <li>anti-spam software</li> <li>antivirus software</li> <li>internet-browser privacy security settings</li> <li>operating system firewall utilities</li> <li>proxy settings</li> <li>SE Linux</li> <li>Windows Group Policy.</li> </ul>
<b>Network protocols</b> may include:	<ul style="list-style-type: none"> <li>dynamic host configuration protocol (DHCP)</li> <li>dynamic name system (DNS)</li> <li>file transfer protocol (FTP)</li> <li>hypertext transfer protocol (HTTP and HTTPS)</li> <li>internet message access protocol (IMAP)</li> <li>network file system (NFS)</li> <li>network time protocol (NTP)</li> <li>post office protocol (POP)</li> <li>server messages block (SMB)</li> <li>simple mail transfer protocol (SMTP)</li> <li>simple network management protocol (SNMP)</li> <li>TCP/IP.</li> </ul>
<b>Performance</b> may be affected by:	<ul style="list-style-type: none"> <li>desktop environment</li> <li>driver versions</li> <li>hard drive cache</li> <li>mobile computing performance issues</li> <li>network</li> <li>page files, swap files and virtual memory</li> <li>power options</li> <li>processor scheduling</li> <li>services.</li> </ul>
<b>Desktop problems</b> may include:	<ul style="list-style-type: none"> <li>disk and storage problems, such as file system full, file system fragmentation, and disk failure</li> <li>hardware device problems, such as printer configuration and display settings</li> <li>network connectivity problems, such as cable unplugged or dynamic IP address not received</li> <li>workstation boot problems.</li> </ul>

## **Unit Sector(s)**

Networking

## ICANWK409A Create scripts for networking

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake scripted programming tasks for networking-related activities.

### Application of the Unit

This unit applies to those employed in network or systems administration roles.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Develop algorithms to represent solutions to a given problem</p>	<p>1.1 Consult with <i>client</i> and key <i>stakeholders</i> to identify the problem and associated script requirements</p> <p>1.2 Employ abbreviated software development cycle to script creation</p> <p>1.3 Develop an algorithm to solve the problem and meet client requirements</p> <p>1.4 Develop an algorithm which takes account of expected possible situations</p> <p>1.5 Develop an algorithm which is guaranteed to end</p> <p>1.6 Demonstrate use of structure, sequence, selection and iteration</p>
<p>2. Create code</p>	<p>2.1 Select appropriate <i>scripting language</i></p> <p>2.2 Demonstrate understanding and application of basic language syntax rules and best practices</p> <p>2.3 Select and use language data types, operators and expressions to create clear and concise code</p> <p>2.4 Use techniques of selection, iteration and sequence to control script execution flow</p> <p>2.5 Use techniques for sequential file input and output to retrieve and store information</p> <p>2.6 Obtain and use user input to affect the operation of the script</p> <p>2.7 Apply internal document principles to created code</p> <p>2.8 Follow <i>organisational guidelines</i> for developing maintainable code when creating scripts</p> <p>2.9 Adhere to <i>coding standards</i> when creating scripts</p>
<p>3. Use operating system tools</p>	<p>3.1 Use searching and sorting tools to select information from the logging output of <i>operating system</i> (OS)</p> <p>3.2 Implement controls to ensure that where significant events occur, script creates and maintains a log of operations via operating system logging mechanism</p> <p>3.3 Register and run scripts with OS scheduling facility</p>
<p>4. Test and debug code</p>	<p>4.1 Engineer, document and conduct simple tests to confirm code meets design specification</p> <p>4.2 Identify areas that are not covered or are covered incorrectly in the script</p>

	<p>4.3 Take action to ensure that code complies with security policy</p> <p>4.4 Take action to ensure that code operates with proper permissions</p> <p>4.5 Use script debugging techniques suitable for use with scripting language to detect and resolve errors of syntactical, logical and design origin</p>
5. Document script	<p>5.1 Create technical-level documentation</p> <p>5.2 Create user-level documentation</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with external and external personnel to discuss problems and requirements
- literacy skills to:
  - produce and evaluate technical documents
  - produce user and peer documentation
- problem-solving and contingency-management skills to:
  - debug syntax and semantic errors in the program during testing
  - develop algorithmic solutions to a given problem
- technical skills to:
  - create scripts to automate operating system tasks
  - execute scripts
  - interact with user via script
  - manipulate and extract information contained in files
  - use inbuilt scripting options for a variety of scenarios.

### Required knowledge

- overview knowledge:
  - algorithm design
  - operating system components, such as command line interface, log files, program scheduling utilities, development methodologies, tools and utilities and testing methods
- debugging for a variety of scripting scenarios
- programming structured control constructs: sequence, selection, iteration
- scripting techniques and language syntax.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop an algorithmic statement of a solution for a set process</li> <li>• design, document, construct and test a small single-purpose OS utility application in response to a problem description</li> <li>• create scripted programs that access information stored in files on the system and use system utility programs to sort or find information within these files</li> <li>• validate and record script results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• technical requirements</li> <li>• software development environment</li> <li>• software testing environment</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning of required skills and knowledge, such as: algorithm design, structured control constructs, basic scripting development methodologies and their application</li> <li>• evaluation of algorithm design</li> <li>• evaluation of a small single-purpose OS utility application</li> <li>• evaluation of completed test plan and documentation.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• information and communications technology (ICT) company</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees</li> <li>• service industry.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• information technology (IT) manager or representative</li> <li>• network engineer</li> <li>• project team</li> <li>• systems administrator</li> <li>• user.</li> </ul>
<b><i>Algorithm</i></b> may include:	<ul style="list-style-type: none"> <li>• flow chart</li> <li>• pseudocode</li> <li>• structured English.</li> </ul>
<b><i>Scripting language</i></b> may include:	<ul style="list-style-type: none"> <li>• C, C++</li> <li>• JavaScript</li> <li>• Linux shell scripts</li> <li>• Perl</li> <li>• Python</li> <li>• VBScript</li> <li>• VB.Net</li> <li>• Windows PowerShell.</li> </ul>
<b><i>Organisational guidelines</i></b> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<b><i>Coding standards</i></b> may	<ul style="list-style-type: none"> <li>• GNU coding standard</li> </ul>

include:	<ul style="list-style-type: none"><li>• Java coding standard</li><li>• organisation standards.</li></ul>
<i>Operating system</i> may include:	<ul style="list-style-type: none"><li>• Linux</li><li>• Mac</li><li>• Novell</li><li>• Windows.</li></ul>

## Unit Sector(s)

Networking

## ICANWK410A Install hardware to a network

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan, manage and install new hardware components in a network.

### Application of the Unit

This unit applies to those employed in technical information technology (IT) support roles, such as network administrators, who are required to install and support network hardware in a peer-to-peer or client-server networked environment.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine network hardware requirements	<p>1.1 Assess client <i>network hardware</i> and cabling requirements, considering compatibility with existing <i>application software</i> and <i>operating system</i></p> <p>1.2 Analyse requirements against local area network (LAN), wide area network (WAN), wireless networks, and mobile equipment access design limitations and <i>organisational guidelines</i></p> <p>1.3 Evaluate <i>client</i> requirements according to organisational guidelines, corporate purchasing procedures, licensing arrangements and budget</p>
2. Obtain network hardware	<p>2.1 Contact vendors and obtain technical specifications</p> <p>2.2 Evaluate or test hardware according to client requirements and organisational guidelines</p> <p>2.3 Document recommendations and provide copies to <i>appropriate person</i></p> <p>2.4 Determine and document licensing requirements and security issues</p> <p>2.5 Acquire hardware according to recommendations and organisational procedures</p> <p>2.6 Organise cabling infrastructure where required</p>
3. Install network hardware	<p>3.1 Conduct installation with minimal disruption to clients</p> <p>3.2 Install hardware according to appropriate installation procedures</p> <p>3.3 Configure and test the installation to ensure that it meets client needs</p>
4. Provide instruction and support for installed products	<p>4.1 Determine and document client instructions and needs</p> <p>4.2 Provide one-to-one or group instruction to client and users, as required</p> <p>4.3 Obtain client evaluation and feedback, to ensure that client requirements have been met</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to assess current client hardware and future requirements
- communication skills to:
  - discuss client requirements and specifications
  - interpret client budget requirements
  - interpret technical and hardware installation manuals
  - provide client instruction
- literacy skills to write technical notes and reports
- numeracy skills to plan, prioritise and organise work
- planning and organisational skills to maintain the continuity of network operations and business functions during network installation tasks
- research skills to document licensing requirements and security issues
- technical skills to:
  - evaluate client equipment for requirements
  - use application and diagnostic software.

### Required knowledge

- overview knowledge of:
  - current industry, data and voice networking, security products, devices and procedures
  - current industry-accepted network protocols
  - organisational contracting procedures and responsibilities
  - system diagnostic software
- current industry-accepted network hardware and software products
- hardware and software installation procedures
- LAN capabilities and characteristics, such as network type, IP addressing, switch or hub operation
- network connections, including types of cables and cabling distance limitations and wireless connections
- operating systems sufficient to enable basic installation
- set-up and configuration procedures
- software packages supported by the organisation.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• evaluate client user requirements and hardware installation</li> <li>• install a range of network hardware by planning, managing and supporting the installation of new components in a network, according to organisational policies and procedures.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• vendor hardware and software components</li> <li>• application software and operating system</li> <li>• hardware maintenance tools</li> <li>• live network</li> <li>• networked computers</li> <li>• organisational guidelines</li> <li>• technical documentation and installation manuals</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's underpinning knowledge</li> <li>• direct observation of candidate installing network devices</li> <li>• review of instructional guides for client or group presentation prepared by candidate</li> <li>• evaluation of performance test results prepared by candidate.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Network hardware</b> may include:</p>	<ul style="list-style-type: none"> <li>• access points</li> <li>• firewalls</li> <li>• gateways</li> <li>• hubs</li> <li>• IP cameras</li> <li>• mobile phones</li> <li>• modems</li> <li>• network bridges</li> <li>• network interface cards</li> <li>• network printers</li> <li>• network scanners or multifunction devices</li> <li>• network-attached storage (NAS)</li> <li>• personal digital assistants (PDAs)</li> <li>• print servers</li> <li>• routers</li> <li>• switches.</li> </ul>
<p><b>Application software</b> may include:</p>	<ul style="list-style-type: none"> <li>• database programs to handle data and voice functionality</li> <li>• email programs</li> <li>• internet browsers</li> <li>• spreadsheets</li> <li>• system browsers</li> <li>• word processing.</li> </ul>
<p><b>Operating system</b> may include:</p>	<ul style="list-style-type: none"> <li>• Linux</li> <li>• Mac</li> <li>• Windows.</li> </ul>
<p><b>Organisational guidelines</b> may include:</p>	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>

<i>Client</i> may include:	<ul style="list-style-type: none"><li>• clubs</li><li>• external organisations</li><li>• individuals</li><li>• internal departments</li><li>• internal employees.</li></ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"><li>• authorised business representative</li><li>• client</li><li>• supervisor.</li></ul>

## Unit Sector(s)

Networking

## ICANWK411A Deploy software to networked computers

### Modification History

Version	Comments
ICANWK411A	This version first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan, manage and support the installation of new or upgraded software to networked computers according to vendor and organisation specifications.

### Application of the Unit

This unit applies to those involved in installing, configuring, maintaining and supporting software, such as network administrators and network support staff.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Determine operating system and software and hardware requirements</p>	<p>1.1 Assess <i>client</i> software and licensing requirements, considering compatibility with existing application software and operating system</p> <p>1.2 Assess <i>hardware</i> requirements</p> <p>1.3 Analyse requirements against local area network (LAN), wide area network (WAN), and wireless networks within organisational guidelines</p> <p>1.4 Evaluate client requirements according to organisational guidelines, corporate purchasing procedures and budget</p>
<p>2. Obtain deployment software to automate deployment</p>	<p>2.1 Evaluate <i>deployment software</i> according to client requirements and organisational guidelines</p> <p>2.2 Contact <i>vendors</i> and obtain technical specifications, including support arrangements and licensing</p> <p>2.3 Acquire software and licences, according to organisational procedures</p> <p>2.4 Store software licences and manuals, according to organisational guidelines</p>
<p>3. Automate installation of operating system via network</p>	<p>3.1 Plan and deploy <i>operating system</i> according to appropriate vendor installation procedures with minimal disruption to network and clients</p> <p>3.2 Configure and test installation to ensure that it meets client needs and vendor specifications</p> <p>3.3 Install updates and patches</p>
<p>4. Automate installation of software packages via network</p>	<p>4.1 Plan and deploy <i>software packages</i> according to appropriate vendor installation procedures with minimal disruption to network and clients</p> <p>4.2 Configure and test installation to ensure that it meets client needs and vendor specifications</p> <p>4.3 Install updates and patches</p>
<p>5. Test and sign off</p>	<p>5.1 Test installed operating system and software for error-free performance, identifying and resolving problems</p> <p>5.2 Determine and document security and licensing issues</p> <p>5.3 Obtain client evaluation and feedback, to ensure that client requirements have been met</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with a client to determine functional requirements of network
- literacy skills to document client requirements
- problem-solving skills to troubleshoot and debug:
  - deployment issues
  - configuration issues
- research skills to determine most suitable solution for client
- technical skills to:
  - implement LANs
  - implement various software deployment solutions.

### Required knowledge

- overview knowledge of:
  - network protocols and operating systems
  - organisational contracting procedures and responsibilities
  - software licensing requirements and documentation
  - transmission control protocols or internet protocols (TCPs/IPs) and applications
- detailed knowledge of:
  - current industry standards related to software deployment
  - deployment software configuration
  - configuration of automated deployment processes
  - operating system deployment
  - software package deployment
  - troubleshooting deployment processes.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify client software requirements</li> <li>• plan and deploy automatic installation of operating system and software</li> <li>• configure and test installation, ensuring client needs are met.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where deployment processes may be implemented</li> <li>• live network</li> <li>• software tools to support implementation of deployment processes</li> <li>• technical documentation and installation manuals</li> <li>• organisational guidelines</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of underpinning knowledge and skills</li> <li>• direct observation of candidate performing the tasks required to successfully implement automated deployment processes</li> <li>• documentation produced in a small project environment that reflects the understanding of client and technical skills required.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill</p>

	<p>level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• networks</li> <li>• network interface card (NIC)</li> <li>• personal computers</li> <li>• servers</li> <li>• workstations.</li> </ul>
<b><i>Deployment software</i></b> may include:	<ul style="list-style-type: none"> <li>• Acronis</li> <li>• Altiris</li> <li>• Ghost</li> <li>• remote installation services (RIS) and wireless distribution system (WDS)</li> <li>• Windows Server tools.</li> </ul>
<b><i>Vendors</i></b> may include:	<ul style="list-style-type: none"> <li>• Adobe</li> <li>• Apple</li> <li>• Citrix</li> <li>• Linux or Unix</li> <li>• Microsoft</li> <li>• Novell</li> <li>• open source.</li> </ul>
<b><i>Operating system</i></b> may include:	<ul style="list-style-type: none"> <li>• Linux</li> <li>• Mac</li> <li>• Unix</li> <li>• Windows.</li> </ul>
<b><i>Software packages</i></b> may include:	<ul style="list-style-type: none"> <li>• office applications</li> <li>• utilities.</li> </ul>

## **Unit Sector(s)**

Networking

## ICANWK412A Create network documentation

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to determine network requirements, and produce and evaluate appropriate network documentation.

### Application of the Unit

This unit applies to the development of appropriate network documentation and is relevant to job roles, such as network administrator, network technician and network support.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine network documentation requirements	1.1 Consult with <i>appropriate personnel</i> 1.2 Identify network documentation standards 1.3 Define <i>network configuration</i> 1.4 Develop <i>naming standards</i> and <i>labelling schemes</i> 1.5 Develop <i>network addressing scheme</i> and verify, using <i>calculations</i>
2. Design network diagrams and checklists	2.1 Identify network <i>software mapping tools</i> 2.2 Use network software mapping tools to design <i>network diagrams</i> 2.3 Develop <i>plans and checklists</i> 2.4 Develop <i>manuals</i>
3. Produce network documentation	3.1 Validate documentation structure with appropriate personnel 3.2 Produce network diagrams 3.3 Produce network plans and checklists 3.4 Produce procedure and policy manuals 3.5 Prepare documentation for publication
4. Complete network documentation	4.1 Check network documentation with appropriate personnel 4.2 Select appropriate <i>media</i> 4.3 Publish network documentation 4.4 Record and store essential network documentation 4.5 Notify appropriate personnel of the completed network documentation

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to develop network documentation maintain records in required formats
- numeracy skills to interpret technical data
- planning and organisational skills to plan, prioritise and monitor own work
- research skills to gain and maintain current industry technical knowledge
- technical skills to:
  - apply network design methodologies
  - determine organisational requirements
  - identify the technical requirements, constraints and manageability issues for a given organisational network
  - use appropriate software tools.

### Required knowledge

- open systems interconnect (OSI) layered communication model
- overview knowledge of network requirements related to:
  - applications
  - life cycles
  - manageability
  - quality of service
- network design concepts related to:
  - financial constraints
  - network topologies
  - organisation requirements
  - physical constraints
  - security issues.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• determine client requirements</li> <li>• design network documentation according to standards</li> <li>• produce network documentation according to design specifications.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• relevant network documentation</li> <li>• legislation and standards documentation</li> <li>• industry codes of practice</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate developing and producing network documentation</li> <li>• review of documents that detail design and development</li> <li>• verbal or written questioning to assess required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Appropriate personnel</i></b> may include:	<ul style="list-style-type: none"> <li>• customer</li> <li>• manager</li> <li>• network manager</li> <li>• supervisor.</li> </ul>
<b><i>Network configuration</i></b> may include:	<ul style="list-style-type: none"> <li>• file systems</li> <li>• hardware</li> <li>• protocols</li> <li>• servers</li> <li>• users</li> <li>• wired</li> <li>• wireless</li> <li>• workstations.</li> </ul>
<b><i>Naming standards</i></b> may include:	<ul style="list-style-type: none"> <li>• abbreviations</li> <li>• consistency</li> <li>• generated</li> <li>• geography</li> <li>• host names</li> <li>• legal and special characters</li> <li>• location</li> <li>• name length</li> <li>• parse</li> <li>• platform</li> <li>• theme</li> <li>• usage type.</li> </ul>
<b><i>Labelling schemes</i></b> may include:	<ul style="list-style-type: none"> <li>• cabling</li> <li>• hardware.</li> </ul>
<b><i>Network addressing scheme</i></b> may include:	<ul style="list-style-type: none"> <li>• dynamic</li> <li>• static</li> <li>• subnet.</li> </ul>
<b><i>Calculations</i></b> may include binary:	<ul style="list-style-type: none"> <li>• conversion</li> <li>• division</li> <li>• multiplication</li> <li>• number system</li> </ul>

	<ul style="list-style-type: none"> <li>• subtraction.</li> </ul>
<i>Software mapping tools</i> may include:	<ul style="list-style-type: none"> <li>• commercial</li> <li>• open source</li> <li>• vendor.</li> </ul>
<i>Network diagrams</i> may include:	<ul style="list-style-type: none"> <li>• logical</li> <li>• network</li> <li>• physical</li> <li>• structure</li> <li>• topology.</li> </ul>
<i>Plans and checklists</i> may include:	<ul style="list-style-type: none"> <li>• installation</li> <li>• network plans</li> <li>• OSI reference</li> <li>• patches</li> <li>• pre-installation</li> <li>• test plans</li> <li>• updates.</li> </ul>
<i>Manuals</i> may include:	<ul style="list-style-type: none"> <li>• forms</li> <li>• hardware</li> <li>• maintenance</li> <li>• policy</li> <li>• procedure</li> <li>• security</li> <li>• servicing</li> <li>• technical</li> <li>• user.</li> </ul>
<i>Media</i> may include:	<ul style="list-style-type: none"> <li>• document</li> <li>• online</li> <li>• paper</li> <li>• web page.</li> </ul>

## Unit Sector(s)

Networking

## ICANWK414A Create a common gateway interface script

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to define and produce common gateway interface (CGI) script and install that script on a server.

### Application of the Unit

This unit applies to individuals in the network or web development area who are required to use CGI scripting as a common means of interacting with websites, providing security access to directories and databases.

Internet access to server CGI scripts provides a powerful means to control a wide variety of operations on the server.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Define specification for CGI script	1.1 Determine the functionality of the CGI <i>form</i> 1.2 Define the functionality of the CGI script 1.3 Choose the appropriate <i>language</i> in which to write the CGI script 1.4 Determine <i>server requirements</i>
2. Create CGI form and write script	2.1 Produce a hypertext markup language (HTML) web document that uses the form elements required by the <i>CGI script specification</i> and includes the uniform resource locator (URL) for the CGI script 2.2 Write the CGI script to function as required by the CGI script specification
3. Test CGI script	3.1 Configure the <i>server</i> , if required, that will host the CGI script 3.2 Upload the CGI script to the server 3.3 Run the CGI form and assess its output 3.4 Reiterate until the specification for the CGI script is met

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to write network documentation in required formats and maintain records
- numeracy skills to interpret technical data
- planning and organisational skills to plan, prioritise and monitor own work
- research skills to gain and maintain current industry technical knowledge
- technical skills to:
  - interpret and write HTML
  - use basic operating system commands
  - use file transfer protocol (FTP) clients.

### Required knowledge

- detailed knowledge of:
  - a scripting language
  - CGI 1.1/1.2 specifications
  - security issues surrounding CGI
  - web servers
- overview knowledge of:
  - Copyleft and Free Software Foundation
  - special features relating to copyright and intellectual property.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• review the requirements</li> <li>• produce CGI forms and scripts to meet the requirements</li> <li>• upload scripts to a server</li> <li>• test the script, and rework until requirements is met.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• web servers</li> <li>• ebusiness website</li> <li>• FTP or file transfer client software</li> <li>• server access</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• scripting language</li> <li>• security issues surrounding CGI</li> </ul> </li> <li>• evaluation of candidate's CGI form</li> <li>• review of candidate's CGI script.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Form</i></b> may include:	<ul style="list-style-type: none"> <li>• hidden form tags</li> <li>• on or off flags</li> <li>• scrollable text box</li> <li>• selection lists</li> <li>• single selection buttons</li> <li>• submit and reset</li> <li>• text box.</li> </ul>
<b><i>Language</i></b> for CGI may include:	<ul style="list-style-type: none"> <li>• AppleScript</li> <li>• C or C++</li> <li>• Perl</li> <li>• Python</li> <li>• shell script</li> <li>• Visual Basic.</li> </ul>
<b><i>Server requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• ability to FTP documents to a server</li> <li>• remote desktop</li> <li>• secure shell access</li> <li>• Telnet to a server or Telnet-only access on another server</li> <li>• VPN.</li> </ul>
<b><i>CGI script specifications</i></b> may include:	<ul style="list-style-type: none"> <li>• CGI/1.1 specification</li> <li>• CGI/1.2 specification.</li> </ul>
<b><i>Server</i></b> may include:	<ul style="list-style-type: none"> <li>• Apache HTTP server</li> <li>• BEA Weblogic servers</li> <li>• email servers</li> <li>• file and print servers</li> <li>• FTP servers</li> <li>• IBM VisualAge and WebSphere</li> <li>• iPlanet-Enterprise</li> <li>• Lotus Domino</li> <li>• Microsoft-Internet-Information-Server</li> <li>• NetDynamics</li> <li>• Netscape Enterprise Server, Netscape-FastTrack, Netscape-Commerce</li> <li>• proxy servers</li> </ul>

	<ul style="list-style-type: none"><li>• Sun Microsystems iPlanet Web Server</li><li>• Sun Microsystems Java Web Server.</li></ul>

## Unit Sector(s)

Networking

## ICANWK416A Build security into virtual private networks

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to build security into a virtual private network (VPN).

### Application of the Unit

This unit applies to networking staff who are required to ensure that VPNs contain required security.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Configure router to provide for network security monitoring and management	<p>1.1 Create and apply audit rules consistent with <b><i>policies, standards, protocols and management systems</i></b></p> <p>1.2 Configure router to provide appropriate level of asset security and monitoring of security consistent with <b><i>commercial and business requirements</i></b></p> <p>1.3 Monitor and manage system to assess the level of security and attempts to breach security of <b><i>framework components</i></b></p> <p>1.4 Employ appropriate <b><i>hardware</i></b> and <b><i>software</i></b> to monitor and address security issues and provide VPN solutions</p>
2. Secure a site-to-site VPN	<p>2.1 Configure internet key exchange (IKE) and internet protocol security (IPSec)</p> <p>2.2 Configure site-to-site IPSec VPN using pre-shared keys</p> <p>2.3 Configure site-to-site IPSec VPN using digital certificates</p>
3. Secure a remote access VPN	<p>3.1 Configure a VPN server</p> <p>3.2 Install and administer a router-management console</p> <p>3.3 Develop documentation on current <b><i>system</i></b> settings and framework components and file securely for future reference</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to undertake a network security risk assessment
- initiative and enterprise skills to develop enterprise policies, strategies and procedures
- literacy skills to:
  - interpret audit rules
  - produce security documentation
- numeracy skills to undertake a cost-benefit comparison
- technical skills to:
  - implement LAN, WLAN, VPN and WAN solutions
  - implement security strategies and configure network security software and hardware.

### Required knowledge

- characteristics of:
  - auditing and penetration testing techniques
  - configuration of routers and switches
  - security protocols, standards and data encryption
- detailed knowledge of:
  - authentication issues
  - network protocols and operating systems
  - processes and techniques related to security perimeters and their functions
  - security threats, including eavesdropping, data interception, data corruption and data falsification
  - transmission control protocol or internet protocol (TCP/IP) protocols and applications
  - VPNs features, issues and functions
- overview knowledge of:
  - audit and intrusion detection systems
  - LAN, WLAN and WAN
  - organisational issues surrounding security cryptography
  - screened subnets
  - virus detection software.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop basic security functionality for either VPN, LANs, WANs or WLANs</li> <li>• implement such security</li> <li>• maintain such security</li> <li>• document the security implemented and its maintenance.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• network technical requirements</li> <li>• network infrastructure, including servers and security hardware and software</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• VPNs</li> <li>• WANs</li> <li>• security protocols</li> </ul> </li> <li>• review of candidate's documentation of installed security and its maintenance</li> <li>• evaluation of candidate's security implementation on a VPN.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Policies</i></b> may include:	<ul style="list-style-type: none"> <li>• audit systems</li> <li>• incident response procedures</li> <li>• network intrusion detection systems.</li> </ul>
<b><i>Standards, protocols and management systems</i></b> may include:	<ul style="list-style-type: none"> <li>• AAA security</li> <li>• access control lists, context-based control lists</li> <li>• data over cable service interface specification</li> <li>• domain name system security extensions</li> <li>• generic routing encapsulation</li> <li>• IEEE 802.11 Protocol standard for secure wireless local area network products</li> <li>• internet group management protocol</li> <li>• IP security protocol</li> <li>• network port addresses translation (NAT or PAT)</li> <li>• point-to-point network tunnelling protocol</li> <li>• secure: <ul style="list-style-type: none"> <li>• electronic transactions</li> <li>• multi-purpose internet mail extensions</li> <li>• shell</li> <li>• socket layer and transport layer security.</li> </ul> </li> </ul>
<b><i>Commercial and business requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• availability</li> <li>• backup</li> <li>• confidentiality</li> <li>• firewalls</li> <li>• hacking prevention</li> <li>• integrity</li> <li>• password logons.</li> </ul>
<b><i>Framework components</i></b> may include:	<ul style="list-style-type: none"> <li>• deployment of public key infrastructure (PKI), CA and key management services</li> <li>• firewall technologies</li> <li>• multi-platform directory services supporting relevant standards</li> <li>• operating system capable of providing access control, audit services</li> <li>• support for generalised security services interfaces,</li> </ul>

	<p>personnel security</p> <ul style="list-style-type: none"> <li>• trusted hardware and operating system at selective desktops, servers, network points and mainframes.</li> </ul>
<i>Hardware</i> may include:	<ul style="list-style-type: none"> <li>• desktop and laptop computers, networked and stand-alone</li> <li>• firewall devices</li> <li>• network-monitoring appliances</li> <li>• routers</li> <li>• switches</li> <li>• wired and wireless networks.</li> </ul>
<i>Software</i> may include:	<ul style="list-style-type: none"> <li>• audit</li> <li>• encryption modules</li> <li>• operating system</li> <li>• packaged software but can be supplied from many varying vendors and can include security</li> <li>• virus checking.</li> </ul>
<i>System</i> may include:	<ul style="list-style-type: none"> <li>• applications</li> <li>• databases</li> <li>• external service providers, such as internet service providers (ISPs) and digital certification suppliers</li> <li>• gateways</li> <li>• operating system</li> <li>• servers.</li> </ul>

## Unit Sector(s)

Networking

## ICANWK417A Build an enterprise wireless network

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to build an enterprise, community or mesh wireless network within and outside buildings.

### Application of the Unit

This unit applies to individuals working in senior design roles in the networking area who are required to develop complex wireless networks for organisations.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Confirm client requirements and network equipment required</p>	<p>1.1 Identify and clarify organisational <i>requirements</i> of the client</p> <p>1.2 Evaluate client requirements along with business needs in order to translate into technical requirements</p> <p>1.3 Review existing network design <i>documentation</i> to ensure it is authorised, current and complete</p> <p>1.4 Identify <i>network topology</i></p> <p>1.5 Identify the <i>components</i> required to be installed to meet the technical requirements</p> <p>1.6 Contact vendors and service suppliers to obtain specifications and availability of identified components</p> <p>1.7 Ensure preliminary work is completed within the required timeframe</p>
<p>2. Prepare for installation</p>	<p>2.1 Ensure client and <i>users</i> are aware of date and time of installation</p> <p>2.2 Gather, prepare and check installation and safety equipment</p> <p>2.3 Assess on-site safety arrangements for installers and users</p>
<p>3. Select, install and configure access points and other wireless devices</p>	<p>3.1 Select appropriate <i>hardware</i> based on identified components</p> <p>3.2 Install and configure hardware to provide wireless access to network</p> <p>3.3 Ensure connections are secured against intrusion or data access by unauthorised persons, are safe for users, and are protected from the environment</p> <p>3.4 Configure <i>security</i>, monitoring, logging and quality of service features consistent with <i>standards</i> and protocols</p> <p>3.5 Ensure test equipment is calibrated</p> <p>3.6 Test wireless network systems performance and verify that it meets enterprise requirements and is consistent with standards and protocols</p>
<p>4. Select, install and configure antennas</p>	<p>4.1 Select appropriate antennas based on design plan</p> <p>4.2 Safely install and configure antennas to provide wireless access to network</p> <p>4.3 Measure and assess signal strength within and outside building</p>

	4.4 Resolve and report radio frequency interference issues
5. Secure wireless network	5.1 Identify possible security threats to <i>assets</i> 5.2 Configure client server and helper security devices 5.3 Configure associations and filters
6. Train users	6.1 Provide training for users to establish and manage network connections 6.2 Resolve pairing and log-on difficulties for users 6.3 Inform users of wireless network etiquette and traffic capacity issues 6.4 Advise users of help-desk contact details
7. Monitor and administer wireless network	7.1 Monitor wireless network performance using diagnostic <i>tools</i> , including appropriate software 7.2 Debug networking issues to maintain trouble-free wireless connection 7.3 Document current settings and store securely consistent with <i>commercial and business requirements</i>
8. Finalise build process	8.1 Review network for performance issues, planned maintenance or upgrade requirements 8.2 Report to client with network documentation and recommendations for performance issues 8.3 File documentation according to organisational outlines

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to design, develop and implement various wireless network solutions
- communication skills to:
  - communicate with users
  - liaise with vendors and obtain prices and product details
  - train users
- numeracy skills to prepare a cost-benefit analysis
- planning and organisational skills to plan and manage project according to time lines and cost schedules
- problem-solving skills to troubleshoot and debug
- technical skills to:
  - implement local area networks (LANs)
  - implement wireless networking strategies and configure wireless network software and hardware.

### Required knowledge

- detailed knowledge of:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - bandwidth and quality of service
  - factors affecting signal quality
  - layer 2 and layer 3 design issues
  - small office home office (SOHO) and enterprise LANs
  - transmission control protocols or internet protocols (TCPs/IPs) and applications
  - wireless security strategies
  - wireless topologies
  - wireless local area network (WLAN) and wireless area network (WAN) solutions
- overview knowledge of:
  - features of security threats
  - network protocols and operating systems
  - security protocols, standards and data encryption.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>develop and maintain wireless networks.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>network technical requirements</li> <li>network infrastructure, including wireless hardware and software</li> <li>appropriate learning and assessment support when required</li> <li>modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <p>verbal or written questioning to assess candidate's knowledge of:</p> <ul style="list-style-type: none"> <li>wireless topologies</li> <li>wireless security networks</li> <li>wireless security strategies</li> <li>review of candidate's client report and supporting documentation with recommendations.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Requirements</b> may include:	<ul style="list-style-type: none"> <li>• how and what the organisation wants in regard to work environment</li> <li>• preventative maintenance and diagnostic policy</li> <li>• problem solution processes</li> <li>• roles and technical responsibilities in network management</li> <li>• vendor and product service level support agreements.</li> </ul>
<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b>Documentation</b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• maintaining equipment inventory</li> <li>• naming standards</li> <li>• project-management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b>Network topology</b> may include:	<ul style="list-style-type: none"> <li>• cabled, connected or single zone</li> <li>• carrier links</li> <li>• free space optics</li> <li>• indoor and outdoor installations</li> <li>• local multi-point distribution service (LMDS)</li> <li>• multi-channel multi-point distribution service (MMDS)</li> <li>• multiple zone</li> <li>• satellite connections</li> <li>• stand-alone or multi-zone wireless networks.</li> </ul>
<b>Components</b> may include:	<ul style="list-style-type: none"> <li>• hardware, such as:             <ul style="list-style-type: none"> <li>• antennas and other connectivity devices</li> <li>• digital subscriber line (DSL) modems</li> <li>• mobile equipment</li> <li>• modem wireless access points</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• networks</li> <li>• personal computers</li> <li>• power controllers</li> <li>• remote sites</li> <li>• servers</li> <li>• uninterruptible power supplies (UPS)</li> <li>• workstations</li> <li>• cabling, such as: <ul style="list-style-type: none"> <li>• category 5e, 6 and 7</li> <li>• coaxial</li> <li>• fibre optic</li> </ul> </li> <li>• software, such as: <ul style="list-style-type: none"> <li>• commercial applications</li> <li>• customised</li> <li>• in-house</li> <li>• organisation specific</li> <li>• packaged</li> </ul> </li> <li>• wireless access.</li> </ul>
<i>Users</i> may include:	<ul style="list-style-type: none"> <li>• community members</li> <li>• department</li> <li>• department within the organisation</li> <li>• third party.</li> </ul>
<i>Hardware</i> may include:	<ul style="list-style-type: none"> <li>• access points</li> <li>• bridges</li> <li>• other wireless devices.</li> </ul>
<i>Security</i> may include:	<ul style="list-style-type: none"> <li>• authentication, authorisation and accounting (AAA)</li> <li>• diameter</li> <li>• IP security (IPSec)</li> <li>• lightweight extensible authentication protocol (LEAP)</li> <li>• privacy key management (PKM)</li> <li>• secure sockets layer (SSL)</li> <li>• smart cards</li> <li>• tokens</li> <li>• wi-fi protected access (WPA)</li> <li>• wired equivalent privacy (WEP).</li> </ul>
<i>Standards</i> may include:	<ul style="list-style-type: none"> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC), Institute of Electrical and Electronics Engineers (IEEE), Internet Engineering Task Force (IETF), International Telecommunication Union (ITU) and Australian Standards (AS)</li> </ul>

	<ul style="list-style-type: none"> <li>• organisational</li> <li>• project.</li> </ul>
<i>Assets</i> may include:	<ul style="list-style-type: none"> <li>• data and information</li> <li>• intellectual property</li> <li>• physical assets.</li> </ul>
<i>Tools</i> may include:	<ul style="list-style-type: none"> <li>• cable testing</li> <li>• carrier-connection tests</li> <li>• data and voice-integration measurements</li> <li>• equipment testing</li> <li>• frequency and spectrum analysers</li> <li>• network performance software</li> <li>• policing and shaping tools</li> <li>• power meters</li> <li>• radiation meter.</li> </ul>
<i>Commercial and business requirements</i> may include:	<ul style="list-style-type: none"> <li>• availability</li> <li>• backup and recovery of data</li> <li>• confidentiality</li> <li>• firewalls</li> <li>• hacking prevention</li> <li>• integrity</li> <li>• password logons</li> <li>• remote access to internal network.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK418A Implement backbone technologies in a local area network

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement core layer (backbone) connectivity in a local area network (LAN) for applications between floors in a multi-storey building or between separate buildings.

This unit focuses on configuring high-speed (high-bandwidth) channels between high-end switches.

## Application of the Unit

This unit applies to individuals in the network area who are required to enable backbone connectivity in a LAN.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Define network	<p>1.1 Identify current and future <b>network</b> requirements based on the organisation's business and <b>technical requirements</b></p> <p>1.2 Design an appropriate structure to meet <b>client</b> requirements, such as video, audio or data application services</p> <p>1.3 Design a network addressing system with subnet and host identities (IP addressing) and virtual LANs (VLANs)</p> <p>1.4 Identify and document resource requirements according to network design</p>
2. Install and configure network backbone	<p>2.1 Install and configure switches and routers according to network requirements and <b>resources</b></p> <p>2.2 Install <b>network protocol suites</b> using configurations on switch uplink ports as required by network design specifications</p> <p>2.3 Configure hosts and workstations for network access</p>
3. Test and validate network	<p>3.1 Test network connectivity to ensure operation parameters are met between hosts on segments or VLANs</p> <p>3.2 Make adjustments as required</p> <p>3.3 Validate and document network performance</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse organisation's current technical environment and requirements
- communication skills to liaise with clients and team members
- literacy skills to write technical reports
- numeracy skills to subnet a network
- planning and organisational skills to prioritise tasks and contingency arrangements
- technical skills to:
  - configure trunking on uplink ports
  - implement optic fibre and ether-channel technologies
  - install ethernet switches with gigabit and 10 gigabit interfaces
  - undertake basic cabling.

### Required knowledge

- current and emerging industry practice associated with:
  - bandwidth limitations, measuring and testing
  - ethernet switch functions (frame switching: store-and-forward, fast-forward, fragment-free)
  - ethernet switches
  - internetworking protocol suites, such as TCP/IP, IPX, DECnet, AppleTalk and IPv6
  - LAN and WAN network topologies (three-layer LAN hierarchy: core distribution and access)
  - MAC addresses, network layer protocols
  - NICs (fast ethernet, gigabit and 10-gigabit ethernet)
  - OSI layer modelling
  - routers
  - virtual LANs.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• build an ATM LAN that provides the required services and communication standards</li> <li>• document resource requirements and network performance.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• local area network infrastructure</li> <li>• switches with various interfaces: fast-, one-, 10 gigabit-ethernet</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• network hardware</li> <li>• LAN and WAN topologies</li> <li>• VLANs</li> <li>• TCP/IP</li> <li>• internet protocol version 4 (IPv4)</li> <li>• internet protocol version 6 (IPv6)</li> </ul> </li> <li>• review of completed documentation of a network's performance</li> <li>• direct observation of candidate installing and testing backbone technology.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

# ICANWK501A Plan, implement and test enterprise communication solutions

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage deployment and administration of an enterprise messaging environment and enterprise-wide content management and collaboration tools.

## Application of the Unit

This unit applies to an information technology (IT) professional who configures and deploys software to supply mail, collaboration and messaging services in an enterprise environment.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan, implement and test an enterprise email solution</p>	<p>1.1 Plan implementation to provide mail services to meet business requirements</p> <p>1.2 <i>Prepare existing network</i> for <i>mail server</i> installation</p> <p>1.3 Install and configure mail servers</p> <p>1.4 Configure users, mailboxes, address lists, distribution lists and user constraints</p> <p>1.5 Configure <i>mail-client access</i></p> <p>1.6 Configure <i>message integrity</i> and anti-spam, antivirus and anti-phishing measures</p> <p>1.7 Configure message transport to deliver mail within and outside enterprise</p> <p>1.8 Monitor <i>mail-system performance</i></p> <p>1.9 Implement <i>measures to provide high availability and data recovery</i></p> <p>1.10 Test functionality</p>
<p>2. Plan, implement and test remote access to email</p>	<p>2.1 Plan <i>remote access</i> to mail</p> <p>2.2 Configure mail system to provide remote access</p> <p>2.3 Test remote mail access</p>
<p>3. Plan, implement and test an enterprise web portal or content management solution</p>	<p>3.1 Plan namespace and server roles and deploy <i>web portal or content-management software</i></p> <p>3.2 Configure access and <i>security</i></p> <p>3.3 Configure <i>network infrastructure</i></p> <p>3.4 Manage design and customisation of portal and related services</p> <p>3.5 Monitor performance and logs</p> <p>3.6 Implement measures to provide high availability and disaster recovery</p> <p>3.7 Test functionality</p>
<p>4. Plan, implement and test business collaboration tools</p>	<p>4.1 Plan namespace and server roles and deploy <i>business collaboration software</i></p> <p>4.2 Configure access and security</p> <p>4.3 Configure network infrastructure</p> <p>4.4 Customise to meet business requirements</p> <p>4.5 Monitor performance and logs</p>

	4.6 Implement measures to provide high availability and disaster recovery 4.7 Test functionality
--	---

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports in required formats
- numeracy skills to:
  - take test measurements
  - interpret results
  - evaluate performance and interoperability of communication services
- planning and organisational skills to plan, design and implement a communications solution
- problem-solving skills in a predictable range of network and software compatibility problems
- research skills to interrogate vendor databases and websites
- technical skills to install and configure multiple server applications in a complex network environment.

### Required knowledge

- detailed knowledge of:
  - mail server application
  - some business collaboration tools
  - web portal or content management software
- overview knowledge of:
  - administering database servers to support portal applications
  - backup and restoration of data
  - firewall configuration
  - network load-balancing for applications
  - network server or directory administration
  - networking infrastructure
  - security and authentication practices
  - web server administration.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design and implement an enterprise mail system</li> <li>• design and implement an enterprise web portal or content management system</li> <li>• design and implement business collaboration tools</li> <li>• configure network, servers and application software to provide optimal performance, meet security requirements and avoid known conflicts</li> <li>• configure applications to meet customisation requirements</li> <li>• monitor and test the performance of aspects of the solution.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where server applications can be installed</li> <li>• networked servers</li> <li>• workstations</li> <li>• switch</li> <li>• wide area network (WAN) service point of presence</li> <li>• client requirements</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of design report for an enterprise communication solution</li> <li>• direct observation of the candidate installing and configuring an enterprise communication solution</li> <li>• verbal or written questioning of required skills and knowledge</li> <li>• evaluation of report that outlines testing procedures, test results and changes made as a result of testing</li> <li>• review of report that outlines the design process, including challenges faced and how these were addressed</li> <li>• evaluation of design and implementation of the system in</li> </ul>

	terms of performance and suitability for business needs.
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Prepare existing network</i></b> may include:	<ul style="list-style-type: none"> <li>• checking for incompatibilities with existing systems</li> <li>• configuring domain names system (DNS) to support mail server</li> <li>• installing any prerequisites</li> <li>• reconfiguring other network services to support mail</li> <li>• removing unsupported legacy components</li> <li>• updating server operating systems to latest version</li> <li>• using vendor tools to check network for readiness to install mail server.</li> </ul>
<b><i>Mail server</i></b> may include:	<ul style="list-style-type: none"> <li>• Axigen Mail Server</li> <li>• Linux or Unix Sendmail</li> <li>• Microsoft Exchange</li> <li>• Open Xchange Server</li> <li>• Postfix.</li> </ul>
<b><i>Mail-client access</i></b> may include:	<ul style="list-style-type: none"> <li>• authentication</li> <li>• certificates</li> <li>• internet message access protocol (IMAP)</li> <li>• integration with other services, such as file sharing</li> <li>• mobile devices</li> <li>• post office protocol (POP).</li> </ul>
<b><i>Message integrity</i></b> may include:	<ul style="list-style-type: none"> <li>• certificates</li> <li>• encryption</li> <li>• Information Rights Management</li> <li>• secure or multipurpose internet mail extensions (SMIME or MIME)</li> <li>• transport layer security (TLS).</li> </ul>
<b><i>Mail-system performance</i></b> may include:	<ul style="list-style-type: none"> <li>• connectivity: <ul style="list-style-type: none"> <li>• mail clients to server</li> <li>• simple mail transfer protocol (SMTP) client to server</li> <li>• SMTP server to server</li> </ul> </li> <li>• databases</li> <li>• mail flow.</li> </ul>
<b><i>Measures to provide high</i></b>	<ul style="list-style-type: none"> <li>• automatic server failover</li> </ul>

<b><i>availability and data recovery</i></b> may include:	<ul style="list-style-type: none"> <li>• backups of configuration</li> <li>• backups of databases</li> <li>• clustering</li> <li>• deleted item retention</li> <li>• replicating databases.</li> </ul>
<b><i>Remote access</i></b> may include:	<ul style="list-style-type: none"> <li>• web-based mail client</li> <li>• virtual private network (VPN)</li> <li>• mobile phone or other device.</li> </ul>
<b><i>Web portal or content-management software</i></b> may include:	<ul style="list-style-type: none"> <li>• IBM websphere</li> <li>• JBoss</li> <li>• Microsoft SharePoint</li> <li>• Moodle or Equella</li> <li>• Oracle.</li> </ul>
<b><i>Security</i></b> may include:	<ul style="list-style-type: none"> <li>• access policies</li> <li>• application authentication</li> <li>• database permissions</li> <li>• information rights management</li> <li>• roles and site permissions.</li> </ul>
<b><i>Network infrastructure</i></b> may include:	<ul style="list-style-type: none"> <li>• firewall configuration</li> <li>• name resolution</li> <li>• network load balancing.</li> </ul>
<b><i>Business collaboration software</i></b> may include:	<ul style="list-style-type: none"> <li>• Cisco collaboration tools</li> <li>• Domino or Lotus</li> <li>• Groupwise (Novell)</li> <li>• Microsoft SharePoint</li> <li>• Moodle or Equella</li> <li>• wiki engines.</li> </ul>

## Unit Sector(s)

Networking

## ICANWK502A Implement secure encryption technologies

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to ensure secure encryption is selected, implemented and monitored in an information and communications technology (ICT) network, either locally or both.

### Application of the Unit

This unit applies to information technology (IT) professionals who may select, implement and monitor a secure encryption environment in any size enterprise. The encryption system may include local file encryption and encryption across computer networks.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine encryption methods	1.1 Analyse enterprise data <b>security</b> requirements 1.2 Create a new or review an existing <b>security plan</b> to determine appropriate <b>encryption</b> methods 1.3 Review a range of <b>encryption technologies</b> and rank the most appropriate options 1.4 Assess the costs associated with each encryption option 1.5 Document encryption options and costs and forward to <b>appropriate person</b> for decision
2. Implement encryption	2.1 Apply encryption technologies to the enterprise system 2.2 Analyse effect of encryption technologies on <b>user</b> roles and responsibilities 2.3 Inform user of new encryption technologies and effect it has on their responsibilities
3. Monitor encryption	3.1 Analyse implementation of the encryption technologies, confirming function and performance 3.2 Review help-desk records for problems concerning implementation and take appropriate action 3.3 Review system logs for encryption issues and compromises 3.4 Document encryption issues and compromises, notifying appropriate person

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse enterprise data security requirements and help-desk records
  - monitor and assess encryption systems
  - review a range of encryption software and tools
  - review security plan and conduct a detailed survey, including effect on user
  - review system security logs for breaches
- communication skills to:
  - convey and clarify complex information
  - liaise with users and clients
- literacy skills to:
  - create and interpret a data security analysis report
  - interpret an enterprise security plan
  - interpret and prepare technical documentation that includes encryption options and costs
- numeracy skills to make estimates and comparison of costs (cost-benefit analysis)
- planning and organisational skills to analyse effect on user and plan for organisational change
- problem-solving skills to troubleshoot, debug and correct connectivity and security issues
- research skills to:
  - assess and compare encryption options
  - determine data security threats, risks and countermeasures
- technical skills to:
  - develop enterprise policy and procedures
  - implement best practice encryption systems
  - implement local area network (LAN) or wireless local area network (WLAN), virtual private network (VPN) or wide area network (WAN) solutions
  - monitor encryption system for issues and compromises
  - test and prove function of chosen encryption system
  - undertake a network security risk assessment.

### Required knowledge

- certificate-related infrastructure (certificate authorities, registration authorities, repository services)
- common asymmetric key algorithms and their usage
- common symmetric key algorithms and their usage, such as:
  - advanced encryption standard (AES)
  - data encryption standard (DES)
  - triple data encryption algorithm (triple DES)

- Blowfish
- encryption strength
- encryption types (public key, secret key, hash key)
- functions and features of:
  - access control permissions
  - digital signatures
  - symmetric encryption, asymmetric encryption and one-way encryption
  - timestamps
- one-way message digests, such as message digest algorithm 5 (MD5) and secure hash algorithm (SHA)
- public key infrastructure (PKI), pretty good privacy (PGP) and GNU Privacy Guard (GnuPG)
- replay security
- sources of security threats, including eavesdropping, data interception, data corruption, data falsification and authentication issues
- transmission control protocol or internet protocol (TCP/IP) protocols and applications
- security problems and challenges that arise from organisational issues
- wired equivalent privacy (WEP), wi-fi protected access (WPA) and wi-fi protected access 2 (WPA2).

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• analyse enterprise data security requirements</li> <li>• create new or review existing security plan to determine the appropriate encryption methods</li> <li>• rank and document appropriate encryption methods</li> <li>• implement encryption systems informing users of any affects</li> <li>• monitor and document encryption issues and compromises notifying appropriate person.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where encryption installation may be conducted</li> <li>• live network</li> <li>• servers</li> <li>• encryption software</li> <li>• encryption tools</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of security analysis and planning report that outlines enterprise security requirements and security plan, including challenges faced and how these were addressed</li> <li>• evaluation of documentation demonstrating review of suitable encryption systems, ranking the most appropriate</li> <li>• verbal or written questioning to assess candidate's knowledge of encryption types, algorithms, functions and features</li> <li>• direct observation of candidate performing tasks required to successfully implement and monitor a chosen encryption system.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Security</b> may include:	<ul style="list-style-type: none"> <li>• access policies</li> <li>• data protection requirements:             <ul style="list-style-type: none"> <li>• encryption</li> <li>• permissions</li> <li>• secure remote access</li> <li>• tamper identification</li> <li>• user authentication and control</li> </ul> </li> <li>• information rights management</li> <li>• roles and site permissions.</li> </ul>
<b>Security plan</b> may include:	<ul style="list-style-type: none"> <li>• enterprise processes</li> <li>• enterprise requirements</li> <li>• enterprise security policies</li> <li>• enterprise work practices and procedures</li> <li>• security analysis report.</li> </ul>
<b>Encryption</b> may include:	<ul style="list-style-type: none"> <li>• asymmetric public-key ciphers</li> <li>• digital signatures</li> <li>• PGP</li> <li>• PKI</li> <li>• PKZIP</li> <li>• Rivest, Shamir and Adelman (RSA)</li> <li>• secure shell (SSH)</li> <li>• secure socket layer (SSL)</li> <li>• symmetric ciphers.</li> </ul>
<b>Encryption technologies</b> may include:	<ul style="list-style-type: none"> <li>• Blowfish Advanced CS</li> <li>• Cryptainer LE</li> <li>• GnuPG</li> <li>• inbuilt operating system file encryption systems</li> <li>• new PKI</li> <li>• open VPN</li> <li>• PGP.</li> </ul>
<b>Appropriate person</b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

<i>User</i> may include:	<ul style="list-style-type: none"><li>• department within the enterprise</li><li>• person within an enterprise department</li><li>• third party.</li></ul>
--------------------------	--

## Unit Sector(s)

Networking

## ICANWK503A Install and maintain valid authentication processes

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design, develop, install and maintain authentication processes. Security of information and personnel is of increasing importance to organisations. Authentication is a control or protective measure put into place by an organisation to reduce the vulnerability of the system.

Authentication controls include passwords, personal identification numbers (PINs), smart cards, biometric devices and other Authentication protocols.

### Application of the Unit

This unit applies to middle managers, such as information security managers, network engineers or security analysts, responsible for implementing and monitoring the organisational security management system.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine authentication requirements	<p>1.1 Determine user and enterprise security requirements with reference to enterprise security plan</p> <p>1.2 Identify and analyse authentication options according to user and enterprise requirements</p> <p>1.3 Select the most appropriate authentication and authorisation processes</p>
2. Configure authentication software or tools	<p>2.1 Create an authentication realm and reuse as required to protect different areas of <i>server</i></p> <p>2.2 Add <i>users</i> and authorisation rules to new realm according to business needs</p> <p>2.3 Describe user attributes and user attribute set-up</p> <p>2.4 Set up an authentication filter and authorisation parameters on the appropriate server according to business requirements</p>
3. Apply authentication methods	<p>3.1 Develop or obtain authentication <i>protocols</i> as required</p> <p>3.2 Develop and distribute related <i>methods</i> to users according to business need</p> <p>3.3 Brief user on authentication system and their responsibilities according to enterprise security plan</p> <p>3.4 Apply authentication system to <i>network</i> and user according to system product requirements</p> <p>3.5 Record and store permission and configuration information in a secure central location</p>
4. Monitor authentication system	<p>4.1 Review the authentication system according to user and enterprise security and quality of service requirements</p> <p>4.2 Ensure ongoing security monitoring using incident management and reporting processes, according to enterprise security plan</p> <p>4.3 Adjust authentication system if required</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse network information
  - plan approaches to technical problems or management requirements
- communication skills to:
  - convey and clarify complex information
  - liaise with clients
- literacy skills to interpret and prepare technical documentation, including recording authentication events related to network security design and incident response
- planning skills to plan control methods for managing authentication processes
- problem-solving skills to:
  - apply solutions in complex networks, including systems processes
  - instigate rapid deployment of solutions to problems involving authentication failure and security incidents
- technical skills to apply best practice to systems authentication methodologies and technologies.

### Required knowledge

- overview knowledge of:
  - problems and challenges dealing with organisational authentication issues
  - resource accounting through authentication
  - common virtual private network (VPN) issues, including quality of service (QoS) considerations, bandwidth, dynamic security environment
  - function and operation of VPN concepts
- authentication adaptors
- biometric authentication adaptors
- digital certificates, such as VeriSign, X.509, and SSL
- function and operation of authentication
- network authentication services, such as Kerberos and NT LAN Manager (NTLM)
- features of common password protocols, such as:
  - challenge handshake authentication protocol (CHAP)
  - challenge phrases
  - password authentication protocol (PAP)
  - remote authentication dial-in user service (RADIUS) authentication
- token cards.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design and deploy authentications solutions to the business technology environment and business needs</li> <li>• configure authentication software or tools</li> <li>• monitor and test authentication process after implementation</li> <li>• ensure authentication solutions are current.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where network authentication may be implemented and managed</li> <li>• network support tools currently used in industry</li> <li>• organisational security policies related to authentication, manufacturer recommendations and current authentication standards, including biometric authentication adaptors</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• current and emerging authentication processes</li> <li>• features and limitations in vendor solutions, operating systems and software</li> </ul> </li> <li>• direct observation of candidate demonstrating management of authentication processes in a range of complex systems</li> <li>• review of documentation prepared by candidate to manage authentication processes.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the</p>

	<p>work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Server</b> may include:	<ul style="list-style-type: none"> <li>• application or web</li> <li>• building environmental assessment (BEA) Weblogic</li> <li>• Certificate authority</li> <li>• email</li> <li>• file and print</li> <li>• firewall</li> <li>• file transfer protocol (FTP)</li> <li>• IAS - RADIUS</li> <li>• IBM VisualAge and WebSphere</li> <li>• Microsoft domain controllers</li> <li>• Novell Directory Services (NDS)</li> <li>• proxy or cache</li> <li>• routing and remote access, e.g. using virtual private network (RRAS-VPN).</li> </ul>
<b>Users</b> may include:	<ul style="list-style-type: none"> <li>• external client</li> <li>• intranet</li> <li>• remote.</li> </ul>
<b>Protocols</b> may include:	<ul style="list-style-type: none"> <li>• CHAP and PAP</li> <li>• Kerberos</li> <li>• lightweight directory access protocol (LDAP)</li> <li>• network level authentication</li> <li>• NTLM</li> <li>• open LDAP</li> <li>• simple and protected GSSAPI negotiation mechanism (SPNEGO)</li> <li>• security support provider interface (SSPI).</li> </ul>
<b>Methods</b> may include:	<ul style="list-style-type: none"> <li>• certificates</li> <li>• challenge response</li> <li>• face, voice and unique bio-electric signals</li> <li>• fingerprint</li> <li>• ID card</li> <li>• other biometric identifier</li> <li>• pass phrase</li> <li>• password</li> </ul>

	<ul style="list-style-type: none"><li>• PIN</li><li>• retinal pattern</li><li>• security token</li><li>• signature</li><li>• software token.</li></ul>
<i>Network</i> may include:	<ul style="list-style-type: none"><li>• data</li><li>• internet</li><li>• large and small local area networks (LANs)</li><li>• national wide area networks (WANs)</li><li>• private lines</li><li>• use of the public switched telephone network (PSTN) for dial-up modems only</li><li>• voice</li><li>• VPNs.</li></ul>

## Unit Sector(s)

Networking

# ICANWK504A Design and implement an integrated server solution

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to carry out the design and implementation of an integrated server solution to enable multiple operating system platforms to co-exist on the same network.

## Application of the Unit

This unit applies to officers employed in network or systems engineering roles where they are required to support multiple operating systems in a complex computing environment of medium to large organisations. Officers may be required to:

- ensure multiple operating systems co-exist on the same network
- implement a network authentication model that allows users to login using the same user credentials
- provide a secure method of sharing files between operating system platforms.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare for the design and installation of an integrated server solution	<p>1.1 Consult with client and key <i>stakeholders</i> to identify <i>server integration requirements</i></p> <p>1.2 Prepare for work, according to site-specific safety requirements and enterprise OHS processes and procedures</p> <p>1.3 Arrange access to site and advise client of deployment and potential down times</p> <p>1.4 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite</p>
2. Plan and design integrated server solution	<p>2.1 Research and review authentication methods available for integration of network <i>operating systems</i></p> <p>2.2 Select appropriate <i>authentication methods and protocols</i></p> <p>2.3 Research redundancy and replication requirements for selected authentication model</p> <p>2.4 Produce the integrated server design, including authentication, file sharing and security</p>
3. Install and configure the integrated server solution	<p>3.1 Implement integrated authentication solution</p> <p>3.2 Implement integrated <i>file sharing</i> solution</p> <p>3.3 Configure workstations for integrated environment</p> <p>3.4 Implement <i>security</i> for the integrated server environment</p>
4. Test and reconfigure network servers	<p>4.1 Test server for benchmarking against client specification and requirements according to test plan, and record outcomes</p> <p>4.2 Analyse error report and make changes as required</p> <p>4.3 Use troubleshooting tools and techniques to diagnose and correct integration problems</p> <p>4.4 Test required changes or additions</p> <p>4.5 Validate changes or additions against specifications</p>
5. Complete and document network design and installation	<p>5.1 Make and document server configuration and operational changes</p> <p>5.2 Complete client report and notification of server status</p> <p>5.3 Clean up and restore worksite to client's satisfaction</p> <p>5.4 Secure sign-off from appropriate person</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports in required formats
  - read and interpret enterprise procedures, manuals and specifications
- numeracy skills to:
  - take test measurements
  - interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to plan, prioritise and monitor own work
- problem-solving and contingency-management skills to adapt configuration procedures to requirements of network and reconfigure, depending on differing operational contingencies, risk situations and environments
- safety-awareness skills to:
  - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
  - follow enterprise OHS procedures
  - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- research skills to interrogate vendor databases and websites to find appropriate integration solutions
- technical skills to:
  - design an integrated server solution
  - identify the technical requirements, constraints and manageability issues for given customer integration requirements
  - implement an integrated server design
  - select and use server and network diagnostics, test application software and hardware to suit integrated environment.

### Required knowledge

- authentication methods and protocols, such as lightweight directory access protocol (LDAP) and Kerberos
- compatibility issues and resolution procedures
- current network operating systems (NOS)
- current server applications, compatibility issues and resolution procedures
- documentation required for networks
- error and event logging and reporting
- file and print management

- file system security
- high availability options for servers
- network file systems and shares
- network service configuration and security
- operating system help and support utilities
- performance monitoring tools and tuning options
- process or task management
- task scheduling utilities
- troubleshooting tools and techniques, including network diagnostic utilities
- user authentication and directory services.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• produce design documents to integrate multiple server operating systems for authentication, file sharing and security</li> <li>• install and configure the integrated solution, according to the produced design</li> <li>• monitor and test the solution</li> <li>• troubleshoot integration problems.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where server installation may be conducted</li> <li>• relevant server specifications: <ul style="list-style-type: none"> <li>• multiple operating system platforms</li> <li>• cabling</li> <li>• networked (LAN) computers</li> <li>• server diagnostic software</li> <li>• switch</li> <li>• client requirements</li> <li>• workstations</li> </ul> </li> <li>• relevant regulatory documentation that affects installation activities</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of design report for an integrated server solution</li> <li>• direct observation of the candidate installing and configuring the integrated server solution</li> <li>• verbal or written questioning of required skills and knowledge</li> <li>• evaluation of design and implementation of system in terms of integrated functionality and suitability for business needs.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• information and communications technology (ICT) company</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees</li> <li>• service industry.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• information technology (IT) manager or representative</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>
<b><i>Server Integration requirements</i></b> may refer to:	<ul style="list-style-type: none"> <li>• automatic synchronisation of passwords</li> <li>• central or synchronised identity management system to store information about users</li> <li>• data availability for mobile devices</li> <li>• login with same user credentials across multiple platforms</li> <li>• password security across platforms</li> <li>• secure file sharing across multiple platforms</li> <li>• single sign-on.</li> </ul>
<b><i>Operating systems</i></b> may include:	<ul style="list-style-type: none"> <li>• Linux</li> <li>• Mac</li> <li>• mobile device</li> <li>• Unix</li> <li>• Windows Server.</li> </ul>
<b><i>Authentication methods and protocols</i></b> may incorporate a combination of:	<ul style="list-style-type: none"> <li>• enterprise single sign-on</li> <li>• Kerberos</li> <li>• LDAP</li> <li>• network basic input/output system (NetBIOS)</li> <li>• network information system (NIS)</li> <li>• Novell Directory Services (NDS)</li> <li>• pluggable authentic modules (PAM)</li> <li>• public key authentication and digital certificates</li> <li>• Red Hat Directory Services</li> <li>• server messages block or Samba</li> </ul>

	<ul style="list-style-type: none"> <li>• two-factor and multi-factor authentication</li> <li>• winbind</li> <li>• Windows Active Directory Services.</li> </ul>
<i>File sharing</i> must be across multiple platforms and may include:	<ul style="list-style-type: none"> <li>• distributed file systems</li> <li>• network file system (NFS)</li> <li>• server messages block (SMB) or Samba.</li> </ul>
<i>Security</i> must be across multiple platforms and may include:	<ul style="list-style-type: none"> <li>• authentication, authorisation and access control</li> <li>• directory server security</li> <li>• encryption</li> <li>• Kerberos security, such as pre-authentication and ticket validation</li> <li>• network share permissions</li> <li>• password security</li> <li>• secure socket layer (SSL) certificates</li> <li>• transport layer security (TLS).</li> </ul>

## Unit Sector(s)

Networking

## ICANWK505A Design, build and test a network server

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design, install and test a server in a complex network environment.

### Application of the Unit

This unit applies to those employed in network or systems engineering roles, such as network engineers who are required to design and build network servers in a complex computing environment of medium to large organisations.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan and design network servers to meet business requirements</p>	<p>1.1 Consult with <i>client</i> and key <i>stakeholders</i> to identify requirements</p> <p>1.2 Assess business problems, opportunities, scope, objectives and budget, confirming details with appropriate person</p> <p>1.3 Analyse and document data migration requirements</p> <p>1.4 Review requirements to identify <i>network server specifications</i></p> <p>1.5 Produce detailed documentation for the design and configuration of the network services, <i>server applications</i>, <i>security</i> and <i>redundancy</i></p> <p>1.6 Prototype design and update documentation as necessary</p> <p>1.7 Produce installation checklists as part of the quality assurance process</p> <p>1.8 Develop the test plan to ensure that the system meets client requirements, performance standards and quality expectations</p> <p>1.9 Obtain client sign-off for the design report</p>
<p>2. Prepare for network server installation</p>	<p>2.1 Prepare for work, according to site-specific safety requirements and enterprise OHS processes and procedures</p> <p>2.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel</p> <p>2.3 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite</p> <p>2.4 Back up local data in preparation for installation</p>
<p>3. Build and configure the servers according to design</p>	<p>3.1 Install <i>network operating system</i> to design specifications using installation checklists</p> <p>3.2 Install additional tools or third-party software applications as required by the design</p> <p>3.3 Patch the operating system and applications to ensure maximum security and reliability</p> <p>3.4 Configure <i>network services</i> and applications</p> <p>3.5 Implement security design to prevent unauthorised access to <i>system</i></p> <p>3.6 Reconnect and reconfigure connectivity devices</p> <p>3.7 Configure <i>update services</i> to provide automatic updates for operating system and applications</p> <p>3.8 Restore local data to new server</p>

	3.9 Implement backup and recovery methods to enable restoration capability in the event of a disaster
4. Test and reconfigure network servers	4.1 Test server for benchmarking against client specification and requirements according to test plan, and record outcomes 4.2 Analyse the error report and make changes as required 4.3 Use troubleshooting tools and techniques to diagnose and correct <i>server problems</i> 4.4 Test required changes or additions 4.5 Validate changes or additions against specifications
5. Complete and document network design and installation	5.1 Make and document server configuration and operational changes 5.2 Complete client report and notify of server status 5.3 Clean up and restore worksite to client's satisfaction 5.4 Secure sign-off from appropriate person

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - read and interpret enterprise procedures, manuals and specifications
  - interpret technical documentation
  - write reports in required formats
- numeracy skills to:
  - take test measurements
  - interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - deal with unexpected situations on the basis of safety and specified work outcomes
  - adapt configuration procedures to requirements of network and reconfigure depending on differing operational contingencies, risk situations and environments
- safety awareness skills to:
  - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
  - follow enterprise OHS procedures
  - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- research skills to interrogate vendor databases and websites to implement different configuration requirements to meet security levels
- technical skills to:
  - identify the technical requirements, constraints and manageability issues for given customer server requirements
  - design a server and associated network services
  - install a server design
  - select and use server and network diagnostics, test application software and hardware to suit different network applications.

### Required knowledge

- features of:
  - current network operating systems (NOS)
  - current server applications compatibility issues and resolution procedures
- detailed knowledge of:
  - network service configuration, including:

- domain name system (DNS)
- dynamic host configuration protocol (DHCP)
- file transfer protocol (FTP)
- mail
- network time protocol (NTP)
- proxy
- server messages block (SMB)
- web
  
- network service management, including start, stop, restart and start on boot
- network service security
- server firewall configuration
- troubleshooting tools and techniques, including network diagnostic utilities
- operating system installation methods, including installation from: CD, DVD, universal serial bus (USB) boot disk, network and script (automated install), deployment services
- user authentication and directory services
- best practice procedures for implementing backup and recovery
- error and event logging and reporting
- documentation skills for networks
- boot process and diagnosing boot failures
- operating system rescue environment
- operating system help and support utilities
- storage options, including file systems and disk partitioning schemes
- performance monitoring tools and tuning options
- compatibility issues and resolution procedures
- high availability options for servers
- file and print management
- process or task management
- task scheduling utilities.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• produce design report for a server (or servers) with complex user and network service requirements</li> <li>• install and configure the server according to the produced design</li> <li>• monitor and test the server</li> <li>• troubleshoot server and network failures</li> <li>• configure a wide range of server network and security services, including DNS, DHCP, web and proxy, mail, FTP and firewall.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where server installation may be conducted</li> <li>• relevant server specifications: <ul style="list-style-type: none"> <li>• cabling</li> <li>• networked (LAN) computers</li> <li>• server diagnostic software</li> <li>• switch</li> <li>• client requirements</li> <li>• wide area network (WAN) service point of presence</li> <li>• workstations</li> </ul> </li> <li>• relevant regulatory documentation that affects installation activities</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of design report for a server in a complex network environment</li> <li>• direct observation of the candidate installing or updating a server in a complex network environment</li> <li>• verbal or written questioning of required skills and knowledge</li> <li>• evaluation of report that outlines testing procedures, test</li> </ul>

	<p>results and recommendation to server changes</p> <ul style="list-style-type: none"><li>• evaluation of design and implementation of the system in terms of performance and suitability for business needs.</li></ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• information and communications technology (ICT) company</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees</li> <li>• service industry.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• information technology (IT) manager or representative</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>
<b><i>Requirements</i></b> may refer to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• database</li> <li>• network</li> <li>• people in the organisation</li> <li>• performance</li> <li>• platform</li> <li>• system</li> <li>• technical needs.</li> </ul>
<b><i>Network server</i></b> may include:	<ul style="list-style-type: none"> <li>• multiple</li> <li>• physical</li> <li>• virtual.</li> </ul>
<b><i>Specifications</i></b> may include:	<ul style="list-style-type: none"> <li>• IP addressing, such as: <ul style="list-style-type: none"> <li>• IPsec</li> <li>• IPv4 and IPv6</li> <li>• subnetting</li> <li>• supernetting</li> </ul> </li> <li>• DHCP, including: <ul style="list-style-type: none"> <li>• options</li> <li>• relay agents</li> <li>• exclusions</li> <li>• fixed addresses and address ranges</li> </ul> </li> </ul>

	<ul style="list-style-type: none"><li>• pre-boot eXecution environment (PXE) boot</li><li>• scopes</li><li>• routing, including:<ul style="list-style-type: none"><li>• default gateway</li><li>• open shortest path first (OSPF)</li><li>• persistent routing</li><li>• routing internet protocol (RIP)</li><li>• static routing</li></ul></li><li>• authentication services, including:<ul style="list-style-type: none"><li>• biometrics</li><li>• enterprise single sign-on</li><li>• Hesiod</li><li>• Kerberos</li><li>• lightweight directory access protocol (LDAP)</li><li>• network information system (NIS)</li><li>• Novell Directory Services (NDS)</li><li>• pluggable authentication modules (PAM)</li><li>• public key infrastructure (PKI) and digital certificates</li><li>• public key authentication</li><li>• Red Hat Directory Services</li><li>• security tokens and smart cards</li><li>• SMB or Samba</li><li>• two-factor and multifactor authentication</li><li>• Windows Active Directory Services</li></ul></li><li>• file services, including:<ul style="list-style-type: none"><li>• disk partitioning schemes, such as partitions, extended partitions, logical partitions, RAID, logical volumes, swap space</li><li>• disk quotas</li><li>• distributed file systems</li><li>• encrypted file systems</li><li>• files, directories, shares and their permissions</li><li>• file systems, such as NTF-based data.gb (NTFD), file allocation table (FAT), EXT, hierarchical file system (HFS)</li><li>• network file systems (NFS)</li><li>• RAID</li><li>• shadow copy services</li><li>• SMB or Samba</li></ul></li><li>• print services, including:</li></ul>
--	---

	<ul style="list-style-type: none"><li>• print drivers</li><li>• print queues</li><li>• print server</li><li>• print spool location</li><li>• printer pools</li><li>• name resolution services may include detailed DNS configuration, such as:<ul style="list-style-type: none"><li>• cache-only name server</li><li>• client configuration</li><li>• conditional forwarding</li><li>• DNS record types, such as A, PTR, MX, NS</li><li>• DNS zones</li><li>• dynamic updates</li><li>• external forwarders</li><li>• master and slave name servers</li><li>• replication</li><li>• root hints</li><li>• Time to Live (TTL)</li><li>• WINS and DNS integration</li></ul></li><li>• web and proxy services, including:<ul style="list-style-type: none"><li>• Apache</li><li>• extranet</li><li>• HTTP or HTTPS</li><li>• internet information server (IIS)</li><li>• intranet</li><li>• internet security and acceleration (ISA) server</li><li>• squid</li><li>• secure socket later (SSL) certificates</li><li>• virtual hosts</li><li>• website security, access control and authentication</li></ul></li><li>• mail services, including:<ul style="list-style-type: none"><li>• dovecot</li><li>• IMAP or IMAPS</li><li>• mail filtering and virus scanning</li><li>• Microsoft exchange</li><li>• POP3</li><li>• procmail</li><li>• sendmail</li><li>• simple mail transfer protocol (SMTP)</li></ul></li><li>• FTP services, including:</li></ul>
--	---

	<ul style="list-style-type: none"> <li>• access to home directories</li> <li>• anonymous FTP</li> <li>• FTP authentication</li> <li>• FTP server</li> <li>• securing FTP</li> <li>• very secure FTP (VSFTP)</li> <li>• firewall, including: <ul style="list-style-type: none"> <li>• incoming and outgoing traffic filtering</li> <li>• IP tables</li> <li>• ISA server</li> <li>• kernel level firewalls</li> <li>• Microsoft Windows Firewall</li> <li>• SmoothWall</li> <li>• third-party firewalls</li> <li>• traffic filtering by ports and protocols</li> </ul> </li> <li>• remote access, including: <ul style="list-style-type: none"> <li>• dial-up</li> <li>• inbound or outbound filters</li> <li>• internet connection sharing (ICS)</li> <li>• network address translation (NAT)</li> <li>• remote authentication dial-in user service (RADIUS)</li> <li>• RADIUS proxy</li> <li>• remote access policy</li> <li>• remote access protocols</li> <li>• routing and remote access services (RRAS)</li> <li>• secure shell (SSH)</li> <li>• terminal services</li> <li>• VPN</li> <li>• wireless</li> </ul> </li> <li>• hardware</li> <li>• NOS</li> <li>• network services</li> <li>• server applications</li> <li>• security</li> <li>• redundancy.</li> </ul>
<p><i>Server applications</i> may include:</p>	<ul style="list-style-type: none"> <li>• database and data warehousing</li> <li>• directory services</li> <li>• file sharing</li> <li>• line of business applications</li> <li>• management</li> </ul>

	<ul style="list-style-type: none"> <li>• messaging</li> <li>• name services</li> <li>• network and remote access</li> <li>• terminal services</li> <li>• web applications</li> <li>• Windows media server</li> <li>• Microsoft SharePoint.</li> </ul>
<i>Security</i> may include:	<ul style="list-style-type: none"> <li>• access control lists</li> <li>• authentication</li> <li>• encryption</li> <li>• file and directory permissions</li> <li>• firewalls</li> <li>• network service security</li> <li>• network share permissions</li> <li>• password security</li> <li>• physical security</li> <li>• SE Linux</li> <li>• security for system resources, such as printers, databases, SharePoint sites, applications and websites</li> <li>• transmission control protocol (TCP) wrappers</li> <li>• Windows group policy.</li> </ul>
<i>Redundancy</i> may include:	<ul style="list-style-type: none"> <li>• dual boot read-only memory (ROMs)</li> <li>• error correcting random access memory (RAM)</li> <li>• failover clustering</li> <li>• multiple fans</li> <li>• multiple power supplies</li> <li>• redundant array of inexpensive or independent disks (RAID)</li> <li>• replication</li> <li>• uninterruptible power supply (UPS).</li> </ul>
<i>Network operating system</i> may include:	<ul style="list-style-type: none"> <li>• Linux OS</li> <li>• Unix OS</li> <li>• Windows Server OS.</li> </ul>
<i>Network services</i> may include:	<ul style="list-style-type: none"> <li>• DHCP</li> <li>• DNS</li> <li>• FTP</li> <li>• firewall</li> <li>• hypertext transfer protocol (HTTP or HTTPS)</li> <li>• internet message access protocol (IMAP)</li> <li>• network file system (NFS)</li> <li>• NTP</li> <li>• post office protocol (POP)</li> </ul>

	<ul style="list-style-type: none"> <li>• print services</li> <li>• proxy</li> <li>• SMB</li> <li>• simple mail transfer protocol (SMTP)</li> <li>• simple network management protocol (SNMP)</li> <li>• structured query language server (SQL)</li> <li>• transmission control protocol or internet protocol (TCP/IP).</li> </ul>
<i>System</i> may include:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• computers</li> <li>• database system</li> <li>• financial system</li> <li>• information system</li> <li>• management system</li> <li>• network</li> <li>• software</li> <li>• website.</li> </ul>
<i>Update services</i> may include:	<ul style="list-style-type: none"> <li>• Potentially Unwanted Program Remover (PUP)</li> <li>• Red Hat Network</li> <li>• Windows Server Update Services</li> <li>• Yellow Dog Update Manager (YUM).</li> </ul>
<i>Backup and recovery</i> may include:	<ul style="list-style-type: none"> <li>• automated backups using operating system backup and job scheduling tools</li> <li>• backup and recovery of mail systems</li> <li>• backup and recovery of network directory service objects</li> <li>• backups using third-party software</li> <li>• database backup and recovery</li> <li>• volume shadow copies.</li> </ul>
<i>Server problems</i> may include:	<ul style="list-style-type: none"> <li>• disk failure</li> <li>• email problems</li> <li>• file system problems</li> <li>• hostname resolution problems</li> <li>• internet connectivity problems</li> <li>• logged system errors</li> <li>• misconfigured networking</li> <li>• security breaches</li> <li>• web server problems.</li> </ul>

## **Unit Sector(s)**

Networking

# ICANWK506A Configure, verify and troubleshoot WAN links and IP services in a medium enterprise network

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use appropriate tools, equipment, software and protocols to install, operate, and troubleshoot medium enterprise switches.

## Application of the Unit

This unit applies to the installation, operation and troubleshooting of medium enterprise networks. Job roles include help-desk technician and network support technician.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Prepare to install medium enterprise WAN links</p>	<p>1.1 Prepare for given work according to legislation, OHS codes, regulations and standards</p> <p>1.2 Arrange access to the site according to required procedure</p> <p>1.3 Review existing <i>network</i> design <i>documentation</i> to ensure it is current and complete</p> <p>1.4 Select the <i>network elements</i> required to be installed to meet the technical <i>requirements</i></p> <p>1.5 Contact vendors and service suppliers to obtain specifications and availability of identified components</p> <p>1.6 Develop plans, with prioritised tasks and contingency arrangements, for installation of components with minimum disruption to <i>client</i></p> <p>1.7 Liaise with <i>appropriate person</i> to obtain approval for the plans, including security clearance and timing</p>
<p>2. Configure WAN links</p>	<p>2.1 Describe different methods for connecting to a wide area network (WAN)</p> <p>2.2 Configure and verify a <i>basic serial WAN configuration</i></p> <p>2.3 Configure and verify at least two <i>WAN protocols</i></p> <p>2.4 Describe <i>virtual private network (VPN) technology</i></p> <p>2.5 Configure and verify a site to site <i>VPN</i></p> <p>2.6 Describe asymmetric digital subscriber line (ADSL) technology</p> <p>2.7 Configure and verify an ADSL connection</p>
<p>3. Configure and verify IP services on a router</p>	<p>3.1 Explain the operation and benefits of using dynamic host configuration protocol (DHCP)</p> <p>3.2 Configure and verify DHCP operation on a router</p> <p>3.3 Implement static and dynamic addressing services for hosts in a local area network (LAN) environment</p> <p>3.4 Explain the basic operation of network address translation (NAT)</p> <p>3.5 Configure NAT for given network requirements</p> <p>3.6 Implement and verify NAT in a medium-sized enterprise branch office network</p> <p>3.7 Describe the basic operation and configuration of internet protocol version 6 (IPv6)</p>
<p>4. Secure a network</p>	<p>4.1 Describe the purpose and types of access control lists</p>

using router services	(ACLs) 4.2 Configure and apply ACLs based on network filtering requirements 4.3 Configure and apply ACLs to provide secure access to the router
5. Troubleshoot medium enterprise WAN links	5.1 Troubleshoot <i>WAN implementation issues</i> 5.2 Rectify WAN problems 5.3 Document solutions

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - take test measurements
  - interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to:
  - coordinate the process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - adapt configuration procedures to requirements of network
  - reconfigure depending on differing operational contingencies, risk situations and environments
  - troubleshoot and debug WAN issues
- research skills to investigate appropriate hardware to meet requirements
- technical skills to select and configure networking devices and assess and implement security requirements.

### Required knowledge

- overview knowledge of IPv6
- detailed knowledge of:
  - ACLs
  - router calling line identification (CLI) configuration
  - router debug commands.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• plan and prepare for the WAN link installation task</li> <li>• install and configure WAN links</li> <li>• configure and troubleshoot the following IP services: <ul style="list-style-type: none"> <li>• NAT</li> <li>• DHCP</li> <li>• ACLs</li> </ul> </li> <li>• configure and troubleshoot ADSL links</li> <li>• configure and troubleshoot VPNs.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network installation may be conducted</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• computers</li> <li>• WAN service point of presence</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of prepared documentation that outlines testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and</p>

	<p>the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>Network</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• internet</li> <li>• large and small LAN</li> <li>• national WAN</li> <li>• VPN.</li> </ul>
<b>Documentation</b> may include:	<ul style="list-style-type: none"> <li>• equipment inventory</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b>Network elements</b> may include:	<ul style="list-style-type: none"> <li>• adaptors</li> <li>• communications cables and connectors</li> <li>• hubs</li> <li>• routers</li> <li>• servers</li> <li>• switches.</li> </ul>
<b>Requirements</b> may refer to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>

<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b>Appropriate person</b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b>Basic serial WAN configuration</b> may include:	<ul style="list-style-type: none"> <li>• high-level data link control (HDLC)</li> <li>• link control settings</li> <li>• point-to-point protocol (PPP)</li> <li>• usernames and passwords.</li> </ul>
<b>WAN protocols</b> may include:	<ul style="list-style-type: none"> <li>• frame relay</li> <li>• HDLC</li> <li>• PPP.</li> </ul>
<b>VPN technology</b> may include:	<ul style="list-style-type: none"> <li>• benefits</li> <li>• components</li> <li>• affect</li> <li>• importance</li> <li>• role.</li> </ul>
<b>VPN</b> may include:	<ul style="list-style-type: none"> <li>• IPSec site to site VPN with pre-shared key authentication.</li> </ul>
<b>IPv6</b> concepts may include:	<ul style="list-style-type: none"> <li>• dual stack</li> <li>• routing information protocol next generation (RIPng)</li> <li>• tunnelling.</li> </ul>
<b>WAN implementation issues</b> may include:	<ul style="list-style-type: none"> <li>• DHCP</li> <li>• NAT</li> <li>• ACL</li> <li>• VPN</li> <li>• ADSL.</li> </ul>

Networking

# ICANWK507A Install, operate and troubleshoot medium enterprise routers

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use appropriate tools, equipment, software and protocols to install, operate and troubleshoot medium enterprise routers.

## Application of the Unit

This unit applies to the installation, operation and troubleshooting of medium enterprise routers. Job roles include network technician, network administrator and network support.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Prepare to install a medium enterprise router</p>	<p>1.1 Prepare for given work according to legislation, OHS, codes, regulations and standards</p> <p>1.2 Arrange access to the site according to required procedure</p> <p>1.3 Review existing <i>network</i> design <i>documentation</i> to ensure it is current and complete</p> <p>1.4 Select <i>network elements</i> required to be installed to meet the technical <i>requirements</i></p> <p>1.5 Contact vendors and service suppliers to obtain specifications and availability of identified components</p> <p>1.6 Develop plans, with prioritised tasks and contingency arrangements, for installation of components with minimum disruption to <i>client</i></p> <p>1.7 Liaise with <i>appropriate person</i> to obtain approval for the plans, including security clearance and timing</p>
<p>2. Configure basic router operation</p>	<p>2.1 Describe <i>basic routing concepts</i></p> <p>2.2 Describe the <i>operation</i> of routers</p> <p>2.3 Select the appropriate media, cables, ports, and connectors to connect routers to other network devices and hosts</p> <p>2.4 Access and use the router to set basic parameters</p> <p>2.5 Upgrade firmware on a router</p> <p>2.6 Save and back up router configuration files</p> <p>2.7 Implement <i>basic router security</i></p> <p>2.8 Configure static and default routes</p>
<p>3. Configure and verify dynamic classless routing protocols</p>	<p>3.1 Determine the appropriate classless addressing scheme using VLSM and summarisation to satisfy addressing requirements in a LAN or WAN environment</p> <p>3.2 Calculate and apply an addressing scheme, including VLSM internet protocol (IP) addressing design to a network</p> <p>3.3 Configure and verify <i>classless routing protocols</i></p>
<p>4. Troubleshoot medium enterprise routers</p>	<p>4.1 Troubleshoot device configuration and network connectivity using <i>basic utilities</i></p> <p>4.2 Identify and correct common problems associated with IP addressing and host configurations</p> <p>4.3 Troubleshoot router hardware and software operation</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - take test measurements
  - interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to:
  - coordinate process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving skills to:
  - adapt configuration procedures to requirements of network and reconfigure depending on differing operational contingencies, risk situations and environments
  - troubleshoot and debug router network issues
- research skills to investigate appropriate hardware to meet requirements
- technical skills to select and configure networking devices and assess and implement security requirements.

### Required knowledge

- basic routing concepts for small enterprise network switches and routers
- classless routing protocols, including:
  - enhanced interior gateway routing protocol (EIGRP)
  - open shortest path first (OSPF)
  - routing information protocol (RIPv2)
- debug commands
- internet protocol version 4 (IPv4)
- purpose and basic operation of the protocols in the open system interconnection (OSI) and transmission control protocol or internet protocol (TCP/IP) models
- router calling line identification (CLI) configuration.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• plan and prepare for the installation of an enterprise router</li> <li>• design a classless IP addressing scheme to suit requirements</li> <li>• install, configure and test the network elements to ensure interoperability within the network</li> <li>• apply network topologies, routing protocols and security issues</li> <li>• apply solutions and troubleshoot defined network problems.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network installation may be conducted</li> <li>• enterprise routers and operating systems</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• computers</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation that outlines testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Network</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• internet</li> <li>• large and small local area networks (LANs)</li> <li>• national wide area networks (WANs)</li> <li>• virtual private network (VPN).</li> </ul>
<b>Documentation</b> may include:	<ul style="list-style-type: none"> <li>• equipment inventory</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b>Network elements</b> may include:	<ul style="list-style-type: none"> <li>• adaptors</li> <li>• communications cables and connectors</li> <li>• hubs</li> <li>• routers</li> <li>• servers</li> <li>• switches.</li> </ul>
<b>Requirements</b> may refer to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• Internal employees.</li> </ul>
<b>Appropriate person</b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b>Basic routing concepts</b> may include:	<ul style="list-style-type: none"> <li>• packet forwarding</li> <li>• router lookup process.</li> </ul>

<b><i>Operation</i></b> may include:	<ul style="list-style-type: none"><li>• power on self-test (POST)</li><li>• router bootup process</li><li>• router components.</li></ul>
<b><i>Basic router security</i></b> may include:	<ul style="list-style-type: none"><li>• configuration security</li><li>• implement password</li><li>• physical security.</li></ul>
<b><i>Classless routing protocols</i></b> may include:	<ul style="list-style-type: none"><li>• EIGRP</li><li>• OSPF</li><li>• RIPv2.</li></ul>
<b><i>Basic utilities</i></b> may include:	<ul style="list-style-type: none"><li>• debug commands</li><li>• ipconfig</li><li>• ping</li><li>• secure shell (SSH)</li><li>• Telnet</li><li>• traceroute.</li></ul>

## Unit Sector(s)

Networking

# ICANWK508A Install, operate and troubleshoot medium enterprise switches

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use appropriate tools, equipment, software and protocols to install, operate, and troubleshoot medium enterprise switches.

## Application of the Unit

This unit applies to the installation, operation and troubleshooting of medium enterprise networks. Job roles include help-desk technician and network-support technician.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Prepare to install an medium enterprise switch</p>	<p>1.1 Prepare for given work according to legislation, OHS, codes, regulations and standards</p> <p>1.2 Arrange access to the site according to required procedure</p> <p>1.3 Review existing <i>network</i> design <i>documentation</i> to ensure it is current and complete</p> <p>1.4 Select the <i>network elements</i> required to be installed to meet the technical <i>requirements</i></p> <p>1.5 Contact vendors and service suppliers to obtain specifications and availability of identified components</p> <p>1.6 Develop plans, with prioritised tasks and contingency arrangements, for installation of components with minimum disruption to <i>client</i></p> <p>1.7 Liaise with <i>appropriate person</i> to obtain approval for the plans, including security clearance and timing</p>
<p>2. Configure basic switch operation</p>	<p>2.1 Describe network segmentation, basic traffic management and basic switching concepts</p> <p>2.2 Perform, save and verify initial switch configuration tasks</p> <p>2.3 Select the appropriate media, cables, ports, and connectors to connect switches to other network devices and hosts</p> <p>2.4 Perform, save and verify initial switch configuration tasks</p> <p>2.5 Upgrade firmware on a switch</p> <p>2.6 Save and back up switch configuration files</p> <p>2.7 Implement <i>basic switch security</i></p>
<p>3. Configure and verify advanced switching functions</p>	<p>3.1 Describe <i>enhanced switching technologies</i></p> <p>3.2 Configure and verify virtual local area networks (VLANs)</p> <p>3.3 Configure and verify trunks between switches</p> <p>3.4 Configure and verify inter-VLAN routing</p> <p>3.5 Configure and verify spanning tree protocol (STP) and rapid spanning tree protocol (RSTP) operation</p>
<p>4. Troubleshoot medium enterprise switches</p>	<p>4.1 Troubleshoot device configuration and network connectivity using <i>basic utilities</i></p> <p>4.2 Identify and resolve <i>common switched network issues</i></p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - take test measurements
  - interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to:
  - coordinate the process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving skills to:
  - adapt configuration procedures to requirements of network and reconfigure depending on differing operational contingencies, risk situations and environments
  - troubleshoot and debug router switch issues
- research skills to investigate appropriate hardware to meet requirements
- technical skills to:
  - assess and implement security requirements
  - select and configure networking devices.

### Required knowledge

- overview knowledge of RSTP
- detailed knowledge of:
  - debug commands
  - routing between VLANs
  - STP
  - switch calling line identification (CLI) commands
  - VLANs.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• prepare for the installation of an enterprise switch</li> <li>• install, configure and test the network elements to ensure interoperability within the network</li> <li>• apply network topologies, protocols and security issues</li> <li>• apply solutions and troubleshoot defined network problems.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network installation may be conducted</li> <li>• enterprise switches and operating systems</li> <li>• equipment specifications</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation that outlines testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Network</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• internet</li> <li>• large and small local area networks (LAN)</li> <li>• national wide area networks (WAN)</li> <li>• virtual private network (VPN).</li> </ul>
<b>Documentation</b> may include:	<ul style="list-style-type: none"> <li>• equipment inventory</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b>Network elements</b> may include:	<ul style="list-style-type: none"> <li>• adaptors</li> <li>• communications cables and connectors</li> <li>• hubs</li> <li>• routers</li> <li>• servers</li> <li>• switches.</li> </ul>
<b>Requirements</b> may refer to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b>Appropriate person</b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b>Basic switch security</b> may include:	<ul style="list-style-type: none"> <li>• port deactivation</li> <li>• port security</li> </ul>

	<ul style="list-style-type: none"><li>• secure shell (SSH).</li></ul>
<i>Enhanced switching technologies</i> may include:	<ul style="list-style-type: none"><li>• 802.1q</li><li>• per-VLAN spanning tree protocol (PVSTP)</li><li>• RSTP</li><li>• trunking</li><li>• VLAN.</li></ul>
<i>Basic utilities</i> may include:	<ul style="list-style-type: none"><li>• debug commands</li><li>• ipconfig</li><li>• ping</li><li>• secure shell (SSH)</li><li>• Telnet</li><li>• traceroute.</li></ul>
<i>Common switched network issues</i> may include:	<ul style="list-style-type: none"><li>• auto-negotiation</li><li>• configuration issues</li><li>• media issues</li><li>• switch hardware failures</li><li>• VLAN</li><li>• STP and RSTP</li><li>• trunking.</li></ul>

## Unit Sector(s)

Networking

# ICANWK509A Design and implement a security perimeter for ICT networks

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to build a high performance, high security, failure resistant security perimeter for an enterprise information and communications technology (ICT) network.

## Application of the Unit

This unit applies to middle managers, such as information security managers, network engineers, network technicians or security analysts, responsible for implementing and managing the organisational network security.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Plan and design firewall solution	<p>1.1 Determine level and nature of security needed to meet enterprise requirements</p> <p>1.2 Identify security threats</p> <p>1.3 Research available perimeter security options</p> <p>1.4 Design security perimeter to meet identified enterprise requirements</p>
2. Configure perimeter to secure network	<p>2.1 Deploy perimeter devices according to design</p> <p>2.2 Configure <i>perimeter topology</i></p> <p>2.3 Configure <i>basic functionality</i> of <i>devices</i> to allow access</p> <p>2.4 Configure <i>advanced functions</i></p>
3. Plan, design and configure network devices to provide secure fallover and redundancy	<p>3.1 Back up device configuration</p> <p>3.2 Design and configure perimeter to enable continuity of service during upgrade of devices</p> <p>3.3 Design and configure perimeter to enable continuity of service in the event of device failure</p>
4. Plan, design and configure a VPN solution	<p>4.1 Configure perimeter for site to site virtual private networks (VPNs)</p> <p>4.2 Configure perimeter as a remote access VPN server</p> <p>4.3 Configure perimeter to allow <i>VPN tunnel</i> forwarding</p> <p>4.4 Diagnose and resolve VPN connectivity issues</p>
5. Test and verify design performance	<p>5.1 Test functionality of basic features</p> <p>5.2 Test functionality of advanced features</p> <p>5.3 Perform penetration testing to verify perimeter meets security requirements</p> <p>5.4 Monitor perimeter device performance</p> <p>5.5 Monitor security breaches</p> <p>5.6 Document test results and report to appropriate person</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse network information and plan approaches to technical problems or management requirements
- communication skills to:
  - convey and clarify complex information
  - liaise with clients
- literacy skills to interpret and prepare technical documentation, including recording security incidents and developing security policies
- planning skills to plan deployment of the perimeter solution
- problem-solving skills to:
  - design perimeter solution to meet security requirements
  - resolve technical problems
- technical skills to:
  - configure firewalls
  - configure routers
  - deploy perimeter devices to a network
  - test performance of security perimeter to current industry standards.

### Required knowledge

- overview knowledge of:
  - emerging security issues
  - emerging security policies
- detailed knowledge of:
  - auditing and penetration testing techniques
  - capabilities of software and hardware perimeter solutions
  - logging analysis techniques
  - organisational network infrastructure
  - security technologies, according to perimeter design
  - weaknesses of installed perimeter design.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify threats to perimeter security</li> <li>• develop design for a secure perimeter</li> <li>• deploy perimeter to meet security requirements</li> <li>• design and configure advanced features of perimeter devices to provide additional services</li> <li>• design and configure an integrated VPN solution</li> <li>• conduct exhaustive testing of perimeter.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where perimeter security may be implemented and managed</li> <li>• perimeter devices</li> <li>• organisational security requirements</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of emerging security issues, security features of hardware and software, limitations in vendor solutions, operating systems and software</li> <li>• direct observation of candidate demonstrating deployment and configuration of a security perimeter</li> <li>• direct observation of candidate conducting testing of secure perimeter</li> <li>• evaluation of report that outlines testing procedures, test results and changes made as a result of testing</li> <li>• evaluation of design and implementation of system in terms of performance and suitability for business needs.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Perimeter topology</i></b> may include:	<ul style="list-style-type: none"> <li>• 3 legged</li> <li>• back-to-back private</li> <li>• back-to-back public.</li> </ul>
<b><i>Basic functionality</i></b> may include:	<ul style="list-style-type: none"> <li>• access control lists (ACLs)</li> <li>• dynamic host configuration protocol (DHCP)</li> <li>• routing</li> <li>• secure network address translation (NAT).</li> </ul>
<b><i>Devices</i></b> may include:	<ul style="list-style-type: none"> <li>• Cisco PIX</li> <li>• Cisco router ACLs</li> <li>• ClearOS</li> <li>• Linux iptables</li> <li>• Microsoft ISA Firewall</li> <li>• SmoothWall</li> <li>• Untangle.</li> </ul>
<b><i>Advanced functions</i></b> may include:	<ul style="list-style-type: none"> <li>• automated web-client configuration</li> <li>• content filtering</li> <li>• demilitarised zone (DMZ) hosting</li> <li>• firewall policies</li> <li>• forward and reverse caching</li> <li>• load balancing</li> <li>• port forward rules</li> <li>• quality of service (QOS)</li> <li>• server publishing</li> <li>• stateful packet inspection.</li> </ul>
<b><i>VPN tunnel</i></b> may include:	<ul style="list-style-type: none"> <li>• IPSec</li> <li>• layer 2 tunnelling protocol (L2TP)</li> <li>• point-to-point tunnelling protocol (PPTP)</li> <li>• secure socket tunnelling protocol (SSTP).</li> </ul>

## **Unit Sector(s)**

Networking

# ICANWK510A Develop, implement and evaluate system and application security

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop, implement and evaluate information security in an information technology (IT) system or application during the system development life cycle (SDLC) prior to the operations and maintenance phase.

## Application of the Unit

This unit applies to network managers who are required to handle system and application security, from the development phase through implementation to evaluation.

The practice of these protocols ensures that the operation of IT systems and software does not present undue risk to the enterprise and its information assets. This objective is accomplished through risk assessment; risk mitigation; security control selection, implementation and evaluation; and software security standards compliance.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<p><i>Elements describe the essential outcomes of a unit of competency.</i></p>	<p><i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i></p>

## Elements and Performance Criteria

<p>1. Develop system and application security</p>	<p>1.1 Specify enterprise and <i>IT system or application</i> security policies</p> <p>1.2 Specify security requirements for the IT system or application</p> <p>1.3 Author an IT system or application security plan according to the enterprise and IT system or application security policies</p> <p>1.4 Identify standards against which to engineer the IT system or application</p> <p>1.5 Specify criteria for performing risk-based audits against the IT system or application</p> <p>1.6 Develop processes and procedures to mitigate the introduction of <i>vulnerabilities</i> during the engineering process</p> <p>1.7 Integrate applicable information security requirements, controls, processes, and procedures into IT system and application design specifications according to <i>established requirements</i></p>
<p>2. Implement system and application security</p>	<p>2.1 Execute enterprise and IT system or application security policies</p> <p>2.2 Apply and verify compliance with identified standards against which to engineer the IT system or application</p> <p>2.3 Perform processes and procedures to mitigate the introduction of vulnerabilities during the engineering process</p> <p>2.4 Perform secure configuration management practices</p> <p>2.5 Validate that the engineered IT system and application security controls meet the specified requirements</p> <p>2.6 Re-engineer security controls to mitigate vulnerabilities identified during the operations phase</p> <p>2.7 Ensure integration of information security practices throughout the SDLC process</p> <p>2.8 Document IT system or application security controls addressed within the system</p> <p>2.9 Practise secure coding practices</p>
<p>3. Evaluate system and application security</p>	<p>3.1 Review new and existing risk management technologies to achieve an optimal enterprise risk posture</p> <p>3.2 Review new and existing IT security technologies to support secure engineering across the SDLC phases</p> <p>3.3 Continually assess the effectiveness of the</p>

	<p>information-system controls based on risk-management practices and procedures</p> <p>3.4 Assess and evaluate system compliance with corporate policies and architectures</p> <p>3.5 Assess system maturation and readiness for promotion to the production stage</p> <p>3.6 Collect lessons learned from integration of information security into the SDLC and use to identify improvement actions</p> <p>3.7 Collect, analyse and report performance measures</p>
--	---

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to translate requirements from problem space to machine space
- initiative and enterprise skills to write security plans
- literacy skills to write technical documentation
- planning and organisational skills to ensure that the plan is implemented
- problem-solving skills to ensure that security areas are covered
- technical skills to:
  - debug code
  - read and interpret program specifications
  - write code.

### Required knowledge

- range of programming languages, including those used by the organisation
- best practice in application of language syntax rules
- data structures
- graphical user interface (GUI) interfaces
- small-size application development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• author an IT system or application security plan</li> <li>• apply and verify compliance with the identified standards</li> <li>• practise secure coding practices</li> <li>• assess and evaluate system compliance.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• IT business specifications</li> <li>• information on the security environment, including laws and legislation, existing organisational security policies, organisational expertise and knowledge</li> <li>• possible security environment, which also includes the threats to security that are, or are held to be, present in the environment</li> <li>• risk analysis tools and methodologies</li> <li>• IT security assurance specifications</li> <li>• application and system scenarios</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of security issues regarding the system or application and security standards</li> <li>• review of system or application security plan prepared by candidate</li> <li>• review of amended system or security plan after evaluation prepared by candidate</li> <li>• observation of candidate carrying out work to ensure the plan complies with security standards.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>IT system or application</i></b> may include:	<ul style="list-style-type: none"> <li>• applications</li> <li>• collection of programs</li> <li>• integrated suite of programs</li> <li>• operating system and system software</li> <li>• program.</li> </ul>
<b><i>Vulnerabilities</i></b> may include:	<ul style="list-style-type: none"> <li>• buffer overflows</li> <li>• errors in application or system</li> <li>• poor design</li> <li>• trapdoors</li> <li>• undefined or undocumented code</li> <li>• undefined variables</li> <li>• untested code.</li> </ul>
<b><i>Established requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• laws</li> <li>• policies</li> <li>• regulations</li> <li>• standards.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK511A Manage network security

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement and manage security functions throughout a network.

## Application of the Unit

This unit applies to middle managers, such as information security managers, network engineers or security analysts, responsible for implementing and managing the organisational security management system.

They provide technical advice, guidance and leadership in resolution of specified problems and the role may involve responsibility for others. The role also involves leading development of strategic reviews, determining security threats and implementing controls to mitigate risk. Related tasks include network security planning, implementation, cost-analysis and budgeting.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Define a process for designing security	1.1 Define planning phase for <i>network</i> security design 1.2 Define building phase for network security design 1.3 Define managing phase for network security design
2. Identify threats to network security	2.1 Determine why <i>attacks</i> occur 2.2 Determine who the attack may come from 2.3 Analyse common types of network <i>vulnerabilities</i> 2.4 Determine how attacks occur 2.5 Design a threat model to categorise treats
3. Analyse security risks	3.1 Determine elements of risk management 3.2 Determine <i>assets</i> that require protection 3.3 Categorise assets and calculate their value to the organisation 3.4 Create a risk management plan
4. Create a security design	4.1 Determine attacker scenarios and threats 4.2 Design <i>security</i> measures for <i>network components</i> 4.3 Obtain feedback and adjust if required 4.4 Develop security policies
5. Design and implement responses to security incidents	5.1 Design auditing and incident response procedure 5.2 Document security incidents 5.3 Implement configurations aligned with incident response procedure design 5.4 Test and sign off

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse network information
  - plan approaches to technical problems or management requirements
- communication skills to:
  - convey and clarify complex information
  - liaise with clients
- literacy skills to interpret and prepare technical documentation, including recording security incidents and developing security policies
- planning skills to plan control methods for managing system security
- problem-solving skills to:
  - apply solutions in complex networks, including systems processes
  - deploy rapid deployment of solutions to problems involving failure and security incidents
- technical skills to apply best practice to systems security methodologies and technologies.

### Required knowledge

- detailed knowledge of:
  - auditing and penetration testing techniques
  - logging analysis techniques
  - organisational network infrastructure
  - related weaknesses of installed network infrastructure
  - security technologies
- broad knowledge of:
  - capabilities of software and hardware solutions
  - emerging security issues
  - general features of emerging security policies, with depth in security procedures
  - network management and security process controls
- network security implementation risk management plans and procedures.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify threats to security</li> <li>• develop risk management plan</li> <li>• design network security policies</li> <li>• analyse and plan solutions to compromised networks and design incident response</li> <li>• evaluate security information and use it to plan suitable control methods and countermeasures</li> <li>• add network controls, according to system security policies, procedures and risk management plan.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where network security may be implemented and managed</li> <li>• network support tools currently used in industry</li> <li>• organisational security policies, manufacturer recommendations and security standards</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of emerging security issues, security features of hardware and software, limitations in vendor solutions, operating systems and software</li> <li>• direct observation of candidate demonstrating management of network security in a range of complex security situations</li> <li>• review of documentation prepared by candidate to manage network security.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Network</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• internet</li> <li>• local area networks (LANs)</li> <li>• large and small LANs</li> <li>• virtual private networks (VPNs)</li> <li>• wide area networks (WANs)</li> <li>• wireless LANs (WLANs).</li> </ul>
<b>Attacks and vulnerabilities</b> may include:	<ul style="list-style-type: none"> <li>• authorisations</li> <li>• brute force and dictionary attacks</li> <li>• denial of service and by-pass</li> <li>• eavesdropping</li> <li>• hackers</li> <li>• internal threats</li> <li>• intruder detection</li> <li>• manipulation</li> <li>• penetration</li> <li>• social engineering, including impersonation</li> <li>• spoofing</li> <li>• viruses using logging.</li> </ul>
<b>Assets</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• hardware</li> <li>• personal information</li> <li>• product and branding information.</li> </ul>
<b>Security</b> may include:	<ul style="list-style-type: none"> <li>• AAA</li> <li>• authentication process, Kerberos and challenge handshake authentication protocol (CHAP)</li> <li>• Diameter and remote authentication dial-in user service (RADIUS)</li> <li>• folder and file security</li> <li>• IPsec</li> <li>• lightweight extensible authentication protocol (LEAP)</li> <li>• personal knowledge management (PKM)</li> <li>• smart cards</li> <li>• secure socket layer (SSL)</li> </ul>

	<ul style="list-style-type: none"> <li>• tokens</li> <li>• VPN</li> <li>• wired equivalent privacy (WEP)</li> <li>• wi-fi protected access (WPA) or WPA2.</li> </ul>
<p><i>Network components</i> may include:</p>	<ul style="list-style-type: none"> <li>• servers</li> <li>• workstations</li> <li>• accounts</li> <li>• authentication</li> <li>• data</li> <li>• data transmission</li> <li>• network perimeters: <ul style="list-style-type: none"> <li>• part of router configuration or proxy server</li> <li>• products: <ul style="list-style-type: none"> <li>• Cisco Centri, PIX</li> <li>• ClearOS</li> <li>• IPcop</li> <li>• Linux iptables</li> <li>• MS ISA server</li> <li>• SmoothWall</li> <li>• Untangle.</li> </ul> </li> </ul> </li> </ul>

## Unit Sector(s)

## ICANWK513A Manage system security

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement and manage security on an operational system.

### Application of the Unit

This unit applies to middle managers such as information security managers or security analysts, responsible for implementing and managing the organisation's security management system. They provide technical advice, guidance and leadership in resolution of specified problems and the role may involve responsibility for others.

The role also involves leading development of strategic reviews, and determining security threats and implementing controls to mitigate risk. Related tasks include planning and budgeting.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Analyse threats to system	<p>1.1 Evaluate the organisation's <i>system</i> and verify that it meets enterprise guidelines and policies</p> <p>1.2 Conduct risk analysis on system and document outcomes</p> <p>1.3 Evaluate <i>threats</i> to the system and document findings</p> <p>1.4 Compile and document human interactions with system</p>
2. Determine risk category	<p>2.1 Conduct a risk assessment on the system and categorise risks</p> <p>2.2 Conduct a risk assessment on human operations and interactions with the system and categorise risks</p> <p>2.3 Match risk plans to risk categories</p> <p>2.4 Determine and plan resources by risk categories</p>
3. Identify appropriate controls	<p>3.1 Devise and put in place effective controls to manage risk</p> <p>3.2 Design policies and procedures to cover user access of the system</p> <p>3.3 Conduct training in the use of system-related policies and procedures</p> <p>3.4 Monitor high-risk categories at specified periods</p> <p>3.5 Categorise and record system breakdowns</p>
4. Include controls in the system	<p>4.1 Develop <i>security plan</i> and procedures to include in management system</p> <p>4.2 Develop <i>security</i> recovery plan</p> <p>4.3 Implement system controls to reduce risks in human interaction with the system</p>
5. Monitor system tools and procedures	<p>5.1 Review and monitor risks and controls using a management review process</p> <p>5.2 Review risk analysis process based on security benchmarks from vendors, security specialists and organisational reviews</p> <p>5.3 Plan to re-evaluate system and identify new threats and risks</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate system security
- communication skills to communicate clear concepts and solutions to complex issues
- literacy skills to write reports
- planning skills to:
  - develop a security plan
  - develop a security recovery plan
- problem-solving skills to:
  - manage unpredictable problems involving participation in group solutions and analysis
  - resolve issues for a mixed mode environment of people and systems processes
- research skills to identify, analyse and evaluate weaknesses and strengths of security systems
- technical skills to use systems security methodologies and technologies.

### Required knowledge

- broad knowledge of general features of specific security technology
- risk analysis techniques, with broad knowledge of their general features, and depth in security procedures
- details of the client organisation
- systems management and process control in relation to security
- systems technologies, with broad knowledge of their general features and capabilities.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• implement and manage security functions on a system</li> <li>• conduct risk assessment</li> <li>• set up effective controls to manage risk</li> <li>• develop security plan and security recovery plan</li> <li>• monitor risks and controls</li> <li>• review risk-analysis process.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where system security may be implemented and managed</li> <li>• use of utility tools currently used in industry</li> <li>• organisational security policies</li> <li>• manufacturer recommendations</li> <li>• security standards</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of security risks and options available in the operating environment</li> <li>• direct observation of candidate demonstrating management of system security in a range of complex situations</li> <li>• review of documentation prepared by candidate to manage system security.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating system</li> <li>• servers</li> <li>• wireless network access policies using mobile devices.</li> </ul>
<b><i>Threats</i></b> may include:	<ul style="list-style-type: none"> <li>• denial of service and by-pass</li> <li>• eavesdropping</li> <li>• hackers</li> <li>• impersonation</li> <li>• manipulation</li> <li>• penetration</li> <li>• viruses.</li> </ul>
<b><i>Security plan</i></b> may include:	<ul style="list-style-type: none"> <li>• alerts relating directly to the security objectives of the organisation</li> <li>• audits</li> <li>• privacy</li> <li>• standards: <ul style="list-style-type: none"> <li>• archival</li> <li>• backup</li> <li>• network</li> </ul> </li> <li>• theft</li> <li>• viruses.</li> </ul>
<b><i>Security</i></b> may include:	<ul style="list-style-type: none"> <li>• AAA</li> <li>• Diameter</li> <li>• IPSec</li> <li>• LEAP</li> <li>• PKM</li> <li>• smart cards</li> <li>• SSL</li> <li>• tokens</li> <li>• WEP</li> </ul>

	<ul style="list-style-type: none"><li>• WPA.</li></ul>

## ICANWK514A Model preferred system solutions

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to fit a physical model into the design phase of the methodology.

### Application of the Unit

This unit applies to systems designers who are required to model proposed solutions.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Review and confirm information requirements and existing models</p>	<p>1.1 Review information <i>requirements</i> and clarify areas that are not understood</p> <p>1.2 Identify organisational <i>standards</i> for developing models, and check the model development method for consistency with organisational goals</p> <p>1.3 Identify assumptions and incorporate into modelling process</p> <p>1.4 Identify goals and resolve into tasks required to be performed to obtain goals</p> <p>1.5 Define internal tasks needed to perform identified goals</p>
<p>2. Resolve conflicts and inconsistencies</p>	<p>2.1 Identify missed opportunities arising from previous and current model development</p> <p>2.2 Identify bottlenecks, overlooked functionalities and other issues and resolve with <i>client</i> input as required</p>
<p>3. Build and test model</p>	<p>3.1 Develop model based on <i>existing architecture</i></p> <p>3.2 <i>Document</i> details of model, according to agreed project or organisational standards</p> <p>3.3 Develop model according to <i>project</i> deliverables and acceptance criteria within determined timeframe and project <i>constraints</i></p> <p>3.4 Test model against the test plan</p> <p>3.5 Document test data to ensure that test procedures validate performance of the model</p>
<p>4. Ensure that the model represents a workable solution</p>	<p>4.1 Ensure a consensus view of key information technology (IT) <i>stakeholders</i> is represented in model</p> <p>4.2 Ensure model is checked by key IT stakeholders to confirm common knowledge of the model and the proposed <i>solution</i></p> <p>4.3 Submit model to <i>appropriate person</i> for sign-off</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to negotiate and liaise with internal and external personnel on technical and operational matters
- literacy skills to:
  - document details of system model
  - interpret standards
- planning skills to set benchmarks and identify project scope when developing model
- problem-solving skills to resolve conflicts and inconsistencies in systems models
- research skills to specify, analyse and evaluate broad features of a particular business domain and best practice system
- technical skills to:
  - develop the model
  - test model according to test plan.

### Required knowledge

- client business domain, particularly the client organisation structure and business functionality
- current industry-accepted hardware and software products and standards
- modelling techniques and methodologies
- range of development and test tools
- systems development methodologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• use two or more development tools</li> <li>• develop specific areas of a system for further information or to confirm a software or hardware direction</li> <li>• identify opportunities for expansion of the model</li> <li>• test the model to a test plan.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• acceptance criteria</li> <li>• client requirements</li> <li>• future organisational business processes</li> <li>• organisational and process goals</li> <li>• project budget</li> <li>• project deliverables</li> <li>• standards for model development</li> <li>• technical specifications</li> <li>• test plan</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate preparing to develop a system model</li> <li>• verbal or written questioning to assess knowledge of developing and testing a system model</li> <li>• review of candidate's documented test results.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and</p>

	<p>the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Requirements</b> may refer to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<b>Standards</b> may include:	<ul style="list-style-type: none"> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS)</li> <li>• organisational</li> <li>• project</li> <li>• project standards, found on Standards Australia website.</li> </ul>
<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<b>Existing architecture</b> may vary from:	<ul style="list-style-type: none"> <li>• systems based on mainframes to networks of mid-range machines and desktop computers</li> <li>• networks that may be: <ul style="list-style-type: none"> <li>• intranet</li> <li>• local</li> <li>• virtual private network</li> <li>• wide or based on the internet</li> <li>• with vendor products and network protocols.</li> </ul> </li> </ul>
<b>Document</b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• ISO, IEC and AS standards</li> <li>• naming standards</li> <li>• project management templates</li> <li>• report writing principles</li> <li>• version control.</li> </ul>
<b>Project</b> may include:	<ul style="list-style-type: none"> <li>• business improvement process</li> <li>• ebusiness solution involving the total organisation or part of the organisation</li> <li>• systems-only change</li> </ul>

	<ul style="list-style-type: none"> <li>• total organisational change.</li> </ul>
<i>Constraints</i> may include:	<ul style="list-style-type: none"> <li>• budget</li> <li>• hardware</li> <li>• legal</li> <li>• policy</li> <li>• resource</li> <li>• software</li> <li>• time.</li> </ul>
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>
<i>Solution</i> may include:	<ul style="list-style-type: none"> <li>• hardware upgrades</li> <li>• implementing a new system</li> <li>• new hardware</li> <li>• new software</li> <li>• software upgrades</li> <li>• user training.</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

Networking

# ICANWK515A Develop configuration management protocols

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop administrative and technical procedures throughout the life cycle of a system, network, software and documentation project.

## Application of the Unit

This unit applies to individuals working in a variety of information and communications technology (ICT) areas who are required to develop and manage tasks that facilitate the development of a system, such as version control and naming standards.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Establish configuration management requirements</p>	<p>1.1 Establish identification <i>standards</i> for naming and version control of <i>system, network, software</i> and <i>documentation</i> to align with organisational needs</p> <p>1.2 Establish tools and procedures for the required level of integration into the programming, system or network environment</p> <p>1.3 Determine responsibilities for configuration management within the <i>project</i> and for ongoing support, including approval of changes</p> <p>1.4 Determine the appropriate points for configuration of particular items</p>
<p>2. Establish control mechanisms</p>	<p>2.1 Establish methods for identification and recording of change requests in line with <i>organisational guidelines</i></p> <p>2.2 Establish <i>acceptance criteria, test and acceptance processes</i> and processes for approval of change requests in line with organisational guidelines</p> <p>2.3 Establish security, access and management control criteria and <i>quality benchmarks</i></p> <p>2.4 Determine necessary audit trails and alerts for variations or non-conformance</p>
<p>3. Establish monitoring mechanisms</p>	<p>3.1 Establish mechanisms to identify software status throughout the software life cycle, or the status of the system or network during upgrading or reconfiguration</p> <p>3.2 Determine management of records and status reports, including the history of baselines and their links to backups</p> <p>3.3 Define target audiences and determine the level of detail required in the status reports</p> <p>3.4 Integrate configuration management into general project management processes for monitoring and control purposes</p> <p>3.5 Document control and monitoring mechanisms</p>
<p>4. Manage the release of the product to clients</p>	<p>4.1 Determine physical and functional completeness of items prior to release</p> <p>4.2 Determine requirements for formal control of software products and documentation</p> <p>4.3 Determine policies for retention of baseline and master copies in line with safety, security and legislative requirements and organisational guidelines</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - facilitate groups
  - present information and gain consensus on concepts
- literacy skills to:
  - develop administrative procedures for integration
  - identify legislative and organisational requirements
  - identify target groups
  - write technical and business reports
- planning and organisational skills to:
  - determine responsibilities for configuration management
  - determine scope, time, cost, quality, communications and risk management for a project
  - estimate function point analysis and other skills for use across a range of predictable project contexts, either varied or highly specific
  - integrate configuration management into general project management processes for monitoring and control purposes
- problem-solving skills to develop strategic initiatives
- research skills to specify, analyse and evaluate broad features of a particular business domain and best practice in software development methodologies
- technical skills to develop technical procedures.

### Required knowledge

- benchmarking methodologies
- configuration management
- control mechanisms, such as acceptance criteria, test and acceptance processes, and security, access and management control criteria
- monitoring mechanisms
- organisational guidelines
- project planning methodologies and tools
- quality assurance and quality processes
- safety, security and legislative requirements
- software development methodologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop technical and administrative procedures for use during the software life cycle, system or network reconfiguration or the upgrade process, including:             <ul style="list-style-type: none"> <li>• quality processes</li> <li>• audit trails</li> <li>• version control</li> <li>• configuration management procedures.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• CASE tools</li> <li>• future organisational business processes</li> <li>• organisational standards for documentation and version control</li> <li>• project budget and timeframe</li> <li>• project-management process and hierarchy</li> <li>• legislation and organisational guidelines</li> <li>• technical specifications</li> <li>• test plans</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate determining the tools and procedures for integration</li> <li>• verbal or written questioning to assess candidate's knowledge of control and monitoring mechanisms</li> <li>• review of requirements for formal control of software products and documentation determined by candidate</li> <li>• evaluation of candidate's documented control and monitoring mechanisms.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Standards</i></b> may include:	<ul style="list-style-type: none"> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS)</li> <li>• organisational</li> <li>• project.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider (ASP)</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating systems</li> <li>• servers.</li> </ul>
<b><i>Network</i></b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• large and small local area networks (LANs)</li> <li>• private lines</li> <li>• internet</li> <li>• use of the public switched telephone network (PSTN) for dial-up modems only</li> <li>• virtual private networks (VPNs)</li> <li>• voice</li> <li>• wide area networks (WANs).</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial</li> <li>• customised</li> <li>• in-house</li> <li>• packaged.</li> </ul>
<b><i>Documentation</i></b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training and satisfaction reports</li> <li>• ISO, IEC and AS standards</li> <li>• maintaining equipment inventory</li> <li>• naming standards</li> <li>• project-management templates and report writing</li> <li>• version control.</li> </ul>
<b><i>Project</i></b> may include:	<ul style="list-style-type: none"> <li>• business improvement process</li> <li>• ebusiness solution involving the total organisation or part of</li> </ul>

	<p>the organisation</p> <ul style="list-style-type: none"> <li>• systems-only change</li> <li>• total organisational change.</li> </ul>
<b>Organisational guidelines</b> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<b>Acceptance criteria</b> may include:	<ul style="list-style-type: none"> <li>• cost implications</li> <li>• technical and logistical considerations</li> <li>• timeframe.</li> </ul>
<b>Test and acceptance processes</b> may vary according to:	<ul style="list-style-type: none"> <li>• AS4006-1992 Software test documentation</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) that are updated and changed on a regular basis</li> <li>• size and type and scope of the project.</li> </ul>
<b>Quality benchmarks</b> may include:	<ul style="list-style-type: none"> <li>• benchmarks that cover: <ul style="list-style-type: none"> <li>• cost savings</li> <li>• performance</li> <li>• quality</li> <li>• technical matters</li> </ul> </li> <li>• documented standards for addressing quality in quality-certified organisations</li> <li>• international and Australian standards that are updated and changed on a regular basis, including: <ul style="list-style-type: none"> <li>• AS3925.1-1994 Software quality assurance - plans</li> <li>• AS4042-1992 Software configuration management plans</li> <li>• AS4043-1992 Software configuration management</li> <li>• AS/NZS14102:1998 Information technology - guideline for evaluation and selection of computer-aided software engineering (CASE) tools</li> <li>• AS/NZS4258:1994 Software user documentation process</li> <li>• AS/NZS ISO/IEC 12207:1997 Information technology - Software life cycle processes.</li> </ul> </li> </ul>

## **Unit Sector(s)**

Networking

## ICANWK516A Determine best-fit topology for a local network

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to determine the most appropriate way of networking computers to meet user needs and business requirements.

Network topologies include large and small local area networks (LANs), wide area networks (WANs), virtual private networks (VPNs), virtual local area networks (VLANs) and wireless local area networks (WLANs).

### Application of the Unit

This unit applies to individuals in senior roles in the networking area who are required to plan the most appropriate topology for a proposed network.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine user needs	<p>1.1 Identify the different segments of the proposed <b>network</b> based on business <b>requirements</b></p> <p>1.2 Determine segment needs, using network functional analysis</p> <p>1.3 Estimate <b>traffic</b> content and volumes based on business requirements</p> <p>1.4 Develop a prioritised organisational network functional matrix</p>
2. Develop local area network specification	<p>2.1 Determine the resource requirements for each network segment on the basis of functional analysis</p> <p>2.2 Analyse features of the physical environment for the effect on network design</p> <p>2.3 Conduct a costing process for possible topology options</p> <p>2.4 Consider topology options with reference to available resources and network functional matrix</p> <p>2.5 Select and document appropriate network topology based on business requirements and functional analysis</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to determine features of the physical environment for the effect on network design
- literacy skills to produce network recommendations
- numeracy skills to conduct a costing process
- technical skills to:
  - conduct basic traffic analysis
  - connect networks and keep cables tidy
  - use LAN functional matrices
  - use network protocols
  - use traffic simulation tools.

### Required knowledge

- detailed knowledge of:
  - adaptor cards
  - bridges
  - constraints, including costs and queuing
  - ethernet
  - gateways
  - growth projections and capacity planning
  - high and low-speed links
  - hubs
  - protocols
  - redundancy paths
  - response time and reliability requirements
  - routers
  - scope of operation
  - security
  - transmission control protocol or internet protocol (TCP/IP)
  - traffic flow patterns
  - traffic load
  - users applications requirements
- overview knowledge of:
  - cabling, particularly unshielded twisted pair (UTP), shielded twisted pair (STP) or optic fibre
  - characteristics and relative strengths and weaknesses of LAN network topologies
  - features and capabilities of current industry-accepted hardware and software products
  - features of line sharing protocols.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• analyse business or organisational needs</li> <li>• identify the most appropriate LAN, VPN or WLAN topology</li> <li>• document the recommendation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• business requirements</li> <li>• equipment specifications</li> <li>• organisational and industry costing</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of:             <ul style="list-style-type: none"> <li>• network segments</li> <li>• network traffic</li> <li>• different topologies</li> </ul> </li> <li>• review of candidate's network functional matrix</li> <li>• evaluation of candidate's documented topology recommendation.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Network</i></b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• large and small LANs</li> <li>• private lines</li> <li>• public switched telephone network (PSTN) for dial-up modems only</li> <li>• VLANs</li> <li>• VPNs</li> <li>• voice</li> <li>• WANs</li> <li>• WLANs.</li> </ul>
<b><i>Requirements</i></b> may be in reference to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<b><i>Traffic</i></b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• video</li> <li>• voice.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK517A Determine best-fit topology for a wide area network

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify the best way computers and local area networks (LANs) can be connected to make a wide area network (WAN).

## Application of the Unit

This unit applies to individuals in networking areas who are required to research and recommend the most appropriate topology for a wide area network.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify WAN needs	<p>1.1 Identify the different LAN, or wireless local area network (WLAN) or virtual private network (VPN) segments of the proposed WAN</p> <p>1.2 Determine segment needs using functional analysis</p> <p>1.3 Estimate <b>traffic</b> content and volumes according to expected organisational usage, by examining <b>telecommunications infrastructure</b></p> <p>1.4 Develop an organisational WAN functional matrix</p>
2. Create WAN specification	<p>2.1 Determine <b>resource requirements</b> for each LAN or WLAN or VPN segment on the basis of functional analysis</p> <p>2.2 Consider and report how features of the physical environment affect WAN design</p> <p>2.3 Choose a <b>WAN service</b> appropriate to the amount and type of traffic expected to access the WAN</p> <p>2.4 Include redundant links in the proposed WAN connectivity for link backup purposes, in case the main link is disrupted</p> <p>2.5 Document appropriate WAN service</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to identify WAN needs
- literacy skills to compile reports
- numeracy skills to estimate traffic needs and compare costs
- technical skills to use:
  - functional matrices
  - LAN functional matrices
  - network protocols
  - traffic simulation tools.

### Required knowledge

- detailed knowledge of:
  - concepts and types of modems
  - internet protocol (IP) addressing
  - packet switching
  - routed or routable protocols, including IP, IPX and AppleTalk
  - router operations, including DDR
  - routing protocols, including RIP, EIGRP and OSPF
  - transmission control protocols or internet protocols (TCPs/IPs)
  - relationship of asynchronous and synchronous communication
  - use of microwave and satellite communication in networking
- overview knowledge of:
  - constraints and costs
  - features of telecommunications infrastructure, including the difference between digital and analog networks
  - growth projections and capacity planning
  - high or low-speed links
  - protocols
  - redundancy paths
  - response time and reliability requirements
  - scope of operation
  - security
  - traffic flow patterns
  - traffic load
  - users and the applications expected.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• consider budget constraints and business needs</li> <li>• identify the configuration for connecting a LAN or WLAN or VPN into a WAN</li> <li>• document the configuration.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• design documents relating to LANs to be incorporated into the WAN</li> <li>• equipment specifications</li> <li>• costings</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• network segments</li> <li>• telecommunications infrastructure</li> </ul> </li> <li>• review of candidate's WAN functional matrix</li> <li>• evaluation of documented recommendation.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>Traffic</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• video</li> <li>• voice.</li> </ul>
<b>Telecommunications infrastructure</b> may include:	<ul style="list-style-type: none"> <li>• asymmetrical digital subscriber line (ADSL)</li> <li>• high speed digital subscriber line (HDSL)</li> <li>• integrated services digital network (ISDN)</li> <li>• leased lines</li> <li>• switched circuits (permanent virtual circuits (PVCs) and switched virtual circuits (SVCs)</li> <li>• symmetrical digital subscriber line (SDSL)</li> <li>• T-carriers, synchronous optical network (SONET) technologies.</li> </ul>
<b>Resource requirements</b> may include:	<ul style="list-style-type: none"> <li>• average transaction and file transfer size</li> <li>• nature of WAN traffic (i.e. constant, steady, flows or communication in bursts)</li> <li>• number of users</li> <li>• telecommunications links</li> <li>• type of applications using the link.</li> </ul>
<b>WAN service</b> may include:	<ul style="list-style-type: none"> <li>• bandwidth</li> <li>• cost structure</li> <li>• reliability.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK518A Design an enterprise wireless local area network

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to conduct an internal and outdoor site survey and design a complex wireless local area network (LAN).

## Application of the Unit

This unit applies to individuals in the networking area who are required to evaluate client requirements and design an appropriate wireless local area network.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Document current network configuration	<p>1.1 Obtain details of current <i>network</i> layout and parameters</p> <p>1.2 Hold consultations with key stakeholders</p> <p>1.3 Document the current network configuration, <i>network topology</i> and links to carrier</p>
2. Research client needs	<p>2.1 Identify the <i>client's</i> current needs</p> <p>2.2 Determine future needs</p> <p>2.3 <b>Document</b> current and future needs according to <b>organisational requirements</b></p>
3. Implement site survey	<p>3.1 Select the appropriate diagnostic <i>tools</i> and measurement processes</p> <p>3.2 Select test equipment and ensure calibration</p> <p>3.3 Undertake <i>site survey</i> with minimum disruption to client and ensure safe working environment for <i>users</i> and survey personnel</p> <p>3.4 Record physical infrastructure, building use, aesthetics and other issues that will impact on future network performance and client acceptance</p> <p>3.5 Record radio frequency interference issues, sources and possible resolution</p> <p>3.6 Document results of site survey</p>
4. Develop specifications for upgrade of wireless network	<p>4.1 Document the current network performance equipment and capacity for the expanded network</p> <p>4.2 Assess interference issues relating to existing radio frequency, topographic barriers, climate, obstacles, transmission distances and construction materials</p> <p>4.3 Assess optimum location and position of access points, repeaters, routers and other equipment</p> <p>4.4 Develop <i>cabling</i> plans and repeater links, including power requirements</p> <p>4.5 Determine frequency to be used based on client and user requirements</p>
5. Model network	<p>5.1 Determine appropriate test and modelling routines</p> <p>5.2 Determine estimated network traffic and planned growth</p> <p>5.3 Test planned network using modelling tools and techniques</p> <p>5.4 Document outcome of tests and revise design where</p>

	required
6. Determine components for network	<p>6.1 Select and test vendor products and equipment where appropriate</p> <p>6.2 Consult others, including emerging industry bodies, for sustainable compatibility and economic running costs and user connectivity access</p> <p>6.3 Finalise components list for suitability and vendor claims</p> <p>6.4 Prepare <i>implementation plans</i></p>
7. Present design to client	<p>7.1 Present the design in a clear and logical fashion</p> <p>7.2 Provide advice to client on reasons for design choice</p> <p>7.3 Inform the client of design limitations, performance expectations and possible unanticipated outcomes, including <i>security</i> threats</p> <p>7.4 Obtain feedback from client</p> <p>7.5 Undertake modifications to design if required</p> <p>7.6 Complete final design documentation and seek client endorsement</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with stakeholders, users and industry bodies
- literacy skills to write technical documentation and record user requirements
- numeracy skills to undertake a cost-benefit comparison
- technical skills to:
  - analyse wireless network performance
  - design, develop and implement various wireless network solutions
  - implement wireless networking strategies and configure wireless network software and hardware
  - implement WLAN and WMAN
  - produce wireless network designs.

### Required knowledge

- detailed knowledge of:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - bandwidth and quality of service
  - factors affecting signal quality
  - features of antenna design
  - layer 2 and layer 3 design issues
  - radio frequency theory and practice
  - small office home office (SOHO) and enterprise LANs
  - transmission control protocols or internet protocols (TCP/IP) and applications
  - problems associated with topography and obstacles in radio transmission path
  - wireless security strategies
  - wireless topologies
  - WLAN and WMAN solutions
- overview knowledge of:
  - network protocols and operating systems
  - security protocols, standards and data encryption
  - security threats.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• assess wireless network performance</li> <li>• produce wireless network designs appropriate to client requirements</li> <li>• document design.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• network infrastructure, including wireless hardware and software</li> <li>• network technical requirements</li> <li>• real or simulated wireless networks</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• wireless networks</li> <li>• wireless security</li> </ul> </li> <li>• review of candidate's completed design documentation</li> <li>• evaluation of candidate's implementation plan</li> <li>• direct observation of candidate briefing client and obtaining feedback.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.
--	------------

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Networks</b> may include:	<ul style="list-style-type: none"> <li>• domestic</li> <li>• large enterprise WLANs</li> <li>• medium</li> <li>• small.</li> </ul>
<b>Network topology</b> may include:	<ul style="list-style-type: none"> <li>• cabled connected single zone</li> <li>• carrier links</li> <li>• Free Space Optics</li> <li>• indoor and outdoor installations</li> <li>• LMDS</li> <li>• MMDS</li> <li>• multiple zone</li> <li>• satellite connections</li> <li>• stand-alone multi-zone wireless networks.</li> </ul>
<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• communities</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b>Document</b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• maintaining equipment inventory</li> <li>• naming standards</li> <li>• project management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b>Organisational requirements</b> may include:	<ul style="list-style-type: none"> <li>• how and what the organisation wants in regard to work environment</li> <li>• preventative maintenance and diagnostic policy</li> <li>• problem solution processes</li> <li>• roles and technical responsibilities in network management</li> <li>• vendor and product service level support agreements.</li> </ul>

<b>Tools</b> may include:	<ul style="list-style-type: none"> <li>• cable testing</li> <li>• carrier connection tests</li> <li>• data and voice integration measurements</li> <li>• equipment testing</li> <li>• frequency and spectrum analysers</li> <li>• modelling tools for network performance software</li> <li>• power meters</li> <li>• radiation meter.</li> </ul>
<b>Site survey</b> may include:	<ul style="list-style-type: none"> <li>• building plans</li> <li>• GPS measurements</li> <li>• indoor propagation analysis</li> <li>• path loss measurements</li> <li>• physical inspection</li> <li>• satellite mapping.</li> </ul>
<b>Users</b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party.</li> </ul>
<b>Cabling</b> may include:	<ul style="list-style-type: none"> <li>• category 5e, 6 and 7 cable</li> <li>• coaxial cable</li> <li>• fibre optic cable.</li> </ul>
<b>Implementation plans</b> may include:	<ul style="list-style-type: none"> <li>• cabling</li> <li>• construction requirements</li> <li>• cut-over arrangements</li> <li>• service suppliers.</li> </ul>
<b>Security</b> may include:	<ul style="list-style-type: none"> <li>• authentication, authorisation and accounting (AAA)</li> <li>• diameter</li> <li>• IP security (IPSec)</li> <li>• lightweight eXtensible authentication protocol (LEAP)</li> <li>• privacy key management (PKM)</li> <li>• secure sockets layer (SSL)</li> <li>• smart cards</li> <li>• tokens</li> <li>• wi-fi protected access (WPA)</li> <li>• wired equivalent privacy (WEP).</li> </ul>

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Research IT security requirements	<p>1.1 Investigate and assemble statutory, commercial and application <i>security requirements</i></p> <p>1.2 Assess impact on the existing IT system</p> <p>1.3 Identify additional IT security requirements</p> <p>1.4 Document security requirements and forward to <i>appropriate person</i> for approval</p>
2. Conduct risk analysis	<p>2.1 Identify <i>security threats</i> and determine security specifications, taking into account the internal and external business environment</p> <p>2.2 Develop controls and contingencies to alleviate security threats</p> <p>2.3 Identify the costs associated with contingencies</p> <p>2.4 Document and forward recommendations to appropriate person for approval</p>
3. Develop IT security policy and operational procedures	<p>3.1 Review feedback from appropriate person to determine how to manage security threats</p> <p>3.2 Develop <i>security policies</i> based on the <i>security strategy</i></p> <p>3.3 Create and document work procedures based on the security policies</p> <p>3.4 Document operating procedures and forward to appropriate person for approval</p> <p>3.5 Take action to ensure confidentiality of <i>client</i> and <i>user</i> information</p> <p>3.6 Apply statutory requirements to policy and procedures</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse International Organization for Standardization (ISO), International Electrotechnical Commission (IEC), Australian Standards (AS) and other standards to establish and maintain a security framework
  - evaluate and present information across a range of technical and management functions
- communication skills to liaise with clients and users and articulate complex security scenarios in a clear and concise manner
- literacy skills to produce document procedures and recommendations
- numeracy skills to develop a broad plan, budget or strategy
- planning and organisational skills to:
  - contribute to the development of security policies, procedures and frameworks
  - facilitate presentations to groups
- research skills to:
  - identify the range of security risks
  - transfer and collect information.

### Required knowledge

- detailed knowledge of:
  - accurate and in-depth knowledge of the client business domain
  - awareness of legislation relating to IT security
  - current industry-accepted hardware and software products, including broad knowledge of security features and capabilities
  - operating systems, including strengths and weaknesses over lifetime of product
  - sources of risk relating to IT security
- overview knowledge of privacy issues and legislation.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• explain legal obligations with respect to privacy and the specific application of security issues</li> <li>• design a security framework.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• information on the security environment, including:             <ul style="list-style-type: none"> <li>• laws or legislation</li> <li>• existing organisational security policies</li> <li>• organisational expertise</li> </ul> </li> <li>• IT business specifications</li> <li>• IT security assurance specifications</li> <li>• possible security environment, which also includes the threats to security that are, or are held to be, present in the environment</li> <li>• risk analysis tools or methodologies</li> </ul> <p>appropriate learning and assessment support when required</p> <ul style="list-style-type: none"> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• security threats</li> <li>• current industry security trends</li> <li>• current legislation</li> </ul> </li> <li>• review of candidate's documented security policies</li> <li>• evaluation of candidate's documented operating procedures.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level,</p>

	<p>language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Security requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• customs</li> <li>• expertise</li> <li>• knowledge</li> <li>• laws</li> <li>• organisational security policies</li> <li>• security environment, which also includes: <ul style="list-style-type: none"> <li>• authentication</li> <li>• encryption</li> <li>• hardware</li> <li>• passwords</li> <li>• policies</li> <li>• threats to security that are, or are held to be, present in the environment.</li> </ul> </li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b><i>Security threats</i></b> may include:	<ul style="list-style-type: none"> <li>• data tampering and manipulation; impersonation, penetration and by-pass actions</li> <li>• eavesdropping</li> <li>• keyboard logging</li> <li>• local applications or LAN connections</li> <li>• weaknesses in internet networks.</li> </ul>
<b><i>Security policies</i></b> may cover:	<ul style="list-style-type: none"> <li>• theft</li> <li>• viruses</li> <li>• standards, including archival, backup and network</li> <li>• privacy</li> <li>• audits and alerts.</li> </ul>
<b><i>Security strategy</i></b> may include:	<ul style="list-style-type: none"> <li>• authentication</li> <li>• authorisation and integrity</li> <li>• privacy.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employees</li> <li>• external organisations</li> <li>• individuals</li> </ul>

	<ul style="list-style-type: none"><li>• internal departments.</li></ul>
<i>User</i> may include:	<ul style="list-style-type: none"><li>• department within the organisation</li><li>• person within a department</li><li>• third party.</li></ul>

## Unit Sector(s)

Networking

## ICANWK520A Design IT system security controls

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design the security controls that ensure an IT system is secure, both physically and legally. It involves developing the organisational policy and procedures for information security, process security, internet technology security, communications security, wireless security and overall physical security.

### Application of the Unit

This unit applies to individuals in a range of information and communications technology (ICT) areas who are required to guarantee the security of IT systems.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Review organisational security policy and procedures	<p>1.1 Review business environment to identify existing <b>requirements</b></p> <p>1.2 Determine organisational goals for legal and security requirements</p> <p>1.3 Verify security needs in a policy document</p> <p>1.4 Determine legislative impact on business domain</p> <p>1.5 Gather and document objective evidence on current <b>security threats</b></p> <p>1.6 Identify options for using internal and external expertise</p> <p>1.7 Establish and document a standard methodology for performing security tests</p>
2. Develop security plan	<p>2.1 Investigate theoretical attacks and threats on the business</p> <p>2.2 Evaluate risks and threats associated with the investigation</p> <p>2.3 Prioritise assessment results and write <b>security policy</b></p> <p>2.4 Document information related to attacks, threats, risks and controls in a <b>security plan</b></p> <p>2.5 Review the <b>security strategy</b> with security-approved key <b>stakeholders</b></p> <p>2.6 Integrate approved changes into business plan and ensure compliance with statutory requirements</p>
3. Design controls to be incorporated into system	<p>3.1 Implement controls in a procedurally organised manner to ensure minimum risk of security breach in line with <b>organisational guidelines</b></p> <p>3.2 Monitor each phase of the implementation to determine the impact on the business</p> <p>3.3 Take corrective action on system implementation breakdown</p> <p>3.4 Record implementation process</p> <p>3.5 Evaluate corrective actions for risk</p> <p>3.6 Plan <b>risk assessment</b> review process</p> <p>3.7 Take action to ensure confidentiality throughout all phases of design</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to undertake risk assessment of data-gathering techniques
- communication skills to manage group facilitation and presentation related to transferring and collecting information
- literacy skills to produce business reports
- planning and organisational skills to provide accurate and concise insights to possible security threats for all levels of staff, both technical and managerial
- problem-solving skills to identify and remedy evolving and complex security threat scenarios.

### Required knowledge

- detailed knowledge of:
  - communications security, including human organisational interactions
  - how to conduct an information security risk assessment
  - internet technology security, including firewalls
  - physical security
  - security testing methods for performing security tests
  - wireless security
- overview knowledge of:
  - current industry-accepted security processes, including general features and capabilities of software and hardware solutions
  - ethics in IT
  - general features of specific security technology
  - privacy issues and legislation
  - process security for policy and procedures.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• confirm sufficient knowledge of security products and organisational security policy</li> <li>• establish realistic ground rules for security product procedures</li> <li>• design security controls for a system</li> <li>• incorporate these into a security strategy.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• IT security assurance specifications</li> <li>• probability, frequency and severity of direct and indirect harm, loss or misuse of the IT system</li> <li>• risk analysis tools and methodologies</li> <li>• risks to the mission or business resulting from IT-related risks</li> <li>• security environment, which also includes the threats to security that are, or are held to be, present in the environment</li> <li>• security environment relating to laws and legislation, existing organisational security policies and organisational expertise</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of: <ul style="list-style-type: none"> <li>• layered security</li> <li>• risk management</li> <li>• security issues</li> <li>• statutory requirements</li> </ul> </li> <li>• review of documented security, including: <ul style="list-style-type: none"> <li>• policy</li> <li>• plan</li> <li>• strategy.</li> </ul> </li> </ul>
<b>Guidance information</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

<b>for assessment</b>	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
-----------------------	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Requirements</i></b> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<b><i>Security threats</i></b> may include:	<ul style="list-style-type: none"> <li>• by-pass actions</li> <li>• data tampering and manipulation</li> <li>• eavesdropping</li> <li>• impersonation</li> <li>• keyboard logging</li> <li>• local applications or local area network (LAN) connections</li> <li>• penetration</li> <li>• weaknesses in internet networks.</li> </ul>
<b><i>Security policy</i></b> may relate to:	<ul style="list-style-type: none"> <li>• audits and alerts</li> <li>• privacy</li> <li>• standards, including: <ul style="list-style-type: none"> <li>• archival</li> <li>• backup</li> <li>• network</li> </ul> </li> <li>• theft</li> <li>• viruses.</li> </ul>
<b><i>Security plan</i></b> may include:	<ul style="list-style-type: none"> <li>• logical controls</li> <li>• physical controls</li> <li>• social controls.</li> </ul>
<b><i>Security strategy:</i></b>	<ul style="list-style-type: none"> <li>• may include: <ul style="list-style-type: none"> <li>• authentication</li> <li>• authorisation and integrity</li> <li>• privacy</li> </ul> </li> <li>• usually forms part of the overall objectives of the organisation.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• project team</li> <li>• sponsor</li> </ul>

	<ul style="list-style-type: none"> <li>• user.</li> </ul>
<i>Organisational guidelines</i> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• templates</li> <li>• virus risk.</li> </ul>
<i>Risk assessment</i> may include:	<ul style="list-style-type: none"> <li>• developing risk plans</li> <li>• developing scenarios</li> <li>• evaluating threats</li> <li>• following up</li> <li>• gathering information</li> <li>• identifying counter measures</li> <li>• identifying threats</li> <li>• ranking risk</li> <li>• reporting.</li> </ul>

Networking

# ICANWK521A Install, configure and test a payment gateway

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install, configure and test a payment gateway that enables translation of electronic payment information provided online into a form accessible to a merchant processor.

## Application of the Unit

This unit applies to individuals in the network or web development area who are required to build e-commerce facilities into websites.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare server and ebusiness software for payment site	<p>1.1 Analyse client requirements</p> <p>1.2 Evaluate payment <i>software</i> and select appropriate software to meet <i>specifications</i>, including security and privacy benchmarks</p> <p>1.3 Review and compare online merchant options</p> <p>1.4 Choose <i>payment method</i> with reference to business requirements and client expectations</p> <p>1.5 Test payment software and evaluate to ensure suitability and compatibility with current <i>system</i> and to meet <i>client</i> needs</p>
2. Install payment gateway	<p>2.1 Install selected payment software</p> <p>2.2 Establish online merchant account</p> <p>2.3 Configure web pages and back-end <i>solutions</i> to handle requests and integrate with the <i>database</i> for each transaction</p> <p>2.4 Obtain merchant account information from the financial institution</p> <p>2.5 Implement appropriate security systems to protect the payment infrastructure</p> <p>2.6 Configure payment gateway to accept the appropriate payment methods and transaction types according to business requirements</p>
3. Test payment gateway	<p>3.1 Check transaction <i>server</i> for functionality against expected performance benchmarks</p> <p>3.2 Test gateway using transaction types</p> <p>3.3 Verify transactions by using the administrative functions of chosen payment software</p> <p>3.4 Document payment gateway</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse client needs
- literacy skills to document completed work
- numeracy skills to check payment transactions
- planning and organisational skills to complete tasks within costs and timeframe
- technical skills to:
  - configure software on a server
  - script in a variety of languages
  - select and configure a merchant account
  - set up a merchant ID (MID) and a terminal ID (TID).

### Required knowledge

- detailed knowledge of
  - batching verification
  - payment software products
  - processes and techniques associated with implementing client-side shopping carts through active server pages (ASP) and interfacing with databases with ActiveX Data Objects (ADO)
  - public key infrastructure (PKI)
  - relative advantages and disadvantages of credit card, digital cash and online cheque systems
- overview knowledge of:
  - Copyleft and Free Software Foundation
  - copyright and intellectual property
  - electronic commerce modelling language (ECML)
  - encryption options for national and international business
  - globally unique ID (GUID)
  - privacy legislation.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• review client requirements</li> <li>• install, configure and test a payment gateway</li> <li>• document completed payment gateway.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate servers and software</li> <li>• payment software</li> <li>• simulated merchant account</li> <li>• website</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of candidate's payment gateway</li> <li>• review of candidate's payment gateway documentation</li> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• payment gateways</li> <li>• scripting</li> <li>• security required for ecommerce.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial applications</li> <li>• customised</li> <li>• in-house</li> <li>• organisation-specific</li> <li>• packaged.</li> </ul>
<b><i>Specifications</i></b> may include:	<ul style="list-style-type: none"> <li>• current system functionality</li> <li>• metrics</li> <li>• project plan</li> <li>• software requirements</li> <li>• technical requirements</li> <li>• user problem statement.</li> </ul>
<b><i>Payment method</i></b> may include:	<ul style="list-style-type: none"> <li>• local and international transactions</li> <li>• use of credit cards</li> <li>• off-line</li> <li>• online cheques or digital cash</li> <li>• online or a combination of both.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider (ASP)</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating systems</li> <li>• servers.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b><i>Solutions</i></b> may include:	<ul style="list-style-type: none"> <li>• audit requirements</li> <li>• ebusiness or e-commerce solution</li> <li>• changes to network infrastructure</li> <li>• changes to security or privacy provisions</li> <li>• new hardware and hardware upgrades</li> <li>• new software and software upgrades</li> </ul>

	<ul style="list-style-type: none"><li>• inventory management</li><li>• OHS requirements</li><li>• quality requirements</li><li>• user training or implementing a new system.</li></ul>
<i>Database</i> may include:	<ul style="list-style-type: none"><li>• commercial off-the-shelf (COTS) packages</li><li>• object-relational</li><li>• proprietary</li><li>• relational.</li></ul>
<i>Server</i> may include:	<ul style="list-style-type: none"><li>• application or web servers</li><li>• BEA Weblogic servers</li><li>• email servers</li><li>• file and print servers</li><li>• firewall servers</li><li>• FTP servers</li><li>• IBM VisualAge and WebSphere</li><li>• Novell Directory Services (NDS) servers</li><li>• proxy or cache servers.</li></ul>

## Unit Sector(s)

Networking

## ICANWK522A Build decks using wireless markup language

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to create wireless markup language (WML) decks.

### Application of the Unit

This unit applies to individuals in the networking area who are required to use WML to create decks.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Design WML deck	<p>1.1 Analyse existing hypertext markup language (HTML) page design and identify information to be accessible via hand-held device</p> <p>1.2 Design deck logical structure, ensuring that deck size is kept within acceptable boundaries</p> <p>1.3 Determine structure of content based on business needs and user requirements</p> <p>1.4 Identify links between sets of cards</p> <p>1.5 Design cards for user input or for the selection of more than one item</p>
2. Create deck	<p>2.1 <b><i>Code</i></b> each card in the deck, ensuring each card has an ID and a title</p> <p>2.2 Create cards using language and practices compliant with the international <b><i>WML standard</i></b></p> <p>2.3 Use best practice coding standards in creating the deck</p> <p>2.4 Avoid device-specific features in creating the deck</p>
3. Test deck	<p>3.1 Test deck on multiple devices to ensure compatibility with as many hand-held devices as possible</p> <p>3.2 Validate WML files by typing and submitting the uniform resource locator of the WML file or the WML validator</p> <p>3.3 Ensure the &lt;go&gt; and &lt;prev&gt; tasks select the correct card in the deck</p> <p>3.4 Ensure the tested WML files meet the needs of the business <b><i>client</i></b></p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse existing HTML page design
- problem-solving skills to apply solutions to problems related to WML
- technical skills to use:
  - JavaScript
  - WWW, HTML and building web pages
  - XML.

### Required knowledge

- detailed knowledge of:
  - internet standards and transmission control protocols or internet protocols (TCP/IPs)
  - five layer protocol stack of TCP/IP
  - WAP and application communication protocols
  - WML
  - WMLScript
  - WMLScript specification
  - XML 1.0 standard
  - XML applications
- features of wireless:
  - application environment
  - datagram protocol
  - session protocol
  - transaction protocol
  - transport layer security
- overview knowledge of the Australian Computer Society Code of Ethics.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• create WML files that meet the business client's need.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• XML parser</li> <li>• WML valuator</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of candidate's completed deck</li> <li>• direct observation of candidate testing a deck on a hand-held device</li> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• HTML</li> <li>• WML</li> <li>• XML</li> <li>• wireless networks.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>Code</b> card elements may contain:	<ul style="list-style-type: none"> <li>• images</li> <li>• input fields</li> <li>• links</li> <li>• markup language</li> <li>• tasks</li> <li>• text.</li> </ul>
<b>WML standard</b> may include:	<ul style="list-style-type: none"> <li>• WAP architecture specification - WAP-100, Wireless application protocol architecture specification</li> <li>• WAP specification 1.1 or later</li> <li>• WAP specification suite</li> <li>• WAP-120 WAP caching model specification</li> <li>• WAP-174 User agent profiling specification</li> <li>• WAP-175 WAP cache operation specification</li> <li>• WAP-190 Wireless application environment specification</li> <li>• WAP-191 Wireless markup language specification</li> <li>• WAP-192 Binary XML content format specification</li> <li>• WAP-193 WMLScript language specification</li> <li>• WAP-194 WMLScript standard libraries specification.</li> </ul>
<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK524A Install and configure network access storage devices

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to select, install and test a network access storage (NAS) device in a local area network (LAN).

## Application of the Unit

This unit addresses the knowledge, processes and techniques necessary to install, configure and test a NAS device.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine specifications for NAS	<p>1.1 Determine and document the <i>topology</i> of the LAN</p> <p>1.2 Investigate and determine current and future <i>storage requirements</i> according to current and future business requirements</p> <p>1.3 Determine the number and type of <i>NAS</i> devices required, and refer to current and future network requirements</p> <p>1.4 Determine the requirements for network management, backup, security and redundancy, according to organisational policy</p>
2. Select appropriate hardware and software	<p>2.1 Select the hardware and <i>operating system</i> software version with the appropriate features according to required specifications</p> <p>2.2 Choose storage <i>applications</i> to determine access and response times</p>
3. Install hardware and software	<p>3.1 Install required level of RAID hardware or software</p> <p>3.2 Install <i>hard disks</i> as specified by manufacturer instructions</p> <p>3.3 Install operating system software according to manufacturer instructions</p> <p>3.4 Connect to network media using <i>media</i> that meets required <i>standard</i></p> <p>3.5 Connect power, power it up and check operation</p>
4. Configure NAS	<p>4.1 Configure a <i>network address</i> and <i>hostname</i></p> <p>4.2 Establish and test a valid network connection with other LAN devices</p> <p>4.3 Configure hard disks according to RAID requirements and format with appropriate file system</p> <p>4.4 Configure access and security according to application and organisational requirements</p>
5. Test and troubleshoot NAS	<p>5.1 Test NAS according to manufacturer requirements and organisational guidelines</p> <p>5.2 Ensure access and response times are acceptable to required applications, users and organisational policy</p> <p>5.3 Make adjustments to the configuration, depending on test and troubleshooting results</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- literacy skills to:
  - conduct and document a wireless survey
  - develop a cut sheet or cabling map
  - document installed networks with appropriate labelling of cable terminations
- technical skills to:
  - attach a network device to the LAN
  - configure a workstation or server within a network environment
  - implement and configure networks
  - install and configure operating system
  - install hard disk drives
  - open, edit and save word-processing documents
- research skills to gather information to determine NAS requirements.

### Required knowledge

- overview knowledge of:
  - advantages and disadvantages of NAS versus direct attached storage (DAS) devices
  - Australian Computer Society Code of Ethics
  - common hard drive types and connectors
  - common network cable types and connectors
  - common network topologies
  - implementation and configuration of networks
  - RAID configurations.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• install NAS device without interruption to other LAN services</li> <li>• configure LAN services accessing the NAS to allow user-less intervention for normal operation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• NAS device or basic components to build a NAS, such as personal computer, operating system, hard disk, and network connection</li> <li>• network devices, such as switches and routers</li> <li>• workstations and servers</li> <li>• cabling access points and wireless access point</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of setup of NAS device</li> <li>• evaluation of NAS systems and vendor products</li> <li>• completion of a design of NAS setup for a network storage problem</li> <li>• analysis of NAS performance in different usage situations.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Topology</i></b> may include:	<ul style="list-style-type: none"> <li>• bus</li> <li>• hierarchical</li> <li>• hybrid</li> <li>• ring</li> <li>• star.</li> </ul>
<b><i>Storage requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• amount of data to be stored</li> <li>• minimum free space required</li> <li>• temporary storage space</li> <li>• type of data to be stored:             <ul style="list-style-type: none"> <li>• bit torrents</li> <li>• databases</li> <li>• streaming media</li> <li>• user data files</li> <li>• websites.</li> </ul> </li> </ul>
<b><i>NAS</i></b> may be:	<ul style="list-style-type: none"> <li>• built from basic components</li> <li>• produced by vendors:             <ul style="list-style-type: none"> <li>• Buffalo</li> <li>• Connex</li> <li>• D-Link</li> <li>• Hewlett-Packard</li> <li>• LinkSys</li> <li>• NetGear</li> <li>• Network Appliance</li> <li>• Reldata</li> <li>• Seagate</li> <li>• Synology</li> <li>• Western Digital.</li> </ul> </li> </ul>
<b><i>Operating system</i></b> may include:	<ul style="list-style-type: none"> <li>• Citrix</li> <li>• HP-UX</li> <li>• IBM AIX</li> <li>• Linux variants:             <ul style="list-style-type: none"> <li>• ClarkConnect</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• Fedora</li> <li>• FreeNas</li> <li>• Naslite</li> <li>• OpenFiler</li> <li>• Red Hat</li> <li>• SME Server</li> <li>• Ubuntu</li> <li>• Mac</li> <li>• Microsoft Windows (client and server versions)</li> <li>• Novell SUSE Linux</li> <li>• Sun Solaris.</li> </ul>
<b>Applications</b> may include:	<ul style="list-style-type: none"> <li>• deployment servers</li> <li>• domain controllers</li> <li>• file servers</li> <li>• gaming server</li> <li>• media server</li> <li>• print servers</li> <li>• structured query language (SQL) server</li> <li>• user workstations</li> <li>• web server.</li> </ul>
<b>Hard disks</b> may include:	<ul style="list-style-type: none"> <li>• Firewire</li> <li>• parallel advanced technology attachment (PATA): <ul style="list-style-type: none"> <li>• EIDE</li> <li>• IDE</li> </ul> </li> <li>• serial advanced technology attachment (SATA)</li> <li>• eSATA</li> <li>• SAS</li> <li>• SCSI (multiple variations).</li> </ul>
<b>Media</b> may include:	<ul style="list-style-type: none"> <li>• fibre optic</li> <li>• STP</li> <li>• UTP</li> <li>• wireless: <ul style="list-style-type: none"> <li>• infra-red</li> <li>• radio</li> <li>• satellite.</li> </ul> </li> </ul>
<b>Standard</b> may include:	<ul style="list-style-type: none"> <li>• Cat5, 5e, 6 and 7</li> <li>• EIA/TIA 568A</li> <li>• EIA/TIA 568B</li> <li>• FDDI</li> <li>• IEEE 802.11 (a, b, g or n)</li> </ul>

	<ul style="list-style-type: none"><li>• RJ45.</li></ul>
<i>Network address</i> may include:	<ul style="list-style-type: none"><li>• IPX or SPX address</li><li>• transmission control protocol or internet protocol (TCP/IP) address.</li></ul>
<i>Hostname</i> may include:	<ul style="list-style-type: none"><li>• computer name</li><li>• DNS name</li><li>• NetBeui name.</li></ul>

## Unit Sector(s)

Networking

# ICANWK525A Configure an enterprise virtual computing environment

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop and implement virtualisation technologies with the goal of providing a more sustainable information and communications technology (ICT) environment.

## Application of the Unit

This unit applies to senior networking staff responsible for increasing the sustainability of an organisation by using virtualisation technologies.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Configure and manage virtual environment	<p>1.1 Install and configure virtualisation client and server <b><i>management software</i></b>, according to organisational requirements</p> <p>1.2 Install, configure and manage <b><i>environmental requirements</i></b> to ensure virtual machines function according to <b><i>organisational requirements</i></b></p> <p>1.3 Configure and manage virtual machines using <b><i>remote client management software</i></b> according to organisational requirements</p>
2. Design, configure and manage virtual networks	<p>2.1 Install and configure <b><i>virtual networks</i></b> according to organisational requirements</p> <p>2.2 Verify <b><i>functionality</i></b> of virtualisation network according to organisational requirements</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - convey and clarify information
  - liaise with clients
- initiative and enterprise skills to proactively minimise, control or eliminate hazards that may exist during work activities
- literacy skills to:
  - develop and document virtualisation configurations and processes
  - record researched information
- planning skills to plan methods for integrating and maintaining a virtualised machine environment
- problem-solving skills to:
  - apply solutions in networks, including virtualised machine environments
  - deploy rapid deployment of solutions to problems involving virtualised machine environment
  - technical skills to apply current best practice to implementing sustainability options through virtualisation methodologies and technologies.

### Required knowledge

- overview knowledge of:
  - current government and industry policies and guidelines related to developing sustainable ICT environments
  - current technologies and processes designed to produce a sustainable ICT environment
- available tools and software applications required to manage virtual machines
- configuration of software applications required to manage virtual machines
- configuration required to integrate virtual machines into existing network design
- structure, function and business organisation of client.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• install, configure and test virtual machines</li> <li>• manage environmental requirements</li> <li>• install and use software tools.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where virtual machine environments may be implemented</li> <li>• network technical requirements</li> <li>• software</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of emerging policies related to:             <ul style="list-style-type: none"> <li>• current recommendations on sustainability options in ICT design</li> <li>• benefits of virtualisation</li> <li>• installation and configuration of virtualisation software</li> <li>• installation and configuration of virtual machines</li> <li>• configuration of virtual machines into network design</li> </ul> </li> <li>• direct observation of candidate demonstrating:             <ul style="list-style-type: none"> <li>• installation and configuration of virtualisation software</li> <li>• installation and configuration of virtual machines</li> <li>• configuration of virtual machines into network design</li> </ul> </li> <li>• review of documentation prepared by candidate to:             <ul style="list-style-type: none"> <li>• record the configuration of virtual machines</li> <li>• record the process of configuration of virtual machines.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Management software</b> may include:</p>	<ul style="list-style-type: none"> <li>• Citrix Essentials for Hyper-V</li> <li>• Citrix XenServer Management Console</li> <li>• Microsoft Hyper-V</li> <li>• Microsoft Systems Center Virtual Machine Manager</li> <li>• Parallels H-Sphere</li> <li>• VMware Infrastructure Client</li> <li>• VMware vCenter Lab Manager</li> <li>• VMware vSphere Client</li> <li>• vSphere client and host update utility.</li> </ul>
<p><b>Environmental requirements</b> may include:</p>	<ul style="list-style-type: none"> <li>• available memory (RAM)</li> <li>• available storage (hard disks)</li> <li>• central processing unit (CPU) loads</li> <li>• physical environmental factors, such as ventilation and cooling</li> <li>• power requirements.</li> </ul>
<p><b>Organisational requirements</b> may include:</p>	<ul style="list-style-type: none"> <li>• preventative maintenance and diagnostic policy</li> <li>• problem solution processes</li> <li>• roles and technical responsibilities in network management</li> <li>• vendor and product service level support agreements</li> <li>• work environment.</li> </ul>
<p><b>Remote client management software</b> may include:</p>	<ul style="list-style-type: none"> <li>• Microsoft Hyper-V</li> <li>• Microsoft Systems Center Virtual Machine Manager</li> <li>• VMware Infrastructure Client</li> <li>• VMware vCenter Lab Manager</li> <li>• VMware vSphere Client.</li> </ul>
<p><b>Virtual networks</b> may include:</p>	<ul style="list-style-type: none"> <li>• bridged networks</li> <li>• host only networks</li> <li>• private virtual local area network (VLANs)</li> <li>• those using network address translation (NAT).</li> </ul>
<p><b>Functionality</b> may include:</p>	<ul style="list-style-type: none"> <li>• connectivity to a physical network</li> <li>• connectivity to a specific VLAN on a physical network</li> <li>• connectivity within a local host-only network</li> <li>• local area network (LAN) and wide area network (WAN) connectivity.</li> </ul>

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Analyse client needs	1.1 Assess <i>client</i> requirements 1.2 Assess existing client or server <i>systems</i> that may be suitable to be virtualised
2. Analyse virtualisation host software	2.1 Assess and compare suitable virtualisation <i>host software</i> according to organisational requirements 2.2 Document recommendations and provide to <i>appropriate person</i>
3. Evaluate system requirements	3.1 Obtain and document technical specifications and <i>system requirements</i> from <i>virtualisation-software vendors</i> 3.2 Compare the system requirements needed to implement virtualisation according to <i>organisational requirements</i> 3.3 Document recommendations and provide to appropriate person
4. Install virtualisation host software	4.1 Install virtualisation host platform according to organisational requirements 4.2 Validate <i>functionality</i> of the virtualisation host platform according to organisational requirements

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - liaise with clients
  - convey and clarify information
- initiative and enterprise skills to proactively minimise, control or eliminate hazards that may exist during work activities
- literacy skills to:
  - record researched information
  - develop and document virtualisation configurations and processes
- planning skills to plan methods for integrating and maintaining a virtualised machine environment
- problem-solving skills to:
  - apply solutions in networks, including virtualised machine environments
  - deploy rapid solutions to problems involving virtualised machine environment
- technical skills to apply current best practice to implementing sustainability options through virtualisation methodologies and technologies.

### Required knowledge

- overview knowledge of:
  - current government and industry policies and guidelines related to developing sustainable ICT environments
  - current technologies and processes designed to produce a sustainable ICT environment
- structure, function and business organisation of client
- available tools and software applications required to manage virtual machines
- configuration of software applications required to manage virtual machines
- configuration required to integrate virtual machines into existing network design.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>analyse, evaluate, recommend and install an enterprise virtual computing environment.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>site or prototype where virtual machine environments may be implemented</li> <li>network technical requirements</li> <li>software</li> <li>appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>current recommendations on sustainability options in ICT design</li> <li>benefits of virtualisation</li> <li>installation and configuration of virtualisation software</li> <li>installation and configuration of virtual machines</li> <li>configuration of virtual machines into network design</li> </ul> </li> <li>direct observation of candidate demonstrating: <ul style="list-style-type: none"> <li>installation and configuration of virtualisation software</li> <li>installation and configuration of virtual machines</li> <li>configuration of virtual machines into network design</li> </ul> </li> <li>review of documentation prepared by candidate to: <ul style="list-style-type: none"> <li>record research of current recommendations on sustainability options in ICT design and the benefits of virtualisation.</li> </ul> </li> </ul>
<b>Guidance information</b>	Holistic assessment with other units relevant to the industry

<b>for assessment</b>	<p>sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
-----------------------	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisation</li> <li>• individual</li> <li>• internal department</li> <li>• internal employee.</li> </ul>
<b><i>Systems</i></b> may include:	<ul style="list-style-type: none"> <li>• servers</li> <li>• thin client terminals</li> <li>• workstations.</li> </ul>
<b><i>Host software</i></b> may include:	<ul style="list-style-type: none"> <li>• Citrix XenServer</li> <li>• KVM</li> <li>• Microsoft Hyper-V Server</li> <li>• Microsoft Virtual PC</li> <li>• Microsoft Virtual Server</li> <li>• Oracle VM VirtualBox</li> <li>• parallels desktop for Mac</li> <li>• parallels server for Mac</li> <li>• VMware ESX Server</li> <li>• VMware ESXi Server</li> <li>• VMware Player</li> <li>• VMware Server</li> <li>• VMware vSphere</li> <li>• VMware Workstation</li> <li>• Windows Virtual PC.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b><i>System requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• hard disk capacity and speed</li> <li>• minimum random access memory (RAM)</li> <li>• motherboard architecture</li> <li>• number of cores in central processing unit (CPU)</li> <li>• number of network interface cards</li> <li>• number of physical CPUs</li> <li>• speed of CPU</li> <li>• storage and hard disk interface requirements:</li> </ul>

	<ul style="list-style-type: none"> <li>• internet small computer systems interface (ISCSI)</li> <li>• redundant array of inexpensive or independent disks (RAID)</li> <li>• statistical analysis system (SAS)</li> <li>• small computer system interface (SCSI)</li> <li>• serial advanced technology attachment (SATA)</li> <li>• virtualisation technology at the central processing unit level (VT(x)) support.</li> </ul>
<b>Virtualisation software vendors</b> may include:	<ul style="list-style-type: none"> <li>• Citrix</li> <li>• KVM</li> <li>• Microsoft</li> <li>• Oracle</li> <li>• Parallels</li> <li>• VMware.</li> </ul>
<b>Organisational requirements</b> may include:	<ul style="list-style-type: none"> <li>• how and what the organisation wants regarding the work environment</li> <li>• preventative maintenance and diagnostic policy</li> <li>• problem-solving processes</li> <li>• roles and technical responsibilities in network management</li> <li>• vendor and product service level support agreements.</li> </ul>
<b>Functionality</b> may include:	<ul style="list-style-type: none"> <li>• availability of services</li> <li>• virtualised services performing the same as a service running on physical hardware.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK527A Manage an enterprise virtual computing environment

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage virtualisation technologies with the goal of providing a more sustainable information and communications technology (ICT) environment.

## Application of the Unit

This unit applies to senior networking staff responsible for managing virtualisation technologies.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Manage resources	<p>1.1 Monitor and adjust <b>resources</b> to ensure virtual environment performance functions according to <b>organisational requirements</b></p> <p>1.2 Verify <b>functionality</b> of virtual environment according to organisational requirements</p>
2. Manage virtual machines	<p>2.1 Use <b>migration tools</b> to convert a <b>physical machine</b> to a virtual machine, according to organisational requirements</p> <p>2.2 Create and deploy a virtual machine using <b>installation media</b> according to organisational requirements</p> <p>2.3 Create and deploy a virtual machine using automated templates according to organisational requirements</p> <p>2.4 Use virtual machine <b>snapshots</b> to reverse or implement changes to a virtual machine according to organisational requirements</p>
3. Ensure high availability	<p>3.1 Configure virtual machine environment to ensure <b>high availability</b> according to organisational requirements</p> <p>3.2 Back up and recover a virtual machine according to organisational requirements</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - convey and clarify information
  - liaise with clients
- literacy skills to:
  - document virtualisation configurations and processes
  - record researched information
- planning skills to plan methods for maintaining a virtualised machine environment
- problem-solving skills to:
  - apply solutions in networks, including virtualised machine environments
  - deploy rapid deployment of solutions to problems involving virtualised machine environment
  - proactively minimise, control or eliminate hazards that may exist during work activities
- technical skills to apply current best practice to managing virtualisation methodologies and technologies.

### Required knowledge

- in-depth knowledge of:
  - current government and industry policies and guidelines in relation to developing sustainable ICT environments
  - current technologies and processes designed to produce a sustainable ICT environment
  - structure, function and business organisation of client
- application and deployment of virtual machine management tools
- virtual machine configuration and integration options.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• monitor and provide resources to virtual environment</li> <li>• create and deploy virtual machines</li> <li>• implement changes to virtual machines</li> <li>• back up and recover a virtual machine.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where virtual machine environments may be implemented</li> <li>• network technical requirements</li> <li>• appropriate software</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of emerging policies related to: <ul style="list-style-type: none"> <li>• current recommendations on sustainability options in ICT design</li> <li>• benefits of virtualisation</li> <li>• installation and configuration of virtualisation software</li> <li>• installation and configuration of virtual machines</li> <li>• configuration of virtual machines into network design</li> </ul> </li> <li>• direct observation of candidate demonstrating: <ul style="list-style-type: none"> <li>• installation and configuration of virtualisation software</li> <li>• installation and configuration of virtual machines</li> <li>• configuration of virtual machines into network design</li> </ul> </li> <li>• review of documentation prepared by candidate to: <ul style="list-style-type: none"> <li>• record the process of installing and configuring virtual machines</li> <li>• document the system.</li> </ul> </li> </ul>
<b>Guidance information</b>	Holistic assessment with other units relevant to the industry

<b>for assessment</b>	<p>sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
-----------------------	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Resources</b> may include availability of:	<ul style="list-style-type: none"> <li>• central processing unit (CPU) cores</li> <li>• CPU speed</li> <li>• hard disk space (storage)</li> <li>• memory (RAM)</li> <li>• network bandwidth</li> <li>• physical CPUs</li> <li>• CPU load to be shared.</li> </ul>
<b>Organisational requirements</b> may include:	<ul style="list-style-type: none"> <li>• how and what the organisation wants regarding work environment</li> <li>• preventative maintenance and diagnostic policy</li> <li>• problem-solving processes</li> <li>• roles and technical responsibilities in network management</li> <li>• vendor and product service level support agreements.</li> </ul>
<b>Functionality</b> may include:	<ul style="list-style-type: none"> <li>• availability of services on a virtual machine</li> <li>• virtualised services performing the same as a service running on physical machine.</li> </ul>
<b>Migration tools</b> may include:	<ul style="list-style-type: none"> <li>• AutoVirt AutoMove</li> <li>• Leostream</li> <li>• Microsoft System Center Virtual Machine Manager (SCVMM)</li> <li>• Microsoft Virtual Server 2005 Migration Toolkit</li> <li>• PlateSpin Migrate</li> <li>• Virtuozzo</li> <li>• Vizioncore vConverter</li> <li>• VMware Converter</li> <li>• VMware P2V Converter</li> <li>• VMware vCenter Converter.</li> </ul>
<b>Physical machine</b> may include:	<ul style="list-style-type: none"> <li>• laptop or notebook</li> <li>• server</li> <li>• workstation.</li> </ul>
<b>Installation media</b> may include:	<ul style="list-style-type: none"> <li>• blu-ray disk</li> <li>• CD</li> <li>• DVD</li> <li>• floppy disk</li> </ul>

	<ul style="list-style-type: none"><li>• ISO image</li><li>• network share</li><li>• universal serial bus (USB) flash drive.</li></ul>
<i>Snapshots</i> may include:	<ul style="list-style-type: none"><li>• stored virtual machine configuration to allow:<ul style="list-style-type: none"><li>• the rollback of changes to a virtual machine</li><li>• the implementation of instant changes to a virtual machine.</li></ul></li></ul>
<i>High availability</i> may relate to use of:	<ul style="list-style-type: none"><li>• clustered virtual machines performing an identical task</li><li>• load balancing between virtual machines to ensure service requirements are being met</li><li>• pre-configured virtual machines that can be rapidly stored and deployed in the event of a system failure</li><li>• standby power solutions in the event of a power disruption.</li></ul>

## Unit Sector(s)

Networking

## ICANWK529A Install and manage complex ICT networks

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install and manage enterprise-wide information and communications technology (ICT) networks.

### Application of the Unit

This unit applies to information technology (IT) professionals who work in the complex computing environment of medium-sized to large companies to provide network services and resources.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Plan and design a complex network to meet business requirements	<p>1.1 Review network design, business requirements and latest vendor technical specifications for <i>network components</i></p> <p>1.2 Research options available for providing the network functionality required</p> <p>1.3 Plan network implementation to provide <i>network services</i> and <i>resources</i> to meet business requirements</p>
2. Design and implement a security strategy	<p>2.1 Analyse requirements for internal and external security</p> <p>2.2 Design <i>security strategy</i> to meet requirements</p> <p>2.3 Implement security strategy</p> <p>2.4 Undertake ongoing monitoring of the viability and reliability of network security, through testing and use of technical <i>tools</i></p> <p>2.5 Continually monitor internal and external network access for security breaches</p>
3. Install and configure a complex network to meet business requirements	<p>3.1 Check and install cabling and associated components according to industry standards</p> <p>3.2 Install and configure servers, routers, switches or other devices to provide internet protocol (IP) addressing and routing</p> <p>3.3 Install and configure servers, routers, switches or other devices to provide name resolution</p> <p>3.4 Install and configure servers, routers, switches or other devices to provide network services</p> <p>3.5 Install and configure remote access services</p> <p>3.6 Install and configure devices to provide <i>data management services</i></p>
4. Provide integrated network services across a complex network	<p>4.1 <i>Integrate multiple network services</i> across network</p> <p>4.2 Analyse and resolve interoperability issues</p> <p>4.3 Optimise performance</p> <p>4.4 Rectify security conflicts arising from integrating services</p>
5. Plan, design and implement voice and video business communications system	<p>5.1 Install software and configure and test voice over internet protocol (VoIP) and videoconferencing services</p> <p>5.2 Incorporate the use of a communications server to provide real-time multimedia communications</p> <p>5.3 Select common voice and videoconferencing codecs according to standards and practices</p>
6. Manage and support a	6.1 Identify and evaluate appropriate network management tools

complex network	<p>to assist in the administration of the complex network</p> <p>6.2 Select and install network management tools according to industry and organisational standards</p> <p>6.3 Set and monitor alerts and logs</p> <p>6.4 Capture and analyse network performance data</p> <p>6.5 Implement automated server updates</p> <p>6.6 Implement desktop management policies</p> <p>6.7 Implement automated virus checking</p> <p>6.8 Use remote management tools</p>
7. Test network functionality and obtain sign-off	<p>7.1 Test network functionality and record results</p> <p>7.2 Record results of network functionality test</p> <p>7.3 Complete network documentation according to organisational standards</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to use complex technical data to develop network designs
- communication skills to consult with customers
- literacy skills to:
  - interpret technical documentation
  - write reports
- numeracy skills to:
  - take test measurements
  - interpret results
  - evaluate performance and interoperability of network services
- problem-solving skills to solve a range of predictable network problems
- research skills to identify, analyse and evaluate broad features of a particular business domain and best practice in networking technologies, including hardware and software to be installed
- technical skills to:
  - implement dynamic name system (DNS), IP addressing and secure virtual private network (VPN) tunnels
  - install and configure application software to provide specific services
  - install, configure and secure server operating systems
  - install, configure and secure switches and routers
  - integrate multiple network services without conflict
  - set up and use network monitoring and management tools
  - test network functionality.

### Required knowledge

- firewall configuration
- IP addressing and network configuration
- network:
  - infrastructure
  - load-balancing for applications
  - security
  - server operating systems
  - service configuration, including:
    - DNS
    - dynamic host configuration protocol (DHCP)
    - file transfer protocol (FTP)
    - mail
    - network time protocol (NTP)
    - proxy
    - server messages block (SMB)

- web
- service management
- troubleshooting tools and techniques, including network diagnostic utilities
- user authentication and directory services
- VoIP
- VPN.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design and implement a complex network that involves integrating multiple network services to meet business requirements</li> <li>• design and implement an appropriate security strategy for a complex network</li> <li>• monitor and test the performance of aspects of the solution</li> <li>• provide ongoing management and support of the network.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• network design and business requirements documents</li> <li>• a complex network or hardware and software required to build a network involving multiple servers, multiple physical locations (or simulation of) and a combination of network services</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of report that outlines design process undertaken, including challenges faced and how these were addressed</li> <li>• direct observation of the candidate installing and configuring components of a complex network</li> <li>• technical documentation detailing configuration of the complete network</li> <li>• verbal or written questioning of candidate to assess required skills and knowledge</li> <li>• evaluation of report that outlines testing procedures, test results and changes made as a result of testing</li> <li>• evaluation of system designed and implemented in terms of performance and suitability for business needs.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Network components</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• cables</li> <li>• digital subscriber line (DSL) modems</li> <li>• local area network (LAN)</li> <li>• modems</li> <li>• routers</li> <li>• servers</li> <li>• switches</li> <li>• WAN</li> <li>• wireless access point.</li> </ul>
<p><b><i>Network services</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• database service</li> <li>• DHCP</li> <li>• DNS</li> <li>• FTP</li> <li>• firewall</li> <li>• hypertext transfer protocol (HTTP, HTTPS)</li> <li>• internet message access protocol (IMAP)</li> <li>• network file system (NFS)</li> <li>• NTP</li> <li>• post office protocol (POP)</li> <li>• print services</li> <li>• proxy</li> <li>• SMB</li> <li>• simple mail transfer protocol (SMTP)</li> <li>• simple network management protocol (SNMP)</li> <li>• transmission control protocol or internet protocol (TCP/IP).</li> </ul>
<p><b><i>Network resources</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• backup and data security</li> <li>• business applications</li> <li>• collaboration tools</li> <li>• conferencing</li> <li>• data storage</li> <li>• databases</li> <li>• email</li> <li>• internet services</li> <li>• printers, faxes and scanners</li> </ul>

	<ul style="list-style-type: none"> <li>• streaming video</li> <li>• VoIP.</li> </ul>
<i>Security strategy</i> may include:	<ul style="list-style-type: none"> <li>• automated updates: <ul style="list-style-type: none"> <li>• Red Hat Network (RHN)</li> <li>• Windows Server Update Services (WSUS)</li> </ul> </li> <li>• encryption</li> <li>• Firewall - demilitarised zone (DMZ)</li> <li>• proxy</li> <li>• public key infrastructure (PKI) and secure socket layer (SSL) certificates</li> <li>• secure remote access</li> <li>• server hardening</li> <li>• smart cards</li> <li>• tokens</li> <li>• user authentication</li> <li>• virus checking</li> <li>• VPN.</li> </ul>
<i>Tools</i> may include:	<ul style="list-style-type: none"> <li>• cable testing</li> <li>• carrier connection tests</li> <li>• data and voice integration measurements</li> <li>• equipment testing</li> <li>• frequency analysers</li> <li>• network performance software</li> <li>• packet tracers</li> <li>• policing and shaping tools.</li> </ul>
<i>Data management services</i> may include:	<ul style="list-style-type: none"> <li>• backup and recovery</li> <li>• disk quotas</li> <li>• distributed file systems</li> <li>• indexing</li> <li>• online and offline storage</li> <li>• storage area networks (SANs).</li> </ul>
<i>Integrate multiple network services</i> may include:	<ul style="list-style-type: none"> <li>• Kerberos</li> <li>• lightweight directory access protocol (LDAP)</li> <li>• Samba</li> <li>• seamless access to Linux and Windows hosted data and services</li> <li>• single login to gain access to multiple services (federated authentication)</li> <li>• VoIP over VPN.</li> </ul>

## **Unit Sector(s)**

Networking

# ICANWK531A Configure an internet gateway

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to connect network hardware devices, mainly personal computers (PCs), to an internet gateway.

## Application of the Unit

This unit applies to middle managers, such as network engineers, technical specialists or security analysts, who are responsible for implementing and managing the connection of network hardware devices to an internet gateway.

They provide technical advice, guidance and leadership in the resolution of specified problems.

The role involves managing the installation, configuration and testing of gateway products and related hardware and software, as well as determining security threats. Related tasks include network planning, implementation and budgeting.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Confirm client requirements and network equipment	1.1 Confirm and validate <i>client</i> requirements 1.2 Determine scope of internet services with reference to client requirements 1.3 Identify and install both <i>hardware</i> and <i>software</i> components 1.4 Verify equipment specifications and availability of components
2. Review security issues	2.1 Assess security features of internet gateways with reference to <i>architecture</i> and <i>security plan</i> 2.2 Review security measures with the <i>internet service provider</i> (ISP) with reference to <i>firewalls</i> and other measures as required 2.3 Brief <i>users</i> on the security plan with reference to internet use and hazard possibilities
3. Install and configure gateway products and equipment	3.1 Identify and select installation and configuration options 3.2 Install and configure gateway products and equipment as required by technical guidelines 3.3 Plan and execute tests with reference to client requirements and <i>network</i> impact 3.4 Analyse error reports and make changes as required
4. Configure and test node	4.1 Assign node to specific gateway as required by network architecture and client requirements 4.2 Determine <i>connection type</i> and configure with reference to network architecture and client requirements 4.3 Ensure node software and hardware are configured as required according to vendor specifications and client requirements

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to confirm business and network requirements
- communication skills to:
  - communicate with clients
  - convey and clarify complex information
- literacy skills to interpret technical documentation, equipment manuals and specifications
- problem-solving skills to solve operational problems as they arise
- safety awareness skills to work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
  - analyse error reports and correct as required
  - install and configure computer hardware and software
  - use proprietary software.

### Required knowledge

- current browser software, such as MS Explorer, Netscape Navigator, Mozilla, Konqueror and Opera
- domain name server (DNS) resolution
- features and functions of:
  - network architecture:
    - bridges as required
    - desktop operating systems
    - hubs
  - network gateways
  - network operating systems:
    - routers
    - switches
- gateway software:
  - Cisco IpeXchange
  - Lotus Notes
  - Postoffices.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• connect network hardware devices to an internet gateway</li> <li>• configure and test gateway products</li> <li>• configure and test node according to vendor specifications and client requirements.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• network and internet where gateway products may be installed and configured</li> <li>• use of hardware and software currently used in industry</li> <li>• client requirements documentation</li> <li>• vendor specifications</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of hardware and software to be installed</li> <li>• direct observation of candidate: <ul style="list-style-type: none"> <li>• installing and configuring gateway products as required by technical guidelines</li> <li>• configuring and testing node as required by vendor specifications and client requirements.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employees</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments.</li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• digital subscriber line (DSL) modems</li> <li>• modems or other connectivity devices</li> <li>• networks</li> <li>• PCs</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• application software: <ul style="list-style-type: none"> <li>• database</li> <li>• internet browser</li> <li>• spreadsheet</li> <li>• word-processing</li> </ul> </li> <li>• commercial</li> <li>• customised software</li> <li>• in-house</li> <li>• programming software: <ul style="list-style-type: none"> <li>• assembler</li> <li>• compiler</li> <li>• development tools</li> </ul> </li> <li>• system software: <ul style="list-style-type: none"> <li>• computer security software</li> <li>• device drivers</li> <li>• operating system.</li> </ul> </li> </ul>
<b><i>Architecture</i></b> may include:	<ul style="list-style-type: none"> <li>• configuration: <ul style="list-style-type: none"> <li>• large memory model</li> <li>• requests per second</li> <li>• small memory model</li> </ul> </li> <li>• database software:</li> </ul>

	<ul style="list-style-type: none"> <li>• DB2</li> <li>• Informix</li> <li>• Ingres</li> <li>• Microsoft SQL (MS SQL) server</li> <li>• Mini SQL (mSQL)</li> <li>• MySQL</li> <li>• Oracle</li> <li>• Sybase</li> <li>• operating system:             <ul style="list-style-type: none"> <li>• Linux</li> <li>• Mac</li> <li>• multi-user ability</li> <li>• Novell NetWare</li> <li>• Windows.</li> </ul> </li> </ul>
<p><i>Security plan</i> may include:</p>	<ul style="list-style-type: none"> <li>• alerts relating to the security objectives of the organisation</li> <li>• audits</li> <li>• privacy</li> <li>• standards:             <ul style="list-style-type: none"> <li>• archival</li> <li>• backup</li> <li>• network</li> </ul> </li> <li>• theft</li> <li>• viruses.</li> </ul>
<p><i>Internet service provider</i> may include:</p>	<ul style="list-style-type: none"> <li>• broadband access:             <ul style="list-style-type: none"> <li>• asymmetric digital subscriber line (ADSL)</li> <li>• cable</li> <li>• fibre</li> <li>• satellite</li> <li>• wireless</li> </ul> </li> <li>• dial-up access</li> <li>• ISP hierarchical structure:             <ul style="list-style-type: none"> <li>• Tier 1 ISP</li> <li>• Tier 2 ISP</li> <li>• Tier 3 ISP.</li> </ul> </li> </ul>
<p><i>Firewalls</i> may include:</p>	<ul style="list-style-type: none"> <li>• hardware appliances</li> <li>• individual PC solutions, with varying functionality:             <ul style="list-style-type: none"> <li>• network address translation (NAT) or internet protocol (IP) masquerading</li> <li>• routing to specific machines</li> </ul> </li> <li>• proxy servers.</li> </ul>

<i>Users</i> may include:	<ul style="list-style-type: none"><li>• contractors</li><li>• departments within the organisation</li><li>• persons within a department</li><li>• support staff</li><li>• third parties.</li></ul>
<i>Network</i> may include:	<ul style="list-style-type: none"><li>• data</li><li>• internet</li><li>• large and small local area networks (LANs)</li><li>• private lines</li><li>• use of the public switched telephone network (PSTN) for dial-up modems only</li><li>• voice</li><li>• virtual private network (VPN)</li><li>• wide area network (WAN).</li></ul>
<i>Connection type</i> may include:	<ul style="list-style-type: none"><li>• ADSL</li><li>• cable</li><li>• dedicated or proxy connections</li><li>• dial-up</li><li>• integrated services digital network (ISDN) terminal adapter</li><li>• optical network termination (ONT).</li></ul>

## Unit Sector(s)

Networking

## ICANWK532A Identify and resolve network problems

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to troubleshoot local area network (LAN), wide area network (WAN) and wireless network problems.

### Application of the Unit

This unit applies to network managers, network engineers and technical specialists, who generally work independently with limited supervision. Staff at this level perform a broad range of problem-solving activities, including troubleshooting, evaluating and analysing networks, and planning and developing new systems and procedures. They generally have excellent problem-solving skills and address more complex or non-routine situations where discretion and judgement are required.

They provide technical advice, guidance and leadership in resolution of network problems and the role may involve responsibility for others.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Implement regular network monitoring	<p>1.1 Set up appropriate logs to monitor <i>network</i> activity and to produce a management information base (MIB)</p> <p>1.2 Use <i>network tools</i> to benchmark the network and to establish a reference point for network performance</p> <p>1.3 Identify critical activity levels and network capacity</p> <p>1.4 Regularly review documents and logs to facilitate network tuning</p> <p>1.5 Make recommendations to management for additional network resources to improve performance or to proactively avoid problems</p>
2. Troubleshoot network problems	<p>2.1 Communicate with help desk and other support services to quickly identify network problems</p> <p>2.2 Use various tools and knowledge of <i>network topology</i> and <i>protocols</i> to identify network problems</p> <p>2.3 Consult with vendor or service suppliers for assistance where appropriate</p>
3. Diagnose network faults	<p>3.1 Establish likely fault hierarchy using data from previous resolution attempts</p> <p>3.2 Progressively isolate fault with concurrent testing of fault presence</p> <p>3.3 Document steps taken to resolve fault</p> <p>3.4 Refer fault to a higher level if not resolved within organisational limits</p>
4. Rectify faults	<p>4.1 Isolate and repair, replace and reconfigure equipment or software</p> <p>4.2 Test network to ensure fault rectification</p> <p>4.3 Advise <i>users</i> and clients of progress and solutions in a timely manner</p> <p>4.4 Complete support <i>documentation</i></p>
5. Finalise fault rectification process	<p>5.1 Review resolution of fault for possible reoccurrence, planned maintenance or upgrade requirements</p> <p>5.2 Report to client with fault resolution and recommendations</p> <p>5.3 Obtain sign-off from the <i>appropriate person</i> for work and billing outside of warranty or service level agreements</p> <p>5.4 Forward necessary documentation to the appropriate person</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to identify, analyse and evaluate support issues and network problems
- communication skills to:
  - communicate with help desk
  - consult with vendors
- literacy skills to:
  - interpret technical documentation, equipment manuals and specifications
  - record findings and write reports
- planning skills to manage projects to scope, time, cost, quality, communications and risk management
- problem-solving skills to solve operational problems arising
- technical skills to use:
  - benchmarking techniques
  - current industry-accepted hardware and software
  - network management tools.

### Required knowledge

- current industry-accepted hardware, cabling and software products, including general features and capabilities
- detailed knowledge of organisational maintenance response level escalation procedures
- client business domain, including client organisation structure and business functionality
- network management tools, with broad knowledge of general features and capabilities, with substantial depth in troubleshooting areas
- network topologies
- networking technologies and broad knowledge of their features and capabilities, including those relating to:
  - protocol stacks of transmission control protocol or internet protocol (TCP/IP) and open system interconnection (OSI)
  - Institute of Electrical and Electronics Engineers (IEEE)
  - International Telecommunications Union (ITU)
  - Internet Engineering Task Force (IETF)
  - protocols, such as ethernet, AppleTalk, Novell, Linux or Unix.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• produce a management information base</li> <li>• benchmark the network performance</li> <li>• troubleshoot and rectify network problems</li> <li>• provide constant monitoring and tuning of the network</li> <li>• review fault resolution and make recommendations.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• live system and sites with a representative range of network environments and operating systems</li> <li>• technical records and documentation</li> <li>• management information base of accumulated fault resolution information</li> <li>• network support tools</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate undertaking network benchmarking activities</li> <li>• direct observation of candidate performing network testing to ensure fault rectification</li> <li>• review fault resolution documentation and recommendations</li> <li>• verbal or written questioning to assess candidate's knowledge of the troubleshooting and monitoring facilities available in the operating environment.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>Network</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• digital subscriber line (DSL) connections</li> <li>• internet</li> <li>• large and small LANs</li> <li>• private lines</li> <li>• use of the public switched telephone network (PSTN) for dial-up modems only</li> <li>• voice</li> <li>• virtual private networks (VPNs)</li> <li>• WANs</li> <li>• wireless networks.</li> </ul>
<b>Network tools</b> may include:	<ul style="list-style-type: none"> <li>• cable testing</li> <li>• carrier connection tests</li> <li>• data and voice integration measurements</li> <li>• equipment testing</li> <li>• frequency analysers</li> <li>• network performance software</li> <li>• policing and shaping tools.</li> </ul>
<b>Network topology</b> may include:	<ul style="list-style-type: none"> <li>• bus</li> <li>• hierarchical</li> <li>• hybrid</li> <li>• ring</li> <li>• star.</li> </ul>
<b>Protocols</b> may include:	<ul style="list-style-type: none"> <li>• AgentX</li> <li>• CMIP over TCP/IP</li> <li>• common management information protocol (CMIP)</li> <li>• ethernet</li> <li>• internet protocol (IP)</li> <li>• simple network management protocol (SNMP):             <ul style="list-style-type: none"> <li>• SNMPv1</li> <li>• SNMPv2</li> <li>• SNMPv2c</li> <li>• SNMPv2u</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• SNMPv3</li> <li>• transport control protocol (TCP)</li> <li>• user datagram protocol (UDP).</li> </ul>
<i>Users</i> may include:	<ul style="list-style-type: none"> <li>• employees</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments.</li> </ul>
<i>Documentation</i> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project management templates</li> <li>• report writing principles</li> <li>• version control.</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>• chief information officer (CIO)</li> <li>• project manager</li> <li>• subject matter expert</li> <li>• supervisor</li> <li>• system administrator.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK601A Design and implement a security system

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use software tools, equipment and protocols to implement a security system.

## Application of the Unit

This unit applies to the use of foundational elements of network security, and the description of security threats, securing network devices and their associated networks.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Assess the security threats facing network Infrastructure	<p>1.1 Evaluate mitigation methods for <i>network</i> attacks and different types of malware</p> <p>1.2 Propose a methodical concept of defending network architecture</p>
2. Secure edge devices (routers)	<p>2.1 Secure network routers using software <i>tools</i></p> <p>2.2 Secure <i>administration access</i> to routers using the router operating system (OS)</p> <p>2.3 Secure router OS and its configuration file(s)</p>
3. Implement authentication, authorisation and accounting (AAA) and secure access control system (ACS)	<p>3.1 Evaluate and implement the functions and importance of authentication, authorisation and accounting</p> <p>3.2 Configure the router using AAA</p> <p>3.3 Analyse and compare the <i>features of TACACS+ and RADIUS AAA protocols</i> for securing the network</p>
4. Mitigate threats to routers and networks using access control lists (ACLs)	<p>4.1 Assess the functionality of <i>access control lists</i> and document the caveats to be considered when building them</p> <p>4.2 Configure and verify IP ACLs to mitigate threats and to prevent IP address spoofing using tools</p>
5. Implement secure network management and reporting	<p>5.1 Configure secure shell (SSH) on routers to enable secure management</p> <p>5.2 Configure routers to send log messages to a log server with tools</p>
6. Mitigate common layer 2 attacks	<p>6.1 Document how to prevent layer 2 attacks by configuring basic switch security and features</p> <p>6.2 Configure switch to prevent layer 2 attacks</p>
7. Implement the router OS firewall-feature set	<p>7.1 Evaluate and compare the operational strategies and weaknesses of the different firewall technologies</p> <p>7.2 Implement zone-based firewall to strategically secure group of interfaces</p>
8. Implement the intrusion detection and prevention system (IDPS) feature set in the router OS using secure device manager (SDM)	<p>8.1 Evaluate and compare network based versus host based IDPS to identify malicious activity, log information, attempt to block/stop activity, and report activity</p> <p>8.2 Explain IDPS technologies, attack responses and monitoring options</p> <p>8.3 Configure the router OS IDPS operations using secure device manager to monitor network and system activities for malicious</p>

	activity
9. Implement site-to-site virtual private networks (VPNs) using SDM	<p>9.1 Assess the different methods used in cryptography</p> <p>9.2 Evaluate internet key exchange (IKE) protocol functionality and phases to support authentication and define the binding blocks of IPSec and the security functions it provides</p> <p>9.3 Configure and verify an IPSec site-to-site VPN with pre-shared key (PSK) authentication to provide a secure channel between the two parties</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - take test measurements
  - interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to:
  - coordinate the process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - adapt configuration procedures to network requirements
  - reconfigure depending on differing operational contingencies, risk situations and environments
- problem-solving skills to troubleshoot
- research skills to investigate appropriate hardware to meet requirements
- technical skills to:
  - select and configure networking devices
  - assess and implement security requirements.

### Required knowledge

- access control lists, configuration and troubleshooting
- authentication protocols
- encryption techniques
- IDS and IPS
- IOS and IP networking models and protocols
- current wireless regulations, standards and certifications
- local area network (LAN) or wide area network (WAN) implementations
- malicious attacks and prevention techniques
- network management tools
- network security prevention methods
- procedures to configure, verify and troubleshoot:
  - switch with VLANs and inter-switching communications
  - router
- procedures to set up VPNs
- routing protocols

- threat and attack mitigation techniques
- use of command line interface to configure and test network elements.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• evaluate network security system threats and requirements</li> <li>• mitigate attacks and configure firewalls</li> <li>• design and implement network security systems</li> <li>• implement VPN using SDM.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network security may be evaluated and tightened</li> <li>• hardware and software</li> <li>• organisational guidelines, procedures and policies</li> <li>• computers</li> <li>• LAN or WLAN internet work technologies (hardware and software)</li> <li>• security technologies (hardware and software)</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Network</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• internet</li> <li>• protocol</li> <li>• large and small LANs</li> <li>• virtual LAN (VLAN)</li> <li>• WANs.</li> </ul>
<b>Tools</b> may include:	<ul style="list-style-type: none"> <li>• Cisco security device manager (SDM)</li> <li>• command line interface (CLI)</li> <li>• web interface.</li> </ul>
<b>Administration access</b> may include:	<ul style="list-style-type: none"> <li>• multiple privilege levels</li> <li>• role-based CLI</li> <li>• strong-encrypted passwords.</li> </ul>
<b>Features of TACACS+ and RADIUS AAA protocols</b> may include:	<ul style="list-style-type: none"> <li>• remote authentication dial-in user service (RADIUS): <ul style="list-style-type: none"> <li>• combines authentication and authorisation</li> <li>• does not allow users to control which commands can be executed on a router</li> <li>• does not support ARA access, NetBIOS Frame Protocol Control Protocol, NASI, and X.25 PAD connections</li> <li>• encrypts only the password in the access-request packet</li> <li>• uses industry standard</li> <li>• uses UDP</li> </ul> </li> <li>• TACACS+: <ul style="list-style-type: none"> <li>• encrypts the entire body of the packet</li> <li>• is Cisco proprietary</li> <li>• offers multiprotocol support</li> <li>• provides two ways to control the authorisation of router commands on a per-user or per-group basis</li> <li>• uses transmission control protocol (TCP)</li> <li>• uses the AAA architecture, which separates authentication, authorisation and accounting.</li> </ul> </li> </ul>
<b>Access control lists</b> may include:	<ul style="list-style-type: none"> <li>• extended</li> <li>• named</li> <li>• standard.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK602A Plan, configure and test advanced server based security

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement advanced server security using secure authentication and network services on a network server.

## Application of the Unit

This unit applies to planning, designing, implementing, maintaining, monitoring and troubleshooting advanced security on network servers.

Relevant job roles include information and communications technology (ICT) network specialist, ICT network engineer, network security specialist, network security planner and network security designer.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan advanced network-server security according to business needs</p>	<p>1.1 Consult with <i>client</i> and key <i>stakeholders</i> to identify security requirements in an advanced <i>network server</i> environment</p> <p>1.2 Analyse and review existing <i>client security documentation</i> and predict network service vulnerabilities</p> <p>1.3 Research <i>network authentication</i> and <i>network service</i> configuration options and implications to produce network security solutions</p> <p>1.4 Ensure features and capabilities of network service security options meet the business needs</p> <p>1.5 Produce or update server security design documentation to include new solutions</p> <p>1.6 Obtain sign-off for the security design from the <i>appropriate person</i></p>
<p>2. Prepare for network-server security implementation</p>	<p>2.1 Prepare for work in line with site-specific safety requirements and enterprise OHS processes and procedures</p> <p>2.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel</p> <p>2.3 Consult appropriate person to ensure the task is coordinated effectively with others involved at the worksite</p> <p>2.4 Back up server before implementing configuration changes</p>
<p>3. Configure the advanced network-server security according to design</p>	<p>3.1 Configure <i>update services</i> to provide automatic updates to ensure maximum security and reliability</p> <p>3.2 Configure network authentication, authorisation and accounting services to log and prevent unauthorised access to the server</p> <p>3.3 Configure <i>basic service security</i> and access control lists to limit access to authorised users, groups or networks</p> <p>3.4 Implement <i>encryption</i> as required by the design</p> <p>3.5 Configure advanced network service <i>security options for services</i> and <i>remote access</i></p> <p>3.6 Configure the <i>operating system</i> or <i>third-party firewall</i> to filter traffic in line with security requirements</p> <p>3.7 Ensure security of server logs and log servers are appropriately implemented for system integrity</p> <p>3.8 Implement <i>backup and recovery</i> methods to enable restoration capability in the event of a disaster</p>
<p>4. Monitor and test</p>	<p>4.1 Test server to assess the effectiveness of network service</p>

network-server security	security according to agreed design plan 4.2 Monitor server logs, network traffic and open ports to detect possible intrusions 4.3 Monitor important files to detect unauthorised modifications 4.4 Investigate and verify alleged violations of server or data security and privacy breaches 4.5 Recover from, report and document security breaches according to security policies and procedures 4.6 Evaluate monitored results and reports to implement and test improvement actions required to maintain the required level of network service security
-------------------------	---

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on security-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports in required formats
  - read and interpret enterprise security procedures, policies and specifications
  - review vendor sites, bulletins and notifications for security information
- planning and organisational skills to:
  - plan control methods for network service security and authentication
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - adapt configuration procedures to requirements of network service security and reconfigure depending on differing operational contingencies, risk situations and environments
  - detect, investigate and recover from security breaches
- safety-awareness skills to:
  - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
  - follow enterprise OHS procedures
  - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- research skills to interrogate vendor databases and websites to implement different configuration requirements to meet security levels
- technical skills to:
  - design network service and authentication security
  - identify the technical requirements, constraints and manageability issues for given customer server-security requirements
  - implement security strategies
  - install network service and authentication security design
  - monitor log files for security information
  - select and use server and network diagnostics
  - test server security.

### Required knowledge

- auditing and penetration testing techniques
- best practice procedures for implementing backup and restore
- cryptographic techniques
- procedures for error and event logging and reporting

- intrusion detection and recovery procedures
- network service configuration, including DNS, DHCP, web, mail, FTP, SMB, NTP and proxy
- network service security features, options and limitations
- network service vulnerabilities
- operating system help and support utilities
- planning, configuration, monitoring and troubleshooting techniques
- security protection mechanisms
- security threats and risks
- server firewall configuration
- server monitoring and troubleshooting tools and techniques, including network monitoring and diagnostic utilities
- user authentication and directory services.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify network service security vulnerabilities and appropriate controls</li> <li>• plan, design and configure a secure network authentication service</li> <li>• secure a wide range of network services to ensure server and data security including: DNS, web and proxy, mail, FTP and firewall</li> <li>• implement cryptographic techniques</li> <li>• monitor the server for security breaches.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where server installation may be conducted</li> <li>• relevant server specifications: <ul style="list-style-type: none"> <li>• cabling</li> <li>• networked (LAN) computers</li> <li>• server diagnostic software</li> <li>• switch</li> <li>• client requirements</li> <li>• WAN service point of presence</li> <li>• workstations</li> </ul> </li> <li>• relevant regulatory documentation that impacts on installation activities</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of security design report for a server with complex network service security requirements</li> <li>• direct observation of the candidate configuring complex security requirements</li> <li>• verbal or written questioning of required skills and knowledge</li> <li>• evaluation of prepared report outlining intrusion detection,</li> </ul>

	<p>recovery, reporting and documentation procedures</p> <ul style="list-style-type: none"><li>• evaluation of system design and implementation in terms of network service security and suitability for business needs.</li></ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• ICT company</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees</li> <li>• service industry.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• IT manager or representative</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>
<b><i>Network server</i></b> may include:	<ul style="list-style-type: none"> <li>• applications server</li> <li>• communications server</li> <li>• content and media server</li> <li>• multiple servers</li> <li>• physical server</li> <li>• virtual server.</li> </ul>
<b><i>Client security documentation</i></b> may include:	<ul style="list-style-type: none"> <li>• risk assessment reports</li> <li>• security incident reports and server logs</li> <li>• security plans</li> <li>• security policies</li> <li>• security procedures.</li> </ul>
<b><i>Network authentication</i></b> may include:	<ul style="list-style-type: none"> <li>• biometrics</li> <li>• enterprise single sign-on</li> <li>• Hesiod</li> <li>• Kerberos</li> <li>• lightweight directory access protocol (LDAP)</li> <li>• Novell Directory Services (NDS)</li> <li>• network information service (NIS)</li> <li>• pluggable authentication modules (PAM)</li> <li>• public key authentication (PKA)</li> <li>• public key infrastructure (PKI) and digital certificates</li> <li>• Red Hat Directory Services (RHDS)</li> <li>• security tokens and smart cards</li> </ul>

	<ul style="list-style-type: none"> <li>• SMB or Samba software</li> <li>• two-factor and multifactor authentication</li> <li>• Windows Active Directory Services (WADS).</li> </ul>
<i>Network service</i> may include:	<ul style="list-style-type: none"> <li>• dynamic host configuration protocol (DHCP)</li> <li>• dynamic name system (DNS)</li> <li>• firewall</li> <li>• file transfer protocol (FTP)</li> <li>• hypertext transfer protocol (HTTP) or secure (HTTPS)</li> <li>• internet message access protocol (IMAP)</li> <li>• network authentication: <ul style="list-style-type: none"> <li>• remote procedure call (RPC)</li> <li>• NIS</li> <li>• Kerberos</li> </ul> </li> <li>• network file system (NFS)</li> <li>• network time protocol (NTP)</li> <li>• open source secure shell software suite (open SSH)</li> <li>• post-office protocol (POP)</li> <li>• print services</li> <li>• proxy</li> <li>• server messages block (SMB)</li> <li>• simple mail transfer protocol (SMTP)</li> <li>• simple network management protocol (SNMP)</li> <li>• structured query language server (SQL)</li> <li>• transmission control protocol or internet protocol (TCP/IP).</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• representative from the IT department</li> <li>• supervisor</li> <li>• security manager.</li> </ul>
<i>Update services</i> may include:	<ul style="list-style-type: none"> <li>• Potentially Unwanted Program Remover (PUP)</li> <li>• Red Hat Network</li> <li>• Windows Server Update Services</li> <li>• Yellow Dog Update Manager (YUM).</li> </ul>
<i>Basic service security</i> may include:	<ul style="list-style-type: none"> <li>• host-based access control</li> <li>• network service access control lists (ACL)</li> <li>• network service authentication</li> <li>• network share permissions</li> <li>• security-enhanced Linux (SE Linux)</li> <li>• TCP wrappers</li> <li>• Windows group policy</li> <li>• eXtended interNET Daemon (xinetd) and service limits.</li> </ul>

<b><i>Encryption</i></b> may include:	<ul style="list-style-type: none"> <li>• asymmetric encryption</li> <li>• certificate authority configuration</li> <li>• digital signatures and signature verification</li> <li>• email encryption</li> <li>• encrypted file systems</li> <li>• encrypted network traffic</li> <li>• GNU Privacy Guard (GnuPG or GPG)</li> <li>• public key infrastructure (PKI)</li> <li>• secure sockets layer (SSL) certificates</li> <li>• symmetric encryption.</li> </ul>
<b><i>Security options for services</i></b> may include:	<ul style="list-style-type: none"> <li>• network file services security options, such as: <ul style="list-style-type: none"> <li>• disk quotas</li> <li>• distributed file system security</li> <li>• encrypted file systems</li> <li>• NFS security</li> <li>• shares and their permissions</li> <li>• SMB or Samba security options</li> </ul> </li> <li>• name resolution services, such as: <ul style="list-style-type: none"> <li>• bogus servers and blackholes</li> <li>• DNS topologies</li> <li>• dynamic DNS security</li> <li>• restrictive zone transfers and recursive queries</li> <li>• transaction signatures</li> <li>• transaction signature (TSIG)</li> <li>• views</li> </ul> </li> <li>• web and proxy services, such as: <ul style="list-style-type: none"> <li>• authentication</li> <li>• common gateway interface (CGI) security</li> <li>• server-side includes</li> <li>• SSL certificates</li> <li>• suEXEC</li> </ul> </li> <li>• mail services, such as: <ul style="list-style-type: none"> <li>• email encryption</li> <li>• mail filtering including spam filtering</li> <li>• mail topology design</li> <li>• secure sockets layer and transport layer security protocols (SSL/TLS)</li> <li>• start transport layer security (STARTTLS)</li> <li>• virus scanning</li> </ul> </li> <li>• FTP services, such as:</li> </ul>

	<ul style="list-style-type: none"> <li>• anonymous FTP</li> <li>• FTP authentication</li> <li>• secure access to home directories.</li> </ul>
<b>Remote access security options</b> may include:	<ul style="list-style-type: none"> <li>• dial-up</li> <li>• internet connection sharing (ICS)</li> <li>• inbound and outbound filters</li> <li>• network address translation (NAT)</li> <li>• open SSH</li> <li>• port forwarding</li> <li>• remote authentication dial-in user service (RADIUS)</li> <li>• RADIUS proxy</li> <li>• remote access policy</li> <li>• routing and remote access services (RRAS)</li> <li>• secure remote access protocols</li> <li>• secure wireless</li> <li>• terminal services</li> <li>• virtual private network (VPN).</li> </ul>
<b>Operating system</b> may include:	<ul style="list-style-type: none"> <li>• Linux</li> <li>• Unix</li> <li>• Windows server.</li> </ul>
<b>Third-party firewall</b> may include:	<ul style="list-style-type: none"> <li>• incoming and outgoing traffic filtering</li> <li>• iptables</li> <li>• internet security and acceleration (ISA) server</li> <li>• kernel level firewalls</li> <li>• Microsoft Windows Firewall</li> <li>• netfilter</li> <li>• SmoothWall</li> <li>• traffic filtering by ports and protocols.</li> </ul>
<b>Backup and recovery</b> may include:	<ul style="list-style-type: none"> <li>• automated backups using operating system backup and job scheduling tools</li> <li>• backup and recovery of mail systems</li> <li>• backup and recovery of network directory service objects</li> <li>• backups using third party software</li> <li>• database backup and recovery</li> <li>• volume shadow copies.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK603A Plan, configure and test advanced internetwork routing solutions

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge necessary to plan, configure and support advanced internet protocol (IP) addressing and routing when implementing scalable and secure routers connected to local area networks (LANs) and wide area networks (WANs). The unit also covers configuration of secure routing solutions to support branch offices and mobile workers.

## Application of the Unit

This unit applies to an information and communications technology (ICT) network specialist, network engineer, network infrastructure engineer, senior network administrator, network and systems manager, ICT security specialist, security engineer, communications engineer and communications manager.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan, configure and test a complex network-routing protocol solution</p>	<p>1.1 Determine <i>network</i> resources required for implementing a <i>complex distance-vector routing protocol</i> solution, a <i>multi-area link-state routing protocol</i> solution and an <i>exterior routing protocol</i> solution on a network</p> <p>1.2 Produce separate protocol implementation plans and verification plans for each routing solution</p> <p>1.3 Configure and test the routing protocol solution</p> <p>1.4 Document results of the routing protocol solution implementation and verification plans for each solution</p>
<p>2. Plan, configure and test an internet protocol version 6 (IPv6) based network solution</p>	<p>2.1 Determine network resources needed for implementing IPv6 on a network</p> <p>2.2 Produce an implementation plan and a verification plan for an IPv6-based network solution</p> <p>2.3 Configure IPv6 routing and IPv6 interoperation with IPv4</p> <p>2.4 Verify and test the IPv6 solution and make amendments if necessary</p> <p>2.5 Document results of IPv6 implementation and verification plans</p>
<p>3. Plan, configure and test an IPv4 or IPv6-based network redistribution solution</p>	<p>3.1 Produce an IPv4 or IPv6 redistribution implementation plan and verification plan based on the outcomes of a network redistribution analysis</p> <p>3.2 Configure and verify the redistribution solution for the network</p> <p>3.3 Document results of redistribution, implementation and verification plans</p> <p>3.4 Analyse the differences between implementing an IPv4 and an IPv6 redistribution solution</p>
<p>4. Plan, configure and test a layer 3 path control solution</p>	<p>4.1 Produce a layer 3 path control implementation plan and a verification plan based on the outcomes of a network redistribution analysis</p> <p>4.2 Configure and verify layer 3 path control for the network</p> <p>4.3 Implement basic teleworker and branch services</p> <p>4.4 Evaluate and compare <i>broadband technologies</i> and <i>VPN technologies</i> in terms of access and data transfer rate as solutions for secure broadband network</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to identify functional, performance and management features associated with the operation of complex networks
- communication skills to:
  - communicate complex concepts and issues technically and in plain language
  - liaise with diverse clients
- literacy skills to:
  - develop and prepare operational documentation, such as policies and procedures, and technical and management reports
  - interpret and prepare technical documentation
  - prepare project-management documentation
- planning and organisational skills to risk manage complex and dynamic environments
- problem-solving skills suitable for complex and dynamic environments with demanding service levels
- technical skills to:
  - design, implement and maintain complex networks to industry standards and best practice
  - identify viable complementary and emerging technologies.

### Required knowledge

- broadband technologies relevant to advanced internetworking routing solutions
- business justifications for having integrated and unified enterprise networks
- emerging viable business and social technologies
- external developments or factors that affect network design
- IPv4 and IPv6 technologies and solutions
- maintenance and management tools and practices suitable for complex networks to achieve availability and resilience
- network topologies
- regulations, standards and certifications relevant to advanced internetworking routing solutions
- risk-management strategies and practices suitable for a complex network environment
- routing tables, protocols and operational processes
- routing technologies for an enterprise environment
- security for enterprise networks
- security standards and technologies for network environments
- benefits of formal or structured approaches to network management
- virtual private network (VPN) technologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• plan, configure and support advanced routed network infrastructure</li> <li>• use network tools</li> <li>• plan and analyse redistribution solutions</li> <li>• produce and configure layer 3 path control implementation plan</li> <li>• provide solutions to static and dynamic routing issues together with optimisation strategies.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network installation may be conducted</li> <li>• router hardware and software</li> <li>• organisational guidelines</li> <li>• computers</li> <li>• LAN and WAN systems</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Network</b> may include:	<ul style="list-style-type: none"> <li>• integrated network</li> <li>• internet</li> <li>• intranet</li> <li>• LAN</li> <li>• router-based network</li> <li>• switch-based network</li> <li>• VPN</li> <li>• WAN</li> <li>• wireless LAN (WLAN).</li> </ul>
<b>Complex distance-vector routing protocol</b> may include:	<ul style="list-style-type: none"> <li>• ad hoc on-demand distance vector routing protocol (AODV)</li> <li>• destination-sequenced distance-vector routing (DSDV) protocol</li> <li>• enhanced interior gateway routing protocol (EIGRP)</li> <li>• interior gateway routing protocol (IGRP).</li> </ul>
<b>Multi-area link-state routing protocol</b> may include:	<ul style="list-style-type: none"> <li>• intermediate system to intermediate system (IS-IS)</li> <li>• multicast open shortest path first (MOSPF)</li> <li>• open shortest path first (OSPF) and (OSPFv3).</li> </ul>
<b>Exterior routing protocol</b> may include:	<ul style="list-style-type: none"> <li>• border gateway protocol (BGP)</li> <li>• external border gateway protocol (EBGP)</li> <li>• exterior gateway protocol (EGP)</li> <li>• multiprotocol BGP (MBGP).</li> </ul>
<b>Broadband technologies</b> may include:	<ul style="list-style-type: none"> <li>• digital subscriber lines (DSL, ADSL)</li> <li>• ethernet</li> <li>• fibre technologies</li> <li>• cellular:                             <ul style="list-style-type: none"> <li>• high-speed packet access (HSPA)</li> <li>• evolution-data optimised (EVDO)</li> </ul> </li> <li>• satellite</li> <li>• worldwide interoperability for microwave access (WiMAX).</li> </ul>
<b>VPN technologies</b> may include:	<ul style="list-style-type: none"> <li>• hybrid</li> <li>• mobile</li> <li>• secure</li> <li>• trusted</li> </ul>

	<ul style="list-style-type: none"><li>• tunnels.</li></ul>
--	--

## Unit Sector(s)

Networking

# ICANWK604A Plan and configure advanced internet network switching solutions

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan, configure and support advanced enterprise switching. The unit also covers secure integration of virtual local area networks (VLANs), wireless local area networks (WLANs), voice and video into campus networks.

## Application of the Unit

This unit applies to an information and communications technology (ICT) network specialist, network engineer, network infrastructure engineer, senior network administrator, network and systems manager, ICT security specialist, security engineer, communications engineer, and communications manager.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan, configure and test a VLAN-based solution</p>	<p>1.1 Determine <i>network</i> resources required for implementing a VLAN-based solution for a given network design and requirements</p> <p>1.2 Produce an implementation plan and a verification plan for the VLAN-based network solution</p> <p>1.3 Configure and verify switch-to-switch connectivity, loop prevention and access ports for the VLAN-based solution using <i>network tools</i></p> <p>1.4 Document results of the VLAN implementation and verification plans</p>
<p>2. Plan, configure and test a secure layer 2 network solution and a switch-based layer 3 services solution</p>	<p>2.1 Determine network resources required for implementing a secure layer 2 network solution and a switch-based layer 3 solution against <i>vulnerabilities</i> with <i>organisational security policies</i></p> <p>2.2 Produce an implementation plan and a verification plan for each of the layer 2 and layer 3 network solution</p> <p>2.3 Configure and verify a private VLAN, and features for port security and general switch security for the layer 2 network solution using network tools</p> <p>2.4 Configure and verify routing interfaces and layer 3 security for the switch-based layer 3 network solution using network tools</p> <p>2.5 Document results of security implementation and verification plans for each of the layer 2 and the layer 3 network solution</p>
<p>3. Prepare infrastructure to support advanced services</p>	<p>3.1 Implement a wireless extension of a layer 2 solution</p> <p>3.2 Implement a support solution for a voice over internet protocol (VoIP) and a video application</p>
<p>4. Plan, configure and test high-availability networks using multilayer switches solution</p>	<p>4.1 Determine network resources needed for implementing high-availability solution for a given network design and requirements</p> <p>4.2 Produce an implementation plan and a verification plan for the high-availability network using multilayer switches</p> <p>4.3 Configure, verify and manage <i>first hop redundancy protocols</i> (FHRP)</p> <p>4.4 Implement switch supervisor redundancy and use network tools to verify the high-availability solution</p> <p>4.5 Document results of high-availability implementation and verification plans</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to identify functional, performance and management features associated with the operation of complex switched networks
- communication skills to:
  - communicate complex concepts and issues technically and in plain language
  - liaise with diverse clients
- literacy skills to:
  - develop and prepare operational documentation, such as policies and procedures, and technical and management reports
  - interpret and prepare technical documentation
  - prepare project-management documentation
- problem-solving skills suitable for complex and dynamic environments with demanding service level
- technical skills to:
  - design, implement and maintain availability of complex switched networks to industry standards and best practice
  - identify viable complementary and emerging technologies
  - use network tools.

### Required knowledge

- benefits of formal or structured approach to network management
- business justifications for having integrated and unified enterprise networks
- current wireless regulations, standards and certifications
- emerging viable business and social technologies
- external developments or factors that affect switched network design
- maintenance and management tools and practices suitable for complex networks to achieve availability and resilience
- network topologies
- organisational policies for internetworking
- risk management strategies and practices suitable for a complex switched network environment
- security for an enterprise-switched environment
- security standards and technologies for switched network environments
- switching and routing technologies for an enterprise-switched environment.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design, configure and support advanced switched network infrastructure</li> <li>• implement wireless extension solution with multi-layered (layer 3) switches</li> <li>• prepare infrastructure to support advanced services</li> <li>• use network tools.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network installation may be conducted</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• computers</li> <li>• LAN and WAN systems, including voice and video (hardware or software)</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation prepared by the candidate outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

## Unit Sector(s)

Networking

# ICANWK605A Design and configure secure integrated wireless systems

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use appropriate tools, equipment, software and protocols to produce a verified radio frequency (RF) design plan for a wireless local area network (WLAN) and to design, configure and troubleshoot secure integrated wireless systems.

## Application of the Unit

This unit applies to those who plan and conduct a wireless network site survey to verify RF coverage design for installation and to the installation, operation and troubleshooting of small to medium enterprise wireless networks.

Relevant job roles include wireless network installer, wireless network support specialist and wireless network engineer.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan and conduct a site survey for setting up a wireless network</p>	<p>1.1 Assess <i>client requirements</i> to plan for selecting appropriate <b>WLAN technology</b> and <b>network elements</b></p> <p>1.2 Evaluate existing <b>network infrastructure</b> and produce a <b>wireless network topology</b> to determine upgrade or new installation requirements</p> <p>1.3 Prepare basic <b>RF deployment considerations</b> related to site survey design of data or voice over WLAN applications</p> <p>1.4 Produce a <b>survey model</b> including <b>deployment characteristics</b> to meet client requirements</p> <p>1.5 Produce a spectral analysis predictive layer 1 site survey verified by a <b>physical site survey</b></p> <p>1.6 Analyse the survey results produced with an <b>RF network design</b> for a secure wireless network</p> <p>1.7 Conduct an RF field trial for final evaluation of network topology and network element placements</p>
<p>2. Prepare design specifications and plan for secure enterprise WLANs</p>	<p>2.1 Prepare for work according to relevant legislation, OHS, codes, regulations and standards</p> <p>2.2 Produce design specifications and layout for wireless network using <b>spread spectrum technology</b> for enhanced network security</p> <p>2.3 Review design plans to ensure sound <b>WLAN RF principles</b> and compliance with <b>wireless regulatory bodies, standards and certifications</b></p>
<p>3. Configure and test a controller-based WLAN</p>	<p>3.1 Produce a controller based wireless architecture from a possible range of industry-based <b>wireless network architectures</b></p> <p>3.2 Configure and test a <b>WLAN controller and access points</b> using <b>controller-based AP discovery and association</b> to enable <b>roaming</b> facilities</p> <p>3.3 Configure the basics of a stand-alone access point</p> <p>3.4 Configure and test <b>client operating system WLAN configuration</b> and install vendor specific software and utilities where applicable</p>
<p>4. Configure and test WLAN security</p>	<p>4.1 Review the general framework of wireless security and <b>security components</b> for securing the WLAN</p> <p>4.2 Configure and test <b>identification assignments</b> to network elements</p> <p>4.3 Configure and test <b>authentication methods</b> using different <b>sources of authentication</b></p>

	4.4 Configure and test <i>encryption methods</i> to comply with network security policies
5. Conduct WLAN maintenance and troubleshooting	5.1 Evaluate WLAN troubleshooting methods for controllers, access points, and client methodologies 5.2 Use <i>networking tools</i> to maintain and troubleshoot network 5.3 Transfer device configurations and operating system (OS) using maintenance tools and commands

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - take test measurements and interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to:
  - coordinate the process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - troubleshoot and debug WAN issues
  - adapt configuration procedures to requirements of network
  - reconfigure depending on differing operational contingencies, risk situations and environments
- research skills to investigate appropriate hardware to meet requirements
- technical skills to:
  - select and configure networking devices
  - assess and implement security requirements
  - use networking tools and site survey tools.

### Required knowledge

- authentication and encryption methods
- configuration, verification and troubleshooting procedures to undertake:
  - router-operation and routing
  - VLAN switching and inter-switching communications
- configuration of WLAN securities
- current wireless regulations, standards and certifications
- internetwork operating system (IOS) and IP networking models
- RF and WLAN technology and network design
- RF propagation and implementation issues
- spread spectrum technologies
- wireless network topologies and elements
- wireless networking protocols
- WLAN devices and their specification and use
- WLAN radio frequencies characteristics and their measuring techniques.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• plan and conduct a WLAN site survey</li> <li>• produce design specifications and layout of wireless network</li> <li>• configure and test a controller-based WLAN</li> <li>• test wireless security configurations.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network installation may be conducted</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• computers</li> <li>• stand-alone and lightweight WLAN controllers and AP</li> <li>• hardware and software WLAN site survey tools</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation prepared by the candidate outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Client requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• accessibility</li> <li>• dropout rates</li> <li>• future scalability</li> <li>• grade of service (GoS)</li> <li>• infrastructure costs</li> <li>• interoperability to existing network</li> <li>• network growth</li> <li>• network RF coverage</li> <li>• network security</li> <li>• network traffic</li> <li>• operating budget</li> <li>• quality of service (QoS)</li> <li>• serviceability</li> <li>• service level agreement (SLA).</li> </ul>
<p><b><i>WLAN technology</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• channels reuse and overlap</li> <li>• carrier sense multiple access/collision avoidance (CSMA/CA)</li> <li>• dynamic satellite survey (DSS)</li> <li>• multiple-input multiple-output (MIMO)</li> <li>• orthogonal frequency division multiplexing (OFDM)</li> <li>• rate-shifting</li> <li>• worldwide interoperability for microwave access (WiMAX)</li> <li>• wireless network topologies</li> <li>• wireless personal devices:             <ul style="list-style-type: none"> <li>• Bluetooth</li> <li>• cordless phones</li> <li>• personal digital assistant (PDA)</li> <li>• smartphone</li> </ul> </li> <li>• wireless technology developed as an open global standard (ZigBee).</li> </ul>
<p><b><i>Network elements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• adaptors</li> <li>• access point (AP)</li> <li>• client</li> <li>• communications cables and connectors</li> </ul>

	<ul style="list-style-type: none"> <li>• controller</li> <li>• host</li> <li>• hubs</li> <li>• routers</li> <li>• servers</li> <li>• switches.</li> </ul>
<b>Network infrastructure</b> may include:	<ul style="list-style-type: none"> <li>• additional antenna</li> <li>• lightning protection</li> <li>• mounting considerations</li> <li>• outdoor grounding</li> <li>• physical security</li> <li>• power over ethernet (PoE)</li> <li>• power including renewable sources</li> <li>• rack capacity</li> <li>• switch port capacity.</li> </ul>
<b>Wireless network topology</b> may include:	<ul style="list-style-type: none"> <li>• basic mesh</li> <li>• bridging</li> <li>• basic service set (BSS)</li> <li>• extended service set (ESS)</li> <li>• independent basic service set (IBSS)</li> <li>• point-to-multipoint using BSS</li> <li>• point-to-point using IBSS.</li> </ul>
<b>RF deployment considerations</b> may include:	<ul style="list-style-type: none"> <li>• AP location</li> <li>• basic RF site survey design related to channel re-use</li> <li>• building material</li> <li>• cell overlap</li> <li>• common RF interference sources such as devices</li> <li>• signal strength.</li> </ul>
<b>Survey model</b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• point-to-multipoint bridging</li> <li>• video point-to-point bridging</li> <li>• voice.</li> </ul>
<b>Deployment characteristics</b> may include:	<ul style="list-style-type: none"> <li>• dense deployment</li> <li>• high mobility versus nomadic</li> <li>• internal meshing.</li> </ul>
<b>Physical site survey</b> may include:	<ul style="list-style-type: none"> <li>• actual AP</li> <li>• RF power</li> <li>• simulated data rate to conduct the site survey</li> <li>• test radio equipment.</li> </ul>
<b>RF network design</b> may	<ul style="list-style-type: none"> <li>• AP count</li> <li>• controller and licence requirements</li> </ul>

include:	<ul style="list-style-type: none"> <li>• location and type of network elements</li> <li>• location of additional APs for monitoring and sniffing</li> <li>• propagation patterns and attenuation</li> <li>• WLAN radio frequencies and characteristics.</li> </ul>
<b>Spread spectrum technology</b> may include:	<ul style="list-style-type: none"> <li>• channels reuse and overlap</li> <li>• carrier sense multiple access or collision avoidance (CSMA/CA)</li> <li>• direct sequence spectrum (DSS)</li> <li>• multiple-input multiple-output (MIMO)</li> <li>• modulation</li> <li>• orthogonal frequency division multiplexing (OFDM)</li> <li>• rate-shifting</li> <li>• techniques: <ul style="list-style-type: none"> <li>• direct sequence (DS)</li> <li>• frequency hopping (FH)</li> <li>• hybrids, combination of FH and DS</li> <li>• time hopping (TH).</li> </ul> </li> </ul>
<b>WLAN RF principles</b> may include:	<ul style="list-style-type: none"> <li>• antenna types</li> <li>• effective isotropic radiated power (EIRP)</li> <li>• reflection</li> <li>• refraction</li> <li>• RF gain/loss.</li> </ul>
<b>Wireless regulatory bodies, standards and certifications</b> may include:	<ul style="list-style-type: none"> <li>• 802.11a/b/g/n</li> <li>• European Telecommunications Standards Institute (ETSI)</li> <li>• Federal Communications Commission (FCC)</li> <li>• Wi-Fi Alliance.</li> </ul>
<b>Wireless network architectures</b> may include:	<ul style="list-style-type: none"> <li>• lightweight access point (LWAP)</li> <li>• split media access control (MAC)</li> <li>• stand-alone AP versus controller-based AP.</li> </ul>
<b>WLAN controller and access points</b> may include:	<ul style="list-style-type: none"> <li>• channel</li> <li>• command line interface (CLI)</li> <li>• graphical user interface (GUI)</li> <li>• interfaces</li> <li>• network time protocol (NTP)</li> <li>• power</li> <li>• wireless LANs (WLANs).</li> </ul>
<b>Controller-based AP discovery and association</b> may include:	<ul style="list-style-type: none"> <li>• dynamic host configuration protocol (DHCP)</li> <li>• domain name system (DNS)</li> <li>• master-controller</li> <li>• n+1 redundancy</li> </ul>

	<ul style="list-style-type: none"> <li>• over the air provisioning (OTAP)</li> <li>• primary-secondary-tertiary.</li> </ul>
<b>Roaming</b> may include:	<ul style="list-style-type: none"> <li>• Cisco centralised key management or proactive key caching (CCKM/PKC)</li> <li>• inter-controller</li> <li>• intra-controller</li> <li>• layer 2</li> <li>• layer 3.</li> </ul>
<b>Client operating system WLAN configuration</b> may include:	<ul style="list-style-type: none"> <li>• Linux</li> <li>• Mac</li> <li>• Windows.</li> </ul>
<b>Security components</b> may include:	<ul style="list-style-type: none"> <li>• authentication</li> <li>• encryption</li> <li>• intrusion prevention system (IPS)</li> <li>• management frame protection (MFP).</li> </ul>
<b>Identification assignments</b> may include:	<ul style="list-style-type: none"> <li>• 802.1q trunking</li> <li>• interface</li> <li>• service set identifier (SSID)</li> <li>• virtual local area network (VLAN)</li> <li>• wireless LAN identifier (WLANID).</li> </ul>
<b>Authentication methods</b> may include:	<ul style="list-style-type: none"> <li>• 802.1X</li> <li>• extensible authentication protocol-flexible authentication via secure tunnelling (EAP-FAST)</li> <li>• frame types: <ul style="list-style-type: none"> <li>• associated or unassociated</li> <li>• control</li> <li>• data</li> <li>• management</li> </ul> </li> <li>• guest</li> <li>• lightweight extensible authentication protocol</li> <li>• open (LEAP)</li> <li>• protected extensible authentication protocol (PEAP)</li> <li>• pre-shared key (PSK)</li> <li>• shared</li> <li>• wi-fi protected access (WPA) with extensible authentication protocol-transport layer security (WPA or WPA2 with EAP-TLS).</li> </ul>
<b>Sources of authentication</b> may include:	<ul style="list-style-type: none"> <li>• local or external (EAP)</li> <li>• pre-shared key (PSK)</li> <li>• remote authentication dial-in user service (RADIUS).</li> </ul>

<i>Encryption methods</i> may include:	<ul style="list-style-type: none"><li>• advanced encryption standard (AES)</li><li>• WPA or WPA2 with temporal key integrity protocol (TKIP).</li></ul>
<i>Networking tools</i> may include:	<ul style="list-style-type: none"><li>• client troubleshooting</li><li>• vendor debug</li><li>• vendor logging.</li></ul>

## Unit Sector(s)

Networking

# ICANWK606A Implement voice applications over secure wireless networks

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use network tools, equipment, software and protocols to design and use voice applications over a wireless local area network (WLAN).

## Application of the Unit

This unit applies to integrating voice over wireless local area network (VoWLAN) services into the WLAN and implementing quality of service (QoS), multi-protocol label switching (MPLS), and high bandwidth applications into the wireless network. Relevant job roles include advanced wireless help-desk technician, wireless network support specialist and wireless network engineer.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Specify requirements for voice over wireless architecture	<p>1.1 Analyse <i>voice requirements</i> for use over a wireless network</p> <p>1.2 Specify <i>wireless requirements for voice</i> applications for design considerations</p> <p>1.3 Verify network for voice readiness and suitability</p>
2. Design the implementation of secure VoWLAN	<p>2.1 Configure wireless client devices</p> <p>2.2 Design and configure the WLAN for VoWLAN with <i>security</i> configurations</p> <p>2.3 Design and configure infrastructure devices</p> <p>2.4 Devise structured troubleshooting methodology for VoWLAN implementation</p>
3. Design, implement and QoS for wireless applications	<p>3.1 Plan general design considerations for wired QoS</p> <p>3.2 Design wireless QoS deployment schemes</p> <p>3.3 Configure WLAN equipment for QoS</p>
4. Design, implement and test multicast over wireless environment	<p>4.1 Evaluate general multicast concepts</p> <p>4.2 Analyse the implications for multicast in 802.11</p> <p>4.3 Configure multicast requirements for a wireless network</p> <p>4.4 Devise structured troubleshooting methodology for multicast in a WLAN environment</p>
5. Plan and scope the wireless network for video and high-bandwidth applications	<p>5.1 Design and implement QoS for latency-sensitive applications</p> <p>5.2 Analyse the requirement for video applications over 802.11n WLAN</p> <p>5.3 Calculate and predict bandwidth requirements for video applications over the wireless network</p> <p>5.4 Analyse the impact of the WLAN interconnectivity for devices on QoS for devices or the wired side</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal or external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to take test measurements, interpret results and evaluate performance and interoperability of network
- planning and organisational skills to:
  - coordinate the process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - troubleshoot and debug WLAN issues
  - adapt configuration procedures to requirements of network
  - reconfigure depending on differing operational contingencies, risk situations and environments
- research skills to investigate appropriate hardware to meet requirements
- technical skills to:
  - select and configure networking devices and assess and implement security requirements
  - use networking tools.

### Required knowledge

- configuration, verification and troubleshoot procedures to undertake:
  - router operation and routing
  - VLAN switching and inter-switching communications
- IOS and IP networking models
- video and high bandwidth applications and requirements
- voice applications and protocols
- VoWLAN technologies
- wireless:
  - current regulations, standards and certifications
  - deployment schemes
  - network security technology
  - network topologies and elements
  - networking protocols
- WLAN devices and their specification and use.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• produce voice over wireless architecture requirements</li> <li>• evaluate, design and implement voice applications over WLAN</li> <li>• use network tools to configure and test wireless infrastructure and applications.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network installation may be conducted</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• computers</li> <li>• stand-alone and lightweight WLAN controllers and AP</li> <li>• hardware and software LAN/WLAN voice technologies</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation prepared by the candidate outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Voice requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• codecs</li> <li>• data flow</li> <li>• hardware</li> <li>• skinny call control protocol (SCCP)</li> <li>• session initiation protocol (SIP)</li> <li>• software</li> <li>• standards.</li> </ul>
<b><i>Wireless requirements for voice</i></b> may include:	<ul style="list-style-type: none"> <li>• cell overlap</li> <li>• cell separations</li> <li>• delay</li> <li>• jitter</li> <li>• latency</li> <li>• QoS</li> <li>• traffic separation.</li> </ul>
<b><i>Security</i></b> may include:	<ul style="list-style-type: none"> <li>• 802.11r</li> <li>• Cisco centralised key management or proactive key caching (CCKM/PKC)</li> <li>• extensible authentication protocol-flexible authentication via secure tunnelling (EAP-FAST)</li> <li>• lightweight extensible authentication protocol (LEAP)</li> <li>• protected extensible authentication protocol (PEAP)</li> <li>• wi-fi protected access with extensible authentication protocol-transport layer security (WPA or WPA2 with EAP-TLS).</li> </ul>

## Unit Sector(s)

Networking

# ICANWK607A Design and implement wireless network security

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to mitigate security threats to a wireless local area network (WLAN) by implementing security standards and policies.

## Application of the Unit

This unit applies to protecting the wireless network from security threats by applying security policies and best practices to implement security standards and to configure wireless security components. Relevant job roles include advanced wireless help-desk support technician, wireless network support specialist and wireless network engineer.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Plan to implement wireless network security	<p>1.1 Research and evaluate organisational and regulatory security policies that have been used to benchmark acceptable network security standards</p> <p>1.2 Assess customer requirements and needs against regulatory security compliance and OHS considerations</p> <p>1.3 Produce a plan with <i>security-solution documentation</i> for future growth and security needs</p>
2. Design, implement and test guest access services	<p>2.1 Analyse and select the appropriate architecture for <i>guest access services</i></p> <p>2.2 Produce a map and set up guest access accounts</p> <p>2.3 Configure WLAN controller <i>authorisation</i></p> <p>2.4 Configure the anchor and internal controllers</p> <p>2.5 Troubleshoot guest access issues</p>
3. Design, implement and test the security of wireless client devices	<p>3.1 Design and configure authentication of clients and management frame protection on clients and controllers</p> <p>3.2 Configure access control servers for integration with <i>wireless network</i></p> <p>3.3 Configure client and server-side digital certificate services</p> <p>3.4 Troubleshoot secure wireless connectivity services</p>
4. Design, implement and test the integration of wireless network with organisational network admission control systems	<p>4.1 Analyse network admission control <i>architectures</i> to assess the feasibility of network integration</p> <p>4.2 Analyse the high-level authentication process flow to ensure compatible integration</p> <p>4.3 Configure and test the wireless controller for admission control</p> <p>4.4 Troubleshoot integration issues of network with access control</p>
5. Evaluate and plan secure wireless connectivity services	<p>5.1 Configure the intrusion detection system (IDS) to monitor the network activities for malicious activities or policy violations</p> <p>5.2 Analyse the report produced by the IDS to review <i>threat-mitigation strategies</i></p> <p>5.3 Update security solution plan to mitigate <i>wireless vulnerabilities</i> to ensure network integrity</p>
6. Manage the requirements to integrate	<p>6.1 Evaluate end-to-end security solutions and assess how they integrate with the planned wireless solutions</p>

the WLAN with advanced security platforms	6.2 Analyse the <i>firewall configuration requirements</i> of WLANs to ensure compliance with organisational policies 6.3 Configure and test the WLAN controllers for wired and wireless intrusion prevention and detection system (IPDS) security protection
---	--

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - evaluate performance and interoperability of network
  - interpret results
  - take test measurements
- planning and organisational skills to:
  - coordinate the process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - adapt configuration procedures to requirements of network
  - reconfigure depending on differing operational contingencies, risk situations and environments
  - troubleshoot and debug WLAN issues
- research skills to investigate appropriate hardware to meet requirements
- technical skills to:
  - select and configure networking devices and assess and implement security requirements
  - use networking tools.

### Required knowledge

- configuration, verification and troubleshooting procedures to undertake:
  - router operation and routing
  - VLAN switching and inter-switching communications
- IOS and IP networking models
- intrusion prevention system (IPS) and IDS security protection
- threat mitigation strategies
- wireless:
  - current regulations, standards and certifications
  - deployment schemes
  - network security technology
  - network topologies, architectures and elements
  - networking protocols
- WLAN:

- advanced security platforms
- devices and their specification and use
- radio frequencies characteristics and their measuring techniques.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• conduct research and produce security solutions plan</li> <li>• evaluate, design and implement a WLAN site security plan</li> <li>• evaluate end-to-end security solutions and assess their integrate with the planned wireless solutions</li> <li>• use network tools to test wireless controllers and IPDS solutions.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where network installation may be conducted</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• live network</li> <li>• stand-alone and lightweight WLAN controllers and AP</li> <li>• hardware and software WLAN site survey tools</li> <li>• hardware and software IDS and IPS</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation prepared by the candidate outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Security-solution documentation</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• equipment inventory</li> <li>• naming standards</li> <li>• project management templates and report writing</li> <li>• satisfaction reports</li> <li>• standards:             <ul style="list-style-type: none"> <li>• International Organization for Standardization (ISO)</li> <li>• International Electrotechnical Commission (IEC)</li> <li>• Australian Standards (AS)</li> </ul> </li> <li>• version control.</li> </ul>
<p><b><i>Guest access services</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• anchor</li> <li>• bandwidth limiting</li> <li>• demilitarised zone or perimeter network (DMZ)</li> <li>• redundancy</li> <li>• scaling</li> <li>• VLAN-based</li> <li>• wired guest access.</li> </ul>
<p><b><i>Authorisation</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• authentication</li> <li>• email</li> <li>• external</li> <li>• internal</li> <li>• pass through.</li> </ul>
<p><b><i>Wireless network</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• cellular network</li> <li>• mobile services</li> <li>• paging network</li> <li>• wireless LAN (WLAN).</li> </ul>
<p><b><i>Architectures</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• agent versus agent</li> <li>• in-band</li> <li>• out-of-band.</li> </ul>
<p><b><i>Threat-mitigation strategies</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• client exclusions</li> <li>• custom signature</li> <li>• rogue reporting and location</li> <li>• signature</li> <li>• switch-port tracing.</li> </ul>

<b>Wireless vulnerabilities</b> may include:	<ul style="list-style-type: none"><li>• anomalous behaviour attacks</li><li>• client misconfiguration</li><li>• denial of service (DoS)</li><li>• eavesdropping</li><li>• hijacking</li><li>• radio frequency (RF) jamming</li><li>• signature attacks</li><li>• social engineering.</li></ul>
<b>Firewall configuration requirements</b> may include:	<ul style="list-style-type: none"><li>• access control list (ACL)</li><li>• demilitarised zone (DMZ)</li><li>• IP port pass-through.</li></ul>

## Unit Sector(s)

Networking

# ICANWK608A Configure network devices for a secure network infrastructure

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use software tools, equipment and protocols to configure network devices in the design of the infrastructure of a secure network.

## Application of the Unit

This unit applies to the use of routers and switches as network elements for a securing networks, and the use of router and switch operating system capabilities to mitigate attacks.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Implement layer 2 security	<p>1.1 Configure using router operating system (OS) commands to mitigate layer 2 attacks</p> <p>1.2 Implement identity-based networking services (IBNS) on switches to provide layer 2 security</p> <p>1.3 Implement identity management using access control system (ACS) as the authentication server</p>
2. Configure router OS intrusion prevention system (OS-IPS) to mitigate threats to network resources	<p>2.1 Evaluate the advanced capabilities of router OS-IPS firewall feature set to include event action processing (EAP) for <i>threats</i> to <i>network resources</i></p> <p>2.2 Configure and verify IPS features to identify threats and dynamically block them from entering the network</p> <p>2.3 Maintain, update and tune the IPS signatures</p> <p>2.4 Configure and verify context-based access control (CBAC) and network address translation (NAT) to dynamically mitigate identified threats to the network</p> <p>2.5 Configure and verify zone-based firewall (ZFW) to include advanced application inspections and uniform resource locator (URL) filtering for improved network security</p>
3. Configure virtual private networks (VPNs) to provide secure connectivity for site-to-site and remote access communications	<p>3.1 Analyse and evaluate internet protocol security (IPSec) and generic routing encapsulation (IPSec/GRE) features and functionality</p> <p>3.2 Configure secure connectivity for site-to-site VPN using certificate authorities</p> <p>3.3 Analyse dynamic multipoint VPN (DMVPN) features and capabilities</p> <p>3.4 Configure and verify secure connectivity for site-to-site VPN operations</p> <p>3.5 Provide highly secure network access with secure socket layer (SSL) VPN to deliver <i>remote access connectivity features and benefits</i></p> <p>3.6 Evaluate <i>EasyVPN benefits</i> and configure EasyVPN server with dynamic virtual tunnel interface (DVTI) to create a virtual access interface on the virtual tunnel interface</p> <p>3.7 Configure and verify EasyVPN remote to establish a site-to-site connection using both router and VPN software clients</p> <p>3.8 Implement group-encrypted transport (GET) VPN features to simplify the provisioning and management of VPN</p>
4. Implement network	4.1 Evaluate NFP features and functionality to provide

foundation protection (NFP)	infrastructure protection 4.2 Secure the management plane, the data plane and the control plane using OS features of the router
-----------------------------	--

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - evaluate performance and interoperability of network
  - interpret results
  - take test measurements
- planning and organisational skills to:
  - coordinate the process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - adapt configuration procedures to requirements of network
  - reconfigure depending on differing operational contingencies, risk situations and environments
  - troubleshoot and network security issues
- research skills to investigate appropriate hardware to meet requirements
- technical skills to:
  - assess and implement security requirements
  - select and configure networking devices
  - use networking tools.

### Required knowledge

- configuration, verification and troubleshooting procedures to undertake:
  - VLAN switching
  - inter-switching communications
- key features of deployment schemes
- setting up and securing firewalls
- IOS and IP networking models
- local area network (LAN) and wide area network (WAN) implementations
- NAT concepts and configuration
- network topologies, architectures and elements
- networking standards and protocols
- procedures for configuring, verifying and troubleshooting router operations and routing
- secure connectivity and remote access communications
- security protocols, such as SSL
- threat mitigation strategies

- tunnelling protocols
- VPN technologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• evaluate network security system requirements</li> <li>• design, implement and verify network security systems using layer 2 and layer 3 devices</li> <li>• mitigate treats to network security</li> <li>• configure VPNs for secure connectivity</li> <li>• evaluate and implement NFP.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where network security may be evaluated and tightened</li> <li>• hardware and software</li> <li>• organisational guidelines, procedures and policies</li> <li>• computers</li> <li>• hardware and software LAN and WLAN internetwork technologies</li> <li>• hardware and software security technologies</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation prepared by the candidate outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Threats</i></b> may include:	<ul style="list-style-type: none"> <li>• denial of service (DoS)</li> <li>• IP spoofing</li> <li>• media access control (MAC) spoofing</li> <li>• port scanning</li> <li>• sniffing.</li> </ul>
<b><i>Network resources</i></b> may include:	<ul style="list-style-type: none"> <li>• company information</li> <li>• corporate secrets</li> <li>• data</li> <li>• financial data</li> <li>• personal information.</li> </ul>
<b><i>Remote access connectivity features and benefits</i></b> may include:	<ul style="list-style-type: none"> <li>• flexible and cost-effective licensing</li> <li>• lower desktop support costs</li> <li>• reduced cost and management complexity</li> <li>• threat protection.</li> </ul>
<b><i>EasyVPN benefits</i></b> may include:	<ul style="list-style-type: none"> <li>• deployment flexibility</li> <li>• easy to use and maintain</li> <li>• enhanced interoperability</li> <li>• increased productivity.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK609A Configure and manage intrusion prevention system on network sensors

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use appropriate tools, equipment and software to implement an intrusion prevention system (IPS) on IPS sensors to mitigate network attacks.

## Application of the Unit

This unit applies to the use of IPS and signatures of IPS sensors, installation and configuration of advanced features, analysis of IPS sensor events as well as the upgrade and maintenance of IPS systems. Relevant job roles include certified IPS specialist, network security specialist and network security manager.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Evaluate the ways IPS sensors are used to mitigate network attacks</p>	<p>1.1 Evaluate <i>system requirements</i> of the <i>network</i> according to <i>industry standards</i> for inline operations</p> <p>1.2 Compare inline to promiscuous mode sensor operations and evaluate how IPS protects network devices from attacks</p> <p>1.3 Evaluate the evasive techniques used by hackers and determine ways IPS can defeat those techniques in the network</p> <p>1.4 Evaluate the considerations necessary for selection, placement, and deployment of a network IPS including using features of IPS signature</p>
<p>2. Select and install IPS sensors and configure essential system parameters</p>	<p>2.1 Install and initialise the sensor for <i>configuration of sensor interfaces</i>, interface pairs, virtual local area network (VLAN) pairs, and VLAN groups</p> <p>2.2 Configure management access to the sensor appliance and create user accounts to comply with different <i>user</i> roles</p> <p>2.3 Set up sensor communications with external management and monitoring systems</p> <p>2.4 Manage and monitor sensor operation using built-in tools</p> <p>2.5 Upgrade and maintain IPS <i>sensor parameters and licensing requirements</i> to maintain network integrity</p> <p>2.6 Plan the mitigation of specific network vulnerabilities and exploits</p>
<p>3. Tune IPS sensor advanced system parameters to optimise attack mitigation performance</p>	<p>3.1 Tune sensor signatures to provide optimal protection of the network</p> <p>3.2 Create custom signatures and a meta signature to meet <i>mitigation performance configurations</i> for given <i>test scenarios</i> while disabling alert production for the component signatures</p> <p>3.3 Configure gateway for passive operating system (OS) fingerprinting</p> <p>3.4 Configure the external product interface to receive and process information from external security and management products to automatically enhance the sensor configuration information</p> <p>3.5 Configure a virtual sensor and anomaly detection</p> <p>3.6 Monitor the IPS advanced features for optimal performance</p>
<p>4. Manage security and response of the IPS to network attacks</p>	<p>4.1 Monitor IPS events using <i>network tools</i> to determine appropriate response to network attacks</p> <p>4.2 Use <i>network management tools</i> to assess and manage IPS</p>

	effectiveness against security intrusion
--	--

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - interpret results and evaluate performance and interoperability of network
  - take test measurements
- planning and organisational skills to:
  - coordinate the process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - adapt configuration procedures to requirements of network
  - reconfigure depending on differing operational contingencies, risk situations and environments
  - debug networking entities configuration issues
  - troubleshoot
- research skills to investigate appropriate hardware to meet requirements
- technical skills to:
  - assess and implement security requirements
  - select and configure networking devices
  - use calling line identification (CLI) and the web interface in configuration of network entities
  - use networking and network management tools.

### Required knowledge

- configuration, verification and troubleshooting procedures to undertake a switch and router operation and routing protocol
- deployment schemes
- setting up and securing firewalls
- internetwork operating system (IOS) and internet protocol (IP) networking models
- IP addressing and detailed understanding of the transmission control protocol (TCP) or IP stack
- IPS and intrusion detection system (IDS) strategies
- IPS sensor technologies and licensing requirements
- local area network or wide area network (LAN/WAN) implementations and design
- network topologies, architectures and elements
- networking standards and protocols

- signatures and meta signatures
- threat mitigation strategies
- VLAN concepts and functionality
- VPN technologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• evaluate IPS requirements and configure IPS sensors</li> <li>• tune up IPS sensors to optimise attack mitigation</li> <li>• use network tools and network management tools to monitor and manage security sensor events</li> <li>• upgrade and maintain IPS sensors.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site or prototype where network installation may be conducted</li> <li>• relevant hardware and software</li> <li>• organisational guidelines</li> <li>• live network</li> <li>• IPS system and its sensors</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation prepared by the candidate outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>System requirements</i></b> may refer to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<b><i>Network</i></b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• firewall</li> <li>• IDS</li> <li>• internet</li> <li>• IPS</li> <li>• large and small LAN</li> <li>• protocol</li> <li>• WAN</li> <li>• wireless LAN (WLAN).</li> </ul>
<b><i>Industry standards</i></b> may include:	<ul style="list-style-type: none"> <li>• Australian Standards (AS)</li> <li>• International Electrotechnical Commission (IEC)</li> <li>• International Organization for Standardization (IOS)</li> <li>• security policy and procedures.</li> </ul>
<b><i>Configuration of sensor interfaces</i></b> may include:	<ul style="list-style-type: none"> <li>• allowed hosts</li> <li>• assignment of virtual sensors</li> <li>• creation of pairs</li> <li>• enabling</li> <li>• software bypass.</li> </ul>
<b><i>User</i></b> may include:	<ul style="list-style-type: none"> <li>• external</li> <li>• internal</li> <li>• remote access</li> <li>• temporary.</li> </ul>
<b><i>Sensor parameters and licensing requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• application of software images and upgrades</li> <li>• configuration of files:                             <ul style="list-style-type: none"> <li>• file transfer protocol (FTP)</li> <li>• hypertext transfer protocol (HTTP)</li> <li>• hypertext transfer protocol secure (HTTPS)</li> <li>• service control point (SCP)</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• installation of sensor licence</li> <li>• installation of signature update of file names</li> <li>• performing sensor password recovery.</li> </ul>
<i>Mitigation-performance configurations</i> may include:	<ul style="list-style-type: none"> <li>• event action filters</li> <li>• event variables</li> <li>• general settings for event action rules</li> <li>• response actions based on risk taking</li> <li>• target value ratings.</li> </ul>
<i>Test scenarios</i> may include:	<ul style="list-style-type: none"> <li>• exploiting the network: <ul style="list-style-type: none"> <li>• denial of service (DOS) and OS exploitation and countermeasures</li> <li>• eavesdropping and interception attacks and countermeasures</li> <li>• infrastructure flooding attacks and countermeasures</li> </ul> </li> <li>• simple network reconnaissance: <ul style="list-style-type: none"> <li>• dynamic host configuration protocol (DHCP) response sniffing and spoofing and countermeasures</li> <li>• hacking devices and hacking countermeasures</li> <li>• port scanning and port scanning countermeasures</li> <li>• sniffing and sniffing countermeasures.</li> </ul> </li> </ul>
<i>Network tools</i> may include:	<ul style="list-style-type: none"> <li>• command line interface (CLI)</li> <li>• IPS device manager</li> <li>• IPS event viewer.</li> </ul>
<i>Network management tools</i> may include:	<ul style="list-style-type: none"> <li>• intrusion attacks</li> <li>• network security management</li> <li>• sniffer trace.</li> </ul>

## Unit Sector(s)

Networking

# ICANWK610A Design and build integrated VoIP networks

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use appropriate tools, equipment, software and protocols to design and build an internet protocol (IP)-based integrated voice network for small to medium enterprises.

## Application of the Unit

This unit applies to the use of foundational elements of voice over internet protocol (VoIP) calls, and the description of dial plans for the design and implementation of gateways, gatekeepers and IP-IP gateways. Relevant job roles include advanced VoIP network support specialist, VoIP network engineer and VoIP systems installer.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan design concepts of a voice network for specified voice quality</p>	<p>1.1 Determine the <i>design requirements</i> of an IP-based voice network including the choice of <i>network elements</i></p> <p>1.2 Evaluate the various applications of <i>real time protocols</i> and of <i>signalling protocols</i> for an appropriate gateway</p> <p>1.3 Design a site numbering plan including digit manipulation and path selection process</p> <p>1.4 Plan and assign calling privileges as required</p> <p>1.5 Predict VoIP call flow and potential impact on voice quality considerations and network performance</p>
<p>2. Design, configure implement and test voice protocols and interoperation of VoIP communications network</p>	<p>2.1 Produce the design layout of the voice network according to the design requirements</p> <p>2.2 Design and configure a gateway and a gatekeeper to using <i>H.323 protocol suite</i> for dial plan resolution and call admission control for the network</p> <p>2.3 Configure and test the use of real-time protocols, call management protocols and gateway signalling protocol in the network design</p> <p>2.4 Analyse the function and interoperation of gatekeepers within an IP communications network</p>
<p>3. Design, configure and test a VoIP IP-to-IP call system</p>	<p>3.1 Analyse the IP-to-IP gateway features and functionality requirements for a given network design requirement</p> <p>3.2 Configure the gatekeeper to support an IP-to-IP gateway</p> <p>3.3 Configure and test the IP-to-IP gateway to provide address hiding, protocol and media interworking and call admission control implementations</p> <p>3.4 Produce test results and evaluate against design requirements</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - take test measurements and interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to:
  - coordinate the process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - adapt configuration procedures to requirements of network
  - reconfigure depending on differing operational contingencies, risk situations and environments
  - troubleshoot and debug WLAN issues
- research skills to investigate appropriate hardware to meet requirements
- technical skills to:
  - select and configure networking devices and assess and implement security requirements
  - use networking and network management tools.

### Required knowledge

- codecs and their protocols for use
- configuration, verification and troubleshooting procedures to undertake:
  - basic router operation and routing
  - switch with VLANs and inter-switching communications
- design considerations and deployment schemes
- gateway technologies
- IOS and IP networking models
- procedures and techniques for implementing LAN/WAN topologies
- network topologies, architectures and elements
- networking standards and protocols
- voice applications and protocols
- VoIP technologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• produce design plan and requirements of VoIP network</li> <li>• configure and test for voice gateways</li> <li>• design site numbering plan, dial plans and priorities</li> <li>• use networking and network management tools</li> <li>• configure and test real time protocols, call management protocols and gateway signalling protocol in the network elements</li> <li>• implement voice systems and applications.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network installation may be conducted</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• computers</li> <li>• stand-alone and lightweight WLAN controllers and AP</li> <li>• hardware and software LAN/WLAN voice technologies</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation prepared by the candidate outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Design requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• applications for dial peer types</li> <li>• applications of different types of voice ports</li> <li>• calling privileges</li> <li>• functionality of digital signal processor (DSP)</li> <li>• grade of service</li> <li>• latency</li> <li>• numbering plan</li> <li>• quality of service</li> <li>• requirements, complexity and types of codecs (coder-decoders):             <ul style="list-style-type: none"> <li>• G.711</li> <li>• G.722_64K</li> <li>• G.723.1</li> <li>• G.726</li> <li>• G.728</li> <li>• G.729</li> <li>• IIBC MODE 30</li> <li>• ILBC MODE 20 - internet low bitrate codec</li> </ul> </li> <li>• role and type of gateways</li> <li>• voice quality requirements.</li> </ul>
<p><b><i>Network elements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• call managers</li> <li>• gatekeepers</li> <li>• gateways</li> <li>• IP phones</li> <li>• routers</li> <li>• servers</li> <li>• soft phones</li> <li>• switches</li> <li>• toll managers.</li> </ul>
<p><b><i>Real time protocols</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• compressed RTP (CRTP)</li> <li>• control protocol (RTCP)</li> <li>• real-time transport protocol (RTP)</li> <li>• Secure RTP (SRTP).</li> </ul>

<i>Signalling protocols</i> may include:	<ul style="list-style-type: none"><li>• H.323</li><li>• media gateway control protocol (MGCP)</li><li>• skinny client control protocol (SCCP)</li><li>• session initiation protocol (SIP).</li></ul>
<i>H.323 protocol suite</i> may include:	<ul style="list-style-type: none"><li>• call control</li><li>• media control</li><li>• registration, admission and status (RAS).</li></ul>

## Unit Sector(s)

Networking

# ICANWK611A Configure call processing network elements for secure VoIP networks

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use tools, equipment, software and protocols to install or upgrade call processing network elements for secure and reliable internet protocol (IP)-based communications networks.

## Application of the Unit

This unit applies to the use of voice management servers to support single site and centralised call processing models. Relevant job roles include advanced voice over internet protocol (VoIP) network support specialist, VoIP network engineer and VoIP systems installer.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan to implement enterprise IP communications</p>	<p>1.1 Produce <i>design considerations</i> for planning and implementing IP-based voice communications networks</p> <p>1.2 Produce a <i>solutions plan</i> to meet business expectations</p> <p>1.3 Select the required <i>resources</i> to effectively install or upgrade voice-management servers</p> <p>1.4 Perform, test and evaluate the installation or upgrade of <i>voice call-management software</i> against the solutions plan</p>
<p>2. Plan, configure and test call-processing network elements for a single-site deployment</p>	<p>2.1 Produce a topology of the voice network and plan the location of the <i>call-processing network elements</i> to best support the business requirements</p> <p>2.2 Install and test voice servers to support <i>user requirements</i>, third-party session initiation protocol (SIP) phones and lightweight directory access protocol (LDAP) integration</p> <p>2.3 Install and configure local area network (LAN) switches to support IP phones</p> <p>2.4 Configure and test voice gateways according to <i>gateway requirements</i> to allow for internal calls and external calls and provide <i>voice features</i></p> <p>2.5 Configure and test the integration of voice servers with other <i>media systems</i></p> <p>2.6 Test and evaluate final configuration against the design requirements</p>
<p>3. Manage security and privacy of IP voice network</p>	<p>3.1 Produce design and installation templates for bulk deployment across the enterprise</p> <p>3.2 Research and implement the use of a <i>network support model</i> to manage the performance and security of the IP voice network</p> <p>3.3 Design and conduct simple <i>security deployment scenarios</i> to test the integrity and security of the voice network</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - take test measurements and interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to:
  - plan, prioritise and monitor own work
  - liaise with others to coordinate the process
- problem-solving and contingency-management skills to:
  - adapt configuration procedures to requirements of network
  - reconfigure depending on differing operational contingencies, risk situations and environments
  - troubleshoot and debug wireless local area network (WLAN) issues
- research skills to investigate appropriate hardware to meet requirements
- technical skills to:
  - assess and implement security requirements
  - select and configure networking devices
  - use networking and network management tools.

### Required knowledge

- call-processing network element technology
- codecs and their protocols for use
- configuration, verification and troubleshoot procedures to undertake:
  - basic router operation and routing
  - switch with virtual local area network (VLANs) and inter-switching communications
- design considerations and deployment schemes
- interoperability of legacy private branch exchange (PBX) to IP voice communications
- internetwork operating system (IOS) and internet protocol (IP) networking and network support models
- LAN and wide area network (WAN) implementations
- network topologies, architectures and elements
- network, signalling and call management protocols
- networking standards and protocols
- security deployment scenarios
- voice applications and protocols

- VoIP technologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• produce design plan and requirements of call processing network elements</li> <li>• configure and test voice gateways and LAN switches</li> <li>• evaluate voice call manager server requirements and design voice call systems and applications</li> <li>• implement voice systems and applications on voice call manager</li> <li>• manage security of voice network.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where network installation may be conducted</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• computers</li> <li>• stand-alone and lightweight WLAN controllers and AP</li> <li>• hardware and software LAN/WLAN voice technologies</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation prepared by the candidate outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• oral or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Design considerations</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• access</li> <li>• additional resources for new plan</li> <li>• call processing network element location</li> <li>• deployment plan:                         <ul style="list-style-type: none"> <li>• centralised call processing model</li> <li>• distributed or decentralised call processing model</li> <li>• single or multiple LAN sites</li> </ul> </li> <li>• dial plan</li> <li>• encryption</li> <li>• existing IP network capability</li> <li>• existing legacy PBX</li> <li>• failure to WAN and internet access</li> <li>• feasibility</li> <li>• grade of service (GoS)</li> <li>• growth</li> <li>• interoperability between systems and protocols</li> <li>• power back up</li> <li>• quality of service (QoS)</li> <li>• security.</li> </ul>
<p><b><i>Solution plans</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• design</li> <li>• execution</li> <li>• implementation testing</li> <li>• management</li> <li>• review and optimisation.</li> </ul>
<p><b><i>Resources</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• call-processing network equipment</li> <li>• protocols:                         <ul style="list-style-type: none"> <li>• call control</li> <li>• H.323</li> <li>• LDAP</li> <li>• media control</li> <li>• media gateway controller protocol (MGCP)</li> <li>• registration, admission and status (RAS)</li> <li>• signalling connection control part (SCCP)</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• SIP</li> <li>• software tools</li> <li>• support tools</li> <li>• technical support and backup.</li> </ul>
<b><i>Voice call-management software</i></b> may include:	<ul style="list-style-type: none"> <li>• Asterisk</li> <li>• Cisco voice call manager.</li> </ul>
<b><i>Call-processing network elements</i></b> may include:	<ul style="list-style-type: none"> <li>• call manager</li> <li>• call processing agent</li> <li>• IP phones</li> <li>• routers</li> <li>• SIP phones</li> <li>• switches</li> <li>• voice gateways</li> <li>• voice server.</li> </ul>
<b><i>User requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• calling patterns</li> <li>• groups: <ul style="list-style-type: none"> <li>• hunt</li> <li>• paging</li> </ul> </li> <li>• profiles</li> <li>• roles</li> <li>• security access.</li> </ul>
<b><i>Gateway requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• analog and digital trunking</li> <li>• call coverage</li> <li>• calling patterns</li> <li>• calling privileges</li> <li>• dial plans</li> <li>• digital signal processing (DSP) hardware</li> <li>• external calls to public switched telephone network (PSTN)</li> <li>• route patterns and filters.</li> </ul>
<b><i>Voice features</i></b> may include:	<ul style="list-style-type: none"> <li>• answer call</li> <li>• barge</li> <li>• call park</li> <li>• call pickup</li> <li>• call transfer</li> <li>• conference</li> <li>• intercom</li> <li>• music on hold</li> <li>• originate call</li> <li>• privacy.</li> </ul>
<b><i>Media systems</i></b> may	<ul style="list-style-type: none"> <li>• chat</li> </ul>

include:	<ul style="list-style-type: none"> <li>• email</li> <li>• instant messaging (IM)</li> <li>• presence.</li> </ul>
<b>Network support model</b> may include:	<ul style="list-style-type: none"> <li>• backup support and recovery</li> <li>• call manager monitoring</li> <li>• monitoring tools:             <ul style="list-style-type: none"> <li>• Call Manager</li> <li>• Microsoft Event Viewer</li> <li>• Microsoft Performance Monitor</li> <li>• Sniffer Trace</li> </ul> </li> <li>• network management:             <ul style="list-style-type: none"> <li>• accounting</li> <li>• configuration</li> <li>• fault</li> <li>• performance</li> <li>• security</li> </ul> </li> <li>• physical and network security</li> <li>• power backup</li> <li>• reporting mechanism</li> <li>• serviceability</li> <li>• troubleshooting.</li> </ul>
<b>Security deployment scenarios</b> may include:	<ul style="list-style-type: none"> <li>• exploiting the network:             <ul style="list-style-type: none"> <li>• denial of service (DoS) and OS exploitation and countermeasures</li> <li>• eavesdropping and interception attacks and countermeasures</li> <li>• infrastructure flooding attacks and countermeasures</li> </ul> </li> <li>• simple network reconnaissance:             <ul style="list-style-type: none"> <li>• dynamic host configuration protocol (DHCP) response sniffing and spoofing and countermeasures</li> <li>• hacking devices and hacking countermeasures</li> <li>• port scanning and port scanning countermeasures</li> <li>• sniffing and sniffing countermeasures</li> <li>• virtual network computing (VNC) enumeration and VNC countermeasures.</li> </ul> </li> </ul>

## **Unit Sector(s)**

Networking

# ICANWK612A Plan and manage troubleshooting advanced integrated IP networks

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan, manage and implement troubleshooting and monitoring strategies to ensure reliability and performance on advanced integrated internet protocol (IP) networks.

## Application of the Unit

This unit applies to maintaining and troubleshooting infrastructure supporting voice, video and data networks. Relevant job roles include advanced support engineer, network support specialist and information and communications technology (ICT) network engineer.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan the strategies for troubleshooting and monitoring the performance of advanced integrated IP networks</p>	<p>1.1 Develop a plan to monitor and manage the <i>IP network</i> to optimise its performance and reliability</p> <p>1.2 Plan the isolation of network segments for troubleshooting procedures</p> <p>1.3 Plan the testing sequences and scenarios of network infrastructure</p> <p>1.4 Select appropriate <i>network testing and monitoring tools</i> and software application to suit the specific network troubleshooting and monitoring sequence</p>
<p>2. Manage and monitor troubleshooting strategies for complex enterprise networks</p>	<p>2.1 Manage and monitor <i>strategies</i> for network monitoring structure</p> <p>2.2 Produce a routine internetwork operating system (IOS) device maintenance plan to include monitoring of <i>routing protocols</i> and <i>router configurations</i></p> <p>2.3 Isolate sub-optimal internetwork operations at the appropriate open systems interconnection (OSI) model layer</p> <p>2.4 Produce a plan troubleshooting and monitoring security issues related to <i>IOS services</i> for mission critical applications</p> <p>2.5 Produce a plan troubleshooting and monitoring internet protocol version 6 (IPv6) and version 4 (IPv4) interoperability</p>
<p>3. Implement test plans for advanced network solutions</p>	<p>3.1 Test switch-to-switch connectivity, access ports and loop prevention for the virtual local area network (VLAN) based solution</p> <p>3.2 Test private VLANs</p> <p>3.3 Test switch virtual interfaces (SVI)</p> <p>3.4 Test switch support of <i>advanced services</i></p> <p>3.5 Troubleshoot <i>switch configuration</i></p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and/or external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports as required
- numeracy skills to:
  - take test measurements and interpret results
  - evaluate performance and interoperability of network
- planning and organisational skills to:
  - coordinate the process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to:
  - adapt configuration procedures to requirements of network
  - reconfigure depending on differing operational contingencies, risk situations and environments
  - troubleshoot and debug WLAN issues
- research skills to investigate appropriate hardware to meet requirements
- technical skills to:
  - select and configure networking devices and assess and implement security requirements
  - use networking and network testing and management tools.

### Required knowledge

- advanced network solutions
- configuration, verification and troubleshoot procedures to undertake:
  - router operation and routing
  - VLANs switching and inter-switching communications
- deployment schemes
- IOS and IP networking models
- IOS services
- IP network topologies, architectures and elements
- networking standards and protocols
- threat mitigation strategies
- VLAN technologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• plan and monitor IP networks for performance and reliability</li> <li>• evaluate, design and implement a troubleshooting structured plan</li> <li>• use network testing and monitoring tools</li> <li>• produce a maintenance plan for monitoring routing protocols and configurations</li> <li>• implement tests of advanced network solutions.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• site where complex network installation may be conducted</li> <li>• hardware and software</li> <li>• organisational guidelines</li> <li>• computers</li> <li>• LAN and WAN systems, including voice and video hardware and software</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate installing, configuring and testing a new or updated network</li> <li>• evaluation of documentation prepared by the candidate outlining testing procedures, test results, recommendation to network changes and completion records</li> <li>• verbal or written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and</p>

	<p>the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>IP network</i></b> may include:	<ul style="list-style-type: none"> <li>• integrated network</li> <li>• internet</li> <li>• intranet</li> <li>• local area network (LAN)</li> <li>• router-based network</li> <li>• switch-based network</li> <li>• VPN</li> <li>• WAN</li> <li>• WLAN.</li> </ul>
<b><i>Network testing and monitoring tools</i></b> may include:	<ul style="list-style-type: none"> <li>• applications, services or systems monitor</li> <li>• bandwidth tester</li> <li>• connection speed</li> <li>• fingerprinting monitor</li> <li>• flow monitor</li> <li>• latency calculator</li> <li>• mapping tools</li> <li>• network:             <ul style="list-style-type: none"> <li>• connectivity</li> <li>• monitor</li> <li>• security monitor</li> <li>• simulator</li> </ul> </li> <li>• packet capture and analyser</li> <li>• packet tracer</li> <li>• path characterisation</li> <li>• protocol analyser</li> <li>• sniffer or analyser</li> <li>• simple network management protocol (SNMP) tools</li> <li>• voice over internet protocol (VoIP) monitors.</li> </ul>
<b><i>Strategies</i></b> may include:	<ul style="list-style-type: none"> <li>• use of internetwork operating system (IOS) tools</li> <li>• use of vendor-recommended software and hardware:             <ul style="list-style-type: none"> <li>• Apple</li> <li>• Billion</li> <li>• Cisco</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• Juniper Networks.</li> </ul>
<b>Routing protocols</b> may include:	<ul style="list-style-type: none"> <li>• external border gateway protocol (EBGP)</li> <li>• enhanced interior gateway routing protocol (EIGRP)</li> <li>• open shortest path first (OSPF)</li> <li>• routing information protocol (RIP).</li> </ul>
<b>Router configurations</b> may include:	<ul style="list-style-type: none"> <li>• dynamic host configuration protocol (DHCP)</li> <li>• link control settings</li> <li>• network address translation (NAT)</li> <li>• usernames and passwords.</li> </ul>
<b>IOS services</b> may include:	<ul style="list-style-type: none"> <li>• auto-upgrade manager (AUM)</li> <li>• embedded event management (EEM)</li> <li>• flexible netflow</li> <li>• file transfer protocol (FTP)</li> <li>• hypertext transfer protocol (HTTP)</li> <li>• identity-based network services (IBNS)</li> <li>• IOS firewall</li> <li>• IP service level agreement (IPSLA)</li> <li>• network-based application recognition 2 (NBAR2)</li> <li>• network time protocol (NTP)</li> <li>• performance routing (PfR)</li> <li>• remote copy or rate control protocol (RCP)</li> <li>• service advertisement framework (SAF)</li> <li>• web services management agent (WSMA).</li> </ul>
<b>Advanced services</b> may include:	<ul style="list-style-type: none"> <li>• internet protocol TV (IPTV)</li> <li>• video</li> <li>• voice over internet protocol (VoIP)</li> <li>• wireless.</li> </ul>
<b>Switch configuration</b> may include:	<ul style="list-style-type: none"> <li>• spanning tree</li> <li>• switch virtual interface (SVI)</li> <li>• virtual LAN (VLAN).</li> </ul>

## Unit Sector(s)

Networking

# ICANWK613A Develop plans to manage structured troubleshooting process of enterprise networks

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage the maintenance of a complex integrated enterprise network to ensure availability and performance standard.

## Application of the Unit

This unit applies to an information and communications technology (ICT) network specialist, network engineer, network infrastructure engineer, senior network administrator, network and systems manager, ICT security specialist, security engineer, communications engineer, communications manager.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan the strategies for structured troubleshooting and monitoring of enterprise networks</p>	<p>1.1 Develop strategies to monitor and manage an <b>enterprise network</b> to ensure availability and performance standard</p> <p>1.2 Conduct equipment and skills audits as required</p> <p>1.3 Evaluate the business value of service level agreements (SLAs), formal maintenance plans and monitoring procedures against best practices for maintenance and fault procedures</p> <p>1.4 Assign functional responsibilities to <b>stakeholders</b> according to the maintenance plan</p> <p>1.5 Select and use appropriate <b>network fault management</b> tools and monitor and improve network performance</p>
<p>2. Manage and monitor structured troubleshooting strategies for complex enterprise networks</p>	<p>2.1 Implement structured network <b>maintenance management processes and procedures</b> in line with <b>enterprise design plans and policies</b> for ensuring high network reliability</p> <p>2.2 Undertake risk assessment evaluation and rank threats for minimal impact</p> <p>2.3 Develop and implement <b>disaster recovery strategies</b> for reliable contingencies and business continuity in a complex routing environment</p> <p>2.4 Measure and analyse performance against an agreed baseline</p>
<p>3. Conduct structured network troubleshooting strategies</p>	<p>3.1 Analyse and troubleshoot <b>layer 2 and 3 switch configuration</b> to ensure the availability and resilience of a switched environment</p> <p>3.2 Implement effective control of broadcast and multicast traffic in a switched environment</p> <p>3.3 Analyse and troubleshoot scalable network layer connectivity with routing data structures and routing functions</p> <p>3.4 Analyse and troubleshoot enterprise intra and internetwork <b>routing protocols</b>, architectures and processes</p> <p>3.5 Analyse and troubleshoot route redistribution operations in inter-autonomous system routing architectures and processes</p> <p>3.6 Test and manage internet protocol version 6 (IPv6) and version 4 (IPv4) addressing schema and verify internal and external IP address translation standards</p> <p>3.7 Analyse and troubleshoot communication filtering techniques, <b>automated address allocation</b> systems and IPv6 operational issues in the context of enterprise routing protocols</p> <p>3.8 Analyse and troubleshoot wireless network configuration issues</p>

	3.9 Analyse and resolve network performance issues in an integrated voice or video network
--	--

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to identify functional, performance and management features associated with the operation of complex network infrastructure
- communication skills to:
  - communicate complex concepts and issues technically and in plain language
  - liaise with diverse clients
- literacy skills to:
  - develop and prepare operational documentation, such as policies and procedures, technical and management reports
  - interpret and prepare technical documentation
  - prepare project-management documentation
- problem-solving skills suitable for complex and dynamic environments with demanding service levels
- risk-management skills for complex and dynamic environments
- technical skills to investigate, analyse and resolve faults and performance problems in complex network infrastructure.

### Required knowledge

- benefits of a formal or structured approach to network management
- disaster recovery strategies
- emerging viable business and social technologies
- enterprise network technologies, design plans and policies
- enterprise network topologies, architectures and elements
- external developments or factors that affect network design
- IPv4 and IPv6 addressing configurations
- maintenance and fault procedures
- maintenance and management tools and practices suitable for complex networks
- networking standards and protocols
- risk management strategies and practices suitable for a complex network environment
- routing and routed protocols
- routing and switching technologies for an enterprise environment
- security for enterprise networks
- security standards and technologies for network environments
- SLAs
- skills audit
- troubleshooting and threat-mitigation strategies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• analyse, document and troubleshoot a given complex network using industry methodologies and resources</li> <li>• develop monitoring and management plans</li> <li>• use networking and network fault management tools</li> <li>• evaluate risk assessments and minimise threats on enterprise networks.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• location where the network configuration can be implemented</li> <li>• routers and switches with appropriate operating systems</li> <li>• computers</li> <li>• suitable testing and analyses tools</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate preparing, installing, configuring, testing, analysing and correcting network problems</li> <li>• documentation of the tools and methodologies adopted by the candidate to test, analyse, network functionality and performance (system audits)</li> <li>• documentation of the options and justification for the selected solutions developed to address network problems</li> <li>• evidence of the success of the corrective measures</li> <li>• delivery of the revised configuration documentation of the entire network</li> <li>• verbal and written questioning of required knowledge.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level,</p>

	<p>language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

	<ul style="list-style-type: none"> <li>• private VLANS</li> <li>• rapid spanning tree protocol (RSTP)</li> <li>• spanning tree protocol (STP)</li> <li>• switch virtual interface (SVI)</li> <li>• switch supervisor redundancy</li> <li>• switch-to-switch connectivity for the VLAN-based solution</li> <li>• VLAN access control list (VACL)</li> <li>• VLAN trunking protocol (VTP).</li> </ul>
<i>Routing protocols</i> may include:	<ul style="list-style-type: none"> <li>• border gateway protocol (BGP)</li> <li>• external border gateway protocol (EBGP)</li> <li>• enhanced interior gateway routing protocol (EIGRP)</li> <li>• first-hop redundancy protocols (FHRP): <ul style="list-style-type: none"> <li>• gateway load balancing protocol (GLBP)</li> <li>• hot standby router protocol (HSRP)</li> <li>• virtual router redundancy protocol (VRRP)</li> </ul> </li> <li>• open shortest path first (OSPF).</li> </ul>
<i>Automated address allocation</i> may include:	<ul style="list-style-type: none"> <li>• automatic private IP addressing (APIPA)</li> <li>• dynamic host configuration protocol (DHCP)</li> <li>• IPv6 stateless address auto-configuration.</li> </ul>

## Unit Sector(s)

Networking

## ICANWK614A Manage IT security

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage data security, enterprise continuity, incidents, networks and telecommunications security, system and application security.

### Application of the Unit

Experienced security technical specialists, security analysts and security consultants apply the skills and knowledge in this unit.

Those with managerial responsibility undertake this role.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Manage enterprise security parameters</p>	<p>1.1 Determine and evaluate <i>parameters</i> that affect enterprise security to establish benchmark</p> <p>1.2 Review security classification and data management policies and guidance for relevance and update if required</p> <p>1.3 Plan and coordinate an effective enterprise <i>continuity of operations</i> (COOP) program and organisational structure for critical business continuity</p> <p>1.4 Develop a plan to address <i>factors</i> to manage the risks of the enterprise</p> <p>1.5 Integrate and evaluate risk management concepts into operational activities with related contingency planning activities using an enterprise COOP performance measurement program</p> <p>1.6 Evaluate and assess <i>security incidents</i> to establish an effective <i>incident-management program</i> for the enterprise</p> <p>1.7 Manage the coordination between <i>related security teams</i> for effective incident management processes and procedures</p>
<p>2. Manage networks and telecommunications security</p>	<p>2.1 Develop a network security and telecommunications program in line with enterprise policy and security goals</p> <p>2.2 Manage the necessary <i>resources</i> to integrate network security and telecommunications program activities with technical support, security administration and incident response activities in a secure network</p> <p>2.3 Establish effective communications protocols between the network security and telecommunications team and related security teams to manage the risks</p> <p>2.4 Establish a performance measurement program to evaluate the security effectiveness of the integrated network security and telecommunications network</p> <p>2.5 Ensure enterprise compliance with <i>applicable network-based documents</i> and that network-based audits and management reviews are conducted to implement process improvement</p>
<p>3. Implement and document enhancements</p>	<p>3.1 Implement appropriate changes and improvement actions as required and evaluate effectiveness of enhancements</p> <p>3.2 Produce and table <i>documentation</i> for audit tracking</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - negotiate with stakeholders and team members using a range of communication styles to suit different audiences and purposes
  - respond to diversity, including gender and disability
- literacy skills to:
  - access and prepare information electronically or in hard copy
  - write recommendations and prepare reports requiring precision of expression
- numeracy skills to manage finances
- planning and organisational skills to:
  - lead and mentor people to achieve project outcomes
  - maintain commitment of stakeholders and project teams
- problem-solving skills to apply ethical decision making when problem solving
- safety awareness skills to apply workplace safety procedures in line with requirements
- technical skills to:
  - apply risk management techniques, including risk sharing and transfer
  - use management tools applicable to complex activities.

### Required knowledge

- business and commercial issues related to the management of IT security
- COOP
- cost schedule control systems to handle potential budget blow-outs
- critical analysis in a management context
- legislation, organisational or jurisdictional policy and procedures that may impact on management:
  - budgetary framework
  - codes of ethics and conduct
  - equal employment opportunity, equity and diversity principles
  - financial management requirements
  - governance requirements
  - human resources
  - OHS and environment requirements
  - procurement guidelines
  - public relations
  - quality standards
  - risk management
- management specifications and objectives
- management systems
- management tools and techniques suited to a range of complex projects activities

- organisational and political context
- systems development life cycle (SDLC).

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• direct contingency planning, operations and programs to manage risk</li> <li>• establish the IT system and application security engineering program</li> <li>• manage the necessary resources to establish and maintain an effective network security and telecommunications program</li> <li>• specify policy and coordinate review.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• IT business specifications</li> <li>• IT security assurance specifications</li> <li>• management-related scenarios</li> <li>• a security environment, including the threats to security that are, or are held to be, present in the environment</li> <li>• information on the security environment, including: <ul style="list-style-type: none"> <li>• laws or legislation</li> <li>• existing organisational security policies</li> <li>• organisational expertise</li> </ul> </li> <li>• use of risk analysis tools and methodologies currently used in industry</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate managing networks and telecommunications security</li> <li>• direct observation of candidate managing IT security incidents</li> <li>• verbal or written questioning to assess candidate's knowledge of organisational policy and procedures that impact on IT security</li> <li>• review of documentation prepared by candidate, including contingency planning and programs to manage risk.</li> </ul>

<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Parameters</i></b> may include:	<ul style="list-style-type: none"> <li>• applications security</li> <li>• data security</li> <li>• enterprise continuity</li> <li>• incidents</li> <li>• system security.</li> </ul>
Continuity of operations may include:	<ul style="list-style-type: none"> <li>• COOP plan execution</li> <li>• COOP plan revision and updating</li> <li>• COOP program implementation</li> <li>• identification of functional requirements:             <ul style="list-style-type: none"> <li>• mission impact analysis</li> <li>• mitigation strategies and plan</li> <li>• risk assessment</li> </ul> </li> <li>• plan design and development</li> <li>• project initiation</li> <li>• training, testing and drills.</li> </ul>
Factors may include:	<ul style="list-style-type: none"> <li>• business continuity and recovery</li> <li>• contingency planning</li> <li>• contingency planning and programs</li> <li>• disaster recovery</li> <li>• emergency delegations of authority</li> <li>• orders of succession for key positions</li> <li>• scope of the enterprise COOP program</li> <li>• security incidence</li> <li>• staffing model.</li> </ul>
Security incidents may include:	<ul style="list-style-type: none"> <li>• event causing interruption to reduction in quality of service</li> <li>• failure or error in IT infrastructure</li> <li>• illegal data harvesting</li> <li>• illegal downloads</li> <li>• malware:             <ul style="list-style-type: none"> <li>• adware</li> <li>• computer viruses</li> <li>• phishing</li> <li>• spyware</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• trojans</li> <li>• worms</li> <li>• security breach</li> <li>• service not available</li> <li>• system down</li> <li>• tampering.</li> </ul>
Incident-management program may include:	<ul style="list-style-type: none"> <li>• ensuring that the best possible levels of service quality and availability are maintained</li> <li>• establishing effective and responsive response team</li> <li>• evaluation of security incidents</li> <li>• improvement of incident management processes and procedures</li> <li>• minimisation of the impact on business operations</li> <li>• restoration of normal service operation as quickly as possible</li> <li>• sourcing effective security tools.</li> </ul>
Related security teams may include:	<ul style="list-style-type: none"> <li>• incident response team</li> <li>• security administration: <ul style="list-style-type: none"> <li>• external stakeholders: <ul style="list-style-type: none"> <li>• law enforcement agencies</li> <li>• public relations professionals</li> <li>• vendors</li> </ul> </li> <li>• internal stakeholders: <ul style="list-style-type: none"> <li>• finance</li> <li>• HR</li> <li>• legal department</li> <li>• procurement</li> </ul> </li> </ul> </li> <li>• technical support.</li> </ul>
Resources may include:	<ul style="list-style-type: none"> <li>• equipment</li> <li>• financial</li> <li>• network security and telecommunications personnel</li> <li>• training.</li> </ul>
<i>Applicable network-based documents</i> may include:	<ul style="list-style-type: none"> <li>• directives</li> <li>• laws</li> <li>• policies</li> <li>• procedures</li> <li>• regulations</li> <li>• standards.</li> </ul>
Documentation may include:	<ul style="list-style-type: none"> <li>• applicable network-based documents</li> <li>• audits and management reviews</li> <li>• communications protocols</li> <li>• contingency plans and activities</li> </ul>

	<ul style="list-style-type: none"><li>• evaluation reports</li><li>• incident management program, processes and procedures</li><li>• management reports</li><li>• network security and telecommunications program</li><li>• performance measurement program</li><li>• reviews and improvements records</li><li>• security classification and data management policies</li><li>• security incidence records.</li></ul>

## Unit Sector(s)

Networking

## ICAPMG401A Support small scale IT projects

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to support the management of low risk, straightforward information technology (IT) projects within an organisation.

### Application of the Unit

This unit applies to information and communications technology (ICT) practitioners who need to support the initiation, implementation and completion of small-scale IT projects. The projects can range across a wide range of ICT related financial, management and business areas. The provision of support within these projects is a key component of ICT environments.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Support project commencement	<p>1.1 Confirm business opportunity to ensure the project objectives are understood</p> <p>1.2 Identify <i>stakeholders</i> and gather requirements</p> <p>1.3 Prepare a project charter or project proposal and obtain agreement from project sponsor</p>
2. Support project plan development	<p>2.1 Break down the requirements to identify tasks and resources needed to complete the <i>project plan</i></p> <p>2.2 Compile a schedule of project tasks, including realistic timeframes and costs if required</p> <p>2.3 Allocate task responsibilities to project team members</p> <p>2.4 Agree on a process with the sponsor to manage risks or unexpected events that may arise and affect project objectives or expectations</p>
3. Support project completion	<p>3.1 Work with project team to ensure project activities meet timeframe, scope, cost and quality expectations</p> <p>3.2 Monitor and control <i>project risks and issues</i> according to the agreed process</p> <p>3.3 Verify that project deliverables meet project expectations and sign off as complete</p> <p>3.4 Train users if applicable</p>
4. Support project closure	<p>4.1 Prepare IT support or maintenance documents if applicable</p> <p>4.2 Obtain final project sign-off from sponsor and key stakeholders</p> <p>4.3 Document lessons learned and close the project</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills required to gather stakeholder requirements
- literacy skills to create basic systems and user documentation
- negotiation skills to ensure expected project outcomes are achievable
- planning and organisational skills to monitor project.

### Required knowledge

- basic knowledge of project-management methods and tools
- characteristics of technical teams
- methods of communication and communication styles, including interviewing techniques
- organisational values, policies and processes.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• support the initiation, control and completion of a simple small-scale IT project</li> <li>• identify and apply requirements and expectations of a project.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• real or simulated organisation that needs to address an identified IT problem or opportunity.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate carrying out small-scale IT project work</li> <li>• verbal or written questioning of candidate to assess required knowledge and skills</li> <li>• review of reports and implementation plans prepared by candidate for the project</li> <li>• review of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Stakeholders</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• clients or customers (internal and external)</li> <li>• end user</li> <li>• functional areas</li> <li>• industry</li> <li>• organisation's senior management</li> <li>• project sponsor or funding bodies</li> <li>• project team</li> <li>• relevant interest groups</li> <li>• steering committee members</li> <li>• supplier or service provider.</li> </ul>
<p><b><i>Project plan</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• acquisition strategies</li> <li>• budget and financial management strategy</li> <li>• contract management</li> <li>• cost estimates</li> <li>• evaluation criteria</li> <li>• expected outcomes and measurable benefits</li> <li>• facilities</li> <li>• inclusions and exclusions</li> <li>• information or communication strategy</li> <li>• intellectual property strategies</li> <li>• milestones</li> <li>• objectives</li> <li>• outputs or project deliverables and their acceptance criteria</li> <li>• people plan, including human-resource management and human-resource development</li> <li>• performance criteria or indicators</li> <li>• project control mechanisms</li> <li>• project governance strategy</li> <li>• project implementation strategy</li> <li>• purpose</li> <li>• quality assurance</li> <li>• quality control</li> <li>• rationale</li> <li>• required project resources</li> </ul>

	<ul style="list-style-type: none"> <li>• resource management</li> <li>• risk management</li> <li>• roles and responsibilities</li> <li>• schedule or timeline</li> <li>• task or work breakdown structure (WBS).</li> </ul>
<p><i>Project risks and issues</i> may relate to:</p>	<ul style="list-style-type: none"> <li>• cost: <ul style="list-style-type: none"> <li>• materials costing more than planned</li> <li>• resources costing more than expected</li> </ul> </li> <li>• scope: <ul style="list-style-type: none"> <li>• additional tasks arising due to unexpected events</li> <li>• required tasks missed during planning</li> </ul> </li> <li>• time management: <ul style="list-style-type: none"> <li>• tasks taking longer than expected</li> <li>• under estimation of necessary effort.</li> </ul> </li> </ul>

## Unit Sector(s)

IT project management

# ICAPMG501A Manage IT projects

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage information technology (IT) projects within a medium to large organisation.

## Application of the Unit

This unit applies to information and communications technology (ICT) practitioners who manage the initiation, implementation and completion of reasonably complex IT projects in terms of scope, risk, control and financial factors. The projects vary across a wide range of ICT, financial, management and business areas. The provision of specific IT-related project management within projects is a key component of the ICT environment.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Manage project definition activities	<p>1.1 Confirm organisational <b><i>project governance policy and processes</i></b></p> <p>1.2 Confirm business problem or opportunity as well as project objectives</p> <p>1.3 Develop project charter, including preliminary statement of project scope and obtain sign-off</p> <p>1.4 Conduct a <b><i>feasibility</i></b> study and prepare a business case as necessary</p>
2. Undertake project planning	<p>2.1 Plan <b><i>information-gathering activities</i></b> to determine project requirements, <b><i>constraints</i></b> and risks</p> <p>2.2 Identify project partitioning on the basis of intended system development life cycle and risk</p> <p>2.3 Prepare project work breakdown, schedule and budget</p> <p>2.4 Compile <b><i>project-management plan documents</i></b> as necessary to communicate the intended management strategy for the project and obtain sign-off</p>
3. Establish the IT project team	<p>3.1 Identify and select team members, including roles and responsibilities, based on project solution requirements</p> <p>3.2 Determine training and support needs of team members</p> <p>3.3 Establish project team values and agreed behavioural standards with team members</p>
4. Manage project execution activities	<p>4.1 Monitor delivery and acceptance of assigned project team work activities and manage individuals as necessary</p> <p>4.2 Monitor and control the quality of project deliverables</p> <p>4.3 Monitor and control project scope changes, risks and issues</p> <p>4.4 Manage system testing and <b><i>hand-over activities</i></b></p>
5. Coordinate project closure	<p>5.1 Prepare IT support plans and <b><i>maintenance or support documents</i></b></p> <p>5.2 Obtain final project sign-off</p> <p>5.3 Conduct post-project review and document lessons learned</p> <p>5.4 Review and update disaster recovery plan</p> <p>5.5 Close project</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to determine current system deficiencies and new system objectives
- communication skills to:
  - gather stakeholder needs
  - liaise with enterprise senior management
- counselling skills to mentor and coach team members and resolve conflict
- literacy skills to present options and recommendations in reports
- negotiation skills to ensure expected project outcomes are achievable
- numeracy and documentation skills to develop cost-benefit analyses
- planning and organisational skills to plan project activities
- research skills to identify solution alternatives
- technical team management and leadership skills, including providing feedback.

### Required knowledge

- characteristics of leaders and technical teams
- consultation and communication techniques and strategies
- how to establish technical teams and determine stages of team development
- estimation and cost-analysis techniques
- methods of communication and communication styles, including interviewing techniques
- objectives and benefits analysis
- organisational values, policies and processes
- performance management and project team appraisal methods
- processes for monitoring team and own performance
- project cash flow and budgeting
- range of project-management methods and tools
- self-awareness
- systems analysis and modelling techniques
- team roles and delegation within a multi-project methodology context
- technology solution models and frameworks.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>define, plan, execute and close a reasonably complex project to meet project requirements.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>real or appropriate simulated organisation with a desire to implement an IT project to address an identified problem, opportunity or unfulfilled legislative need</li> <li>appropriate learning and assessment support when required</li> <li>modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>direct observation of the candidate carrying out project work</li> <li>verbal or written questioning to assess required knowledge and skills</li> <li>review of reports and implementation plans</li> <li>review of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Project governance policy and processes</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• established roles and responsibilities for key project stakeholders</li> <li>• mandated positions to be filled on various project-governance boards or committees, such as the project steering committee or quality-review board</li> <li>• mandated project-management standard or development methodology for the organisation</li> <li>• project portfolio prioritisation process or criteria</li> <li>• project selection process or criteria.</li> </ul>
<p><b><i>Feasibility</i></b> in relation to IT solutions may refer to:</p>	<ul style="list-style-type: none"> <li>• economic</li> <li>• operational</li> <li>• technical.</li> </ul>
<p><b><i>Information-gathering activities</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• interviews</li> <li>• research related to existing documents, and similar or previous projects</li> <li>• surveys</li> <li>• workshops.</li> </ul>
<p><b><i>Constraints</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• external or internal project dependencies</li> <li>• limitations or standards that the project must adhere to:             <ul style="list-style-type: none"> <li>• resources budget</li> <li>• quality</li> <li>• timeframe.</li> </ul> </li> </ul>
<p><b><i>Project-management plan documents</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• change control</li> <li>• communications</li> <li>• human resource</li> <li>• procurement</li> <li>• quality</li> <li>• risk management</li> <li>• training.</li> </ul>
<p><b><i>Hand-over activities</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• communications to users and other stakeholders</li> <li>• production system environment verification tests</li> <li>• user training and documentation.</li> </ul>
<p><b><i>Maintenance or support</i></b></p>	<ul style="list-style-type: none"> <li>• additional tasks or changed responsibilities within the support team for ongoing support of the new system</li> </ul>

<i>documents</i> may include:	<ul style="list-style-type: none"><li>• new policies and procedures and how these differ to current practices</li><li>• technical documents relating to the system:<ul style="list-style-type: none"><li>• specifications</li><li>• system dependencies</li><li>• technical requirements.</li></ul></li></ul>
-------------------------------	---

## Unit Sector(s)

IT project management

## ICAPMG601A Establish IT project governance

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to establish an information technology (IT) project within small, medium or large organisations.

### Application of the Unit

Project managers in small, medium or large organisations apply the skills and knowledge in this unit to ensure governance processes, roles and responsibilities, and stakeholder expectations are established at the commencement of IT projects.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Establish project-governance framework	1.1 Assess current project methodology and determine state of <b><i>project management maturity</i></b> 1.2 Determine <b><i>governance framework</i></b> 1.3 Appoint project governance team 1.4 Establish project governance reporting processes
2. Establish project-governance roles and responsibilities	2.1 Agree with project sponsor on responsibilities 2.2 Delegate steering committee or project board responsibilities 2.3 Confirm project manager responsibilities
3. Establish IT project stakeholder expectations	3.1 Educate stakeholders on <b><i>characteristics of IT projects</i></b> 3.2 Develop and maintain project relationships 3.3 Negotiate successful project outcomes

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - access and prepare information electronically or in hard copy
  - communicate in styles to suit different audiences and purposes
  - establish and manage expectations
  - present complex or technical information and ideas in a way appropriate to the audience
  - resolve conflicts
  - write recommendations and prepare project reports requiring precise expression
- initiative and enterprise skills to:
  - act as a positive role model
  - agree achievable project objectives with stakeholders and team members
  - apply OHS procedures in line with project requirements
  - establish and maintain professional relationships at various levels within the organisation
  - establish stakeholder and team member project roles and responsibilities
  - lead and coach project team members to achieve project outcomes
  - use diversity of staff, including gender and disability to improve project outcomes
- planning and organisational skills to use project-management tools to establish reasonably complex projects
- problem-solving and decision-making skills to apply ethical management of reasonably complex projects.

### Required knowledge

- organisation's industry
- organisation's current information systems and processes
- organisational policies and procedures, including:
  - project management and procurement policies
  - environment
  - duty of care
  - contract
  - company
  - freedom of information
  - industrial relations
  - privacy and confidentiality
  - due diligence
  - records management
- project governance approaches and methods
- relevant legislation and regulations that impact on business continuity, such as OHS.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• assess the project environment and establish or implement an appropriate project management governance framework</li> <li>• negotiate with stakeholders to agree achievable project objectives.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• relevant documentation: <ul style="list-style-type: none"> <li>• appropriate policies</li> <li>• current project practices</li> <li>• legislation if applicable.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans prepared by the candidate for the project</li> <li>• review of a portfolio of the project work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Project management maturity</i></b> may relate to:</p>	<ul style="list-style-type: none"> <li>• decision-making process</li> <li>• internal project management approach</li> <li>• methodology</li> <li>• strategy</li> <li>• five levels of project management maturity:             <ul style="list-style-type: none"> <li>• ad hoc</li> <li>• planned</li> <li>• managed</li> <li>• integrated</li> <li>• adaptive.</li> </ul> </li> </ul>
<p><b><i>Governance framework</i></b> within an organisation may include:</p>	<ul style="list-style-type: none"> <li>• principles for how projects should be run</li> <li>• project management methodology</li> <li>• rules about project communication and decision making</li> <li>• specific roles and responsibilities to be adopted for every project</li> <li>• structure of working groups and other stakeholder groups that might be established.</li> </ul>
<p><b><i>Characteristics of IT projects</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• complex interrelated activities</li> <li>• difference to operational work</li> <li>• high propensity to change:             <ul style="list-style-type: none"> <li>• budget</li> <li>• quality</li> <li>• scope</li> <li>• time</li> </ul> </li> <li>• inherent risk</li> <li>• need to manage uncertainty</li> <li>• scope becoming more explicit as the project progresses.</li> </ul>

## Unit Sector(s)

IT project management

## ICAPMG602A Manage IT project initiation

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to initiate an information technology (IT) project within small, medium or large organisations.

### Application of the Unit

Project managers in small medium or large organisations apply the skills and knowledge in this unit to ensure IT projects get off to a good start and are seen to be adding value to the organisation.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Define project	1.1 Define <b><i>business problems</i></b> and initial scope 1.2 Identify key stakeholders and analyse <b><i>stakeholder needs</i></b> 1.3 Define <b><i>project constraints</i></b>
2. Develop project business case and feasibility	2.1 Identify project objectives and benefits 2.2 Identify and select feasible IT solutions 2.3 Develop and present the business case or <b><i>feasibility</i></b> study 2.4 Obtain appropriate sign-off
3. Select project approach	3.1 Identify project <b><i>core technology areas</i></b> 3.2 Identify solution approach requirements 3.3 Negotiate project outcomes
4. Establish the IT project team	4.1 Identify and select team members 4.2 Establish team member roles and responsibilities 4.3 Develop a cohesive technical team 4.4 Train and support team members

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to determine current system deficiencies and new system objectives
- communication skills to gather stakeholder needs and liaise with senior enterprise management
- literacy skills to present options and recommendations in reports
- numeracy skills to develop cost-benefit analyses
- planning and organisational skills to:
  - meet project timeframes and produce required deliverables
  - mentor and coach team members and resolve conflict
- problem-solving skills to negotiate with stakeholders and senior enterprise management to ensure expected project outcomes are achievable
- research skills to identify solution alternatives.

### Required knowledge

- characteristics of leadership and technical teams
- consultation and communication techniques, styles and strategies, including interviewing techniques
- estimation and cost-analysis techniques
- how to establish technical teams and determine stages of team development
- objectives and benefits analysis
- organisational values, policies and processes
- performance management and project team appraisal methods
- processes for monitoring team and own performance
- project cash flow and budgeting
- range of project-management methods and tools and how they apply in a formal project-management methodology
- self-awareness
- systems analysis and modelling techniques
- team roles and delegation within a multi-project methodology context
- technology solution models and frameworks.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• produce a comprehensive business case and project implementation approach that takes into account core technology limitations and project constraints</li> <li>• establish and work in a cohesive project team.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• real or appropriate simulated organisation with a desire to implement an IT project to address an identified problem, opportunity or unfulfilled legislative need.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans</li> <li>• review of a portfolio of the project work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Business problems</i></b> may include:	<ul style="list-style-type: none"> <li>• deficiencies in the current business process</li> <li>• deficiencies or identified problems with current systems or IT infrastructure</li> <li>• legislative mandated system changes</li> <li>• opportunities identified as part of the strategic or operational planning processes.</li> </ul>
<b><i>Stakeholder needs</i></b> may include:	<ul style="list-style-type: none"> <li>• expectations related to agreed project outcomes</li> <li>• project constraints</li> <li>• project objectives based on business problems</li> <li>• solution requirements based on project objectives.</li> </ul>
<b><i>Project constraints</i></b> may include:	<ul style="list-style-type: none"> <li>• external or internal project dependencies</li> <li>• limitations or standards that the project must adhere to, such as timeframe, budget resources and quality</li> <li>• organisational policies or procedures, including mandated project management and systems development methodologies.</li> </ul>
<b><i>Feasibility</i></b> may relate to:	<ul style="list-style-type: none"> <li>• economic</li> <li>• operational</li> <li>• technical.</li> </ul>
<b><i>Core technology areas</i></b> may include:	<ul style="list-style-type: none"> <li>• database-dependent implementations</li> <li>• process-oriented implementations</li> <li>• software implementations:             <ul style="list-style-type: none"> <li>• C</li> <li>• C++</li> <li>• COBOL or other third generation languages</li> <li>• Java</li> <li>• Visual Basic</li> </ul> </li> <li>• systems and network architectures:             <ul style="list-style-type: none"> <li>• client or server</li> <li>• legacy mainframe</li> <li>• mid-range</li> <li>• web-oriented solution architectures.</li> </ul> </li> </ul>

## **Unit Sector(s)**

IT project management

## ICAPMG603A Manage IT project planning

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan an information technology (IT) project within small, medium or large organisations.

### Application of the Unit

Project managers in small, medium or large organisations apply the skills and knowledge in this unit to ensure IT projects are appropriately planned, required deliverables are identified and understood, and appropriate controls are established.

Their job roles combine high-level management, business and technical skills necessary to manage complex technology projects within the information and communications technology (ICT) industry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Establish project control plans	1.1 Develop the project management plan 1.2 Develop <b><i>management sub-plans</i></b>
2. Determine appropriate methodology	2.1 Assess <b><i>models of project management</i></b> 2.2 Assess product development or procurement approach 2.3 Select appropriate project management and systems development methodology 2.4 Tailor methodologies to solution requirements
3. Develop project schedule	3.1 Develop project <b><i>component breakdown</i></b> 3.2 Estimate project effort and duration 3.3 Create <b><i>project schedule</i></b> 3.4 Develop and allocate work packages 3.5 Establish schedule controls
4. Finalise project budget	4.1 Identify areas of anticipated project spend 4.2 Determine dollar amounts and timing of cash flows 4.3 Develop a project budget 4.4 Establish budget controls

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate and select appropriate methods for delivery which suit the technical and business environment
- initiative and enterprise skills to conceptualise and articulate a logical plan for delivery of project stages and related solution components to meet business expectations
- numeracy skills to identify cost components and determine project cash flows and budget
- planning and organisational skills to:
  - meet project timeframes and produce required deliverables
  - mentor and coach team members and resolve conflict
- technical skills to use project-management tools.

### Required knowledge

- current and emerging industry practice in relation to:
  - estimation techniques and methods
  - planning techniques and methods
  - project management methodologies
  - system development methodologies
- awareness of impact of business needs on project management, including implications for project control and expected returns on business investment.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop project management plan</li> <li>• select appropriate methodology</li> <li>• develop project schedule</li> <li>• develop a project budget</li> <li>• establish budgetary controls.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• real or appropriate simulated organisation with a desire to implement an IT project to address an identified problem, opportunity or unfulfilled legislative need</li> <li>• specialist diagramming software or equivalent</li> <li>• specialist project-scheduling software or equivalent.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans</li> <li>• review of a portfolio of the project work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Management sub-plans</i></b> may include:	<ul style="list-style-type: none"> <li>• communications</li> <li>• human resource</li> <li>• organisational change</li> <li>• project implementation procurement quality</li> <li>• risk</li> <li>• scope</li> <li>• change control.</li> </ul>
<b><i>Models of project management</i></b> refer to:	<ul style="list-style-type: none"> <li>• project methods and approaches: <ul style="list-style-type: none"> <li>• agile</li> <li>• green PM</li> <li>• PRINCE2</li> <li>• traditional.</li> </ul> </li> </ul>
<b><i>Component breakdown</i></b> may include:	<ul style="list-style-type: none"> <li>• feature</li> <li>• product</li> <li>• sprint</li> <li>• work.</li> </ul>
<b><i>Project schedule</i></b> may include:	<ul style="list-style-type: none"> <li>• allocated resources and their respective responsibilities</li> <li>• bar charts</li> <li>• Gantt charts</li> <li>• tables or matrices: <ul style="list-style-type: none"> <li>• activities or products required to be delivered as part of the project</li> <li>• milestones</li> <li>• anticipated timeframes and dependencies between these elements.</li> </ul> </li> </ul>

## **Unit Sector(s)**

IT project management

## ICAPMG604A Manage IT project delivery

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage the creation and delivery of the products of an information technology (IT) project within small, medium or large organisations.

### Application of the Unit

Project managers in small, medium or large organisations apply the skills and knowledge in this unit to ensure that what is being produced by an IT project continues to meet stakeholder and organisational expectations as the project progresses.

Their job roles combine high-level management, business and technical skills necessary to manage complex technology projects within the information and communications technology (ICT) industry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Manage systems analysis and design	1.1 Apply systems thinking to project design 1.2 <b>Model</b> IT process and systems according to specifications 1.3 <b>Re-engineer</b> business processes 1.4 Control IT systems development 1.5 Review IT architecture 1.6 Manage the design and integration of the system
2. Facilitate project-related workshops	2.1 Apply facilitation techniques 2.2 Apply problem-solving techniques 2.3 Facilitate requirements gathering 2.4 Facilitate IT design workshops
3. Manage IT project team performance	3.1 Establish a project team performance framework 3.2 Measure team member performance 3.3 Manage the performance of technical staff 3.4 Manage project team dissolution
4. Manage the project delivery cycle	4.1 Delegate project work to project team members 4.2 Review and report status of project 4.3 Assess progress and update plans 4.4 Assess the quality of deliverables and rectify where required 4.5 Control project issues and take corrective action 4.6 Update project control documents

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - review business models and processes
  - review designs
- communication skills to:
  - assess progress
  - delegate project work
  - facilitate IT design workshops
  - facilitate requirements gathering
  - liaise with stakeholders
  - review and report status
  - update plans
- initiative and enterprise skills to:
  - facilitate IT design workshops
  - facilitate requirements gathering
- literacy skills to:
  - develop team performance plans and update plans
  - review recommendations and reports
  - update project control documents
  - re-engineer business processes
- planning and organisational skills to manage and deliver IT project
- problem-solving skills to:
  - apply systems thinking
  - handle project issues and take corrective action.

### Required knowledge

- formal management methodology, including project management roles and responsibilities
- problem-solving tools and techniques
- data modelling
- IT design
- business processes.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• manage the execution of a complex IT project, including aspects of the IT solution definition and design process.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• real or appropriate simulated organisation with a desire to implement an IT project to address an identified problem, opportunity or unfulfilled legislative need.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans</li> <li>• review of a portfolio of the project work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Model</i></b> may include:	<ul style="list-style-type: none"> <li>• context and dataflow diagrams</li> <li>• entity relationship diagrams</li> <li>• interaction models</li> <li>• object models</li> <li>• PMBOK and PRINCE2</li> <li>• screen prototypes</li> <li>• state models</li> <li>• system design models</li> <li>• system diagrams</li> <li>• use cases</li> <li>• user interaction and transaction diagrams.</li> </ul>
<b><i>Re-engineer</i></b> may include:	<ul style="list-style-type: none"> <li>• business process re-engineering</li> <li>• business process redesign</li> <li>• business transformation</li> <li>• lean IT.</li> </ul>

## Unit Sector(s)

IT project management

# ICAPMG605A Manage IT project closure

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to decommission or close an information technology (IT) project within a small, medium or large organisation.

## Application of the Unit

Project managers in small, medium or large organisations apply the skills and knowledge in this unit to recommend project decommissioning or closure during or on completion of an IT project.

Their job roles combine high-level management, business and technical skills necessary to manage complex technology projects within the information and communications technology (ICT) industry.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Evaluate project performance	1.1 Collect <b><i>project performance metrics</i></b> 1.2 Debrief project team 1.3 Debrief project stakeholders 1.4 Summarise and report on results
2. Finalise the project	2.1 Review project performance to determine whether the project should be continued, decommissioned or closed 2.2 Assess the impact of continuing, decommissioning or closing the project 2.3 Recommend appropriate management action to the relevant governing authority 2.4 Decommission or close the project if required
3. Action outstanding activities	3.1 Identify outstanding activities and create an action plan 3.2 Assign responsibilities to action outstanding activities 3.3 Follow up outstanding activities to ensure completion

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse metrics
  - identify issues, root causes and solution options
- facilitation and communication skills to conduct interviews, reviews, debrief workshops and presentations
- negotiation skills to negotiate the best outcomes for stakeholders given the results of analysis.

### Required knowledge

- problem-solving techniques to address issues related to project closure
- project-management methods, practices and processes.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• recommend and plan the decommissioning or closure of a complex IT project based on collected performance metrics.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• relevant project documentation, including project metrics</li> <li>• project stakeholders.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace</li> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports, documents and presentations</li> <li>• review of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Project performance metrics</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• financial measures:             <ul style="list-style-type: none"> <li>• actual versus planned budget</li> <li>• actual versus planned return on investment (RoI) projections</li> <li>• earned value (EV) and EV performance indexes</li> </ul> </li> <li>• quality measures:             <ul style="list-style-type: none"> <li>• number of defects</li> <li>• stakeholder satisfaction feedback</li> </ul> </li> <li>• scope measures:             <ul style="list-style-type: none"> <li>• actual versus expected number of change requests</li> <li>• amount of rework</li> <li>• requirements or user story backlogs</li> </ul> </li> <li>• time measures:             <ul style="list-style-type: none"> <li>• actual versus expected burn-down rates</li> <li>• planned versus actual schedule.</li> </ul> </li> </ul>
---	---

## Unit Sector(s)

IT project management

# ICAPMG606A Manage IT project quality

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to ensure quality within information technology (IT) projects. It covers planning for quality based on stakeholder needs, implementing quality assurance processes, and using quality control data to ensure continuous improvement for the benefit of current and future projects.

## Application of the Unit

IT project managers in small, medium or large organisations apply the skills and knowledge in this unit to ensure that appropriate quality processes and controls are established in projects under their control.

Their job roles combine high-level management, business and technical skills necessary to manage complex technology projects within the information and communications technology (ICT) industry.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Establish a quality management plan	<p>1.1 Determine project <b>quality requirements</b> with reference to project scope and stakeholder needs and expectations</p> <p>1.2 Adopt or agree on organisational quality policy and <b>quality standards</b> with stakeholders</p> <p>1.3 Determine project quality management approach, including proposed <b>quality assurance processes</b> and <b>quality control</b> measurement methods and benchmarks</p> <p>1.4 Negotiate project quality, cost, time trade-offs and changes to stakeholder expectations if necessary</p> <p>1.5 Develop a quality management plan for the project and obtain sign-off</p>
2. Perform IT quality assurance processes	<p>2.1 Execute quality assurance activities as the project progresses according to the quality management plan</p> <p>2.2 Identify project processes not meeting quality standards agreed in the quality management plan</p> <p>2.3 Raise project change request to action process changes or corrective actions, update project-management plan and <b>quality baselines</b> as necessary</p>
3. Perform quality control	<p>3.1 Validate project processes and deliverables against quality requirements as the project progresses</p> <p>3.2 Review <b>quality control metrics</b> and take action as necessary to investigate and understand the reasons for failure</p> <p>3.3 Use <b>quality-management tools</b> to determine failures and root causes and implement continuous improvement processes</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to interpret quality metrics, identify issues, root causes and identify the need for improvement processes
- communication skills to:
  - negotiate and establish stakeholder expectations and gather quality requirements
  - facilitate problem-solving workshops
- literacy skills to:
  - develop quality plans
  - review recommendations and reports
- numeracy skills to develop cost-benefit analyses
- project-management skills to develop a life cycle process.

### Required knowledge

- problem-solving tools and techniques
- project-management roles and responsibilities
- quality improvement processes and methodology
- quality management theory, techniques, tools and methodologies
- relevant quality standards.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify and implement appropriate quality management processes within a complex IT project.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• appropriate simulated or real organisation and suitable IT project</li> <li>• facilities suitable for holding quality assurance problem-solving workshops.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports, plans and documents</li> <li>• review of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Quality requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• negotiated trade-offs between cost, schedule and performance as these relate to implementation of quality processes</li> <li>• quality aspects that may impact on customer satisfaction</li> <li>• requirements from the client and other stakeholders.</li> </ul>
<b><i>Quality standards</i></b> may refer to:	<ul style="list-style-type: none"> <li>• ISO 10006:2003, which provides guidance on the application of quality management in projects and other recognised standards and guidelines</li> <li>• national and international standards, such as ISO 9004:2008 and 9004:2009 for guidance on implementing continual improvement processes and quality of product and service delivery</li> <li>• recognised industry best practices.</li> </ul>
<b><i>Quality assurance processes</i></b> refer to:	<ul style="list-style-type: none"> <li>• procedures and processes implemented to ensure agreed quality outcomes based on the specific needs of the project.</li> </ul>
<b><i>Quality control</i></b> may relate to:	<ul style="list-style-type: none"> <li>• monitoring compliance with best practice, standards, requirements and solution specifications</li> <li>• monitoring the results of regular quality assurance processes, including audits or inspections by internal or external agents</li> <li>• recommending continual improvement activities</li> <li>• recommending ways to eliminate root causes of unsatisfactory performance of processes or products.</li> </ul>
<b><i>Quality baselines</i></b> may include:	<ul style="list-style-type: none"> <li>• standard by which quantitative values captured via quality metrics are compared to, such as stakeholder satisfaction index, which must remain above 90%.</li> </ul>
<b><i>Quality-control metrics</i></b> relate to:	<ul style="list-style-type: none"> <li>• measures that have been developed to allow quantitative evaluation of the relative performance of specific processes, activities and outcomes over time</li> <li>• defect density</li> <li>• schedule variance</li> <li>• stakeholder satisfaction index</li> <li>• training effectiveness.</li> </ul>
<b><i>Quality-management tools</i></b> may include:	<ul style="list-style-type: none"> <li>• benchmarking</li> <li>• brainstorming</li> <li>• charting processes</li> </ul>

	<ul style="list-style-type: none"><li>• control charts</li><li>• cost-benefit analysis</li><li>• flowcharts</li><li>• group work activities</li><li>• histograms</li><li>• Pareto charts</li><li>• processes that limit or indicate variation</li><li>• ranking candidates</li><li>• run charts</li><li>• scattergrams</li><li>• statistical methods.</li></ul>
--	---

## Unit Sector(s)

IT project management

## ICAPMG607A Manage and control IT project risks

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage and control risks in an information technology (IT) project within small, medium or large organisations.

### Application of the Unit

Project managers in small, medium or large organisations apply the skills and knowledge in this unit to ensure the appropriate identification and treatment of risks within an IT project.

Their job roles combine high-level management, business and technical skills necessary to manage complex technology projects within the information and communications technology (ICT) industry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify project risks	<p>1.1 Review project planning documents, organisational risk policies and relevant lessons learned from earlier projects</p> <p>1.2 Identify major project risks and potential <b><i>sources of project risk</i></b></p> <p>1.3 Establish relevant <b><i>risk management processes and procedures</i></b></p> <p>1.4 Develop a project risk management plan, including a risk register in consultation with stakeholder and obtain sign-off</p>
2. Treat project risks	<p>2.1 Assess the likelihood of the risk occurring and the resulting consequence of the risk</p> <p>2.2 Develop risk response strategies and contingency measures as appropriate</p> <p>2.3 Incorporate risk response actions and contingency measures into the risk register and project schedule in consultation with stakeholders and obtain sign-off</p>
3. Monitor project risks	<p>3.1 Undertake activities to monitor the risk factors or identified events as the project progresses</p> <p>3.2 Establish formal risk reviews at appropriate intervals or project milestones</p> <p>3.3 Update risk register and raise project change requests to update baseline project schedule as required</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to identify risks, risk mitigations and contingency plans
- communication skills to:
  - negotiate and communicate plans and identified risks and mitigations to stakeholders
  - run project risk workshops and presentations
- initiative and enterprise skills to prioritise and manage stakeholder expectations
- literacy skills to:
  - develop risk management plans
  - write recommendations and reports.

### Required knowledge

- methods and techniques of risk management
- organisational policies relating to risk and organisational risk appetite
- processes and techniques of business analysis
- project management and systems development techniques, as well as potential risks associated with these activities.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify and implement appropriate risk-management processes within a complex IT project.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• appropriate simulated or real organisation to implement an IT project</li> <li>• facilities suitable for holding risk management related workshops.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports, plans and documents</li> <li>• review of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Sources of project risk</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• change risks, such as:             <ul style="list-style-type: none"> <li>• changes to project scope not approved (scope creep)</li> <li>• solution uncertainty</li> </ul> </li> <li>• people risks, such as loss of key resource</li> <li>• procurement risks, such as required equipment not delivered on time</li> <li>• quality risks, such as delivered solution not meeting requirements or expectations</li> <li>• schedule or budget risks, such as time or cost of scheduled tasks underestimated</li> <li>• technology risks, such as new or untried technology as part of the solution, components difficult to integrate.</li> </ul>
<p><b><i>Risk management processes and procedures</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• communicating with stakeholders</li> <li>• dispute resolution and modification procedures</li> <li>• implementing risk control trigger mechanisms</li> <li>• measuring actual progress against planned milestones</li> <li>• recording and reporting major variance</li> <li>• setting key milestones at significant points during the project and at completion.</li> </ul>
<p><b><i>Risk response strategies</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• accept the risk or continue in the knowledge that the risk still exists</li> <li>• avoid the risk or take action to eliminate the risk</li> <li>• mitigate or take action to reduce the risk.</li> </ul>

## Unit Sector(s)

IT project management

# ICAPMG608A Manage IT project systems implementation

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage system implementation tasks during an information technology (IT) project within small, medium or large organisations.

## Application of the Unit

Project managers in small, medium or large organisations apply the skills and knowledge in this unit to ensure the successful implementation of the products of an IT project into the existing IT production operational environment.

Their job roles combine high-level management, business and technical skills necessary to manage complex technology projects within the information and communications technology (ICT) industry.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare for system implementation	<p>1.1 Review relevant <i>project and system development documentation</i></p> <p>1.2 Consider organisational culture as part of an implementation risk analysis</p> <p>1.3 Identify implementation options and constraints and select a preferred approach in consultation with stakeholders</p> <p>1.4 Develop a detailed <i>implementation plan</i> and a high-level training plan and obtain sign-off</p> <p>1.5 Ensure the creation of system-user documentation and obtain sign-off</p> <p>1.6 Ensure the preparation of operations documentation and obtain sign-off</p>
2. Manage organisational change	<p>2.1 Communicate <i>relevant information</i> about the pending change through <i>appropriate channels</i></p> <p>2.2 Establish necessary <i>support structures</i></p>
3. Coordinate release management	<p>3.1 Establish and confirm release management roles and responsibilities, including those of the <i>release manager</i></p> <p>3.2 Determine release <i>configuration items</i>, including any production system software, hardware and capacity changes required and compile a request for change</p> <p>3.3 Ensure the creation of required test environment</p> <p>3.4 Establish ongoing monitoring procedure to cover the post-release warranty period</p> <p>3.5 Undertake data conversion activities if needed</p>
4. Manage acceptance testing	<p>4.1 Review results of system test and ensure acceptance test entry criteria are met</p> <p>4.2 Ensure test environment and IT <i>configuration management processes</i> meet solution requirements and organisational standards</p> <p>4.3 Ensure acceptance testing is performed and results are collated</p> <p>4.4 Ensure test results meet acceptance test exit criteria and obtain sign-off</p>
5. Manage user training	<p>5.1 Undertake <i>training needs analysis</i></p> <p>5.2 Review high-level training plan and schedule and add detailed activities as necessary</p> <p>5.3 Ensure training materials are prepared and user training is</p>

	conducted
6. Release system to production	<p>6.1 Develop an hour by hour action plan or checklist for release activities</p> <p>6.2 Create a <i>rollback strategy</i> and plan to guide rollback of changes if required</p> <p>6.3 Prepare appropriate communication to inform users of possible interruption to service due to the release</p> <p>6.4 Manage the installation of the new release into production and ensure performance of operational verification tests and rollback changes if necessary</p> <p>6.5 Review and update service level agreements (SLAs) and disaster recovery plan</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to identify implementation risks, risk mitigations and contingency plans
- communication skills to:
  - communicate plans and status to stakeholders
  - coordinate training, run implementation workshops and presentations
  - negotiate implementation priorities and manage stakeholder expectations
- literacy skills to develop documentation, recommendations and reports
- planning skills to develop implementation, testing and training plans.

### Required knowledge

- methods and techniques of configuration management
- organisational policies and standards relating to IT configuration management, e.g. an IT infrastructure library (ITIL)
- business analysis, processes and techniques
- project management and systems development, as well as potential risks associated with implementation activities
- structure and implications of disaster recovery plans and SLAs.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>plan, prepare and implement a complex IT project by ensuring appropriate acceptance testing and training has been conducted.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>appropriate learning and assessment support when required</li> <li>modified equipment for people with special needs</li> <li>appropriate simulated or real organisation to implement an IT project</li> <li>facilities suitable for holding risk management-related workshops.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>direct observation of the candidate carrying out project work</li> <li>verbal or written questioning to assess required knowledge and skills</li> <li>review of reports, plans and documents</li> <li>review of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Project and system development documentation</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• planned project schedule tasks and milestones</li> <li>• project and organisational assumptions and constraints</li> <li>• project-management plan documents, such as quality plan, acceptance plan, implementation plan, and training plan</li> <li>• system specification or vendor product specifications in the case of a procured solution.</li> </ul>
<p><b><i>Implementation plan</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• cut-over activities</li> <li>• data conversion.</li> </ul>
<p><b><i>Relevant information</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• background and business need and strategy for the change</li> <li>• new policies and procedures and how these differ to current practices</li> <li>• planned implementation schedule, including milestones, such as:             <ul style="list-style-type: none"> <li>• data conversion</li> <li>• new system cut-over</li> </ul> </li> <li>• recognition of staff who contributed to the project in any special way</li> <li>• roles and responsibilities within the implementation, and for ongoing operation of the new system.</li> </ul>
<p><b><i>Appropriate channels</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• help desk</li> <li>• organisation intranet</li> <li>• regular departmental team meetings, including informal discussion and feedback</li> <li>• specific training courses</li> <li>• staff newsletters or wall posters</li> <li>• workshops and staff briefing sessions.</li> </ul>
<p><b><i>Support structures</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• checklists or frequently asked question (FAQ) guides</li> <li>• help desk</li> <li>• identified change leaders.</li> </ul>
<p><b><i>Release manager</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• project manager</li> <li>• specialist release manager</li> <li>• systems administration manager</li> <li>• systems development manager</li> <li>• other nominated technical IT manager given the specific</li> </ul>

	responsibility of managing the release of system changes into the IT production environment.
<b><i>Configuration items</i></b> refer to:	<ul style="list-style-type: none"> <li>exact list of the items, including version designations that make up the configuration of the system changes at the time of the release.</li> </ul>
<b><i>Configuration management processes</i></b> refer to:	<ul style="list-style-type: none"> <li>processes and procedures developed to control system changes and maintain the integrity of IT systems.</li> </ul>
<b><i>Training needs analysis</i></b> refers to:	<ul style="list-style-type: none"> <li>activity undertaken to identify the extent of training needed to ensure staff can effectively operate in the new or changed system environment.</li> </ul>
<b><i>Rollback strategy:</i></b>	<ul style="list-style-type: none"> <li>refers to strategy or plan to facilitate the act of reverting the production system to its earlier stable state, in response to an unsuccessful release, such as a new system failing operational verification tests</li> <li>usually includes creation of a backup of the production system or relevant system components.</li> </ul>

## Unit Sector(s)

IT project management

## ICAPMG609A Plan and direct complex IT projects

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify, plan, control and finalise complex IT projects.

### Application of the Unit

This unit applies to senior managers responsible for identifying, planning, controlling and finalising complex projects.

The environment in which the project is managed is also complex and involves the management of a project team, which typically will include staff with diverse skill sets. The management of complex projects also involves significant reporting requirements.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Identify the strategic and operational needs of the IT project during the planning phase</p>	<p>1.1 Identify the strategic and operational needs of the project during the planning phase</p> <p>1.2 Identify and consider the project's <i>strategic context</i> and requirements</p> <p>1.3 Identify and consider the organisation's strategic and business plans and its output requirements</p> <p>1.4 Identify and explore client requirements and the impact of <i>legislation and industry codes and standards</i></p> <p>1.5 Conduct a <i>risk-management analysis</i> and develop and document a risk-management plan</p>
<p>2. Prepare the IT project plan</p>	<p>2.1 Define and document precise <i>specifications and terms of reference</i> for the project</p> <p>2.2 Identify and document project budget, specified to a level that can be used for the management of sub-tasks</p> <p>2.3 Define skills needed for the successful completion of project</p> <p>2.4 Define, document and secure physical and other resources required to support the project</p> <p>2.5 Develop and document timelines, schedules and critical path for the project, taking into consideration contingencies and planning for time slippages</p> <p>2.6 Define and document a consultation strategy or process that will be used to inform clients, contractors and other interested parties of the project's progress, and seek their input as required</p>
<p>3. Assemble the IT project team and commence work</p>	<p>3.1 Secure and brief appropriate project team members regarding the project, their roles, levels of delegated responsibility and the outcomes to be achieved</p> <p>3.2 Implement effective communication processes to coordinate work and inform team members of progress</p> <p>3.3 Identify and communicate clear reporting processes for team members</p>
<p>4. Manage the IT project</p>	<p>4.1 Monitor project progress according to project plan requirements, using appropriate <i>project-management tools</i> and methodologies</p> <p>4.2 Manage team member performance, ensuring that their output is directed to the key performance indicators identified in the project plan</p> <p>4.3 Make corrections, changes and additions to the project plan in light of changing circumstances to ensure project aims and</p>

	<p>outcomes</p> <p>4.4 Monitor resourcing to support the project and make corrections to reflect changing circumstances</p> <p>4.5 Report overall project progress to senior management or funding bodies as required and in line with the project plan</p>
5. Finalise the IT project	<p>5.1 Finalise the project in line with the project plan</p> <p>5.2 Conduct handover to staff members responsible for the ongoing implementation or maintenance of project products or services efficiently, effectively and in line with organisational procedures</p> <p>5.3 Debrief project team members and relevant stakeholders about the conduct of the project and the outcomes achieved</p> <p>5.4 Prepare a report analysing the strengths and weaknesses of the project plan and the conduct of the project</p>
6. Use the IT project to contribute to improved policies and processes	<p>6.1 Identify and analyse opportunities for wider organisational learning, including changes to processes or policies generated by the project</p> <p>6.2 Forward opportunities for future further developments following project completion for consideration by senior management</p> <p>6.3 Consider the strategic impact of the project and feed into the organisation's ongoing strategic planning processes</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse project progress
- communication skills to:
  - facilitate groups
  - liaise and negotiate with clients and team members
  - present, transfer and collect information and gain consensus
- literacy skills to:
  - read and interpret drawings, plans and specifications, including architectural, structural, mechanical, hydraulic and electrical
  - research and evaluate competing technologies in new products and systems
  - review and comment on reports, including building, insurance and corporate
  - search, access, read, interpret and apply current relevant legislation, codes and standards
  - update knowledge of products, software systems and technology
- numeracy skills for budgeting and financial management
- planning and organisational skills to:
  - manage human resources
  - manage time
  - participate in the development of strategic initiatives
  - plan and execute a project
  - plan communications and risk management for a project
  - consider scoping, timeframe, cost and quality for a project
- research skills to specify, analyse and evaluate broad features of a particular business domain and solutions to project problems
- technical skills to formulate milestones.

### Required knowledge

- budgets and financial plans
- concepts of risk-management planning and processes
- computer software functions and operation, including relevant proprietary software
- relevant current legislation, codes and standards
- sustainability requirements and ratings, including reporting mechanisms
- tools and models of project management:
  - energy conservation
  - water conservation
- organisational frameworks and functions, including:
  - enterprises
  - government bodies
  - industry associations.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design, implement, manage and finalise a complex IT project</li> <li>• manage planning processes, scheduling, human resources, reporting and response to contingencies</li> <li>• ensure projects undertaken are aligned with and support organisational strategies and requirements</li> <li>• learn from project outcomes and refine and improve future IT project management processes.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• codes and standards</li> <li>• legislation relevant to the jurisdiction and the project being undertaken</li> <li>• project documentation</li> <li>• research resources, including product information and data</li> <li>• theoretical texts and other information to support the assessment of the unit's required skills and knowledge</li> <li>• relevant computer software packages and suitable hardware</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate performing complex IT project management</li> <li>• verbal or written questioning to assess candidate's ability to formulate metrics and milestones</li> <li>• review of candidate's project documentation.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Strategic context</i></b> may include:	<ul style="list-style-type: none"> <li>• operating environment in which the project will be conducted.</li> </ul>
<b><i>Legislation and industry codes and standards</i></b> may include:	<ul style="list-style-type: none"> <li>• Australian Computer Society Code of Ethics</li> <li>• sector-specific impacts on the project design and delivery.</li> </ul>
<b><i>Risk-management analysis</i></b> may include:	<ul style="list-style-type: none"> <li>• business continuity, including emergency plans for activities to continue in the event of loss of building, equipment or systems</li> <li>• changing government policy or funding arrangements</li> <li>• environmental concerns:             <ul style="list-style-type: none"> <li>• hazardous waste</li> <li>• pollution</li> <li>• tree-retention policies</li> </ul> </li> <li>• public liability</li> <li>• safety of staff</li> <li>• workers-compensation claims.</li> </ul>
<b><i>Specifications and terms of reference</i></b> may include:	<ul style="list-style-type: none"> <li>• definition of the project aims</li> <li>• description of stakeholders</li> <li>• description of the outcomes to be achieved using, wherever possible, the nomination of clear metrics</li> <li>• description of the project parameters:             <ul style="list-style-type: none"> <li>• flexibilities involved</li> <li>• scope of operations</li> </ul> </li> <li>• identification of the budget</li> <li>• specification of the communication strategy to be used</li> <li>• specification of the timescale.</li> </ul>
<b><i>Project-management tools</i></b> may:	<ul style="list-style-type: none"> <li>• be in-house or proprietary software</li> <li>• incorporate scheduling and reporting templates</li> <li>• incorporate the use of Gantt or PERT charts</li> <li>• use critical path analysis.</li> </ul>

IT project management

# ICAPRG301A Apply introductory programming techniques

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake introductory programming tasks in the development of a game or application.

This unit addresses the knowledge, processes and techniques necessary to develop skills to create simple applications or games.

## Application of the Unit

This unit applies to people with responsibility for creating applications or games and includes creating code, using programming standards, testing and debugging.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Apply language syntax and layout	<p>1.1 Apply basic <i>language</i> syntax rules</p> <p>1.2 Use language data types, operators and expressions to create clear and concise code</p> <p>1.3 Apply variables and <i>variable scope</i></p> <p>1.4 Use <i>library functions</i> in a program</p> <p>1.5 Use commenting to create clear meaning to code</p>
2. Apply control structures	<p>2.1 Apply language syntax for sequence, selection and iteration constructs</p> <p>2.2 Use <i>logical operators</i> to create expressions for use in selection and iteration constructs</p>
3. Code using standard algorithms	<p>3.1 Develop algorithms that use the sequence, selection and iteration constructs</p> <p>3.2 Create and use <i>arrays</i></p> <p>3.3 Code standard sequential access algorithms for reading and writing text files, including end-of-file detection loops</p> <p>3.4 Apply <i>string manipulation</i></p>
4. Test code	<p>4.1 Use <i>debugging techniques</i> to trace code execution and examine variable contents to detect and correct errors</p> <p>4.2 Create and conduct simple tests to confirm code meets design specification</p> <p>4.3 Document the tests performed and results achieved</p>
5. Create an application or game	<p>5.1 Design an algorithm in response to basic program specifications</p> <p>5.2 Develop the application or game to meet the program specification</p> <p>5.3 Test and confirm that application or game meets the initial specifications</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to determine the requirements of the specification
- communication skills to:
  - document the code
  - understand the client requirements
- learning skills to research encountered problems independently
- literacy skills to create program code that uses correct syntax
- planning and organisational skills to complete the program within the required timeframe
- problem-solving skills to translate the required outcomes of the specification into correct program code
- technical skills to apply programming concepts.

### Required knowledge

- programming language syntax and command structure
- small-sized application or game development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• apply programming language syntax, sequence, selection and iteration control structures to the development of an application or game</li> <li>• produce an application or game that is designed and built from a provided program specification</li> <li>• confirm that the created application or game meets the original program specifications and obtain user sign-off for completed program.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• requirement documents</li> <li>• site documents</li> <li>• software development tools currently used in industry, such as compiler and IDE</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate programming and debugging code</li> <li>• verbal or written questioning to assess candidate's knowledge of language syntax and programming constructs</li> <li>• review of programs to assess candidate's knowledge of language syntax and programming constructs</li> <li>• review of an application or game developed by candidate to meet a specification.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Language</i></b> may include:	<ul style="list-style-type: none"> <li>• C</li> <li>• C++</li> <li>• Java</li> <li>• VB.</li> </ul>
<b><i>Variable scope</i></b> may include:	<ul style="list-style-type: none"> <li>• global</li> <li>• local</li> <li>• local to code block.</li> </ul>
<b><i>Library functions</i></b> may include:	<ul style="list-style-type: none"> <li>• getch()</li> <li>• printf, cout</li> <li>• rand()</li> <li>• SDL_BlitterSurface()</li> <li>• SDL_PollEvent().</li> </ul>
<b><i>Logical operators</i></b> may include:	<ul style="list-style-type: none"> <li>• AND</li> <li>• OR</li> <li>• NOT.</li> </ul>
<b><i>Arrays</i></b> may include:	<ul style="list-style-type: none"> <li>• one-dimensional arrays: <ul style="list-style-type: none"> <li>• declare</li> <li>• initialise</li> <li>• loop through array elements</li> <li>• use</li> </ul> </li> <li>• 2-D arrays.</li> </ul>
<b><i>String manipulation</i></b> may include:	<ul style="list-style-type: none"> <li>• converting strings to numbers</li> <li>• searching a string for tokens</li> <li>• splitting a string based on tokens</li> <li>• stringing concatenation</li> <li>• sub-strings.</li> </ul>
<b><i>Debugging techniques</i></b> may include:	<ul style="list-style-type: none"> <li>• printing variable information to screen or log</li> <li>• using debugging tools provided by the integrated development environment (IDE).</li> </ul>

## **Unit Sector(s)**

Programming and software development

## ICAPRG401A Maintain open-source code programs

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to contribute as a member of an open-source software project community and to maintain open-source code. The open-source development model differs considerably from the traditional commercial model.

### Application of the Unit

This unit applies to individuals working in software and system development and maintenance. They may work as open-source software developers who are required to build, test and distribute open-source software applications, or programmers responsible for integrating open-source components, tools or technologies into their applications.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Investigate open-source paradigm	<p>1.1 Examine the open-source paradigm and demonstrate an understanding of the differences from the traditional <i>software</i> development models</p> <p>1.2 Investigate and demonstrate understanding of the types of <i>online resources</i></p> <p>1.3 Investigate and demonstrate understanding of the types of project <i>documentation</i></p> <p>1.4 Recognise and demonstrate understanding of the role of an <i>online community</i> and international collaboration</p> <p>1.5 Examine and demonstrate understanding of motivational factors for contributors to open-source code</p> <p>1.6 Analyse and demonstrate understanding of open-source <i>licensing models</i></p>
2. Familiarise with target project	<p>2.1 Examine online resources associated with the target project</p> <p>2.2 Download pre-built executable binaries to install and run project</p> <p>2.3 Download, read and demonstrate understanding of supporting documentation</p>
3. Prepare for maintenance activities	<p>3.1 Select and register with a relevant online community open-source group</p> <p>3.2 Download nightly snapshots of latest source code and supporting documentation</p> <p>3.3 Build and execute snapshot where appropriate</p>
4. Maintain code	<p>4.1 Access the project bug database and select bugs to be resolved or features to be added</p> <p>4.2 Make changes to local copy of code to resolve selected bugs</p> <p>4.3 Test resulting code to ensure it performs appropriately</p> <p>4.4 Prepare code patch for submission</p> <p>4.5 Submit code patch to project</p> <p>4.6 Use appropriate <i>software-development tools</i> and environment</p>
5. Maintain documentation	<p>5.1 Access project documentation</p> <p>5.2 Prepare and contribute new information or updates to existing documentation</p> <p>5.3 Prepare and submit documentation changes to project</p>
6. Participate in	<p>6.1 Exchange messages with other project members and actively</p>

community	participate in community activities 6.2 Take action to ensure exchanges are <i>socially acceptable</i> 6.3 Submit code and documentation code patches for inclusion 6.4 Access <i>online project</i> resources frequently to keep up-to-date with project and community developments 6.5 Take action to ensure <i>community-participation standards</i> are observed and maintained
-----------	---

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - apply some of the latest information technology tools and techniques
  - evaluate and compare a range of open-source tools and components to use in software development and maintenance
- communication skills to:
  - discuss issues with global peers
  - participate effectively in discussions on a number of information technology issues
  - participate in volatile communities of interest
- initiative and enterprise skills to:
  - apply information technology knowledge and skills in a multidisciplinary environment
  - participate in open-source projects
- literacy skills to:
  - read and interpret complex technical and non-technical information from a range of sources
  - write a clearly structured document or update existing documentation
- problem-solving skills to choose the best solution for a particular context
- research skills to identify and locate possible sources of required information for a target project
- technical skills to:
  - build existing software projects from source
  - create and maintain code
  - use basic language syntax and layout, data structures, arrays and standard algorithms
  - test and debug code at a high level.

### Required knowledge

- detailed knowledge of:
  - debugging and testing techniques
  - documentation techniques, including internal documentation, user guides and technical documentation
  - open-source development methodology
- overview knowledge of online project communities.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• provide significant contribution to an open-source project in the form of:             <ul style="list-style-type: none"> <li>• program source code changes and/or additions</li> <li>• documentation changes or additions</li> <li>• online participation in the project direction</li> <li>• local proof of building of snapshots, code modifications and testing.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• software development environment</li> <li>• internet</li> <li>• technical requirements</li> <li>• databases</li> <li>• information repositories</li> <li>• programming languages</li> <li>• group-facilitation software</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of open-source practices, open-source software and open-source issues such as distribution, compatibility and security</li> <li>• evaluation of candidate's:             <ul style="list-style-type: none"> <li>• participation</li> <li>• application code, test and documentation.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and</p>

	<p>the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial software applications</li> <li>• customised software</li> <li>• in-house software</li> <li>• organisation-specific software</li> <li>• packaged software.</li> </ul>
<b><i>Online resources</i></b> may include:	<ul style="list-style-type: none"> <li>• community sites</li> <li>• CVS trees</li> <li>• FTP sites</li> <li>• gopher sites</li> <li>• news groups</li> <li>• online communities</li> <li>• websites.</li> </ul>
<b><i>Documentation</i></b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC), and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project management templates</li> <li>• report writing principles</li> <li>• version control.</li> </ul>
<b><i>Online community</i></b> may include:	<ul style="list-style-type: none"> <li>• local communities</li> <li>• online virtual communities of interest</li> <li>• organisational communities</li> <li>• main tools for online communities: <ul style="list-style-type: none"> <li>• mailing lists</li> <li>• newsgroups</li> <li>• web conferencing.</li> </ul> </li> </ul>
<b><i>Licensing models</i></b> may include:	<ul style="list-style-type: none"> <li>• Apache licences</li> <li>• Berkeley Software Distribution (BSD)</li> <li>• General Public License (GPL)</li> <li>• Lesser General Public License (LGPL)</li> <li>• Mozilla.</li> </ul>

<b><i>Software-development tools</i></b> may include:	<ul style="list-style-type: none"> <li>• computer language</li> <li>• development methodology</li> <li>• development tools</li> <li>• operating systems</li> <li>• target environments</li> <li>• version control systems.</li> </ul>
<b><i>Socially acceptable</i></b> should be:	<ul style="list-style-type: none"> <li>• designed and sent with regard to recipient's:             <ul style="list-style-type: none"> <li>• culture</li> <li>• ethnicity</li> <li>• location</li> <li>• race</li> <li>• social sensitivities.</li> </ul> </li> </ul>
<b><i>Online project</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial hosting facility hosting community code</li> <li>• CVS site</li> <li>• FTP site</li> <li>• other type of group repository</li> <li>• private website.</li> </ul>
<b><i>Community-participation standards</i></b> may include:	<ul style="list-style-type: none"> <li>• informal or formal rules and regulations used by groups to manage their online projects</li> <li>• procedures or guidelines</li> <li>• verbal or written policies.</li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG402A Apply query language

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to retrieve and manipulate information stored in information systems using a query language.

## Application of the Unit

This unit applies to individuals in a range of work environments who are required to extract information from a source, such as database, text file, and eXtensible markup language (XML), by creating and running queries.

These individuals may support the job functions of managers and developers. They may work as application support, database support, junior IT administrator, database programmer and data programmer.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine the requirements of developing queries	1.1 Recognise various query-related <b><i>terminologies</i></b> 1.2 Identify the type of <b><i>data source</i></b> for a chosen <b><i>query language</i></b> 1.3 Identify and use necessary <b><i>tools</i></b> and environment in building queries
2. Write queries to retrieve and sort values	2.1 Use an <b><i>expression</i></b> to retrieve values from a single <b><i>unit</i></b> 2.2 Use an expression to combine values from more than one unit 2.3 Use an expression to sort values into certain order
3. Write queries to selectively retrieve values	3.1 Use an expression to filter a sequence based on a predicate or condition 3.2 Use an expression to filter a subset of sequence based on a predicate or condition 3.3 Use an expression to extract a specific value by position
4. Perform calculation in queries	4.1 Use expression to perform calculation on numeric values 4.2 Use expression to perform operation on text values 4.3 Use expression to perform operation on date and time values

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse and comprehend interdependencies between data fields
  - examine and define system requirements for data
  - review requirements and determine the availability of information
- communication skills to:
  - interact with developer to determine data requirement
  - interact with end user personnel to determine data requirement
  - liaise with management on report and result matters
- literacy skills to:
  - produce basic ad hoc report
  - read and interpret specifications developed by business and technical experts
- numeracy skills to:
  - make basic calculations involving basic arithmetic operations
  - make estimates and comparisons involving date and time data
- problem-solving skills to:
  - address common problems in operating a computer system
  - perform basic debugging, such as defining simple problems, locating source of the problems, and providing solutions to problems
- technical skills to:
  - perform basic data-management operations, such as insert, update and delete operations
  - perform basic operations of a computer system.

### Required knowledge

- broad knowledge of:
  - information gathering methods
  - data analysis
  - data mining
- characteristics of data source
- features of information system
- typical systems and procedures.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• select and use tools in developing, storing and executing queries to extract the appropriate data required for ad hoc reports or to support developers</li> <li>• incorporate calculations using:             <ul style="list-style-type: none"> <li>• control statements</li> <li>• operators</li> <li>• functions.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• tools in:             <ul style="list-style-type: none"> <li>• accessing a data source</li> <li>• developing queries using the chosen query language</li> </ul> </li> <li>• specific requirements, including client and functionality</li> <li>• policy and naming standard</li> <li>• resources to aid calculation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of candidate's ability to:             <ul style="list-style-type: none"> <li>• integrate query into larger systems to support application development team</li> <li>• implement programmability objects (such as stored procedures) containing queries stored in an information system to support operational functions</li> </ul> </li> <li>• direct observation of candidate using query language to retrieve or manipulate data</li> <li>• verbal or written questioning to assess candidate's knowledge of the features of the query language.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Terminologies</i></b> may include:	<ul style="list-style-type: none"> <li>• attribute</li> <li>• command</li> <li>• data item</li> <li>• expressions</li> <li>• item type</li> <li>• statement.</li> </ul>
<b><i>Data source</i></b> may include:	<ul style="list-style-type: none"> <li>• arrays</li> <li>• databases</li> <li>• entities</li> <li>• enumerable classes</li> <li>• objects</li> <li>• text files</li> <li>• eXtensible markup language (XML).</li> </ul>
<b><i>Query language</i></b> may include:	<ul style="list-style-type: none"> <li>• abstract object query language (AOQL)</li> <li>• XML</li> <li>• Google base query language (GBQL)</li> <li>• Java persistence query language (JPQL)</li> <li>• language integrated query (LINQ)</li> <li>• structured query language (SQL)</li> <li>• xQuery.</li> </ul>
<b><i>Tools</i></b> may include:	<ul style="list-style-type: none"> <li>• application programming interface (API)</li> <li>• class libraries</li> <li>• database engine</li> <li>• integrated development environment (IDE)</li> <li>• programming language.</li> </ul>

## ICAPRG403A Develop data-driven applications

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to create data-driven applications that access data from a range of sources, such as databases, object data sources or eXtensible markup language (XML).

### Application of the Unit

This unit applies to those who work as programmers or database application developers who are responsible for data-access coding.

The context of the unit applies to different types of data-access methods, such as data retrieval and storage, back-end coding, disconnect data management, and reading and writing XML documents.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Design data-access layer (DAL)	1.1 Design DAL in a <b><i>multi-layer application</i></b> model 1.2 Determine <b><i>data-access application programming interface</i></b> (API) for connecting to various data sources
2. Establish a connection with a data source	2.1 Create and manage connection strings 2.2 Connect to a <b><i>data source</i></b> by using different <b><i>data providers</i></b> 2.3 Create code to handle connection exceptions
3. Execute commands and return results from the data source	3.1 <b><i>Query data</i></b> from the data source 3.2 Retrieve data from the data source as result sets 3.3 Manage result sets 3.4 Manage exceptions when retrieving data
4. Modify data in the data source	4.1 Insert, update or delete data 4.2 Manage <b><i>data integrity</i></b> 4.3 Manage exceptions when modifying data
5. Manage disconnected data	5.1 Research a <b><i>disconnected data</i></b> management strategy 5.2 Ensure that application can deal with disconnected data
6. Document data-access layer	6.1 Document the code 6.2 Document database connectivity

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to design complex multi-layer application model
- communication skills to interact with developer to ensure proper implementation
- learning skills to investigate potential new techniques to access data from various resources
- literacy skills to:
  - read and interpret database design document
  - read basic technical data
- problem-solving skills to develop and refine strategies to access data sources
- technical skills to:
  - create code for the data-access layer
  - create structured query language (SQL) commands to select, insert, update or delete data
  - test and debug code.

### Required knowledge

- features of:
  - object-oriented design and multi-layer applications
  - relational database management systems
- object-oriented programming at an intermediate level
- SQL at a basic level.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design and code the data-access layer of multi-layer applications</li> <li>• retrieve and update data from various data sources.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• integrated development environment (IDE)</li> <li>• data access APIs</li> <li>• database management system software</li> <li>• database files</li> <li>• coding standard</li> <li>• specific tools and licences, depending on particular data-access API</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of candidate's DAL design</li> <li>• evaluation of candidate's data-access management strategy</li> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• multi-layer applications</li> <li>• database access.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Multi-layer application</i></b> may include:	<ul style="list-style-type: none"> <li>• business logic layer (BLL)</li> <li>• data-access layer (DAL)</li> <li>• user interface layer (UI).</li> </ul>
<b><i>Data-access application programming interface</i></b> may relate to:	<ul style="list-style-type: none"> <li>• object-oriented set of libraries used to interact with data sources: <ul style="list-style-type: none"> <li>• active data objects (ADO.NET)</li> <li>• ADO.NET Entity Framework</li> <li>• Java database connectivity (JDBC)</li> <li>• language integrated query (LINQ).</li> </ul> </li> </ul>
<b><i>Data source</i></b> may include:	<ul style="list-style-type: none"> <li>• databases: <ul style="list-style-type: none"> <li>• Microsoft SQL server</li> <li>• MySQL</li> <li>• Oracle</li> <li>• Postgre Structured Query Language (Postgre SQL)</li> </ul> </li> <li>• fat-files database</li> <li>• internal data</li> <li>• object data sources</li> <li>• XML database.</li> </ul>
<b><i>Data providers</i></b> may include:	<ul style="list-style-type: none"> <li>• managed providers</li> <li>• Microsoft object linking and embedding (OLE) DB</li> <li>• native providers</li> <li>• open database connection (ODBC)</li> <li>• SQL client</li> <li>• third-party providers.</li> </ul>
<b><i>Query data</i></b> may include:	<ul style="list-style-type: none"> <li>• access input and output parameters and return values</li> <li>• access stored procedures</li> <li>• create command objects.</li> </ul>
<b><i>Data integrity</i></b> may include:	<ul style="list-style-type: none"> <li>• cascading deletes</li> <li>• cascading updates</li> <li>• constraints.</li> </ul>
<b><i>Disconnected data</i></b> may include:	<ul style="list-style-type: none"> <li>• DataSet</li> <li>• DataTable</li> <li>• service data objects (SDO).</li> </ul>

## **Unit Sector(s)**

Programming and software development

## ICAPRG404A Test applications

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to prepare test plans, write test procedures or scripts according to test plans, and maintain test plans and scripts.

### Application of the Unit

This unit is relevant to those responsible for test plan preparation, execution, maintenance, and reporting of tests; as well as defect management in the software development life cycle.

The positions in this role include programmers, developers, testers and test analysts.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine testing need in development	1.1 Identify testing role across software development life cycle 1.2 Identify <b><i>testing types</i></b> and <b><i>testing tools</i></b> 1.3 Recognise testing benefits, standard and terms
2. Prepare test plan document	2.1 Gather requirements to develop test plan 2.2 Analyse and identify test data using various <b><i>test-case design techniques</i></b> 2.3 Define and design test cases
3. Write and execute test procedures	3.1 Choose and adopt a <b><i>unit test framework</i></b> 3.2 Design and implement algorithm in <b><i>test procedures</i></b> 3.3 Perform test executions
4. Review test results	4.1 Record test results 4.2 Analyse test results 4.3 Produce test progress reports 4.4 Manage defects

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - liaise with developers on programming matters
  - liaise with managers or leaders on report and result matters
  - seek requirements and information from business and technical experts
- literacy skills to:
  - develop reports and documentation in relation to presentation of information
  - read and interpret program specifications developed by business and technical experts
- problem-solving skills to apply basic debugging techniques in the context of software and application development
- research skills to:
  - locate and interrogate complex and varied sources of information
  - source information from available sources
- technical skills to:
  - develop a small scale application
  - execute an application.

### Required knowledge

- characteristics of programming language
- detailed knowledge of input and output requirements
- overview knowledge of software development life cycle
- processes and techniques related to small-size application development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• apply test case design techniques to develop test plan and test cases that adequately cover specific test requirements</li> <li>• design, implement and execute test procedures or scripts by using a unit test framework and an integrated development environment (IDE)</li> <li>• create test progress reports based on recorded test results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• software development environment</li> <li>• specific test requirements, such as test-plan document</li> <li>• suitable code to be tested</li> <li>• word-processing software</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to key issues in testing software applications related to a specific project</li> <li>• evaluation of candidate's ability to create testing project and execute test cases in a specific context</li> <li>• observation of test cases development and documentation based on specific requirements.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.

## ICAPRG405A Automate processes

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to write scripts to automate solutions by using basic scripting processes and application-specific scripting options.

### Application of the Unit

This unit applies to individuals in information and communications technology (ICT) support roles who are required to automate tasks. System administrators make decisions about what processes to automate in order to expedite servers' operations.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Develop algorithms to represent solution to a given problem	1.1 Develop an algorithm which is an exact and sufficient description of the solution 1.2 Develop an algorithm which takes account of all expected possible situations 1.3 Develop an algorithm which is guaranteed to end
2. Describe structures of algorithms	2.1 Demonstrate use of structure, sequence, selection and iteration 2.2 Use structures to describe algorithmic solutions to a problem
3. Design and write script or code	3.1 Create an abstract design to fulfil the <b>requirements</b> of the proposed process 3.2 Review the abstract design for omissions or errors 3.3 Translate the abstract design to the chosen <b>language</b> 3.4 Create internal documentation
4. Verify and review script or code	4.1 Check the script or code for syntax and semantic errors 4.2 Identify areas that are not covered or are covered incorrectly in the script or code
5. Document script or code	5.1 Create technical-level documentation 5.2 Create user-level documentation

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to interact with user via script
- literacy skills to create technical and user level documentation
- technical skills to:
  - create scripts to automate application system tasks
  - execute scripts for set repeat time slices, single runs or break-out loops
  - manipulate and automate data
  - use inbuilt scripting options for a variety of scenarios.

### Required knowledge

- detailed knowledge of:
  - debugging for a variety of scripting scenarios
  - scripting language syntax
  - scripting techniques.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop an algorithmic statement of a solution for a set process</li> <li>• produce a functional script to automate a set process</li> <li>• document this script both internally and externally.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• applications capable of being scripted or having own scripting language</li> <li>• templates for automating processes</li> <li>• executable scripts for set repeat time slices, single runs or break-out loops</li> <li>• debugging tools</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of application or process that scripting will control</li> <li>• evaluation of algorithm design and scripting concepts to a variety of manual operations</li> <li>• review of scripting:             <ul style="list-style-type: none"> <li>• results on appropriate device</li> <li>• documentation.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.

## ICAPRG406A Apply introductory object-oriented language skills

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake introductory programming tasks using an object-oriented programming language. Competency includes tool usage, documentation, debugging and testing techniques in support of the programming activities.

### Application of the Unit

This unit applies to programmers in a variety of fields who are required to produce simple programs in object-oriented languages.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Apply basic language syntax and layout	<p>1.1 Demonstrate understanding and application of basic <i>language</i> syntax rules and best practices</p> <p>1.2 Select and use language data types, operators and expressions to create clear and concise code</p> <p>1.3 Use the appropriate language syntax for sequence, selection and iteration constructs</p> <p>1.4 Use a modular programming approach within member or function logic</p> <p>1.5 Apply arrays, including arrays of objects to introductory programming tasks</p> <p>1.6 Use <i>standard-array processing algorithms</i></p> <p>1.7 Use the facilities of the language to read and write data from and to text files and record outcomes</p>
2. Apply basic object-oriented principles in the target language	<p>2.1 Implement a class that contains primitive member or instance variables</p> <p>2.2 Implement a class that contains multiple options for object construction</p> <p>2.3 Implement a class that uses user-defined aggregation (object instance or member variables)</p> <p>2.4 Use the facilities provided in the language to implement inheritance to at least two levels of depth</p> <p>2.5 Use polymorphism at a simple level through inheritance to enable easy extension of code</p>
3. Debug code	<p>3.1 Use an <i>integrated development environment</i>, in particular the language debugging facilities, to debug code</p> <p>3.2 Interpret compiler or interpreter messages to resolve syntax errors and use debugging techniques to resolve logic errors</p>
4. Document activities	<p>4.1 Follow organisational guidelines for developing maintainable code and adhere to the provided <i>coding standards</i> when documenting activities</p> <p>4.2 Apply internal documentation to all code created and use documentation tools available in the target language when documenting activities</p>
5. Test code	<p>5.1 Create and conduct simple tests to confirm code meets <i>design specification</i></p> <p>5.2 Document the tests performed and results achieved</p>

6. Create an application	6.1 Develop a solution when provided with a basic <i>object-oriented design document</i> 6.2 Refer to appropriate documentation for the language
--------------------------	---

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to translate requirements from problem space to machine space
- communication skills to liaise with client
- literacy skills to:
  - document results
  - read and interpret program specifications
- problem-solving skills to debug problems with program code
- technical skills to:
  - debug and test
  - use integrated development environment
  - use internal (code) documentation
  - use programs.

### Required knowledge

- processes and techniques related to the use of:
  - object-oriented programming concepts and language
  - small-size application development
  - graphical user interface (GUI) to interact with operator.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• use an application program to design and build standard reusable software modules in response to a design specification</li> <li>• generate code documentation</li> <li>• undertake testing to confirm that the created application meets the original specification and solves original problem.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• software development environment</li> <li>• technical requirements</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of processes and techniques related to object-oriented programming concepts and language</li> <li>• evaluation of object-oriented solution</li> <li>• review of developed program documentation.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Language</i></b> may include:	<ul style="list-style-type: none"> <li>• C#.net</li> <li>• C++</li> <li>• Java</li> <li>• Small Talk</li> <li>• VB.NET.</li> </ul>
<b><i>Standard-array processing algorithms</i></b> may include:	<ul style="list-style-type: none"> <li>• insertion and deletion algorithms</li> <li>• search.</li> </ul>
<b><i>Integrated development environment</i></b> may include:	<ul style="list-style-type: none"> <li>• Code Warrior</li> <li>• Eclipse</li> <li>• JBuilder</li> <li>• J-Edit</li> <li>• Visual C++</li> <li>• Visual Studio suite.</li> </ul>
<b><i>Coding standards</i></b> may include:	<ul style="list-style-type: none"> <li>• GNU</li> <li>• Java.</li> </ul>
<b><i>Design specification</i></b> may include:	<ul style="list-style-type: none"> <li>• current system functionality</li> <li>• technical requirements</li> <li>• user problem statement.</li> </ul>
<b><i>Object-oriented design document</i></b> may include:	<ul style="list-style-type: none"> <li>• class diagrams</li> <li>• supplementary specifications</li> <li>• use-cases.</li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG407A Write script for software applications

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan, design and build scripts using a scripting language to construct a highly interactive and automated software application.

## Application of the Unit

This unit applies to individuals who build and integrate interactive applications or websites for internal and public sites.

These individuals may work as an application developer, application support, programmer specialised in a scripting language, web application programmer, and web developer.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine the requirements of building script	1.1 Identify the main characteristics of <b><i>scripting languages</i></b> 1.2 Identify and use a <b><i>framework</i></b> and <b><i>integrated development environment</i></b> (IDE) to build script using the chosen scripting language 1.3 Identify the <b><i>protocols</i></b> and <b><i>object model</i></b> used in the chosen scripting language
2. Design script	2.1 Create pseudo code to describe the logic needed in the script 2.2 Review pseudo code for missing logic and error
3. Write script	3.1 Translate pseudo code into scripts incorporating the use of <b><i>basic language elements</i></b> 3.2 Create internal documentation in the script 3.3 Incorporate <b><i>item</i></b> manipulation using the chosen scripting language 3.4 Review, debug, and document script

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - liaise with developers on programming matters
  - seek requirements and information from business and technical experts
- literacy skills to:
  - read and interpret program specifications developed by business and technical experts
  - read and interpret technical documentation
  - write a basic documentation
- problem-solving skills to apply basic debugging techniques in the context of software and application development
- research skills to:
  - locate and interrogate complex and varied sources of information
  - source information
- technical skills to:
  - develop a small scale application
  - perform basic operations of a computer system.

### Required knowledge

- overview knowledge of:
  - computing platforms
  - copyright and intellectual property
  - software development life cycle
- processes and techniques related to small-size application development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design, write, and integrate scripts into software solutions to accommodate specified requirements, such as data manipulation and data automation</li> <li>• use a framework and IDE in developing scripts.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• requirements of the brief, including those relating to client and functionality</li> <li>• runtime environment, such as a scripting engine to execute and test script</li> <li>• development environment to create and debug script</li> <li>• scripting language, such as application programming interface (API)</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of ability to create:             <ul style="list-style-type: none"> <li>• dynamic (web) application with automatic elements generation, interactive user input, and persistent information storage</li> <li>• macros to automate routine manual tasks such as report generation.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Scripting languages</i></b> may include:	<ul style="list-style-type: none"> <li>• application scripting language:             <ul style="list-style-type: none"> <li>• visual basic for applications (VBA)</li> </ul> </li> <li>• web scripting languages:             <ul style="list-style-type: none"> <li>• client-side scripting languages:                 <ul style="list-style-type: none"> <li>• ActionScript</li> <li>• JavaScript</li> <li>• Jscript</li> <li>• VBScript</li> </ul> </li> <li>• server-side scripting languages:                 <ul style="list-style-type: none"> <li>• ASP.NET</li> <li>• ColdFusion</li> <li>• JSP</li> <li>• Perl</li> <li>• PHP</li> <li>• Python.</li> </ul> </li> </ul> </li> </ul>
<b><i>Framework</i></b> may include:	<ul style="list-style-type: none"> <li>• catalyst</li> <li>• django</li> <li>• flex</li> <li>• jQuery</li> <li>• mach-II</li> <li>• .NET framework</li> <li>• spring</li> <li>• struts</li> <li>• yii.</li> </ul>
<b><i>Integrated development environment</i></b> may include:	<ul style="list-style-type: none"> <li>• FlashBuilder</li> <li>• Microsoft Office</li> <li>• NetBeans</li> <li>• Visual Studio</li> <li>• .NET.</li> </ul>
<b><i>Protocols</i></b> may include:	<ul style="list-style-type: none"> <li>• file transfer protocol (FTP)</li> <li>• file transfer protocol secure (FTPS)</li> <li>• hypertext transfer protocol (HTTP)</li> <li>• hypertext transfer protocol secure (HTTPS)</li> </ul>

	<ul style="list-style-type: none"> <li>• secure sockets layer (SSL).</li> </ul>
<i>Object model</i> may include:	<ul style="list-style-type: none"> <li>• component object model (COM)</li> <li>• data-access object (DAO) model</li> <li>• document object model (DOM)</li> <li>• VBA object model.</li> </ul>
<i>Basic language elements</i> must include:	<ul style="list-style-type: none"> <li>• data flow statements such as conditional statements and iteration statements</li> <li>• data types</li> <li>• expressions</li> <li>• functions</li> <li>• operators</li> <li>• variables.</li> </ul>
<i>Item</i> may include:	<ul style="list-style-type: none"> <li>• browser</li> <li>• cookie</li> <li>• database</li> <li>• device</li> <li>• text file</li> <li>• spreadsheet</li> <li>• eXtensible markup language (XML) documents.</li> </ul>

## Unit Sector(s)

Programming and software development

## ICAPRG409A Develop mobile applications

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop, debug, test and deploy applications for hand-held devices, such as mobile phones, pocket PCs, personal digital assistants (PDAs) and enterprise digital assistants (EDAs).

### Application of the Unit

This unit is relevant to those who work as mobile device application developers. They may be programmers, game developers, designers, or testers who are working in the area of mobile applications development.

The context of the unit applies to all development platform environments which provide tools to build and deploy applications into the target platform environment, such as Android, Symbian, Java ME, .NET compact platform, iPhone, Google phone and BlackBerry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Define a platform	<p>1.1 Determine target <i>platform</i> for the hand-held device</p> <p>1.2 Choose and evaluate a <i>development environment</i> based on the target platform, hardware and mobile phone manufacturer on which the application will run</p> <p>1.3 Prepare and configure the application development environment</p>
2. Design user interface for a mobile application	<p>2.1 Create views for different screen orientations and resolutions</p> <p>2.2 Integrate appropriate <i>navigation</i> techniques</p> <p>2.3 Design page <i>layout and content</i></p> <p>2.4 Integrate appropriate <i>user input</i> techniques</p>
3. Permit the personalisation of parameters	<p>3.1 Write code to allow users to configure application settings</p> <p>3.2 Write code to allow users to configure application output, such as text size, brightness and sound effects</p>
4. Build user interface for a mobile application	<p>4.1 Itemise the required functionality</p> <p>4.2 Build user interface in the determined development environment to fulfil this functionality</p>
5. Connect to data sources	<p>5.1 Bind controls to data sources</p> <p>5.2 Persist data using eXtensible markup language (XML) serialisation</p> <p>5.3 Access remote data using XML web services</p>
6. Test and debug a mobile device application	<p>6.1 Test application for overall functionality according to requirements</p> <p>6.2 Iterate application design or build until test results meet requirements</p>
7. Deploy a mobile device application	<p>7.1 Create application packaging for deployment</p> <p>7.2 Deploy an application to target devices</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - design for small devices
  - evaluate appropriate mobile development environment
- communication skills to provide advice and guidance to others
- literacy skills to read and interpret technical and non-technical information
- numeracy skills to make basic calculations for specifying the layout of the mobile user interface design
- problem-solving skills to:
  - address common problems in building and deploying mobile applications
  - perform basic programming debugging skills
- research skills to find and evaluate relevant technologies in mobile applications development
- technical skills to:
  - create XML documents
  - design user interface
  - develop software applications
  - test and debug applications
  - use an integrated development environment (IDE).

### Required knowledge

- basic knowledge of:
  - hardware and networking
  - object-oriented programming
  - user-interface design
  - web design: HTML, JavaScript, cascading style sheet (CSS), and AJAX
- detailed knowledge of XML programming and web services.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design, build, test and deploy applications for small devices:             <ul style="list-style-type: none"> <li>• mobile phones</li> <li>• pocket PCs</li> <li>• personal digital assistants (PDAs)</li> <li>• enterprise digital assistants (EDAs).</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• hand-held devices or stimulators</li> <li>• integrated development environment (IDE)</li> <li>• internet and web services</li> <li>• server system with sufficient privileges to deploy applications</li> <li>• specific tools and licences, depending on particular platform</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following example is appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of mobile development environment.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Platform</i></b> may include:	<ul style="list-style-type: none"> <li>• Android</li> <li>• BlackBerry</li> <li>• Google iPhone</li> <li>• Java ME</li> <li>• .NET compact platform</li> <li>• Symbian.</li> </ul>
<b><i>Development environment</i></b> may include:	<ul style="list-style-type: none"> <li>• cross-platform deployment</li> <li>• emulator availability</li> <li>• frameworks:             <ul style="list-style-type: none"> <li>• Flash</li> <li>• Java Platform, Micro Edition and Java Platform Standard Edition</li> <li>• .NET compact platform</li> <li>• Qtopia for embedded Linux-based mobile devices</li> <li>• Sprout Core (open-source JavaScript framework)</li> <li>• wireless application protocol (WAP)</li> </ul> </li> <li>• integrated development environment:             <ul style="list-style-type: none"> <li>• BlackBerry</li> <li>• Eclipse</li> <li>• NetBeans</li> <li>• Visual Studio</li> <li>• XCode</li> </ul> </li> <li>• languages:             <ul style="list-style-type: none"> <li>• C#</li> <li>• C/C++</li> <li>• Java</li> <li>• JavaScript</li> <li>• Objective-C</li> <li>• Perl hypertext pre-processor (PHP)</li> <li>• Python</li> <li>• Ruby</li> <li>• Visual Basic (VB) or VBScript</li> <li>• wireless markup language (WML)</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• server and client tools libraries and tools.</li> </ul>
<i>Navigation</i> may include:	<ul style="list-style-type: none"> <li>• access keys</li> <li>• image maps</li> <li>• navigation bar</li> <li>• navigation links.</li> </ul>
<i>Layout and content</i> may include:	<ul style="list-style-type: none"> <li>• content: <ul style="list-style-type: none"> <li>• bandwidth</li> <li>• limited screen area</li> <li>• load time and cost</li> <li>• use clear language</li> </ul> </li> <li>• layout: <ul style="list-style-type: none"> <li>• font and colour</li> <li>• images</li> <li>• page size</li> <li>• positioning controls</li> <li>• scrolling to display content.</li> </ul> </li> </ul>
<i>User input</i> may include:	<ul style="list-style-type: none"> <li>• multi-press</li> <li>• multi-touch</li> <li>• on-screen keyboard</li> <li>• phone keypad.</li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG410A Build a user interface

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design, build and test a user interface (UI) to specification.

## Application of the Unit

This unit is relevant to those who work as user-interface designers and responsible for specifying the layout and style of the desired user interface. They may be developers working in the area of user-interface design and implementation.

The context of the unit applies to different types of user interfaces, such as command-line interfaces (CLI), graphical user interfaces (GUI), web user interfaces (WUI) and natural user interfaces (NUI).

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Build a prototype user interface	1.1 <b><i>Gather requirements</i></b> for the user interface 1.2 Determine the application <b><i>development language</i></b> for writing the user interface 1.3 Build a prototype using <b><i>prototyping tools</i></b> available in the determined language 1.4 Review UI prototype with client and edit as required
2. Design UI	2.1 Formulate application content flow 2.2 Design <b><i>UI components</i></b> 2.3 Define <b><i>UI actions</i></b> 2.4 Itemise UI events
3. Build UI	3.1 Determine the appropriate language 3.2 Build UI with the required functionality
4. Test UI	4.1 Test UI for overall functionality according to requirements 4.2 Iterate UI design or build until test results meet requirements
5. Document UI and obtain client sign-off	5.1 Document user requirements 5.2 Document UI 5.3 Obtain client sign-off to completed UI

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to provide advice and guidance to others
- literacy skills to read basic technical data
- numeracy skills to make basic calculations for specifying the layout of the UI
- research skills to keep up-to-date with UI technologies and tools
- technical skills to:
  - create applications using basic programming techniques
  - create web pages using hypertext markup language (HTML) and cascading style sheet (CSS)
  - debug applications using basic debugging techniques
  - test applications using basic testing techniques.

### Required knowledge

- maths at a basic level
- object-oriented programming
- open-source development tools
- small-size application development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design a fully functional UI in consultation with the user using the determined language</li> <li>• create a prototype UI</li> <li>• review the prototype with the user</li> <li>• build the UI</li> <li>• test that created UI is complete, consistent and functional.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• internet in order to use online tools available for prototyping and UI design</li> <li>• integrated development environment (IDE) for the determined language</li> <li>• specific tools and licenses are available depending on particular platform, such as Windows, Linux, Unix, Mac and Google Chrome</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of candidate's: <ul style="list-style-type: none"> <li>• UI prototype</li> <li>• completed UI</li> </ul> </li> <li>• review of candidate's UI documentation</li> <li>• verbal or written questioning to determine candidate's knowledge of: <ul style="list-style-type: none"> <li>• UI components</li> <li>• prototyping methodology.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Gather requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• interviews</li> <li>• observation</li> <li>• questionnaires.</li> </ul>
<b><i>Development language</i></b> may include:	<ul style="list-style-type: none"> <li>• object-oriented language, such as:             <ul style="list-style-type: none"> <li>• ASP.NET</li> <li>• C++</li> <li>• Java</li> <li>• JavaScript</li> <li>• JSP</li> <li>• NET (VB, C#)</li> <li>• Python</li> </ul> </li> <li>• XHTML, DHTML and CSS.</li> </ul>
<b><i>Prototyping tools</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial applications, such as:             <ul style="list-style-type: none"> <li>• Adobe FireWorks CS4</li> <li>• Adobe Flash Catalyst</li> <li>• Axure</li> <li>• Balsamiq Mockups</li> <li>• Microsoft Expression Blend</li> <li>• MockupScreens</li> </ul> </li> <li>• open-source tools, such as:             <ul style="list-style-type: none"> <li>• FluidIA</li> <li>• Napkin Look &amp; Feel</li> <li>• Pencil Sketching</li> </ul> </li> <li>• web-based tool, such as:             <ul style="list-style-type: none"> <li>• Hot Gloo</li> <li>• Mockingbird.</li> </ul> </li> </ul>
<b><i>UI components</i></b> may include:	<ul style="list-style-type: none"> <li>• common and basic controls, such as button, label, textbox, checkbox and combo box</li> <li>• container controls</li> <li>• data controls</li> <li>• dialogs</li> <li>• menus and toolbars controls</li> </ul>

	<ul style="list-style-type: none"><li>• printing controls.</li></ul>
<i>UI actions</i> may include:	<ul style="list-style-type: none"><li>• keyboard actions along with the key modifiers</li><li>• keyboard actions, such as key press, key release and key action</li><li>• mouse actions include moves, button presses, button releases and dragging</li><li>• use of emerging interactive surface technologies and the NUI.</li></ul>

## Unit Sector(s)

Programming and software development

# ICAPRG412A Configure and maintain databases

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install a database, manage data, data access and data security, and improve database performance.

## Application of the Unit

This unit applies to individuals responsible for the maintenance and coordination of database operations. They usually work in a company or organisation to provide daily services related to databases.

These individuals may work as database administrators, database developers, database coordinators, or application developers.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine requirements of database administration	1.1 Identify <b>components</b> of a <b>database</b> instance 1.2 Define and use tools to administer database
2. Install and configure database system	2.1 Verify database software installation prerequisites 2.2 Install database software and related services 2.3 Configure database instance, components and services 2.4 Perform <b>data-management tasks</b>
3. Manage database security and integrity	3.1 Create and administer users 3.2 Create and manage <b>permissions</b> to perform database operations 3.3 Create and manage <b>roles</b>
4. Optimise and back up database	4.1 Configure database for backup and recovery operations 4.2 Create and manage database <b>backups</b> 4.3 Restore and perform database <b>recovery</b> 4.4 Tune and perform database <b>optimisation</b>
5. Document database	5.1 Document maintenance and tuning work performed on database 5.2 Document users added to system

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - evaluate interdependencies between data fields
  - examine and define system requirements for data
  - review requirements and determine the availability of information
- communication skills to:
  - interact with developer to determine data requirement
  - interact with end user personnel to determine data requirement
  - liaise with management on report and result matters
- literacy skills to:
  - read and interpret specifications developed by business and technical experts
  - write a report
- problem-solving skills to:
  - address common issues relating to the operation of a computer system
  - perform basic troubleshooting to diagnose system problems
- technical skills to:
  - perform basic data-management operations, such as insert, update and delete operations
  - perform basic operations of a computer system.

### Required knowledge

- basic knowledge of:
  - database design
  - desktop operating systems
  - relational databases
  - computer hardware and components
  - computer networking and components
  - structured query language (SQL).

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• install and configure database software</li> <li>• manage database files, integrity, users and security</li> <li>• create backup and restore databases</li> <li>• monitor database performance.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• database-management system software</li> <li>• database instance</li> <li>• tools in administering database</li> <li>• specific requirements, including client and functionality requirements</li> <li>• policy and naming standard</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate performing: <ul style="list-style-type: none"> <li>• the installation, configuration and troubleshooting of a database management system software</li> <li>• database tuning for performance using appropriate techniques and tools</li> <li>• database backup creation and restore using the backup file</li> <li>• data-management tasks, such as importing and exporting data, and instance creation</li> <li>• database security tasks, such as creating users, and assigning roles and permissions to database users</li> </ul> </li> <li>• verbal or written questioning to determine candidate's knowledge of database tuning and database security</li> <li>• review of candidate's database documentation.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Components</i></b> may include:	<ul style="list-style-type: none"> <li>• memory structure</li> <li>• relational database management system (RDBMS) software</li> <li>• stored procedures</li> <li>• table structure.</li> </ul>
<b><i>Database</i></b> may include:	<ul style="list-style-type: none"> <li>• MS Access</li> <li>• MySQL</li> <li>• Oracle</li> <li>• structured query language (SQL) server.</li> </ul>
<b><i>Tools</i></b> may include:	<ul style="list-style-type: none"> <li>• MySQL Workbench</li> <li>• Oracle Enterprise Manager Database Control</li> <li>• phpMyAdmin</li> <li>• SQL Server Management Studio.</li> </ul>
<b><i>Data-management tasks</i></b> may include:	<ul style="list-style-type: none"> <li>• implement data compressions</li> <li>• import and export data</li> <li>• maintain indexes</li> <li>• manage collations</li> <li>• manage data partitions.</li> </ul>
<b><i>Permissions</i></b> may include:	<ul style="list-style-type: none"> <li>• implied</li> <li>• object</li> <li>• statement.</li> </ul>
<b><i>Roles</i></b> may include:	<ul style="list-style-type: none"> <li>• application</li> <li>• database: <ul style="list-style-type: none"> <li>• fixed</li> <li>• public</li> <li>• defined</li> </ul> </li> <li>• server, such as fixed-server roles.</li> </ul>
<b><i>Backups</i></b> may include:	<ul style="list-style-type: none"> <li>• compressed</li> <li>• differential</li> <li>• file</li> <li>• full database</li> <li>• online and offline database</li> <li>• transaction log.</li> </ul>

<i>Recovery</i> may include:	<ul style="list-style-type: none"><li>• bulk-logged</li><li>• full</li><li>• simple.</li></ul>
<i>Optimisation</i> may include:	<ul style="list-style-type: none"><li>• cache mechanism</li><li>• data compression</li><li>• indexing.</li></ul>

## Unit Sector(s)

Programming and software development

## ICAPRG413A Use a library or pre-existing components

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify, evaluate and incorporate reuse components from a library or other source as part of a software project.

### Application of the Unit

This unit applies to individuals working in a programming role in a variety of IT areas who are required to use programming libraries to support their work.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify potential reuse units	<p>1.1 Analyse <b><i>project</i></b> design and functionality to identify <b><i>reuse components</i></b></p> <p>1.2 Source reuse components with desired functionality</p>
2. Evaluate reuse components for suitability in parent project	<p>2.1 Evaluate reuse component or libraries for suitability for use within the parent software project</p> <p>2.2 Compare functionality of each potential reuse component to functionality required by parent project</p> <p>2.3 Evaluate cost of implementing reuse component</p> <p>2.4 Consider technical impact on parent project design</p> <p>2.5 Consider reuse component vendor licensing issues</p> <p>2.6 Finalise selection of reuse components</p> <p>2.7 Document selection, evaluation and decision processes as part of the parent project-design <b><i>documentation</i></b></p>
3. Incorporate reuse components	<p>3.1 Configure <b><i>development environment</i></b> to include reuse components during build process</p> <p>3.2 Construct test programs or use provided example programs to become familiar with reuse components in preparation for incorporation into parent project</p> <p>3.3 Add reuse components to parent project incrementally</p> <p>3.4 Resolve reuse component dependencies</p> <p>3.5 Assemble and test parent project with a focus on the functionality provided by reuse components</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse project design and functionality
  - evaluate reuse components
- literacy skills to document selection, evaluation and decision processes
- numeracy skills to evaluate cost of reusing components
- planning and organisational skills to identify, analyse and evaluate a range of solutions
- problem-solving skills to solve issues with the use of the library
- research skills for identifying, analysing and evaluating broad features of current reuse issues and best practice in component reuse
- technical skills to:
  - complete abstraction for a range of solutions
  - apply appropriate naming standards for a range of solutions.

### Required knowledge

- broad knowledge of:
  - contract specifications
  - current industry development and design methodologies
- detailed knowledge of:
  - domain modelling
  - genericity specification
  - content and structure of libraries
  - techniques for metrics collection
  - patterns, frameworks and idioms
  - repository tools.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• meet project requirements by efficiently identifying, modifying and integrating components for reuse.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• software development environment</li> <li>• reuse library</li> <li>• technical requirements</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of the purpose of reuse libraries</li> <li>• review of the documentation when selecting a reuse component</li> <li>• evaluation of the completed program code incorporating the reuse library.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Project</i></b> may include:	<ul style="list-style-type: none"> <li>• business improvement process</li> <li>• business involved in a total organisational change</li> <li>• ebusiness solution involving the total organisation or part of the organisation</li> <li>• systems-only change.</li> </ul>
<b><i>Reuse components</i></b> may include:	<ul style="list-style-type: none"> <li>• code</li> <li>• design patterns</li> <li>• metadata</li> <li>• requirements</li> <li>• specifications.</li> </ul>
<b><i>Documentation</i></b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC), and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project-management templates</li> <li>• report-writing protocols</li> <li>• version control.</li> </ul>
<b><i>Development environment</i></b> may include:	<ul style="list-style-type: none"> <li>• computer language used</li> <li>• development methodology</li> <li>• development tools</li> <li>• operating systems</li> <li>• target environments</li> <li>• version control systems.</li> </ul>

Programming and software development

# ICAPRG414A Apply introductory programming skills in another language

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake programming tasks using a procedural approach to programming. An object-oriented language may be used in this approach.

## Application of the Unit

This unit applies to individuals working in programming, development and technical roles.

They may work as programmers, software developers or may be IT staff with responsibility for undertaking programming activities, including writing, maintaining and updating programs, defining data and file handling.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Apply basic language syntax and layout	<p>1.1 Apply basic <i>language</i> syntax rules</p> <p>1.2 Use language data types, operators and expressions to create clear and concise code</p> <p>1.3 Use appropriate language syntax for sequence, selection and iteration <i>constructs</i></p>
2. Code using data structures	<p>2.1 Demonstrate understanding of <i>data structures</i></p> <p>2.2 Write code to create and manipulate <i>arrays</i></p> <p>2.3 Design, define and use data structures</p>
3. Code using standard algorithms	<p>3.1 Create sequential search, binary search, insertion and deletion algorithms to operate on arrays</p> <p>3.2 Code standard sequential access algorithms and random access algorithms</p>
4. Debug code	<p>4.1 Use stand-alone debugging tools or tools provided by <i>integrated development environment</i> (IDE) to debug code</p> <p>4.2 Use a debugger to trace code execution and examine variable contents to detect and correct errors</p>
5. Document activities	<p>5.1 Follow <i>organisational guidelines</i> for developing maintainable code and adhere to the provided coding standard when documenting activities</p> <p>5.2 Apply internal <i>documentation</i> suitable for use by peers to all code created and use documentation tools available in the target language when documenting activities</p>
6. Test code	<p>6.1 Design and document tests</p> <p>6.2 Capture and record test results</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- literacy skills to:
  - read and interpret:
    - code standards and organisational guidelines
    - program specifications
  - write internal documentation
- problem-solving skills to develop solutions for applications
- technical skills to use integrated development environment.

### Required knowledge

- basic knowledge of:
  - documentation techniques
  - programming techniques
  - testing techniques
  - small-size application development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• perform programming coding to create, debug and test medium-size applications</li> <li>• generate design and code documentation</li> <li>• test and confirm that created application meets program specifications.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• IDE for the determined language</li> <li>• specific tools and licences, depending on particular platform and language</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of candidate's application code, test and documentation</li> <li>• verbal or written questioning of candidate on key programming concepts, such as:             <ul style="list-style-type: none"> <li>• syntax and language features</li> <li>• aggregate data types (such as collections, lists, hash tables, arrays and queues) that are appropriate to the language studied</li> <li>• using an IDE</li> <li>• debugging code.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Language</i></b> may include:	<ul style="list-style-type: none"> <li>• C++</li> <li>• C#</li> <li>• Java</li> <li>• JavaScript</li> <li>• Visual Basic (VB)</li> <li>• VBScript.</li> </ul>
<b><i>Constructs</i></b> may include:	<ul style="list-style-type: none"> <li>• iterations or loops</li> <li>• nested control structures</li> <li>• selection statements: <ul style="list-style-type: none"> <li>• if</li> <li>• switch.</li> </ul> </li> </ul>
<b><i>Data structures</i></b> may include:	<ul style="list-style-type: none"> <li>• arrays</li> <li>• collections</li> <li>• dictionaries</li> <li>• lists</li> <li>• maps</li> <li>• sets.</li> </ul>
<b><i>Arrays</i></b> may include:	<ul style="list-style-type: none"> <li>• multi-dimensional arrays</li> <li>• one-dimensional arrays.</li> </ul>
<b><i>Integrated development environment</i></b> may include:	<ul style="list-style-type: none"> <li>• C++Builder</li> <li>• CodeLite</li> <li>• Eclipse</li> <li>• JavaBuilder</li> <li>• Microsoft Visual Studio</li> <li>• NetBeans</li> <li>• Xcode.</li> </ul>
<b><i>Organisational guidelines</i></b> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> </ul>

	<ul style="list-style-type: none"><li>• personal use of emails and internet access</li><li>• templates</li><li>• virus risk.</li></ul>
<i>Documentation</i> may include:	<ul style="list-style-type: none"><li>• audit trails</li><li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC), and Australian Standards (AS) standards</li><li>• naming standards</li><li>• project management templates</li><li>• report writing</li><li>• version control.</li></ul>

## Unit Sector(s)

Programming and software development

## ICAPRG415A Apply skills in object-oriented design

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to apply the cyclic process of iteration from identification of class, instance, role and type to the final complete object-oriented model of the application.

### Application of the Unit

This unit applies to system designers who are required to design systems in an object-oriented method.

Object-oriented languages are an important feature of software development processes world-wide.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Derive the high-level design from specification	<p>1.1 Develop a static class diagram from a given set of <b><i>specifications</i></b></p> <p>1.2 Develop either a collaboration diagram or a sequence diagram from a given set of specifications</p> <p>1.3 Develop either an activity diagram or a state diagram from a given set of specifications</p>
2. Refine the design	<p>2.1 Investigate and refine behaviour, state of classes and the collaboration between classes</p> <p>2.2 Validate the correct visibility of class services and state data</p> <p>2.3 Identify generalisations within classes</p> <p>2.4 Identify specialisations within classes</p> <p>2.5 Apply the principles of aggregation and composition to refine class design</p>
3. Document the design	<p>3.1 Create detailed uniform modelling language (UML) static class diagrams</p> <p>3.2 Create detailed UML collaboration or sequence diagrams</p> <p>3.3 Create detailed UML activity or state diagrams</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with clients and staff
- technical skills to:
  - abstract classes related to producing the required design
  - conduct completion of abstractions to successfully produce the required design
  - conduct domain analysis to successfully produce the required design
  - conduct refinement of inheritance hierarchies to successfully produce the required design.

### Required knowledge

- design quality metrics, such as coupling and cohesion
- design refinement techniques
- programming design principles
- different programming methodologies
- various developmental life cycle options.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• produce an object-oriented design from requirements documents or system specifications, including:             <ul style="list-style-type: none"> <li>• static class diagrams</li> <li>• collaboration or sequence diagrams</li> <li>• activity or state diagrams.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• system specifications</li> <li>• requirement documents</li> <li>• design specifications</li> <li>• detailed design</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate performing the process of iteration from identification of class, instance, role and type to the object-oriented model</li> <li>• verbal or written questioning to assess candidate's knowledge of object-oriented techniques and analytical skills, including evaluating development methodologies to a project or scenario to the scope and tasks involved in the object-oriented design processes</li> <li>• review of documentation as required by the chosen methodology.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Unit Sector(s)

Programming and software development

## ICAPRG416A Manage a software component reuse library

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to store, document and maintain IT components for reuse.

### Application of the Unit

This unit applies to individuals in a software development area who are required to manage a library that contains reusable code.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Specify components for reuse library</p>	<p>1.1 Determine <i>component</i> suitability for reuse by checking its quality and uses</p> <p>1.2 Review the size and complexity of <i>reuse components</i> for generalisation and remove <i>project</i>-specific refinements</p> <p>1.3 Evaluate components, including patterns, clusters and frameworks, and break down into smaller components for greater flexibility or use</p> <p>1.4 Review components for duplication and remove duplicates</p>
<p>2. Document reuse library</p>	<p>2.1 Document components internally and externally to ensure efficient retrieval</p> <p>2.2 Document public constants, data structures, component interfaces and limitations</p> <p>2.3 Document possible relationships between data structures or objects</p> <p>2.4 Provide example code, demonstrating the use of components within the documentation</p> <p>2.5 Document <i>development environment</i> configuration</p> <p>2.6 Provide simple test programs to prove the functionality of the library</p>
<p>3. Set up library structure</p>	<p>3.1 Classify data structures or objects in a consistent and logical manner</p> <p>3.2 Ensure that library has a logical structure so that the <i>user</i> is aware of library contents and can understand the logic of how the functionality may be used by another developer</p> <p>3.3 Develop the structure in a manner that avoids redundancy within the library</p> <p>3.4 Configure development environment to automate build of reuse components and library</p> <p>3.5 Take action to ensure interfaces to library components are consistent and abstracted</p> <p>3.6 Add, update and remove reuse components as development is undertaken</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - classify data structures
  - determine the quality of reuse components for efficient retrieval and use
  - evaluate components to allow for greater flexibility or use
- communication skills to liaise with users
- literacy skills to provide technical documents
- planning and organisational skills to:
  - manage own work priorities
  - produce a logical library structure
- technical skills to:
  - provide example code to demonstrate functionality
  - use simple test programs to prove the functionality of the library.

### Required knowledge

- abstraction of code module interfaces
- component libraries
- design paradigms
- patterns, frameworks and idioms
- reuse components and metrics
- reuse libraries content and structure.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• reuse libraries and manage components within the library structure</li> <li>• store, document and improve the quality of reuse components for efficient retrieval and use</li> <li>• organise and communicate library contents.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• software development environment</li> <li>• technical requirements</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of design paradigms</li> <li>• review of the candidate's library structure</li> <li>• evaluation of the library components added.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Component</i></b> may include:	<ul style="list-style-type: none"> <li>• classes</li> <li>• code</li> <li>• design</li> <li>• documents</li> <li>• metadata</li> <li>• methods</li> <li>• modules</li> <li>• test cases.</li> </ul>
<b><i>Reuse components</i></b> may include:	<ul style="list-style-type: none"> <li>• code</li> <li>• design patterns</li> <li>• metadata</li> <li>• requirements</li> <li>• specifications.</li> </ul>
<b><i>Project</i></b> may include:	<ul style="list-style-type: none"> <li>• business improvement process</li> <li>• business involved in a total organisational change</li> <li>• ebusiness solution involving the total organisation or part of the organisation</li> <li>• systems-only change.</li> </ul>
<b><i>Development environment</i></b> may include:	<ul style="list-style-type: none"> <li>• computer language used</li> <li>• development methodology</li> <li>• development tools</li> <li>• operating systems</li> <li>• target environments</li> <li>• version control systems.</li> </ul>
<b><i>User</i></b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party.</li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG417A Apply mathematical techniques for software development

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use basic mathematical methods and operations with real numbers and their precedence, the evaluation and construction of formulas in standard and computer notation, and the use of Boolean algebra, data types and computer storage.

## Application of the Unit

This unit applies to individuals in software development roles who are required to use mathematical constructions in programming.

Mathematics and algebraic manipulation forms the underpinning structure of computer architecture and memory storage as well as programming languages.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Manipulate algebraic terms, leading to the solution of linear equations	1.1 Position number types on the number line 1.2 Evaluate various numerical expressions involving integers, fractions and indices 1.3 Simplify various algebraic expressions involving integers, fractions and indices
2. Construct mathematical formulas	2.1 Solve simple equations 2.2 Convert formulas between standard algebraic form and computer form 2.3 Create several formulas in standard algebraic form and in computer form
3. Simplify and evaluate Boolean expressions and formulas	3.1 Simplify and evaluate several <b><i>Boolean expressions</i></b> 3.2 Complete truth tables based on simple Boolean expressions and logic 3.3 Simplify and evaluate several formulas
4. Manipulate number and character representation systems	4.1 Convert numbers between binary, decimal and hexadecimal number systems 4.2 Add, subtract and multiply numbers in binary 4.3 Determine binary memory storage of an integer and a character

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate various numerical expressions
- numeracy skills to solve simple equations
- planning and organisational skills to meet deadlines
- problem-solving skills to recognise and address issues and problems.

### Required knowledge

- overview knowledge of mathematical terms and operations and calculation tools.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• solve and evaluate various mathematical problems in various computational contexts</li> <li>• demonstrate a knowledge, use and manipulation of: <ul style="list-style-type: none"> <li>• Boolean algebra</li> <li>• number types</li> <li>• memory storage.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• programming language</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• Boolean algebra and how it applies to various computational contexts</li> <li>• different number bases</li> <li>• arithmetic involving different number bases</li> </ul> </li> <li>• review of candidate's program code containing mathematical equations.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Boolean expressions</i></b> may include the use of:	<ul style="list-style-type: none"><li>• AND</li><li>• NOT</li><li>• OR.</li></ul>
--	---

## Unit Sector(s)

Programming and software development

# ICAPRG418A Apply intermediate programming skills in another language

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake intermediate programming tasks using another programming language. The language may be an object-oriented language.

## Application of the Unit

This unit applies to programmers in a variety of fields who are required to produce software programs.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Code using user defined data structures	<p>1.1 Design, define and use data structures that are an aggregate of other <i>data types</i></p> <p>1.2 Code using an array of user-defined data types</p> <p>1.3 Use the facilities in the language to create, manipulate and destroy dynamic variables, such as arrays</p>
2. Code using standard algorithms	<p>2.1 When coding, use a modular programming approach, including pass-by-reference parameter passing</p> <p>2.2 Write code to create and manipulate a 2-D array</p> <p>2.3 Create and maintain a sorted array and use language-provided facilities for sorting an array of ordered elements</p> <p>2.4 Code a simple binary search technique for use with an array of sorted data</p> <p>2.5 Code binary file-handling solutions using random access algorithms</p>
3. Debug code	<p>3.1 Use stand-alone debugging tools or tools provided by <i>integrated development environment</i> to debug code</p> <p>3.2 Use a debugger to trace code execution and examine variable contents to detect and correct errors</p>
4. Document activities	<p>4.1 Follow <i>organisational guidelines</i> for developing maintainable code and adhere to the provided <i>coding standard</i> when documenting activities</p> <p>4.2 Apply internal <i>documentation</i> suitable for use by peers to all code created</p> <p>4.3 Use documentation tools available in the target <i>language</i> when documenting activities</p>
5. Test code	<p>5.1 Design and document tests</p> <p>5.2 Undertake limited testing of produced code to ensure compliance with program specification</p> <p>5.3 Capture and record test results</p>
6. Create an application	<p>6.1 Build an application in response to a user requirement</p> <p>6.2 Access multiple source code files</p> <p>6.3 Employ integrated development environment project maintenance facilities or make files to automate program building</p> <p>6.4 Develop a program specification solution when provided with a basic design document</p>

	6.5 Design the algorithm, and document, construct and test applications in response to a problem description using the language 6.6 Document the completed application
--	---

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - read and interpret program specifications
  - undertake user testing
- communication skills to deal with clients and colleagues
- initiative and enterprise skills to produce a solution to the programming requirement
- literacy skills to:
  - follow organisational guidelines
  - produce documentation required for the chosen methodology
- problem-solving skills to debug problems with object-oriented code
- technical skills to:
  - apply a programming methodology to a project or scenario
  - interpret program specifications
  - translate from problem space to machine space
  - use a range of debugging tools
  - use an integrated development environment
  - use program-coding techniques.

### Required knowledge

- detailed knowledge of:
  - dynamic variables
  - medium-size application development
  - standard array and file handling algorithms
  - user-defined data structures
- limited range of development methodologies and their application
- limited knowledge of language development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design and build application programs to a problem scenario and program specification</li> <li>• generate code documentation and test it to confirm that created application meets original specification and solves original problem</li> <li>• produce technical documentation for the application program.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• software development environment</li> <li>• technical requirements</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• arrays</li> <li>• dynamic variables</li> <li>• modular programming</li> </ul> </li> <li>• evaluation of candidate's application</li> <li>• review of candidate's technical documentation.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Data types</b> may include:	<ul style="list-style-type: none"> <li>• language-provided data types</li> <li>• standard data types</li> <li>• database management system (DBMS)-specific data types.</li> </ul>
<b>Integrated development environment</b> may include:	<ul style="list-style-type: none"> <li>• Borland C++</li> <li>• Code Warrior</li> <li>• Eclipse</li> <li>• Visual C++</li> <li>• Visual Studio suite.</li> </ul>
<b>Organisational guidelines</b> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<b>Coding standard</b> may include:	<ul style="list-style-type: none"> <li>• ANSI C</li> <li>• GNU.</li> </ul>
<b>Documentation</b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC), and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project-management templates</li> <li>• report writing</li> <li>• version control.</li> </ul>
<b>Language</b> may include:	<ul style="list-style-type: none"> <li>• C</li> <li>• C++</li> <li>• Java</li> <li>• Small Talk</li> <li>• VB</li> <li>• VB.NET.</li> </ul>

## Unit Sector(s)

Programming and software development

## ICAPRG419A Analyse software requirements

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to research and analyse client requirements, produce a range of options, and create a software requirements document.

### Application of the Unit

This unit applies to individuals in a range of work environments who are required to perform an analysis role in formulating software requirements.

These individuals may work as database or computer developers, business analysts or project managers.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Gather and confirm client requirements	<p>1.1 Confirm requirements and scope with the <i>client</i></p> <p>1.2 Gather information regarding requirements via <i>sources of information</i> and business processes</p> <p>1.3 Analyse client requirements to determine the <i>project scope</i> and the problem context or opportunity faced by the business</p> <p>1.4 Document client requirements, project scope, related problems and sources of information</p>
2. Analyse functional and related non-functional requirements	<p>2.1 Map business processes using modelling tools, such as <i>unified modelling language</i> (UML)</p> <p>2.2 Determine opportunities for business process efficiencies</p> <p>2.3 Document functional and related non-functional processes</p>
3. Analyse the feasibility of a project	<p>3.1 Analyse the technical <i>feasibility</i> of the project</p> <p>3.2 Analyse the operational feasibility of the project</p> <p>3.3 Determine the budget and schedule feasibility of the project</p> <p>3.4 Examine how the project will fit within the organisation</p>
4. Develop high-level system solutions	<p>4.1 Develop and document feasible <i>solutions</i> for client <i>requirements</i></p> <p>4.2 Explore and document the feasibility of each solution</p> <p>4.3 Examine alternatives against project <i>constraints</i></p> <p>4.4 Document assumptions, dependencies and required <i>resources</i></p> <p>4.5 Produce a project risk analysis</p> <p>4.6 Document future requirements</p>
5. Prepare and publish software-requirements documentation	<p>5.1 Develop <i>software-requirements document</i></p> <p>5.2 Submit software-requirements report to <i>appropriate person</i> for <i>project</i> approval</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - evaluate audience needs
  - model business processes
- communication skills to:
  - determine appropriate content, formats and styles
  - question and actively listen
- literacy skills to:
  - evaluate and present information
  - write reports for business requiring in-depth analysis and evaluation of information in a defined range of areas
- numeracy skills to produce financial models for identifying, analysing and evaluating a range of solutions
- planning and organisational skills to:
  - identify target audiences
  - plan projects in relation to scope, time, cost, quality, communications and risk management
- problem-solving skills to identify viable solutions to meet client requirements
- research skills to:
  - identify, analyse and evaluate broad features of a particular business domain and best practice in system development
  - identify relevant content
- technical skills to:
  - use modelling tools
  - use word-processing software and multimedia-authoring tools.

### Required knowledge

- client-business domain
- content features, such as clarity and readability
- detailed knowledge of the system's current functions
- document design and usability
- functions and features of templates and style guides
- instructional-design principles
- role of stakeholders and the degree of stakeholder involvement
- two or more current industry systems development methodologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• research and analyse client requirements in order to present a range of solution options</li> <li>• create a software requirements document applying content format and style according to relevant organisational standards.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• specific requirements, including client and functionality</li> <li>• word-processing software, such as Microsoft Word</li> <li>• modelling software currently used in industry</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of candidate's software requirements documentation</li> <li>• verbal or written questioning to assess candidate's knowledge of modelling tools.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b><i>Sources of information</i></b> may involve:	<ul style="list-style-type: none"> <li>• business-strategic plans</li> <li>• change-management plans</li> <li>• current systems-design plans</li> <li>• project-management plans.</li> </ul>
<b><i>Project scope</i></b> may include:	<ul style="list-style-type: none"> <li>• budget</li> <li>• features</li> <li>• hardware</li> <li>• policy and legal constraints</li> <li>• resource</li> <li>• software</li> <li>• time.</li> </ul>
<b><i>Unified modelling language</i></b> may include:	<ul style="list-style-type: none"> <li>• activity diagram</li> <li>• class diagram</li> <li>• use-case diagram</li> <li>• use-case narrative.</li> </ul>
<b><i>Feasibility</i></b> may include:	<ul style="list-style-type: none"> <li>• economic and schedule feasibility as well as the principal inputs and outputs</li> <li>• expected improvements and impacts</li> <li>• operational feasibility</li> <li>• physical requirements of each solution</li> <li>• revenue and cost-benefits</li> <li>• risks</li> <li>• technical feasibility.</li> </ul>
<b><i>Solutions</i></b> may include:	<ul style="list-style-type: none"> <li>• hardware upgrades</li> <li>• new system implementation</li> <li>• new hardware</li> <li>• new software</li> <li>• software upgrades</li> <li>• user training.</li> </ul>

<b>Requirements</b> may be in reference to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• organisational policies</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<b>Constraints</b> may include:	<ul style="list-style-type: none"> <li>• budget</li> <li>• hardware</li> <li>• legal</li> <li>• organisational policy</li> <li>• resources</li> <li>• software</li> <li>• time.</li> </ul>
<b>Resources</b> may include:	<ul style="list-style-type: none"> <li>• equipment</li> <li>• infrastructure</li> <li>• networks</li> <li>• personnel.</li> </ul>
<b>Software requirements document</b> may include:	<ul style="list-style-type: none"> <li>• brochures</li> <li>• help references, such as online help</li> <li>• operational procedures</li> <li>• reports</li> <li>• solution design</li> <li>• solution feasibility</li> <li>• system design</li> <li>• system functionality</li> <li>• system or project specifications</li> <li>• technical manuals</li> <li>• training materials and self-paced tutorials</li> <li>• user guides.</li> </ul>
<b>Appropriate person</b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b>Project</b> may include:	<ul style="list-style-type: none"> <li>• business improvement process</li> <li>• ebusiness solution involving the total organisation or part of the organisation</li> <li>• projects involving a business undertaking a total organisational change</li> <li>• systems-only change.</li> </ul>

## **Unit Sector(s)**

Programming and software development

# ICAPRG425A Use structured query language

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use a structured query language (SQL) to define, create and manipulate database structures and associated data in a relational database.

## Application of the Unit

This unit applies to a wide variety of information technology (IT) roles where relational databases and SQL are being used. SQL database functions are in place for most organisations and have become integral to internet-based data provision and data retrieval.

Examples of job roles where this unit applies would be:

- IT generalists who work in environments in which relational databases and SQL are part of an overall solution
- systems administrators or network engineers who install and manage systems that run on an SQL server
- developers who build applications that use SQL
- IT professionals who work with third-party applications that are built using SQL databases
- database administrators who manage the relational database environment
- advanced users who write queries to extract data from a relational database.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Write a simple SQL statement to retrieve and sort data	<p>1.1 Retrieve all the data from a single table</p> <p>1.2 Retrieve data from specific columns in a single table</p> <p>1.3 Use 'order by' to sort query output</p>
2. Write an SQL statement that selectively retrieves data	<p>2.1 Restrict the number of rows retrieved by placing criteria in the 'where' clause</p> <p>2.2 Restrict the number of rows retrieved by placing specific criteria in the select statement</p> <p>2.3 Use <b>comparison operators</b> in the 'where' clause to compare numeric, character, string, date and time data</p> <p>2.4 Use <b>Boolean operators</b> with the correct precedence</p> <p>2.5 Use criteria in the 'where' clause to check for a range of values, to select values from a list, and to check for values that match a pattern</p> <p>2.6 Use SQL syntax to suppress duplicate values from query results</p> <p>2.7 Take action to exclude null values from a query result</p>
3. Write SQL statements that use functions	<p>3.1 Use <b>arithmetical operators</b> with the correct precedence</p> <p>3.2 Use string functions and operators to obtain the required query output</p> <p>3.3 Use <b>mathematical functions</b> to obtain the required output, where required</p> <p>3.4 Use date functions to obtain the required output</p> <p>3.5 Use SQL aggregate functions to obtain the required output</p>
4. Write SQL statements that use aggregation and filtering	<p>4.1 Use 'group by' to aggregate data by multiple columns</p> <p>4.2 Sort aggregated data in the query output</p> <p>4.3 Filter aggregated data using the 'having' clause</p>
5. Write SQL statements that retrieve data from multiple tables	<p>5.1 Employ the inner join syntax to retrieve data from two or more tables</p> <p>5.2 Use 'left outer', 'right outer' and 'full outer' syntax to join tables in the select statement</p> <p>5.3 Use correct syntax in the 'where' clause to retrieve data from multiple tables</p> <p>5.4 Write a union query that retrieves data from more than one table</p>

6. Write and execute SQL sub-queries	<p>6.1 Construct single and nested sub-queries</p> <p>6.2 Construct sub-queries that return a single row and multiple rows</p> <p>6.3 Use correlated sub-queries to retrieve required data</p> <p>6.4 Write sub-queries that use aggregates</p>
7. Create and manipulate tables	<p>7.1 Identify required columns, data types, keys, relationships, indexes and constraints</p> <p>7.2 Use relevant naming conventions for <i>database</i> elements</p> <p>7.3 Create tables that implement required elements</p> <p>7.4 <i>Manipulate tables</i> to meet specific requirements</p>
8. Create and use views	<p>8.1 Create views that satisfy <i>information requirements</i></p> <p>8.2 Use check constraints in a view</p> <p>8.3 Retrieve, insert, update and delete data using a view</p> <p>8.4 Drop a view from a database</p>
9. Create and use stored procedures	<p>9.1 Create and execute stored procedures that use SQL to retrieve, insert or modify data according to information requirements</p> <p>9.2 Create and execute stored procedures that use one or more parameters</p> <p>9.3 Drop a stored procedure from the database</p> <p>9.4 Create and test database triggers that automate data management or perform specific required data-related functions</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate business requirements to determine:
  - report and view requirements
  - required data objects and data structures
- numeracy skills to use arithmetical operators and mathematical functions
- planning and organisational skills to analyse and organise data according to business query and reporting requirements
- problem-solving skills to:
  - troubleshoot SQL syntax errors
  - understand typical warnings and errors
- technical skills to:
  - run data modelling, particularly during the design and development phases
  - write SQL queries.

### Required knowledge

- client-server concepts
- data-integrity concepts
- data-modelling structures
- databases and database objects, including data types, data structures, identifiers and metadata
- programming concepts
- query design
- relational database design
- SQL client environment
- SQL server architecture.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design a simple relational database</li> <li>• use SQL to create database structures, and store, retrieve and manipulate data in a relational database</li> <li>• create a variety of SQL queries to match client requirements</li> <li>• create and use views and stored procedures.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• client requirements</li> <li>• functionality and scope requirements</li> <li>• naming standards</li> <li>• SQL server and client software</li> <li>• networked computers</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning of required skills and knowledge</li> <li>• evaluation of an existing database created by the candidate.</li> </ul> <p>Assessment needs to ensure that the database and queries were created by the candidate using SQL statements as outlined in this unit. It would not be appropriate for the candidate to create the database or queries using graphical tools that generate the required SQL statements.</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Comparison operators</b> may include:	<ul style="list-style-type: none"> <li>• equal to</li> <li>• greater than</li> <li>• greater than or equal to</li> <li>• less than</li> <li>• less than or equal to</li> <li>• not equal to.</li> </ul>
<b>Boolean operators</b> may include the use of:	<ul style="list-style-type: none"> <li>• AND</li> <li>• NOT</li> <li>• OR.</li> </ul>
<b>Arithmetical operators</b> may include:	<ul style="list-style-type: none"> <li>• addition</li> <li>• modulus division</li> <li>• multiplication</li> <li>• subtraction.</li> </ul>
<b>Mathematical functions</b> may include:	<ul style="list-style-type: none"> <li>• cos</li> <li>• log</li> <li>• power</li> <li>• sin</li> <li>• square root.</li> </ul>
<b>Database</b> may include:	<ul style="list-style-type: none"> <li>• Informix</li> <li>• Ingres</li> <li>• Microsoft SQL server</li> <li>• MySQLDB2</li> <li>• Oracle</li> <li>• Postgre Structured Query Language (Postgre SQL)</li> <li>• Sybase.</li> </ul>
<b>Manipulating tables</b> may include:	<ul style="list-style-type: none"> <li>• inserting rows into a table</li> <li>• updating some or all of the data in a table</li> <li>• adding columns to a table</li> <li>• modifying a column within a table</li> <li>• deleting a column from a table</li> <li>• deleting rows from a table</li> <li>• viewing detailed information regarding a table</li> <li>• deleting tables with regard to referential integrity rules.</li> </ul>

<b><i>Information requirements</i></b> may include:	<ul style="list-style-type: none"><li>• letters</li><li>• other business documents required by the organisation</li><li>• reports</li><li>• summaries.</li></ul>
---	--

## Unit Sector(s)

Programming and software development

## ICAPRG426A Prepare software development review

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to establish standards associated with IT technical requirements in the context of quality assurance processes applicable to software development.

### Application of the Unit

This unit applies to staff in the software development area who are required to ensure that the software development process incorporates quality.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Review software standards	<p>1.1 Ensure that <i>stakeholders</i> have an understanding of the <i>organisational requirements</i></p> <p>1.2 Document software <i>standards</i> according to <i>project standards</i></p>
2. Review implementation standards	<p>2.1 Assign software standards to functions according to detailed technical plan</p> <p>2.2 Take action to ensure that <i>communication</i> and distribution strategies are clear, coherent and meet overall project plan requirements</p> <p>2.3 Monitor and report on implementation of standards against acceptance criteria and detailed technical specifications</p>
3. Review software metrics and milestones	<p>3.1 Define metrics related to the project milestones, and timeframe and cost considerations</p> <p>3.2 Develop schedule of quality reviews</p> <p>3.3 Determine quality considerations by identifying in-process measurement points that relate to critical organisational requirements</p> <p>3.4 Determine method to benchmark and scale achievement against stated stakeholders requirements and cost considerations</p> <p>3.5 Report metrics and milestones to stakeholders in a clear and coherent manner and take action to ensure written agreement</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse and evaluate a range of solutions using database modelling
- communication skills to:
  - liaise with stakeholders
  - provide clear communication and distribution strategies to meet project plan requirements
- literacy skills to provide clear and coherent technical reports
- numeracy skills to account for cost considerations in project plan
- planning and organisational skills to develop a detailed project plan and schedule of quality reviews
- problem-solving skills to develop technical solutions
- technical skills to use metrics software.

### Required knowledge

- current industry-accepted software configuration management processes
- quality assurance practices and the identification of standards
- software metrics development
- client business domain.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• establish the standards associated with the IT technical requirements, taking into account quality assurance processes that are in place for the development of software</li> <li>• monitor the application of these standards within the project.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• technical specifications</li> <li>• organisational standards for documentation and version control</li> <li>• project management process and hierarchy</li> <li>• future organisational business processes</li> <li>• software requirement specifications</li> <li>• interface requirement specifications</li> <li>• system requirements</li> <li>• design specifications</li> <li>• project budget and timeframe</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul> <p>Note: Data used in preparing the development review should be validated and come from other projects or related organisational activities.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• quality assurance</li> <li>• appropriate quality standards for software development</li> <li>• benchmarking</li> </ul> </li> <li>• review of candidate's documented software standards</li> <li>• evaluation of candidate's report to stakeholders.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>
<b><i>Organisational requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• how and what the organisation wants in regard to work environment</li> <li>• preventative maintenance and diagnostic policy</li> <li>• problem solution processes</li> <li>• roles and technical responsibilities in the IT department</li> <li>• vendor and product service level support agreements.</li> </ul>
<b><i>Standards</i></b> may include:	<ul style="list-style-type: none"> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• Java coding standards</li> <li>• GNU coding standards</li> <li>• organisational standards</li> <li>• project standards.</li> </ul>
<b><i>Project standards</i></b> may include:	<ul style="list-style-type: none"> <li>• change control</li> <li>• delivery against required milestones and budget</li> <li>• development methodology</li> <li>• ease of modification and maintenance</li> <li>• project plan</li> <li>• quality of software modules</li> <li>• reporting mechanisms</li> <li>• sharing of code or libraries.</li> </ul>
<b><i>Communication</i></b> may include:	<ul style="list-style-type: none"> <li>• non-verbal methods, such as written messages, emails and memos</li> <li>• verbal methods, such as telephone, meetings and video conferencing.</li> </ul>

## ICAPRG427A Use XML effectively

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to create eXtensible markup language (XML) documents, web service applications, and client applications to consume web services.

### Application of the Unit

This unit applies to programmers who build Windows or web-based applications that access data in XML format. Others may be programmers who develop and consume web services.

These individuals may work as web developer, web programmer, and application programmer.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Represent structured data with XML	1.1 Gather information by analysing data, documents and problem domains 1.2 Write well-formed XML document by incorporating proper <b><i>structure</i></b> and <b><i>syntax</i></b> 1.3 Validate XML document using <b><i>validation tools</i></b> 1.4 Format XML document using <b><i>styling tools</i></b>
2. Access and manipulate XML document	2.1 Create new XML document using an <b><i>XML parser application programming interface</i></b> (API) 2.2 Access and traverse elements and attributes using an XML parser API 2.3 Modify elements and attributes using an XML parser API 2.4 Delete elements and attributes using an XML parser API 2.5 Transform XML document into data object using an XML parser API 2.6 Transform data object into XML document using an XML parser API
3. Create service-oriented application using XML	3.1 Define web services architecture and <b><i>platform elements</i></b> 3.2 Develop and deploy web service applications using a language 3.3 Develop a client application to consume web service using a <b><i>language</i></b>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse and comprehend interdependencies between data fields
  - examine and define structure requirements for data
- communication skills to:
  - liaise with developers on programming matters
  - seek requirements and information from business and technical experts
- literacy skills to:
  - read and interpret program specifications developed by business and technical experts
  - read and interpret technical documentation
  - write a basic documentation
- numeracy skills to identify order and position of element in a sequence, such as first and last
- problem-solving skills to apply basic debugging techniques in the context of software and application development
- research skills to:
  - locate and interrogate complex and varied sources of information
  - source information from available sources
- technical skills to:
  - develop a small scale application
  - perform basic operations of a computer system.

### Required knowledge

- basic knowledge of:
  - hierarchy and tree structure
  - programming concept and language
  - world wide web (WWW)
  - data modelling
  - hypertext markup language (HTML)
  - information system features
  - source characteristics.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• produce, validate, transform, format and transport XML data</li> <li>• exchange data between different applications and different platforms by creating and consuming web services.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• tools in accessing and developing a data source, such as integrated development environment (IDE), text editor and web browser</li> <li>• specific requirements, including client and functionality requirements</li> <li>• web server and software that host services to deploy and test web service application</li> <li>• libraries to develop web service and client applications, such as SOAP libraries</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of ability to: <ul style="list-style-type: none"> <li>• develop XML applications to generate a report in HTML or portable document format (PDF) file by applying certain presentation style using styling tools</li> <li>• develop web or stand-alone applications that access and store information in XML data format</li> <li>• develop and consume web service applications to solve interoperability problem by writing client code in different platform</li> </ul> </li> <li>• verbal or written questioning to assess candidate's knowledge of XML.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Structure</i></b> must include:	<ul style="list-style-type: none"> <li>• child element</li> <li>• root element</li> <li>• sub-child element.</li> </ul>
<b><i>Syntax</i></b> must include these rules:	<ul style="list-style-type: none"> <li>• case sensitive</li> <li>• closing tag</li> <li>• entity reference</li> <li>• proper nesting</li> <li>• quoted attribute values</li> <li>• single-root element.</li> </ul>
<b><i>Validation tools</i></b> may include:	<ul style="list-style-type: none"> <li>• document type definition (DTD)</li> <li>• validating parsers</li> <li>• XML schema</li> <li>• XSD schema validator.</li> </ul>
<b><i>Styling tools</i></b> may include:	<ul style="list-style-type: none"> <li>• cascading style sheets (CSS)</li> <li>• eXtensible stylesheet language (XSL)</li> <li>• eXtensible stylesheet language transformations (XSLT).</li> </ul>
<b><i>XML parser application programming interface</i></b> may include:	<ul style="list-style-type: none"> <li>• data binding</li> <li>• document object model (DOM)</li> <li>• language-specific API, such as XML API in .NET, JAXP in Java, and E4X in ActionScript</li> <li>• simple API for XML (SAX)</li> <li>• XMLPULL.</li> </ul>
<b><i>Platform elements</i></b> may include:	<ul style="list-style-type: none"> <li>• simple object access protocol (SOAP)</li> <li>• universal description, discovery and integration (UDDI)</li> <li>• web services description language (WSDL).</li> </ul>
<b><i>Language</i></b> may include:	<ul style="list-style-type: none"> <li>• Java</li> <li>• Net languages</li> <li>• PHP</li> <li>• Python.</li> </ul>

# ICAPRG428A Use regular expressions in programming languages

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use regular expressions for manipulating text and data.

## Application of the Unit

Programmers and system administrators apply the skills and knowledge described in this unit. Their main responsibility is to code complex text processing such as search and replace tasks, validate inputs and create regex-based queries.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Differentiate the use of regular expressions in programming languages	1.1 Compare regular expression features among different <i>languages</i> and tools 1.2 Define different <i>regular expression engine</i> types and how they work 1.3 Determine the programming language and tools for writing regular expressions
2. Code using regular expressions	2.1 Use regular expression characters, operators, anchors and quantifiers to match patterns of text 2.2 Write regular expression <i>patterns</i> to search and manipulate text 2.3 Write code to split strings and collect matches 2.4 Validate user input using regular expressions
3. Test regular expressions	3.1 Use <i>test tools</i> to test and validate regular expressions 3.2 Capture results and edit as required

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - evaluate and compare a range of tools and languages
  - write complex regular expressions for text processing
- literacy skills to read basic technical data
- problem-solving skills to:
  - find best solutions using regular expressions to a wide range of problems
  - perform basic debugging and testing skills
- research skills to locate and interrogate complex and varied sources of information
- technical skills to:
  - debug applications using basic debugging techniques
  - test applications using basic testing techniques
  - write code using an integrated development environment (IDE).

### Required knowledge

- maths at a basic level
- basic knowledge of:
  - coding
  - database systems
  - object-oriented programming
  - open-source development tools
  - small-size application development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• build and test regular expressions</li> <li>• match, replace or split text within a document or input field.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• internet in order to use online tools available for regular expressions</li> <li>• IDE</li> <li>• specific tools and licences, depending on particular platform</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of writing regular expressions to solve common text-processing problems</li> <li>• evaluation of ability to: <ul style="list-style-type: none"> <li>• create code to search files and input fields</li> <li>• handle data validation</li> <li>• manipulate text based on patterns.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Languages</i></b> may include:	<ul style="list-style-type: none"> <li>• .NET languages</li> <li>• C++</li> <li>• Java</li> <li>• JavaScript</li> <li>• MySQL</li> <li>• Perl</li> <li>• PHP</li> <li>• PowerShell</li> <li>• Python</li> <li>• Ruby on Rails</li> <li>• XML Schema</li> <li>• XQuery and XPath.</li> </ul>
<b><i>Regular expression engine types</i></b> may include:	<ul style="list-style-type: none"> <li>• deterministic finite automaton (DFA)</li> <li>• non-deterministic finite automaton (NFA)</li> <li>• portable operating system interface for Unix NFA (POSIX NFA).</li> </ul>
<b><i>Patterns</i></b> may include:	<ul style="list-style-type: none"> <li>• alternatives</li> <li>• character classes</li> <li>• grouping</li> <li>• repeating sequences</li> <li>• sub-patterns.</li> </ul>
<b><i>Test tools</i></b> may include:	<ul style="list-style-type: none"> <li>• Grep</li> <li>• java.util.regex</li> <li>• PowerGREP</li> <li>• RegexBuddy</li> <li>• RegexMagic</li> <li>• RegexPal</li> <li>• Regular Expression Checker</li> <li>• Rubular.</li> </ul>

## ICAPRG501A Apply advanced object-oriented language skills

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake advanced programming tasks using an object-oriented programming language.

### Application of the Unit

This unit applies to programmers who are required to produce complex object-oriented programming.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Develop client-server application	<p>1.1 Build and test object-oriented applications</p> <p>1.2 Make use of the features of the language that enable inter-process communication through at least one <i>mechanism</i></p> <p>1.3 Make use of the features of the language that enable remote procedure calls (RPC) using a class that is based on multiple inheritances</p> <p>1.4 Build programs using classes that are based on nested classes</p>
2. Develop graphical user interface (GUI)	<p>2.1 Code to implement drag and drop</p> <p>2.2 Develop GUI help files</p> <p>2.3 Code using 2-D graphics</p>
3. Build applications	<p>3.1 Code within an existing <i>architectural framework</i></p> <p>3.2 Ensure code follows standards for object-oriented language</p> <p>3.3 Develop an application that includes data transfer between client and server</p> <p>3.4 Review the concept of design patterns used by the architectural framework</p>
4. Debug code	<p>4.1 Use stand-alone debugging tools or tools provided by <i>integrated development environment</i> to examine running code</p> <p>4.2 Detect logical and coding errors using debugger</p> <p>4.3 Detect and correct errors by tracing code and examining variable content</p>
5. Test application	<p>5.1 Design and document tests to be undertaken</p> <p>5.2 Undertake limited testing of produced code to ensure it complies with program specification</p> <p>5.3 Document test results</p>
6. Document system	<p>6.1 Demonstrate adherence to guidelines for developing maintainable code and company or institutional <i>coding standards</i></p> <p>6.2 Create code using supplied design documents</p> <p>6.3 Create and maintain program documentation</p> <p>6.4 Ensure that user documentation in the form of online help is built into applications</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to interpret design specifications, translating requirements from problem space to machine space
- literacy skills to interpret and write technical documents
- planning and organisational skills to produce work within an agreed schedule
- problem-solving skills to debug code
- technical skills to:
  - follow coding standards
  - produce client-server application development
  - produce internal (code) documentation techniques
  - use an integrated development environment (IDE)
  - use good programming techniques
  - use web-enabled application development
  - use debugging techniques
  - write a GUI to interact effectively with operator.

### Required knowledge

- detailed knowledge of:
  - architecture of a framework for web-enabled application development
  - techniques for implementing inter-process communication
  - large-size application development
  - testing techniques as applied to distributed application development
  - techniques for implementing third-party supplied code.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design an application to meet user requirements using object-oriented techniques</li> <li>• build an application program using a range of tools for a given problem</li> <li>• test application to ensure that it meets client requirements</li> <li>• document the application.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• database management system (DBMS)</li> <li>• networked computers</li> <li>• software-development environment</li> <li>• technical requirements</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of completed application</li> <li>• review of:             <ul style="list-style-type: none"> <li>• application documentation</li> <li>• testing documentation</li> </ul> </li> <li>• verbal or written questioning to determine knowledge of:             <ul style="list-style-type: none"> <li>• object-oriented techniques and terms</li> <li>• DBMS access</li> <li>• software testing.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Mechanism</i></b> may include:	<ul style="list-style-type: none"> <li>• pipes</li> <li>• sockets.</li> </ul>
<b><i>Architectural framework</i></b> may include:	<ul style="list-style-type: none"> <li>• J2EE</li> <li>• .NET.</li> </ul>
<b><i>Integrated development environment</i></b> may include:	<ul style="list-style-type: none"> <li>• Code Warrior</li> <li>• Eclipse</li> <li>• JBuilder</li> <li>• J-Edit</li> <li>• Visual C++</li> <li>• Visual Studio suite</li> <li>• WebSphere.</li> </ul>
<b><i>Coding standards</i></b> may include:	<ul style="list-style-type: none"> <li>• GNU</li> <li>• Java.</li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG502A Manage a project using software management tools

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use software-management tools to manage a project from initiation to completion.

## Application of the Unit

This unit applies to individuals who either work in a team or individually in order to develop a system to specification and use software management tools in order to manage the delivery of the system within time and budget parameters.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify software management tools	<p>1.1 Determine <b><i>software development methodology</i></b> to be used for project development</p> <p>1.2 Determine <b><i>project-management software</i></b> to be used to manage the development of the project</p> <p>1.3 Determine <b><i>source-control system</i></b> to manage source code and handle conflicts</p> <p>1.4 Determine <b><i>collaboration software</i></b> to be used in the project development</p>
2. Implement software management tools	<p>2.1 Create project plan according to software requirement specifications</p> <p>2.2 Define source-control procedures</p> <p>2.3 Create collaboration environment</p>
3. Monitor use of software management tools	<p>3.1 Monitor and adjust project plan accordingly to maintain progress according to the project plan</p> <p>3.2 Ensure code is correctly entered into source control system</p> <p>3.3 Monitor collaboration environment and resolve issues where required</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to interact with developers and stakeholders during the development cycle
- literacy skills to read and interpret software requirement specifications
- numeracy skills of basic maths for project planning
- planning and organisational skills to:
  - create project plan
  - implement software-management tools
- research skills to determine appropriate software-management tools
- technical skills to use software-management tools.

### Required knowledge

- basic knowledge of:
  - project management
  - software development life cycle (SDLC)
  - software requirement specifications
  - version control.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• use software-management tools to manage the development of a system to specification</li> <li>• prepare a project plan using project-management software</li> <li>• use source-control software to manage code</li> <li>• use collaboration tools.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• internet</li> <li>• project-management software</li> <li>• source-control software</li> <li>• specific tools and licences, depending on particular platform</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of candidate's project plan</li> <li>• verbal or written questioning on knowledge of:             <ul style="list-style-type: none"> <li>• source-control methods</li> <li>• collaboration methods.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Software development methodology</i></b> may include:	<ul style="list-style-type: none"> <li>• agile software development</li> <li>• joint applications design</li> <li>• prototyping</li> <li>• rapid application development</li> <li>• waterfall.</li> </ul>
<b><i>Project-management software</i></b> may include:	<ul style="list-style-type: none"> <li>• dotProject</li> <li>• FastTrack Schedule</li> <li>• Microsoft Project</li> <li>• OpenProj</li> <li>• Oracle Project Portfolio Management</li> <li>• Teamwork.</li> </ul>
<b><i>Source-control system</i></b> may include:	<ul style="list-style-type: none"> <li>• CVS</li> <li>• Microsoft Visual SourceSafe.</li> </ul>
<b><i>Collaboration software</i></b> may include:	<ul style="list-style-type: none"> <li>• blogs</li> <li>• forums</li> <li>• Microsoft SharePoint</li> <li>• wikis</li> <li>• Zimbra.</li> </ul>

## ICAPRG503A Debug and monitor applications

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to debug and monitor a software application.

### Application of the Unit

This unit addresses the knowledge and processes necessary for debugging and monitoring software applications.

This unit is relevant to those who work as developers, testers and support engineers who use logging and tracing techniques to identify software problems and monitor systems.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Implement a framework for logging and error handling	1.1 Determine the <b>logging framework</b> for writing text messages at a certain <b>level</b> or priority to log files or sending data to monitoring applications 1.2 Create a custom event log for an application 1.3 Analyse the logs to check the state of the running application
2. Debug and trace an application	2.1 Apply basic debugging techniques such as breakpoints and stepping through and over code and stack trace 2.2 Identify and use <b>tools</b> to debug software applications 2.3 Write code for debugging (print, assert and stop statements)
3. Monitor the application performance	3.1 Identify and use <b>profiling tools</b> to verify the parts of the system that consume the most resources, such as random access memory (RAM), central processing unit (CPU) and time 3.2 Analyse performance issues and apply changes to improve the performance of the application

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - evaluate and compare results from different profiling tools
  - evaluate log file information and develop solutions as a result of analysis
- communication skills to recommend an approach to debugging and performance issues
- initiative and enterprise skills to identify potential improvements to the application performance
- literacy skills to:
  - read log files
  - write log messages
- numeracy skills to read and interpret the monitoring applications data
- research skills to keep up-to-date with monitoring and debugging technologies and tools
- technical skills to:
  - use software development tools
  - write code to create custom event log.

### Required knowledge

- basic knowledge of:
  - computer hardware, networking and components
  - database-management systems
  - object-oriented programming
  - open-source development tools
- maths at a basic level
- procedures for developing small-size applications
- software development life cycle (SDLC).

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• create error logging framework to persist error logs, debug and trace an application, and plan a performance-monitoring strategy</li> <li>• use debugging techniques and tools, and profiling tools and analyse performance issues.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• client and server system</li> <li>• sufficient privileges to access and use performance monitoring tools in client and server systems</li> <li>• debugging tools</li> <li>• specific tools and licences, depending on particular platform</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• written or verbal questioning of debugging, diagnostics and monitoring strategy</li> <li>• evaluation of candidate's logging framework and custom event log for an application</li> <li>• direct observation of candidate using an integrated development environment (IDE) for code development and debugging and the monitoring applications.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Logging framework</b> may include:	<ul style="list-style-type: none"> <li>• Java logging framework:             <ul style="list-style-type: none"> <li>• Apache Commons Logging</li> <li>• Java Logging application programming interface (API)</li> <li>• Log4J</li> <li>• SLF4J</li> </ul> </li> <li>• .NET logging and tracing tools:             <ul style="list-style-type: none"> <li>• C# Logger</li> <li>• DebugWriter</li> <li>• Log4net</li> <li>• LogThis</li> <li>• Logview4net</li> <li>• Microsoft's Enterprise Library</li> <li>• NetTrace</li> <li>• Traffic Monitor.</li> </ul> </li> </ul>
<b>Level</b> may include:	<ul style="list-style-type: none"> <li>• debug</li> <li>• error</li> <li>• fatal</li> <li>• information</li> <li>• trace</li> <li>• warning.</li> </ul>
<b>Tools</b> may include:	<ul style="list-style-type: none"> <li>• Eclipse debugger</li> <li>• Firebug (JavaScript debugger)</li> <li>• Java debugger</li> <li>• NetBeans debugger</li> <li>• Visual Studio debugger</li> <li>• WinDBG, NTSD, and CDB to debug .NET applications.</li> </ul>
<b>Profiling tools</b> may include:	<ul style="list-style-type: none"> <li>• CLR profiler</li> <li>• Microsoft operations manager</li> <li>• open-source profilers in Java:             <ul style="list-style-type: none"> <li>• Cougaar Memory Profiler</li> <li>• Extensible Java Profiler</li> <li>• JMP</li> </ul> </li> </ul>

	<ul style="list-style-type: none"><li>• NetBeans Profiler</li><li>• TomcatProbe</li><li>• structured query language (SQL) profiler</li><li>• system monitor</li><li>• Visual Studio profiler.</li></ul>

# ICAPRG504A Deploy an application to a production environment

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install, uninstall and configure an application to a production environment.

## Application of the Unit

This unit applies to individuals responsible for software deployments of enterprise applications. They may work as application developers, administrators, release managers or deployment coordinators.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Plan software installation	1.1 Determine if a client system and a server system meet the <b>requirements</b> for installation 1.2 Determine an <b>installation method</b> 1.3 Review <b>security requirements</b> 1.4 Prepare <b>software-installation plan</b>
2. Perform software installation	2.1 Create an <b>install package</b> for an application 2.2 Test the install package in a test environment 2.3 Deploy the install package to a production environment
3. Plan and test application removal	3.1 Create an uninstall package for removal of installed components 3.2 Test the uninstall package in a test environment
4. Perform database installation	4.1 <b>Deploy a database</b> from the development environment to the production environment 4.2 Specify the connection string to the database
5. Manage application configuration	5.1 Configure the application to use parameters that are valid for the production environment 5.2 Use configuration files to modify deployment variables 5.3 Configure security features in an application

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - interact with developers and stakeholders during the deployment process
  - negotiate requirements to deploy the application with client
- literacy skills to:
  - read and interpret complex technical and non-technical documents
  - write a software installation plan document
- planning and organisational skills to:
  - organise resources for deployment
  - plan software installation
- problem-solving skills to troubleshoot the software installation
- technical skills to:
  - test client and server system specifications
  - write code to create install and uninstall packages.

### Required knowledge

- basic knowledge of:
  - database management systems
  - software development life cycle (SDLC)
  - web hosting and domain name registration provider
- detailed knowledge of:
  - coding to create deployment application
  - IT hardware, software and security protocols and standards
  - organisational IT policies, plans and OHS procedures.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• deploy software applications to a production environment including:             <ul style="list-style-type: none"> <li>• preparing software installation plan</li> <li>• planning application re-installation</li> <li>• planning database installation</li> <li>• planning application removal</li> <li>• performing software deployment</li> <li>• using configuration files to easily modify deployment variables</li> <li>• troubleshooting software installation.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• client and server system</li> <li>• sufficient privileges to install packages in client and server systems</li> <li>• database management system software</li> <li>• deployment tools</li> <li>• specific tools and licences, depending on particular platform</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. Programming and software development

## ICAPRG505A Build advanced user interface

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design, build and test advanced user interface (UI), including interaction techniques, rich controls, improved client-side validation, customisation and personalisation, graphics and multimedia.

### Application of the Unit

This unit is relevant to those who work as user interface designers responsible for managing and implementing complex UI design.

This unit focuses on the skills and knowledge needed to implement effective complex user interfaces. It includes, advanced layout and style techniques, interactions, navigations, rich components, client-side validation, graphics, multimedia and templates.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Plan UI design	1.1 Determine appropriate <b><i>client technology</i></b> and <b><i>development tools</i></b> and platform for writing the UI 1.2 Review conceptual design with client and edit as required 1.3 Design <b><i>UI layout and structure</i></b>
2. Implement interaction techniques	2.1 Apply <b><i>interaction design patterns</i></b> 2.2 Implement <b><i>client-side validation</i></b>
3. Implement customised and personalised UI	3.1 Build <b><i>customisable UI</i></b> to allow users to select own custom version of the underlying application 3.2 Build <b><i>personalised UI</i></b> to improve user experience
4. Implement graphics and multimedia	4.1 Create and display graphics 4.2 Add multimedia content to an application

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to define UI structure
- communication skills to review UI design with client
- literacy skills to read and interpret technical documentation
- numeracy skills to make basic calculations for specifying the layout of the UI
- research skills to research and evaluate new interactive technologies
- technical skills to:
  - build basic UI
  - create applications using basic programming techniques
  - create web pages using hypertext markup language (HTML) and cascading style sheet (CSS).

### Required knowledge

- basic knowledge of:
  - client-side programming
  - object-oriented programming
  - web design, including HTML, CSS and JavaScript
- detailed knowledge of UI prototyping
- documenting requirements for UI.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• apply advanced techniques to create complex user interface, including:             <ul style="list-style-type: none"> <li>• user and custom controls</li> <li>• enhanced client validation</li> <li>• multimedia audio and video</li> <li>• graphics 2-D and 3-D</li> <li>• strategies to enhance user experiences.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• integrated development environment (IDE)</li> <li>• client and server system</li> <li>• multimedia tools</li> <li>• specific tools and licences, depending on particular platform</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of candidate's UI layout and structure</li> <li>• evaluation of candidate's UI:             <ul style="list-style-type: none"> <li>• functions</li> <li>• user validation</li> <li>• multimedia content</li> <li>• customisation and personalisation.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Client technology</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• AJAX</li> <li>• Java Server Faces</li> <li>• Java server pages and Struts</li> <li>• .NET ASP</li> <li>• Silverlight framework</li> <li>• Windows Forms</li> <li>• Windows Presentation Foundation.</li> </ul>
<p><b><i>Development tools</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• Borland JBuilder</li> <li>• Eclipse Java IDE</li> <li>• Microsoft Expression</li> <li>• NetBeans Java IDE</li> <li>• Oracle JDeveloper</li> <li>• Visual studio.</li> </ul>
<p><b><i>UI layout and structure</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• grouping by group controls</li> <li>• intuitiveness</li> <li>• size</li> <li>• spacing and positioning by layout controls.</li> </ul>
<p><b><i>Interaction design patterns</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• choices:             <ul style="list-style-type: none"> <li>• options</li> <li>• rating</li> <li>• selectors</li> </ul> </li> <li>• data models:             <ul style="list-style-type: none"> <li>• carousel</li> <li>• details view</li> <li>• grid view</li> <li>• list view</li> <li>• panels</li> <li>• tabs</li> </ul> </li> <li>• navigation models:             <ul style="list-style-type: none"> <li>• links</li> <li>• menus</li> <li>• trees</li> </ul> </li> <li>• search models:</li> </ul>

	<ul style="list-style-type: none"> <li>• auto-complete</li> <li>• help wizard</li> <li>• site map</li> <li>• tag cloud</li> <li>• tips.</li> </ul>

<b><i>Customisable UI</i></b> may include:	<ul style="list-style-type: none"> <li>• custom controls</li> <li>• custom HTML and eXtensible stylesheet language transformations (XSLT)</li> <li>• web parts</li> <li>• Windows Presentation Foundation (Syndicated Client Experiences [SCE]).</li> </ul>
<b><i>Personalised UI</i></b> may include:	<ul style="list-style-type: none"> <li>• personalisation providers</li> <li>• personalised styles and themes</li> <li>• user profiles</li> <li>• web parts.</li> </ul>

## Unit Sector(s)

Programming and software development

## ICAPRG506A Design application architecture

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design the structure of software or systems components and how they interact. The unit focuses on layered architectural style.

### Application of the Unit

This unit is relevant to those who work as software architects, developers, designers, software engineers or programmers responsible for designing and building solution architects.

This unit addresses the knowledge and processes necessary to produce the high-level design (blueprint) of a system.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Gather and confirm architecture requirements	1.1 Gather information regarding architectural requirements 1.2 Establish and document <b><i>architectural requirements</i></b>
2. Design layered architecture	2.1 Separate the areas of concern into logical <b><i>layers</i></b> 2.2 Determine the <b><i>cross-cutting concerns</i></b> 2.3 Define the system into components 2.4 Identify the responsibilities of each component 2.5 Identify interconnections between components
3. Plan a strategy to re-use components	3.1 Determine an appropriate strategy for communicating with external systems 3.2 Interact with existing legacy components
4. Design for globalisation and localisation	4.1 Determine culture-specific information 4.2 Consider database design features 4.3 Select appropriate user interface 4.4 Develop software product for worldwide distribution 4.5 Develop software product for specific country

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - assign a priority to each architectural requirement
  - determine areas of concern
- communication skills to:
  - interact with others of different cultures to globalise a software product
  - interact with stakeholders to gather architectural requirements
- initiative and enterprise skills to identify potential improvements to the structure of software and existing systems
- literacy skills to:
  - maintain a complete list of architectural requirements
  - prepare architectural requirements questionnaire to system stakeholders
- problem-solving skills to:
  - communicate with external systems
  - determine the possibility of reusing the existing legacy components
- technical skills to:
  - analyse software requirements
  - design software applications.

### Required knowledge

- basic knowledge of database design
- current software development methodologies
- detailed knowledge of:
  - object-oriented programming
  - software development life cycle.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design layered applications to increase application performance, scalability and re-usability</li> <li>• create flexible and configurable applications and adapt to suit different locales</li> <li>• adapt a software product to a particular language and culture of the target market.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• specific requirements, including functional and non-functional requirements</li> <li>• tools to design software architecture</li> <li>• culture-specific information for the target culture or language</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of candidate's architecture requirements documentation</li> <li>• evaluation of software-layered architecture.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Architectural requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• design requirement</li> <li>• functional requirements</li> <li>• non-functional requirements:             <ul style="list-style-type: none"> <li>• maintainability</li> <li>• performance</li> <li>• reliability</li> <li>• scalability</li> <li>• security</li> <li>• usability</li> </ul> </li> <li>• quality requirements.</li> </ul>
<p><b><i>Layers</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• business logic layer (BLL)</li> <li>• data-access layer (DAL)</li> <li>• services layer</li> <li>• user interface (UI) layer.</li> </ul>
<p><b><i>Cross-cutting concerns</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• caching (improve performance)</li> <li>• communications (protocols)</li> <li>• configuration management</li> <li>• data protection</li> <li>• operational management</li> <li>• security:             <ul style="list-style-type: none"> <li>• authentication</li> <li>• authorisation.</li> </ul> </li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG507A Implement security for applications

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement security for software applications. It includes code access security, security access control, cryptographic and secure input and output handling.

## Application of the Unit

This unit applies to individuals responsible for coding secure software applications. These individuals may work as software developers, software engineers, system and security administrators and testers.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Implement policy-based code-access security in an application	1.1 Demonstrate understanding of the purpose of <b><i>application security</i></b> in software development 1.2 Configure platform security configuration files using <b><i>security configuration tools</i></b> 1.3 Define a custom <b><i>code access permission</i></b> to restrict access to protected resources or run protected operations
2. Implement security access control in an application	2.1 Plan <b><i>authentication and authorisation strategy</i></b> 2.2 Develop an appropriate authentication and authorisation strategy for an application
3. Write code to encrypt and decrypt data for secure communication	3.1 Demonstrate understanding of the standard <b><i>cryptographic algorithms</i></b> 3.2 Encrypt and decrypt data using standard cryptographic algorithms
4. Protect an application against injections	4.1 Plan <b><i>secure input and output handling</i></b> to prevent vulnerabilities related to code injections 4.2 Use secure input and output handling

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - deal with common programming security problems
  - identify security weaknesses in existing code
- literacy skills to evaluate complex and varied information and concepts in software security
- planning and organisational skills to ensure privacy for users and protect sensitive user data
- problem-solving skills to develop and refine security access control strategies
- technical skills to:
  - use security configuration tools
  - write secure code for application.

### Required knowledge

- basic hardware and networking knowledge
- basic programming algorithms
- detailed knowledge of object-oriented programming
- maths at basic level.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• create secure applications</li> <li>• plan security strategies</li> <li>• ensure safe communications</li> <li>• prevent security attacks.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• security configuration tools</li> <li>• software development environment</li> <li>• testing and debugging tools</li> <li>• network resources</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• application security concepts</li> <li>• cryptographic algorithms</li> <li>• application protection against injections</li> </ul> </li> <li>• evaluation of candidate's ability to:             <ul style="list-style-type: none"> <li>• create secure code and perform security configurations</li> <li>• apply secure communications</li> <li>• protect data and code.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

Programming and software development

# ICAPRG508A Create mashups

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to combine content from more than one source into new integrated applications and create custom mashups.

## Application of the Unit

This unit is for individuals responsible for developing modern web application (Web 2.0) using the enabling technologies to create mashup applications.

This unit addresses the knowledge and skills necessary to remix content from external data services, evaluate Web 2.0 application programming interfaces (APIs) and create mashups.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Remix elements from multiple websites to create new mashups	1.1 Demonstrate understanding of <b>Web 2.0 concepts</b> and the web as a platform 1.2 Search various API providers and the types of <b>services</b> available 1.3 Evaluate and select which APIs to use 1.4 Determine which <b>programming language</b> to use with the selected APIs 1.5 Create mashups of several services
2. Use mashup tools	2.1 Search various <b>mashup tools</b> 2.2 Evaluate and select which tool to use 2.3 Create mashups using the selected tool

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - choose the right APIs for the mashup
  - evaluate and compare a range of API providers
- literacy skills to:
  - read and interpret API-specific tutorials and introductions
  - read API provider documentation
- problem-solving skills to find the best possible mashup solution to a problem
- research skills to source information from available sources
- technical skills to:
  - create basic mashups with coding
  - use an integrated development environment (IDE)
  - use mashup tools.

### Required knowledge

- basic knowledge of:
  - HTML, CSS and JavaScript
  - server-side scripting language
  - XML, web services, AJAX and metadata
- web design
- web development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• create programmable web applications that combine data and functionality from various sources to create new services.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• the internet, in order to use mashup tools and API providers</li> <li>• Web 2.0 tools</li> <li>• IDE</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of Web 2.0 concepts and technologies</li> <li>• review of output from: <ul style="list-style-type: none"> <li>• mashups using code</li> <li>• mashups using mashup tools.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Web 2.0 concepts</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• AJAX</li> <li>• atom syndication format</li> <li>• blogs</li> <li>• representational state transfer (REST)</li> <li>• rich site summary (RSS) feeds</li> <li>• simple object access protocol (SOAP)</li> <li>• social bookmarking and folksonomies</li> <li>• social networking sites</li> <li>• tagging</li> <li>• user-generated content</li> <li>• web services technology</li> <li>• wikis.</li> </ul>
<p><b><i>Services</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• blogging services</li> <li>• book search services</li> <li>• calendar services</li> <li>• chart creation service</li> <li>• content sharing service</li> <li>• CRM services</li> <li>• geocoding services</li> <li>• mapping services</li> <li>• music search services</li> <li>• online news</li> <li>• photo sharing services</li> <li>• search services</li> <li>• shopping services</li> <li>• SMS, WAP and email messaging</li> <li>• social bookmarking</li> <li>• social networking service</li> <li>• telephony service</li> <li>• video sharing and search</li> <li>• weather forecast services</li> <li>• widgets.</li> </ul>
<p><b><i>Programming language</i></b></p>	<ul style="list-style-type: none"> <li>• Java</li> <li>• JavaScript</li> </ul>

may include:	<ul style="list-style-type: none"><li>• NET</li><li>• PHP</li><li>• Ruby.</li></ul>
<i>Mashup tools</i> may include:	<ul style="list-style-type: none"><li>• Apatar</li><li>• Chickenfoot</li><li>• Dapper</li><li>• Google Mashup Editor (GME)</li><li>• IBM Mashup Center</li><li>• Intel Mash Maker</li><li>• WaveMaker</li><li>• Wayfaring</li><li>• Yahoo Pipes.</li></ul>

## Unit Sector(s)

Programming and software development

# ICAPRG509A Build using rapid application development

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to build using rapid application development (RAD) tools.

## Application of the Unit

This unit applies to programmers who are required to develop new systems.

RAD building for a software project should be carefully managed to deliver maximum benefit for cost and quality. Selection of the most appropriate RAD tool will take into consideration the targeted platform or multi-platform options.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Construct application using RAD	<p>1.1 Capture and record business rules using a methodology well-suited for the chosen RAD and <b><i>RAD techniques</i></b></p> <p>1.2 Design <b><i>application</i></b> with focus on modularity and future extension</p> <p>1.3 Develop code by other <b><i>RAD tools</i></b></p> <p>1.4 Build and demonstrate completed transaction to user for revision within the agreed terms of reference</p> <p>1.5 Take action to ensure that design caters for continuous change by involving user in iteration process</p> <p>1.6 Provide quality assurance (QA) testing throughout the phase and provide feedback to <b><i>appropriate person</i></b></p> <p>1.7 Demonstrate use of code optimisers and performance tools</p>
2. Prepare handover stage	<p>2.1 Track implemented modules and follow up where necessary with appropriate person</p> <p>2.2 Review user and builds for each module in the deliverables as preparation for handover</p> <p>2.3 Compare <b><i>specifications</i></b> and implementation schedules for each module and confirm the functional requirements according to specifications</p> <p>2.4 Document the completed work</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with users while managing iterative changes in design by involving end users in the development process
- literacy skills to write technical documents and present written material for review
- planning and organisational skills to keep accurate technical records
- problem-solving skills to solve problems with design
- technical skills to identify, analyse and evaluate a range of solutions using prototyping tools.

### Required knowledge

- broad knowledge of industry-accepted prototyping tools
- overview knowledge of:
  - quality assurance practices
  - client business domain
  - role of stakeholders and the degree of stakeholder involvement
  - three or more current industry development methodologies
  - three or more programming languages.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design application and develop high quality code according to client specifications</li> <li>• provide QA testing and monitoring</li> <li>• demonstrate use of code optimisers using RAD techniques</li> <li>• document completed work.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• CASE repository to facilitate the re-use of templates and components</li> <li>• CASE tools</li> <li>• code generator</li> <li>• detailed user requirements</li> <li>• prototyping software</li> <li>• requirements document, including model and scope</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of completed code</li> <li>• review of documentation</li> <li>• verbal or written questioning to assess knowledge of prototyping and RAD process.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.
--	------------

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>RAD techniques</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-aided software engineering (CASE) tools</li> <li>• iterative life cycles</li> <li>• prototyping</li> <li>• re-use of applications, templates and code</li> <li>• SWAT teams</li> <li>• timebox-development methodology</li> <li>• workshops.</li> </ul>
<b><i>Application</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial software applications</li> <li>• organisation-specific software: <ul style="list-style-type: none"> <li>• communication packages</li> <li>• database</li> <li>• graphic</li> <li>• presentation functionalities</li> <li>• spreadsheet</li> <li>• word-processing.</li> </ul> </li> </ul>
<b><i>RAD tools</i></b> may include:	<ul style="list-style-type: none"> <li>• CASE tools</li> <li>• code generators.</li> </ul>
<b><i>User</i></b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b><i>Specifications</i></b> may include:	<ul style="list-style-type: none"> <li>• current system functionality</li> <li>• metrics</li> <li>• project plan</li> <li>• software requirements</li> <li>• technical requirements</li> <li>• user problem statement.</li> </ul>

## ICAPRG510A Maintain custom software

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to maintain software so that it continues to meet client user requirements.

### Application of the Unit

This unit applies to programmers who are required to maintain existing software.

Organisations may use either software that has been developed in-house or off-the-shelf packages. Some customisation generally occurs with off-the-shelf packages. It is important that all changes made to standard software products are documented. Changes may be made in response to user requests or organisational requirements.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine software fault to be corrected	<p>1.1 Collect and review software fault details from sources</p> <p>1.2 Obtain <i>technical data</i> to assist in identifying problem</p> <p>1.3 Clarify nature of the problem with <i>appropriate person</i> where necessary</p>
2. Identify and isolate fault	<p>2.1 Review program documentation for specific modules in order to pinpoint problem areas</p> <p>2.2 Review source code for logic errors</p> <p>2.3 Read manuals, help files and 'read me files' to determine if there is a known fix</p> <p>2.4 Undertake additional testing to identify or duplicate fault</p> <p>2.5 Escalate difficult faults that cannot be identified</p>
3. Design fix for fault	<p>3.1 Ensure requirements to fix the fault are understood by client</p> <p>3.2 Consider alternative options and choose the most effective solution</p> <p>3.3 Consider the possible impact of the fix on other parts of the system</p> <p>3.4 Document changes according to organisational guidelines</p>
4. Carry out fix to software	<p>4.1 Identify and obtain access to appropriate software development tools, source code and libraries</p> <p>4.2 Construct appropriate code to correct the fault according to organisational and programming standards</p> <p>4.3 Compile or regenerate code for changed programs and associated modules</p> <p>4.4 Correct and resubmit code until error free</p> <p>4.5 Document changes according to organisational and programming standards</p>
5. Test fix and associated system areas	<p>5.1 Check logic to ensure that it works with test data, corrects original fault, and does not cause problems elsewhere</p> <p>5.2 Request users to perform acceptance testing and record outcomes</p>
6. Hand over to systems operations area	<p>6.1 Update <i>documentation</i> to reflect all changes made</p> <p>6.2 Confirm acceptance by systems operations and arrange for sign-off according to procedures</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to review software fault details and interpret complex technical data
- communication skills to liaise with clients
- literacy skills to interpret and write technical documents
- planning and organisational skills to ensure adherence to standards and procedures in programming
- problem-solving skills to consider alternative options and possible impacts
- technical skills to use, customise and adapt software packages.

### Required knowledge

- detailed knowledge of:
  - concepts relating to system performance
  - concepts relating to testing of software systems
  - current industry-accepted hardware and software products, and their general features and capabilities
  - system's current functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• effectively maintain custom software</li> <li>• apply a fix that works</li> <li>• deploy a possible range of solutions to produce the same results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• fault logs and help-desk reports</li> <li>• software development tools, documentation and environment</li> <li>• source code and libraries</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of completed code</li> <li>• review of candidate's updated program documentation</li> <li>• verbal or written questioning to determine candidate's understanding of:             <ul style="list-style-type: none"> <li>• impact of changes on applications and systems</li> <li>• programming standards.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Technical data</i></b> may be obtained from:	<ul style="list-style-type: none"> <li>• error messages</li> <li>• memory dumps</li> <li>• software traces</li> <li>• other information.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b><i>Documentation</i></b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• maintaining equipment inventory, client training and satisfaction reports</li> <li>• naming standards</li> <li>• project-management templates and report writing</li> <li>• version control.</li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG511A Monitor and support data conversion to new IT system

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to monitor and support data conversion to a new IT system.

## Application of the Unit

This unit applies to individuals involved in the development process who are required to convert data to work on new systems.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Monitor data conversion	<p>1.1 Obtain conversion <b>supporting documentation</b> and apply to conversion process</p> <p>1.2 Protect production data by taking action to ensure backup before conversion</p> <p>1.3 Determine <b>requirements</b> of the <b>client</b> and impact on business operation</p> <p>1.4 Identify and confirm <b>software, hardware</b> or <b>environmental prerequisites</b> in the conversion plan</p> <p>1.5 Validate data accuracy and integrity according to conversion specifications</p> <p>1.6 Identify data rejected by conversion <b>tools</b> and carry out actions detailed in conversion plan</p> <p>1.7 Document data rejection or errant behaviour of the conversion process</p>
2. Support conversion	<p>2.1 Verify results</p> <p>2.2 Present to <b>appropriate person</b> and obtain sign-off</p> <p>2.3 Maintain and document backup copies of conversion files according to requirements</p> <p>2.4 Develop clear and coherent <b>technical documentation</b></p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with clients
- literacy skills to evaluate and write technical documents
- problem-solving skills to develop strategic initiatives, such as data accuracy and integrity are validated according to conversion specifications
- problem-solving skills to address data rejected by converters
- technical skills to operate software, hardware or environmental prerequisites listed in the conversion plan.

### Required knowledge

- current data modelling methodologies
- current industry data conversion tools
- current industry-accepted hardware and software products, including their general features and capabilities
- data conversion from legacy systems.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify inherent data requirements of both old and upgraded or new systems in order to achieve a physical transfer or transformation of data</li> <li>• back up data before conversion process</li> <li>• validate converted data</li> <li>• document the process.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• conversion specifications</li> <li>• data conversion plan</li> <li>• documentation guidelines</li> <li>• sample data to be converted</li> <li>• data conversion tools</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate's handling of rejected data</li> <li>• review of candidate's technical documentation</li> <li>• verbal or written questioning to assess candidate's knowledge of backups.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Supporting documentation</i></b> may include:	<ul style="list-style-type: none"> <li>• conversion specifications</li> <li>• data conversion plan</li> <li>• documentation guidelines.</li> </ul>
<b><i>Requirements</i></b> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• database</li> <li>• network</li> <li>• people in the organisation</li> <li>• platform</li> <li>• system.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• clubs</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial software applications</li> <li>• in-house or customised software</li> <li>• organisation-specific software</li> <li>• packaged software.</li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• modems and other connectivity devices, such as digital subscriber line (DSL) modems</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>
<b><i>Environmental prerequisites</i></b> may consist of:	<ul style="list-style-type: none"> <li>• air circulation</li> <li>• dust</li> <li>• extreme cold</li> <li>• heat</li> <li>• moisture</li> <li>• temperature stability.</li> </ul>
<b><i>Tools</i></b> may include:	<ul style="list-style-type: none"> <li>• data management tools</li> </ul>

	<ul style="list-style-type: none"> <li>• tools for cleansing data (identifying invalid field entries and forcing to legal values)</li> <li>• tools for extraction and transformation</li> <li>• tools that analyse data quality.</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<i>Technical documentation</i> may include:	<ul style="list-style-type: none"> <li>• brochures</li> <li>• help references</li> <li>• online help</li> <li>• project specifications</li> <li>• reports</li> <li>• technical manuals</li> <li>• training materials and self-paced tutorials</li> <li>• user guides.</li> </ul>

Programming and software development

## ICAPRG512A Prepare for the build phase of an IT system

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to prepare the development environment for the build phase and actual coding of the IT system.

### Application of the Unit

This unit applies to individuals in software development environments who are required to organise documents, environments and tools for the build phase of the software development.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify best development platform for project	<p>1.1 Identify <b><i>requirements</i></b> of the <b><i>development platform</i></b> using the detailed <b><i>technical specifications</i></b></p> <p>1.2 Match the technical specification of the development platform with the technical specification of the project and <b><i>quality standards</i></b></p>
2. Identify best development tools for project	<p>2.1 Identify functional requirements for development tools using the detailed technical specifications and other <b><i>program documentation</i></b></p> <p>2.2 Evaluate development tools for match with requirements and document evaluation outcomes</p> <p>2.3 Select appropriate <b><i>development tools</i></b></p>
3. Prepare development environment	<p>3.1 Obtain <b><i>components</i></b> for development platform, development tools and required <b><i>hardware</i></b></p> <p>3.2 Install, configure and test development platform and tools</p> <p>3.3 Document the configuration of the development platform</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to identify, analyse and evaluate a range of solutions
- literacy skills to:
  - read and correctly interpret technical design documentation
  - write quality-related software documentation
- planning and organisational skills to complete the preparation tasks according to project timescales
- research skills to identify best development tools for project
- technical skills to install, configure and test a variety of development tools and platforms.

### Required knowledge

- client business domain
- current industry-accepted coding methods and standards in a recognised language and database management system (DBMS) modelling techniques
- processes and techniques related to software and database design, architectures and their technical requirements
- quality assurance practices.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• meet technical requirements by successfully preparing the development environment.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• design specification</li> <li>• software requirement specifications</li> <li>• system requirements</li> <li>• technical specifications</li> <li>• version control standards</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of candidate's completed development environment</li> <li>• review of candidate's documented configuration</li> <li>• verbal or written questioning to assess candidate's knowledge of software development environments.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Requirements</b> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• database</li> <li>• network</li> <li>• people in the organisation</li> <li>• platform</li> <li>• system.</li> </ul>
<b>Development platform</b> may include:	<ul style="list-style-type: none"> <li>• computer language used</li> <li>• development methodology</li> <li>• development tools</li> <li>• operating systems</li> <li>• target environments</li> <li>• version control systems.</li> </ul>
<b>Technical specification</b> may include:	<ul style="list-style-type: none"> <li>• system functionality</li> <li>• technical requirements</li> <li>• user problem statement.</li> </ul>
<b>Quality standards</b> include:	<ul style="list-style-type: none"> <li>• AS3925.1-1994 Software quality assurance - plans</li> <li>• AS4042-1992 Software configuration management plans</li> <li>• AS4043-1992 Software configuration management</li> <li>• AS/NZS 14102:1998 Information technology - guideline for evaluation and selection of CASE tools</li> <li>• AS/NZS4258:1994 Software user documentation process</li> <li>• AS/NZS ISO/IEC 12207:1997 Information technology - Software life cycle processes</li> </ul> <p>Note: International and Australian standards are updated and changed on a regular basis. It is therefore important to check the Standards Australia website on a regular basis for new standards.</p>
<b>Program documentation</b> may include:	<ul style="list-style-type: none"> <li>• architecture documentation</li> <li>• code comments</li> <li>• design documents</li> <li>• in-code documentation</li> <li>• internal module documentation</li> <li>• release documents</li> <li>• requirement documents</li> </ul>

	<ul style="list-style-type: none"> <li>• test documents</li> <li>• user manuals.</li> </ul>
<i>Development tools</i> may include:	<ul style="list-style-type: none"> <li>• computer-aided software engineering (CASE) tools</li> <li>• fourth-generation language</li> <li>• program generator</li> <li>• screen generator.</li> </ul>
<i>Components</i> may include:	<ul style="list-style-type: none"> <li>• CD and DVD drives</li> <li>• central processing unit (CPU)</li> <li>• complementary metal oxide semiconductor (CMOS) battery</li> <li>• CPU upgrades</li> <li>• drives</li> <li>• fax or modem cards</li> <li>• interface cards</li> <li>• motherboards</li> <li>• random access memory (RAM) upgrades.</li> </ul>
<i>Hardware</i> may include:	<ul style="list-style-type: none"> <li>• modems and other connectivity devices, such as asymmetric digital subscriber line (ADSL) modems</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG513A Coordinate the build phase of an IT system

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to coordinate activities to be carried out during the build phase and actual coding of an IT system.

The unit focuses on the day-to-day management of tasks associated with making sure that the software product is developed according to the design specifications and project plan.

## Application of the Unit

This unit applies to individuals in the software development area who are required to synchronise the coding activities of a new system.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare work	<p>1.1 Review the specifications and standards for the <b>project</b></p> <p>1.2 Review the project documentation for the <b>development environment</b></p> <p>1.3 Analyse and confirm that the development environment matches the project documentation and meets standards</p> <p>1.4 Select <b>development tools</b></p>
2. Coordinate work	<p>2.1 Determine work units based on the design</p> <p>2.2 Delegate work units to the appropriate developers</p> <p>2.3 Brief developers on standards, procedures, schedules and other <b>requirements</b></p> <p>2.4 Implement project management techniques to ensure that all tasks are completed on time and according to standards and the specification</p>
3. Coordinate development environment	<p>3.1 Implement and test changes to the development environment and document outcomes</p> <p>3.2 Update the project documentation for the development environment</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse requirements and confirm environment is appropriate to the tasks involved
- communication skills to brief team members on their tasks
- literacy skills to review and write technical documents
- planning and organisational skills to manage a project
- problem-solving skills to coordinate build phase
- technical skills to:
  - identify, analyse and evaluate algorithms for a range of solutions
  - model data for identifying, analysing and evaluating a range of solutions
  - review coding work on units under testing.

### Required knowledge

- client business domain to inform the system build
- client-server architecture
- current industry-accepted coding in a recognised language, including features and capabilities
- current industry-accepted database management system (DBMS) modelling techniques
- current industry-accepted hardware and software products, including their general features and capabilities
- at least three or more current principles of databases
- database design
- quality assurance practices.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• coordinate coding, testing, administration and graphical user interface (GUI) design</li> <li>• fulfil technical requirements by successfully managing allocated tasks</li> <li>• understand performance benchmarks and module design</li> <li>• control the testing process.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• design specification</li> <li>• software requirement specifications</li> <li>• system requirements</li> <li>• technical specifications</li> <li>• version control standards</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of candidate's project documentation</li> <li>• review of candidate's tested development environment and documentation</li> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• software development</li> <li>• project management</li> <li>• testing</li> </ul> </li> <li>• direct observation of candidate briefing developers on standards, procedures and schedules.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and</p>

	<p>the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Specifications</i></b> may include:	<ul style="list-style-type: none"> <li>• current system functionality</li> <li>• metrics</li> <li>• project plan</li> <li>• software requirements</li> <li>• technical requirements</li> <li>• user problem statement.</li> </ul>
<b><i>Project</i></b> may include:	<ul style="list-style-type: none"> <li>• business improvement process</li> <li>• business involved in a total organisational change</li> <li>• ebusiness solution involving the total organisation or part of the organisation</li> <li>• systems-only change.</li> </ul>
<b><i>Development environment</i></b> may include:	<ul style="list-style-type: none"> <li>• computer language used</li> <li>• development methodology</li> <li>• development tools</li> <li>• operating systems</li> <li>• target environments</li> <li>• version control systems.</li> </ul>
<b><i>Development tools</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-aided software engineering (CASE) tools</li> <li>• fourth-generation language</li> <li>• program generator</li> <li>• screen generator.</li> </ul>
<b><i>Requirements</i></b> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• database</li> <li>• network</li> <li>• people in the organisation</li> <li>• platform</li> <li>• system.</li> </ul>

Programming and software development

# ICAPRG514A Prepare for software development using rapid application development

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to carry out rapid application development (RAD), in the context of preparing for software development.

## Application of the Unit

This unit applies to programmers in a variety of IT areas who are required to develop software using RAD.

The selection and use of suitable RAD tools can have an impact on cost and quality of a software project and should be carefully selected and used with code projects.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Determine RAD requirements</p>	<p>1.1 Select and demonstrate use of the most suitable industry standard <i>tool set</i></p> <p>1.2 Implement a prioritised plan using a series of recursive stages of build and review for delivery of the <i>system</i></p> <p>1.3 Implement and incorporate a physical <i>database</i></p> <p>1.4 Identify, <i>document</i> and schedule modules to be implemented by incremental development techniques</p> <p>1.5 Identify and formally allocate responsibilities to authorised user and suitably skilled builders for each module</p> <p>1.6 Plan for and document the endorsement of reviews, administration schedules and development milestones</p>
<p>2. Determine work metrics</p>	<p>2.1 Set development goals</p> <p>2.2 Seek and secure agreement on and adherence to single common notation</p> <p>2.3 Determine tools, features and techniques most appropriate to the development environment</p> <p>2.4 Facilitate, plan, develop and document version and change control methods</p> <p>2.5 Facilitate training and exposure to the user participants via RAD</p>
<p>3. Implement administration method</p>	<p>3.1 Determine and reach agreement of <i>stakeholders</i> on the specifics</p> <p>3.2 Confirm dates for milestones with stakeholders and secure with written agreement</p> <p>3.3 Inform production system parties and secure with written acknowledgment</p> <p>3.4 Administer and maintain relevant time recording and management methodologies</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - liaise with stakeholders and users, especially when seeking agreement from all parties
  - facilitate training
- literacy skills to interpret and write technical documents
- planning and organisational skills to manage risk when a prioritised plan is implemented, using a series of recursive stages of build and review for delivery of the system
- problem-solving skills to determine RAD requirements.

### Required knowledge

- broad knowledge of industry-accepted prototyping tools
- detailed knowledge of:
  - client business
  - two or more programming languages
- overview knowledge of:
  - quality assurance practices
  - two or more current industry development methodologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• use RAD tools and prototyping methods in order to meet client requirements</li> <li>• document the outcomes of the RAD.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• computer-aided software engineering tools (CASE) repository to facilitate the re-use of templates and components</li> <li>• CASE tools</li> <li>• detailed user requirements</li> <li>• prototyping software</li> <li>• requirements document, including model and scope</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observation of candidate participating in RAD</li> <li>• review of candidate's documentation of RAD process</li> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• client business requirement</li> <li>• RAD process.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Tool set</i></b> may include:	<ul style="list-style-type: none"> <li>• bug analyser</li> <li>• code beautifier</li> <li>• compiler</li> <li>• integrated development environment</li> <li>• test harness software.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider (ASP)</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating system</li> <li>• servers.</li> </ul>
<b><i>Database</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial off-the-shelf (COTS) database packages</li> <li>• object-relational databases</li> <li>• proprietary databases</li> <li>• relational databases.</li> </ul>
<b><i>Documentation</i></b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC), and Australian Standards (AS) standards</li> <li>• maintaining equipment inventory</li> <li>• naming standards</li> <li>• project management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>

## **Unit Sector(s)**

Programming and software development

## ICAPRG515A Review developed software

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge to apply quality standards associated with software development.

### Application of the Unit

This unit applies to senior programmers who are required to ensure the quality of software produced by others.

Quality assurance is a necessary part of any code development. Imposing quality on software development involves the review of quality standards, the determination of development quality issues, and a closer review of specific quality areas.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Review quality standards	<p>1.1 Review copies of the organisation's <b>quality standards</b> and <b>standards</b> related to software development and prepare for use</p> <p>1.2 Contact <b>appropriate person</b> to discuss their involvement in the review and establish their role</p> <p>1.3 Determine and document the approach to be used to validate quality during the review</p>
2. Determine development quality issues	<p>2.1 Examine and document processes that have a significant impact on the quality of a particular product under development</p> <p>2.2 Hold discussions on quality issues with development staff and establish agreed actions</p> <p>2.3 Allocate responsibilities to development staff</p> <p>2.4 Obtain agreement from appropriate person on procedures to ensure quality of development, where necessary</p>
3. Review specific quality areas	<p>3.1 Review plans to ensure that they are adequate to control the quality of the development process</p> <p>3.2 Review testing processes to ensure that defect-free software will be developed</p> <p>3.3 Examine <b>documentation</b> and methods for development to ensure that software will be supportable</p> <p>3.4 Monitor <b>requirements</b> to ensure that <b>client</b> needs are met</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with clients and development staff
- literacy skills to interpret and write technical documents
- planning and organisational skills to:
  - plan a project that addresses scope, time, cost, quality and risk
  - manage staff responsibilities
- problem-solving skills to test processes during the development of defect-free software
- technical skills to use data-modelling tools.

### Required knowledge

- client business domain
- broad knowledge of industry accepted hardware and software products
- input and output drivers
- operating systems
- programming languages: two or more procedural languages and three or more object-oriented languages
- quality assurance practices and the identification of standards
- real-time programming techniques
- software application measuring and estimating methodology
- software development and configuration-management processes
- software-metrics development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• determine quality standards and procedures that support the development of defect-free products to meet client requirements</li> <li>• apply appropriate quality standards to the development of products</li> <li>• conduct quality testing of developed software.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• data dictionaries</li> <li>• design specifications</li> <li>• data stream management system (DSMS)</li> <li>• simulated scenario</li> <li>• Australian and international software quality standards</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of quality testing processes</li> <li>• review of documented processes to ensure quality</li> <li>• verbal or written questioning on quality standards.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Quality standards</b> may include:	<ul style="list-style-type: none"> <li>• AS3925.1-1994 Software quality assurance - plans</li> <li>• AS4042-1992 Software configuration management plans</li> <li>• AS4043-1992 Software configuration management</li> <li>• AS/NZS14102:1998 Information technology - guideline for evaluation and selection of CASE tools</li> <li>• AS/NZS4258:1994 Software user documentation process</li> <li>• AS/NZS ISO/IEC 12207:1997 Information technology - Software life cycle processes</li> <li>• current international and Australian standards.</li> </ul>
<b>Standards</b> may include:	<ul style="list-style-type: none"> <li>• Australian Standards (AS)</li> <li>• International Electrotechnical Commission (IEC)</li> <li>• International Organization for Standardization (ISO)</li> <li>• software development standards.</li> </ul>
<b>Appropriate person</b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b>Documentation</b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• ISO, IEC and AS standards</li> <li>• maintaining equipment inventory, client training and satisfaction reports</li> <li>• naming standards</li> <li>• project-management templates and report writing</li> <li>• version control.</li> </ul>
<b>Requirements</b> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• database</li> <li>• network</li> <li>• people in the organisation</li> <li>• platform</li> <li>• system.</li> </ul>
<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• clubs</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> </ul>

	<ul style="list-style-type: none"><li>• internal employees.</li></ul>

Programming and software development

## ICAPRG516A Develop integration blueprint for IT systems

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to document and maintain details of the technology and architectural components incorporated into the integration blueprint for an IT system.

### Application of the Unit

This unit applies to individuals in senior roles in the development environment who are required to integrate a series of components.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Review technical architecture documents	<p>1.1 Review technical architecture documents, supplemented with discussions where necessary</p> <p>1.2 Identify and evaluate technical considerations that cover the overall <b>requirements</b> and provide best technical fit against requirements</p> <p>1.3 Update the integration blueprint according to best-fit technical <b>specifications</b></p>
2. Undertake compatibility tests	<p>2.1 Assemble <b>components</b> and <b>component technologies</b> according to design specifications</p> <p>2.2 Test components for functionality against design specifications</p> <p>2.3 Identify non-compliance against technical specifications</p> <p>2.4 Update the integration blueprint to reflect functionality and non-compliance changes</p>
3. Assess risk areas	<p>3.1 Identify the scope of <b>modifications</b> required from compatibility test</p> <p>3.2 Negotiate modifications required with the suppliers, based on outcomes of compatibility test</p> <p>3.3 Update the integration blueprint to reflect modifications to risk areas</p>
4. Assess readiness for stress testing	<p>4.1 Continue integration activities until platform is stable</p> <p>4.2 Evaluate the platform's compliance against technical requirements</p> <p>4.3 Update the integration blueprint for stress testing</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to apply a range of test procedures
- communication skills to liaise with clients and suppliers
- literacy skills to review and write technical documents and keep accurate records
- problem-solving skills to develop strategic initiatives and manage risk
- technical skills to test components for functionality.

### Required knowledge

- sources of technology suppliers and components
- overview knowledge of:
  - current industry development and design methodologies
  - current industry-accepted hardware and software products, features and capabilities
  - current industry-accepted testing procedures
  - stress load testing.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify and capture technical design changes important for future integration activities on a particular platform</li> <li>• avoid integration activities that have been previously performed.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• design specifications</li> <li>• high-level diagrammatic view of the main system components</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of systematic methods used to identify and select tests from component test suites to form integration test suites</li> <li>• review of reusable integration infrastructure to build an integration test platform to cope with integration of diversified components</li> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• system components</li> <li>• integration activities.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>Requirements</b> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• database</li> <li>• network</li> <li>• people in the organisation</li> <li>• platform</li> <li>• system.</li> </ul>
<b>Specifications</b> may include:	<ul style="list-style-type: none"> <li>• current system functionality</li> <li>• metrics</li> <li>• project plan</li> <li>• software requirements</li> <li>• technical requirements</li> <li>• user problem statement.</li> </ul>
<b>Components</b> may include:	<ul style="list-style-type: none"> <li>• file system object in Windows operating systems</li> <li>• transactional processing component.</li> </ul>
<b>Component technologies</b> may include:	<ul style="list-style-type: none"> <li>• ActiveX</li> <li>• component object model (COM)</li> <li>• common object request broker architecture (CORBA)</li> <li>distributed component object model (DCOM)</li> <li>• JavaBeans</li> <li>• NET</li> <li>• OpenDoc.</li> </ul>
<b>Modifications</b> may include:	<ul style="list-style-type: none"> <li>• board and chip revisions</li> <li>• custom-designed components</li> <li>• distribution release details</li> <li>• driver and firmware revisions</li> <li>• internal or external hardware model information</li> <li>• software patches and upgrades</li> <li>• software versions</li> <li>• telecommunications hardware and software version details.</li> </ul>

## ICAPRG517A Install, test and evaluate pilot version of IT system

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install a pilot version of a developed IT system, test it and evaluate it among a subset of clients to gauge reaction and gather feedback.

### Application of the Unit

This unit applies to senior staff in a development area who are required to test a new system among a small group of users, analysing their responses and comments.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare for pilot system	<p>1.1 Establish and confirm objectives, success criteria and <i>acceptance criteria</i> for pilot implementation</p> <p>1.2 Identify and secure technical and <i>organisational resources</i> required for pilot implementation</p> <p>1.3 Establish and confirm executive support for pilot</p> <p>1.4 Complete <i>project plan</i> for pilot and refer project documentation to <i>appropriate person</i> for approval</p>
2. Install pilot system	<p>2.1 Install and configure pilot according to project plan</p> <p>2.2 Verify and record technical readiness of pilot</p> <p>2.3 Take necessary actions to determine accuracy of data</p> <p>2.4 Prepare a status report and submit to appropriate person for sign-off</p>
3. Test pilot system	<p>3.1 Work with stakeholders to identify and release appropriate pilot group</p> <p>3.2 Brief members of pilot team on objectives of test</p> <p>3.3 Train pilot-team members in new system</p> <p>3.4 Run test</p>
4. Evaluate results and feedback of pilot	<p>4.1 Assess computerised results of pilot test</p> <p>4.2 Interview pilot group members to obtain feedback</p> <p>4.3 Document feedback and results</p> <p>4.4 Evaluate according to success and acceptance criteria previously established</p> <p>4.5 Report final recommendations from pilot with regard to a complete installation of the piloted system to appropriate person</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse results of pilot
- communication skills to:
  - facilitate training and user participants, including exposure to joint application development (JAD) process
  - liaise with clients
- literacy skills to prepare status reports and final recommendation
- planning and organisational skills to manage scope, time, cost, quality, communications and risk management
- problem-solving skills to participate in the development of strategic initiatives
- technical skills to install pilot system.

### Required knowledge

- role of stakeholders and the degree of stakeholder involvement in the developed system
- system's current functionality
- three or more current industry information-gathering methodologies
- client business domain with regard to the developed system
- current industry system development and design methodologies
- current industry-accepted hardware and software products, with broad knowledge of general features and capabilities and detailed knowledge of installing pilot systems
- current industry-accepted system piloting methodologies, including general features and capabilities
- overall project objectives and client requirements when preparing for pilot
- quality assurance practices with regard to installing, testing and evaluating developed system.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• plan the pilot of a new system</li> <li>• define objectives, success criteria and acceptance criteria</li> <li>• run the piloting of a new system</li> <li>• obtain feedback from pilot group members</li> <li>• evaluate the pilot</li> <li>• make recommendations about the full installation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• pilot system</li> <li>• acceptance criteria</li> <li>• people to be involved in the pilot</li> <li>• pilot plan</li> <li>• project plan</li> <li>• technical materials</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of pilot project documentation prepared by candidate</li> <li>• review of candidate's documented recommendation</li> <li>• verbal or written questioning to assess candidate's knowledge of acceptance testing</li> <li>• direct observation of candidate:             <ul style="list-style-type: none"> <li>• briefing pilot members on the piloted system</li> <li>• obtaining feedback from pilot members after the test.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the</p>

	<p>work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Acceptance criteria</i></b> may include:	<ul style="list-style-type: none"> <li>• cost implications</li> <li>• logistical considerations</li> <li>• technical</li> <li>• timeframe.</li> </ul>
<b><i>Organisational resources</i></b> will vary subject to nature of pilot and may include:	<ul style="list-style-type: none"> <li>• financial resources secured to fund the pilot</li> <li>• staffing resources expected from user community, technical operations, technical support, technical development, supplier, project manager and executive sponsor</li> <li>• personnel with an understanding of corporate governance, such as legal, audit and data security specialists</li> <li>• representative experts from business areas, such as functional managers or operational staff</li> <li>• representative users</li> <li>• systems developers and IT technicians.</li> </ul>
<b><i>Project plan</i></b> may include a number of variables, including:	<ul style="list-style-type: none"> <li>• parties and their responsibilities</li> <li>• project budget</li> <li>• project objectives</li> <li>• project scope</li> <li>• schedule.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

## ICAPRG518A Monitor the system pilot

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to evaluate the performance of the developed system among a subset of clients.

### Application of the Unit

This unit applies to senior programmers and systems analysts who are required to implement systems.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Monitor implementation of pilot system	1.1 Review <i>pilot</i> and support documentation 1.2 Identify pilot and <i>system</i> procedures 1.3 Supervise system functionality and integrity tests 1.4 Document findings 1.5 Provide appropriate technical support as required
2. Evaluate pilot system	2.1 Review pilot objectives and success criteria against pilot operation 2.2 Review <i>client</i> and executive feedback on pilot against <i>acceptance criteria</i> 2.3 Identify and prioritise areas of success and improvement 2.4 Assess the impact of changes on the pilot 2.5 Document review process and submit to <i>appropriate person</i>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate the pilot by monitoring performance
- communication skills to:
  - facilitate and present concepts and obtain group consensus
  - liaise with clients and team members
- literacy skills to interpret and write technical documents
- planning and organisational skills to manage the system pilot
- research skills to identify, analyse and evaluate broad features of a particular business domain and best practice in system piloting.

### Required knowledge

- current industry-accepted system piloting methodologies, including their general features and capabilities, with particular emphasis in acceptance criteria
- current industry system development and design methodologies
- broad knowledge of industry-accepted hardware and software products
- project objectives and client requirements, e.g. when monitoring implementation of pilot
- client business domain
- three or more current industry information-gathering methodologies
- role of stakeholders and the degree of stakeholder involvement
- system's current functionality, with specific emphasis on:
  - system integration
  - system response and recovery times
  - user interfaces
  - validation of inputs and outputs.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• observe and evaluate the pilot by:             <ul style="list-style-type: none"> <li>• monitoring performance</li> <li>• analysing performance issues from a systems and a client user perspective</li> <li>• documenting findings</li> <li>• evaluating against acceptance criteria.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• acceptance criteria</li> <li>• pilot plan</li> <li>• system to be piloted</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of piloting process</li> <li>• review of pilot documentation prepared by candidate</li> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• piloting methodologies</li> <li>• system's current functionality.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.
--	------------

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Pilot</i></b> may relate to:	<ul style="list-style-type: none"> <li>• nature of system</li> <li>• organisational requirements.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider (ASP)</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating system</li> <li>• servers.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b><i>Acceptance criteria</i></b> may include:	<ul style="list-style-type: none"> <li>• accessibility</li> <li>• cost implications</li> <li>• logistical considerations</li> <li>• technical</li> <li>• timeframe.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG520A Validate an application design against specifications

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to check the software application design against specifications and apply validation techniques across the system life cycle.

## Application of the Unit

This unit applies to individuals employed in the area of software development responsible for verifying and validating software-design specifications.

They may be individuals who work as software project managers, testers, software engineers, system analysts and software developers.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Evaluate software-requirement specification	<p>1.1 Review <i>software requirement specifications document</i> to ensure that requirements are completely specified and correct before software design begins</p> <p>1.2 Validate the software requirement specifications document</p>
2. Create a proof-of-concept prototype	<p>2.1 Use rapid application development tools to create prototype system</p> <p>2.2 Present prototype system for demonstration to appropriate person</p> <p>2.3 Validate proof of concept</p>
3. Evaluate software design	<p>3.1 Determine if the design is complete, accurate, consistent and feasible</p> <p>3.2 Validate <i>software design document</i></p> <p>3.3 Validate <i>database structure and elements</i></p> <p>3.4 Validate <i>user interface</i> (UI)</p> <p>3.5 Review software risk analysis</p>
4. Evaluate source code	<p>4.1 Validate consistency between code and software design document</p> <p>4.2 Validate logical structure and syntax using <i>static analysis tools</i></p>
5. Evaluate testing requirements	<p>5.1 Review and validate test plans</p> <p>5.2 Review and validate test cases</p>
6. Document validation	<p>6.1 Document results of validation exercise</p> <p>6.2 Recommend current software design or itemise required alterations</p> <p>6.3 Submit report to appropriate person for action</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to determine audience needs
- communication skills to:
  - interact with developer to ensure proper implementation
  - provide leadership and motivation
- literacy skills to:
  - create technical documentation related to software design
  - read and interpret complex technical and non-technical information from a range of sources
- technical skills to use:
  - software design tools, such as unified modelling language (UML) tools
  - word-processing software
  - UI design.

### Required knowledge

- basic knowledge of database design and implementation
- business and technical modelling using UML tools at intermediate level
- current software development methodologies
- detailed knowledge of system development life cycle (SDLC)
- object-oriented programming
- open-source development tools
- organisational procedures for documenting technical specifications
- software-testing techniques.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• verify and validate software application design, including:             <ul style="list-style-type: none"> <li>• creating proof of concept (PoC) prototype</li> <li>• evaluating the technical specification and comparing against the PoC</li> <li>• interpreting and evaluating software design documentation requirements and confirming details with the client</li> <li>• analysing and validating user interface and database requirements</li> <li>• effectively using static analysis tools</li> <li>• walkthrough documents, test plans and test cases.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• tools to create prototype systems</li> <li>• static analysis tools</li> <li>• test plan and test cases</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of candidate's validation documents</li> <li>• evaluation of validation documents.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Software requirement specifications document</i></b> may include:	<ul style="list-style-type: none"> <li>• reports</li> <li>• risks and resourcing</li> <li>• software functions</li> <li>• software system inputs and outputs</li> <li>• timeframe.</li> </ul>
<b><i>Software design document</i></b> may include:	<ul style="list-style-type: none"> <li>• module test plan generation</li> <li>• test-design generation</li> <li>• traceability analysis</li> <li>• update software risk analysis.</li> </ul>
<b><i>Database structure and elements</i></b> may include:	<ul style="list-style-type: none"> <li>• database consistency</li> <li>• database integrity</li> <li>• database structure.</li> </ul>
<b><i>User interface</i></b> may include:	<ul style="list-style-type: none"> <li>• appearance</li> <li>• consistency</li> <li>• design</li> <li>• functions</li> <li>• navigation.</li> </ul>
<b><i>Static analysis tools</i></b> may include:	<ul style="list-style-type: none"> <li>• Blast (c language)</li> <li>• Checkstyle (for Java)</li> <li>• JSLint (JavaScript checker)</li> <li>• StyleCop (for .net languages).</li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG523A Apply advanced programming skills in another language

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake advanced programming tasks using a selected choice of another programming language. The second language may be an object-oriented language.

## Application of the Unit

This unit applies to programmers who are required to develop program code.

Programming languages form the underpinning software infrastructure of all computer data processing. It is important that the stages of the development methodology are followed within the scope of any project or scenario, and the relevant supporting documentation produced.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Code using advanced data structures	<p>1.1 Design <i>dynamic data structures</i></p> <p>1.2 Implement and use dynamic data structures, including double-linked lists and binary trees for coding</p>
2. Code using advanced algorithms	<p>2.1 Code using hashing techniques</p> <p>2.2 Consider and record the advantages and disadvantages of at least three sorting algorithms</p> <p>2.3 Code at least one sorting algorithm</p> <p>2.4 Code advanced searching techniques for use with complex data structures</p>
3. Write simple multi-process application	<p>3.1 Demonstrate use of the features of the language that enable inter-process communication through at least one <i>mechanism</i></p> <p>3.2 Demonstrate use of features of the language that allow for operating system ‘signals’ to be captured and responded to</p>
4. Use third-party libraries	<p>4.1 Use a third-party library in the construction of an application</p> <p>4.2 Reference third-party documentation</p> <p>4.3 Use procedural techniques to write an application to work within a graphical user interface (GUI) environment</p>
5. Debug code	<p>5.1 Use <i>integrated development environment</i> (IDE) debugging facilities or a stand-alone debugger</p> <p>5.2 Use program debugging techniques to detect and resolve errors of syntactical, logical and design origin</p>
6. Document activities	<p>6.1 Demonstrate use of source code version control</p> <p>6.2 Demonstrate adherence to guidelines for developing maintainable code and to a set of provided <i>coding standards</i></p> <p>6.3 Apply suitable internal documentation to all code created using documentation tools available in the target <i>language</i></p>
7. Test code	<p>7.1 Design and document tests to be undertaken</p> <p>7.2 Undertake limited testing of produced code to ensure it complies with program specification</p> <p>7.3 Capture test results</p>
8. Create an application	<p>8.1 Develop a solution from a program specification design document</p> <p>8.2 Design the algorithm, and construct and test applications in response to a problem description and language</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to read and interpret program specifications
- literacy skills to write technical documentation
- problem-solving skills to solve bugs in program code
- technical skills to:
  - debug, program and test code in specified language
  - use an IDE
  - work with version control.

### Required knowledge

- detailed knowledge of:
  - range of programming languages
  - languages in a GUI environment
  - techniques for developing large scale applications
  - procedures for programming with complex data structures
  - procedures for using third-party supplied library for standard programming features.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design application programs using a range of tools to support programming activities</li> <li>• produce design documentation for these programs</li> <li>• build application programs according to the design</li> <li>• document these programs</li> <li>• conduct testing procedures on these programs to ensure validity</li> <li>• analyse test results to determine program's accuracy.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• software development environment</li> <li>• technical requirements</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of candidate's program response to specifications</li> <li>• review of candidate design, program and testing documentation</li> <li>• verbal or written questioning to determine candidate's knowledge of:             <ul style="list-style-type: none"> <li>• user requirements</li> <li>• programming techniques</li> <li>• testing techniques.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Programming and software development

# ICAPRG524A Develop high-level object-oriented class specifications

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse requirements and produce a set of high-level object-oriented class specifications.

## Application of the Unit

This unit applies to systems designers who are required to develop object designs as part of the systems design process.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Analyse behaviour of objects	1.1 Analyse behaviour scenarios and prepare <b><i>documentation</i></b> according to <b><i>standards</i></b> 1.2 Identify classes, objects and abstract data types according to <b><i>requirements</i></b> 1.3 Prepare class, object, module and process diagrams according to <b><i>specifications</i></b>
2. Prepare state model	2.1 Analyse data requirements and iterate data flows 2.2 Prepare state-transition diagrams according to standards 2.3 Improve abstract data types and specifications
3. Describe roles and responsibilities of classes	3.1 Review functional requirements, assign responsibilities and update class structures 3.2 Specify interface and class communication requirements 3.3 Prepare interaction diagrams according to standards
4. Iterate and review the object model	4.1 Review current object model, class functionality and data transformation 4.2 Identify and develop class relationships, priorities and inheritance hierarchy 4.3 Review class-service requirements and initial test criteria 4.4 Identify object processes and reuse classes 4.5 Document model and forward to <b><i>appropriate person</i></b>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to present information and liaise with colleagues
- literacy skills to analyse, evaluate and present information when documenting behaviour scenarios
- problem-solving skills to specify and develop classes, objects and system abstract data types
- research skills to specify, analyse and evaluate broad features of a particular business domain and best practice in program development
- technical skills to:
  - develop class relationships
  - prepare diagrams for class, object, module and process
  - prepare interaction diagrams.

### Required knowledge

- overview knowledge of:
  - configuration management
  - current industry-accepted object-oriented methodologies
  - current program development methodologies
- detailed knowledge of:
  - data modelling techniques
  - object-oriented analysis tools
  - quality assurance practices.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• specify and model abstract data types</li> <li>• specify the interface between classes and objects</li> <li>• document the result.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• business, system and user requirement</li> <li>• unified modelling language (UML) modelling tool</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of identifying classes, objects and abstract data types and preparing class, object, module and process diagrams</li> <li>• verbal or written questioning to assess knowledge of roles and responsibilities of classes</li> <li>• review of documented model.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Documentation</i></b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC), and Australian Standards (AS) standards</li> <li>• maintaining equipment inventory</li> <li>• naming standards</li> <li>• project-management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b><i>Standards</i></b> may include:	<ul style="list-style-type: none"> <li>• ISO, IEC and AS standards</li> <li>• organisational standards</li> <li>• project standards.</li> </ul>
<b><i>Requirements</i></b> may refer to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<b><i>Specifications</i></b> may include:	<ul style="list-style-type: none"> <li>• current system functionality</li> <li>• technical requirements</li> <li>• user-problem statement.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

Programming and software development

## ICAPRG525A Build Java applets

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to compile and run an applet that executes in Java-enabled browsers and interacts with users.

### Application of the Unit

This unit applies to individuals involved in software, web or games development who are required to build applets using Java that interact with users via a browser.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Create Java source file	<p>1.1 Create a file with a text editor</p> <p>1.2 Create a sub-class of the class java.applet.Applet</p> <p>1.3 Ensure that applet sub-class implements at least one of the following methods: init and paint</p> <p>1.4 Define classes that contain instance variables, methods and local variables</p> <p>1.5 Ensure that the init method initialises instance variables and constructs any graphical interface used in the applet sub-class</p> <p>1.6 Implement the paint and update methods to manage output that is drawn in the applet window</p> <p>1.7 Incorporate event handling methods</p> <p>1.8 Implement code that allows a <i>user</i> to enter values and assigns these values to variables</p> <p>1.9 Use available graphical user interface (GUI) components to allow user interaction with the applet</p> <p>1.10 Specify and load images and sounds</p> <p>1.11 Include comments to describe the behaviour of the applet</p>
2. Compile source file	<p>2.1 Use a <i>Java compiler</i> to compile the file</p> <p>2.2 Correct errors detected by the compiler</p> <p>2.3 Confirm basic correctness of file to ensure that all variables have been initialised</p> <p>2.4 Ensure compiler creates a class file and the class is interpreted correctly</p>
3. Run applet	<p>3.1 Create and name a hypertext markup language (HTML) file and add APPLET tag</p> <p>3.2 Write the applet class file to match the HTML document that contains APPLET tag</p> <p>3.3 Confirm that the applet loads and executes correctly</p> <p>3.4 Identify and correct run-time errors</p> <p>3.5 Identify and correct logic errors</p> <p>3.6 Ensure that the appearance of the applet window renders it accessible and intuitive for the user, and that its design complies with organisational standards</p> <p>3.7 Ensure that user interaction is implemented efficiently and effectively</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- problem-solving skills to apply solutions to Java applet problems
- technical skills to:
  - use Java programming
  - use object-oriented design software
  - write HTML code.

### Required knowledge

- detailed knowledge of:
  - object-oriented programming concepts
  - theoretical concepts of Java programming
- overview knowledge of Australian Computer Society Code of Ethics
- sources of browser security restrictions.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• review the requirements to provide an applet that executes in Java-enabled browsers and allows users to customise the applet's operation</li> <li>• write, compile and run an applet that accepts user input and generates response based on the input.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• Java development environment</li> <li>• Java compiler and interpreter</li> <li>• Java enabled web browser</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of candidate's Java applet code</li> <li>• evaluation of candidate's Java applet</li> <li>• verbal or written questioning to assess candidate's knowledge of Java applets.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>User</b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party.</li> </ul>
<b>Java compiler</b> may include:	<ul style="list-style-type: none"> <li>• adaptable layout environment (ALE)</li> <li>• alma 0.28</li> <li>• AnyTool</li> <li>• AutoRad</li> <li>• Bean scripting framework</li> <li>• BEanACTION</li> <li>• Codemesh</li> <li>• DocWiz: the JavaDoc documentation tool</li> <li>• Eclipse</li> <li>• eXtensible pre-processor (EPP) kit</li> <li>• generating graphical editors (GRACE)</li> <li>• Java 2 SDK</li> <li>• Java Runner</li> <li>• JBuilder 3.5</li> <li>• JCreator</li> <li>• jGRASP</li> <li>• Metamata Development Environment</li> <li>• Netscape Directory SDK for Java: Source Code</li> <li>• Utility+</li> <li>• Visual Age 3.0</li> <li>• Visual J++</li> <li>• WingSoft</li> <li>• Zero G software.</li> </ul>

Programming and software development

## ICAPRG526A Maintain functionality of legacy code programs

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to maintain the functionality of legacy code programs.

### Application of the Unit

This unit applies to individuals working in software development who are required to maintain legacy programs, updating them as required.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine functional changes required	<p>1.1 Consult <i>user</i> to determine and document the functional change required</p> <p>1.2 Clarify impact of changes with operational personnel</p>
2. Review legacy language	<p>2.1 Identify the basic structures of the legacy language</p> <p>2.2 Review the data storage of the legacy language with regard to global variables, modularisation, cohesion and coupling</p> <p>2.3 Review the basic algorithms of the legacy language</p>
3. Identify and isolate change	<p>3.1 Review the <i>technical documentation</i> for the system to determine modules to change</p> <p>3.2 Review source code to determine program logic and flow</p> <p>3.3 Update the technical documentation to reflect current state of program</p>
4. Determine framework for change	<p>4.1 Determine the <i>change approach</i> to be used to implement the change</p> <p>4.2 Ascertain and detail the risks for each approach</p> <p>4.3 Determine the personnel who will make the changes</p>
5. Design change	<p>5.1 Develop the changes required, considering the impact of the changes on other parts of the system</p> <p>5.2 Document the changes according to change-management standards</p>
6. Code change	<p>6.1 Identify and obtain appropriate <i>hardware</i> and <i>software</i> for the change</p> <p>6.2 Write code according to programming standards</p> <p>6.3 Compile and unit test the changes</p> <p>6.4 Document the changes according to programming standards</p>
7. Test change	<p>7.1 System test the changes and record outcomes</p> <p>7.2 Perform user acceptance testing and record outcomes</p> <p>7.3 Sign off change request</p>
8. Archive system	<p>8.1 Create new version of software according to configuration management standards</p> <p>8.2 Archive the development system, including source code, compilers and test data</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to determine functional changes and impacts these changes will have on the system
- communication skills to liaise with user and operational personnel
- literacy skills to interpret and write technical documentation
- planning and organisational skills to determine change-management process
- technical skills to:
  - code in legacy language
  - test new code
  - use change-management system.

### Required knowledge

- operational procedures on the required operating system
- organisational standards for software development
- security and viruses
- privacy legislation and copyright with regard to legacy code, the particular system involved and its data
- technical terminology related to reading help files and manuals
- types of software.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• read legacy language</li> <li>• identify and isolate the required change</li> <li>• implement the change via the chosen technique.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• documents detailing organisational standards for software development</li> <li>• existing legacy code</li> <li>• appropriate compilers</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of candidate's completed change in legacy code</li> <li>• review of candidate's documentation that reflects modification in legacy programs</li> <li>• verbal or written questioning to determine candidate's knowledge of:             <ul style="list-style-type: none"> <li>• key design alternatives</li> <li>• change-management process.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>User</b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party.</li> </ul>
<b>Technical documentation</b> may include:	<ul style="list-style-type: none"> <li>• brochures</li> <li>• help references</li> <li>• online help</li> <li>• project specifications</li> <li>• reports</li> <li>• technical manuals</li> <li>• training materials and self-paced tutorials</li> <li>• user guides.</li> </ul>
<b>Change approach</b> may include:	<ul style="list-style-type: none"> <li>• implementing a new layer or replacing an existing layer to the architecture of the system</li> <li>• implementing the changes in the legacy language</li> <li>• implementing wrappers to the legacy code.</li> </ul>
<b>Hardware</b> may include:	<ul style="list-style-type: none"> <li>• modems and other connectivity devices, such as asymmetric digital subscriber line (ADSL) modems</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>
<b>Software</b> may include:	<ul style="list-style-type: none"> <li>• commercial applications</li> <li>• customised</li> <li>• in-house</li> <li>• organisation-specific</li> <li>• packaged.</li> </ul>

## **Unit Sector(s)**

Programming and software development

## ICAPRG527A Apply intermediate object-oriented language skills

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake intermediate level programming tasks using an object-oriented programming language.

### Application of the Unit

This unit applies to programmers in a variety of fields who are required to produce programs in object-oriented languages.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Build applications using provided language utilities</p>	<p>1.1 Review program requirements</p> <p>1.2 Divide multiple source-code files into logical units and packages</p> <p>1.3 Use at least two of the utilities of the target language allowing for internal storage of <i>collections of data</i></p> <p>1.4 Use the utilities of the target language providing internal data sorting and searching facilities</p> <p>1.5 Employ <i>integrated-development environment</i> facilities to make files to automate program building</p> <p>1.6 Follow guidelines for developing maintainable code adhering to <i>coding standards</i></p> <p>1.7 Use the facilities in the language for persisting objects to binary files</p> <p>1.8 Use the operator and function or method overloading facilities available in the <i>language</i> at an introductory level</p> <p>1.9 Demonstrate ability to use exception-handling techniques to ensure program stability</p> <p>1.10 Demonstrate use of a class that is based on multiple inheritances</p>
<p>2. Write programs that interact with a database</p>	<p>2.1 Design and implement programs that connect to a <i>database</i></p> <p>2.2 Design and implement programs that use the language facilities to extract, update and delete data stored in a database</p> <p>2.3 Design and implement programs that use the language facilities to manipulate database structure (query, create and delete)</p> <p>2.4 Write programs that deliver transactional integrity</p>
<p>3. Write graphical user interface (GUI)</p>	<p>3.1 Employ GUI framework or text windowing interface appropriate to the chosen language</p> <p>3.2 Demonstrate use of standard <i>GUI components</i></p> <p>3.3 Use the facilities within the language for GUI objects to respond to user and program-generated events</p>
<p>4. Debug application</p>	<p>4.1 Use stand-alone debugging tools or tools provided by integrated development environment to examine variables and trace running code</p> <p>4.2 Use debugger to detect logical and coding errors</p> <p>4.3 Use tracing of code and examination of variable contents</p>

	during execution to detect and correct errors
5. Test application	5.1 Design and document limited tests of code 5.2 Undertake limited testing of produced code to ensure it complies with program specification 5.3 Capture and document test results
6. Create and maintain documentation	6.1 Read and interpret supplied design document to create code 6.2 Create and maintain program documentation

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse requirements document
- communication skills to communicate with user and colleagues
- initiative and enterprise skills to produce an appropriate application to fulfil requirements
- literacy skills to:
  - produce program documentation
  - read requirements documentation
- planning and organisational skills to produce output in a timely fashion as required
- problem-solving skills to debug program code
- technical skills to:
  - interpret program specifications
  - translate requirements from problem space to machine space
  - integrate development environment usage
  - use internal documentation techniques
  - test program to ensure it meets its requirements.

### Required knowledge

- detailed knowledge of:
  - data structures
  - small-size and medium-size application development
  - object-oriented programming concepts
  - object-oriented programming language
  - process and techniques related to the use of GUI to interact with operator
- documentation techniques to document the application.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design and build application programs from a problem scenario and program specification.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• requirements document or object-oriented design structures</li> <li>• programming languages that support object-oriented development</li> <li>• database management system (DBMS)</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of completed application</li> <li>• review of documentation of this application</li> <li>• verbal or written questioning to ensure knowledge of:             <ul style="list-style-type: none"> <li>• object-oriented programming</li> <li>• coding standards</li> <li>• methods used to access data in databases</li> <li>• documentation techniques.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.
--	------------

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Collections of data</i></b> may include:	<ul style="list-style-type: none"> <li>• hash tables</li> <li>• lists</li> <li>• queues</li> <li>• sets</li> <li>• stacks</li> <li>• trees.</li> </ul>
<b><i>Integrated development environment</i></b> may include:	<ul style="list-style-type: none"> <li>• Code Warrior</li> <li>• Eclipse</li> <li>• J-Edit</li> <li>• Visual C++</li> <li>• Visual Studio suite.</li> </ul>
<b><i>Coding standards</i></b> may include:	<ul style="list-style-type: none"> <li>• GNU</li> <li>• Java.</li> </ul>
<b><i>Language</i></b> may include:	<ul style="list-style-type: none"> <li>• C#.net</li> <li>• C++</li> <li>• Java</li> <li>• Small Talk</li> <li>• VB.NET.</li> </ul>
<b><i>Database</i></b> may be:	<ul style="list-style-type: none"> <li>• object</li> <li>• relational.</li> </ul>
<b><i>GUI components</i></b> may include:	<ul style="list-style-type: none"> <li>• buttons</li> <li>• check boxes</li> <li>• drop-down lists</li> <li>• option buttons</li> <li>• text input fields.</li> </ul>
<b><i>Documentation</i></b> may include:	<ul style="list-style-type: none"> <li>• architecture documentation</li> <li>• code comments</li> <li>• design documents</li> <li>• in-code documentation</li> <li>• internal module documentation</li> <li>• release documents</li> <li>• requirement documents</li> <li>• test documents</li> </ul>

	<ul style="list-style-type: none"><li>• user manuals.</li></ul>

## Unit Sector(s)

Programming and software development

## ICAPRG528A Perform IT data conversion

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to translate IT data from one format to another by means of a data conversion process.

### Application of the Unit

This unit applies to individuals in support and implementation roles who are required to convert data from one system to another.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Prepare system for conversion</p>	<p>1.1 Obtain data stores that are subject to conversion</p> <p>1.2 Protect and confirm backup solutions</p> <p>1.3 Trial conversion work in an isolated environment secure from production <i>system</i></p> <p>1.4 Map and document required data fields from the old system to the new or upgraded system</p> <p>1.5 Determine field validation <i>requirements</i> from conversion plans, including data field legal ranges</p> <p>1.6 Determine actions to be taken with fields or records that are rejected by the conversion plan</p> <p>1.7 Consult <i>stakeholders</i> on creation of conversion plan</p> <p>1.8 Design data conversion program modules from conversion <i>specifications</i></p> <p>1.9 Code and test data conversion program modules according to conversion specifications</p> <p>1.10 Confirm data conversion and test converted production data</p>
<p>2. Perform data conversion</p>	<p>2.1 Estimate and plan for conversion time</p> <p>2.2 Prepare production system for data conversion and take off-line</p> <p>2.3 Undertake action to protect production data</p> <p>2.4 Take action to ensure minimal disruption to <i>client</i> business requirements during the conversions process</p> <p>2.5 Document data rejected by conversion routines and the reason for rejection</p> <p>2.6 Execute conversion program modules</p> <p>2.7 Document results of the conversion process and report to <i>appropriate person</i></p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with stakeholders and clients
- literacy skills to write technical documents
- planning and organisational skills to ensure minimal disruption to client business requirements
- problem-solving skills to develop strategic initiatives when performing data conversion
- technical skills to:
  - back up data
  - code data conversion modules.

### Required knowledge

- current and emerging industry knowledge of:
  - hardware and software products, including their general features and capabilities
  - data conversion tools and data modelling methodologies
- overview knowledge of:
  - conversion from legacy systems
  - industry-accepted database management system (DBMS) modelling.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• define inherent data requirements of both old and upgraded or new systems</li> <li>• remodel data to achieve successful conversion</li> <li>• back up data prior to conversion</li> <li>• code conversion programs.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• analysis of the source data</li> <li>• business quality assurance rules associated with data</li> <li>• data mappings</li> <li>• logic to convert the data</li> <li>• plan of the conversion routines</li> <li>• software development environment</li> <li>• technical requirements</li> <li>• data conversion plan</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of data conversion tools and data modelling methodologies</li> <li>• evaluation of candidate's data conversion modules</li> <li>• review of candidate's documented conversion results.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider (ASP)</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating systems</li> <li>• servers.</li> </ul>
<b><i>Requirements</i></b> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• database</li> <li>• network</li> <li>• people in the organisation</li> <li>• platform</li> <li>• system.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>
<b><i>Specifications</i></b> may include:	<ul style="list-style-type: none"> <li>• current system functionality</li> <li>• technical requirements</li> <li>• user problem statement.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

## **Unit Sector(s)**

Programming and software development

# ICAPRG529A Apply testing techniques for software development

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop test strategies and implement tests to assure the reliability and quality of an application.

## Application of the Unit

This unit is relevant to those responsible for test plan preparation, execution and maintenance; reporting of tests; and defect management in an application.

The positions that undertake this role include quality assurance analysts, test analysts, testers, system testers, software testers, test leads and developers.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Plan and design test	1.1 Analyse and review <i>software development specifications</i> 1.2 Determine test context, scope, <i>standard</i> and <i>methodology</i> 1.3 Determine <i>test types</i> and <i>tools</i> 1.4 Determine test input data requirements 1.5 Design test plan and test cases using various <i>test design techniques</i>
2. Prepare test environment	2.1 Analyse and review <i>documents</i> to prepare test environment 2.2 Determine <i>test environment requirements</i> 2.3 Build and <i>set up test environment</i>
3. Implement and execute test	3.1 Build input data for testing 3.2 Create test suite or script from test cases 3.3 Execute test cases 3.4 Create test record to store test result
4. Manage defect and testing process	4.1 Evaluate and report test results 4.2 Track defect and verify fixes 4.3 Maintain and archive <i>testware</i>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to review and evaluate technical and business requirements
- communication skills to:
  - liaise with programmers on fault debugging matters
  - liaise with project managers or leaders on report and result matters
  - seek requirements and information from business and technical experts
- literacy skills to:
  - develop reports and documentation related to test result report
  - read and interpret software specifications developed by business and technical experts
- problem-solving skills to apply basic debugging techniques in the context of software or application development
- research skills to:
  - locate and interrogate complex and varied sources of information
  - source information from available sources
- technical skills to:
  - operate software applications and navigate the internet
  - develop a small scale application
  - execute an application.

### Required knowledge

- characteristics of programming language
- detailed knowledge of input and output requirements
- software development life cycle (SDLC) methodologies
- system layers, such as data network, hardware, operating system, database management systems, web servers, application servers and client deployment
- processes and techniques related to small-size application development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop test-plan document and test cases to verify the completeness, reliability and performance of an application according to requirement specifications</li> <li>• analyse and prepare test environment, and execute test cases by using automated test tools</li> <li>• document and manage test result by performing application debugging process and re-testing application.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• test environment that closely resembles production environment</li> <li>• business, functional, system and user requirements</li> <li>• system or application suitable for testing</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of test-plan document that follows a certain standard, such as AS/NZS15026:1999</li> <li>• evaluation of candidate's ability to: <ul style="list-style-type: none"> <li>• select and use features of automated testing tool to perform certain type of test (e.g. stress testing)</li> <li>• analyse and document test results</li> <li>• debug application.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Software development specifications</i></b> may include:	<ul style="list-style-type: none"> <li>• budget requirements</li> <li>• customer requirements</li> <li>• functional design</li> <li>• internal design specifications</li> <li>• schedule requirements</li> <li>• user stories.</li> </ul>
<b><i>Standard</i></b> may include:	<ul style="list-style-type: none"> <li>• ASNZS15026:1999</li> <li>• IEEE 829.</li> </ul>
<b><i>Methodology</i></b> may include:	<ul style="list-style-type: none"> <li>• agile</li> <li>• extreme</li> <li>• rapid application development (RAD)</li> <li>• spiral</li> <li>• traditional plan driven development (TPDD)</li> <li>• waterfall.</li> </ul>
<b><i>Test types</i></b> may include:	<ul style="list-style-type: none"> <li>• accessibility testing</li> <li>• load testing</li> <li>• performance testing</li> <li>• smoke testing</li> <li>• stress testing</li> <li>• usability testing</li> <li>• volume testing.</li> </ul>
<b><i>Tools</i></b> may include:	<ul style="list-style-type: none"> <li>• automated test</li> <li>• configuration management</li> <li>• defect management</li> <li>• dynamic analysis</li> <li>• modelling</li> <li>• monitoring</li> <li>• requirement management</li> <li>• review</li> <li>• static analysis</li> <li>• test-data preparation</li> <li>• test-design</li> <li>• test-execution</li> <li>• test-management.</li> </ul>

<i>Test design techniques</i> may include:	<ul style="list-style-type: none"> <li>• black-box</li> <li>• experience-based</li> <li>• specification-based</li> <li>• structure-based</li> <li>• white-box.</li> </ul>
<i>Documents</i> may include:	<ul style="list-style-type: none"> <li>• configuration guides</li> <li>• installation guides</li> <li>• reference documents</li> <li>• user manuals.</li> </ul>
<i>Test environment requirements</i> may include:	<ul style="list-style-type: none"> <li>• communications</li> <li>• configuration</li> <li>• hardware</li> <li>• software</li> <li>• versions.</li> </ul>
<i>Set up test environment</i> may include:	<ul style="list-style-type: none"> <li>• obtain and install software releases</li> <li>• set up logging and archiving processes</li> <li>• set up or obtain test input data</li> <li>• set up test tracking processes.</li> </ul>
<i>Testware</i> may include:	<ul style="list-style-type: none"> <li>• automation tools</li> <li>• defect repositories</li> <li>• script</li> <li>• test cases</li> <li>• test plan</li> <li>• test report</li> <li>• test result</li> <li>• testing framework.</li> </ul>

## Unit Sector(s)

Programming and software development

# ICAPRG601A Develop advanced mobile multi-touch applications

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design, develop, debug, test and deploy applications for hand-held devices such as mobile phones, pocket PCs, personal digital assistants (PDAs) and enterprise digital assistants (EDAs) using advanced features of these devices.

## Application of the Unit

This unit applies to mobile device application developers. They may be programmers, game developers, designers and testers who are working in the area of mobile applications development.

The context of the unit applies to development platform environments that provide tools to build and deploy applications into the target platform environment, such as Android, Symbian, Java ME, Compact Framework, iPhone, and a number of other mobile development platforms.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Work effectively on target platform	<p>1.1 Review requirements</p> <p>1.2 Establish <i>platform</i></p> <p>1.3 Install required <i>development tools</i> and environment</p> <p>1.4 Use available debugging tools and techniques</p> <p>1.5 Deploy completed applications on target device and for public download</p> <p>1.6 Test application using an emulator</p>
2. Develop an application for a multi-touch device	<p>2.1 Design and code application responding to events</p> <p>2.2 Design and code application responding to taps, touches and gestures</p> <p>2.3 Use a model view controller design approach</p> <p>2.4 Develop making effective use of auto-rotation and auto-resizing facilities</p>
3. Develop code using the features of the mobile device	<p>3.1 List the available features of the mobile device</p> <p>3.2 Write code requiring web connectivity and using web services</p> <p>3.3 Write code that communicates with another device using a <i>communication protocol</i></p> <p>3.4 Write code using application programming interface (API) related to at least one other advanced <i>device feature</i></p>
4. Use available data persistence facilities	<p>4.1 Write code to read and write to the devices file system</p> <p>4.2 Use synchronisation techniques to synchronise data between the device and external data sources</p> <p>4.3 Write code to make use of available database facilities on chosen device</p>
5. Develop applications that are secure and stable	<p>5.1 Determine and apply performance objectives</p> <p>5.2 Ensure memory management, using tools and techniques effectively</p> <p>5.3 Use tools and techniques to evaluate performance</p> <p>5.4 Eliminate zombies using appropriate tools and techniques</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse designs for small devices
  - evaluate appropriate mobile-development environment
- communication skills to provide advice and guidance to others
- literacy skills to read and interpret technical and non-technical information
- numeracy skills to make basic calculations for specifying the layout of the mobile-user interface design
- problem-solving skills to:
  - address common problems in building and deploying mobile applications
  - perform basic program-debugging skills
- research skills to find and evaluate relevant technologies in mobile applications development
- technical skills to:
  - create eXtensible markup language (XML) documents
  - design user interface
  - test and debug applications
  - use an integrated development environment (IDE).

### Required knowledge

- basic knowledge of:
  - hardware and networking
  - object-oriented programming
  - user interface design
  - web design
- detailed knowledge of:
  - XML programming and web services
  - techniques for developing software applications.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>design applications for small devices that allow multi-touch user input and have advanced mobile features</li> <li>build and test these applications</li> <li>deploy these applications on mobile phones, pocket personal computers, PDAs and EDAs.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>hand-held devices and simulators</li> <li>IDE</li> <li>internet and web services</li> <li>server system with sufficient privileges to deploy applications</li> <li>specific tools and licences, depending on particular platform</li> <li>appropriate learning and assessment support when required</li> <li>modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>verbal or written questioning to assess candidate's knowledge of mobile development environment</li> <li>evaluation of candidate's mobile application, including its distribution to target devices.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Platform</i></b> may include:	<ul style="list-style-type: none"> <li>• Android</li> <li>• BlackBerry</li> <li>• iPhone</li> <li>• Java ME</li> <li>• .NET Compact Framework</li> <li>• Symbian.</li> </ul>
<b><i>Development tools</i></b> may include:	<ul style="list-style-type: none"> <li>• cross-platform deployment</li> <li>• emulator availability</li> <li>• frameworks:             <ul style="list-style-type: none"> <li>• Flash</li> <li>• Java Platform, Micro Edition and Java Platform</li> <li>• Net compact platform</li> <li>• Qtopia for embedded Linux-based mobile devices</li> <li>• Sprout Core (open-source JavaScript framework)</li> <li>• Standard Edition</li> </ul> </li> <li>• IDE:             <ul style="list-style-type: none"> <li>• BlackBerry SDK</li> <li>• Eclipse</li> <li>• NetBeans</li> <li>• Visual Studio</li> <li>• XCode</li> </ul> </li> <li>• languages:             <ul style="list-style-type: none"> <li>• C#</li> <li>• C/C++</li> <li>• Java</li> <li>• JavaScript</li> <li>• Objective-C</li> <li>• PHP</li> <li>• WML</li> </ul> </li> <li>• server and client tools, libraries and tools:             <ul style="list-style-type: none"> <li>• Core Data</li> <li>• JavaScript</li> </ul> </li> </ul>

	<ul style="list-style-type: none"><li>• SQL Lite</li><li>• SQL Server Compact Edition.</li></ul>
<i>Communication protocol</i> may include:	<ul style="list-style-type: none"><li>• Bluetooth</li><li>• general packet radio service (GPRS)/3G</li><li>• radio frequency identification (RFID).</li></ul>
<i>Device feature</i> may include:	<ul style="list-style-type: none"><li>• accelerometer</li><li>• address book</li><li>• animation</li><li>• audio</li><li>• camera</li><li>• compass</li><li>• map</li><li>• GPS</li><li>• video.</li></ul>

## Unit Sector(s)

Programming and software development

## ICAPRG602A Manage the development of technical solutions from business specifications

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage the process of compiling client business specifications to produce business solutions for consideration.

### Application of the Unit

Project managers are responsible for the overall design and development process within any project and need to review, manage and approve the planned solutions.

Their job roles combine high-level management, business and technical skills necessary to manage complex technology projects within the information and communications technology (ICT) industry.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Obtain business requirements</p>	<p>1.1 Ensure that <i>business requirements</i> and <i>business specifications</i> have been obtained from the client or <i>appropriate person</i></p> <p>1.2 Manage the team's identification of the client's business model</p> <p>1.3 Ensure technical specifications for business <i>problem</i> have been determined</p> <p>1.4 Manage the confirmation of key <i>stakeholder requirements</i> with stakeholders</p> <p>1.5 Confirm the documentation of business objectives, technical requirements and problem</p>
<p>2. Evaluate the impact of the technical requirements</p>	<p>2.1 Review the business problems, opportunities and objectives</p> <p>2.2 Confirm that the <i>technical requirements</i> are complete</p> <p>2.3 Review <i>hardware, software</i> and <i>network</i> requirements</p> <p>2.4 Coordinate investigation into the processes to be changed by the business solution</p> <p>2.5 Review an evaluation document on the <i>impact</i> of the technical requirements on the business</p>
<p>3. Produce technical business solutions</p>	<p>3.1 Confirm the <i>technical solutions</i> produced in response to problems and business requirements</p> <p>3.2 Review the costs involved to implement</p> <p>3.3 Review the recommendation from a range of supplier products to determine which one best meets technical requirements</p> <p>3.4 Review a report on the technical solutions addressing the business specifications and recommendations against business requirements</p>
<p>4. Document and validate the agreed solutions</p>	<p>4.1 Ensure report is forwarded to appropriate person for feedback</p> <p>4.2 Manage the feedback and incorporate changes as required</p> <p>4.3 Coordinate redistribution of adjusted reports to appropriate person</p> <p>4.4 Obtain sign-off on final business solution</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports, design solutions, technical specifications and recommendations in required formats
- numeracy skills to:
  - interpret business requirements and specifications
  - evaluate possible technical design scenarios for optimum solution
- planning and organisational skills to plan, prioritise and monitor team members work
- problem-solving and contingency-management skills to adapt varied business procedures to requirements
- research skills to interrogate vendor databases and websites in order to implement different solutions that meet client business specifications
- technical skills to:
  - evaluate optimum solutions
  - produce technical solutions
  - review technical specifications.

### Required knowledge

- business processes
- client business domain, including client organisation structure and business functionality
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- customer and business liaison
- desktop applications and operating system (OS) as required
- procedures for linking processes
- project-management methodologies and processes
- security protocols, standards and data encryption
- technologies, such as:
  - access networks
  - core networks
  - ICT network topologies
  - mobile cellular networks
  - network protocols and OS
  - optical networks and principles
  - radio frequency (RF) networks and principles
  - radio frequency identification (RFID) hardware and software.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• adapt technologies to specified technical solutions</li> <li>• use site-design software and hardware</li> <li>• evaluate client specifications against accepted industry practices</li> <li>• produce technical solutions from business specifications</li> <li>• produce information that can be shared between businesses</li> <li>• apply design concepts to business solutions</li> <li>• produce technical reports</li> <li>• make recommendations and offer optimum design solutions.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• client functional requirements</li> <li>• business specifications</li> <li>• database and simulation software</li> <li>• organisational guidelines</li> <li>• network or computer layout</li> <li>• site-design software and hardware</li> <li>• information on a range of ICT business solutions</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of the candidate carrying out project work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and implementation plans prepared by the candidate for the project</li> <li>• review of a portfolio of the project work undertaken.</li> </ul> <p>Note: The preferred assessment method is through a workplace project or through a simulated medium to large enterprise workplace.</p>
<b>Guidance information</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

<b>for assessment</b>	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
-----------------------	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Business requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• business application</li> <li>• business plan</li> <li>• existing system</li> <li>• mission statement</li> <li>• nature of the business</li> <li>• network or people in the organisation.</li> </ul>
<b><i>Business specifications</i></b> may include:	<ul style="list-style-type: none"> <li>• budget allocation</li> <li>• budget costs estimate</li> <li>• future plan</li> <li>• growth forecast</li> <li>• technical requirements</li> <li>• timeline.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisation</li> <li>• finance company</li> <li>• health industry</li> <li>• ICT company</li> <li>• individuals</li> <li>• internal department</li> <li>• internal employee</li> <li>• manufacturing company</li> <li>• service industry.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• ICT network administrator</li> <li>• ICT network manager</li> <li>• ICT support manager</li> <li>• small or medium enterprise (SME) customer</li> <li>• small office home office (SOHO) customer</li> <li>• supervisor.</li> </ul>
<b><i>Problem</i></b> may refer to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business need or opportunity that needs to be addressed</li> <li>• network or people in the organisation</li> <li>• system.</li> </ul>

<p><b>Stakeholders</b> may include:</p>	<ul style="list-style-type: none"> <li>• development team</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>
<p><b>Requirements</b> may refer to:</p>	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• database</li> <li>• network</li> <li>• people in the organisation</li> <li>• platform</li> <li>• system.</li> </ul>
<p><b>Technical requirements</b> may refer to:</p>	<ul style="list-style-type: none"> <li>• bandwidth</li> <li>• hardware problems</li> <li>• input and output</li> <li>• interface</li> <li>• network: <ul style="list-style-type: none"> <li>• growth</li> <li>• security</li> <li>• traffic congestions</li> </ul> </li> <li>• new technologies</li> <li>• power usage</li> <li>• process flow</li> <li>• quality requirements</li> <li>• software problems</li> <li>• transmission dropouts</li> <li>• upgrades.</li> </ul>
<p><b>Hardware</b> may include:</p>	<ul style="list-style-type: none"> <li>• cabling networks</li> <li>• internet protocol TV (IPTV)</li> <li>• multimedia</li> <li>• network elements: <ul style="list-style-type: none"> <li>• gateways</li> <li>• local area network (LAN) switches</li> <li>• routers</li> <li>• servers</li> <li>• wireless networks</li> </ul> </li> <li>• optical networks</li> <li>• radio networks</li> <li>• equipment: <ul style="list-style-type: none"> <li>• RFID</li> <li>• switching</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• transmission</li> <li>• voice and data.</li> </ul>
<i>Software</i> may include:	<ul style="list-style-type: none"> <li>• commercial</li> <li>• customised software</li> <li>• in-house</li> <li>• packaged.</li> </ul>
<i>Network</i> may include:	<ul style="list-style-type: none"> <li>• broadband</li> <li>• data</li> <li>• ICT networks</li> <li>• internet</li> <li>• intranet</li> <li>• media</li> <li>• radio</li> <li>• RFID</li> <li>• security</li> <li>• switching</li> <li>• telecommunications</li> <li>• transmission.</li> </ul>
<i>Impact</i> may refer to:	<ul style="list-style-type: none"> <li>• fewer downtimes</li> <li>• improved efficiency</li> <li>• improved response times</li> <li>• increased return on investment (RoI)</li> <li>• lower operational costs</li> <li>• more user-friendly network.</li> </ul>
<i>Technical solutions</i> may include:	<ul style="list-style-type: none"> <li>• audit requirements</li> <li>• changes to: <ul style="list-style-type: none"> <li>• network infrastructure</li> <li>• security or privacy provisions</li> </ul> </li> <li>• ebusiness or e-commerce solution</li> <li>• hardware upgrades</li> <li>• implementing a new system</li> <li>• inventory management</li> <li>• new hardware</li> <li>• new software</li> <li>• OHS and quality requirements</li> <li>• software upgrades</li> <li>• user training.</li> </ul>

## **Unit Sector(s)**

Programming and software development

## ICAPRG603A Create cloud computing services

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design, build, test and deploy web services and cloud computing applications to specification.

### Application of the Unit

This unit applies to individuals required to create and install web services and cloud computing applications in their job as a computer programmer.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Design web service or cloud computing application	1.1 <b><i>Gather requirements</i></b> for the web service or cloud computing application 1.2 Determine the <b><i>development environment</i></b> and tools to create web service or cloud computing application 1.3 Define <b><i>architecture</i></b> and <b><i>framework</i></b> 1.4 Define <b><i>protocols</i></b>
2. Build web service	2.1 Itemise required functionality 2.2 Build web service in the determined environment to meet required functionality
3. Build cloud computing application	3.1 Determine required functionality 3.2 Build cloud computing application in the determined environment to meet the required functionality
4. Test web service or cloud computing application	4.1 Test web service or cloud computing application for overall functionality according to requirements 4.2 Iterate design or build until test results meet requirements
5. Deploy web service or cloud computing application	5.1 Deploy web service or cloud computing application to the specified environment 5.2 Publish web service or cloud computing application to the specified environment

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - examine and define system requirements
  - review requirements and determine appropriate solution
- communication skills to:
  - interact with developer to determine system requirements
  - interact with end user or client to determine system requirement
- literacy skills to read technical specifications
- planning and organisational skills to perform tasks according to the project plan
- problem-solving skills to:
  - address common problems in operating a web service or cloud computing application
  - perform basic debugging skill, such as defining simple problem, locating source of the problem, and providing solution to problems
- research skills to find and evaluate technologies to meet system requirements
- technical skills to:
  - access databases and manipulate data
  - create applications using basic programming techniques
  - create web pages using hypertext markup language (HTML) and cascading style sheet (CSS)
  - perform basic operations within a web environment
  - use an integrated development environment (IDE).

### Required knowledge

- development tools to produce services deployable from the internet (cloud computing)
- internet infrastructure
- object-oriented programming
- overview knowledge of:
  - database access and manipulation
  - HTML
  - eXtensible markup language (XML).

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• design, build, test and deploy a web service to specification that can be accessed and used from a separate web application</li> <li>• design, build, test and deploy a cloud computing application to specification that can be accessed from a variety of portals</li> <li>• document the completed development.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• specific requirements, including client and functionality requirements</li> <li>• IDE for the determined language</li> <li>• database server with tools to access data source and develop queries</li> <li>• web server for determined environment</li> <li>• internet and web browser</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of candidate's:             <ul style="list-style-type: none"> <li>• web service code, test and deployment</li> <li>• cloud computing application code, test and deployment</li> </ul> </li> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• web services</li> <li>• coding standards</li> <li>• cloud computing</li> </ul> </li> <li>• review of candidate's completed documentation.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the</p>

	<p>work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Gather requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• interviews</li> <li>• observation</li> <li>• questionnaires</li> <li>• requirements already documented</li> <li>• reviewing existing documentation.</li> </ul>
<b><i>Development environment</i></b> may include:	<ul style="list-style-type: none"> <li>• AJAX</li> <li>• Eclipse incorporating Java</li> <li>• HTML, XHTML and CSS</li> <li>• JavaScript</li> <li>• JSP</li> <li>• Microsoft Visual Studio incorporating ASP, C#, Visual Basic</li> <li>• PHP</li> <li>• Python.</li> </ul>
<b><i>Architecture</i></b> may include:	<ul style="list-style-type: none"> <li>• capacity considerations</li> <li>• network topology</li> <li>• operating system</li> <li>• public or private network</li> <li>• scalability</li> <li>• security model</li> <li>• web server, such as IIS or Apache.</li> </ul>
<b><i>Framework</i></b> may include:	<ul style="list-style-type: none"> <li>• .NET</li> <li>• Apache Axis</li> <li>• Apache CXF</li> <li>• Halycon</li> <li>• Hessain</li> <li>• Web Services Interoperability Technology</li> <li>• WSO2 WSF/PHP.</li> </ul>
<b><i>Protocols</i></b> may include:	<ul style="list-style-type: none"> <li>• representational state transfer (REST)</li> <li>• simple object access protocol (SOAP)</li> <li>• universal description, discovery and integration (UDDI)</li> <li>• web processing service (WPS)</li> <li>• web services description language (WSDL).</li> </ul>

## **Unit Sector(s)**

Programming and software development

## ICASAD401A Develop and present feasibility reports

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to research and present a range of feasible scenarios to the client.

### Application of the Unit

This unit applies to individuals required to investigate solutions to an information and communications technology (ICT) project, such as in a systems analyst role.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Confirm client requirements	1.1 Analyse <i>client requirements</i> to determine <i>project</i> scope, and the problem or opportunity faced by the business 1.2 Document client requirements, project scope, <i>related problems</i> and <i>sources of information</i> 1.3 Confirm requirements and scope with the <i>client</i>
2. Develop high-level alternative scenarios	2.1 Compare future client requirements with current requirements 2.2 Develop and document feasible solutions for client requirements 2.3 Explore and document the <i>feasibility</i> of each <i>solution</i> 2.4 Examine alternatives against project <i>constraints</i>
3. Prepare and publish feasibility report	3.1 Develop a feasibility report that describes client requirements and project scope, analyses alternative scenarios, and provides recommendations 3.2 Submit feasibility report to <i>appropriate person</i> for project approval

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to identify, analyse and evaluate broad features of a particular business domain
- communication skills to:
  - liaise and negotiate with clients and colleagues
  - present information
- literacy skills to:
  - analyse and evaluate information and organisational requirements
  - apply financial modelling skills for identifying, analysing and evaluating a range of budget and other solutions
  - write business reports
- planning and organisational skills to:
  - determine project scope, time, cost and quality
  - scope communications and risk management
- research skills to locate and evaluate solutions to business requirement
- technical skills to:
  - identify, analyse and evaluate best practice in system development
  - interpret technical documentation.

### Required knowledge

- client business domain
- detailed knowledge of the system's current functionality
- role of stakeholders and the degree of stakeholder involvement
- two or more current industry systems development methodologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify services required</li> <li>• scope a project</li> <li>• develop solutions to client’s requirements that fit within the constraints</li> <li>• prepare a feasibility report.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• client requirements</li> <li>• report-writing template</li> <li>• client-expectations brief</li> <li>• information on a range of information technology (IT) business solutions</li> <li>• future organisational business processes</li> <li>• budgets for scenarios</li> <li>• outcomes of the business-analysis process.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of a candidate analysing client’s requirements and presenting solutions</li> <li>• verbal and written questioning of candidate’s knowledge of the client requirements and the business context</li> <li>• review of a feasibility report prepared by the candidate.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• applications</li> <li>• business opportunities</li> <li>• network</li> <li>• people in the organisation</li> <li>• problems with or opportunities for a business</li> <li>• system.</li> </ul>
<b><i>Project</i></b> may include:	<ul style="list-style-type: none"> <li>• business improvement process</li> <li>• systems-only change</li> <li>• ebusiness solution involving the total organisation or part of the organisation</li> <li>• projects involving a business undertaking a total organisational change</li> <li>• scope:             <ul style="list-style-type: none"> <li>• budget</li> <li>• feasibility</li> <li>• features</li> <li>• hardware</li> <li>• legal constraints</li> <li>• policy</li> <li>• resource</li> <li>• software</li> <li>• time.</li> </ul> </li> </ul>
<b><i>Related problems</i></b> may relate to:	<ul style="list-style-type: none"> <li>• routine or non-routine problems that may affect the immediate work environment or project outcome, particularly related to meeting client requirements.</li> </ul>
<b><i>Sources of information</i></b> may include:	<ul style="list-style-type: none"> <li>• business strategy change management</li> <li>• current systems design project-management.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• clubs</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>

<p><i>Feasibility</i> may include:</p>	<ul style="list-style-type: none"> <li>• economic and schedule feasibility as well as the principal inputs and outputs</li> <li>• expected improvements or impacts</li> <li>• operational feasibility</li> <li>• physical requirements of each solution</li> <li>• revenue and cost-benefits</li> <li>• risks</li> <li>• technical feasibility.</li> </ul>
<p><i>Solution</i> may include:</p>	<ul style="list-style-type: none"> <li>• hardware upgrades</li> <li>• implementing a new system</li> <li>• new hardware</li> <li>• new software</li> <li>• software upgrades</li> <li>• user training.</li> </ul>
<p><i>Constraints</i> may include:</p>	<ul style="list-style-type: none"> <li>• budget</li> <li>• hardware</li> <li>• legal constraints</li> <li>• policy</li> <li>• resource</li> <li>• software</li> <li>• time.</li> </ul>
<p><i>Appropriate person</i> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

## Unit Sector(s)

Systems analysis and design

## ICASAD501A Model data objects

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to understand business operations, identify entities and data, diagrammatically represent their relationships and prepare a data model.

### Application of the Unit

This unit applies to systems designers who are required to prepare data models.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify entities and relationships	1.1 Analyse business data to understand operations 1.2 Identify boundaries of the <i>system</i> 1.3 Identify <i>entities</i> , attributes, <i>data types</i> and <i>relationships</i> of data 1.4 Review business rules to determine impact 1.5 Document relationships in an entity relationship diagram
2. Develop normalisation	2.1 Identify suitable business data 2.2 Undertake normalisation of business data and document results 2.3 Compare normalisation results with entity relationship diagram 2.4 Reconcile differences between data
3. Validate model	3.1 Validate data model with client 3.2 Resolve issues or recommendations 3.3 Document completed data model 3.4 Submit to client for final approval

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse business data
- communication skills to liaise with clients
- problem-solving skills to solve problems that arise with the entity relationships
- technical skills to:
  - develop entity-relationship models in tables
  - relate identifier selection to business domain
  - relate user specifications to data model
  - transfer customer requirements into data model.

### Required knowledge

- detailed knowledge of:
  - database identifiers and their impact on database usability
  - normalisation rules and processes
  - type hierarchies, including sub-types, super-types, root-types related to development of structured data types
  - validation procedures and processes
- function and features of:
  - an approach to data modelling, such as the entity-relationship model
  - keys, e.g. unique keys, composite keys, primary keys and primary index
  - time stamps related to the use of keys
  - user-defined types, structured types, reference types and user-defined functions
- particular business or domain.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• model valid data objects</li> <li>• normalise the model</li> <li>• validate the model.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• client business requirements</li> <li>• database software</li> <li>• computer-aided software engineering tools or other suitable software.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observation of candidate's use of computer-aided software engineering (CASE) tool or other appropriate software</li> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• data modelling techniques</li> <li>• normalisation</li> <li>• entity relationship diagrams</li> </ul> </li> <li>• review of completed data model and associated documentation prepared by candidate.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating systems</li> <li>• servers.</li> </ul>
<b><i>Entities</i></b> may include:	<ul style="list-style-type: none"> <li>• concept</li> <li>• object</li> <li>• person.</li> </ul>
<b><i>Data types</i></b> may include:	<ul style="list-style-type: none"> <li>• character large object (CLOB), double-byte character large object (DBCLOB)</li> <li>• character string</li> <li>• date-time and binary string</li> <li>• double-byte (or graphic) character string</li> <li>• large object (LOB), binary large object (BLOB)</li> <li>• numeric</li> <li>• structured types and reference types</li> <li>• user-defined type (UDT).</li> </ul>
<b><i>Relationships</i></b> may include:	<ul style="list-style-type: none"> <li>• many-to-many</li> <li>• many-to-one</li> <li>• one-to-many</li> <li>• one-to-one.</li> </ul>

## Unit Sector(s)

Systems analysis and design

## ICASAD502A Model data processes

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to gather process data and business information in order to model data processes within an organisation.

### Application of the Unit

This unit applies to systems designers who are required to design new systems by modelling data processes.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Develop scope of model	1.1 Identify relevant data processes and sources of information 1.2 Identify <b><i>information-gathering method</i></b> and <b><i>modelling methodology</i></b> to be used 1.3 Document modelling information gathered 1.4 Validate modelling information with <b><i>client</i></b>
2. Gather process data	2.1 Identify business functions and collect process data using chosen method 2.2 Identify external events, procedures and results 2.3 Identify processes and required decomposition
3. Develop and validate data model	3.1 Model process data according to modelling methodology 3.2 Validate process model with client to determine inaccuracies 3.3 Incorporate identified changes, as required 3.4 Review business rules to determine impact on process models and change as required 3.5 Validate completed process models with client

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to determine business requirements
- communication skills to liaise with users
- literacy skills to document the process model
- research skills to research current industry practice
- technical skills to implement process modelling using relevant methodologies, including object-oriented cooperative process modelling and OIKOS.

### Required knowledge

- detailed knowledge of modelling rules and conventions with reference to naming processes and events
- features and functions of process mappers, e.g. IEF, Isee, ProcessWise Workbench, ARIS, and PROTOS
- features of data analysis, particularly in determining process flows
- processes and techniques using logical design concepts related to designing process models.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify data processes that represent the client's business reality</li> <li>• model these processes according to industry and organisation standard</li> <li>• document the model.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• client business requirements</li> <li>• database software</li> <li>• computer-aided software engineering (CASE) tools or other modelling software.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• process modelling</li> <li>• business rules</li> </ul> </li> <li>• review of completed data model and associated documentation prepared by candidate.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Information gathering method</i></b> may include:	<ul style="list-style-type: none"> <li>• interviews</li> <li>• observation</li> <li>• questionnaires</li> <li>• surveys.</li> </ul>
<b><i>Modelling</i></b> may include:	<ul style="list-style-type: none"> <li>• activity definition report (process definition)</li> <li>• activity dependency diagram</li> <li>• activity hierarchy diagrams (process diagrams)</li> <li>• data flow diagrams</li> <li>• use case diagrams.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employees</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments.</li> </ul>

Systems analysis and design

# ICASAD503A Minimise risk of new technologies to business solutions

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify and plan to minimise the financial and technological risks facing business solutions using new technologies.

## Application of the Unit

This unit applies to individuals in senior information and communications technology (ICT) roles in a variety of areas who are required to assess potential implications of new technologies, both monetary and technical.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Establish the risk context	<p>1.1 Review organisational and technical environment and proposed business solution</p> <p>1.2 Identify scale, importance and complexity of project risks</p> <p>1.3 Establish acceptable and unacceptable levels of risk and consequences for the <b><i>solution</i></b></p> <p>1.4 Identify the impact of risks against the business environment</p> <p>1.5 Determine and document proposed actions to insure against identified generic risks</p>
2. Conduct risk analysis	<p>2.1 Conduct a risk analysis to determine the likelihood of risks identified</p> <p>2.2 Rank risk factors according to the impact and likelihood of occurrence</p> <p>2.3 Develop <b><i>contingency plans</i></b> to mitigate identified risks</p> <p>2.4 Document risk analysis and contingencies in a <b><i>risk-management plan</i></b></p> <p>2.5 Implement risk management plans and undertake awareness training to inform <b><i>stakeholders</i></b></p>
3. Monitor risks	<p>3.1 Establish feedback channels to warn of unforeseen and identified risks</p> <p>3.2 Conduct regular reviews to identify new risks and update established risks</p> <p>3.3 Document changes to risk management plans as appropriate</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to review organisational and technical business solutions
- communication skills to liaise with stakeholders and provide training
- literacy skills to:
  - write and dissemination policy
  - write technical documents
- numeracy skills to assess financial risk
- planning and organisational skills to:
- develop mitigation strategies
  - manage a project
  - manage risk and implement contingency plans
- technical skills to:
  - maintain and administer a site
  - transfer files
  - use site design software and hardware.

### Required knowledge

- business process design
- business supply chain
- copyright and intellectual property relating to new technologies
- how business sites fit into corporate strategy
- user analysis and the CRM.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop procedures that identify where risk occurs</li> <li>• identify measures to be taken to treat the risk.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• analysis software</li> <li>• business website</li> <li>• customer relationship model (CRM)</li> <li>• requirements documentation</li> <li>• site server</li> <li>• site server software</li> <li>• updated or new technology</li> <li>• user analysis</li> <li>• web servers</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate’s knowledge of:             <ul style="list-style-type: none"> <li>• risk management</li> <li>• financial calculations of risk</li> </ul> </li> <li>• review of candidate’s documented risk management plan</li> <li>• evaluation of candidate’s risk review procedures.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Solution</i></b> may include:	<ul style="list-style-type: none"> <li>• implementing a new system</li> <li>• new hardware and hardware upgrades</li> <li>• new software and software upgrades</li> <li>• user training.</li> </ul>
<b><i>Contingency plans</i></b> may include:	<ul style="list-style-type: none"> <li>• identifying weaknesses and providing for the implementation of a disaster prevention program</li> <li>• minimising disruption to business operations</li> <li>• providing a coordinated approach to the disaster recovery process.</li> </ul>
<b><i>Risk-management plan</i></b> may include:	<ul style="list-style-type: none"> <li>• insuring against risk may include transferring risk to external technicians or ensuring that indemnity insurance is valid and appropriate to the situation</li> <li>• potential risk events, preferred and alternative risk management strategies and actions, formal arrangements, responsibility assignment, contingency plans and assigned risk responsibilities.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>

# ICASAD504A Implement quality assurance processes for business solutions

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to define and implement quality assurance processes and procedures to ensure that business solutions achieve quality performance expectations.

## Application of the Unit

This unit applies to senior information and communications technology (ICT) staff in a range of areas who are required to ensure quality in ICT systems.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Plan business quality assurance process</p>	<p>1.1 Determine business quality performance expectations and benchmark <i>standards</i></p> <p>1.2 Develop business standards and guidelines for achieving each benchmark</p> <p>1.3 Allocate strategic quality responsibilities for meeting business standards and guidelines according to business procedures</p> <p>1.4 Communicate quality policy and procedures to appropriate <i>stakeholders</i></p> <p>1.5 Document expectations, standards and benchmarks in a quality plan based on business <i>documentation standards</i></p> <p>1.6 Identify appropriate quality management systems guides, including <i>quality management plan</i> for complex activities</p>
<p>2. Implement quality policies and plans</p>	<p>2.1 Write quality policy for business directive</p> <p>2.2 Create quality management plan for business process</p> <p>2.3 Distribute quality management plan to key people for feedback</p> <p>2.4 Analyse feedback to determine if corrective action needs to be taken</p> <p>2.5 Make changes to quality management plan, if required, to incorporate corrective action</p> <p>2.6 Allocate key quality tasks and functions to <i>appropriate person</i> as per the quality management plan</p> <p>2.7 Establish and document a quality reporting and monitoring program</p> <p>2.8 Check and document skills of staff to ensure that they are able to meet the <i>quality standards</i> required</p>
<p>3. Control quality assurance processes</p>	<p>3.1 Implement quality performance guidelines, procedures and processes as per the quality management plan</p> <p>3.2 Obtain stakeholder feedback, including client satisfaction to monitor implementation of quality processes</p> <p>3.3 Monitor quality process performance as per the quality management plan</p> <p>3.4 Report on monitoring of quality performance to key decision makers</p> <p>3.5 Identify and record breakdowns in the <i>system</i> and create corrective action requests</p> <p>3.6 Take immediate corrective action, where necessary</p>

<p>4. Improve quality</p>	<p>4.1 Collect, analyse and measure quality performance results against benchmarks to determine quality standards</p> <p>4.2 Determine the frequency of quality breakdowns through corrective action requests in order to identify whether defects are isolated incidents or require a wider analysis and corrective action</p> <p>4.3 Determine corrective actions to be taken and assign responsibility for taking the action where appropriate</p> <p>4.4 Identify who will be responsible for quality improvement</p> <p>4.5 Implement corrective action solutions and measure performance</p> <p>4.6 Review and adjust benchmark standards periodically in order to improve quality performance</p> <p>4.7 Document quality performance results and disseminate the information to stakeholders as appropriate</p> <p>4.8 Review business procedures at predetermined schedules as part of a management-review process and quality-reporting function</p>
---------------------------	--

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse current development environment with regard to implementing quality plan
  - analyse quality performance results
- communication skills to liaise with a variety of key stakeholders and customers
- literacy skills to:
  - compile a quality plan
  - interpret quality reports
- planning and organisational skills to schedule the implementation
- problem-solving skills to solve quality breakdown issues
- technical skills to:
  - audit website security
  - test evaluation data
  - test implementation data
  - test technical design development.

### Required knowledge

- copyright and intellectual property relating to IT systems development
- features of business models
- International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards
- quality concepts applied to IT
- quality improvement processes
- techniques of technical performance measurement
- website architecture, including operating system
- website privacy, accessibility and equity legislation.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• plan and implement appropriate processes and procedures to ensure quality expectations are met</li> <li>• produce quality standards that are quantitative and applied universally</li> <li>• document quality assurance standards.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• related quality standards</li> <li>• data related to the business model</li> <li>• quality guidelines</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of quality assurance and appropriate processes</li> <li>• review of candidate's documented implementation plan.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Standards</i></b> may include:	<ul style="list-style-type: none"> <li>• ISO, IEC and AS standards</li> <li>• organisational standards</li> <li>• project standards.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• community groups</li> <li>• corporate body</li> <li>• end user</li> <li>• government body</li> <li>• internal or external client.</li> </ul>
<b><i>Documentation standards</i></b> may include:	<ul style="list-style-type: none"> <li>• ISO, IEC and AS standards</li> <li>• organisational standards</li> <li>• policy relating to:                             <ul style="list-style-type: none"> <li>• distribution</li> <li>• revision</li> <li>• sign-off and storage</li> </ul> </li> <li>• project standards</li> <li>• tools for documenting:                             <ul style="list-style-type: none"> <li>• word-processing packages</li> <li>• desktop-publishing packages.</li> </ul> </li> </ul>
<b><i>Quality management plan</i></b> may include:	<ul style="list-style-type: none"> <li>• audit</li> <li>• authorisations and responsibilities for quality control</li> <li>• communications and responsibilities</li> <li>• continuous improvement</li> <li>• critical success factors</li> <li>• measurement criteria and inspection</li> <li>• processes</li> <li>• quality assurance</li> <li>• report</li> <li>• review procedures.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b><i>Quality standards</i></b> may be specific to:	<ul style="list-style-type: none"> <li>• internal or customer-supplied standards</li> <li>• international standards</li> </ul>

	<ul style="list-style-type: none"> <li>• national standards</li> <li>• organisational standards.</li> </ul>
<i>Client</i> may include:	<ul style="list-style-type: none"> <li>• employees</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments.</li> </ul>
<i>System</i> may include:	<ul style="list-style-type: none"> <li>• applications</li> <li>• application service provider (ASP)</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating systems</li> <li>• servers.</li> </ul>

## Unit Sector(s)

Systems analysis and design

# ICASAD505A Develop technical requirements for business solutions

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop technical and related requirements that will enable business solutions to be implemented in an organisation.

## Application of the Unit

This unit applies to system analysts in a range of information and communications technology (ICT) areas who are required to produce technical specifications.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Research business requirements	<p>1.1 Define <i>hardware</i> and <i>software</i> requirements of the business solution</p> <p>1.2 Determine model of business</p> <p>1.3 Determine <i>technical specifications</i> for business</p> <p>1.4 Establish <i>interface requirements</i> for end users and external parties</p> <p>1.5 Document business solution <i>requirements</i> for approval from <i>stakeholders</i></p> <p>1.6 Determine IT security requirements</p>
2. Analyse the impact of technical solutions	<p>2.1 Identify hardware, software and <i>network</i> requirements</p> <p>2.2 Identify software solutions to build business platform</p> <p>2.3 Identify processes to be changed by the business solution</p> <p>2.4 Determine the effect changes will have on the value or supply chain</p> <p>2.5 Research a range of <i>security protocols</i> suitable for business solutions</p> <p>2.6 Document impact of changes and submit to relevant stakeholders</p>
3. Develop and test business solutions	<p>3.1 Implement hardware and software solutions for testing purposes</p> <p>3.2 Identify training needs to update personnel skills</p> <p>3.3 Plan timelines and allocation of resources for business solution</p> <p>3.4 Develop performance <i>standards</i> and benchmark results</p> <p>3.5 Determine costs involved to implement business solution</p> <p>3.6 Document the business solution</p>
4. Secure sign-off of validated solution	<p>4.1 Test, validate and document results of the business solution</p> <p>4.2 Provide results to appropriate person for verification</p> <p>4.3 Obtain sign-off on business solution</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse business requirements
- communication skills to communicate with clients, stakeholders and technical staff
- literacy skills to:
  - produce technical requirements document
  - understand business requirements
- planning and organisational skills to plan timelines and resource allocation
- research skills to research appropriate hardware and software
- technical skills to:
  - implement hardware and software
  - produce technical architecture of business solutions.

### Required knowledge

- business-process design
- copyright and intellectual property relating to IT systems development
- customer and business liaison
- implications of technology connectivity
- potential business solutions
- prevailing corporate strategies that may influence business solutions.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the internal and external technical environments required to provide a business solution</li> <li>• develop a corresponding list of technical requirements</li> <li>• analyse the impact of the technical solution</li> <li>• ensure that the nominated hardware and software are functional.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• business model</li> <li>• business requirements documentation</li> <li>• customer relationship model</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• written or verbal questioning to identify candidate's knowledge of:             <ul style="list-style-type: none"> <li>• process of producing technical requirements</li> <li>• business processes</li> </ul> </li> <li>• review of candidate's documentation, specifically:             <ul style="list-style-type: none"> <li>• hardware, software and network requirements</li> <li>• software solutions to build business platform</li> <li>• processes to be changed by the business solution</li> <li>• effect that changes will have on the value or supply chain</li> <li>• security protocols suitable for business solutions</li> <li>• training requirements</li> <li>• timelines</li> <li>• required resources.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Hardware</b> may include:	<ul style="list-style-type: none"> <li>• variety of hardware, such as:                             <ul style="list-style-type: none"> <li>• systems units</li> <li>• monitors</li> <li>• keyboards</li> <li>• mice</li> <li>• personal digital assistants (PDA)</li> <li>• printers</li> <li>• smart phones</li> <li>• laptops</li> </ul> </li> <li>• identifying key hardware characteristics of internally used hardware and external hardware that must be interfaced with.</li> </ul>
<b>Software</b> may include:	<ul style="list-style-type: none"> <li>• commercial</li> <li>• customised software</li> <li>• in-house</li> <li>• packaged.</li> </ul>
<b>Technical specifications</b> may include:	<ul style="list-style-type: none"> <li>• brochures</li> <li>• help references</li> <li>• online help</li> <li>• project specifications</li> <li>• reports</li> <li>• technical manuals</li> <li>• training materials and self-paced tutorials</li> <li>• user guides.</li> </ul>
<b>Interface requirements</b> may include:	<ul style="list-style-type: none"> <li>• command line</li> <li>• graphical user interface (GUI):                             <ul style="list-style-type: none"> <li>• application-based</li> <li>• web-based</li> </ul> </li> <li>• variety of communication options.</li> </ul>
<b>Requirements</b> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>

<p><i>Stakeholders</i> may include:</p>	<ul style="list-style-type: none"> <li>• community groups</li> <li>• corporate body</li> <li>• end users</li> <li>• government body</li> <li>• internal or external clients.</li> </ul>
<p><i>Network</i> may include:</p>	<ul style="list-style-type: none"> <li>• data</li> <li>• large and small local area networks (LANs)</li> <li>• private lines</li> <li>• the internet</li> <li>• use of the public switched telephone network (PSTN) for dial-up modems only</li> <li>• voice</li> <li>• virtual private network (VPN)</li> <li>• wide area networks (WANs).</li> </ul>
<p><i>Security protocols</i> may include:</p>	<ul style="list-style-type: none"> <li>• data over cable-service interface specification</li> <li>• domain name system security extensions</li> <li>• IEEE 802.11 Protocol standard for secure wireless local area network products</li> <li>• IP security protocol</li> <li>• point-to-point network tunnelling protocol</li> <li>• secure electronic transactions</li> <li>• secure multi-purpose internet mail extensions</li> <li>• secure shell</li> <li>• secure socket layer (SSL) and transport layer security.</li> </ul>
<p><i>Standards</i> may include:</p>	<ul style="list-style-type: none"> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• organisational standards</li> <li>• project standards.</li> </ul>

## Unit Sector(s)

Systems analysis and design

## ICASAD506A Produce a feasibility report

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to recommend the preferred scenario from a range of feasible options offered to the client.

### Application of the Unit

This unit applies to individuals performing a senior systems analyst role who are required to investigate solutions to an information and communications technology (ICT) project.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Confirm client requirements	1.1 Confirm <i>client requirements</i> to determine <i>project</i> scope, and the problem context or opportunity faced by the business 1.2 Review documented client requirements, project scope, <i>related problems</i> and <i>sources of information</i> 1.3 Confirm requirements and scope with the <i>client</i>
2. Examine and review alternatives	2.1 Ensure that future client requirements are addressed 2.2 Research and document feasible solutions for client requirements 2.3 Ensure that the <i>feasibility</i> of each <i>solution</i> has been assessed, including <i>constraints</i>
3. Prepare and publish feasibility report	3.1 Ensure that the completed feasibility report covers client requirements, project scope and analysis of alternative scenarios 3.2 Confirm the recommendation of the preferred scenario 3.3 Present feasibility report to <i>appropriate person</i> for project approval

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse the results of feasibility tests applied to options
  - identify, analyse and evaluate details of a particular business domain
- communication skills to:
  - liaise and negotiate with clients and colleagues
  - present information
- literacy skills to:
  - analyse and evaluate information and organisational requirements
  - review documents prepared by others
  - write business reports
- numeracy skills to:
  - apply financial feasibility analysis to options
  - evaluate the results
- planning and organisational skills to:
  - determine project scope, time, cost and quality
  - plan communications and risk management
- research skills to locate and evaluate solutions to business requirement
- technical skills to:
  - identify, analyse and evaluate best practice in system development
  - interpret technical documentation.

### Required knowledge

- client business domain
- role of stakeholders and the degree of stakeholder involvement
- system's current functionality
- two or more current industry systems development methodologies.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• manage and review work done by others in the:             <ul style="list-style-type: none"> <li>• identification of required services</li> <li>• scope of a project</li> <li>• solutions to client's requirements that fit within the constraints</li> </ul> </li> <li>• review a prepared feasibility report.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• contributions to a feasibility report</li> <li>• client requirements</li> <li>• report-writing template</li> <li>• client expectations brief</li> <li>• information on a range of IT business solutions</li> <li>• future organisational business processes</li> <li>• budgets for scenarios</li> <li>• outcomes of the business-analysis process</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of a candidate analysing client's requirements with their team</li> <li>• verbal and written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• client requirements</li> <li>• business context</li> <li>• factors required to present solutions</li> <li>• feasibility</li> <li>• financial modelling</li> </ul> </li> <li>• review of an approved feasibility report with contributions from the candidate's team.</li> </ul>
<b>Guidance information</b>	Holistic assessment with other units relevant to the industry

<p><b>for assessment</b></p>	<p>sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
------------------------------	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client requirements</i></b> may refer to:	<ul style="list-style-type: none"> <li>• applications</li> <li>• business opportunities</li> <li>• network</li> <li>• people in the organisation</li> <li>• problems with or opportunities for a business</li> <li>• system.</li> </ul>
<b><i>Project</i></b> may include:	<ul style="list-style-type: none"> <li>• business improvement process</li> <li>• ebusiness solution involving the total organisation or part of the organisation</li> <li>• projects involving a business undertaking a total organisational change</li> <li>• scope:</li> <li>• budget</li> <li>• feasibility</li> <li>• features</li> <li>• hardware</li> <li>• legal constraints</li> <li>• policy</li> <li>• resource</li> <li>• software</li> <li>• time</li> <li>• systems-only change.</li> </ul>
<b><i>Related problems</i></b> may relate to:	<ul style="list-style-type: none"> <li>• routine or non-routine problems that may affect the immediate work environment or project outcome, particularly relating to meeting client requirements.</li> </ul>
<b><i>Sources of information</i></b> may include:	<ul style="list-style-type: none"> <li>• business-strategic plans</li> <li>• change-management plans</li> <li>• current systems-design plans</li> <li>• project-management plans.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisation</li> <li>• individual</li> <li>• internal department</li> <li>• internal employee.</li> </ul>

<p><i>Feasibility</i> may include:</p>	<ul style="list-style-type: none"> <li>• economic and schedule feasibility as well as the principal inputs and outputs</li> <li>• expected improvements or impacts</li> <li>• operational feasibility</li> <li>• physical requirements of each solution</li> <li>• revenue and cost-benefits</li> <li>• risks</li> <li>• technical feasibility.</li> </ul>
<p><i>Solution</i> may include:</p>	<ul style="list-style-type: none"> <li>• hardware upgrades</li> <li>• implementing a new system</li> <li>• new hardware</li> <li>• new software</li> <li>• software upgrades</li> <li>• user training.</li> </ul>
<p><i>Constraints</i> may include:</p>	<ul style="list-style-type: none"> <li>• budget</li> <li>• hardware</li> <li>• legal constraints</li> <li>• policy</li> <li>• resource</li> <li>• software</li> <li>• time.</li> </ul>
<p><i>Appropriate person</i> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

## Unit Sector(s)

Systems analysis and design

# ICASAD601A Perform IT-focused enterprise analysis

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to provide an enterprise analysis and determine the possible IT solutions available for a given initiative or for long-term planning.

Enterprise analysis is often the starting point for initiating a new project and is continued as changes occur and more information becomes available.

## Application of the Unit

This unit applies to senior business analysts in medium to large organisations who determine an IT business need, problem, or opportunity, to define the nature of a solution that meets that need, and to justify the investment necessary to deliver that solution.

The work roles combine high-level management, business and technical skills necessary to manage complex analysis efforts within the information and communications technology (ICT) industry, often as part of business critical IT projects.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Define business need	<p>1.1 Analyse business goals and objectives and link to measures to allow objective assessment of achievement</p> <p>1.2 <i>Investigate issues</i> to determine the business problem or opportunity</p> <p>1.3 Identify possible IT solutions to the business problem</p> <p>1.4 Determine <i>desired outcomes</i> to enable evaluation of proposed solutions</p>
2. Assess capability gaps	<p>2.1 Determine current <i>capabilities</i> of the enterprise and relate to the desired objectives</p> <p>2.2 Identify new capabilities required to achieve the desired future state and assess gaps</p> <p>2.3 Test assumptions to facilitate appropriate decision making</p>
3. Determine solution approach	<p>3.1 Generate potential IT options to meet the business objectives</p> <p>3.2 Generate valid assumptions and recognise constraints that may affect the choice of solutions</p> <p>3.3 Assess and rank <i>solution approaches</i> to facilitate selection</p>
4. Define solution scope	<p>4.1 Define solution scope in terms of the major features or functions to be included</p> <p>4.2 Explain the implementation approach in terms of how the chosen solution will deliver the solution scope</p> <p>4.3 Delineate major business and technical dependencies</p>
5. Define business case	<p>5.1 Identify benefits of the recommended solution in terms of both qualitative and quantitative gains to the enterprise</p> <p>5.2 Estimate the total net cost of the solution</p> <p>5.3 Perform initial risk assessment</p> <p>5.4 Agree how identified costs and benefits will be assessed and evaluated</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to review organisational and technical business solutions
- communication skills to:
  - conduct research, interviews and liaise with stakeholders
  - conduct focus groups and requirements workshops
- numeracy skills to develop cost-benefit analyses
- problem-solving and analytical skills to undertake root cause analysis and feasibility studies
- technical writing skills to develop business case
- technical skills to develop models of systems, processes and solutions.

### Required knowledge

- business-analysis processes, procedures and techniques
- market trends and best practices to assist in identifying business opportunities
- technology and technology solution patterns.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• analyse a business situation</li> <li>• develop a comprehensive business case for a proposed solution that addresses:             <ul style="list-style-type: none"> <li>• business need</li> <li>• required capabilities</li> <li>• solution scope</li> <li>• most feasible approach.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• documentation, including appropriate policies, current business analysis practices, tools and legislation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of a simulated or workplace project in a medium to large enterprise</li> <li>• direct observation of the candidate carrying out business analysis work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and plans prepared for the projects</li> <li>• evaluation of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where a practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Investigating issues</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• adverse impacts the problem is causing</li> <li>• expected benefits from any potential solution</li> <li>• how quickly the problem could potentially be resolved</li> <li>• underlying sources of the problem.</li> </ul>
<p><b><i>Desired outcomes</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• creating a new capability, such as a new product or service, addressing a competitive disadvantage, or creating a new competitive advantage</li> <li>• complying with new regulations</li> <li>• improving revenue, by increasing sales or reducing cost</li> <li>• increasing customer satisfaction</li> <li>• increasing employee satisfaction</li> <li>• improving safety</li> <li>• reducing time to deliver a product or service.</li> </ul>
<p><b><i>Capabilities</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• business processes</li> <li>• events that a solution must be able to respond to</li> <li>• features of a software application</li> <li>• goals that a solution will allow stakeholders to accomplish</li> <li>• products that an organisation creates</li> <li>• services that an organisation delivers</li> <li>• tasks that an end user may perform.</li> </ul>
<p><b><i>Solution approaches</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• adding resources to the business or making organisational changes</li> <li>• changing the business procedures or processes</li> <li>• designing and developing custom software</li> <li>• purchasing or leasing software and hardware from a supplier</li> <li>• partnering with other organisations, or outsourcing work to suppliers</li> <li>• using additional capabilities of existing software or hardware within the organisation.</li> </ul>

Systems analysis and design

## ICASAD602A Conduct knowledge audits

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement a knowledge management audit.

### Application of the Unit

This unit applies to senior managers responsible for knowledge management within an organisation.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Conduct a knowledge need analysis	1.1 Identify current and future directions of the business 1.2 Identify knowledge and skills required to support the current business activities 1.3 Identify knowledge and skills required to support future business directions
2. Analyse the knowledge inventory	2.1 Produce knowledge questionnaires to request information from staff about corporate knowledge 2.2 Identify <b><i>explicit knowledge</i></b> currently resident in data sources, such as policies, procedures, databases and libraries; and record its location 2.3 Identify the accessibility, aim and integrity of the knowledge 2.4 Identify the frequency of update of this knowledge, its previous versions, and its backup status 2.5 Identify <b><i>implicit knowledge</i></b> currently resident in informal sources and organisational knowledge
3. Chart the knowledge flow	3.1 Examine how knowledge flows from one data store to another within the organisation, and how this flow is facilitated or impeded by policies, such as access control or records management policies 3.2 Examine the procedures that facilitate the flow of knowledge within the organisation and their ease of use 3.3 Identify the corporate and individual attitudes to knowledge within the organisation
4. Produce a knowledge audit report	4.1 Analyse the results of the knowledge audit 4.2 Document findings and present to the appropriate person

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse knowledge requirements and the results of questionnaires
- communication skills to:
  - facilitate groups
  - liaise and negotiate with team members and management
  - present, transfer and collect information and gain consensus
- initiative and enterprise skills to forecast future directions and anticipate knowledge requirements
- literacy skills to update knowledge of products, software systems and technology
- planning and organisational skills to create, distribute and collect knowledge surveys
- research skills to specify, analyse and evaluate broad features of a particular business domain and solutions to project problems
- technical skills to formulate milestones.

### Required knowledge

- organisation's business, policies, procedures and structure
- concepts of risk management planning and processes
- design and development of questionnaires
- procedures for analysis of completed questionnaires
- reporting mechanisms
- tools and models of project management.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify and document explicit and implicit knowledge in an organisation</li> <li>• identify knowledge required to meet current needs</li> <li>• forecast knowledge required to meet future needs.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• an organisation and its data sources</li> <li>• staff from the organisation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate creating questionnaires</li> <li>• verbal or written questioning to assess candidate's knowledge of implicit and explicit knowledge</li> <li>• review of candidate's knowledge audit report.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Explicit knowledge</i></b> may include information held in:	<ul style="list-style-type: none"> <li>• database management system (DBMS)</li> <li>• intranets</li> <li>• libraries</li> <li>• policies</li> <li>• procedures.</li> </ul>
<b><i>Implicit knowledge</i></b> may include:	<ul style="list-style-type: none"> <li>• informal networks of employees</li> <li>• the 'go-to' employee</li> <li>• those with a long-standing organisational knowledge</li> <li>• corporate memory.</li> </ul>

Systems analysis and design

# ICASAD603A Plan and monitor business analysis activities in an IT environment

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to establish and manage IT business analysis activities in a medium to large organisation.

## Application of the Unit

This unit applies to senior business analysts in medium to large organisations who ensure business analysis activities for a particular business analysis effort are properly initiated, planned and managed.

Their job roles combine high-level management, business and technical skills necessary to manage complex analysis efforts within the information and communications technology (ICT) industry, often as part of business critical IT projects.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Plan business analysis approach	<p>1.1 Establish organisational process needs and objectives that apply to the <i>initiative</i> and if necessary define the requirements that the process must meet</p> <p>1.2 Review existing organisational standards, including standards, guidelines and processes relating to the current initiative</p> <p>1.3 Tailor <i>approach</i> to the needs of a specific business analysis initiative, according to organisational standards if required</p> <p>1.4 Engage with the <i>appropriate stakeholders</i> to determine how the work will be completed</p> <p>1.5 Plan the execution of <i>business activities</i></p>
2. Conduct stakeholder analysis	<p>2.1 Recognise stakeholders who may be affected by the business need or a new solution</p> <p>2.2 Assess stakeholder attitudes toward and <i>influence</i> over the initiative</p> <p>2.3 Decide which stakeholders will have <i>authority</i> over business analysis activities</p> <p>2.4 Instigate regular reviews to identify new stakeholders or changed positions as clarity of business needs evolve</p>
3. Plan business analysis activities	<p>3.1 Decide the type of project or initiative and the business analysis deliverables</p> <p>3.2 Determine the scope of work for business analysis activities</p> <p>3.3 Approve which activities the business analyst will perform and when</p> <p>3.4 Develop estimates for business analysis work</p>
4. Plan business analysis communication	<p>4.1 Determine how best to receive, distribute, access, update and escalate information from project stakeholders</p> <p>4.2 Decide how best to communicate with each stakeholder according to <i>stakeholder needs and constraints to communication</i></p>
5. Plan requirements management process	<p>5.1 Establish a <i>requirements repository</i> for storing requirements, including those under development, those under review, and approved requirements</p> <p>5.2 Assess the need and process for requirements traceability based on <i>relevant factors</i></p> <p>5.3 Conclude which <i>requirements attributes</i> will be captured</p> <p>5.4 Determine the process for requirements change management</p>

<p>6. Manage business analysis performance</p>	<p>6.1 Determine which metrics will be used to measure the work performed by the business analyst</p> <p>6.2 Report performance in an <i>appropriate format</i> based on the needs of the project</p> <p>6.3 Assess performance measures to determine where problems may be occurring in executing business analysis activities</p> <p>6.4 Identify preventative or corrective actions as required</p>
--	--

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to review organisational and technical business solutions
- communication skills to:
  - conduct focus groups and requirements workshops
  - conduct research, interviews and liaise with stakeholders
- planning and organisational skills to:
  - develop mitigation strategies
  - manage an analysis project
  - manage risk and implement contingency plans
- problem-solving and analytical skills to brainstorm requirements and approaches
- technical writing skills to develop requirements documents and specifications
- technical skills to develop models of systems, processes and solutions.

### Required knowledge

- business-analysis process, procedures and techniques
- project management process, procedures and techniques
- risk management strategies
- technology and technology solution patterns.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• plan and monitor business analysis activities, including determining an approach and processes that are appropriate to the circumstances</li> <li>• determine business analysis deliverables, tasks and estimates</li> <li>• determine metrics that will be used for monitoring business analysis work.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• documentation, including appropriate policies, current business analysis practices, tools and legislation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of a simulated or workplace project in a medium to large enterprise</li> <li>• direct observation of the candidate carrying out business analysis work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and plans prepared for the projects</li> <li>• evaluation of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Initiative</i></b> may include:	<ul style="list-style-type: none"> <li>• feasibility studies</li> <li>• new software development (in-house)</li> <li>• organisational change</li> <li>• outsourced new software development</li> <li>• process improvement</li> <li>• software maintenance or enhancement</li> <li>• software package selection.</li> </ul>
<b><i>Approach</i></b> defines:	<ul style="list-style-type: none"> <li>• approach will also determine how the planning process is performed</li> <li>• deliverables</li> <li>• life cycle</li> <li>• templates and tasks that should be included.</li> </ul>
<b><i>Appropriate stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• customer, domain SME, end user or supplier</li> <li>• implementation SME</li> <li>• regulator or other stakeholder with legal or governance authority over the solution or the process used to develop it</li> <li>• project manager</li> <li>• tester</li> <li>• sponsor.</li> </ul>
<b><i>Business activities</i></b> may include:	<ul style="list-style-type: none"> <li>• analysis techniques</li> <li>• frequency of stakeholder interactions</li> <li>• project deliverables</li> <li>• project risk</li> <li>• project timeframe</li> <li>• team roles</li> <li>• other elements of the business-analysis process.</li> </ul>
<b><i>Influence</i></b> may include:	<ul style="list-style-type: none"> <li>• influence on the project</li> <li>• influence in the organisation</li> <li>• influence needed to ensure success of the particular project</li> <li>• influence with other stakeholders.</li> </ul>
<b><i>Authority</i></b> may relate to:	<ul style="list-style-type: none"> <li>• approving the deliverables</li> <li>• approving the requirements process that will be used</li> <li>• inspecting and approving the requirements</li> <li>• requesting and approving changes</li> </ul>

	<ul style="list-style-type: none"> <li>• reviewing and approving the traceability structure</li> <li>• vetoing proposed requirements or solutions (individually or in a group).</li> </ul>
<p><b><i>Stakeholder needs and constraints to communication</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• communication approach for the stakeholder</li> <li>• how best to communicate requirements conclusions or packages, including authority level (sign-off authority, veto authority or review only)</li> <li>• physical location or time zone of the stakeholders</li> <li>• time and resource availability constraints</li> <li>• what types of communications will be required, such as status, anomalies, issues and their resolution, risks, meeting results and action items</li> <li>• what types of requirements will be elicited, such as business, stakeholder, solution, or transition; high level versus detailed and how best to elicit them.</li> </ul>
<p><b><i>Requirements repository</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• diagrams and models</li> <li>• requirements management tools and applications</li> <li>• whiteboards</li> <li>• word-processing documents</li> <li>• wikis</li> <li>• any other method of recording information that allows requirements to be single-sourced and available to stakeholders for as long as they are needed.</li> </ul>
<p><b><i>Relevant factors</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• complexity of the domain</li> <li>• number of views of requirements that will be produced</li> <li>• potential impacts from risk</li> <li>• costs and benefits involved.</li> </ul>
<p><b><i>Requirements attributes</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• absolute reference via a unique numeric (preferred) or textual identifier</li> <li>• author of the requirement</li> <li>• cost</li> <li>• complexity</li> <li>• ownership</li> <li>• priority</li> <li>• risks associated with meeting or not meeting the requirements</li> <li>• source of the requirement</li> <li>• stability</li> <li>• status</li> <li>• urgency</li> <li>• resource assignment</li> <li>• revision number</li> <li>• traced-from and traced-to.</li> </ul>

<p><i>Appropriate format</i> may include:</p>	<ul style="list-style-type: none"> <li>• verbal</li> <li>• presentation</li> <li>• writing.</li> </ul>

## Unit Sector(s)

Systems analysis and design

# ICASAD604A Manage and communicate IT solutions

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage and communicate requirements for new IT systems to a broad and diverse audience.

## Application of the Unit

This unit applies to senior business analysts in medium to large organisations who ensure that all stakeholders have a shared understanding of the nature of an IT solution; and to ensure that those stakeholders with approval authority agree on the requirements that the solution meets.

Their job roles combine high-level management, business and technical skills necessary to manage complex analysis efforts within the information and communications technology (ICT) industry, often as part of IT projects critical to the business.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Manage identified client IT requirements and scope of solution	1.1 Establish baseline client IT requirements and change control processes to track changes to requirements and solution scope 1.2 Resolve issues and conflicts that emerge during final stages of identifying and analysing requirements 1.3 Determine how requirements will be presented for review 1.4 Secure approval of requirements from those stakeholders who have the appropriate authority
2. Manage requirement relationships and dependencies	2.1 Examine and organise the set of requirements and record the dependencies and relationships for each 2.2 Perform impact analysis to assess or evaluate the impact of a change 2.3 Deploy <b><i>requirements management tools</i></b> as necessary
3. Maintain requirements for re-use	3.1 Identify requirements that the organisation will use in the long term 3.2 Name and define requirements available for future re-use
4. Prepare requirements package	4.1 Decide which formats are appropriate for a particular project and its stakeholders 4.2 Prepare <b><i>requirements package</i></b> according to organisational need
5. Communicate requirements	5.1 Communicate requirements iteratively and in conjunction with <b><i>business analysis tasks</i></b> 5.2 Develop and deliver <b><i>presentations of requirements</i></b> according to communication objectives

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to perform impact analysis of possible changes to solution scope
- communication skills to bring stakeholders from different backgrounds and business domains to a common understanding of the IT requirements
- organisational and management skills to manage the integrity of requirements to the business goals and actual solution through uncertainty and change over time
- strategic thinking skills to ensure that knowledge of the organisation gained during business analysis is available for future use
- technical skills to develop evaluation criteria.

### Required knowledge

- conflict-resolution and issue-management techniques to handle possible changes to solution scope
- requirements management and requirements traceability processes
- techniques for managing version control and configuration.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• establish processes to trace requirements, and control and track changes to requirements and solution scope</li> <li>• package and communicate requirements according to what is appropriate for a project or stakeholder group.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• documentation, including appropriate policies, current business analysis practices, tools and legislation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of a simulated or workplace project in a medium to large enterprise</li> <li>• direct observation of the candidate carrying out business analysis work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and plans prepared for the projects</li> <li>• evaluation of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b>Requirements management tools</b> may include:</p>	<ul style="list-style-type: none"> <li>• Caliber-RM</li> <li>• MKS requirements</li> <li>• Requisite Pro</li> <li>• RTM Workshop</li> <li>• SoftREQ</li> <li>• Teamcenter</li> <li>• TestTrackRM.</li> </ul>
<p><b>Requirements package</b> may exist in the form of:</p>	<ul style="list-style-type: none"> <li>• formal documentation, usually based on a template used by the organisation, such as a vision document or software requirements specification</li> <li>• models, where the requirements may be presented only in the form of a model, such as a process map, or captured on a whiteboard</li> <li>• presentation that delivers a high-level overview of the functionality delivered by the solution.</li> </ul>
<p><b>Business analysis tasks</b> may include:</p>	<ul style="list-style-type: none"> <li>• enterprise analysis tasks</li> <li>• elicitation tasks</li> <li>• requirements analysis tasks</li> <li>• solution assessment and validation tasks.</li> </ul>
<p><b>Presentations of requirements</b> may be used to:</p>	<ul style="list-style-type: none"> <li>• as a precursor to delivery, e.g. examining solution options with a delivery team</li> <li>• ensure cross-functional fit with other business process areas within the same project</li> <li>• ensure that internal project quality standards have been adhered to</li> <li>• make decisions regarding solution scope</li> <li>• obtain business acceptance and sign-off</li> <li>• obtain delivery team sign-off</li> <li>• obtain testing team sign-off</li> <li>• prioritise a set of requirements before proceeding to next project stage.</li> </ul>

## ICASAD605A Elicit IT requirements

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake and engage stakeholders in the key task of defining IT requirements.

### Application of the Unit

This unit applies to senior business analysts in medium to large organisations who ensure that requirements elicited are complete, clear, correct and consistent, and can serve as a solid foundation for the solution to the business needs.

Their job roles combine high-level management, business and technical skills necessary to manage complex analysis efforts within the information and communications technology (ICT) industry, often as part of business critical IT projects.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare for elicitation	1.1 Define the specific activities and the planned dates for a particular <i>elicitation activity</i> 1.2 Build a detailed schedule 1.3 Communicate the plan to affected parties
2. Conduct elicitation activity	2.1 Conduct elicitation activity 2.2 Monitor captured requirements against business objectives to prevent scope creep 2.3 Capture and document <i>requirements' attributes</i> 2.4 Update process metrics as the basis for future planning
3. Document elicitation results	3.1 Record elicitation outcomes in the <i>appropriate form</i> 3.2 Present elicitation outcomes to stakeholders and obtain agreement
4. Confirm elicitation results	4.1 <b>Review</b> the documented outputs with the stakeholders 4.2 Confirm that own understanding reflects stakeholder intentions and preferences

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse:
  - document and system interface
  - others' observations
  - impact of changes
- communication skills to:
  - conduct interviews, develop surveys and questionnaires
  - conduct focus groups, requirements workshops, walkthroughs and to present requirements
- planning and organisational skills to plan and conduct elicitation activities
- technical writing skills to develop requirements documents and specifications
- technical skills to develop solution concepts and prototypes.

### Required knowledge

- conflict-resolution and issue-management techniques
- negotiation and consensus strategies
- techniques to elicit and manage the gathering of requirements
- risk management strategies with regard to requirements gathering, staff management and proposed systems
- scope management and change control processes
- version control and configuration management.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• plan and conduct requirements elicitation activities</li> <li>• select and apply techniques that are appropriate to the situation</li> <li>• document requirements and obtain stakeholder sign-off.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate policies</li> <li>• current business analysis practices</li> <li>• tools</li> <li>• legislation if applicable</li> <li>• other documentation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of a simulated or workplace project in a medium to large enterprise</li> <li>• direct observation of the candidate carrying out business analysis work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and plans prepared for the projects</li> <li>• evaluation of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Elicitation activity</i></b> may include:	<ul style="list-style-type: none"> <li>• brainstorming</li> <li>• document analysis</li> <li>• focus group</li> <li>• interview</li> <li>• interface analysis</li> <li>• observation</li> <li>• prototyping</li> <li>• workshop</li> <li>• survey or questionnaire.</li> </ul>
<b><i>Requirements' attributes</i></b> to aid in managing each requirement throughout its life cycle may include:	<ul style="list-style-type: none"> <li>• source</li> <li>• its value</li> <li>• its priority.</li> </ul>
<b><i>Appropriate form</i></b> may include:	<ul style="list-style-type: none"> <li>• visual or audio recordings</li> <li>• written documents describing the outcomes, such as meeting minutes</li> <li>• actual or virtual whiteboards where notes are retained until they are transferred to another medium.</li> </ul>
<b><i>Review</i></b> may include:	<ul style="list-style-type: none"> <li>• informal discussion or brainstorming</li> <li>• structured or facilitated workshop</li> <li>• use of formal review tools, such as survey or interview.</li> </ul>

## Unit Sector(s)

Systems analysis and design

## ICASAD606A Analyse stakeholder requirements

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse stated requirements, determine potential solutions, and define possible features available to meet stakeholder needs.

### Application of the Unit

This unit applies to senior business analysts in medium to large organisations who define the IT requirements (both stakeholder and solution requirements) of one or more stakeholder groups in enough detail to allow solution components to be constructed.

Their job roles combine high-level management, business and technical skills necessary to manage complex analysis efforts within the information and communications technology (ICT) industry, often as part of business critical IT projects.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prioritise requirements	<p>1.1 Determine the <i>basis for prioritisation</i> of requirements</p> <p>1.2 Resolve <i>challenges</i> in facilitating the prioritisation</p>
2. Organise requirements	<p>2.1 Articulate requirements at an <i>appropriate level</i> of abstraction</p> <p>2.2 Devise <i>appropriate models</i> to describe the solution scope based on informational needs of stakeholders</p> <p>2.3 Document dependencies and interrelationships among requirements</p>
3. Specify and model requirements	<p>3.1 Develop textual requirements</p> <p>3.2 Generate matrices to convey or support identified requirements</p> <p>3.3 Create models to document and communicate requirements and improvement opportunities</p>
4. Define assumptions and constraints	<p>4.1 Agree on assumptions to be defined and clarified as requirements are understood</p> <p>4.2 Document and examine <i>business constraints</i> to identify options no longer available</p> <p>4.3 Recognise and examine <i>technical constraints</i> that may restrict design or mandate standards to be followed</p>
5. Verify requirements	<p>5.1 Establish <i>characteristics of requirements' quality</i></p> <p>5.2 Undertake verification activities iteratively throughout the requirements analysis process</p>
6. Validate requirements	<p>6.1 Identify and define stakeholder requirement benefit assumptions so that associated risks can be managed</p> <p>6.2 Generate measurable evaluation criteria to assess success of requirements benefit post-implementation</p> <p>6.3 Assign business value of requirements to assist in identifying candidates for elimination</p> <p>6.4 Determine requirement dependencies for benefits realisation</p> <p>6.5 Evaluate alignment with business case and opportunity cost to assist validation and decision making</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to review organisational and technical business solutions
- communication skills to:
  - conduct focus groups and requirements workshops
  - conduct research and interviews
  - liaise with stakeholders
- analytical skills to prioritise requirements
- technical writing skills to develop requirements documents and specifications
- technical modelling skills to develop models of systems, processes and solutions.

### Required knowledge

- business rules analysis
- data flow diagramming
- data modelling
- functional decomposition
- organisation modelling
- process modelling
- risk management strategies
- scenarios and use cases
- scope modelling
- user stories.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>define, specify and prioritise stakeholder and solution requirements to a standard that would allow construction of a business solution</li> <li>verify and validate the requirements to ensure necessary quality and support for stakeholder needs.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>documentation, including appropriate policies, current business analysis practices, tools and legislation</li> <li>appropriate learning and assessment support when required</li> <li>modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>evaluation of a simulated or workplace project in a medium to large enterprise</li> <li>direct observation of the candidate carrying out business analysis work</li> <li>verbal or written questioning to assess required knowledge and skills</li> <li>review of reports and plans prepared for the projects</li> <li>evaluation of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Basis for prioritisation</i></b> may include:	<ul style="list-style-type: none"> <li>• difficulty of implementation</li> <li>• relative value</li> <li>• likelihood of success</li> <li>• risk</li> <li>• regulatory or policy compliance</li> <li>• relationship to other requirements</li> <li>• stakeholder agreement</li> <li>• urgency.</li> </ul>
<b><i>Challenges</i></b> may include:	<ul style="list-style-type: none"> <li>• non-negotiable demands, e.g. stakeholders wish to rank all requirements as high priority</li> <li>• unrealistic tradeoffs, e.g. difficulty or complexity of implementing certain requirements may be overstated.</li> </ul>
<b><i>Appropriate level</i></b> is determined by:	<ul style="list-style-type: none"> <li>• particular methodology being used</li> <li>• whatever level of abstraction is appropriate for the audience.</li> </ul>
<b><i>Appropriate models</i></b> may include:	<ul style="list-style-type: none"> <li>• data flow diagrams</li> <li>• data models</li> <li>• functional decomposition</li> <li>• organisation models</li> <li>• process models</li> <li>• scenarios and use cases</li> <li>• scope models</li> <li>• user stories.</li> </ul>
<b><i>Business constraints</i></b> may include:	<ul style="list-style-type: none"> <li>• organisational restrictions</li> <li>• budgetary restrictions</li> <li>• limits on the number of resources available</li> <li>• restrictions based on skills of the project team and stakeholders</li> <li>• scope restrictions</li> <li>• time restrictions.</li> </ul>
<b><i>Technical constraints</i></b> may include:	<ul style="list-style-type: none"> <li>• application software that must be used</li> <li>• architecture decisions that are made that may impact the design of the solution, such as:             <ul style="list-style-type: none"> <li>• development languages</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• hardware and software platforms</li> <li>• application software that must be used</li> <li>• restrictions, such as resource use</li> <li>• message size and timing</li> <li>• software size</li> <li>• maximum number of and size of files records and data elements</li> <li>• enterprise architecture standards that must be followed.</li> </ul>
<p><i>Characteristics of requirements' quality</i> may include:</p>	<ul style="list-style-type: none"> <li>• cohesiveness</li> <li>• completeness</li> <li>• consistency</li> <li>• correctness</li> <li>• feasibility</li> <li>• modifiable</li> <li>• testable</li> <li>• unambiguous.</li> </ul>

## Unit Sector(s)

Systems analysis and design

## ICASAD607A Manage assessment and validation of IT solutions

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to determine the best IT solution and facilitate its implementation.

### Application of the Unit

This unit applies to senior business analysts in medium to large organisations who assess and validate business processes, organisational structures, outsourcing agreements, software applications, and any other component of the solution to ensure that the overall solution delivers maximum value to stakeholders.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Assess proposed solution	1.1 Rank solution options on business value and advantages and disadvantages of alternatives 1.2 Generate and consider solution options and additional capabilities
2. Allocate requirements	2.1 Allocate requirements to <b><i>solution components</i></b> to maximise business value 2.2 Facilitate allocation of requirements to a specific project release, phase or iteration
3. Assess organisational readiness	3.1 Conduct cultural assessment 3.2 Conduct operational or technical assessment 3.3 Perform <b><i>stakeholder impact analysis</i></b>
4. Define transition requirements	4.1 Evaluate old system actual data and metadata 4.2 Develop options for managing ongoing work during transition to the new solution 4.3 Participate in organisational change-management recommendations or processes as required
5. Validate solution	5.1 Investigate <b><i>defective solution outputs</i></b> 5.2 Assess defects and issues
6. Evaluate solution performance	6.1 Realise value delivered by the solution 6.2 Validate solution metrics 6.3 Decide <b><i>solution replacement or elimination</i></b>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical and technical skills to conduct stakeholder impact analyses
- planning and organisational skills to plan and conduct solution assessment and validation activities
- analytical skills to rank solutions
- communication and facilitation skills to:
  - conduct interviews and workshops
  - participate in organisational change-management activities.

### Required knowledge

- business environment with regard to proposed IT solutions
- techniques for assessing options and validating solutions
- organisational change management
- solution-performance metrics.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• categorise benefits and disadvantages of various solution options</li> <li>• assess cultural impact of different solutions</li> <li>• compare transition requirements between solutions</li> <li>• analyse output variances between solutions</li> <li>• remove inappropriate solutions from list</li> <li>• recommend remaining solutions in priority order.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• documentation, including appropriate policies, current business analysis practices, tools and legislation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• evaluation of a simulated or workplace project in a medium to large enterprise</li> <li>• direct observation of the candidate carrying out business analysis work</li> <li>• verbal or written questioning to assess required knowledge and skills</li> <li>• review of reports and plans prepared for the projects</li> <li>• evaluation of a portfolio of the project work undertaken.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Solution components</i></b> may include:	<ul style="list-style-type: none"> <li>• business policies and business rules</li> <li>• business processes to be performed and managed</li> <li>• people who operate and maintain the solution, including their job functions and responsibilities</li> <li>• software applications and application components used in the solution</li> <li>• structure of the organisation, including interactions between the organisation and its customers and suppliers.</li> </ul>
<b><i>Stakeholder impact analysis</i></b> may include:	<ul style="list-style-type: none"> <li>• changed costs</li> <li>• different interface</li> <li>• new workflow.</li> </ul>
<b><i>Defective solution outputs</i></b> may include:	<ul style="list-style-type: none"> <li>• inappropriate output</li> <li>• incorrect output</li> <li>• irrelevant output.</li> </ul>
<b><i>Solution replacement or elimination</i></b> may include:	<ul style="list-style-type: none"> <li>• adjustment of solution</li> <li>• necessity</li> <li>• ongoing cost versus initial investment</li> <li>• opportunity cost of pursuing alternative courses of action</li> <li>• removal of solution from option list</li> <li>• replacement of solution</li> <li>• sunk cost - the money and effort already committed to an initiative.</li> </ul>

## Unit Sector(s)

Systems analysis and design

# ICASAS201A Maintain inventories for equipment, software and documentation

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to record and store details of software, hardware and technical documentation.

## Application of the Unit

This unit applies to frontline technical support personnel who maintain equipment and software in a small to large office environment. The technical documentation of the equipment and software within this role is a key component of any information and communications technology (ICT) environment.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Document and update inventory	1.1 Maintain <b>hardware inventory</b> that creates a profile or description of each piece of equipment 1.2 Maintain <b>software inventory</b> and update licences as required, particularly when upgrading software 1.3 Record and organise storage of user documentation or technical manuals
2. Store technical documentation	2.1 Store hardware, software and equipment that is not in use, according to technical manuals 2.2 Ensure <b>technical documentation</b> is stored securely 2.3 Access and disseminate technical documentation as required

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - liaise with users across a range of organisational levels
  - provide limited advice and guidance to users
  - seek assistance when required
- initiative and enterprise skills to identify potential improvements to inventories and technical documentation
- literacy skills to read, write and interpret workplace documentation
- problem-solving skills for a defined range of predictable problems
- technical skills to operate a personal computer.

### Required knowledge

- basic knowledge of:
  - technical documentation processes
  - software licensing requirements
  - inventory principles and procedures
- current industry practice related to storage of hardware, software and technical documentation.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• update and maintain software, equipment and technical documentation inventory, according to identified storage and retrieval policy and procedures</li> <li>• adhere to software licensing requirements, according to vendor specifications</li> <li>• access and regularly keep inventories up-to-date.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• personal computer and enterprise intranet</li> <li>• currently used inventory management software</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate accessing inventories of software and hardware</li> <li>• direct observation of candidate maintaining an inventory</li> <li>• review of completed inventory reports for different inventory types and scenarios</li> <li>• direct observation of candidate reviewing the status of software licences and reporting on their status</li> <li>• review of software inventory prepared by candidate outlining updates to licences when upgrading software.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

## Unit Sector(s)

Systems administration and support

# ICASAS202A Apply problem-solving techniques to routine IT malfunctions

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to apply problem-solving techniques to determine the origin of a routine malfunction and plan for its resolution.

## Application of the Unit

This unit applies to frontline technical support personnel who are required to identify technical malfunctions, determine appropriate remedial action and recommend potential solutions. Communicating effectively, simplifying technical problems and determining potential solutions are key components of this support role.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify routine problems	1.1 Identify hardware, software, user or procedural problem areas to <b><i>appropriate person</i></b> in the organisation 1.2 Define and determine problem to be investigated 1.3 identify and document current conditions of the <b><i>hardware, software, user or problem</i></b>
2. Research solutions to routine problems	2.1 Identify potential solutions to problem 2.2 Develop document, rank and present recommendations about possible <b><i>solutions</i></b> to the appropriate person for decision
3. Recommend solutions to problems	3.1 Plan implementation of solutions 3.2 Plan evaluation of implemented solutions 3.3 Document the recommended solution and submit to the appropriate person for confirmation

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - provide clear and precise advice that varies according to audience
  - use questioning and active listening to clarify general information
- literacy skills to document:
  - initial problems
  - recommendations to solve problems
- customer-service skills to effectively deal with clients
- organisational skills to use time management and prioritise work requests
- research skills to source basic information from readily available sources
- technical skills to:
  - identify routine malfunctions
  - rank recommendations about possible solutions.

### Required knowledge

- current industry hardware and software products and services
- current industry maintenance, service and help-desk practices, processes and procedures
- current operating systems
- current industry standard diagnostic tools.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• apply problem-solving techniques to determine the root cause of a routine malfunction</li> <li>• document recommended solutions to problems following established procedures and referring unresolved problems to support persons.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• a workstation</li> <li>• detailed information relating to organisational processes and procedures</li> <li>• information on a range of information technology (IT) business solutions</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate identifying and defining the problem</li> <li>• direct observation of candidate documenting the details of the problem</li> <li>• verbal or written questioning to assess candidate's knowledge of enterprise escalation procedures</li> <li>• review of documentation provided by candidate about possible problems, recommended solutions, and their implementation and evaluation.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• help-desk person</li> <li>• subject matter expert</li> <li>• supervisor</li> <li>• system administrator.</li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• cabling</li> <li>• modems or other connectivity devices</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• application:                         <ul style="list-style-type: none"> <li>• database</li> <li>• internet browser</li> <li>• spreadsheet</li> <li>• word-processing</li> </ul> </li> <li>• commercial</li> <li>• customised</li> <li>• in-house</li> <li>• programming:                         <ul style="list-style-type: none"> <li>• assembler</li> <li>• compiler</li> <li>• development tools</li> </ul> </li> <li>• system:                         <ul style="list-style-type: none"> <li>• computer security</li> <li>• device drivers</li> <li>• operating system.</li> </ul> </li> </ul>
<b><i>User</i></b> may include:	<ul style="list-style-type: none"> <li>• contractor</li> <li>• department within the organisation</li> <li>• person within a department</li> <li>• support staff</li> </ul>

	<ul style="list-style-type: none"> <li>• third party.</li> </ul>
<p><i>Problem</i> may include:</p>	<ul style="list-style-type: none"> <li>• routine malfunction that affects the work environment:                             <ul style="list-style-type: none"> <li>• cable fault</li> <li>• complementary metal oxide semiconductor (CMOS) battery failure</li> <li>• computer freeze</li> <li>• faulty motherboard</li> <li>• hard drive crash</li> <li>• incompatible software</li> <li>• insufficient memory</li> <li>• loss of internet access</li> <li>• malware</li> <li>• virus.</li> </ul> </li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS203A Connect hardware peripherals

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to connect hardware peripherals according to instructions.

## Application of the Unit

This unit applies to workers who require the information and communications technology (ICT) skills to connect a variety of hardware peripherals to different configurations and types of ICT equipment. Communicating effectively, and simplifying and solving technical incompatibility conflicts and problems are key components of this ICT support role.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Confirm client requirements	<p>1.1 Identify and confirm <i>peripheral</i> requirements of <i>client</i> according to <i>organisational standards</i></p> <p>1.2 Document client requirements and peripherals needed and report findings to the appropriate person according to organisational standards</p> <p>1.3 Verify client requirements with <i>appropriate person</i> according to organisational standards and reporting procedures</p> <p>1.4 Take action to ensure client support expectations are covered by vendor warranty and support services</p>
2. Obtain required peripherals	<p>2.1 Obtain peripherals under instruction from appropriate person</p> <p>2.2 Enter details of peripherals into <i>equipment inventory</i> according to organisational standards</p> <p>2.3 Validate that contents of delivered components and physical contents match the packing list and resolve discrepancies if necessary</p> <p>2.4 <i>Store</i> peripherals according to vendors guidelines</p>
3. Connect hardware peripherals	<p>3.1 Verify timeframe for installation schedule with client</p> <p>3.2 Remove old peripherals with minimal disruption to clients if they are to be replaced, taking into account <i>environmental considerations</i> and <i>OHS standards</i></p> <p>3.3 Connect new peripherals with minimum disruption to clients, taking into account <i>operating system</i> procedures</p> <p>3.4 Configure computer to accept new peripherals</p> <p>3.5 Test hardware peripherals and confirm client satisfaction, paying particular attention to possible effect on other systems and making adjustments as required</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- customer service and conflict-resolution skills to:
  - ensure proposed actions are consistent with client's expectations
  - transfer and collect information
- literacy skills to:
  - document client requirements
  - follow vendor guidelines
  - present information
  - update equipment inventory
- negotiation skills to interact with other team members and clients
- problem-solving skills to resolve routine installation and configuration issues
- technical skills and decision-making skills to:
  - ensure compatibility of peripherals with operating system
  - remove and install peripherals
  - undertake maintenance procedures.

### Required knowledge

- broad general knowledge of:
  - computer operating systems
  - help desk and maintenance practices
  - peripheral devices
  - OHS procedures for electrical equipment
  - interconnectivity of technical system components
- current industry-accepted hardware and software products
- detailed knowledge of inventory procedures
- organisational guidelines relating to external suppliers and vendors.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• safely connect several different types of hardware peripherals to the system according to vendor instructions with a minimum of downtime using known routines and procedures</li> <li>• locate, interpret and use vendor documentation related to connection and storage of hardware peripherals</li> <li>• test operation of newly installed hardware peripherals and confirm client satisfaction</li> <li>• adhere to OHS regulations when working with electrical equipment.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• sites with a representative range of workstations, hardware peripherals, internet connections, cabling, and software to be installed, interconnected and configured</li> <li>• hardware and software currently used in industry</li> <li>• technical documentation, including organisational hardware blueprint</li> <li>• vendor support</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate installing, connecting and configuring hardware peripheral devices</li> <li>• review of reports that document client requirements and peripherals completed for different scenarios and situations</li> <li>• verbal or written questioning to assess candidate's ability to locate, use and interpret vendor documentation</li> <li>• direct observation of candidate testing hardware peripherals added to a system.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b>Peripheral</b> may include:</p>	<ul style="list-style-type: none"> <li>• Bluetooth device</li> <li>• firewire (IEEE 1394) device</li> <li>• hard drive</li> <li>• keyboard</li> <li>• laptop</li> <li>• mobile phone</li> <li>• modem</li> <li>• mouse</li> <li>• multimedia kit</li> <li>• pen</li> <li>• personal digital assistant (PDA), such as palmtop</li> <li>• printer</li> <li>• scanner</li> <li>• speaker</li> <li>• tape cartridge</li> <li>• touch pad</li> <li>• universal serial bus (USB) device</li> <li>• wireless fidelity (wi-fi) router.</li> </ul>
<p><b>Client</b> may include:</p>	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments.</li> </ul>
<p><b>Organisational standards</b> may include:</p>	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<p><b>Appropriate person</b> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• help-desk person</li> <li>• subject matter expert</li> </ul>

	<ul style="list-style-type: none"> <li>• supervisor</li> <li>• system administrator.</li> </ul>
<p><b><i>Equipment inventory</i></b> may include detailed lists of peripherals, including:</p>	<ul style="list-style-type: none"> <li>• hard drives</li> <li>• hubs</li> <li>• modems or other connectivity devices</li> <li>• monitors</li> <li>• other peripheral devices</li> <li>• personal computers</li> <li>• PDA</li> <li>• printers</li> <li>• switches.</li> </ul>
<p><b><i>Store</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• anti-static packaging</li> <li>• controlled humidity</li> <li>• controlled temperature</li> <li>• secure storage area</li> <li>• shock and vibration minimisation</li> <li>• silica gel desiccant</li> <li>• stacking limits.</li> </ul>
<p><b><i>Environmental considerations</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• recycling of packaging: <ul style="list-style-type: none"> <li>• cardboard</li> <li>• paper</li> <li>• polystyrene</li> </ul> </li> <li>• recycling or disposal of ewaste: <ul style="list-style-type: none"> <li>• cathode ray tube (CRT) monitors</li> <li>• printed circuit boards</li> <li>• redundant hardware.</li> </ul> </li> </ul>
<p><b><i>OHS standards</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• electrical safety</li> <li>• safe lifting methods</li> <li>• ventilation.</li> </ul>
<p><b><i>Operating system</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• GNUs Not Unix (GNU)</li> <li>• Linux</li> <li>• Mac OS X</li> <li>• Microsoft Windows</li> <li>• Unix-like operating systems: <ul style="list-style-type: none"> <li>• HP-UX</li> <li>• IBM AIX</li> <li>• Silicon Graphics IRIX</li> <li>• Sun Solaris.</li> </ul> </li> </ul>

## **Unit Sector(s)**

Systems administration and support

## ICASAS204A Record client support requirements

### Modification History

Version	Comments
Release 1	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to record, prioritise and escalate client support requests.

### Application of the Unit

This unit applies to frontline technical support personnel who provide information and communications technology (ICT) client support in a small or large office environment. Communicating effectively and simplifying technical problems are key components of client support roles.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

### Elements and Performance Criteria

1. Log requests for support	1.1 Record <i>client</i> support requests and requirements according to <i>organisational standards</i> 1.2 Review <i>client</i> support history and details 1.3 Check the information and request for accuracy and urgency according to <i>organisational standards</i>
2. Prioritise support requests with appropriate personnel	2.1 Identify guidelines for prioritising or rating <i>client</i> requests 2.2 Prioritise <i>client</i> request based on its criticality or effect on business
3. Record support request	3.1 Document support request according to organisational requirements 3.2 Refer requests to <i>appropriate person</i> or department for assistance

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
- gather client information
- clarify client requirements

- conflict-resolution skills and customer-service skills to deal with requests for support
- literacy skills to interpret general workplace documentation
- planning and organisational skills to prioritise work requests

**Required knowledge**

- broad knowledge of:
  - diagnostic tools
  - escalation procedures
  - maintenance procedures
  - business scheduling requirements
  - current business practices to prepare reports
  - organisational procedures to rate and prioritise client requests
  - roles and responsibilities of information technology (IT) division

**Evidence Guide**

<i>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</i>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	Evidence of the ability to: <ul style="list-style-type: none"> <li>• log and record calls according to organisational policy and procedures</li> <li>• prioritise and escalate client support requests according to organisational policy and procedures.</li> </ul>

<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• a site where logging and recording of client support may be recorded and prioritised</li> <li>• <i>client</i> support history records</li> <li>• organisational policy and procedures related to: <ul style="list-style-type: none"> <li>• critical process</li> <li>• escalation procedures</li> <li>• logging procedures</li> <li>• prioritising client requests</li> </ul> </li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<p><b>Method of assessment</b></p>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate logging and recording calls</li> <li>• review of reports completed as part of client history</li> <li>• verbal or written questioning of candidate's ability to communicate with appropriate persons involved with <i>client</i> support.</li> </ul>
<p><b>Guidance information for assessment</b></p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments.</li> </ul>
<b><i>Organisational standards</i></b> may include:	<ul style="list-style-type: none"> <li>• client liaison policy</li> <li>• escalation procedures</li> <li>• logged call procedures</li> <li>• preventative maintenance and diagnostic policy</li> <li>• roles and technical responsibilities in the IT department</li> <li>• security procedures</li> <li>• vendor and product service level support agreements.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• help-desk person</li> <li>• subject matter expert</li> <li>• supervisor</li> <li>• vendor business representative.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS205A Maintain IT system integrity

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to protect and secure stand-alone or client server environments.

## Application of the Unit

This unit applies to technical support personnel who are required to protect and secure equipment and software in a small or large office environment. Maintaining system integrity through backup and recovery procedures, virus security and implementing licensing and copyright requirements are key components of any information and communications technology (ICT) environment.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Carry out system backup	1.1 Create and review organisational <b><i>backup schedule</i></b> 1.2 Determine <b><i>storage media</i></b> and <b><i>hardware</i></b> for backups 1.3 Ensure backups are carried out according to the schedule 1.4 Label and store backups according to <b><i>organisational standards</i></b> 1.5 Maintain records of backups
2. Restore system backup	2.1 Determine and test restoration procedures according to organisational standards 2.2 Restore data under instruction from an <b><i>appropriate person</i></b> 2.3 Restore data according to organisational standards 2.4 Document and report on backup results
3. Maintain virus protection	3.1 Maintain and update <b><i>virus protection</i></b> software according to <b><i>operating system</i></b> in use 3.2 Carry out virus scanning and report detected viruses to appropriate person 3.3 Remove viruses and update scanning software
4. Follow copyright procedures and record software licences where appropriate	4.1 Identify <b><i>licensed software</i></b> used by the organisation 4.2 Maintain records of licence number and location 4.3 Monitor operation and use of licensed software where applicable 4.4 Check personal computers and networks to ensure software compliance 4.5 Report licensing anomalies related to <b><i>software</i></b> to an appropriate person

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - clarify instructions
  - communicate with peers and supervisors
  - present information
  - seek assistance and expert advice
- literacy skills to:
  - interpret user manuals, technical documentation and help functions
  - read and write basic workplace documents
- problem-solving skills to address common operational problems when carrying out system backup and recovery
- technical skills to perform:
  - backup and recovery operations
  - basic diagnostic tests in system integrity.

### Required knowledge

- broad knowledge of:
  - organisational standards regarding:
    - backup and recovery procedures and operations
    - label and store backups
  - current industry-accepted hardware and software products
  - current viruses and protection methods
  - diagnostic tools
  - inventory procedures
  - maintenance procedures
  - storage and retrieval guidelines
  - system performance
- software copyright and general public licence (GPL) or copyright responsibilities.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• protect and secure stand-alone or networked client-server environments and operating systems according to system maintenance procedures</li> <li>• undertake system and file backup, recovery delete and archive according to backup and recovery procedures</li> <li>• check computers to ensure software compliance.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• sites with a representative range of stand-alone and networked client-server environments and operating systems</li> <li>• antivirus software</li> <li>• technical records and documentation</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate undertaking file backup and recovery</li> <li>• direct observation of candidate performing virus scans and virus removal</li> <li>• review of documented reports on backup results</li> <li>• review organisational backup schedules</li> <li>• review software licence records</li> <li>• verbal or written questioning to assess candidate's knowledge of maintaining and updating virus protection software and checking computers for software copyright compliance.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Unit Sector(s)

Systems administration and support

# ICASAS206A Detect and protect from spam and destructive software

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to reduce the risk of a computer's operation being affected by spam or destructive software.

## Application of the Unit

This unit applies to technical support personnel who are required to protect and secure equipment and software in a small or large office environment. Maintaining system integrity through virus security and implementing spam filtering are key components of information and communications technology (ICT) environments.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Detect and remove destructive software	1.1 Identify common types of <b><i>destructive software</i></b> 1.2 Select and install <b><i>virus protection</i></b> compatible with the <b><i>operating system</i></b> in use 1.3 Investigate other <b><i>advanced systems</i></b> of protection for further options 1.4 Install <b><i>software updates</i></b> on a regular basis 1.5 Configure software <b><i>security settings</i></b> to prevent destructive software from infecting computer 1.6 Run or schedule to run virus-protection software on a regular basis 1.7 Report detected destructive software to <b><i>appropriate person</i></b> and remove the destructive software
2. Identify and take action to stop spam	2.1 Identify common types of <b><i>spam</i></b> 2.2 Take <b><i>appropriate action</i></b> in regard to spam 2.3 Configure and use a <b><i>spam filter</i></b> 2.4 Report spam to <b><i>appropriate organisation</i></b>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication and literacy skills to present reports
- problem-solving skills to anticipate and respond to a range of known virus and spam types
- technical skills to:
  - install and configure system filtering and security settings
  - install software updates
  - install virus protection
  - operate a computer and software application
  - select virus protection to suit operating system in a limited range of options.

### Required knowledge

- spam and virus intrusions and appropriate remedial action
- types of protective applications used against viruses and spam
- operating systems supported by the organisation
- computer hardware
- Spam Act 2003 and associated guidelines.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• install virus protection software and updates</li> <li>• schedule virus protection software to run on a regular basis</li> <li>• identify and remove common destructive software</li> <li>• identify common spam types and take appropriate action.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• sites with a representative range of computer hardware, application software and operating systems</li> <li>• current antivirus and anti-spam software</li> <li>• technical records, vendor documentation and enterprise procedures and guidelines</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate undertaking installation of virus protection and anti-spam software</li> <li>• direct observation of candidate performing virus scan and virus removal</li> <li>• review configuration of virus protection software and creation of operating schedule created</li> <li>• configure and use a spam filter.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Destructive software</i></b> may include:	<ul style="list-style-type: none"> <li>• file viruses</li> <li>• keystroke loggers</li> <li>• logic bombs</li> <li>• macro viruses</li> <li>• remote access tools (RATs)</li> <li>• spyware</li> <li>• system sector viruses</li> <li>• trojans</li> <li>• viruses</li> <li>• worms.</li> </ul>
<b><i>Virus protection</i></b> may include:	<ul style="list-style-type: none"> <li>• CA Vet Antivirus</li> <li>• freeware</li> <li>• online</li> <li>• open source</li> <li>• proprietary software: <ul style="list-style-type: none"> <li>• BitDefender</li> <li>• Kaspersky Antivirus</li> <li>• McAfee VirusScan</li> <li>• Panda Antivirus</li> <li>• Symantec Norton Antivirus.</li> </ul> </li> </ul>
<b><i>Operating system</i></b> may include:	<ul style="list-style-type: none"> <li>• GNUs Not Unix (GNU)</li> <li>• Linux</li> <li>• HP-UX</li> <li>• Mac OS X</li> <li>• Microsoft Windows</li> <li>• Unix-like operating systems: <ul style="list-style-type: none"> <li>• IBM AIX</li> <li>• Silicon Graphics IRIX</li> <li>• Sun Solaris.</li> </ul> </li> </ul>
<b><i>Advanced systems</i></b> may include:	<ul style="list-style-type: none"> <li>• hardware firewall</li> <li>• software firewall.</li> </ul>
<b><i>Software updates</i></b> may	<ul style="list-style-type: none"> <li>• automatic online updates</li> <li>• security patches</li> </ul>

include:	<ul style="list-style-type: none"> <li>• service packs and service releases</li> <li>• virus definition updates</li> <li>• virus scanning engine updates.</li> </ul>
<i>Security settings</i> may include:	<ul style="list-style-type: none"> <li>• firewall</li> <li>• internet browser</li> <li>• operating system</li> <li>• virus protection.</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor</li> <li>• system administrator.</li> </ul>
<i>Spam</i> may include:	<ul style="list-style-type: none"> <li>• messages covered by the Spam Act 2003</li> <li>• unsolicited commercial electronic messaging: <ul style="list-style-type: none"> <li>• email</li> <li>• instant messaging</li> <li>• mobile phone messaging</li> <li>• social networking</li> <li>• wiki.</li> </ul> </li> </ul>
<i>Appropriate action</i> may include:	<ul style="list-style-type: none"> <li>• deleting the spam</li> <li>• blocking the sender by configuring spam filter</li> <li>• unsubscribing from mailing list if company is not reputable.</li> </ul>
<i>Spam filter</i> may include:	<ul style="list-style-type: none"> <li>• email client filters or rules</li> <li>• email server filters</li> <li>• third-party filter programs: <ul style="list-style-type: none"> <li>• CA Anti-Spam</li> <li>• MailWasher Pro</li> <li>• Norton Internet Security</li> <li>• SpamAssassin.</li> </ul> </li> </ul>
<i>Appropriate organisation</i> may include:	<ul style="list-style-type: none"> <li>• relevant government and private media screening organisations, such as: <ul style="list-style-type: none"> <li>• Australian Communications and Media Authority</li> <li>• Scamwatch company that originated the spam message.</li> </ul> </li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS207A Protect and secure information assets

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to ensure information assets are protected from improper access and appropriate actions are taken to secure assets in the event that they are threatened.

### Application of the Unit

This unit applies to technical support personnel who are required to protect and secure equipment in a small or large office environment. Maintaining asset security and implementing preventive security measures are key components of any information and communications technology (ICT) environment.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify assets and threats	<p>1.1 Identify types of <b><i>information assets</i></b> in the <b><i>organisation</i></b></p> <p>1.2 Identify mechanisms by which information assets are accessed, transmitted and stored</p> <p>1.3 Establish nature of threats to information assets and determine <b><i>effect</i></b> that <b><i>loss or damage</i></b> may have to the organisation</p>
2. Secure assets	<p>2.1 Identify actions, mechanisms and strategies to protect information assets</p> <p>2.2 <b><i>Secure</i></b> assets within scope of authority</p> <p>2.3 Report issues to <b><i>appropriate person</i></b> and other issues where they are outside scope of authority</p>
3. Mitigate or prevent damage to assets	<p>3.1 Identify signs and evidence that information assets are threatened or undergoing loss or damage</p> <p>3.2 Provide <b><i>first-level response</i></b> to reduce affects, mitigate damage and protect evidence</p> <p>3.3 Report incident, effects and actions to appropriate person</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- literacy and communication skills to:
  - present information
  - report incidents where assets are threatened
- problem-solving skills to:
  - anticipate and respond to threats to information assets
  - solve known problems in routine procedures
- technical skills to:
  - install and activate system filtering and security settings
  - operate a computer and software application
  - protect and secure information assets
  - provide first-level response.

### Required knowledge

- information assets and key sources of information assets
- types of security options available to secure assets
- assets supported by the organisation
- general ICT hardware
- organisation's security procedures.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• conduct an audit of information assets, the potential threats and effect on the organisation</li> <li>• identify threats to assets and take appropriate action to overcome them</li> <li>• communicate and discuss details of security threats and issues relating to information assets.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• sites with computer hardware and office environments representing a range of workplaces</li> <li>• a range of appropriate software systems</li> <li>• organisational information assets</li> <li>• technical records, documentation and enterprise procedures</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate conducting an audit of information assets</li> <li>• review of audit records prepared</li> </ul> <p>verbal or written questioning to assess candidate's knowledge of nature of threats and effect of threats</p> <ul style="list-style-type: none"> <li>• review of reports, including examples of different threats and associated actions.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Information assets</i></b> may include:	<ul style="list-style-type: none"> <li>• equipment</li> <li>• files</li> <li>• forms</li> <li>• online or printed data and information</li> <li>• passkeys or passwords</li> <li>• procedures</li> <li>• programs or information channels</li> <li>• reports.</li> </ul>
<b><i>Organisation</i></b> may include:	<ul style="list-style-type: none"> <li>• departments</li> <li>• entities outside the business</li> <li>• government</li> <li>• individuals inside and outside the business</li> <li>• the whole business.</li> </ul>
<b><i>Affect</i></b> may include:	<ul style="list-style-type: none"> <li>• confidentiality</li> <li>• financial</li> <li>• personal</li> <li>• privacy issues</li> <li>• reputation.</li> </ul>
<b><i>Loss or damage</i></b> may include:	<ul style="list-style-type: none"> <li>• alteration</li> <li>• damage or destruction</li> <li>• deletion</li> <li>• misuse</li> <li>• theft</li> <li>• unauthorised publication.</li> </ul>
<b><i>Secure</i></b> may include:	<ul style="list-style-type: none"> <li>• appropriate modification of procedures or processes</li> <li>• changing of passwords or work habits</li> <li>• physical exclusion or control</li> <li>• protective software installation or operation.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• business owner or authorised business representative</li> <li>• client</li> <li>• government</li> <li>• peers</li> <li>• police as appropriate</li> </ul>

	<ul style="list-style-type: none"><li>• supervisor.</li></ul>
<i>First-level response</i> may include:	<ul style="list-style-type: none"><li>• changing passwords</li><li>• excluding people from access</li><li>• locking doors</li><li>• locking down the workplace</li><li>• logging off</li><li>• powering down systems</li><li>• updating software protection.</li></ul>

Systems administration and support

## ICASAS208A Maintain IT equipment and consumables

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to maintain the operation of basic computer hardware and peripherals, including the replacement of consumables.

### Application of the Unit

This unit applies to technical support personnel who are required to maintain basic hardware equipment and associated consumables in a small or large office environment. The effective operation and maintenance of computing and peripheral equipment are key components of any information and communications technology (ICT) environment. Personnel undertaking this unit may work under direct supervision or with limited responsibility.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Clean equipment	<p>1.1 Access and verify cleaning supplies for usability on the selected <b><i>equipment</i></b></p> <p>1.2 Record maintenance actions undertaken according to organisational procedures</p> <p>1.3 Clean equipment according to manufacturer specifications and organisational manuals</p> <p>1.4 Ensure basic <b><i>OHS principles</i></b> and guidelines are followed</p>
2. Replace and maintain consumables and supplies	<p>2.1 Access <b><i>consumables</i></b> from storage points and record usage information according to organisational procedures</p> <p>2.2 Replace consumables when needed and log the action undertaken</p> <p>2.3 Dispose of consumables following <b><i>environmental guidelines</i></b></p> <p>2.4 Test equipment to ensure it is in working order at set time periods and according to organisational procedures</p>
3. Maintain equipment	<p>3.1 Establish which equipment requires maintenance</p> <p>3.2 Maintain equipment according to organisational guidelines and manufacturer specifications</p> <p>3.3 Document maintenance procedures performed according to organisational guidelines</p> <p>3.4 Exercise care to prevent interruption of business activities during maintenance procedures</p> <p>3.5 Store unused equipment devices according to manufacturer specifications and organisational guidelines</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - communicate with peers and supervisors
  - seek assistance and expert advice
- literacy skills to:
  - document maintenance procedures
  - interpret technical documentation, equipment manuals and specifications
- planning and organisational skills to:
  - organise and maintain equipment
  - schedule required maintenance
- problem-solving skills to solve equipment and logistics problems
- safety-awareness skills to:
  - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
  - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
  - maintain equipment
  - test and evaluate equipment maintenance requirements.

### Required knowledge

- basic knowledge of:
  - current industry-accepted hardware and software and manufacturer maintenance guides
  - organisational systems related to storage and retrieval of information and equipment
- OHS principles and responsibilities, including ergonomics, work periods and breaks, and conservation techniques
- chemical storage, control and disposal procedures
- features and operating requirements of equipment.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• clean equipment following manufacturer specifications and OHS policy and procedures</li> <li>• replace and dispose of consumables according to regulations and organisational policy</li> <li>• test and maintain equipment in working order following OHS procedures.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• a site on which equipment maintenance may be carried out</li> <li>• use of equipment currently used in industry</li> <li>• relevant equipment documentation that may affect maintenance activities</li> <li>• appropriate learning and assessment support when required.</li> </ul> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of suitable cleaning materials</li> <li>• direct observation of candidate replacing consumables</li> <li>• direct observation of candidate maintaining and testing equipment</li> <li>• review of documents, including maintenance procedures performed.</li> </ul>
<b>Guidance information for assessment</b>	<ul style="list-style-type: none"> <li>• Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</li> <li>• Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</li> <li>• Indigenous people and other people from a non-English speaking background may need additional support.</li> <li>• In cases where practical assessment is used it should be</li> </ul>

	combined with targeted questioning to assess required knowledge.
--	--

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Equipment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• hard drives</li> <li>• hubs</li> <li>• modems and other connectivity devices, such as digital subscriber line (DSL) modems</li> <li>• monitors</li> <li>• other peripheral devices</li> <li>• personal computers</li> <li>• personal digital assistants (PDA)</li> <li>• printers</li> <li>• switches</li> <li>• workstations.</li> </ul>
<p><b><i>OHS principles</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• basic principles and responsibilities relating to ICT equipment:             <ul style="list-style-type: none"> <li>• disposal</li> <li>• environmental control</li> <li>• storage.</li> </ul> </li> </ul>
<p><b><i>Consumables</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• cartridges</li> <li>• cleaners</li> <li>• disks</li> <li>• paper</li> <li>• printer toners</li> <li>• ribbons</li> <li>• tapes.</li> </ul>
<p><b><i>Environmental guidelines</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• disposal through an authorised body of redundant hardware, such as:             <ul style="list-style-type: none"> <li>• circuit boards</li> <li>• hard drives</li> <li>• motherboards</li> </ul> </li> <li>• recycling</li> <li>• safe disposal of packaging, such as:             <ul style="list-style-type: none"> <li>• cardboard</li> <li>• paper</li> <li>• plastic</li> <li>• polystyrene.</li> </ul> </li> </ul>

Systems administration and support

## ICASAS209A Connect and use a home-based local wireless network

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install, configure and secure devices to a small home-based local network.

### Application of the Unit

This unit applies to workers who determine the requirements for a small home-based wireless network and then install, configure and secure the network.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Confirm requirements for home-office wireless network	1.1 Document <i>client</i> requirements and confirm with <b><i>appropriate person</i></b> 1.2 Identify available documentation and technical support options 1.3 Identify the <b><i>digital devices</i></b> to be connected to the network and confirm <b><i>wireless network component</i></b> requirements 1.4 Take action to ensure client support expectations are covered by vendor warranty and support services 1.5 Ensure required <b><i>OHS standards</i></b> are incorporated as part of the installation process
2. Prepare for installation	2.1 Obtain digital devices and wireless network components 2.2 Validate that contents of delivered components and physical contents match the packing list and resolve discrepancies if necessary 2.3 Determine internet service provider ( <b><i>ISP connection properties</i></b> )
3. Install and configure the wireless router and adapters	3.1 Install the <b><i>wireless router</i></b> 3.2 Configure the wireless router using the <b><i>router configuration properties</i></b> 3.3 Install the <b><i>wireless adapters</i></b> 3.4 Configure the <b><i>wireless system (wi-fi)</i></b>
4. Secure the wireless system	4.1 Set the <b><i>security components</i></b> of the system 4.2 Test the security components 4.3 Review any updated documentation regarding security issues and the components used

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- customer interaction and conflict-resolution skills to ensure proposed actions are consistent with client's expectations
- literacy skills to:
  - document installation configuration and security codes
  - follow component documentation guidelines
  - present information
- negotiation skills to interact with other team members and clients
- problem-solving skills to resolve routine installation and configuration issues
- technical and decision-making skills to ensure components meet job requirements.

### Required knowledge

- computer-component installation procedures
- current industry-accepted wireless network products
- detailed knowledge of wi-fi installation requirements
- general understanding of wi-fi systems and wi-fi security considerations
- ISP connection protocols
- OHS procedures for electrical equipment
- wireless network components.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• determine suitable wi-fi requirements for small home office style settings</li> <li>• safely connect and integrate wi-fi components into a small office system</li> <li>• install and configure wireless routers and adapters as part of a wi-fi system</li> <li>• secure components of a wi-fi system.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• wi-fi equipment currently used in industry</li> <li>• technical documentation and technical support to support the wi-fi installation</li> <li>• internet to enable configuration procedures.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate installing, connecting and configuring wi-fi network</li> <li>• review of reports that document client requirements compared to the work completed by the candidate for a variety of different scenarios and situations</li> <li>• verbal or written questioning to assess candidate's ability to install, configure and secure a wireless home network</li> <li>• direct observation of candidate installing, configuring and securing a device to a wireless network.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individual home owners</li> <li>• internal departments</li> <li>• small businesses.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• contract authoriser</li> <li>• project manager</li> <li>• supervisor</li> <li>• system administrator.</li> </ul>
<b><i>Digital devices</i></b> may include:	<ul style="list-style-type: none"> <li>• iPad or similar device</li> <li>• laptop</li> <li>• notebook</li> <li>• personal computer</li> <li>• personal digital assistant (PDA).</li> </ul>
<b><i>Wireless network component</i></b> may include:	<ul style="list-style-type: none"> <li>• PC, notebook or similar</li> <li>• wireless adapters</li> <li>• wireless router or gateway.</li> </ul>
<b><i>OHS standards</i></b> may include:	<ul style="list-style-type: none"> <li>• electrical safety</li> <li>• ergonomics in the workplace: <ul style="list-style-type: none"> <li>• correct posture</li> <li>• style and adjustments of chair</li> <li>• type of desk</li> <li>• type of monitor</li> <li>• working position</li> </ul> </li> <li>• length of time in front of computer</li> <li>• lighting level</li> <li>• placement of light fittings</li> <li>• repetitive strain injury (RSI) prevention</li> <li>• safe lifting methods</li> <li>• ventilation.</li> </ul>
<b><i>ISP connection properties</i></b> may include:	<ul style="list-style-type: none"> <li>• default gateway</li> <li>• digital subscriber line (DSL)</li> <li>• transmission control protocol or internet protocol (TCP/IP)</li> </ul>

	<ul style="list-style-type: none"> <li>• IP address</li> <li>• MAC address</li> <li>• password</li> <li>• subnet mask</li> <li>• username.</li> </ul>
<b>Wireless router</b> may include:	<ul style="list-style-type: none"> <li>• G Plus Mimo Wireless Networking - greater range and faster speeds</li> <li>• G Plus Wireless Networking - improved speed and coverage</li> <li>• G Wireless Networking - shares internet connection wirelessly</li> <li>• N Wireless Networking - enhanced speed and coverage</li> <li>• N1 Wireless Networking - maximum wireless performance.</li> </ul>
<b>Router configuration properties</b> may include:	<ul style="list-style-type: none"> <li>• ISP</li> <li>• password</li> <li>• point-to-point protocol over ethernet (PPPoE)</li> <li>• router-configuration IP address</li> <li>• utility ID.</li> </ul>
<b>Wireless adapters</b> may include:	<ul style="list-style-type: none"> <li>• peripheral component interconnect (PCI) and mini PCI</li> <li>• Personal Computer Memory Card International Association (PCMCIA)</li> <li>• universal serial bus (USB) card</li> <li>• wireless compact flash</li> <li>• wireless wide area network (WWAN) PC card.</li> </ul>
<b>Wireless system (wi-fi)</b> may include:	<ul style="list-style-type: none"> <li>• DSL modem</li> <li>• internet connections</li> <li>• wi-fi network cards</li> <li>• wireless network components</li> <li>• wireless router.</li> </ul>
<b>Security components</b> may include:	<ul style="list-style-type: none"> <li>• 802.11b clients</li> <li>• 802.11g clients</li> <li>• 802.11g routers</li> <li>• enable encryption</li> <li>• MAC-address filtering</li> <li>• passphrase passwords</li> <li>• pre-shared keys</li> <li>• router's configuration utility</li> <li>• service set identifier (SSID)</li> <li>• wi-fi protected access (WPA) encryption</li> <li>• wired equivalent privacy (WEP) encryption.</li> </ul>

## **Unit Sector(s)**

Systems administration and support

# ICASAS301A Run standard diagnostic tests

## Modification History

Version	Comments
ICASAS301A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to troubleshoot problems and conduct diagnostic tests on a range of platforms.

## Application of the Unit

This unit applies to workers who require the information and communications technology (ICT) skills to run diagnostics to determine the status of a computer.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify common symptoms and preventative maintenance techniques	1.1 Develop a <b><i>troubleshooting process</i></b> to help resolve problems 1.2 Determine the <b><i>specific symptoms</i></b> relevant to different types of hardware, operating system and printer problems 1.3 Identify <b><i>common preventative maintenance</i></b> techniques to support maintenance strategies
2. Operate system diagnostics	2.1 Run the system diagnostic program according to specification 2.2 Modify the system configuration as indicated by the diagnostic program 2.3 Carry out preventative maintenance in line with <b><i>organisational guidelines</i></b>
3. Scan system for viruses	3.1 Scan the system to check and maintain virus protection 3.2 Report identified viruses to an <b><i>appropriate person</i></b> 3.3 Remove virus infections found by the scan using <b><i>software</i></b> tools and procedures, or by restoring backups 3.4 Document relevant symptom and removal information

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to interpret test results
- communication skills to present information
- literacy skills to interpret computer manuals
- numeracy skills to:
  - interpret results
  - take test measurements
- planning and organisational skills to plan, prioritise and monitor own work
- problem-solving skills for a defined range of predictable problems
- technical skills to use diagnostic tools.

### Required knowledge

- client business domain, including client organisation structure and business functionality
- current industry-accepted hardware and software diagnostic tools, including products that manage:
  - backup procedures
  - configuration procedures
  - diagnostic software and hardware
  - hardware maintenance
  - organisational security procedures
- desktop applications and operating systems.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• troubleshoot hardware and OS problems</li> <li>• conduct diagnostic tests on a range of platforms according to preventative maintenance and diagnostic policy</li> <li>• identify the root causes of the problems</li> <li>• scan systems for computer viruses</li> <li>• remove viruses using software tools and procedures</li> <li>• remove viruses by restoring backups.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• security guidelines</li> <li>• backup procedures</li> <li>• diagnostic software</li> <li>• organisational guidelines</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate: <ul style="list-style-type: none"> <li>• troubleshooting problems</li> <li>• conducting diagnostic tests</li> <li>• adhering to organisation's operational procedures</li> </ul> </li> <li>• review of candidate's documented report of symptom and its removal</li> <li>• verbal or written questioning to assess candidate's knowledge of preventative maintenance within organisational guidelines.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and</p>

	<p>the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Troubleshooting process</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• identifying the problem by questioning the user and identifying user changes to computer</li> <li>• performing backups before making changes</li> <li>• establishing a theory of probable cause</li> <li>• testing the theory to determine cause:             <ul style="list-style-type: none"> <li>• once theory is confirmed determine next steps to resolve problem</li> <li>• if theory is not confirmed re-establish new theory or escalate</li> </ul> </li> <li>• establishing a plan of action to resolve the problem and implement the solution</li> <li>• verifying full system functionality and if applicable implementing preventative measures</li> <li>• documenting findings, actions and outcomes.</li> </ul>
<p><b><i>Specific symptoms</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• hardware-related symptoms:             <ul style="list-style-type: none"> <li>• alerts</li> <li>• excessive heat</li> <li>• noise</li> <li>• odours</li> <li>• status light indicators</li> <li>• visible damage to cable or plastic</li> </ul> </li> <li>• laptop or mobile devices:             <ul style="list-style-type: none"> <li>• issues:                 <ul style="list-style-type: none"> <li>• keyboard</li> <li>• pointer</li> <li>• power conditions</li> <li>• stylus</li> <li>• video</li> <li>• wireless card issues</li> </ul> </li> <li>• methods:                 <ul style="list-style-type: none"> <li>• check LCD cut-off switch</li> <li>• check switch for built-in wi-fi or external antennas</li> <li>• plug in external monitor</li> <li>• remove unneeded peripherals</li> </ul> </li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• toggle Fn keys or hardware switches</li> <li>• verify backlight functionality and pixilation</li> <li>• verify power (e.g. LEDs, swap AC adapter)</li> <li>• operating system (OS) related symptoms:             <ul style="list-style-type: none"> <li>• application install</li> <li>• bluescreen</li> <li>• incorrect or incompatible driver</li> <li>• input or output device</li> <li>• print spool stalled</li> <li>• start or load</li> <li>• system lock-up</li> <li>• Windows-specific printing problems</li> </ul> </li> <li>• printers:             <ul style="list-style-type: none"> <li>• manage print jobs</li> <li>• failure to print a test page</li> <li>• print spooler</li> <li>• printer properties and settings</li> </ul> </li> <li>• use documentation and resources:             <ul style="list-style-type: none"> <li>• internet or web-based</li> <li>• training materials</li> <li>• user or installation manuals.</li> </ul> </li> </ul>
<p><b><i>Common preventative maintenance</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• backup procedures</li> <li>• ensuring proper environment</li> <li>• optimising hard drives</li> <li>• power devices appropriate source:             <ul style="list-style-type: none"> <li>• power strip</li> <li>• surge protector</li> <li>• UPS</li> </ul> </li> <li>• physical inspection</li> <li>• scanning for viruses</li> <li>• scheduling fault-finding</li> <li>• scheduling preventative maintenance:             <ul style="list-style-type: none"> <li>• check disk</li> <li>• defrag</li> <li>• scandisk</li> <li>• start-up programs</li> </ul> </li> <li>• updates:             <ul style="list-style-type: none"> <li>• driver</li> <li>• firmware</li> <li>• OS</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• security</li> <li>• use of appropriate repair tools and cleaning materials:             <ul style="list-style-type: none"> <li>• compressed air</li> <li>• computer vacuum and compressors</li> <li>• lint-free cloth.</li> </ul> </li> </ul>
<i>Organisational guidelines</i> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<i>Software</i> may include:	<ul style="list-style-type: none"> <li>• diagnostic tools</li> <li>• OS and modules for configuration</li> <li>• types of virus and impact</li> <li>• virus protection software.</li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS303A Care for computer hardware

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage the maintenance and location of hardware.

### Application of the Unit

This unit applies to frontline technical support personnel who are required to manage organisational hardware assets, maintaining both them and their records.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Establish safe work practices	<p>1.1 Determine, record and apply relevant legal requirements and <i>OHS standards</i> to the installation and maintenance of computer <i>hardware</i></p> <p>1.2 Determine, record and apply requirements specified by hardware manufacturers</p> <p>1.3 Determine, record and apply <i>safe work practices</i>, taking into account legal and manufacturer requirements</p>
2. Establish location requirements for hardware and peripherals	<p>2.1 Determine and apply suitable <i>environmental conditions</i> for hardware and peripherals</p> <p>2.2 Determine and apply <i>system protection devices</i> where appropriate</p> <p>2.3 Determine and apply requirements when moving hardware</p> <p>2.4 Determine and apply suitable storage principles for hardware and associated <i>peripherals</i> and media</p>
3. Establish maintenance practices	<p>3.1 Determine maintenance requirements specified by the <i>equipment</i> manufacturer</p> <p>3.2 Produce <i>maintenance</i> schedules</p> <p>3.3 Perform diagnostic functions, including replacing suspect <i>components</i> with other serviceable components and reloading associated <i>software</i></p> <p>3.4 Determine whether unserviceable components are replaceable through warranty, replacement or upgrade</p> <p>3.5 Perform diagnostic functions using the <i>operating system</i> (OS) and third-party diagnostic tools</p>
4. Determine appropriate hardware quality standards	<p>4.1 Consider and apply <i>business requirements</i> in respect of hardware matters</p> <p>4.2 Determine and apply quality standards to the selection of appropriate hardware and associated peripherals</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to provide advice and guidance to others
- literacy skills to:
  - comprehend basic workplace documents and technical information
  - determine whether unserviceable components are replaceable through warranty, replacement or upgrade
  - interpret user manuals and help functions
- problem-solving skills to address common operational problems with computer hardware
- safety-awareness skills to work safely in regard to the specific hardware
- technical skills to:
  - diagnose hardware problems
  - reload software
  - replace suspect components
  - reload associated software
  - select appropriate hardware for a given situation
  - set up and maintain hardware
  - undertake diagnostic procedures using OS and third-party diagnostic tools.

### Required knowledge

- range of quality levels in current common hardware
- importance of maintenance
- OHS principles specific to mains-powered equipment
- potential environmental effects of common types of hardware
- security issues:
  - viruses
  - worms
- software related to hardware operations
- system hardware and associated peripherals' functions.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• perform diagnostic functions by replacing components, reloading software and by using operating system and other diagnostic tools</li> <li>• establish siting requirements for system hardware and associated peripheral devices</li> <li>• implement safe work practices</li> <li>• determine maintenance requirements and establish maintenance schedule</li> <li>• apply appropriate quality standards to computer hardware and peripherals.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• computer hardware</li> <li>• software and diagnostic tools</li> <li>• warranty records and reports, maintenance schedules, vendor documentation and safe work practices</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate performing a range of diagnostic tasks</li> <li>• review of maintenance schedule documentation completed by candidate</li> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• quality standards applied to computer hardware and peripherals</li> <li>• safe work practices.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>OHS standards</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• electrical safety</li> <li>• ergonomics in the workplace:                         <ul style="list-style-type: none"> <li>• correct posture</li> <li>• style and adjustments of chair</li> <li>• type of desk</li> <li>• type of monitor</li> <li>• working position</li> </ul> </li> <li>• length of time in front of computer</li> <li>• lighting level</li> <li>• placement of light fittings</li> <li>• repetitive strain injury (RSI) prevention</li> <li>• safe lifting methods</li> <li>• ventilation.</li> </ul>
<p><b><i>Hardware</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• communications equipment:                         <ul style="list-style-type: none"> <li>• modems or other connectivity devices, including digital subscriber line (DSL) modems</li> <li>• wireless access points</li> </ul> </li> <li>• network equipment:                         <ul style="list-style-type: none"> <li>• cables</li> <li>• hubs</li> <li>• racks</li> <li>• routers</li> <li>• servers</li> <li>• switches</li> </ul> </li> <li>• personal computers (PCs)</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>
<p><b><i>Safe work practices</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• codes of practice</li> <li>• hazards and hazardous material</li> <li>• manual handling</li> <li>• physical separation of data cables and mains cables</li> <li>• reporting and following OHS procedures</li> </ul>

	<ul style="list-style-type: none"> <li>• testing and tagging electrical mains cables.</li> </ul>
<b>Environmental conditions</b> may include:	<ul style="list-style-type: none"> <li>• air circulation</li> <li>• dust</li> <li>• extreme cold</li> <li>• heat</li> <li>• moisture</li> <li>• temperature stability.</li> </ul>
<b>System protection devices</b> may include:	<ul style="list-style-type: none"> <li>• line conditioning</li> <li>• surge protection</li> <li>• uninterruptible power supplies (UPS).</li> </ul>
<b>Peripherals</b> may include:	<ul style="list-style-type: none"> <li>• Bluetooth device</li> <li>• Firewire (IEEE 1394) device</li> <li>• keyboard</li> <li>• laptop</li> <li>• mobile phone</li> <li>• modem</li> <li>• mouse</li> <li>• multimedia kit</li> <li>• pen</li> <li>• personal digital assistant (PDA), such as palmtop</li> <li>• printer</li> <li>• scanner</li> <li>• speaker</li> <li>• tape cartridge</li> <li>• touch pad</li> <li>• universal serial bus (USB) device</li> <li>• wi-fi router.</li> </ul>
<b>Equipment</b> may include:	<ul style="list-style-type: none"> <li>• DSL modems</li> <li>• hard drives</li> <li>• hubs</li> <li>• modems or other connectivity devices</li> <li>• monitors</li> <li>• other peripheral devices</li> <li>• PCs</li> <li>• PDA</li> <li>• printers</li> <li>• switches</li> <li>• workstations.</li> </ul>
<b>Maintenance</b> may include:	<ul style="list-style-type: none"> <li>• faulty components returned to depot</li> <li>• on-site response</li> <li>• planned maintenance:</li> </ul>

	<ul style="list-style-type: none"> <li>• dust and grease removal from filters and components</li> <li>• lubrication of fan and blower bearings</li> <li>• remote diagnostics.</li> </ul>
<b>Components</b> may include:	<ul style="list-style-type: none"> <li>• CD and DVD drives</li> <li>• central processing unit (CPU)</li> <li>• complementary metal oxide semiconductor (CMOS) battery</li> <li>• fax or modem cards</li> <li>• interface cards</li> <li>• motherboards</li> <li>• power supply</li> <li>• random access memory (RAM).</li> </ul>
<b>Software</b> may include:	<ul style="list-style-type: none"> <li>• application: <ul style="list-style-type: none"> <li>• database</li> <li>• internet browser</li> <li>• spreadsheet</li> <li>• word-processing</li> </ul> </li> <li>• commercial</li> <li>• customised</li> <li>• in-house</li> <li>• programming: <ul style="list-style-type: none"> <li>• assembler</li> <li>• compiler</li> <li>• development tools</li> </ul> </li> <li>• system: <ul style="list-style-type: none"> <li>• computer security software</li> <li>• device drivers</li> <li>• OS.</li> </ul> </li> </ul>
<b>Operating systems</b> may include:	<ul style="list-style-type: none"> <li>• GNU and Linux</li> <li>• Mac OS X</li> <li>• Microsoft Windows</li> <li>• Unix-like operating systems: <ul style="list-style-type: none"> <li>• HP-UX</li> <li>• IBM AIX</li> <li>• Silicon Graphics IRIX</li> <li>• Sun Solaris.</li> </ul> </li> </ul>
<b>Business requirements</b> may include:	<ul style="list-style-type: none"> <li>• capability for further system upgrades</li> <li>• cost and quality</li> <li>• existing facilities</li> <li>• industry standard components</li> <li>• installation:</li> </ul>

	<ul style="list-style-type: none"><li>• ease</li><li>• lead time</li><li>• licensing issues</li><li>• reliability</li><li>• robustness</li><li>• service level agreements (SLAs)</li><li>• technical support required:<ul style="list-style-type: none"><li>• in-house</li><li>• vendor.</li></ul></li></ul>

## Unit Sector(s)

Systems administration and support

## ICASAS304A Provide basic system administration

### Modification History

Version	Comments
ICASAS304A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement components of systems backup, restore, security and licensing in a stand-alone or client server environment.

### Application of the Unit

Frontline technical support personnel apply the skills and knowledge in this unit, and generally work under limited supervision with experienced IT support staff. Support personnel at this level use known routines and procedures where some discretion and judgement are required, and provide technical advice and some leadership in resolution of specified problems. More complex or non-routine activities involving individual responsibility may be performed as part of a group or team and the role may involve some responsibility for others.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Record security access	<p>1.1 Obtain <i>client</i> access requirements and clearance levels according to <i>organisational requirements</i></p> <p>1.2 Issue computer or network user account and password details to client</p> <p>1.3 Provide security <i>documentation</i> and access to client</p> <p>1.4 Record user account and security access details to maintain system integrity and assist later auditing</p>
2. Record software licences	<p>2.1 Determine what licensed <i>software</i> is used within the organisation</p> <p>2.2 Maintain <i>records</i> of licence number and location</p> <p>2.3 Check personal computers and network for illegal software</p> <p>2.3 Report illegal software to <i>appropriate person</i></p>
3. Carry out system backup	<p>3.1 Create or review organisational backup schedule</p> <p>3.2 Complete file backups according to schedule</p> <p>3.3 Label and store backups according to organisational requirements</p> <p>3.4 Maintain record of backups</p>
4. Restore system backup	<p>4.1 Determine and test restore procedures according to <i>organisational guidelines</i></p> <p>4.2 Complete a restore under supervision of an appropriate person</p> <p>4.3 Record completed restore according to organisational guidelines</p>
5. Apply security access controls	<p>5.1 Document security access as per clearance guidelines set by management</p> <p>5.2 Maintain a security access register in line with organisational guidelines to record which client or groups have access to which resources</p> <p>5.3 Identify the security controls on the file system provided by the <i>operating system</i></p> <p>5.4 Apply effective access control on files and directories</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- literacy skills to:
  - interpret user manuals, technical documentation and help functions
  - maintain inventory records
  - record software licence records
- communication skills to:
  - communicate with peers and supervisors
  - present and explain information
  - seek assistance and expert advice
- planning and organisational skills to plan and develop a backup and restore strategy
- technical skills to:
  - configure user account and security access details
  - identify unlicensed software
  - record user account and security access details.

### Required knowledge

- backup procedures
- operating systems used by the organisation
- organisational security procedures
- organisational standards to:
  - carry out backup and restore operations
  - label and store backups
- selection, functions and features of appropriate diagnostic tools
- software copyright responsibilities
- system's current functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>perform systems backup, restore and maintain correct usage according to licensing agreements in a stand-alone or client server environment</li> <li>maintain software licence records and check for copyright compliance within the system</li> <li>maintain security access details in a register and apply access controls on (network) resources.</li> </ul>
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>sites with a representative range of stand-alone and networked client-server environments and operating systems</li> <li>software licence records</li> <li>technical records and documentation</li> <li>organisational backup and restore procedures</li> <li>organisational security guidelines</li> <li>appropriate learning and assessment support when required</li> <li>modified equipment for people with special needs.</li> </ul>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>direct observation of candidate undertaking file backup and restoration</li> <li>review of records on backup results and backup schedules</li> <li>review of software licence records</li> <li>review of the event viewer</li> <li>verbal or written questioning to assess candidate's knowledge of software copyright compliance.</li> </ul>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level,</p>

	<p>language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Client</b> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<b>Organisational requirements</b> may include:	<ul style="list-style-type: none"> <li>• availability of system to be optimised</li> <li>• client-support documentation</li> <li>• complexity of technical manuals</li> <li>• information and communications technology (ICT) policy and procedures relating to service levels and installation</li> <li>• in-house or vendor ICT purchasing arrangements</li> <li>• register of licences</li> <li>• security procedures</li> <li>• storage of ICT documentation</li> <li>• system administration and backup procedures</li> <li>• type of product licences.</li> </ul>
<b>Documentation</b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• maintaining equipment inventory</li> <li>• naming standards</li> <li>• project-management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b>Software</b> may include:	<ul style="list-style-type: none"> <li>• application: <ul style="list-style-type: none"> <li>• database</li> <li>• internet browser</li> <li>• spreadsheet</li> <li>• word-processing</li> </ul> </li> <li>• commercial applications</li> <li>• customised</li> <li>• in-house</li> </ul>

	<ul style="list-style-type: none"> <li>• programming:             <ul style="list-style-type: none"> <li>• assembler</li> <li>• Java, VB, C++, Visual Fox Pro</li> <li>• compiler</li> <li>• development tools</li> </ul> </li> <li>• system:             <ul style="list-style-type: none"> <li>• computer security</li> <li>• operating system.</li> </ul> </li> </ul>
<b>Records</b> may include:	<ul style="list-style-type: none"> <li>• databases</li> <li>• spreadsheets</li> <li>• vendor tools to create, modify and document user accounts</li> <li>• access to computer or network resources.</li> </ul>
<b>Appropriate person</b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor</li> <li>• system administrator.</li> </ul>
<b>Organisational guidelines</b> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<b>Operating systems</b> may include:	<ul style="list-style-type: none"> <li>• GNU and Linux</li> <li>• Mac OS X</li> <li>• Microsoft Windows</li> <li>• Unix-like operating systems:             <ul style="list-style-type: none"> <li>• HP-UX</li> <li>• IBM AIX</li> <li>• Silicon Graphics IRIX</li> <li>• Sun Solaris.</li> </ul> </li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS305A Provide IT advice to clients

### Modification History

Version	Comments
ICASAS305A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to provide IT advice and support to clients, including the communication of comprehensive technical information.

### Application of the Unit

This unit applies to frontline technical support personnel responsible for providing technical support explained in terms that a user can understand.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Review client support issues	<p>1.1 Check for new problems logged by client</p> <p>1.2 Check previous logs for similar problems or requests from client</p> <p>1.3 Investigate and document the support issues affecting the client</p> <p>1.4 Notify client of the results of <i>investigation</i> and provide <i>advice and support</i> on findings</p> <p>1.5 Obtain client feedback and make changes</p>
2. Provide advice on software, hardware or network	<p>2.1 Confirm software, hardware or network requirements with client</p> <p>2.2 Investigate and document a <i>solution</i></p> <p>2.3 Document additional requirements identified in the investigation and refer them to the client</p> <p>2.4 Obtain approval from the client to implement the solution</p> <p>2.5 Investigate and document the amount of technical support the client may require</p> <p>2.6 Discuss and agree the level of technical support identified with the client</p> <p>2.7 Arrange a time with the client when support will take place</p> <p>2.8 Provide technical support as part of group or one-to-one instruction to the client</p> <p>2.9 Provide manuals and help <i>documentation</i> to the client</p>
3. Obtain client feedback	<p>3.1 Create an appropriate evaluation or feedback form or other mechanism to gather feedback about the solution and support provided</p> <p>3.2 Provide client with instructions on how to complete the form or use other means of providing feedback</p> <p>3.3 Distribute the evaluation or feedback to the client</p> <p>3.4 Review the feedback from the client to identify areas for improvement</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to review client requirements and provide advice and support on findings
- communication skills to:
  - convey and clarify complex information
  - investigate and assess client needs
  - provide one-to-one instruction to client
- customer-service skills to communicate with clients in a range of contexts at various levels
- literacy skills to:
  - develop reports
  - document:
    - additional requirements
    - amount of technical support the client may require
    - solutions
    - support issues affecting the client
  - interpret technical manuals
- technical communication skills to write macros and templates.

### Required knowledge

- available in-house and vendor support
- contract and service agreements with vendors
- features of different types of hardware supported by the organisation
- information sources
- operating system (OS):
  - functions and basic features
  - supported by the organisation
- security and network guidelines and procedures
- software:
  - advanced features
  - functions
  - supported by the organisation.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• investigate client support requests and provide a documented solution after consultation with client</li> <li>• convey comprehensive technical information to clients in a clear, concise, jargon-free and coherent manner</li> <li>• access technical manuals and ‘help’ documentation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• sites, peers and supervisors for obtaining information</li> <li>• software, hardware and networks</li> <li>• help-desk repository, technical records and documentation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate investigating and providing advice and support on findings</li> <li>• review of candidate’s documented investigation and solution</li> <li>• evaluation of client feedback.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<b><i>Investigation</i></b> may include:	<ul style="list-style-type: none"> <li>• active listening to clients and colleagues</li> <li>• contacting vendor or maintenance organisations</li> <li>• on-site examination</li> <li>• questions and answers</li> <li>• reviewing technical advice about the organisation.</li> </ul>
<b><i>Advice and support</i></b> may include:	<ul style="list-style-type: none"> <li>• hardware supported by the organisation: <ul style="list-style-type: none"> <li>• CD or DVD drives</li> <li>• laptops</li> <li>• notebooks</li> <li>• printers</li> <li>• reconfiguration of settings</li> <li>• scanners</li> <li>• screens</li> </ul> </li> <li>• identification of training needs for referral to supervisor</li> <li>• manuals</li> <li>• one-to-one training</li> <li>• provision of client documentation</li> <li>• software supported by the organisation: <ul style="list-style-type: none"> <li>• creation of templates</li> <li>• generation of a complex report on a database</li> <li>• password and log-on procedure</li> <li>• statistical functions of spreadsheets</li> <li>• use of macros</li> </ul> </li> <li>• vendor documentation.</li> </ul>
<b><i>Solution</i></b> may include:	<ul style="list-style-type: none"> <li>• hardware: <ul style="list-style-type: none"> <li>• new</li> <li>• upgrade</li> </ul> </li> <li>• implementing a new system</li> <li>• software:</li> </ul>

	<ul style="list-style-type: none"><li>• new</li><li>• upgrade</li><li>• user training.</li></ul>
<i>Documentation</i> may include:	<ul style="list-style-type: none"><li>• additional support requirements</li><li>• amount of technical support the client requires</li><li>• client support solutions</li><li>• collection of records for computer program, OS or hardware device</li><li>• support issues affecting the client.</li></ul>

## ICASAS306A Maintain equipment and software

### Modification History

Version	Comments
ICASAS306A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to carry out maintenance and fault repair according to organisational procedures, in order to keep equipment and software operating.

### Application of the Unit

This unit applies to frontline technical support personnel who are required to apply preventative maintenance as well as repairing computer systems and equipment to keep them functioning.

Computer hardware and systems fall into disrepair often. This can be prevented by applying a system of preventative maintenance, which can include cleaning, applying service packs, and running malware detection and removal software.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine and undertake required equipment maintenance	<p>1.1 Examine and review specified <i>equipment</i> and <i>maintenance</i> procedures, in order to determine those procedures that can be handled internally</p> <p>1.2 Organise and undertake internal maintenance, as specified in the maintenance procedures</p> <p>1.3 Report problems promptly to <i>appropriate person</i></p>
2. Diagnose and repair faults	<p>2.1 Assess an existing problem situation and identify the main problem area</p> <p>2.2 Test the suspected faulty equipment or <i>software</i> for possible failures or performance degradation, using available technology</p> <p>2.3 Analyse the test results</p> <p>2.4 Review historical fault data for information of relevance to existing faults</p> <p>2.5 Develop plans, with prioritised tasks and contingency arrangements, for the repair or replacement of faulty equipment or software, with minimum disruption to <i>client</i></p> <p>2.6 Liaise with appropriate person to obtain approval for the plans</p> <p>2.7 Obtain necessary <i>components</i> and repair the equipment or software in a timely, organised manner, following <i>OHS standards</i></p>
3. Update documentation and make recommendations for future maintenance	<p>3.1 Record maintenance and fault data and equipment modifications, according to organisational standards</p> <p>3.2 Identify and report instances where preventative measures are needed</p> <p>3.3 Review and update maintenance and fault data and report outcomes periodically to appropriate person</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- basic analytical skills to:
  - analyse historical fault data for information of relevance to existing faults
  - analyse test results
  - assess an existing problem and identify the main problem area
  - determine which equipment and maintenance procedures can be handled internally
- communication skills to:
  - follow up with client
  - liaise with technical team members
  - provide assistance according to organisational guidelines
  - provide clear and precise advice when logging calls from help-desk support staff
- literacy skills to:
  - document initial problem and recommendations to solve problem
  - prepare maintenance report in line with organisational guidelines and support agreements
  - read and interpret technical manuals
  - record maintenance and fault data and equipment modifications, according to organisational standards
- planning and organisational skills to:
  - balance competing and complex demands
  - make contingency arrangements
  - minimise disruption to client
  - organise maintenance
- problem-solving skills to:
  - determine problems based on diagnostic tests
  - solve unknown problems in a range of contexts
- technical skills to:
  - repair equipment or software in a timely, organised manner
  - test suspected faulty equipment or software
  - undertake diagnostic and maintenance tasks
  - use current industry-accepted hardware and software testing and diagnostic tools.

### Required knowledge

- equipment and software maintenance practices
- help-desk response level escalation procedures
- operation and purpose of specified equipment
- operation of technical diagnostic tools
- quality assurance practices
- relevant service level agreements (SLAs) to determine the conditions of the SLA cover
- client warranty claims, repair or replacement procedures
- system's current functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• undertake maintenance according to maintenance procedures</li> <li>• resolve a defined range of equipment and software problems</li> <li>• maintain accurate records according to organisational guidelines.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• maintenance procedures</li> <li>• technical environment with a variety of operational equipment, software and tools</li> <li>• technical manuals, records and documentation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate testing suspected faulty equipment or software for possible failures or performance degradation and then analysing the test results</li> <li>• review of candidate's plans for the repair or replacement of faulty equipment or software developed</li> <li>• review of maintenance records and fault data maintained and updated.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hard drives</li> <li>• hubs or switches</li> <li>• modems or other connectivity devices</li> <li>• monitors</li> <li>• other peripheral devices</li> <li>• personal computers (PCs)</li> <li>• personal digital assistants (PDAs)</li> <li>• printers</li> <li>• switches</li> <li>• tablet PC</li> <li>• workstations.</li> </ul>
<b><i>Maintenance</i></b> may include:	<ul style="list-style-type: none"> <li>• on-site response</li> <li>• remote diagnostics</li> <li>• return to depot.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor</li> <li>• system administrator.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• application:             <ul style="list-style-type: none"> <li>• database</li> <li>• internet browser</li> <li>• spreadsheet</li> <li>• word-processing</li> </ul> </li> <li>• commercial</li> <li>• customised</li> <li>• in-house</li> <li>• programming software:             <ul style="list-style-type: none"> <li>• assembler</li> <li>• C++, VB, Visual Fox Pro</li> <li>• compiler</li> <li>• development tools</li> </ul> </li> <li>• system:             <ul style="list-style-type: none"> <li>• computer security</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• device drivers</li> <li>• operating system.</li> </ul>
<i>Client</i> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<i>Components</i> may include:	<ul style="list-style-type: none"> <li>• CD and DVD drives</li> <li>• central processing unit (CPU)</li> <li>• complementary metal oxide semiconductor (CMOS) battery</li> <li>• fax or modem cards</li> <li>• interface cards</li> <li>• motherboards</li> <li>• power supply</li> <li>• random access memory (RAM).</li> </ul>
<i>OHS standards</i> may include:	<ul style="list-style-type: none"> <li>• correct posture</li> <li>• electrical safety</li> <li>• safe lifting methods.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS307A Install, configure and secure a small office home office network

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify available network components relevant to client requirements and to install, configure and secure those components as part of a small office or home office (SOHO) network.

## Application of the Unit

This unit applies to individuals required to network a small or home office. The unit covers the development of a suitable network design, the identification of relevant network components to meet the design brief and the installation, configuration and securing of the network to meet client requirements.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Confirm client requirements and identify relevant network equipment</p>	<p>1.1 Identify and clarify the <i>client requirement</i> for the <i>small office home office network</i></p> <p>1.2 Identify the most suitable <i>network design</i> to meet the client requirement</p> <p>1.3 Develop and document the network design</p> <p>1.4 Identify the most suitable <i>network technologies, devices and protocols</i> and <i>network cables and connectors</i> to meet the network design</p> <p>1.5 Review the available network technologies, devices and protocols and determine the most appropriate to meet the client requirements</p> <p>1.6 Source vendors and service suppliers to obtain specifications, availability and cost of identified components</p> <p>1.7 Ensure client sign-off for proposed network design and associated components</p>
<p>2. Install and configure hardware and software</p>	<p>2.1 Develop installation plans, with prioritised tasks and contingency arrangements, for installation of components with minimum disruption to client</p> <p>2.2 Liaise with <i>appropriate person</i> to obtain approval for the plans, including security clearance and timing</p> <p>2.3 Confirm and review supplier documentation that network cables and connectors have been installed according to <i>industry standards</i>, client requirements and building requirements</p> <p>2.4 Install and configure <i>computer</i> and other hardware according to the network design and industry standards using knowledge of relevant <i>installation and configuration tools</i></p> <p>2.5 Install and configure network software according to network design and industry standards</p> <p>2.6 Install and configure other software according to network design and industry standards</p>
<p>3. Configure and test network</p>	<p>3.1 Troubleshoot client-side connectivity using appropriate <i>networking settings</i> to review relevant network tools</p> <p>3.2 Test the installed software and hardware, using available <i>networking tools</i> to ensure that components are functioning as expected</p> <p>3.3 Test the network settings to ensure the network is functioning according to specification</p> <p>3.4 Resolve problems identified through the testing process</p>

<p>4. Secure network</p>	<p>4.1 Identify possible <i>security concepts and technologies</i> relevant to securing the network</p> <p>4.2 Apply specific protection using identified <i>security features</i> to protect against possible network attacks</p> <p>4.3 Troubleshoot different types of <i>security intrusion symptoms and issues</i></p>
<p>5. Document completed work, hand over to client and obtain client approval</p>	<p>5.1 Document final network design and associated hardware, software and security features</p> <p>5.2 Document installation, bootup and configuration procedures as per client requirements</p> <p>5.3 Complete handover and secure sign-off from client</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate hardware, software and network specifications against client requirements
- communication skills to deal with clients and vendors
- literacy skills to:
  - review technical documentation
  - write detailed technical notes
- planning and organisational skills to:
  - set benchmarks and identify scope
  - develop plans, prioritise tasks and apply contingency strategy
- problem-solving skills to predict the range of network problems
- research skills to identify, analyse and evaluate technical information
- technical skills to:
  - identify and install components of hardware, software, cabling and wireless equipment
  - use network system software.

### Required knowledge

- current industry-accepted hardware and software products
- current industry-accepted network hardware and software products
- data and voice transmission technologies and protocols
- hardware and software installation procedures
- local area network (LAN) capabilities and characteristics, including network type, such as ethernet, Appletalk IP addressing, switch or hub operation
- network connections, both wired and wireless
- networking technologies, incorporating substantial depth in areas relating to network operating systems and cabling standards
- operating system, such as Mac, Linux, Novell, Windows, to enable basic installation
- set-up and configuration procedures
- small business and home office networking requirements
- software packages supported by the organisation.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the most relevant network hardware and software equipment to meet client requirements</li> <li>• install, configure and test the network according to client requirements, and produce appropriate documentation</li> <li>• identify possible security threats and secure the network.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• current industry standard software, hardware, and networking technologies</li> <li>• server and workstation hardware and software</li> <li>• internet connection</li> <li>• live network</li> <li>• network components, hardware and software</li> <li>• networked computers</li> <li>• technical documentation and installation manuals</li> <li>• vendor hardware and software components</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate’s knowledge of:             <ul style="list-style-type: none"> <li>• current industry-accepted network hardware and software products</li> <li>• hardware and software installation procedures</li> </ul> </li> <li>• direct observation of candidate:             <ul style="list-style-type: none"> <li>• configuring LAN equipment in a variety of scenarios</li> <li>• troubleshooting security issues</li> </ul> </li> <li>• review of candidate’s:             <ul style="list-style-type: none"> <li>• documented installation process</li> <li>• documented security settings.</li> </ul> </li> </ul>
<b>Guidance information</b>	<p>Holistic assessment with other units relevant to the industry sector,</p>

<p><b>for assessment</b></p>	<p>workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
------------------------------	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Client requirements</i></b> may relate to networking a:</p>	<ul style="list-style-type: none"> <li>• small business</li> <li>• small club</li> <li>• small home office</li> <li>• small network.</li> </ul>
<p><b><i>Small office home office network</i></b> may refer to:</p>	<ul style="list-style-type: none"> <li>• a single or small number of rooms</li> <li>• linking a small number of personal computers (PCs) or laptops and associated peripherals</li> <li>• having or not having a server</li> <li>• sharing peripherals, files and other information</li> <li>• using single type or combination of wired or wireless connections:                         <ul style="list-style-type: none"> <li>• category 5 (or similar) cabling</li> <li>• ethernet network hub</li> <li>• ethernet network switch</li> <li>• wi-fi wireless network.</li> </ul> </li> </ul>
<p><b><i>Network design</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• Bluetooth</li> <li>• broadband:                         <ul style="list-style-type: none"> <li>• cable</li> <li>• digital subscriber line (DSL)</li> <li>• fibre</li> <li>• satellite</li> </ul> </li> <li>• cellular</li> <li>• dial-up</li> <li>• wireless:                         <ul style="list-style-type: none"> <li>• all 802.11 types</li> <li>• dynamic host configuration protocol (DHCP) settings</li> <li>• MAC filtering</li> <li>• service set identifier (SSID)</li> <li>• wi-fi protected access (WPA)</li> <li>• wired equivalent privacy (WEP).</li> </ul> </li> </ul>
<p><b><i>Networking technologies, devices and protocols</i></b> may</p>	<ul style="list-style-type: none"> <li>• bandwidth and latency</li> <li>• basics class identification</li> <li>• basics of configuring IP addressing and transmission control</li> </ul>

<p>include:</p>	<ul style="list-style-type: none"> <li>protocol or internet protocol (TCP/IP) properties (DHCP, DNS)</li> <li>• basics of workgroups and domains</li> <li>• common ports:             <ul style="list-style-type: none"> <li>• file transfer protocol (FTP)</li> <li>• hypertext transfer protocol (HTTP)</li> <li>• hypertext transfer protocol secure (HTTPS)</li> <li>• post office protocol (POP)</li> <li>• simple mail transfer protocol (SMTP)</li> <li>• Telnet</li> </ul> </li> <li>• full-duplex and half-duplex</li> <li>• hub, switch and router</li> <li>• identify virtual private networks (VPN)</li> <li>• internet protocol version 6 (IPv6) versus internet protocol version 4 (IPv4):             <ul style="list-style-type: none"> <li>• address conventions</li> <li>• address length differences</li> </ul> </li> <li>• local area network (LAN) or wide area network (WAN)</li> <li>• protocols, such as:             <ul style="list-style-type: none"> <li>• TCP/IP</li> <li>• network basic input/output system (NETBIOS)</li> </ul> </li> <li>• status indicators.</li> </ul>
<p><b>Network cables and connectors</b> may include:</p>	<ul style="list-style-type: none"> <li>• cables:             <ul style="list-style-type: none"> <li>• plenum or polyvinyl chloride (PVC)</li> <li>• shielded twisted-pair (STP)</li> <li>• fibre</li> <li>• coaxial cable</li> <li>• unshielded twisted-pair (UTP), such as CAT3, CAT5, 5e, and CAT6</li> </ul> </li> <li>• connectors:             <ul style="list-style-type: none"> <li>• RJ11</li> <li>• RJ45.</li> </ul> </li> </ul>
<p><b>Appropriate person</b> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<p><b>Industry standards</b> may include:</p>	<ul style="list-style-type: none"> <li>• Australian Standards (AS)</li> <li>• Institute of Electrical and Electronics Engineers (IEEE)</li> <li>• International Electrotechnical Commission (IEC)</li> <li>• International Organization for Standardization (ISO)</li> <li>• International Telecommunications Union (ITU)</li> </ul>

	<ul style="list-style-type: none"> <li>• Internet Engineering Task Force (IETF)</li> <li>• organisational standards</li> <li>• project standards.</li> </ul>
<p><i>Computer</i> may include:</p>	<ul style="list-style-type: none"> <li>• iPad (or similar)</li> <li>• laptop</li> <li>• notebook</li> <li>• personal digital assistant (PDA)</li> <li>• Mac or PC</li> <li>• server</li> <li>• thin client</li> <li>• workstation.</li> </ul>
<p><i>Installation and configuration tools</i> may include:</p>	<ul style="list-style-type: none"> <li>• basics of hardware and software firewall configuration:             <ul style="list-style-type: none"> <li>• port assignment or setting up rules (exceptions)</li> <li>• port forwarding or port triggering</li> </ul> </li> <li>• connection types:             <ul style="list-style-type: none"> <li>• basic VoIP (consumer applications)</li> <li>• Bluetooth (1.0 versus 2.0)</li> <li>• broadband:                 <ul style="list-style-type: none"> <li>• cable</li> <li>• DSL</li> <li>• ISDN</li> <li>• satellite</li> </ul> </li> <li>• cellular</li> <li>• dial-up</li> <li>• LAN (10, 100, 1000BaseT, Speeds)</li> <li>• routers or access points:                 <ul style="list-style-type: none"> <li>• change default username and password</li> <li>• change SSID from default</li> <li>• disable DHCP</li> <li>• disable SSID broadcast</li> <li>• firewall</li> <li>• MAC filtering</li> <li>• update firmware</li> <li>• use static IP</li> </ul> </li> <li>• wireless:                 <ul style="list-style-type: none"> <li>• all 802.11</li> <li>• DHCP settings</li> <li>• MAC filtering</li> <li>• service set identifier (SSID)</li> <li>• wired equivalent privacy (WEP)</li> </ul> </li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• wi-fi protected access (WPA)</li> <li>• physical installation:             <ul style="list-style-type: none"> <li>• cable length</li> <li>• wireless router placement.</li> </ul> </li> </ul>
<p><i>Network settings</i> may include:</p>	<ul style="list-style-type: none"> <li>• characteristics of TCP/IP:             <ul style="list-style-type: none"> <li>• automatic IP addressing</li> <li>• loopback addresses</li> </ul> </li> <li>• firewall settings:             <ul style="list-style-type: none"> <li>• open and closed ports</li> <li>• program filters</li> </ul> </li> <li>• FTP settings:             <ul style="list-style-type: none"> <li>• exceptions</li> <li>• IP addresses</li> <li>• ports</li> <li>• programs</li> </ul> </li> <li>• mail protocol settings:             <ul style="list-style-type: none"> <li>• internet message access protocol (IMAP)</li> <li>• POP</li> <li>• SMTP</li> </ul> </li> <li>• proxy settings:             <ul style="list-style-type: none"> <li>• exceptions</li> <li>• IP addresses</li> <li>• ports</li> <li>• programs</li> </ul> </li> <li>• TCP/IP settings:             <ul style="list-style-type: none"> <li>• DHCP (dynamic versus static)</li> <li>• DNS</li> <li>• gateway</li> <li>• NAT (private and public)</li> <li>• subnet mask.</li> </ul> </li> </ul>
<p><i>Networking tools</i> may include:</p>	<ul style="list-style-type: none"> <li>• secure connection protocols:             <ul style="list-style-type: none"> <li>• HTTPS</li> <li>• secure shell (SSH)</li> </ul> </li> <li>• tools to use and interpret results:             <ul style="list-style-type: none"> <li>• ipconfig</li> <li>• Net use</li> <li>• Netstat</li> <li>• Nslookup</li> <li>• Ping</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• Telnet</li> <li>• Tracert.</li> </ul>
<p><i>Security concepts and technologies</i> may include:</p>	<ul style="list-style-type: none"> <li>• authentication technologies:             <ul style="list-style-type: none"> <li>• biometrics</li> <li>• password</li> <li>• smart cards</li> <li>• user name</li> </ul> </li> <li>• basics of data sensitivity and data security:             <ul style="list-style-type: none"> <li>• classifications</li> <li>• compliance</li> <li>• social engineering</li> </ul> </li> <li>• data wiping or hard drive destruction or hard drive recycling</li> <li>• encryption technologies</li> <li>• software firewall:             <ul style="list-style-type: none"> <li>• exceptions</li> <li>• port security.</li> </ul> </li> </ul>
<p><i>Security features</i> may include:</p>	<ul style="list-style-type: none"> <li>• biometrics:             <ul style="list-style-type: none"> <li>• fingerprint scanner</li> </ul> </li> <li>• bios security:             <ul style="list-style-type: none"> <li>• drive lock</li> <li>• intrusion detection</li> <li>• passwords</li> <li>• TPM</li> </ul> </li> <li>• locking workstation:             <ul style="list-style-type: none"> <li>• hardware</li> <li>• operating system</li> </ul> </li> <li>• malicious software protection:             <ul style="list-style-type: none"> <li>• adware</li> <li>• grayware</li> <li>• spam</li> <li>• spyware</li> <li>• trojans</li> <li>• viruses</li> <li>• worms</li> </ul> </li> <li>• password management or password complexity</li> <li>• wireless encryption:             <ul style="list-style-type: none"> <li>• client configuration, such as service set identifier (SSID)</li> <li>• WEPx and WPAx.</li> </ul> </li> </ul>
<p><i>Common security</i></p>	<ul style="list-style-type: none"> <li>• operating systems:</li> </ul>

<p><i>intrusion symptoms and issues</i> may relate to:</p>	<ul style="list-style-type: none"><li>• encryption (Bitlocker, EFS)</li><li>• local users and groups: administrator, power users, guest, users</li><li>• new technology file system (NTFS) versus share permissions:<ul style="list-style-type: none"><li>• allow versus deny</li><li>• difference between moving and copying folders and files</li><li>• file attributes</li></ul></li><li>• shared files and folders:<ul style="list-style-type: none"><li>• administrative shares versus local shares</li><li>• inheritance</li><li>• permission propagation</li></ul></li><li>• system files and folders</li><li>• user authentication</li><li>• Vista or Windows 7 User Account Control (UAC)</li><li>• system:<ul style="list-style-type: none"><li>• network basic input/output system (BIOS) security:<ul style="list-style-type: none"><li>• drive lock</li><li>• passwords</li><li>• intrusion detection</li><li>• TPM</li></ul></li></ul></li><li>• virus and malware tools:<ul style="list-style-type: none"><li>• educate end user</li><li>• identify malware symptoms</li><li>• quarantine infected systems</li><li>• remediate infected systems</li><li>• repair boot blocks</li><li>• research malware types, symptoms and solutions (virus encyclopaedia)</li></ul></li><li>• scan and removal techniques:<ul style="list-style-type: none"><li>• boot environment</li><li>• safe mode</li></ul></li><li>• schedule scans</li><li>• update antivirus software:<ul style="list-style-type: none"><li>• automatic versus manual</li><li>• signature and engine updates</li></ul></li><li>• use antivirus software.</li></ul>

## **Unit Sector(s)**

Systems administration and support

## ICASAS401A Perform unit test for a class

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to ensure that the system is proved adequate, before handover to the client or user, by unit testing functionality and reliability of individual components.

### Application of the Unit

This unit applies to programmers or testers who are required to test classes.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare for test	1.1 Determine <b><i>test criteria</i></b> 1.2 Prepare the <b><i>test environment</i></b> 1.3 Perform static tests using appropriate test tools to verify correct behaviour of modules 1.4 Use a test harness program to exercise module behaviour 1.5 Test objects containing lower level class instances separately 1.6 Prepare data to facilitate path testing 1.7 Prepare data to facilitate member function testing
2. Conduct test	2.1 Ensure clean test environment 2.2 Initialise test environment 2.3 Run test harness and document results in line with test and acceptance processes 2.4 Finalise test environment
3. Analyse and classify results	3.1 Review and classify test results to highlight areas of concern 3.2 Compare test results against requirements and design specifications in line with <b><i>quality benchmarks</i></b> 3.3 Forward test results to <b><i>appropriate person</i></b> 3.4 Review feedback 3.5 Ensure compliance with documentation and reporting standards

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to present and actively question and listen
- literacy skills to analyse and evaluate information when details and comments are logged and signatures are gained
- problem-solving skills for a defined range of unpredictable problems, such as memory leakage, global name space pollution, and static variables
- technical skills to use testing tools and methodologies.

### Required knowledge

- object-oriented programming language
- automated test tools, with detailed knowledge of features and processes in some areas
- client business domain relating to class to be tested
- input and output requirements
- organisational requirements relating to class to be tested
- system testing
- underlying test data.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• prepare a test environment</li> <li>• conduct unit test, covering:             <ul style="list-style-type: none"> <li>• member function test</li> <li>• path test</li> <li>• static test</li> </ul> </li> <li>• analyse test results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• suitable test plan</li> <li>• specific requirements</li> <li>• design documents used in the analysis of the test</li> <li>• suitable class to test</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of a test for a particular class</li> <li>• direct observation of candidate conducting test</li> <li>• evaluation of candidate's documented analysis of test results and feedback.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Test criteria</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• object-oriented language criteria that may encompass:                             <ul style="list-style-type: none"> <li>• inheritance between classes</li> <li>• interaction between methods of the classes</li> <li>• procedural language criteria</li> <li>• proper instantiation of classes</li> </ul> </li> <li>• procedural language criteria that may encompass:                             <ul style="list-style-type: none"> <li>• behaviour that affects the attributes of the program</li> <li>• parameters</li> <li>• procedures</li> <li>• return values.</li> </ul> </li> </ul>
<p><b><i>Test environment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• data</li> <li>• network or communications and other equipment</li> <li>• operating system</li> <li>• other support software</li> <li>• program libraries.</li> </ul>
<p><b><i>Quality benchmarks</i></b> may relate to:</p>	<ul style="list-style-type: none"> <li>• organisational standards</li> <li>• products, such as Protocol and Service Multiplexor (PSM).</li> </ul>
<p><b><i>Appropriate person</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• project leader or programmer responsible for code</li> <li>• supervisor.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS402A Implement configuration management strategies

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement administrative and technical procedures throughout the software development and documentation life cycle.

## Application of the Unit

This unit applies to senior information and communications technology (ICT) staff in a range of areas who are required to ensure that appropriate administrative standards support development environments.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Identify and clarify configuration management requirements</p>	<p>1.1 Develop and assemble identification standards for the naming and version control of <i>software</i> and <i>documentation</i>, and provide to <i>stakeholders</i></p> <p>1.2 Identify the <i>software configuration tools</i> and procedures for the required level of integration into the programming environment</p> <p>1.3 Identify responsibilities for configuration management within the project and for ongoing support, including approval of changes</p> <p>1.4 Take action to ensure that stakeholders are aware of their roles</p> <p>1.5 Identify the point at which items are subjected to configuration control with stakeholders</p>
<p>2. Employ appropriate control mechanisms</p>	<p>2.1 Identify and document the method for identification and recording of change requests in line with <i>organisational requirements</i> and ensure this is maintained during development process</p> <p>2.2 Take action to ensure that the evaluation criteria and process for approval of change requests are employed according to organisational requirements</p> <p>2.3 Take action to ensure that other management, security and access control criteria are employed according to organisational requirements</p> <p>2.4 Implement controls to ensure that necessary audit trails and alerts for variations or non-conformance are continuously maintained during development</p>
<p>3. Implement monitoring mechanisms</p>	<p>3.1 Implement controls to ensure that mechanisms to identify the status of software throughout the software development life cycle are continuously maintained</p> <p>3.2 Document the development and maintenance of records and status reports required to show the history of baselines and their links to backups</p> <p>3.3 Take action to ensure that the level of detail required in the status reports, and identification of target audiences, meets the configuration management procedures, International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) and organisational requirements</p> <p>3.4 Integrate configuration management into general project management processes for monitoring and control purposes and document</p>

4. Manage release of product	<p>4.1 Take action to ensure the physical and functional completeness of items for the purpose of release to all stakeholders</p> <p>4.2 Identify and implement the <i>requirements</i> for formal control of software products</p> <p>4.3 Determine and document policies for retention of baseline or master copies, taking into account safety and security, legislative requirements and <i>organisational guidelines</i></p>
------------------------------	---

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - gain consensus on concepts
  - liaise with stakeholders
  - transfer and collect information
- literacy skills to develop technical and business reports
- numeracy skills to manage a budget
- planning and organisational skills to estimate use across a range of predictable project contexts related to either varied or highly specific functions
- problem-solving skills to:
  - identify configuration control with developers and team members
  - scope and prepare time lines, budget and risk manage process
- research skills to analyse and evaluate:
  - broad features of a particular business domain
  - best practice in software development methodologies
- technical skills to use a range of software configuration tools and software applications.

### Required knowledge

- project-planning methodologies and tools
- benchmarking methodologies when implementing monitoring mechanisms
- how to formulate software size models and size estimates when employing control mechanisms
- quality assurance and quality processes when implementing monitoring mechanisms
- software development methodologies when identifying and clarifying configuration management requirements.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• use quality processes, audit trails and version control to implement administrative and technical procedures throughout the software development and documentation life cycle</li> <li>• implement and maintain reliable and valid configuration management procedures for technical and administrative procedures for use during the software life cycle.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• configuration tools</li> <li>• evaluation criteria</li> <li>• process for approval of change requests</li> <li>• templates for status reports</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• software development</li> <li>• benchmarking methodologies</li> <li>• audit requirements</li> <li>• parallel development</li> </ul> </li> <li>• review of candidate's documentation, with particular reference to: <ul style="list-style-type: none"> <li>• code identification in line with organisational requirements</li> <li>• change control</li> <li>• backup management</li> <li>• version control</li> <li>• release mechanisms</li> </ul> </li> <li>• direct observation of candidate briefing stakeholders.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial applications</li> <li>• in-house or customised</li> <li>• organisation-specific</li> <li>• packaged.</li> </ul>
<b><i>Documentation</i></b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• ISO, IEC and AS standards</li> <li>• naming standards</li> <li>• project management templates</li> <li>• report writing principles</li> <li>• version control.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• management</li> <li>• project team</li> <li>• sponsor</li> <li>• testers</li> <li>• user.</li> </ul>
<b><i>Software configuration tools</i></b> may include:	<ul style="list-style-type: none"> <li>• Baseline +Plus</li> <li>• ClearCase</li> <li>• Continuous/CM</li> <li>• CVS</li> <li>• PVCS Configuration Builder</li> <li>• PVCS Version Manager</li> <li>• PVCS Version Manager PLUS</li> <li>• RCS</li> <li>• SCCS</li> <li>• Source Integrity</li> <li>• TeamWare</li> <li>• Version +Plus</li> <li>• Version Stamper.</li> </ul>
<b><i>Organisational requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• how and what the organisation wants in regard to work environment</li> <li>• preventative maintenance and diagnostic policy, roles and technical responsibilities in the IT department</li> <li>• problem-solution processes</li> </ul>

	<ul style="list-style-type: none"> <li>• vendor and product service level support agreements.</li> </ul>
<i>Requirements</i> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<i>Organisational guidelines</i> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS403A Review site environmental factors prior to IT system implementation

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to review, identify and assess the impact of site environmental factors prior to commencing IT system installation.

Site environmental factors could include legislation, site history, environmental matters and OHS guidelines.

## Application of the Unit

This unit applies to senior individuals in information and communications technology (ICT) areas who are responsible for assessing a physical site to determine its suitability for system installation.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Plan work area	<p>1.1 Obtain technical and environmental system requirements for equipment to be installed and document site requirements, including OHS site-specific requirements</p> <p>1.2 Consider and take action on requirements associated with <b>equipment</b> against installation requirements</p> <p>1.3 Conduct on-site inspection and audit against site specifications</p> <p>1.4 Formulate preliminary recommendations for site and assess impact on system installation schedule</p> <p>1.5 Create a preliminary report specifying recommended changes to the site to meet requirements and submit the report to <b>appropriate person</b> for approval</p>
2. Evaluate environment	<p>2.1 Organise appropriate support staff to facilitate a successful installation</p> <p>2.2 Install cabling and other environmental equipment to required technical and industry standards</p> <p>2.3 Manage <b>hardware</b> installation to ensure OHS standards for hardware installation are adhered to</p> <p>2.4 Review and test hardware and <b>software</b> to ensure that the system meets <b>client</b> business requirements and system objectives</p>
3. Document recommendations	<p>3.1 Prepare a final report documenting findings and issues relating to site requirements and preparation</p> <p>3.2 Submit final recommendations to appropriate person for approval</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to conduct on-site inspection and audit against site specifications
- communication skills to liaise with clients and other team members
- literacy skills to:
  - document findings related to site requirements
  - read complex technical and non-technical information
- planning and organisational skills to:
  - contribute to solutions and goals of a non-routine or contingency nature
  - transfer and collect information to gain consensus on concepts
- problem-solving skills to develop strategic initiatives
- technical skills to:
  - install cabling and other environmental equipment
  - manage and test hardware and software installation.

### Required knowledge

- current industry-accepted hardware and software products
- current system's functionality
- general features and capabilities of network devices
- physical prerequisites needed for system installation
- possible legislative requirements relating to cabling and building preservation
- quality assurance practices
- role of stakeholders and the degree of stakeholder involvement
- vendor equipment specifications and installation requirements.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• prepare a site in relation to impact on the installation schedule and identify environmental prerequisites prior to commencement of installation</li> <li>• sequence the preparatory steps, taking into account time and budget constraints.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• staff resources and technical equipment</li> <li>• live network</li> <li>• server and workstation hardware and software</li> <li>• several different device types to be installed</li> <li>• number of scenarios, such as LANs incorporating hubs, routers and peripherals</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate’s knowledge of the technologies and associated protocols associated with system installation</li> <li>• direct observation of candidate installing cables and other environmental equipment</li> <li>• evaluation of candidate’s site installation report.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• asymmetric digital subscriber line (ADSL) or cable modems</li> <li>• external or internal storage devices</li> <li>• hubs</li> <li>• monitors</li> <li>• other peripheral devices</li> <li>• personal computers</li> <li>• personal digital assistant (PDA)</li> <li>• printers</li> <li>• switches</li> <li>• workstations.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• modems and other connectivity devices</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial applications</li> <li>• customised</li> <li>• in-house</li> <li>• organisation-specific</li> <li>• packaged.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>

Systems administration and support

## ICASAS404A Acquire IT system components

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify IT system components and use organisational procedures to purchase identified components.

### Application of the Unit

This unit applies to individuals in a variety of information and communications technology (ICT) areas who are required to procure required components of a system, following organisational guidelines.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Confirm system components for acquisition	<p>1.1 Confirm <i>client requirements</i>, including <i>software</i> and <i>operating system</i> requirements</p> <p>1.2 Review technical papers and recommendations that identify required <i>hardware</i> and software components</p> <p>1.3 Review and clearly identify <i>system components</i></p> <p>1.4 Assess and determine the fit with existing technology by consulting with system developer</p> <p>1.5 Identify and determine the best and current technology fit for each purpose by consulting with system developer</p> <p>1.6 Develop a list of required system components with <i>specifications</i> and possible suppliers</p>
2. Agree on methods of component acquisition	<p>2.1 Identify and assess the client organisation's preferred <i>acquisition methods</i> and policies</p> <p>2.2 Evaluate acquisition methods and alternatives for required hardware and software components against required service levels, cost constraints, geographic constraints and user preferences</p> <p>2.3 Discuss and agree acquisition method with client</p> <p>2.4 Inform users and other stakeholders of acquisition method</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - determine software and operating system requirements
  - evaluate acquisition methods
- communication skills to:
  - liaise with client users and system developer
  - liaise with stakeholders and service or product suppliers
  - negotiate with systems developers the relative merits of two or more competing devices for a purchase agreement
- literacy skills to read complex technical papers
- planning and organisational skills to manage project
- problem-solving skills to assess the fit with existing technology and system developers.

### Required knowledge

- change-management systems
- current industry-accepted hardware and software products
- financial management options, including leasing arrangement
- information-gathering techniques
- risk management in relation to IT component use and items procured
- quality assurance practices in relation to identifying and acquiring IT system components
- client business domain
- vendor product directions
- organisational purchasing procedures.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify correct system components</li> <li>• follow procurement procedures to purchase those components</li> <li>• fulfil technical and business requirements.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• current system architectures</li> <li>• current business and IT strategic plans</li> <li>• data models</li> <li>• functional process descriptions</li> <li>• service levels</li> <li>• user requirements</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• software and operating system requirements</li> <li>• organisation's purchasing procedures</li> </ul> </li> <li>• evaluation of candidate's acquisition methods</li> <li>• review of candidate's obtained quotes.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b><i>Requirements</i></b> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• database</li> <li>• network</li> <li>• people in the organisation</li> <li>• platform</li> <li>• system.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial applications</li> <li>• customised</li> <li>• in-house</li> <li>• organisation-specific</li> <li>• packaged.</li> </ul>
<b><i>Operating system</i></b> may include:	<ul style="list-style-type: none"> <li>• Linux</li> <li>• Mac</li> <li>• Windows.</li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• CD and DVD drives</li> <li>• central processing unit (CPU) and CPU upgrades</li> <li>• complementary metal oxide semiconductor (CMOS) battery</li> <li>• fax or modem cards</li> <li>• interface cards</li> <li>• internal and external storage devices</li> <li>• modems and other connectivity devices, such as asymmetric digital subscriber line (ADSL) modems</li> <li>• motherboards</li> <li>• networks</li> <li>• personal computers</li> <li>• random access memory (RAM) upgrades</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>

<i>System components</i> may include:	<ul style="list-style-type: none"> <li>• facilities management</li> <li>• hardware, such as internal expansion devices and external peripheral devices</li> <li>• integration and implementation services</li> <li>• personal computers, networks and printers</li> <li>• software, such as applications, utilities and operating systems.</li> </ul>
<i>Specifications</i> may include:	<ul style="list-style-type: none"> <li>• current system functionality</li> <li>• technical requirements</li> <li>• user problem statement.</li> </ul>
<i>Acquisition methods</i> may include:	<ul style="list-style-type: none"> <li>• lease</li> <li>• new or refurbished</li> <li>• outsourced</li> <li>• purchase</li> <li>• rental.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS405A Identify and evaluate IT industry vendor technologies

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to research, evaluate and recommend an industry vendor to supply IT components and to negotiate with the vendor for supply of identified components.

This unit of competency provides for several approaches, with an emphasis on researching and analysing alternative options in dealing with vendors when acquiring IT components. It covers testing, comparisons and evaluations based on the abovementioned elements, as well as consideration of such other factors as after-sales service and reliability.

## Application of the Unit

This unit applies to individuals in the support area who are required to select the most appropriate vendors for the organisation.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Select method to be used for identifying suitable vendor	<p>1.1 Evaluate organisational purchasing policy as a means of identifying vendors and document outcomes</p> <p>1.2 Consider and undertake other means of identifying suitable vendors and document outcomes</p> <p>1.3 Recommend preferred <b><i>method of vendor selection</i></b> to <b><i>client</i></b></p> <p>1.4 Plan and document selection process</p>
2. Review vendor offerings	<p>2.1 Notify vendors of organisation's requirements</p> <p>2.2 Undertake evaluation process by comparing offers against organisational requirements</p> <p>2.3 Organise vendor demonstrations and performance benchmark tests</p> <p>2.4 Select vendor based on specific technical criteria, servicing, warranty and after-sales service</p>
3. Prepare contracts and delivery requirements	<p>3.1 Prepare contracts for review by <b><i>appropriate person</i></b></p> <p>3.2 Identify and document delivery arrangements with suppliers</p> <p>3.3 Clarify installation responsibilities with suppliers</p> <p>3.4 Review warranty and support requirements with suppliers and service level agreement</p> <p>3.5 Confirm details with client</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to compare offers against organisational requirements
- communication skills to:
  - liaise with clients and vendors on technical and operational matters
  - transfer and collect information and gain consensus on concepts
- literacy skills to:
  - evaluate technical documents
  - prepare contracts and service agreements
  - prepare technical documents
- numeracy skills to:
  - compare prices between vendors
  - evaluate organisational purchasing policy
- planning and organisational skills to:
  - plan and document selection process
  - organise vendor demonstrations
  - provide warranty and after sales service.

### Required knowledge

- benchmarking methodologies
- change-management systems
- contracts in relation to supply and support
- current industry-accepted hardware and software products
- financial management and leasing arrangements
- information-gathering techniques
- quality assurance practices in relation to evaluating and recommending IT vendors
- risk management in relation to evaluating and recommending IT vendors
- client business domain
- vendor product trends.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify an appropriate vendor to supply components according to organisational requirements</li> <li>• demonstrate consistency in the acquisition of technical and business requirements.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• current business and IT strategic plans</li> <li>• service levels</li> <li>• user requirements</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• organisational purchasing policy</li> <li>• tenders</li> <li>• service level agreements</li> </ul> </li> <li>• review of candidate's documented selection process</li> <li>• direct observation of candidate obtaining requirements from user.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Method of vendor selection</i></b> may include:	<ul style="list-style-type: none"> <li>• by tender or invitation</li> <li>• registration of interest</li> <li>• request for information (RFI)</li> <li>• request for proposal (RFP).</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS406A Implement and hand over system components

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to ensure that the system is operational prior to hand over for client use.

## Application of the Unit

This unit applies to project managers who supervise their project team in conducting formal testing and trials to determine whether the system satisfies its acceptance criteria. Conducting formal testing and trials is a critical aspect of hand over.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Confirm system integrity	<p>1.1 Check the functioning of <b>system components</b> in both a stand-alone and integrated environment</p> <p>1.2 Specify shortcomings or problems and create an action plan</p> <p>1.3 Review action plan with <b>client</b></p> <p>1.4 Document system components according to standards and procedures</p>
2. Provide operation and maintenance guidance	<p>2.1 Identify and document operational issues and procedures</p> <p>2.2 Discuss maintenance issues with technical support and document outcomes</p> <p>2.3 Compare maintenance, operational and warranty considerations with <b>service level agreements</b> (SLAs) and document discrepancies</p> <p>2.4 Clarify outstanding issues with client</p>
3. Hand over system to client	<p>3.1 Demonstrate installed system to client</p> <p>3.2 Obtain client sign-off to confirm satisfaction and acceptance of the installed system</p> <p>3.3 Discuss and confirm short-term implementation support with client</p> <p>3.4 Discuss and confirm further training needs with client</p> <p>3.5 Document needs and submit to <b>appropriate person</b> for action</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - evaluate a range of complex test data
  - rigorously assess every probable event
- communication skills to liaise with team members and contractors
- literacy skills to:
  - analyse test data
  - interpret test results
  - technical skills to perform system testing.

### Required knowledge

- current business practices related to preparing reports, such as confirming system integrity and handing over system
- current industry-accepted hardware and software products to enable the candidate to optimise the value of a supply contract
- change-management systems
- client-business domain
- information-gathering techniques
- OHS requirements related to work safety, environmental factors and ergonomic considerations
- operational procedures for IT systems
- project plan, including constraints, guidelines and deadlines
- quality assurance practices
- role of stakeholders and the degree of stakeholder involvement so that levels of responsibility in a project can be clearly defined
- vendor product directions.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• confirm system integrity</li> <li>• confirm operational and maintenance procedures are in place and viable.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• customer computer site and system or suitable simulated system and environment</li> <li>• implementation plan</li> <li>• people involved in hand-over</li> <li>• project plan</li> <li>• SLAs</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate’s knowledge of operational procedures for IT systems</li> <li>• review of maintenance guidance documentation for the installed system</li> <li>• evaluation of the report prepared by the officer conducting the system testing procedures and assessing test results.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating system</li> <li>• servers.</li> </ul>
<b><i>Components</i></b> may include:	<ul style="list-style-type: none"> <li>• CD and DVD drives</li> <li>• central processing unit (CPU)</li> <li>• complementary metal oxide semiconductor (CMOS) battery</li> <li>• CPU upgrades</li> <li>• drives</li> <li>• fax or modem cards</li> <li>• interface cards</li> <li>• motherboards</li> <li>• random access memory (RAM) upgrades.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisation</li> <li>• individual</li> <li>• internal department</li> <li>• internal employee.</li> </ul>
<b><i>Service level agreements:</i></b>	<ul style="list-style-type: none"> <li>• clearly specify and quantify service levels</li> <li>• identify evaluation or audit of service levels</li> <li>• relate to communications carriers, internet service providers (ISPs), application service providers (ASPs) and SLAs for vendor products</li> <li>• should consider business processes and requirements.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

Systems administration and support

# ICASAS407A Conduct pre-installation audit for software installation

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify and appraise critical pre-existing systems or components prior to the installation of software. Establishing compatibility and interoperability is a key success factor to purchasing software.

## Application of the Unit

This unit applies to individuals in the software development area who are required to confirm the suitability of software for installation.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Assess compatibility of existing software	<p>1.1 Confirm details of <i>software</i> loaded on <i>client system</i> from actual system and from existing system documentation</p> <p>1.2 Identify software prerequisites needed for new software</p> <p>1.3 Confirm customer requirements with technical specifications</p> <p>1.4 Confirm and assess compatibility issues against installation plan and cost <i>constraints</i></p> <p>1.5 Document recommendations on variances, level and software consistency for consideration by <i>appropriate person</i></p>
2. Confirm interoperability of software with environment	<p>2.1 Confirm that there are no conflicts between the new software and previously installed software and <i>hardware</i></p> <p>2.2 Measure degree of interoperability between software</p> <p>2.3 Confirm interoperable functioning of all software involved</p>
3. Assess system capacity to install ordered software	<p>3.1 Obtain details of current system memory, disk, available disk storage, and other specific hardware requirements from investigation of system and system documentation</p> <p>3.2 Confirm that the hardware prerequisites needed for new software are met, implications noted and minimum requirements identified</p> <p>3.3 Confirm and assess capacity issues against installation plan and cost constraints</p> <p>3.4 Document recommendations on variances in capacity for consideration by appropriate person</p>
4. Prepare and distribute audit report	<p>4.1 Document findings, recommendations and impact on project in a manner appropriate for target audience</p> <p>4.2 Present and distribute the audit analysis report according to organisational standards and procedures</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with clients
- initiative and enterprise skills to develop strategic initiatives
- literacy skills to write technical reports and audit or analysis reports
- numeracy skills to calculate hardware prerequisites
- planning and organisational skills to:
  - prepare a risk management and contingency plan
  - scope, prepare time lines and cost out a project
- technical skills to use system diagnostics and utilities.

### Required knowledge

- current industry-accepted hardware and software product
- detailed knowledge of system's current functionality
- overview knowledge of:
  - quality assurance practices
  - risk-management practices
  - client business domain
  - role of stakeholders and the degree of stakeholder involvement.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• establish capability of hardware on which new system is to be installed</li> <li>• ensure that the nominated hardware has the capacity to run the installed system</li> <li>• ensure that new systems will operate cooperatively with existing systems</li> <li>• document variations from the above.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• documentation tools</li> <li>• operational system and system specifications</li> <li>• technical specifications of software to be installed</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of:             <ul style="list-style-type: none"> <li>• system current functionality</li> <li>• system hardware and software requirements</li> </ul> </li> <li>• review of audit analysis report.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial applications</li> <li>• customised</li> <li>• in-house</li> <li>• organisation-specific</li> <li>• packaged.</li> </ul>
<b><i>Client</i></b> may be:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• third party.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service providers</li> <li>• networks</li> <li>• operating systems</li> <li>• servers</li> <li>• websites.</li> </ul>
<b><i>Constraints</i></b> may include:	<ul style="list-style-type: none"> <li>• budget</li> <li>• hardware</li> <li>• legal constraints</li> <li>• policy</li> <li>• resource</li> <li>• software</li> <li>• time.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• modems and other connectivity devices, such as digital subscriber line (DSL) modems</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>

## ICASAS408A Complete data transition in data migration process

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake manipulation, migration and conversion of data between systems or databases while maintaining data integrity.

### Application of the Unit

This unit applies to individuals involved in the implementation of new systems who are required to ensure that existing data is migrated to the new system.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Perform data transition	<p>1.1 Identify and document the data that is to be migrated, transferred or archived</p> <p>1.2 Collect required data, target <b>database</b> requirements and implementation details</p> <p>1.3 Clean up data to match new data structures and rules</p> <p>1.4 Write and test conversion programs if required by the implementation plan, or use <b>conversion tools</b></p> <p>1.5 Ensure clean data take-on by re-keying or converting according to database requirements and conversion plan</p> <p>1.6 Migrate data to target environment</p> <p>1.7 Archive data according to requirements</p>
2. Check data transition	<p>2.1 Run reports and other tests on old and new data to verify the quantity and quality of data transition</p> <p>2.2 Run production or specialised programs against data to confirm control totals</p> <p>2.3 Check referential integrity and data constraints and requirements against database requirements and conversion plan</p> <p>2.4 Verify that data transition has been completed according to requirements and plans</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse new data structures and their match to existing data
- literacy skills to interpret and produce technical documentation
- technical skills to:
  - archive data
  - undertake low-level programming
  - use conversion tools.

### Required knowledge

- detailed knowledge of:
  - current industry-accepted hardware and software products, including their general features and capabilities
  - new and existing systems' current functionality
- overview knowledge of:
  - change-management systems when performing data transition and checking data integrity
  - database structures
  - quality assurance practices when checking data integrity
  - software tools
  - system data requirements
  - client business domain when checking data transition
  - client's data management and data security policy and procedures.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• transfer data from one system to another</li> <li>• produce consistency in results, database verification, and integrity and security of data</li> <li>• use organisation's record-keeping arrangements and security and access level procedures</li> <li>• demonstrate knowledge of data structures.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• conversion program, if necessary</li> <li>• data conversion plan</li> <li>• databases to store data</li> <li>• implementation plan</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• data structures</li> <li>• transition tools</li> <li>• quality assurance</li> <li>• system backup and restore procedures</li> <li>• change management</li> </ul> </li> <li>• direct observation of candidate: <ul style="list-style-type: none"> <li>• archiving data</li> <li>• adjusting data to match new data structures</li> </ul> </li> <li>• review of reports generated by candidate that verify the data transition.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level,</p>

	<p>language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>Database</b> may include:	<ul style="list-style-type: none"> <li>• commercial off-the-shelf (COTS) database packages</li> <li>• object-relational databases</li> <li>• proprietary databases</li> <li>• relational databases.</li> </ul>
<b>Conversion tools</b> may include:	<ul style="list-style-type: none"> <li>• data mart management tools</li> <li>• tools for cleansing data, e.g. integrity, enterprise and integrator</li> <li>• tools for extraction and transformation, e.g. ETI Extract, Passport, Warehouse Manager, InfoPump, InfoHub, InfoRefiner and InfoSuite</li> <li>• tools that analyse data quality, e.g. QDB/Analyze, WizRule, and Unitech Systems Inc.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS409A Manage risks involving ICT systems and technology

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement procedures that identify, analyse, evaluate and monitor risks involving information and communications technology (ICT) systems and technology. This includes the development and management of contingency plans.

## Application of the Unit

This unit applies to individuals in senior roles in various ICT areas who are required to manage risk in ICT systems.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Establish risk context	<p>1.1 Review and document organisational and technical environment</p> <p>1.2 Establish and document risk boundaries according to the business operating and strategic environment</p>
2. Identify risk factors	<p>2.1 Develop or acquire a measurement scale for project risk which includes importance, complexity, time and resources required</p> <p>2.2 Identify project risks based on the measurement scale developed and document according to <b>business requirements</b></p> <p>2.3 Identify the business impact of changes and document according to current and future business directions</p>
3. Implement contingency plans	<p>3.1 Classify each risk and create <b>contingency plans</b> that address how the risk will be monitored and overcome, if possible</p> <p>3.2 Identify measurable benchmarks to track the treatment of risks to the new <b>system</b></p> <p>3.3 Identify risk-management intervention points according to benchmarked performance tolerances</p> <p>3.4 Demonstrate use of phased implementation and piloting to reduce risk factors</p>
4. Monitor, update and report risk profile	<p>4.1 Conduct regular risk updates to add new risks and remove old risks</p> <p>4.2 Update contingency plans when appropriate to incorporate new information</p> <p>4.3 Conduct risk reviews at major project milestones and document outcomes</p> <p>4.4 Establish feedback processes to provide warning of potential new risks according to business requirements</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse the risk associated with ICT systems and technologies
- communication skills to work with project teams on risk reviews
- literacy skills to:
  - disseminate and document technical specifications
  - write policy
- numeracy skills to scale risks
- planning and organisational skills to:
  - manage risk
  - plan for contingencies.

### Required knowledge

- detailed knowledge of risk management
- overview knowledge of:
  - Australian Computer Society Code of Ethics
  - business process design
  - how business sites fit into corporate strategy
  - copyright and intellectual property in relation to IT systems and technology
  - privacy legislation relating to IT systems and technology
  - technology updating guidelines
  - business supply chain
  - user analysis and the CRM.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify where risk occurs</li> <li>• highlight the measures that will mitigate or obviate risk</li> <li>• set up procedures for regular risk reviews.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• analysis software</li> <li>• business website</li> <li>• networks</li> <li>• requirements documentation</li> <li>• risk management plan</li> <li>• site server</li> <li>• site server software</li> <li>• software applications</li> <li>• updated or new technology</li> <li>• user analysis</li> <li>• web servers</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• risk management</li> <li>• business process design</li> </ul> </li> <li>• review of candidate's documented outcomes of risk assessment process</li> <li>• evaluation of candidate's documented contingency plans</li> <li>• direct observation of candidate conducting risk reviews at project milestones.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Business requirements</i></b> may relate to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<b><i>Contingency plans</i></b> may include:	<ul style="list-style-type: none"> <li>• identifying weaknesses and providing for the implementation of a disaster prevention program</li> <li>• minimising disruption to business operations</li> <li>• providing a coordinated approach to the disaster recovery process.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating systems</li> <li>• servers.</li> </ul>

Systems administration and support

## ICASAS410A Identify and resolve client IT problems

### Modification History

Version	Comments
ICASAS410A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit defines the competency required to record and prioritise client support activities, determine the required resources, solve client IT problems or escalate as necessary.

### Application of the Unit

This unit applies to experienced technical support personnel, such as help-desk supervisors, IT support technicians, and user support specialists responsible for supporting end users.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine client problems	<p>1.1 Determine <i>client problem</i> by using questioning or other techniques</p> <p>1.2 Document responses of client for follow-up action</p> <p>1.3 Examine logged requests to determine specific <i>requirements</i></p> <p>1.4 Take action where required to gain further information</p> <p>1.5 Refer to a database of known problems to identify possible resolution options</p>
2. Prioritise client problems	<p>2.1 Determine the scale of the problem based on information gathered</p> <p>2.2 Establish and record relevant <i>constraints</i></p> <p>2.3 Undertake an impact analysis of the problem to determine severity and risks</p> <p>2.4 Prioritise the problem according to the organisation's escalation procedures</p> <p>2.5 Provide <i>advice and support</i> to the client from database of known problems, where appropriate</p>
3. Refer problems where required	<p>3.1 Investigate and apply the appropriate process to follow when referring problems to third parties</p> <p>3.2 Provide third party with client and problem details as required</p> <p>3.3 Document the advice and support provided by third party according to <i>organisational guidelines</i>, where appropriate</p>
4. Carry out maintenance	<p>4.1 Obtain appropriate components for resolution in line with organisational guidelines</p> <p>4.2 Complete <i>maintenance</i> in line with organisational guidelines</p> <p>4.3 Store or dispose of used <i>components</i> following organisational <i>environmental guidelines</i></p>
5. Prepare maintenance report	<p>5.1 Prepare a maintenance report, including information about problems and resolution action</p> <p>5.2 Forward maintenance report to client for feedback</p>
6. Confirm problem resolution	<p>6.1 Obtain feedback from the client to ensure requirements have been met</p> <p>6.2 Forward client feedback to <i>appropriate person</i> for sign-off and record in known problems database as appropriate</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - determine client problem by questioning
  - follow up with client
  - liaise with technical team members
  - provide assistance according to organisational guidelines
  - provide clear and precise advice when logging calls from help-desk support staff
  - refer problems to third parties
- literacy skills to:
  - document initial problem and recommendations to solve problem
  - prepare maintenance report
  - read and interpret technical manuals
  - record maintenance and fault data
- planning and organisational skills to:
  - develop plans with prioritised tasks
  - minimise disruption to client
  - organise maintenance
- problem-solving skills to:
  - determine client problems based on logged requests
  - identify possible resolution options using a database of known problems
  - solve unknown problems in a range of contexts
- technical skills to undertake diagnostic and maintenance tasks.

### Required knowledge

- hardware and software products:
  - currently in use
  - supported by the organisation
- help-desk or service desk structure and escalation procedures
- functions and basic features of operating system
- organisational structure
- principles of equal employment opportunity and anti-discrimination relating to client IT problem
- principles of OHS relating to client IT problem
- security and network guidelines and procedures.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• record and prioritise client support activities</li> <li>• determine the required resources</li> <li>• solve the client problem or escalate according to organisational guidelines or practices.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• sites with a representative range of current industry-standard hardware</li> <li>• sites with a representative range of current industry-standard software and diagnostic tools</li> <li>• technical records</li> <li>• organisational guidelines</li> <li>• vendor documentation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate: <ul style="list-style-type: none"> <li>• undertaking maintenance and preparing a maintenance report</li> <li>• using database of known problems</li> </ul> </li> <li>• review of maintenance report prepared by candidate</li> <li>• verbal or written questioning to assess candidate's knowledge of maintaining and solving client computer problems.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<b><i>Problem</i></b> may be in reference to:	<ul style="list-style-type: none"> <li>• failure to:             <ul style="list-style-type: none"> <li>• print</li> <li>• load</li> <li>• perform a feature correctly</li> <li>• save</li> <li>• login</li> <li>• connect</li> <li>• boot</li> <li>• recognise peripheral devices</li> </ul> </li> <li>• failures in a range of IT areas, including:             <ul style="list-style-type: none"> <li>• application programs</li> <li>• business programs</li> <li>• networks</li> <li>• systems.</li> </ul> </li> </ul>
<b><i>Requirements</i></b> may be in reference to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• employees</li> <li>• network</li> <li>• system.</li> </ul>
<b><i>Constraints</i></b> may include:	<ul style="list-style-type: none"> <li>• budget</li> <li>• hardware</li> <li>• legal constraints</li> <li>• policy</li> <li>• resource</li> <li>• software</li> <li>• time.</li> </ul>
<b><i>Advice and support</i></b> may include:	<ul style="list-style-type: none"> <li>• advice on hardware supported by the organisation:             <ul style="list-style-type: none"> <li>• configuration of printers and scanners</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• formatting of disks</li> <li>• operation of printers</li> <li>• setting of screen resolution</li> <li>• advice on software used by the organisation:             <ul style="list-style-type: none"> <li>• creating graphs</li> <li>• formatting spreadsheets</li> <li>• setting up email system</li> <li>• setting up of word-processing documents for printing</li> </ul> </li> <li>• client documentation</li> <li>• manuals</li> <li>• vendor documentation.</li> </ul>
<b>Organisational guidelines</b> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• use of emails and internet access</li> <li>• virus risk.</li> </ul>
<b>Maintenance</b> may include:	<ul style="list-style-type: none"> <li>• 24 hours a day, 7 days a week support</li> <li>• business hours only support</li> <li>• on-site response</li> <li>• real-time online support</li> <li>• remote diagnostics</li> <li>• return to depot</li> <li>• second-level support</li> <li>• telephone support.</li> </ul>
<b>Components</b> may include:	<ul style="list-style-type: none"> <li>• CD and DVD drives</li> <li>• central processing unit (CPU)</li> <li>• complementary metal oxide semiconductor (CMOS) battery</li> <li>• fax or modem cards</li> <li>• interface cards</li> <li>• motherboards</li> <li>• random access memory (RAM).</li> </ul>
<b>Environmental guidelines</b> may include:	<ul style="list-style-type: none"> <li>• recycling of packaging:             <ul style="list-style-type: none"> <li>• cardboard</li> <li>• paper</li> <li>• polystyrene</li> </ul> </li> <li>• recycling or disposal of e-waste:</li> </ul>

	<ul style="list-style-type: none"> <li>• cathode ray tube (CRT) monitors</li> <li>• printed circuit boards</li> <li>• redundant hardware.</li> </ul>
<p><i>Appropriate person</i> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• help-desk person</li> <li>• subject matter expert</li> <li>• supervisor</li> <li>• system administrator.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS411A Assist with policy development for client support procedures

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to contribute to the formulation of client support procedures to be included within organisational policy.

## Application of the Unit

This unit applies to experienced technical support personnel, such as help-desk supervisors, IT support technicians, and user support specialists.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine support issues	<p>1.1 Review current <i>client</i> support procedures followed by the organisation if appropriate</p> <p>1.2 Gather feedback from client detailing positive and negative aspects of their contact with the organisation</p> <p>1.3 Gather feedback from <i>user</i> who executes client support procedures, detailing problems with current methods</p>
2. Develop client support procedures	<p>2.1 Create or update client support procedures using information gathered from the client and the user</p> <p>2.2 Forward new client support procedures to <i>appropriate person</i> for review</p>
3. Provide recommended changes for client support policy	<p>3.1 Evaluate feedback on client support policy</p> <p>3.2 Incorporate changes to client support policy</p> <p>3.3 Determine the impact the new policy will have on <i>organisational guidelines</i> and client interactions</p> <p>3.4 Prepare a report detailing changes in policy and the impact on the client and the user in a clear and concise manner</p> <p>3.5 Forward the report and the updated policy to appropriate person for approval</p>
4. Update documented client support policy	<p>4.1 Amend policies to include new client support procedures</p> <p>4.2 Issue new policies to clients and users in line with organisational guidelines</p> <p>4.3 Maintain policy updates in line with organisational guidelines</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - determine the impact of policy changes
  - evaluate feedback on client support policy
- communication skills to:
  - effectively use questioning and active listening techniques
  - gather feedback from users
  - liaise with technical team members
- initiative and enterprise skills to identify potential improvements to client support policies
- literacy skills to:
  - evaluate reports
  - prepare reports and update or amend support policies
  - read and interpret technical manuals and technical workplace documentation
  - review current support procedures and update accordingly based on feedback
- problem-solving skills to determine issues around current methods of supporting users.

### Required knowledge

- current trends and issues in IT
- organisational guidelines for client maintenance and administration
- organisational policy for access and security
- review process and its stages.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• evaluate and analyse existing client support policy and procedures</li> <li>• develop new criteria and procedures for performing current practices that cater for emerging client needs.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• sites, peers and supervisors to identify the extent and quality of the contribution required</li> <li>• information about systems or networks to be supported</li> <li>• technical manuals, tools and organisational guidelines</li> <li>• current business requirements and documentation standards</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of client feedback and resulting amendments to client support procedures and policies</li> <li>• review of a report prepared detailing changes in policy and the impact on the client and the user</li> <li>• verbal or written questioning to assess candidate’s knowledge of organisational guidelines.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<b><i>User</i></b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• IT manager</li> <li>• project manager</li> <li>• supervisor</li> <li>• team leader</li> <li>• user support specialist.</li> </ul>
<b><i>Organisational guidelines</i></b> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS412A Action change requests

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to receive, review and carry out change requests, while using a change-management system according to client requirements.

### Application of the Unit

This unit applies to frontline experienced personnel, such as help-desk supervisors, IT support technicians, user support specialists, network specialists, web developers and software developers responsible for system changes.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Review change requests	<p>1.1 Receive and document requests for <b>hardware</b> and <b>software</b> changes from client, using a change-management system and according to organisational <b>help-desk procedures</b></p> <p>1.2 Gather and organise <b>system</b> data relevant to the change requests, using available diagnostic tools</p> <p>1.3 Review the proposed changes against current and future business <b>requirements</b> and examine the system data, with work team, in order to select appropriate changes to be carried out</p> <p>1.4 Discuss and clarify the selected changes with <b>client</b></p>
2. Modify system according to requested changes	<p>2.1 Develop a plan, with prioritised tasks and contingency arrangements, for modification of the system</p> <p>2.2 Undertake the selected system changes according to <b>organisational guidelines</b> and procedures and according to manufacturer recommendations</p> <p>2.3 Test the system changes for performance and identify problems</p> <p>2.4 Resolve identified problems</p> <p>2.5 Revise relevant client and <b>technical documentation</b> to reflect system changes according to organisational <b>standards</b></p> <p>2.6 Notify client of status of change and update change-management system, as per organisational help-desk procedures</p>
3. Prepare and deliver training on use of modified system	<p>3.1 Prepare training to meet the needs of client in using the changed system</p> <p>3.2 Deliver prepared training appropriate to the client</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - examine system data to select appropriate changes to be carried out
  - review proposed changes against current and future business requirements
- communication skills to:
  - deliver training on use of the modified system
  - discuss and clarify changes with clients
  - interact with clients and team members
  - maintain a client focus
  - notify clients of status of change
- literacy skills to:
  - carry out change requests
  - conform to manufacturer's recommendations
  - perform recordkeeping for requests and actions
  - revise technical documentation according to organisational standards
  - update change-management system
- planning and organisational skills to:
  - action change requests in a timely manner
  - develop plans with prioritised tasks and contingency arrangements
  - manage and prioritise own work
  - prepare training to meet the needs of the client.

### Required knowledge

- change-management tools
- client-business domain
- features and capabilities of current industry-accepted hardware and software products
- help-desk practices
- currentservice level agreements (SLAs) within or between organisations
- quality assurance practices
- role of stakeholders and the degree of stakeholder involvement
- system testing
- system's current functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• evaluate and analyse current practices</li> <li>• develop new criteria and procedures for performing current practices</li> <li>• use and update a change-management system</li> <li>• review and assess change requirements</li> <li>• plan and implement change procedures according to organisational guidelines and client requirements</li> <li>• prepare and deliver training appropriate to the client.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• change request documentation</li> <li>• physical system or network</li> <li>• technical manuals and appropriate diagnostic tools</li> <li>• current business requirements</li> <li>• documentation standards</li> <li>• change-management system</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of candidate's plan for modification of the system</li> <li>• direct observation of the candidate testing system changes for performance, and identifying and resolving problems</li> <li>• review of candidate's technical documentation</li> <li>• direct observation of the candidate delivering training.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>Hardware</b> may include:	<ul style="list-style-type: none"> <li>• cabling</li> <li>• modems or other connectivity devices</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>
<b>Software</b> may include:	<ul style="list-style-type: none"> <li>• application software:             <ul style="list-style-type: none"> <li>• database</li> <li>• internet browser</li> <li>• spreadsheet</li> <li>• word-processing</li> </ul> </li> <li>• commercial software</li> <li>• customised software</li> <li>• in-house software</li> <li>• programming software:             <ul style="list-style-type: none"> <li>• assembler</li> <li>• compiler</li> <li>• development tools</li> </ul> </li> <li>• system software:             <ul style="list-style-type: none"> <li>• operating system</li> <li>• device drivers</li> <li>• computer security software.</li> </ul> </li> </ul>
<b>Help-desk procedures</b> may include:	<ul style="list-style-type: none"> <li>• customer contact centre or general contact point that then consults with a supplier or other technician</li> <li>• customer contact centre staffed by technicians capable of solving problems</li> <li>• real-time online support</li> <li>• web-based support.</li> </ul>
<b>System</b> may include:	<ul style="list-style-type: none"> <li>• hardware components within a computer</li> <li>• interconnected computers and peripherals</li> <li>• software components that run a computer.</li> </ul>
<b>Requirements</b> may be in	<ul style="list-style-type: none"> <li>• application</li> </ul>

reference to:	<ul style="list-style-type: none"> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<i>Client</i> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<i>Organisational guidelines</i> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<i>Technical documentation</i> may include:	<ul style="list-style-type: none"> <li>• brochures</li> <li>• help references</li> <li>• online help</li> <li>• project specifications</li> <li>• reports</li> <li>• technical manuals</li> <li>• training materials and self-paced tutorials</li> <li>• user guides.</li> </ul>
<i>Standards</i> may include:	<ul style="list-style-type: none"> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• organisational standards</li> <li>• project standards.</li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS413A Manage resolution of system faults on a live system

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage reactive errors and failures on a live system.

### Application of the Unit

This unit applies to experienced technical support personnel, such as help-desk supervisors, IT support technicians, and user support specialists who are required to perform maintenance on systems that are currently operating.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine maintenance methodologies and repositories	1.1 Identify the nature of <b>modification</b> to the <b>system</b> 1.2 Confirm the existence and currency of <b>repositories</b> 1.3 Review repositories for changes and develop new backup procedures 1.4 Prepare or check modification request forms and levels of authority for sign-off 1.5 Develop a hierarchy of modifications and the response for each 1.6 Determine the backup and blackout strategies in place
2. Implement change-management system	2.1 Follow <b>standards</b> and procedures for logging the change request 2.2 Document the expected impact to the <b>user</b> base during implementation 2.3 Identify levels of possible failure and the related <b>reporting procedures</b> 2.4 Document the expected outcomes of the modification 2.5 Inform user of modification implications 2.6 Assign the modification to <b>appropriate person</b> for actioning
3. Report review of results	3.1 Complete aspects of the change system and ensure the modification is tested and operational 3.2 Prepare the report and deliver to the appropriate person indicating the results of modification 3.3 Update and amend <b>documentation</b> and repositories

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with customers and present information to users
- initiative and enterprise skills to:
  - maintain the continuity of information and communications technology (ICT) operations and business functions
  - resolve conflict while undertaking change procedures
  - review change procedures
- literacy skills to:
  - document the expected impact to the user base
  - document the expected outcomes of modifications
  - prepare modification request forms
  - prepare reports
  - report review of results
  - update and amend documentation and repositories
- planning and organisational skills to contribute to solutions and goals of a non-routine or contingency nature
- problem-solving skills to develop new backup procedures
- technical skills to undertake low-level programming.

### Required knowledge

- change control procedures
- client business domain
- current industry-accepted hardware and software products, including their general features and capabilities
- help desk and maintenance practices
- quality assurance practices
- role of stakeholders and the degree of stakeholder involvement
- system testing
- features and functions of the system under modification
- system's current functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify the required modification</li> <li>• itemise the expected outcomes of the modification</li> <li>• demonstrate the steps involved in the implementation of the modification</li> <li>• document the modification.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• live system</li> <li>• benchmarking and testing tools</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of: <ul style="list-style-type: none"> <li>• candidate undertaking implementation of change-management system</li> <li>• candidate determining the backup and blackout strategies</li> </ul> </li> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• managing resolution of system faults on a live system</li> <li>• implications of success and failure of proposed modifications</li> <li>• required steps or procedures.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Modification</b> may include:	<ul style="list-style-type: none"> <li>• assistance</li> <li>• enhancement</li> <li>• error correction</li> <li>• system recovery.</li> </ul>
<b>System</b> may include:	<ul style="list-style-type: none"> <li>• hardware components that run a computer</li> <li>• software components that run a computer.</li> </ul>
<b>Repositories</b> may include:	<ul style="list-style-type: none"> <li>• central repository</li> <li>• databases</li> <li>• program library.</li> </ul>
<b>Standards</b> may include:	<ul style="list-style-type: none"> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• organisational standards</li> <li>• project standards.</li> </ul>
<b>User</b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party.</li> </ul>
<b>Reporting procedures</b> may include:	<ul style="list-style-type: none"> <li>• customer contact centre or general contact point that then consults with a supplier or other technician</li> <li>• customer contact centre staffed by technicians capable of solving the problem</li> <li>• real-time online support</li> <li>• web-based support.</li> </ul>
<b>Appropriate person</b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• project manager</li> <li>• supervisor.</li> </ul>
<b>Documentation</b> may include:	<ul style="list-style-type: none"> <li>• collection of records that describe the structure</li> <li>• hardware device</li> <li>• maintenance and data requirements for a computer program</li> <li>• operating system</li> <li>• operation</li> <li>• purpose.</li> </ul>

## **Unit Sector(s)**

Systems administration and support

## ICASAS414A Evaluate system status

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to evaluate the status of a running system, covering both hardware and software aspects to determine system performance and reliability.

### Application of the Unit

This unit applies to experienced technical support personnel, such as help-desk supervisors, IT support technicians, and user support specialists responsible for assessing the current condition of the system as a first step before problem resolution or upgrades.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Determine scope and evaluation parameters</p>	<p>1.1 Determine <i>scope</i> of the <i>system</i> evaluation</p> <p>1.2 Comply with <i>organisational requirements</i> when planning a 'change of status' test</p> <p>1.3 Review the reason for the evaluation, its objectives, deliverables and key performance indicators, using appropriate capacity tools</p> <p>1.4 Plan and document status evaluation and factor in time, environment, internal and external issues</p> <p>1.5 Alert affected <i>users</i> if evaluation is likely to impact their operations</p> <p>1.6 Develop a plan for the evaluation and identify the resources and methods to be used</p>
<p>2. Carry out evaluation</p>	<p>2.1 Organise the required resources as outlined in the plan, and put in place manual or computerised evaluation methods</p> <p>2.2 Run the evaluation process according to the agreed scope and evaluation parameters</p> <p>2.3 Record the status as per procedural parameters and plan</p> <p>2.4 Observe and document during evaluation the effects of changes to system status that are made according to effect being evaluated</p> <p>2.5 Observe and record effects that are not listed and that may require further investigation</p>
<p>3. Report on evaluation</p>	<p>3.1 Prepare a report to the <i>appropriate person</i> indicating the results of the status check in the <i>documentation</i></p> <p>3.2 Highlight anomalies observed in the status check that are outside the expected results</p> <p>3.3 Make recommendations for changes to improve the system</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to evaluate feedback on client support
- communication skills to:
  - effectively use questioning and active listening techniques
  - gather feedback from users
  - liaise with technical team members
- initiative and enterprise skills to identify potential improvements to client support
- literacy skills to:
  - evaluate reports
  - prepare reports and update or amend system issues
  - read and interpret technical manuals and technical workplace documentation
  - review current support procedures and update accordingly based on feedback
  - problem-solving skills to determine issues around current methods of supporting users.

### Required knowledge

- capacity planning
- change-control procedures
- client-business domain
- current industry-accepted hardware and software products, including their general features and capabilities
- help desk and maintenance practices
- one or more change-management tools
- quality assurance practices
- role and level of stakeholder involvement
- system testing
- features and functions of the system under evaluation
- system's current functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• test a system</li> <li>• identify comprehensive performance indicators to determine system performance and reliability related to both hardware and software</li> <li>• document the results.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• documentation standards</li> <li>• backup and recovery policies</li> <li>• database package with data</li> <li>• server and networked personal computer on which to conduct backup and recovery procedure</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate: <ul style="list-style-type: none"> <li>• undertaking evaluation of system status</li> <li>• determining the system performance and reliability</li> </ul> </li> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• current functionality of the system</li> <li>• implications of success and failure of proposed modifications and the required steps or procedures</li> </ul> </li> <li>• review of candidate's documentation of results of system test.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Scope</i></b> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• hardware</li> <li>• maintenance</li> <li>• networks</li> <li>• personnel</li> <li>• processes</li> <li>• software</li> <li>• support</li> <li>• warranty.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• computers</li> <li>• financial system</li> <li>• information system</li> <li>• management system</li> <li>• network</li> <li>• network operating system</li> <li>• software.</li> </ul>
<b><i>Organisational requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• preventative maintenance and diagnostic policy</li> <li>• problem-solution processes</li> <li>• roles and technical responsibilities in the IT department</li> <li>• vendor and product service level agreements (SLAs)</li> <li>• work environment.</li> </ul>
<b><i>Users</i></b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• project manager</li> <li>• supervisor.</li> </ul>
<b><i>Documentation</i></b> may include:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and</li> </ul>

	<p>Australian Standards (AS) standards</p> <ul style="list-style-type: none"><li>• maintaining equipment inventory</li><li>• naming standards</li><li>• project-management templates and report writing</li><li>• satisfaction reports</li><li>• version control.</li></ul>

## Unit Sector(s)

Systems administration and support

# ICASAS415A Optimise IT system performance

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify, improve and monitor IT system performance.

The optimisation of system performance can be assisted by careful management of existing installed resources.

## Application of the Unit

This unit applies to experienced technical support personnel, such as help-desk supervisors, IT support technicians, and user support specialists responsible for maintaining top performance from computer systems.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify areas of poor performance	<p>1.1 Collect system performance data, during various usage conditions and times, using available technical <i>tools</i></p> <p>1.2 Evaluate the collected <i>system performance</i> data related to organisational benchmarks and <i>client</i> feedback to identify areas of poor performance</p>
2. Investigate methods to improve system performance	<p>2.1 Identify options to <i>improve performance</i> through discussing the system performance findings with <i>appropriate person</i> and accessing technical resources</p> <p>2.2 Create a report for appropriate person, including cost analysis and identified options for alternative courses of action designed to measurably improve performance</p> <p>2.3 Present report to appropriate person for decision as to preferred course of action</p>
3. Develop an implementation plan for system optimisation	<p>3.1 Develop a plan for implementing the approved optimisation, with prioritised tasks and minimum disruption to clients</p> <p>3.2 Factor project budget and staff availability into the implementation plan</p> <p>3.3 Submit the implementation plan to the appropriate person for approval and revision, if necessary</p>
4. Modify system to optimise performance	<p>4.1 Install or configure system <i>components</i> according to installation procedures and <i>organisational guidelines</i>, following the implementation plan</p> <p>4.2 Measure and record the change in performance resulting from the system modification, in order to assess that the required level of optimisation has been achieved</p> <p>4.3 Update appropriate <i>documentation</i> according to organisational guidelines, to reflect the system optimisation</p>
5. Monitor ongoing system performance	<p>5.1 Implement and maintain a performance register</p> <p>5.2 Review and assess benchmarks and performance regularly with the work team to enable timely optimisation and updates</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- basic analytical skills to:
  - evaluate the collected system performance data
  - review and assess benchmarks and performance
- communication skills to:
  - evaluate system performance data related to organisational benchmarks
  - follow up on client feedback
  - liaise with technical team members
- literacy skills to:
  - document initial problem and make recommendations to solve problem
  - implement and maintain a performance register
  - read technical manuals, organisational guidelines and support agreements
  - write reports that include cost analysis details
- planning and organisational skills to:
  - develop an implementation plan for system optimisation
  - develop plans with prioritised tasks
  - make contingency arrangements
  - minimise disruption to client
  - organise maintenance
- problem-solving skills to:
  - determine problems based on diagnostic tests
  - identify options to improve performance
  - solve unknown problems in a range of contexts
- teamwork skills to review and assess benchmarks and performance with the work team
- technical skills to:

collect system performance data using available diagnostic and technical tools

- install and configure system components
- measure and record changes in performance resulting from system modifications
- measure system performance against predefined benchmarks.

### Required knowledge

- business scheduling requirements
- current industry-standard hardware and software monitoring tools and how to interpret information produced from monitoring
- system performance, change control procedures and theoretical concepts
- one or more change-management tools
- quality assurance practices with regard to proposed changes to IT systems
- role of stakeholders and the degree of stakeholder involvement

- features and functions of the system under modification
- current system functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify inadequacies in system performance</li> <li>• analyse system performance</li> <li>• tune the system to keep the system balanced and performing well.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• system components and software for performance tuning</li> <li>• technical manuals and resources</li> <li>• fault logs</li> <li>• diagnostic tools</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate performing system tests</li> <li>• verbal or written questioning to assess candidate's knowledge</li> <li>• review of documentation recording system optimisation process.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Tools</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic test equipment:             <ul style="list-style-type: none"> <li>• data analyser</li> <li>• oscilloscope</li> <li>• voltmeter</li> </ul> </li> <li>• software.</li> </ul>
<b><i>System performance</i></b> may be related to:	<ul style="list-style-type: none"> <li>• allocation of files across disk space</li> <li>• disk speed</li> <li>• I/O channel availability</li> <li>• imbalances in disk use and available space</li> <li>• memory availability and use</li> <li>• number of concurrent users</li> <li>• physical limitations of system</li> <li>• poor design in a programs</li> <li>• processor use</li> <li>• queue depth</li> <li>• seek time</li> <li>• work load.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<b><i>Improving performance</i></b> may include:	<ul style="list-style-type: none"> <li>• load balancing between servers or other network devices using switches or routers</li> <li>• reducing total load by tuning the operating system</li> <li>• tuning applications to reduce the load they impose</li> <li>• tuning the disk sub-system</li> <li>• using various system tools to adjust system parameters, including hardware or software upgrade.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• project manager</li> <li>• supervisor.</li> </ul>
<b><i>Components</i></b> may	<ul style="list-style-type: none"> <li>• CD and DVD drives</li> </ul>

include:	<ul style="list-style-type: none"> <li>• central processing unit (CPU)</li> <li>• complementary metal oxide semiconductor (CMOS) battery</li> <li>• fax or modem cards</li> <li>• interface cards</li> <li>• motherboards</li> <li>• random access memory (RAM).</li> </ul>
<b>Organisational guidelines</b> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<b>Documentation</b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS)</li> <li>• naming standards</li> <li>• project management templates</li> <li>• report writing principles</li> <li>• version control.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS416A Implement maintenance procedures

## Modification History

Version	Comments
ICASAS416A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to set up maintenance procedures to keep equipment and software operating effectively.

## Application of the Unit

This unit applies to frontline technical support personnel, such as IT support technicians, and user support specialists responsible for maintaining computer equipment in an organisation.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Determine best practices for equipment and software maintenance</p>	<p>1.1 Identify equipment and <i>software</i> that are to be maintained and implement processes to ensure future acquisitions of <i>equipment</i> and software are identified</p> <p>1.2 Identify vendor <i>documentation</i>, peer organisations or research information detailing best practices in equipment and software maintenance to improve system performance and reliability</p> <p>1.3 Develop recommended maintenance and operations guidelines for equipment and software maintenance based on the above research</p> <p>1.4 Obtain <i>requirements</i> from <i>user</i> in the area of equipment maintenance and reliability</p> <p>1.5 Document procedures for maintenance based on best practices</p>
<p>2. Identify resources to provide equipment and software maintenance</p>	<p>2.1 Identify and record the level of support that can be provided by in-house resources</p> <p>2.2 Identify and record the support to be supplied by external or third-party organisations</p> <p>2.3 Develop or update <i>service level agreement</i> (SLA) with internal user and third-party suppliers</p>
<p>3. Revise practices, where appropriate</p>	<p>3.1 Monitor and review maintenance operation</p> <p>3.2 Identify problem areas, including failures to meet SLAs, and consider changes to maintenance procedures</p> <p>3.3 Assess changes in consultation with user, support staff and third-party suppliers</p> <p>3.4 Design and implement improvements to maintenance procedures</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with customers in the provision of customer services, including basic training
- initiative and enterprise skills to work as a team member in the development of solutions and goals of a non-routine or contingency nature
- literacy skills to:
  - evaluate and present information
  - write technical reports
- planning and organisational skills to contribute to maintenance and continuity of IT operations and business functions
- problem-solving skills to participate in development of strategic initiatives
- technical skills to undertake low level programming and use a range of computer equipment.

### Required knowledge

- business scheduling requirements
- client business domain
- current industry-standard hardware and software products, including their general features and capabilities
- diagnostic tools
- help desk and maintenance practices
- steps of maintenance procedures
- one or more change-management tools
- quality assurance practices
- role of stakeholders and the degree of stakeholder involvement
- current performance level of the system
- system's current functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• set up maintenance procedures to keep equipment and software operating.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• technical environment with a variety of operational equipment</li> <li>• technical manuals and tools</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate setting up maintenance procures</li> <li>• review of candidate’s documented procedures</li> <li>• verbal or written questioning to assess candidate’s knowledge of: <ul style="list-style-type: none"> <li>• preventative maintenance</li> <li>• SLAs.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial</li> <li>• customised</li> <li>• in-house</li> <li>• packaged.</li> </ul>
<b><i>Equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hard drives</li> <li>• hubs</li> <li>• modems and other connectivity devices, including digital subscriber line (DSL) modems</li> <li>• monitors</li> <li>• other peripheral devices</li> <li>• personal computers</li> <li>• personal digital assistants</li> <li>• printers</li> <li>• switches</li> <li>• workstations.</li> </ul>
<b><i>Documentation</i></b> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• maintaining equipment inventory</li> <li>• naming standards</li> <li>• project management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b><i>Requirements</i></b> may be in reference to:	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<b><i>User</i></b> may include:	<ul style="list-style-type: none"> <li>• person within a department</li> <li>• department within the organisation</li> <li>• third party.</li> </ul>
<b><i>Service level agreement</i></b>	<ul style="list-style-type: none"> <li>• many different infrastructure services:</li> </ul>

may exist for:	<ul style="list-style-type: none"><li>• application service providers (ASPs)</li><li>• communications carriers</li><li>• expectations regarding:<ul style="list-style-type: none"><li>• charge back to business units</li><li>• penalties</li><li>• servicing</li></ul></li><li>• internet service providers (ISPs)</li><li>• SLAs for vendor products</li><li>• workload and performance considerations.</li></ul>
----------------	---

## Unit Sector(s)

Systems administration and support

# ICASAS417A Undertake IT system capacity planning

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to monitor and assess the current and future capacity requirements of an IT system, plan future enhancements and install the identified enhancements.

This unit also establishes the general concepts and methodology involved in performing capacity planning, so that one can adapt the testing to a business.

## Application of the Unit

This unit applies to experienced technical support personnel, such as planners, IT support technicians, and user support specialists responsible for monitoring computing capacity to ensure continuity of service. They generally work under little supervision.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Analyse existing system capacity</p>	<p>1.1 Review the existing <i>system</i> configuration information, both <i>hardware</i> and <i>software</i>, to determine capacity issues</p> <p>1.2 Investigate the current workload of the system and analyse its effect on the capacity to perform</p> <p>1.3 Examine the current <i>service level agreement</i> to determine agreed-upon capacity standards</p> <p>1.4 Examine and analyse the fault logs for those caused by capacity <i>problems</i></p> <p>1.5 Discuss and review capacity issues with <i>users</i></p> <p>1.6 Document the information gathered about the existing system workload and capacity according to <i>organisational guidelines</i></p>
<p>2. Determine future capacity requirements</p>	<p>2.1 Interview the user in order to gather data about future capacity <i>requirements</i> of the system</p> <p>2.2 Organise and analyse the future requirements data and then evaluate to obtain a <i>forecast workload</i> for the system</p> <p>2.3 Using the data and information gathered, compare the existing workload with the forecast workload and evaluate, to determine capacity problem areas</p> <p>2.4 Estimate the resources and <i>equipment</i> required to resolve predicted capacity problems</p> <p>2.5 Undertake a financial analysis of the estimated capacity requirements</p> <p>2.6 Organise and document information according to organisational guidelines</p> <p>2.7 Evaluate <i>documentation</i> in order to create a report, detailing recommendations for capacity enhancements, for presentation to <i>appropriate person</i></p>
<p>3. Develop plan for capacity enhancements</p>	<p>3.1 Develop a plan for implementing the recommended enhancements, with prioritised tasks and minimum disruption to users</p> <p>3.2 Factor into the implementation plan the availability of finances, staff and other requirements</p> <p>3.3 Submit the implementation plan to appropriate person for approval and revision</p>
<p>4. Install capacity enhancements</p>	<p>4.1 Install the capacity enhancements according to installation procedures, organisational guidelines and implementation plan</p> <p>4.2 Measure the increase in capacity and performance resulting</p>

	<p>from installed equipment in order to assess that capacity requirements have been met</p> <p>4.3 Update documentation according to organisational guidelines to reflect the capacity enhancements</p>
<p>5. Monitor ongoing capacity requirements</p>	<p>5.1 Monitor and assess the impact of new technology and application development on capacity and performance</p> <p>5.2 Implement and maintain a performance <i>database</i></p> <p>5.3 Review and assess benchmarks and performance regularly with work team to enable timely capacity enhancements and updates of benchmarks</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - evaluate current practices
  - evaluate documentation to create a report, detailing recommendations for capacity enhancements
  - examine and analyse the fault logs for those caused by capacity problems
  - investigate the current workload of the system and its effect on the capacity to perform
  - review the existing system configuration information to determine capacity issues
- communication skills to deal with other team members, clients and vendors
- literacy skills to:
  - interpret technical manuals and forecasting data
  - process and present written and verbal information
- planning and organisational skills to:
  - allow for scheduled maintenance, budgeting and costing, and communications
  - develop new criteria and procedures for performing current practices
  - develop plans with prioritised tasks
  - make contingency arrangements
  - minimise disruption to client
  - prepare time lines
  - ensure quality assurance and risk management
- problem-solving skills to resolve problems through developing capacity planning initiatives
- technical skills to:
  - modify current system to incorporate the planned changes
  - oversee installation of hardware and software elements.

### Required knowledge

- detailed knowledge of system's current functionality
- overview knowledge of:
  - component performance management
  - current industry-accepted hardware and software products, including their general features and capabilities
  - key features of financial analysis
  - client business domain
  - performance monitoring tools
  - quality assurance practices with regard to proposed IT capability enhancements
  - service level agreements relating to proposed IT capability enhancements
  - role of stakeholders and the degree of stakeholder involvement.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• monitor and accurately assess current and future capacity requirements of a system</li> <li>• predict capacity requirements resulting from business growth, with forecasts being realistic and achievable</li> <li>• plan and install capacity enhancements</li> <li>• create and maintain required documentation.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• live system</li> <li>• service level agreements</li> <li>• fault logs</li> <li>• users</li> <li>• hardware components for installation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of: <ul style="list-style-type: none"> <li>• report detailing recommendations for capacity enhancements based on a financial analysis and resources and equipment required</li> <li>• implementation plan for recommended enhancements, with prioritised tasks and minimum disruption to users</li> </ul> </li> <li>• direct observation of: <ul style="list-style-type: none"> <li>• installing the capacity enhancements following installation procedures, organisational guidelines and implementation plan</li> <li>• measuring the improved capacity and performance resulting from capacity enhancements</li> </ul> </li> <li>• evaluation of performance database implemented and maintained</li> <li>• verbal or written questioning to assess knowledge of: <ul style="list-style-type: none"> <li>• industry products, services and practices</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• techniques of capacity planning.</li> </ul>
<p><b>Guidance information for assessment</b></p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• hardware components that run a computer</li> <li>• software components that run a computer.</li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• modems or other connectivity devices</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• application software:             <ul style="list-style-type: none"> <li>• database</li> <li>• internet browser</li> <li>• spreadsheet</li> <li>• word-processing</li> </ul> </li> <li>• commercial</li> <li>• customised software</li> <li>• in-house</li> <li>• programming software:             <ul style="list-style-type: none"> <li>• assembler</li> <li>• compiler</li> <li>• development tools</li> </ul> </li> <li>• system software:             <ul style="list-style-type: none"> <li>• computer security software</li> <li>• device drivers</li> <li>• operating system.</li> </ul> </li> </ul>

<p><b>Service level agreement</b> may include:</p>	<ul style="list-style-type: none"> <li>• application service providers (ASPs)</li> <li>• business processes and requirements</li> <li>• charge back to business units</li> <li>• communications carriers</li> <li>• expectations regarding:                         <ul style="list-style-type: none"> <li>• audit of service levels</li> <li>• service levels</li> </ul> </li> <li>• penalties</li> <li>• infrastructure services</li> <li>• internet service providers (ISPs)</li> <li>• vendor products</li> <li>• workload and performance considerations.</li> </ul>
<p><b>Problems</b> may relate to:</p>	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• business need or opportunity that must be addressed</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<p><b>Users</b> may include:</p>	<ul style="list-style-type: none"> <li>• departments within the organisation</li> <li>• persons within a department</li> <li>• third parties.</li> </ul>
<p><b>Organisational guidelines</b> may include:</p>	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<p><b>Requirements</b> may relate to:</p>	<ul style="list-style-type: none"> <li>• application</li> <li>• business</li> <li>• network</li> <li>• people in the organisation</li> <li>• system.</li> </ul>
<p><b>Forecast workload</b> may be determined from:</p>	<ul style="list-style-type: none"> <li>• application development personnel</li> <li>• competitive pressures</li> <li>• corporate business plans</li> <li>• economic trends</li> <li>• outside influences, such as legal requirements</li> <li>• trends in existing workload</li> </ul>

	<ul style="list-style-type: none"> <li>• user interviews</li> <li>• user questionnaires.</li> </ul>
<i>Equipment</i> may include:	<ul style="list-style-type: none"> <li>• hard drives</li> <li>• hubs</li> <li>• modems or other connectivity devices</li> <li>• monitors</li> <li>• other peripheral devices</li> <li>• personal computers</li> <li>• personal digital assistant (PDA)</li> <li>• printers</li> <li>• switches</li> <li>• workstations.</li> </ul>
<i>Documentation</i> may follow:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project management templates</li> <li>• report writing principles</li> <li>• version control.</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• project manager</li> <li>• supervisor.</li> </ul>
<i>Database</i> may include:	<ul style="list-style-type: none"> <li>• DB2</li> <li>• Informix</li> <li>• Ingres</li> <li>• Microsoft Structured Query Language (MS SQL) server</li> <li>• Mini SQL (mSQL)</li> <li>• MySQL</li> <li>• Oracle</li> <li>• Sybase.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS418A Monitor and administer security of an IT system

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to monitor and administer security functions of an IT system.

## Application of the Unit

This unit applies to experienced technical support personnel, such as help-desk supervisors, IT support technicians, and user support specialists responsible for maintaining the security of a system.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Ensure user accounts are controlled</p>	<p>1.1 Modify default <i>user</i> settings to ensure that they conform to <i>security policy</i></p> <p>1.2 Modify previously created user settings to ensure they conform to updated security policy</p> <p>1.3 Ensure legal notices displayed at logon are appropriate</p> <p>1.4 Check strength of passwords using the appropriate utilities and consider tightening rules for password complexity</p> <p>1.5 Take action to ensure password procedures are reviewed with appropriate other internal departments</p> <p>1.6 Monitor email to uncover breaches in compliance with <i>legislation</i></p> <p>1.7 Access information services to identify security gaps and take appropriate action using <i>hardware</i> and <i>software</i> or patches</p>
<p>2. Secure file and resource access</p>	<p>2.1 Review inbuilt security and access features of the <i>operating system</i> and consider need for further action</p> <p>2.2 Develop or review the file security categorisation scheme, and develop an understanding of the role of users in setting security</p> <p>2.3 Monitor and record <i>security threats</i> to the system</p> <p>2.4 Implement a virus checking process and schedule for the <i>server, computer</i> and other system components</p> <p>2.5 Investigate and implement inbuilt or additional <i>encryption</i> facilities</p>
<p>3. Monitor threats to the network</p>	<p>3.1 Use third-party software or utilities to evaluate and report on system security</p> <p>3.2 Review logs and audit reports to identify security threats</p> <p>3.3 Carry out spot checks and other <i>security strategies</i> to ensure that procedures are being followed</p> <p>3.4 Prepare and present an audit report and recommendations to <i>appropriate person</i></p> <p>3.5 Obtain approval for recommended changes to be made</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - liaise with technical team members
  - present information
  - provide assistance with organisational guidelines
  - review logs and audit reports to identify security threats
- problem-solving skills to:
  - identify security threats
  - use third-party software or utilities to evaluate system security
- project planning skills to:
  - identify scope
  - implement a virus checking process and schedule
  - set benchmarks
- report writing skills to:
  - present audit reports and recommendations
  - report on system security
- research skills to identify, analyse and evaluate broad features of a particular business domain and best practice in system security methodologies and technologies
- technical skills to:
  - check strength of passwords
  - implement virus checking processes and schedules
  - modify user settings
  - monitor and record security threats to the system.

### Required knowledge

- current industry-accepted hardware and software products
- privacy issues and legislation with regard to IT security
- key components of risk analysis process for system security
- specific security technology
- systems technologies
- client business domain, including client organisation structure and business functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• monitor and administer security functions on the system, which may include use of third-party diagnostic tools</li> <li>• confirm knowledge of security features available in the operating environment.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• security policy</li> <li>• industry and organisational standards</li> <li>• live system</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation: <ul style="list-style-type: none"> <li>• ensuring security policy compliance</li> <li>• using security strategies to evaluate and report on system security and threats</li> </ul> </li> <li>• review of: <ul style="list-style-type: none"> <li>• audit report and recommendations prepared</li> <li>• virus checking process and schedule implemented</li> </ul> </li> <li>• verbal or written questioning to assess candidate's knowledge of security features within the operating environment.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>User</i></b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party.</li> </ul>
<b><i>Security policy</i></b> may relate to:	<ul style="list-style-type: none"> <li>• audits and alerts</li> <li>• file access levels</li> <li>• privacy</li> <li>• security objectives of the organisation</li> <li>• standards: <ul style="list-style-type: none"> <li>• archival</li> <li>• backup</li> <li>• network</li> </ul> </li> <li>• theft</li> <li>• viruses.</li> </ul>
<b><i>Legislation</i></b> may include:	<ul style="list-style-type: none"> <li>• copyright</li> <li>• liability statements</li> <li>• privacy legislation.</li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• modems or other connectivity devices</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• workstations.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• application: <ul style="list-style-type: none"> <li>• spreadsheet</li> <li>• database</li> <li>• word-processing</li> <li>• internet browser</li> </ul> </li> <li>• commercial</li> <li>• customised</li> <li>• in-house</li> <li>• programming: <ul style="list-style-type: none"> <li>• assembler</li> <li>• compiler</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• development tools</li> <li>• system:             <ul style="list-style-type: none"> <li>• computer security software</li> <li>• device drivers</li> <li>• operating system.</li> </ul> </li> </ul>
<b>Operating system</b> may include:	<ul style="list-style-type: none"> <li>• Linux</li> <li>• GNU and Linux</li> <li>• Mac OS X</li> <li>• Microsoft Windows</li> <li>• Unix-like operating systems:             <ul style="list-style-type: none"> <li>• HP-UX</li> <li>• IBM AIX</li> <li>• Silicon Graphics IRIX</li> </ul> </li> <li>• Sun Solaris.</li> </ul>
<b>Security threats</b> may include:	<ul style="list-style-type: none"> <li>• by-pass</li> <li>• denial of service</li> <li>• eavesdropping</li> <li>• hacking</li> <li>• impersonation</li> <li>• manipulation</li> <li>• penetration</li> <li>• viruses.</li> </ul>
<b>Server</b> may include:	<ul style="list-style-type: none"> <li>• application or web servers</li> <li>• BEA Weblogic servers</li> <li>• email servers</li> <li>• file and print servers</li> <li>• firewall servers</li> <li>• FTP servers</li> <li>• IBM VisualAge and WebSphere</li> <li>• Novell Directory Services (NDS) servers</li> <li>• proxy or cache servers</li> <li>• voice servers.</li> </ul>
<b>Computer</b> may include:	<ul style="list-style-type: none"> <li>• laptops</li> <li>• other devices:             <ul style="list-style-type: none"> <li>• hand-held and mobile devices</li> <li>• personal digital assistant (PDA)</li> </ul> </li> <li>• servers</li> <li>• workstations.</li> </ul>
<b>Encryption</b> may include:	<ul style="list-style-type: none"> <li>• asymmetric public-key ciphers</li> <li>• Deslogin</li> </ul>

	<ul style="list-style-type: none"> <li>• digital signatures</li> <li>• public key infrastructure (PKI)</li> <li>• PKZIP</li> <li>• pretty good privacy (PGP)</li> <li>• RSA public key</li> <li>• secure socket layer (SSL)</li> <li>• sniffers</li> <li>• SSH</li> <li>• symmetric ciphers.</li> </ul>
<i>Security strategies</i> may include:	<ul style="list-style-type: none"> <li>• authentication</li> <li>• authorisation and integrity</li> <li>• privacy</li> <li>• security objectives of the organisation.</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• project manager</li> <li>• security consultant</li> <li>• supervisor.</li> </ul>

**Unit Sector(s)**

Systems administration and support

## ICASAS419A Support system software

### Modification History

Version	Comments
ICASAS419A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to operate and support system software.

### Application of the Unit

This unit applies to individuals working in the support area who are required to provide technical assistance to users with operating system problems.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Maintain system software	<p>1.1 Evaluate system effectiveness against <b>organisational requirements</b> and benchmarks to determine if maintenance activities should be commenced</p> <p>1.2 Use system utilisation, file and <b>disk</b> structure, performance reports and files to identify peak periods and possible performance problems</p> <p>1.3 Monitor <b>system</b> data levels to determine whether system performance is consistent with predetermined standards</p> <p>1.4 Troubleshoot the system, if required, with appropriate system tools</p> <p>1.5 Monitor and retune the system to improve performance</p>
2. Set up and manage the system files	<p>2.1 Evaluate <b>system requirements</b> and monitor the appropriateness of file and folder structures</p> <p>2.2 Use the appropriate administration and tools to create file and folder structures</p> <p>2.3 Set security, access and sharing of file system to meet requirements</p> <p>2.4 Identify the virus protection requirements of the network in line with <b>policies</b> and organisational requirements</p> <p>2.5 Scan system for viruses and remove detected viruses</p> <p>2.6 Test file system to ensure that appropriate access is available to the <b>user</b> groups</p> <p>2.7 Ensure log-on scripts and custom written utilities and programs conform to <b>organisational guidelines</b> for simple programming constructs</p> <p>2.8 Document the file system created according to organisational guidelines</p>
3. Monitor and manage system usage and security	<p>3.1 Monitor user access against user access levels</p> <p>3.2 Review <b>security requirements</b> for user and data to be stored on <b>network</b></p> <p>3.3 Determine risks that data is exposed to, and formulate appropriate prevention and recovery processes</p> <p>3.4 Implement a system to provide backup and to restore services in the event of a disaster</p> <p>3.5 Document disaster recovery procedures</p>
4. Carry out system	4.1 Confirm backup schedule meets organisational

backup	requirements 4.2 Ensure system backups are completed according to organisational, scheduling and system requirements 4.3 Ensure that a secure off-site location for the storage of backup media is provided and used 4.4 Ensure system backups are recorded according to organisational requirements
5. Restore system backup	5.1 Ensure system restores are completed when required for system recovery or testing according to organisational guidelines 5.2 Optimise the restored system according to organisational requirements 5.3 Ensure system restores are documented according to organisational requirements

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse routine and non-routine work processes
- communications skills to liaise with users and peers
- literacy skills to write business reports
- problem-solving skills to address a range of unpredictable operating system problems
- technical skills to update operating systems.

### Required knowledge

- detailed knowledge of system software and system tools
- overview knowledge of:
  - change-management systems
  - client business domain
  - OHS requirements related to work safety, environmental factors and ergonomic considerations
  - quality assurance practices with regard to supporting system software
  - vendor products and trends in product development.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• monitor system software performance according to vendor and organisational benchmarks</li> <li>• maintain system performance to these benchmarks</li> <li>• use a wide range of features and system tools.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• organisational performance benchmarks</li> <li>• live system</li> <li>• client user requirements</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of: <ul style="list-style-type: none"> <li>• system software</li> <li>• benchmark performance</li> <li>• system software tools</li> </ul> </li> <li>• direct observation of candidate: <ul style="list-style-type: none"> <li>• liaising with client</li> <li>• upgrading system software</li> </ul> </li> <li>• review of candidate's call documentation</li> <li>• evaluation of client feedback from candidate's communications.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Organisational requirements</i></b> may relate to:	<ul style="list-style-type: none"> <li>• preventative maintenance and diagnostic policy</li> <li>• problem solution processes</li> <li>• roles and technical responsibilities in the IT department</li> <li>• vendor and product service level support agreements</li> <li>• work environment.</li> </ul>
<b><i>Disk</i></b> may include:	<ul style="list-style-type: none"> <li>• CD</li> <li>• CD-RW</li> <li>• diskettes (floppy disks)</li> <li>• DVD RW</li> <li>• solid state hard drive</li> <li>• zip disk.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• hardware and software components that run a computer</li> <li>• ISP</li> <li>• operating systems</li> <li>• servers.</li> </ul>
<b><i>System requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• client or user</li> <li>• cost constraints</li> <li>• environment</li> <li>• geography</li> <li>• system functionality.</li> </ul>
<b><i>Policies</i></b> may include:	<ul style="list-style-type: none"> <li>• awareness raising strategies</li> <li>• forensic procedures</li> <li>• incident response procedures</li> <li>• network intrusion detection systems</li> <li>• training.</li> </ul>
<b><i>User</i></b> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person within a department</li> <li>• third party.</li> </ul>
<b><i>Organisational</i></b>	<ul style="list-style-type: none"> <li>• communication methods</li> </ul>

<i>guidelines</i> may include:	<ul style="list-style-type: none"> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<i>Security requirements</i> may include:	<ul style="list-style-type: none"> <li>• encryption</li> <li>• privacy</li> <li>• security levels</li> <li>• secure socket layer (SSL)</li> <li>• trusted sites.</li> </ul>
<i>Network</i> may include:	<ul style="list-style-type: none"> <li>• data</li> <li>• large and small LANs</li> <li>• private lines</li> <li>• internet</li> <li>• use of the public switched telephone network (PSTN) for dial-up modems only</li> <li>• voice</li> <li>• virtual private networks (VPNs)</li> <li>• wide area networks (WANs).</li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS420A Provide first-level remote help-desk support

### Modification History

Version	Comments
ICASAS420A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to resolve first-level user support difficulties or change requests remotely.

### Application of the Unit

This unit applies to experienced technical support personnel, such as help-desk supervisors, IT support technicians, and user support specialists who provide remote help-desk support to clients.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine the user support issue	<p>1.1 Determine the eligibility status of the individual experiencing the <i>user support</i> difficulty against <i>organisational guidelines</i> for user support services</p> <p>1.2 Clarify the user support difficulty or change request with <i>client</i>, using active listening and questioning techniques where possible</p> <p>1.3 Confirm the nature of the user support difficulty or change request with client, using technical language that is understandable by the client</p>
2. Identify the hardware or software being used by the customer or client	<p>2.1 Identify the <i>software, hardware</i>, network connection or <i>application</i>, being used by the client</p> <p>2.2 Identify the outcome the client is trying to achieve and the stage of the process they have reached, using active listening and questioning techniques</p> <p>2.3 Step the client back to the beginning of the process using plain English</p> <p>2.4 Walk the client through the process in a clear and logical manner</p>
3. Confirm resolution of user support issue	<p>3.1 Determine, describe and eliminate factors that may have created the user support issue or permit it to recur</p> <p>3.2 Explain and guide the client through a complete recovery and resolution process for the issue or change request</p> <p>3.3 Provide sufficient instruction to the client to enable effective handling and resolution of the issue, if it recurs</p> <p>3.4 Offer next-level escalation or lodgement of change request, explaining cost involved, if user request not possible to resolve under current circumstances</p> <p>3.5 Document changes where appropriate</p>
4. Maintain communication link	<p>4.1 Confirm resolution of difficulty with client according to client service policy</p> <p>4.2 Confirm client satisfaction with the current service according to client service policy</p> <p>4.3 Inform client of additional support or services available, according to the organisation's client service policy</p> <p>4.4 Provide the client with additional information related to products and services offered by the organisation, as required by the organisation's sales promotion requirements</p> <p>4.5 Complete the client contact records according to the client</p>

	service requirements
--	----------------------

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to review client requirements and provide advice and support on findings
- communication skills to:
  - convey and clarify complex information
  - discuss product and service matters with potential customers
  - investigate and assess client needs
  - provide one-to-one instruction to client
  - provide service related to communicating about using systems for recording and accessing information
- literacy skills to:
  - document:
    - additional requirements
    - amount of technical support the client may require
    - solutions
    - support issues affecting the client
  - interpret user manuals, for the purpose of resolving client problems and guiding clients through manuals
  - develop reports
- technical skills to write macros and templates.

### Required knowledge

- customer service policies
- escalation procedures in a clearly defined range of contexts
- OHS procedures related to the work environment and organisational requirements
- user support policies of limited complexity related to known or commonly-used options.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• resolve first-level user support difficulties remotely</li> <li>• demonstrate customer-service skills</li> <li>• document problem resolution.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• customer-service policies</li> <li>• user support policies</li> <li>• escalation procedures</li> <li>• communications hardware</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate providing advice and support to clients</li> <li>• evaluation of candidate's resolved call documentation</li> <li>• verbal or written questioning to determine candidate's knowledge of: <ul style="list-style-type: none"> <li>• client support procedures</li> <li>• help or service desk operation.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.
--	------------

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>User support</i></b> may include:	<ul style="list-style-type: none"> <li>• customer contact centre by phone</li> <li>• email</li> <li>• other real-time support structures</li> <li>• real-time website support.</li> </ul>
<b><i>Organisational guidelines</i></b> may include:	<ul style="list-style-type: none"> <li>• communication methods</li> <li>• content of emails</li> <li>• dispute resolution</li> <li>• document procedures and templates</li> <li>• downloading information and accessing particular websites</li> <li>• financial control mechanisms</li> <li>• mobile equipment</li> <li>• opening mail with attachments</li> <li>• personal use of emails and internet access</li> <li>• virus risk.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial</li> <li>• customised</li> <li>• in-house</li> <li>• packaged.</li> </ul>
<b><i>Hardware</i></b> may include:	<ul style="list-style-type: none"> <li>• modems or other connectivity devices, including digital subscriber line (DSL) modems</li> <li>• networks</li> <li>• personal computers</li> <li>• remote sites</li> <li>• servers</li> <li>• wireless connections</li> <li>• workstations.</li> </ul>
<b><i>Application</i></b> may include:	<ul style="list-style-type: none"> <li>• data and voice integration</li> <li>• database programs</li> <li>• email programs</li> </ul>

	<ul style="list-style-type: none"><li>• internet browsers</li><li>• spreadsheets</li><li>• system browsers</li><li>• word-processing.</li></ul>

## Unit Sector(s)

Systems administration and support

# ICASAS421A Support users and troubleshoot desktop applications

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to sustain users who run operating systems (OS) in a corporate or home environment.

## Application of the Unit

This work requires the application of a combination of complex technical and problem-solving skills and is relevant to frontline service personnel who may resolve operating system issues by telephone, by connecting to an end user's system remotely, or by visiting an end user's desktop.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Install, configure and troubleshoot applications	1.1 Install <b><i>application</i></b> 1.2 Configure and customise application within user environment 1.3 Resolve application problems
2. Resolve issues related to usability, customisation and connectivity	2.1 Determine <b><i>problems</i></b> 2.2 Research solutions 2.3 Recommend solutions to client 2.4 Resolve issues
3. Configure application security	3.1 Identify and troubleshoot problems related to security permissions 3.2 Identify and respond to <b><i>security incidents</i></b> 3.3 Manage application security settings

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with people working across different OS and levels of operation
- literacy skills to read and interpret complex technical and non-technical information from a range of sources
- planning and organisational skills to balance competing and complex demands
- problem-solving skills to anticipate and respond to a range of security incidents.

### Required knowledge

- OS and office applications
- sources of OS patches
- specific features of security incidents
- typical systems and procedures of user support.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• install, configure and troubleshoot computer applications</li> <li>• customise computer applications</li> <li>• anticipate and respond to a range of security incidents.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate OS installation CD or recovery boot discs</li> <li>• computers with application errors</li> <li>• samples of operating system patches</li> <li>• stand-alone or networked personal computer</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods will be used to assess practical skills and knowledge for example:</p> <ul style="list-style-type: none"> <li>• evaluation of a security breach and a non-functional mail box</li> <li>• direct observation of the candidate troubleshooting and repairing corrupted data</li> <li>• verbal or written questioning of typical systems and procedures of user support.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Application</i></b> may include:	<ul style="list-style-type: none"> <li>• in-house applications</li> <li>• network applications</li> <li>• office applications</li> <li>• programming applications</li> <li>• terminal emulation applications.</li> </ul>
<b><i>Problems</i></b> may include:	<ul style="list-style-type: none"> <li>• access to devices</li> <li>• access to network resources</li> <li>• keyboard emulation</li> <li>• keyboard shortcuts</li> <li>• screen resolution.</li> </ul>
<b><i>Security Incidents</i></b> may include:	<ul style="list-style-type: none"> <li>• application of critical updates</li> <li>• identification of virus attacks</li> <li>• resetting forgotten password.</li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS422A Scope implementation requirements

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to define boundaries and deliverables of a system installation project in the context of an overall implementation plan.

The unit relates to implementation at one location although may involve building-wide implementation. It is not intended that this unit include implementation of multiple sites across cities, states or countries.

### Application of the Unit

This unit applies to systems designers who are required to plan future development projects.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine scope	1.1 Review <b><i>project plan</i></b> and other documentation 1.2 Determine installation requirements 1.3 Identify other implementation issues
2. Confirm scope with parties	2.1 Develop and document preliminary <b><i>project scope</i></b> and submit to <b><i>appropriate person</i></b> 2.2 Review requests for revision to scope 2.3 Identify areas for further development 2.4 Prepare implementation plan and forward to appropriate person
3. Update plans to account for scope	3.1 Review implementation plan, taking into account scope of system 3.2 Review key dates and events to determine if conflicts exist 3.3 Confirm revised plans and documents with appropriate person for final approval and sign-off

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to determine installation requirements and other implementation issues
- communication skills to liaise with client users
- literacy skills to prepare technical documentation to determine installation requirements
- planning and organisational skills to:
  - deal with contingencies
  - review and confirm implementation
  - scope and plan the project
- problem-solving skills to participate in the development of strategic initiatives, such as when implementation areas to be developed further are identified with project team
- technical skills to use project-management software.

### Required knowledge

- broad knowledge of:
  - client business domain
  - information technology (IT) related services and issues
  - possible legislative requirements relating to cabling and building preservation
  - role of stakeholders and degree of stakeholder involvement
  - vendor product directions
- detailed knowledge of:
  - current industry-accepted hardware and software product
  - prerequisites needed for system installation
  - vendor specifications and requirements for installation.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify and convey a clear understanding of project deliverables, boundaries and roles</li> <li>• plan and document an implementation approach, having regard to implementation drivers, measures of success, implementation by functional area and coordination.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• project documentation</li> <li>• staff, resources and technical equipment.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• analysis of candidate's organisational documents that relate to:             <ul style="list-style-type: none"> <li>• implementation approach</li> <li>• implementation drivers</li> <li>• measures of success</li> <li>• implementation by functional area</li> <li>• implementation coordination</li> </ul> </li> <li>• review of project plan and client expectations brief prepared by candidate</li> <li>• verbal or written questions to determine candidate's knowledge of scope.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Project plan</i></b> may include a number of project variables, including:	<ul style="list-style-type: none"> <li>• parties and their responsibilities</li> <li>• budget</li> <li>• objectives</li> <li>• schedule</li> <li>• scope.</li> </ul>
<b><i>Project scope</i></b> may include:	<ul style="list-style-type: none"> <li>• customer acceptance criteria</li> <li>• description of outcomes (deliverables)</li> <li>• equipment and software to be installed</li> <li>• financials</li> <li>• milestones and timeline</li> <li>• project constraints</li> <li>• project objectives</li> <li>• resources required</li> <li>• roles of involved parties.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS424A Support different operating systems

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to repair bootup procedures in a variety of operating systems (OS).

### Application of the Unit

This unit applies to frontline technical support personnel in a medium to large organisation responsible for end user support.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine organisation's help-desk procedures	1.1 Review organisation's technical support procedures 1.2 Interrogate help-desk system 1.3 Liaise with client
2. Identify OS	2.1 Examine <b><i>operating system</i></b> file and root structure 2.2 Identify profile information 2.3 Explore the help structure 2.4 Observe boot process
3. Differentiate OS	3.1 Compare and contrast <b><i>features</i></b> of OS 3.2 Examine kernel file structures 3.3 Determine currency of operating system
4. Analyse OS boot processes	4.1 Analyse boot procedures 4.2 Evaluate associated boot files 4.3 Itemise boot procedures for different operating procedures

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to interpret technical manuals
- learning skills to maintain knowledge of current industry-accepted hardware and software products
- planning and organisational skills to plan the upgrade or installation of OS, taking into account time, environment, and internal and external issues
- problem-solving skills to solve client OS problems
- technical skills to:
  - select, source and use appropriate software and tools based on analysis of technical needs
  - solve OS boot problems.

### Required knowledge

- boot processes in use
- files required for operation
- range of OS.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• evaluate a non-functional OS</li> <li>• diagnose cause of system faults</li> <li>• rectify the fault.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• stand-alone or networked PC</li> <li>• appropriate OS installation CD or recovery boot discs</li> <li>• drivers for connected devices</li> <li>• help-desk system</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate rectifying a boot process problem</li> <li>• review of candidate's completed call documentation</li> <li>• verbal or written questioning to assess candidate's knowledge of boot procedures of different OS.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Operating system</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• Mac:             <ul style="list-style-type: none"> <li>• Mac OS 9</li> <li>• Mac OS X</li> </ul> </li> <li>• current Windows:             <ul style="list-style-type: none"> <li>• Windows 2000</li> <li>• Windows 7</li> <li>• Windows Vista</li> <li>• Windows XP</li> </ul> </li> <li>• legacy Windows:             <ul style="list-style-type: none"> <li>• DOS</li> <li>• Windows 95</li> <li>• Windows 98</li> <li>• Windows ME</li> <li>• Windows NT 4.0</li> </ul> </li> <li>• Unix-like:             <ul style="list-style-type: none"> <li>• BSD and derivations:                 <ul style="list-style-type: none"> <li>• FreeBSD</li> <li>• NetBSD</li> <li>• OpenBSD</li> </ul> </li> <li>• GNU and Linux</li> <li>• NextStep</li> <li>• Suse Linux</li> <li>• available open source OS.</li> </ul> </li> </ul>
<p><b><i>Features</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• configuration</li> <li>• file handling</li> <li>• internet network access</li> <li>• log-on procedures</li> <li>• printing</li> <li>• user interface.</li> </ul>

## **Unit Sector(s)**

Systems administration and support

# ICASAS425A Configure and troubleshoot operating system software

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit defines the performance outcomes, skills and knowledge required to configure, maintain and troubleshoot operating system (OS) software to ensure organisational requirements and client needs are met.

## Application of the Unit

This unit applies to individuals in a technical support role who are required to configure and troubleshoot OS software to meet organisational requirements. The unit develops the ability to install, configure, optimise and test the OS to identified vendor specifications. The ability to troubleshoot and rectify faults is also a key component of this unit.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify available OS	<p>1.1 Compare and contrast different <i>OS</i></p> <p>1.2 Identify and demonstrate knowledge of basic <i>OS features</i></p> <p>1.3 Research OS vendor sites to obtain technical specifications and system requirements</p> <p>1.4 Install and configure the OS using features such as Internet Information Services (IIS)</p> <p>1.5 Determine licensing, hardware and security requirements and provide recommendations to <i>appropriate person</i></p>
2. Install, configure and optimise OS	<p>2.1 Install, configure and test the OS using the installation components and <i>boot utility options</i></p> <p>2.2 Use the <i>OS user interface</i> to correctly configure the installation</p> <p>2.3 Identify different <i>directory structures</i> and demonstrate management of virtual memory</p> <p>2.4 Optimise system to meet <i>organisational requirements</i></p> <p>2.5 Document system according to organisational requirements</p>
3. Resolve problems using tools	<p>3.1 Identify <i>command line options</i> and <i>system tools</i> available to troubleshoot problems</p> <p>3.2 Identify specific problems and implement strategies for resolution</p> <p>3.3 Use options and tools to resolve <i>common operating system issues</i></p>
4. Provide instruction for new OS implementation	<p>4.1 Provide one-to-one instruction about changes to the <i>client</i> or users as required</p> <p>4.2 Obtain client evaluation about new system to ensure requirements are met, using appropriate <i>feedback mechanism</i></p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - install and configure OS software
  - interpret technical computer installation manuals
  - liaise with people working across different levels and in different contexts
- literacy skills to:
  - obtain written and verbal feedback from clients
  - present information, such as the use of diagnostic tools
  - provide verbal instructions to client
- problem-solving skills to troubleshoot OS
- research skills to search for solutions to common problems
- technical skills to:
  - work with OS
  - write instructions for clients.

### Required knowledge

- architecture of current technical systems
- current industry-accepted hardware and software products
- functions and features of OS used by the organisation
- installation and configuration of systems software
- organisational requirements for OS software
- prerequisites for system software installation
- set-up and configuration procedures
- software packages supported by the organisation
- system's current functionality
- system's diagnostic software
- vendor specifications and requirements for installation.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify requirements of different OS</li> <li>• install, configure and test an OS to improve system performance with minimum disruption to clients</li> <li>• identify faults and rectify with utilities and tools.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• PC where installation may be performed</li> <li>• OS software and technical documentation are available</li> <li>• organisational documentation</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <p>direct observation of candidate:</p> <ul style="list-style-type: none"> <li>• questioning team members, supervisors and clients</li> <li>• installing and testing an OS</li> <li>• identifying and rectifying OS faults</li> <li>• evaluation of candidate's reports demonstrating applicants ability to use and optimise an OS</li> <li>• verbal or written questioning to assess candidate's knowledge of OS installation and troubleshooting.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>OS</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• Mac OS X</li> <li>• Linux:             <ul style="list-style-type: none"> <li>• Debian</li> <li>• Fedora</li> <li>• Google Chrome OS</li> <li>• Kubuntu</li> <li>• Linux Mint</li> <li>• Red Hat</li> <li>• Ubuntu</li> </ul> </li> <li>• Microsoft Windows:             <ul style="list-style-type: none"> <li>• Windows 2000</li> <li>• Windows 7 (32 bit versus 64 bit)</li> <li>• Windows Vista (32 bit versus 64 bit)</li> <li>• Windows XP (32 bit versus 64 bit)</li> </ul> </li> <li>• mobile OS:             <ul style="list-style-type: none"> <li>• Android</li> <li>• Blackberry</li> <li>• iPhone</li> <li>• Palm</li> <li>• Symbian</li> <li>• Windows Phone 7 series.</li> </ul> </li> </ul>
<p><b><i>OS features</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• configure power management:             <ul style="list-style-type: none"> <li>• hibernate</li> <li>• sleep timers</li> <li>• standby</li> <li>• suspend</li> <li>• wake on local area network (LAN)</li> </ul> </li> <li>• device manager:             <ul style="list-style-type: none"> <li>• driver signing</li> <li>• install and update device drivers</li> <li>• verify</li> </ul> </li> <li>• demonstrate safe removal of peripherals</li> </ul>

	<ul style="list-style-type: none"> <li>• directory structures:             <ul style="list-style-type: none"> <li>• create folders</li> <li>• navigation of directory structures</li> </ul> </li> <li>• disk preparation order:             <ul style="list-style-type: none"> <li>• format drive</li> <li>• partition</li> <li>• start installation</li> </ul> </li> <li>• files:             <ul style="list-style-type: none"> <li>• attributes</li> <li>• creation</li> <li>• extensions</li> <li>• permissions</li> </ul> </li> <li>• file systems:             <ul style="list-style-type: none"> <li>• FAT32 versus new technology file system (NTFS)</li> </ul> </li> <li>• installation methods:             <ul style="list-style-type: none"> <li>• boot media, such as DVD, CD, floppy or universal serial bus (USB)</li> <li>• factory recovery partition</li> <li>• install from image</li> <li>• network installation</li> <li>• recover CD</li> </ul> </li> <li>• operating system installation options:             <ul style="list-style-type: none"> <li>• file system type</li> <li>• network configuration</li> <li>• repair install</li> </ul> </li> <li>• user data migration, such as user state migration tool (USMT)</li> <li>• verification of hardware compatibility and minimum requirements</li> <li>• virtual memory.</li> </ul>
<p><i>Appropriate person</i> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<p><i>Boot utility options</i> may include:</p>	<ul style="list-style-type: none"> <li>• boot options:             <ul style="list-style-type: none"> <li>• boot to restore point</li> <li>• recovery options</li> </ul> </li> <li>• safe mode:             <ul style="list-style-type: none"> <li>• automated system recovery (ASR)</li> <li>• emergency repair disk (ERD)</li> <li>• recovery console</li> </ul> </li> <li>• disk boot order or device priority:</li> </ul>

	<ul style="list-style-type: none"> <li>• types of boot devices, such as disk, network and USB.</li> </ul>
<p><i>OS user interface</i> may include:</p>	<ul style="list-style-type: none"> <li>• based on Windows (adopt interface to undertake similar tasks with chosen operating system):             <ul style="list-style-type: none"> <li>• administrative tools:                 <ul style="list-style-type: none"> <li>• performance monitor, event viewer, services, and computer management</li> </ul> </li> <li>• command prompt utilities:                 <ul style="list-style-type: none"> <li>• ipconfig</li> <li>• Ping</li> <li>• Telnet</li> </ul> </li> <li>• control panel</li> <li>• location of basic network settings between OS versions</li> <li>• my computer</li> <li>• my network places or home group</li> <li>• MMC</li> <li>• run line utilities:                 <ul style="list-style-type: none"> <li>• cmd</li> <li>• direct diagnostics (DXdiag)</li> <li>• msconfig</li> <li>• MSINFO32</li> <li>• REGEDIT</li> </ul> </li> <li>• start menu</li> <li>• task bar or systray</li> <li>• task manager</li> <li>• Windows Explorer, such as libraries in Windows 7.</li> </ul> </li> </ul>
<p><i>Directory structures</i> may include:</p>	<ul style="list-style-type: none"> <li>• fonts</li> <li>• offline files and folders</li> <li>• program files</li> <li>• system file locations</li> <li>• temporary files</li> <li>• user file locations</li> <li>• user profile and program files</li> <li>• virtual directories.</li> </ul>
<p><i>Organisational requirements</i> may include:</p>	<ul style="list-style-type: none"> <li>• availability of system to be optimised</li> <li>• client support documentation</li> <li>• in-house or vendor; contracting arrangements relating to IT purchasing</li> <li>• IT policy and procedures relating to service levels and installation</li> <li>• level of complexity of technical manuals.</li> </ul>

<p><b>Command line options</b> may include:</p>	<ul style="list-style-type: none"> <li>• CHKDSK (/f /r)</li> <li>• COPY (/a /v /y)</li> <li>• DIR</li> <li>• EDIT</li> <li>• FORMAT</li> <li>• GREP</li> <li>• IPCONFIG (/all /release /renew)</li> <li>• LS</li> <li>• MD / CD / RD</li> <li>• MKDIR</li> <li>• MSCONFIG</li> <li>• NET</li> <li>• NSLOOKUP</li> <li>• PING (-t -l)</li> <li>• RMDIR</li> <li>• SFC</li> <li>• Tracert</li> <li>• XCOPY.</li> </ul>

	<ul style="list-style-type: none"> <li>• mount points</li> <li>• mounting a drive</li> <li>• offline</li> <li>• online</li> <li>• enable:             <ul style="list-style-type: none"> <li>• disable</li> <li>• indicators</li> <li>• warnings</li> </ul> </li> <li>• regional settings and language settings</li> <li>• remote desktop protocol (remote desktop or remote assistance)</li> <li>• system information</li> <li>• system monitor</li> <li>• system restore</li> <li>• task manager:             <ul style="list-style-type: none"> <li>• process list</li> <li>• process priority</li> <li>• resource usage</li> <li>• termination</li> </ul> </li> <li>• task scheduler.</li> </ul>
<p><b><i>Common operating system issues</i></b> based on Windows (adopt interface to undertake similar tasks with chosen operating system):</p>	<ul style="list-style-type: none"> <li>• error messages and conditions:             <ul style="list-style-type: none"> <li>• aero settings:                 <ul style="list-style-type: none"> <li>• background processes</li> <li>• indexing settings</li> <li>• side bar settings</li> <li>• start-up file maintenance</li> <li>• UAC</li> </ul> </li> <li>• boot:                 <ul style="list-style-type: none"> <li>• inaccessible boot drive</li> <li>• invalid boot disk</li> <li>• missing NTLDR</li> </ul> </li> <li>• event viewer (errors in the event log)</li> <li>• start-up:                 <ul style="list-style-type: none"> <li>• device or program in registry not found</li> <li>• device or service failed to start</li> </ul> </li> <li>• system performance and optimisation</li> </ul> </li> <li>• operational problems:             <ul style="list-style-type: none"> <li>• application install, start or load failure</li> <li>• auto-restart errors</li> <li>• bluescreen error</li> <li>• devices drivers failure (input and output devices)</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• service fails to start</li> <li>• system lock-up</li> <li>• Windows-specific printing problems:                         <ul style="list-style-type: none"> <li>• incorrect or incompatible driver or form printing</li> <li>• print spool stalled.</li> </ul> </li> </ul>
<i>Client</i> may include:	<ul style="list-style-type: none"> <li>• department within the organisation</li> <li>• person with special needs</li> <li>• person within a department</li> <li>• third party.</li> </ul>
<i>Feedback mechanism</i> may include:	<ul style="list-style-type: none"> <li>• interview</li> <li>• meeting</li> <li>• questionnaire</li> <li>• survey.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS426A Locate and troubleshoot IT equipment, system and software faults

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to troubleshoot problems and apply systematic processes to fault finding across a wide range of information and communications technology (ICT) disciplines.

## Application of the Unit

This unit applies to any IT practitioner who needs to apply a systematic approach to finding faults, troubleshooting problems and solving issues in a wide range of ICT-related areas.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Choose the most appropriate fault-finding method	1.1 Develop a <b><i>troubleshooting process</i></b> to help resolve problems 1.2 Analyse and document the <b><i>system</i></b> that requires troubleshooting 1.3 Identify available <b><i>fault-finding tools</i></b> and determine the most appropriate for the identified problem 1.4 Obtain the required fault-finding tools 1.5 Identify <b><i>legislation, OHS requirements, codes, regulations and standards</i></b> related to the problem area
2. Analyse the problem to be solved	2.1 Collect data relevant to the system 2.2 Analyse the data to determine if there is a problem and the nature of the problem 2.3 Determine <b><i>specific symptoms</i></b> of hardware, operating system and printer <b><i>problem</i></b>
3. Identify a solution and rectify the problem	3.1 Formulate a <b><i>solution</i></b> and make provision for rollback 3.2 Systematically test variables until the problem is isolated 3.3 Rectify the problem 3.4 Create a list of probable causes of the problem
4. Test system and complete documentation	4.1 Test the system to ensure the problem has been solved and record results 4.2 Identify and implement <b><i>common preventative maintenance</i></b> techniques to support ongoing maintenance strategies 4.3 Document the signs and symptoms of the problem and its solution, and load to database of problems or solutions for future reference

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - liaise with clients
  - negotiate with other team members
  - provide customer service
  - work in teams
- literacy skills to:
  - analyse and evaluate information
  - document outcomes
- planning and organisational skills to:
  - conduct risk analysis for reviewing change procedures
  - maintain the continuity of IT operations and business functions
  - undertake basic training needs analysis
  - technical skills to apply methodology in fault diagnosis.

### Required knowledge

- client support and maintenance practices
- current industry-accepted hardware and software products, including features and capabilities
- details of the system under modification
- one or more change-management tools
- quality assurance practices with regard to locating and troubleshooting IT equipment, system and software faults
- change control procedures
- system testing tools
- system's current functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop a troubleshooting process</li> <li>• analyse and identify different faults</li> <li>• establish context and background information and determine the likely causes of the fault</li> <li>• obtain suitable tools and equipment and apply simple checks, tests and fault-finding methodology</li> <li>• apply the recommended means to rectify fault.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• system to be diagnosed</li> <li>• diagnostic and fault-finding tools</li> <li>• technical and system documentation</li> <li>• organisational requirements for documenting solution</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate locating and rectifying faults</li> <li>• verbal or written questioning to assess knowledge of types of faults and implications</li> <li>• evaluation of written reports prepared by candidate outlining signs and symptoms of the problem, test results interpretation and solution.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Troubleshooting process</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• documenting findings, actions and outcomes</li> <li>• establishing a theory of probable cause</li> <li>• identifying the problem, such as by questioning the user</li> <li>• identifying user changes to computer and performing backups before making changes</li> <li>• implementing preventative measures</li> <li>• implementing the solution</li> <li>• planning to resolve the problem</li> <li>• testing the theory to determine cause:             <ul style="list-style-type: none"> <li>• if theory is confirmed determine next steps to resolve problem</li> <li>• if theory is not confirmed re-establish new theory or escalate</li> </ul> </li> <li>• verifying full system functionality.</li> </ul>
<p><b><i>System</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• computer systems</li> <li>• hardware and software components</li> <li>• network</li> <li>• website.</li> </ul>
<p><b><i>Fault-finding tools</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• for networking:             <ul style="list-style-type: none"> <li>• mapping tools</li> <li>• operating system tools</li> <li>• open system interconnection (OSI) layered model</li> <li>• Ping</li> <li>• protocol analysers</li> <li>• Telnet</li> <li>• traceroute</li> </ul> </li> <li>• for programming:             <ul style="list-style-type: none"> <li>• break points</li> <li>• compilers</li> <li>• debug</li> <li>• trace.</li> </ul> </li> </ul>
<p><b><i>Legislation, OHS requirements, codes,</i></b></p>	<ul style="list-style-type: none"> <li>• environmental considerations, such as:             <ul style="list-style-type: none"> <li>• clean-up protection</li> </ul> </li> </ul>

<p><b>regulations and standards</b> may include:</p>	<ul style="list-style-type: none"> <li>• flashing lights</li> <li>• gas and other hazard detection equipment</li> <li>• identifying other services, including power and gas</li> <li>• noise, dust and clean-up management</li> <li>• safety barriers</li> <li>• safety equipment</li> <li>• stormwater protection</li> <li>• trench guards</li> <li>• warning signs and tapes</li> <li>• waste management</li> <li>• wickets hats</li> <li>• OHS and environmental requirements relating to decommissioning and isolating worksite and lines prior to commencement</li> <li>• safe working practices, such as the safe use and handling of:             <ul style="list-style-type: none"> <li>• asbestos</li> <li>• chemicals</li> <li>• materials</li> <li>• special access requirements</li> <li>• tools and equipment</li> <li>• work platforms</li> </ul> </li> <li>• suitable light and ventilation.</li> </ul>
<p><b>Specific symptoms</b> may include:</p>	<ul style="list-style-type: none"> <li>• hardware-related symptoms:             <ul style="list-style-type: none"> <li>• alerts</li> <li>• excessive heat</li> <li>• noise</li> <li>• odours</li> <li>• status light indicators</li> <li>• visible damage, such as cable and plastic</li> </ul> </li> <li>• laptop or mobile devices:             <ul style="list-style-type: none"> <li>• issues:                 <ul style="list-style-type: none"> <li>• keyboard</li> <li>• pointer</li> <li>• power conditions</li> <li>• stylus</li> <li>• video</li> <li>• wireless card issues</li> </ul> </li> <li>• methods:                 <ul style="list-style-type: none"> <li>• check LCD cut-off switch</li> <li>• check switch for built-in wi-fi antennas or external</li> </ul> </li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>antennas</li> <li>• plug in external monitor</li> <li>• remove unneeded peripherals</li> <li>• toggle Fn keys or hardware switches</li> <li>• verify backlight functionality and pixilation</li> <li>• verify power, such as LEDs, swap AC adapter</li> <li>• operating system (OS) related symptoms:             <ul style="list-style-type: none"> <li>• bluescreen</li> <li>• system lock-up</li> <li>• input or output device</li> <li>• application install</li> <li>• start or load</li> <li>• Windows-specific printing problems</li> <li>• print spool stalled</li> <li>• incorrect or incompatible driver</li> </ul> </li> <li>• printers:             <ul style="list-style-type: none"> <li>• manage print jobs</li> <li>• print spooler</li> <li>• printer properties and settings</li> <li>• print a test page</li> </ul> </li> <li>• use documentation and resources, including:             <ul style="list-style-type: none"> <li>• user or installation manuals</li> <li>• internet or web-based</li> <li>• training materials.</li> </ul> </li> </ul>
<p><b>Problem</b> may refer to:</p>	<ul style="list-style-type: none"> <li>• application</li> <li>• network</li> <li>• people in the organisation</li> <li>• problem with the business</li> <li>• system.</li> </ul>
<p><b>Solution</b> may include:</p>	<ul style="list-style-type: none"> <li>• business processes</li> <li>• implementing a new system</li> <li>• new hardware and hardware upgrades</li> <li>• new software and software upgrades</li> <li>• user training.</li> </ul>
<p><b>Common preventative maintenance</b> may include:</p>	<ul style="list-style-type: none"> <li>• backup procedures</li> <li>• ensuring proper environment</li> <li>• physical inspection</li> <li>• power devices:             <ul style="list-style-type: none"> <li>• appropriate source, such as power strip, surge protector or UPS</li> </ul> </li> </ul>

	<ul style="list-style-type: none"><li>• scheduling preventative maintenance:<ul style="list-style-type: none"><li>• check disk</li><li>• defrag</li><li>• scandisk</li><li>• start-up programs</li></ul></li><li>• updates:<ul style="list-style-type: none"><li>• driver</li><li>• firmware</li><li>• OS</li><li>• security</li></ul></li><li>• use of appropriate repair tools and cleaning materials:<ul style="list-style-type: none"><li>• compressed air</li><li>• computer vacuum and compressors</li><li>• lint free cloth.</li></ul></li></ul>

## Unit Sector(s)

Systems administration and support

# ICASAS501A Develop, implement and evaluate an incident response plan

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop and implement an incident response plan. The results of the incident response plan must be evaluated if they affect the mission of the organisation.

## Application of the Unit

This unit applies to network managers who are responsible for maintaining network service.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Develop the incident response program	<p>1.1 Develop the <i>incident</i> management policy</p> <p>1.2 Identify the services the incident response team should provide</p> <p>1.3 Create incident response plans according to security policy and organisational goals</p> <p>1.4 Develop procedures for incident handling and reporting</p> <p>1.5 Create incident response exercises and red-teaming activities</p> <p>1.6 Develop specific processes for collecting and protecting forensic evidence during incident response</p> <p>1.7 Specify incident response staffing and training requirements</p> <p>1.8 Establish the response program</p>
2. Implement the incident response program	<p>2.1 Apply response actions in reaction to security incidents according to established policy, plans and procedures</p> <p>2.2 Respond to and report incidents</p> <p>2.3 Assist in collecting, processing and preserving evidence <i>according to requirements</i></p> <p>2.4 Execute incident response plans</p> <p>2.5 Execute red-teaming activities and incident response exercises</p> <p>2.6 Ensure lessons learned from incidents are collected in a timely manner and are incorporated into review plans</p> <p>2.7 Collect, analyse and report incident management measures</p>
3. Evaluate the incident response program	<p>3.1 Assess efficiency and effectiveness of incident response program activities and implement changes as required</p> <p>3.2 Examine effectiveness of red teaming and incident response tests, training and exercises</p> <p>3.3 Assess effectiveness of communication between incident response team and related internal and external organisations, implementing changes where appropriate</p> <p>3.4 Identify and implement improvements based on assessments of effectiveness</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - liaise with clients and team members
  - present technical information
- initiative and enterprise skills to develop incident response policies
- learning skills to build organisational knowledge
- literacy skills to prepare reports
- planning and organisational skills to:
  - manage a project
  - manage logistics for identified resources and procedures to ensure on-time availability of required equipment
- problem-solving skills to evaluate:
  - broad features of a particular business domain
  - best practice in system development.

### Required knowledge

- broad knowledge of:
  - client business domain
  - OHS procedures when formulating prevention and recovery strategy
  - systems engineering when evaluating threats
- detailed knowledge of:
  - backup methodologies
  - specific components of the business planning process relevant to the development of information technology (IT) business solutions
  - current system functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop an incident response program</li> <li>• manage an incident response activation and operation</li> <li>• evaluate the incident response.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• IT business specifications</li> <li>• information on the security environment, including relevant laws and legislation, existing organisational security policies, organisational expertise and knowledge</li> <li>• possible security environment, including threats to security that are, or are held to be, present in the environment</li> <li>• risk analysis tools and methodologies</li> <li>• IT security assurance specifications</li> <li>• incident scenarios.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of security environment and risk analysis</li> <li>• review of incident response plan and associated documentation.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Incident</i></b> may include:	<ul style="list-style-type: none"> <li>• fire</li> <li>• misuse or improper access</li> <li>• other physical damage</li> <li>• theft of data or property</li> <li>• unauthorised publication.</li> </ul>
<b><i>According to requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• directives</li> <li>• laws</li> <li>• policies</li> <li>• procedures</li> <li>• regulations</li> <li>• standards.</li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS502A Establish and maintain client user liaison

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to establish and maintain client user liaison in an information technology (IT) environment, post support implementation. This occurs after the business critical functions have been determined.

### Application of the Unit

This unit applies to a variety of IT staff, including systems analysts, business analysts, system administrators and technical support staff who are responsible for liaising with clients to ensure that their requirements are fully met.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Determine support areas	<p>1.1 Identify and record information technology used in the organisational unit</p> <p>1.2 Identify <i>stakeholders</i> of the <i>system</i></p> <p>1.3 Identify organisational structure, culture and politics related to support requirements</p> <p>1.4 Determine what level of support is required by each organisational unit</p>
2. Develop support procedures	<p>2.1 Contact organisational units, as required, to verify support needs</p> <p>2.2 Establish procedures for providing required support, including method of contact, frequency of meetings and reporting</p> <p>2.3 Document agreed procedures or <i>service level agreement</i> (SLA)</p>
3. Assign support personnel	<p>3.1 Identify IT skills required to assist each organisational unit with support activities</p> <p>3.2 Assign personnel according to <i>human resource processes</i></p> <p>3.3 Verify availability of selected personnel</p> <p>3.4 Provide support using agreed procedures</p> <p>3.5 Obtain feedback from <i>appropriate persons</i> on a regular basis</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - discuss support needs of clients
  - explain relevant concepts
  - enable the end user to attempt remedial action
- initiative and enterprise skills to contribute to solutions and goals of a non-routine or contingency nature
- literacy skills to:
  - document and interpret procedures and SLAs
  - report on service history issues
- planning and organisational skills to:
  - establish procedures for providing support
  - deliver on scope, time, cost and quality
  - promote communications and manage risk
  - assign support personnel according to human resource processes
  - organise equitable workloads for team members
- problem-solving skills to gain consensus on concepts
- research skills to:
  - identify organisational structure and culture
  - identify information technology within an organisational unit.

### Required knowledge

- adequate response times
- awareness of stakeholders, their role in the organisation, and their level of dependence on IT infrastructure
- capabilities of IT devices
- current industry-accepted hardware and software products
- detailed knowledge of areas related to the organisation's services
- equipment that is vital in supplying business critical services:
  - internet file transaction security for client accounts
  - web server for ebusiness
- detailed knowledge of functionality of the IT system in supplying the essential and desirable services to the organisation
- quality assurance practices relating to how the service is supplied
- role of IT in the client's business domain
- server types to provide:
  - application
  - backup
  - email

- firewall
- proxy
- web.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• establish and maintain client liaison in an IT environment</li> <li>• establish procedures for providing required support</li> <li>• identify IT skill requirements and assign appropriate support personnel</li> <li>• show personal responsibility and autonomy in performing complex technical operations or organising others.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• agreed procedures or SLAs</li> <li>• documented support requirements</li> <li>• technical records and documentation.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• review of: <ul style="list-style-type: none"> <li>• records provided by candidate which identify stakeholders and their support requirements</li> <li>• support procedures or SLAs developed by the candidate</li> <li>• evidence of participation in developing strategic initiatives</li> </ul> </li> <li>• direct observation of candidate providing support and maintaining liaison using agreed procedures</li> <li>• verbal or written questioning to assess candidate's knowledge of establishing and maintaining client liaison.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider (ASP)</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating systems</li> <li>• server.</li> </ul>
<b><i>Service level agreements</i></b> may include:	<ul style="list-style-type: none"> <li>• ASPs</li> <li>• audit of service levels</li> <li>• business processes and requirements</li> <li>• communications carriers</li> <li>• infrastructure services</li> <li>• ISPs</li> <li>• vendor products</li> <li>• workload and performance considerations and expectations regarding: <ul style="list-style-type: none"> <li>• charge back to business units</li> <li>• penalties</li> <li>• servicing.</li> </ul> </li> </ul>
<b><i>Human resource processes</i></b> may include:	<ul style="list-style-type: none"> <li>• checking job and person specifications</li> <li>• observing work activities</li> <li>• professional recommendations or referrals</li> <li>• reviewing performance reports.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• project manager</li> <li>• supervisor.</li> </ul>

## **Unit Sector(s)**

Systems administration and support

## ICASAS503A Perform systems tests

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to ensure that the properties of the entire system are tested and proved adequate before handover to the client or user for final acceptance testing.

### Application of the Unit

This unit applies to senior information and communications technology (ICT) staff employed in a range of work environments who are required to ensure that a system is defect-free before it is acceptance tested by the user.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare for test	<p>1.1 Prepare <i>test environment</i></p> <p>1.2 Determine software life cycle</p> <p>1.3 Define test plan and appropriate <i>test tools</i></p> <p>1.4 Recognise and separate the system into runnable modules mirroring live scenarios</p> <p>1.5 Gather and prepare logs and result sheets</p> <p>1.6 Notify operations of scheduled test to ensure preparedness and understanding of implications for operations</p> <p>1.7 Test scripts for online test or test run for batch test</p> <p>1.8 Conduct walkthrough to review expected results against acceptance criteria and system requirements documentation</p>
2. Conduct test	<p>2.1 Run test scripts and document results according to test and acceptance processes</p> <p>2.2 Perform required quality benchmarks or comparisons for acceptance testing</p> <p>2.3 Adopt <i>organisation and industry standards</i></p> <p>2.4 Compare actual results to expected results on completion of each system unit, and complete result sheets</p>
3. Analyse and classify results	<p>3.1 Summarise and classify results, highlighting critical or urgent areas of concern and prepare report</p> <p>3.2 Compare results against requirements</p> <p>3.3 Notify operations of test completion</p> <p>3.4 Log attendees' details or comments and gain required signatures</p> <p>3.5 Schedule feedback meeting to discuss report and possible next actions with stakeholders if necessary</p> <p>3.6 Ensure test reporting complies with documentation and reporting standards</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - present information
  - provide advice to colleagues and staff
- literacy skills to:
  - interpret technical documentation
  - write reports
- problem-solving skills to solve testing problems
- technical skills to analyse and use programming skills related to testing the operation and consistency of the total system.

### Required knowledge

- automated test tools, with detailed knowledge of some features and processes
- input and output requirements
- organisational practice and rules for preparing test
- particular system requirements and features
- underlying test data.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• test the operation and consistency of the total system according to the system requirements, including testing performance, security, configuration sensitivity, and start-up and recovery from failure modes; with testing taking place prior to delivery</li> <li>• analyse test results</li> <li>• prepare reports in compliance with documentation and reporting standards.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• requirements and design documents</li> <li>• human resources</li> <li>• test hardware and environments in place and free for system test use (all testing to be carried out on the same platform as the completed system; scheduled testing to be on the production platform; production environment is required as part of test preparation)</li> <li>• system or application suitable for testing.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate conducting a test using appropriate test tools</li> <li>• verbal or written questioning of underpinning skills and knowledge of components and run-able modules that make up a total system</li> <li>• evaluation of test results prepared by candidate, including confirming that functionality is as specified by the business, and documenting any software issues</li> <li>• review of test documentation, specifically confirming that: <ul style="list-style-type: none"> <li>• functionality of the tested system is as specified by the business in the business design specification document and the requirements documentation</li> <li>• software will replace existing software or support the intended business functions and achieves the standards</li> </ul> </li> </ul>

	<p>required by the organisation for the development of new systems</p> <ul style="list-style-type: none"><li>• software, network or web page is of high quality and interfaces with existing systems.</li></ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Test environment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• data</li> <li>• network, communications and other equipment</li> <li>• operating system</li> <li>• other support software</li> <li>• program libraries.</li> </ul>
<p><b><i>Test tools</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• applications testing:             <ul style="list-style-type: none"> <li>• Cyrano Suite</li> <li>• DataShark</li> <li>• Datatect</li> <li>• preVue-C/S</li> </ul> </li> <li>• code, unit, class testing:             <ul style="list-style-type: none"> <li>• AssertMate</li> <li>• BoundsChecker</li> <li>• C-Cover</li> <li>• CodeReview</li> <li>• CodeWizard</li> <li>• DeepCover</li> <li>• FailSafe</li> <li>• Hindsight</li> <li>• Insure++</li> <li>• JavaPureCheck</li> <li>• JCAST</li> <li>• Logiscope</li> </ul> </li> <li>• stress load testing:             <ul style="list-style-type: none"> <li>• Astra SiteManager</li> <li>• Astra SiteTest</li> <li>• automated test facilities</li> <li>• AutoTester Web</li> <li>• e-Load</li> <li>• e-MONITO</li> <li>• e-TEST Suite</li> <li>• JavaLoad</li> </ul> </li> </ul>

	<ul style="list-style-type: none"><li>• LoadRunner.</li></ul>
<i>Organisation and industry standards</i> may include:	<ul style="list-style-type: none"><li>• AS3925.1-1994 Software quality assurance - plans</li><li>• AS4042-1992 Software configuration management plans</li><li>• AS4043-1992 Software configuration management</li><li>• AS/NZS 14102:1998 Information technology - guideline for evaluation and selection of computer-aided software engineering (CASE) tools</li><li>• AS/NZS 4258:1994 Software user documentation process</li><li>• AS/NZS ISO/IEC 12207:1997 Information technology - Software life cycle processes.</li></ul>

## Unit Sector(s)

Systems administration and support

## ICASAS504A Develop and conduct client acceptance test

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and conduct acceptance testing as part of the process whereby clients will determine whether to accept the system.

### Application of the Unit

This unit applies to senior information and communications technology (ICT) staff employed in a range of work environments who are required to conduct user acceptance tests.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams, including teams concerned with planning and evaluation.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify acceptance criteria and develop test plan	<p>1.1 Review system requirements documentation and project plans to identify mandatory system objectives and optional criteria, and conditions for system acceptance</p> <p>1.2 Develop test plan based on system requirements</p> <p>1.3 Review and validate test plan based on mandatory criteria, conditions, and system objectives and requirements</p> <p>1.4 Communicate test plan to client and prepare client for acceptance test</p> <p>1.5 Notify <i>appropriate person</i> of the scheduled acceptance test</p>
2. Perform functional testing on software modules	<p>2.1 Prepare test environment for <i>client</i> use</p> <p>2.2 Perform testing according to test plan and documentation</p> <p>2.3 Execute each test cycle</p> <p>2.4 Document errors, difficulties and problems</p>
3. Validate test results against expected results	<p>3.1 Record and investigate discrepancies and corrections according to project procedures and timeframe</p> <p>3.2 Brief client on outcomes to ensure client understands test results</p> <p>3.3 Monitor system performance as required</p> <p>3.4 Reschedule required code changes or modifications</p>
4. Obtain sign-off and acceptance	<p>4.1 Confirm test results with client</p> <p>4.2 Identify and document client concerns over system operation</p> <p>4.3 Identify possible solutions to concerns and notify appropriate development staff as required</p> <p>4.4 Confirm client approval and obtain sign-off</p> <p>4.5 Seek and formalise agreement of involved parties regarding the rescheduling of further required maintenance</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to interpret test information
- communication skills to:
  - liaise with client and technical staff to ensure client understanding of test sequences
  - negotiate with team members
  - present information
- literacy skills to:
  - interpret technical specifications, standards and related documentation
  - prepare reports and technical documentation
- numeracy skills to make calculations
- planning and organisational skills to:
  - conduct risk management
  - develop test plans to efficiently undertake inspections and tests
  - estimate scope, time, cost and quality
  - determine project communications
- technical skills to conduct tests and validate test results.

### Required knowledge

- automated test tools, with detailed knowledge of features and processes in some areas
- business rules and standards
- client user requirements
- system or application being tested
- testing techniques.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• review test-plan documentation and ensure client acceptance requirements are explicitly and accurately tested to predetermined standards of consistent performance, specifically:                             <ul style="list-style-type: none"> <li>• ensure system operates in the manner expected</li> <li>• provide supporting material such as procedures and forms</li> <li>• ensure there are no gaps in functionality</li> <li>• ensure individual elements and the overall system provide the desired result or functionality</li> <li>• provide unit and suite user-documentation</li> <li>• copy user-accepted code to the live area</li> <li>• ensure version numbers are correct and code is operational.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• business requirements</li> <li>• project documentation, including templates, standards, specifications, and client user and technical manuals</li> <li>• test plan</li> <li>• technical components of system, including software, hardware and network</li> <li>• staffing resources, including development, operations and client user representatives</li> <li>• system application suitable for testing</li> <li>• functional test cases selected to satisfy the agreed acceptance criteria (acceptance tests relate to the functionality of the system as stated in the requirements specification).</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate undertaking acceptance tests</li> <li>• review of:                             <ul style="list-style-type: none"> <li>• reports and plans completed by the candidate for different</li> </ul> </li> </ul>

	<p>scenarios and situations</p> <ul style="list-style-type: none"> <li>• a completed acceptance documentation for systems prepared by candidate</li> <li>• verbal or written questioning to assess knowledge of tests and inspections types of systems and applications.</li> </ul>
<p><b>Guidance information for assessment</b></p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Appropriate person</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<p><b><i>Client</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• clubs</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments</li> <li>• internal employees.</li> </ul>

Systems administration and support

# ICASAS505A Review and update disaster recovery and contingency plans

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse the impact of the system on the organisation and carry out risk analysis, disaster recovery and contingency planning.

## Application of the Unit

This unit applies to information technology (IT) professionals who are required to prepare contingency plans in case of disaster.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

<p>1. Evaluate impact of system on business continuity</p>	<p>1.1 Identify <i>business critical functions</i> and the security environment from <i>documentation</i> and from discussion with business area and <i>project team</i></p> <p>1.2 Identify critical data and <i>software</i> from documentation</p> <p>1.3 Assess potential impact of business risk and <i>threats</i> on IT <i>systems</i></p> <p>1.4 Identify and evaluate <i>statutory requirements, commercial requirements</i> and contingency possibilities according to specifications and cost <i>constraints</i></p>
<p>2. Evaluate threats to system</p>	<p>2.1 Identify threats to the system, considering security analysis and internal and external business environment</p> <p>2.2 Evaluate risk minimisation alternatives against <i>specifications</i> and cost constraints</p>
<p>3. Formulate prevention and recovery strategy</p>	<p>3.1 Evaluate prevention and recovery options to support critical business functions against business specifications and cost constraints</p> <p>3.2 Review current operational procedures to ensure that adequate risk safeguards and <i>contingency plans</i> are in place</p> <p>3.3 Submit disaster recovery and prevention strategy to <i>appropriate person</i> for approval</p>
<p>4. Develop disaster recovery plan to support strategy</p>	<p>4.1 Identify and document resources required for disaster recovery according to specifications and cost constraints</p> <p>4.2 Identify and document processes required for disaster strategy according to project <i>standards</i></p> <p>4.3 Identify <i>cut-over criteria</i> before initiating disaster plan</p> <p>4.4 Document disaster recovery plan and submit to appropriate person for review and sign-off</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - gain consensus on concepts when disaster recovery plan is submitted to higher authorities for review and sign-off
  - negotiate with client business area and project team when business critical functions are identified from project documentation
- literacy skills to interpret statutory requirements
- planning and organisational skills to:
  - manage logistics for resources and procedures required for disaster recovery
  - scope project, and plan time, cost, and quality
  - scope communications, risk analysis and management
- research skills to:
  - follow best practice in system development
  - specify, analyse and evaluate broad features of a particular business domain.

### Required knowledge

- backup methodologies
- business planning process relevant to the development of IT business solutions
- client business domain
- disaster recovery plan strategies and components, including:
  - physical security
  - system failure, accident or sabotage (hackers)
  - denial of service
  - virus attack
  - cyber attack
  - telecommunications failure
- OHS
- legislative and organisational requirements
- system's current functionality
- systems engineering.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• specify contingencies that minimise down time for business critical functions</li> <li>• clearly specify directions on how to handle serious down time</li> <li>• coordinate, plan and articulate flexible logistics requirements.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• vulnerability assessment and general definition of requirements</li> <li>• acceptance test plan</li> <li>• business impact analysis</li> <li>• information technology security assurance specifications</li> <li>• relevant statutory documentation.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of the disaster recovery or contingency plan to ensure the following is covered: <ul style="list-style-type: none"> <li>• defined recovery requirements from the perspective of business functions</li> <li>• impact of an extended loss on operations and key business functions</li> <li>• contingency plan is understandable, and easy to use and maintain</li> <li>• contingency planning considerations may be integrated into ongoing business planning and system development processes</li> <li>• disaster recovery plan is not a one-off activity, but rather an ongoing process</li> </ul> </li> <li>• review of disaster recovery plan developed by the candidate.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Business critical functions</i></b> may include:	<ul style="list-style-type: none"> <li>• customer service functions</li> <li>• financial systems</li> <li>• payroll.</li> </ul>
<b><i>Documentation</i></b> may relate to:	<ul style="list-style-type: none"> <li>• audit trails</li> <li>• client training</li> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• maintaining equipment inventory</li> <li>• naming standards</li> <li>• project management templates and report writing</li> <li>• satisfaction reports</li> <li>• version control.</li> </ul>
<b><i>Project team</i></b> may include:	<ul style="list-style-type: none"> <li>• different businesses working in partnership</li> <li>• individual business analysts</li> <li>• solution developers and business clients working together</li> <li>• third-party solution developers working together.</li> </ul>
<b><i>Software</i></b> may include:	<ul style="list-style-type: none"> <li>• commercial</li> <li>• in-house</li> <li>• packaged or customised software.</li> </ul>
<b><i>Threats</i></b> may include:	<ul style="list-style-type: none"> <li>• accident</li> <li>• cyber attack</li> <li>• denial of service</li> <li>• espionage</li> <li>• information technology failure</li> <li>• sabotage</li> <li>• security</li> <li>• telecommunications network failure</li> <li>• virus attack</li> <li>• weather, such as storms and earthquake.</li> </ul>
<b><i>Systems</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> </ul>

	<ul style="list-style-type: none"> <li>internet service provider (ISP)</li> <li>operating systems</li> <li>servers.</li> </ul>
<i>Statutory requirements</i> may include:	<ul style="list-style-type: none"> <li>industry imposed controls and standards</li> <li>legislation, such as Privacy Act</li> <li>laws regarding confidentiality and reporting of data in organisations, such as health and banking.</li> </ul>
<i>Commercial requirements</i> may include:	<ul style="list-style-type: none"> <li>access to internal network</li> <li>availability</li> <li>backup</li> <li>confidentiality</li> <li>encryption</li> <li>firewalls</li> <li>hacking</li> <li>integrity</li> <li>passwords and logons</li> <li>storage and data recovery.</li> </ul>
<i>Constraints</i> may include:	<ul style="list-style-type: none"> <li>budget</li> <li>hardware</li> <li>legal constraints</li> <li>policy</li> <li>resource</li> <li>software</li> <li>time.</li> </ul>
<i>Specifications</i> may include:	<ul style="list-style-type: none"> <li>current system functionality</li> <li>technical requirements</li> <li>user-problem statement.</li> </ul>
<i>Contingency plans</i> will typically:	<ul style="list-style-type: none"> <li>identify weaknesses and provide for the implementation of a disaster prevention program</li> <li>minimise disruption to business operations</li> <li>provide a coordinated approach to the disaster recovery process</li> <li>vary in format and content detail.</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>authorised business representative</li> <li>client</li> <li>supervisor.</li> </ul>
<i>Standards</i> may include:	<ul style="list-style-type: none"> <li>ISO, IEC and AS standards</li> <li>organisational standards</li> <li>project standards.</li> </ul>
<i>Cut-over criteria</i> may include:	<ul style="list-style-type: none"> <li>actual system down time</li> <li>authorisations to cut-over</li> <li>estimate of business impact, including</li> </ul>

	<ul style="list-style-type: none"><li>• time before system is operational</li><li>• cut-over plan refresher.</li></ul>

## Unit Sector(s)

Systems administration and support

# ICASAS506A Update IT system operational procedures

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to assess, update and document the operational procedures required to use the IT system.

## Application of the Unit

This unit applies to individuals in a range of information and communications technology (ICT) areas who are required to record the ways in which a system works.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Assess technical and user documentation	1.1 Review current versions of <b><i>technical and user documentation</i></b> 1.2 Compare accuracy of technical and user documentation with current <b><i>system</i></b> functionality 1.3 Identify and document inaccuracies in the documentation
2. Update procedures	2.1 Determine operational procedure requirements using review outcomes 2.2 Develop or update operating procedures for the system 2.3 Submit proposed operating procedures to <b><i>appropriate person</i></b>
3. Update documentation	3.1 Review feedback and make appropriate changes 3.2 Update technical and user documentation to incorporate changes 3.3 Submit technical and user documentation to appropriate person for final approval 3.4 Distribute technical and user documentation as agreed with appropriate person

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to present information to staff and others
- literacy skills to:
  - analyse and evaluate documentation
  - update technical and user documentation
  - write business reports
- planning and organisational skills to:
  - develop procedures
  - work in teams
- problem-solving skills to analyse and evaluate information
- technical skills to:
  - operate current system
  - produce documents on various media for distribution
  - review technical documentation.

### Required knowledge

- client business domain
- current business practices related to preparing reports
- current industry-accepted hardware and software products, including their general features and capabilities
- documentation standards and tools
- role of stakeholders and the degree of stakeholder involvement.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• assess system functionality</li> <li>• review and update technical and user documentation</li> <li>• develop procedures to operate systems.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• system or project-related documentation</li> <li>• staffing resources</li> <li>• documentation tools</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate updating technical and user documentation</li> <li>• verbal or written questioning to assess candidate's knowledge of accuracy of technical and user documentation related to system functionality</li> <li>• review of operating procedures developed.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Technical and user documentation</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• brochures</li> <li>• help references</li> <li>• online help</li> <li>• operational procedures</li> <li>• reports</li> <li>• system design</li> <li>• system functionality</li> <li>• system or project specifications</li> <li>• technical manuals</li> <li>• training materials and self-paced tutorials</li> <li>• user guides.</li> </ul>
<p><b><i>System</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• networks</li> <li>• operating systems</li> <li>• servers</li> <li>• software.</li> </ul>
<p><b><i>Appropriate person</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>

Systems administration and support

# ICASAS507A Implement and evaluate systems for regulatory and standards compliance

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement and evaluate the application of the principles, policies and procedures that enable an enterprise to meet applicable information security laws, regulations and standards to satisfy statutory requirements, perform industry-wide best practices, and achieve its information security program goals.

## Application of the Unit

This unit applies to staff in a range of IT areas responsible for ensuring that systems, networks and websites comply with laws, conform to best practices and organisational standards, and meet security requirements.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Implement compliance systems	1.1 Monitor and assess the information security compliance practices of personnel according to enterprise policy and procedures 1.2 Maintain ongoing and effective communications with <b>key compliance stakeholders</b> 1.3 Conduct internal audits to determine if information security control objectives, controls, processes, and procedures are effectively applied and maintained, and perform as expected
2. Evaluate compliance systems	2.1 Assess the effectiveness of enterprise compliance program controls against <b>appropriate benchmarks</b> 2.2 Assess the effectiveness of information security compliance process and procedures for process improvement and implement changes where appropriate 2.3 Compile, analyse and report performance measures

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to articulate complex security scenarios in a clear and concise manner, relevant to all levels of the organisation
- literacy skills to interpret current security standards
- planning and organisational skills to schedule internal audits
- research skills to monitor the latest security standards as well as industry best practice.

### Required knowledge

- client business domain
- current industry-accepted hardware and software products, including security features and capabilities
- legislation relating to IT security
- operating system, including strengths and weaknesses over lifetime of product
- privacy issues and legislation relating to integrating legal requirements with IT security.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• monitor and assess information security compliance</li> <li>• conduct internal audits</li> <li>• assess the effectiveness of enterprise compliance</li> <li>• compile, analyse and report performance measures.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• IT business specifications</li> <li>• information on the security environment, including laws or legislation, existing organisational security policies, organisational expertise and knowledge</li> <li>• possible security environment, which includes threats to security that are, or are held to be, present in the environment</li> <li>• risk analysis tools and methodologies</li> <li>• IT security assurance specifications</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate’s knowledge of: <ul style="list-style-type: none"> <li>• enterprise policies</li> <li>• information security aims</li> <li>• IT audits</li> </ul> </li> <li>• review of candidate’s documented performance measures</li> <li>• observation of candidate conducting an IT audit.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>Key compliance stakeholders</b> may include:	<ul style="list-style-type: none"> <li>• employees</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments.</li> </ul>
<b>Appropriate benchmarks</b> may include:	<ul style="list-style-type: none"> <li>• applicable laws</li> <li>• policies</li> <li>• procedures</li> <li>• regulations</li> <li>• standards.</li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS509A Provide client IT support services

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to liaise with client users while providing IT support.

### Application of the Unit

This unit applies to technical personnel responsible for providing higher technical assistance to users.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify support procedures	1.1 Identify support required by <i>client</i> 1.2 Review support call documentation to identify client contact person 1.3 Review <i>service level agreement</i> (SLA) and appropriate procedures to determine action, and include escalation procedures 1.4 Verify support requirements with client contact
2. Undertake support	2.1 Provide support activity required by the client 2.2 Maintain communication with client contact throughout support activity by email, phone or other specific process 2.3 Document action taken for support activity 2.4 Acknowledge protocol differences during support activity
3. Gather feedback	3.1 Submit resolution documentation to client contact 3.2 Contact client contact to determine satisfaction with support process 3.3 Conduct follow-up action, as required

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - discuss support needs of clients
  - explain relevant concepts
- initiative and enterprise skills to contribute to solutions and goals of a non-routine or contingency nature
- literacy skills to:
  - document and interpret procedures and service level agreements
  - report on service history issues
- planning and organisational skills to:
  - assign support personnel according to human resource processes
  - deliver on scope, time, cost and quality
  - establish procedures for providing support
  - organise equitable workloads for team members
  - promote communications and manage risk
- project-planning skills related to scope, time, cost, quality, communications and risk management
- problem-solving skills to gain consensus on concepts
- research skills to:
  - identify information technology within an organisational unit
  - identify organisational structure and culture
- teamwork skills to contribute to solutions and goals of a non-routine or contingency nature
- technical skills to provide user support.

### Required knowledge

- client business domain
- current industry-accepted hardware and software products, including their general features and capabilities
- help desk and maintenance practices
- quality assurance practices relating to IT support
- role of stakeholders and degree of stakeholder involvement
- current system functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify support requirements and procedures</li> <li>• contact client</li> <li>• document support provided</li> <li>• liaise with user to obtain feedback</li> <li>• act on feedback as appropriate.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• SLAs</li> <li>• escalation procedure</li> <li>• documentation processes</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• escalation procedures</li> <li>• SLAs</li> <li>• organisational support procedures</li> </ul> </li> <li>• direct observation of candidate liaising with client</li> <li>• review of candidate's call documentation</li> <li>• evaluation of client feedback from candidate's communications.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employees</li> <li>• external organisations</li> <li>• individuals</li> <li>• internal departments.</li> </ul>
<b><i>Service level agreement</i></b> may include:	<ul style="list-style-type: none"> <li>• business processes and requirements</li> <li>• charge back to business units</li> <li>• different infrastructure services, including communications carriers, internet service providers (ISPs), application service providers (ASPs) and SLAs for vendor products</li> <li>• evaluation or audit of service levels</li> <li>• expectations regarding servicing</li> <li>• penalties</li> <li>• specific and quantity service levels</li> <li>• workload and performance considerations.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS510A Review and develop IT maintenance strategy

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to review, develop and set up maintenance strategies and supporting processes to achieve continuity of IT operations and business functions.

## Application of the Unit

This unit applies to frontline technical support personnel, such as IT support technicians, and user support specialists responsible for maintaining computer equipment in an organisation.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Identify and analyse maintenance needs	<p>1.1 Identify risks to business continuity due to system malfunction, including quantification of possible loss</p> <p>1.2 Identify core business functions and determine the service requirements for those functions</p> <p>1.3 Develop a maintenance philosophy to meet business needs and apply it to dealings with the <i>client</i></p>
2. Identify and analyse IT system components to be maintained	<p>2.1 Review <i>systems architecture</i> and configuration documentation for currency</p> <p>2.2 Conduct an <i>equipment</i> and <i>software</i> audit if appropriate information is not available</p> <p>2.3 Determine and document the warranty status of <i>components</i> and software according to vendor, project or organisational requirements</p> <p>2.4 Identify critical components and software and document recommendations regarding possible service arrangements</p>
3. Develop service level agreements	<p>3.1 Determine the views and requirements of the client in order to identify maintenance requirements</p> <p>3.2 Prepare <i>service level agreements</i> (SLAs) to match client user and business requirements</p>
4. Formulate maintenance strategy	<p>4.1 Examine maintenance options against cost constraints, risks to business continuity and SLAs</p> <p>4.2 Identify a specific maintenance strategy based on cost, business and SLA requirements</p> <p>4.3 Create a preventative maintenance schedule based on cost, business and SLA requirements</p> <p>4.4 Negotiate a maintenance strategy with client and make changes to SLAs where necessary</p> <p>4.5 Document the recommended procedure for approval from <i>appropriate person</i> according to organisational requirements</p>
5. Define client and supplier processes and standards	<p>5.1 Negotiate and create reporting procedures for service requests with client and suppliers</p> <p>5.2 Determine response time standards with client and suppliers</p> <p>5.3 Create escalation procedures with client and suppliers</p> <p>5.4 Set up the help desk or other support function according to agreed standards and procedures and in line with industry best practices</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse current system practices and system composition and to suggest improvements to them, as part of the development of strategic initiatives
- change-management skills to maintain the continuity of IT operations and business functions, in carrying out system upgrade in its service levels, or repair or replacement of equipment or software
- communication skills to:
  - liaise with customers in the provision of customer services
  - provide information, report and make recommendations on new models of component maintenance schedules in response to pre-existing inadequate measures
- initiative and enterprise skills to work as a team member in the development of solutions and goals of a non-routine or contingency nature
- literacy skills to:
  - evaluate and present information
  - write technical reports for business, involving analysis and evaluation of information in such areas as maintenance schedules for IT equipment, level of service required, SLA, cost and viability, response time levels, escalation procedures with clients, warranty conditions with suppliers, and presenting proposals for improvements to the servicing system in general
- planning and organisational skills to contribute to maintenance and continuity of IT operations and business functions
- problem-solving skills to participate in development of maintenance strategies
- technical skills to determine level of support to a client.

### Required knowledge

- client business domain and of the features of the IT system that support the client's business activity
- current industry-accepted hardware and software products, such as help-desk software, including:
  - database for storing hardware and software details
  - product warranty and service difficulty records, such as repair, replacement and reconfiguration
- help desk and maintenance practices, including general composition and operation of information database for tracking hardware, software and operational issues
- how the system has been set up to process data and what data elements are stored
- quality assurance practices with reference to maintenance, warranty and repair of network equipment and software
- relationships between the stakeholders and the service provider.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• determine maintenance strategies</li> <li>• put in place support processes for maintaining the continuity of IT operations and business functions.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• systems architecture documentation</li> <li>• warranty documents</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of: <ul style="list-style-type: none"> <li>• SLAs</li> <li>• industry support strategies</li> <li>• preventative maintenance</li> </ul> </li> <li>• review of: <ul style="list-style-type: none"> <li>• preventative maintenance schedule</li> <li>• SLAs</li> <li>• help-desk procedures.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<b><i>Systems architecture</i></b> may include:	<ul style="list-style-type: none"> <li>• configuration: <ul style="list-style-type: none"> <li>• large memory model</li> <li>• requests per second</li> <li>• small memory model</li> </ul> </li> <li>• database software: <ul style="list-style-type: none"> <li>• DB2</li> <li>• Informix</li> <li>• Ingres</li> <li>• Microsoft Structured Query Language (MS SQL) server</li> <li>• Mini SQL (mSQL)</li> <li>• MySQL</li> <li>• Oracle</li> <li>• Sybase</li> </ul> </li> <li>• operating system: <ul style="list-style-type: none"> <li>• Linux</li> <li>• Mac OS</li> <li>• multi-user ability</li> <li>• Novell NetWare 5 or above</li> <li>• Windows 2000 or above.</li> </ul> </li> </ul>
<b><i>Equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hard drives</li> <li>• hubs</li> <li>• modems or other connectivity devices, such as digital subscriber line (DSL) modems</li> <li>• monitors</li> <li>• other peripheral devices</li> <li>• personal computers</li> <li>• personal digital assistant (PDA)</li> <li>• printers</li> <li>• switches</li> </ul>

	<ul style="list-style-type: none"> <li>workstations.</li> </ul>
<i>Software</i> may include:	<ul style="list-style-type: none"> <li>commercial</li> <li>customised</li> <li>in-house</li> <li>packaged.</li> </ul>
<i>Components</i> may include:	<ul style="list-style-type: none"> <li>CD and DVD drives</li> <li>central processing unit (CPU)</li> <li>complementary metal oxide semiconductor (CMOS) battery</li> <li>CPU upgrades</li> <li>drives</li> <li>fax or modem cards</li> <li>interface cards</li> <li>motherboards</li> <li>random access memory (RAM) upgrades.</li> </ul>
<i>Service level agreements</i> may include:	<ul style="list-style-type: none"> <li>business processes and requirements</li> <li>charge back to business units</li> <li>different infrastructure services, including communications carriers, internet service providers (ISPs), application service providers (ASPs) and SLAs for vendor products</li> <li>evaluation or audit of service levels</li> <li>expectations regarding servicing</li> <li>penalties</li> <li>specific and quantity service levels</li> <li>workload and performance considerations.</li> </ul>
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> <li>authorised business representative</li> <li>client</li> <li>supervisor.</li> </ul>

## Unit Sector(s)

Systems administration and support

## ICASAS511A Prioritise IT change requests

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse IT change requests and rank them in priority order.

### Application of the Unit

Experienced managers, project managers, and those with managerial responsibility for systems that undergo continual change apply the skills and knowledge in this unit. Information technology and the manufacturing domain are examples where the change-management process delivers benefits, as well as enabling traceability of changes.

They provide technical advice, guidance and leadership in resolution of specified problems, and the role may involve responsibility for others.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Classify and monitor change requests	<p>1.1 Receive and record change requests from the <i>client</i> or <i>other sources</i></p> <p>1.2 Classify and prioritise change requests according to business guidelines and <i>service level agreements</i> (SLAs)</p>
2. Determine priority settings	<p>2.1 Identify risks to business continuity and prioritise changes that reduce risks for implementation</p> <p>2.2 Evaluate the costs and benefits of implementing changes against the current <i>system</i></p> <p>2.3 Examine the benefits and costs of how and when a change is made, including risks to business continuity</p> <p>2.4 Schedule change analysis according to business down periods and periods of business-critical activities</p>
3. Develop change analysis work plan to develop and implement changes	<p>3.1 Analyse similar change requests that might be developed and implemented simultaneously</p> <p>3.2 Determine impact to the system and organisation of methodology and timing of change</p> <p>3.3 Notify the reason for the change to key <i>stakeholders</i></p> <p>3.4 Determine the resources necessary to carry out the change development, taking into account time and cost constraints</p> <p>3.5 Develop a change plan based on change analysis</p> <p>3.6 Review the change plan documentation to ensure it is completed according to system <i>documentation</i> standards</p> <p>3.7 Forward the change plan to the <i>appropriate person</i> for consideration and decision</p>
4. Confirm change plan is complete and satisfies client	<p>4.1 Conduct feedback session with <i>client</i> groups to ensure change requirements are satisfactory</p> <p>4.2 Complete follow-up work and make recommendations for changes in procedures or documentation</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse risk when reviewing change requests
- communication skills to:
  - facilitate groups to present and collect information and gain consensus on concepts
  - manage conflicts and handle difficult clients when reviewing change requests
  - negotiate with other team members
  - provide customer service
- literacy skills to:
  - evaluate and present information
  - write reports for business
- problem-solving skills to participate in the development of strategic initiatives
- teamwork skills to contribute to solutions and goals of a non-routine or contingency nature
- technical skills to maintain the continuity of IT operations and business functions.

### Required knowledge

- client business domain
- help desk and maintenance practices
- quality assurance practices relating to IT system changes
- role of stakeholders and the degree of stakeholder involvement
- change-management tools
- current industry-accepted hardware and software products, including their general features and capabilities
- detailed knowledge of system's current functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• review change requests and prioritise according to business guidelines and SLAs</li> <li>• evaluate cost-benefit analysis, including risks to business continuity</li> <li>• develop change plan based on change analysis</li> <li>• review change procedures and make appropriate recommendations.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• sites on which change requests may be coordinated</li> <li>• SLAs currently used in industry</li> <li>• business guidelines</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of one or more change-management systems</li> <li>• direct observation of candidate reviewing infrastructure discrepancies and implementing solutions</li> <li>• review of documentation prepared by candidate, including guidelines and processes for regular reviews.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• employee</li> <li>• external organisation</li> <li>• individual</li> <li>• internal department.</li> </ul>
<b><i>Other sources</i></b> may include:	<ul style="list-style-type: none"> <li>• changes in underlying systems</li> <li>• other projects</li> <li>• problem reports</li> <li>• senior management</li> <li>• system enhancements.</li> </ul>
<b><i>Service level agreements</i></b> may relate to:	<ul style="list-style-type: none"> <li>• business processes and requirements</li> <li>• charge back to business units</li> <li>• clearly specified and quantified service levels</li> <li>• evaluation or audit of service levels</li> <li>• expectations regarding servicing</li> <li>• many different infrastructure services: <ul style="list-style-type: none"> <li>• application service providers (ASPs)</li> <li>• communications carriers</li> <li>• internet service providers (ISPs)</li> <li>• SLAs for vendor products</li> </ul> </li> <li>• penalties</li> <li>• workload and performance considerations.</li> </ul>
<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• applications</li> <li>• ASP</li> <li>• databases</li> <li>• gateways</li> <li>• ISP</li> <li>• operating systems</li> <li>• servers.</li> </ul>
<b><i>Stakeholders</i></b> may include:	<ul style="list-style-type: none"> <li>• development team</li> <li>• project team</li> <li>• sponsor</li> <li>• user.</li> </ul>
<b><i>Documentation</i></b> may	<ul style="list-style-type: none"> <li>• audit trails</li> </ul>

<p>follow:</p>	<ul style="list-style-type: none"> <li>• International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• naming standards</li> <li>• project management templates</li> <li>• report writing principles</li> <li>• version control.</li> </ul>
<p><i>Appropriate person</i> may include:</p>	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• project manager</li> <li>• supervisor.</li> </ul>

Systems administration and support

# ICASAS512A Review and manage delivery of maintenance services

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to review and manage the delivery of maintenance services.

## Application of the Unit

This unit applies to experienced managers, project managers and those with managerial responsibility for delivery of maintenance services.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Review service standards	1.1 Review <i>service level agreements</i> (SLAs) 1.2 Identify actual fault reporting and restoration performance and compare with SLAs to ensure they meet requirements 1.3 Record areas of discrepancy
2. Review infrastructure	2.1 Identify internal support and <i>maintenance options</i> 2.2 Undertake a review of infrastructure 2.3 Record areas of discrepancy
3. Determine and implement solutions	3.1 Compare service standards and infrastructure discrepancies and identify gaps in existing service 3.2 Document discrepancies identified 3.3 Determine cost-effective solutions and impact 3.4 Implement solutions
4. Organise reviews	4.1 Determine guidelines for regular reviews with <i>stakeholders</i> 4.2 Undertake reviews as per agreed guidelines 4.3 Document review process and submit to the stakeholder 4.4 Ensure effective reporting procedures are in place and used

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to:
  - analyse risk when reviewing change procedures
  - compare actual performance with SLA
- communication skills to:
  - facilitate groups to present and collect information and gain consensus on concepts
  - manage conflicts and handle difficult clients related to reviewing change procedures
  - negotiate with other team members
  - provide customer service
- literacy skills to:
  - evaluate and present information
  - write reports for business
- problem-solving skills involving participation in the development of strategic initiatives
- teamwork skills to contribute to solutions and goals of a non-routine or contingency nature
- technical skills to maintain the continuity of IT operations and business functions during change management.

### Required knowledge

- business scheduling requirements
- capacity planning
- change-control procedures
- context of changes being implemented
- current industry-accepted hardware and software products, including their general features and capabilities
- general knowledge of the client business domain
- help desk and maintenance practices
- role of stakeholders and the degree of stakeholder involvement
- features and functions of system under modification
- system's current functionality.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• analyse and report on faults and restoration performance and compliance with SLA</li> <li>• analyse and prioritise requests according to business requirements</li> <li>• review infrastructure and document discrepancies with expected service delivery</li> <li>• implement cost-effective solutions and evaluate impact.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• sites on which review of delivery of maintenance services may be conducted</li> <li>• established IT service infrastructure</li> <li>• SLAs and business guidelines</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• verbal or written questioning to assess knowledge of compliance with service level agreement</li> <li>• direct observation of candidate reviewing fault reports, restoration performance and infrastructure discrepancies</li> <li>• review of documentation prepared by candidate for regular assessments with stakeholders, including guidelines, processes and procedures.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.

Systems administration and support

# ICASAS513A Develop detailed test plans

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan for testing by collating documentation of conditions and expected results sufficient to allow for thorough system testing.

## Application of the Unit

This unit applies to information technology (IT) staff in a variety of areas who are required to test IT systems, including software development, systems administration, networking, and web development. Group or team coordination may also be involved.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare test environment and gather tools	<p>1.1 Determine structure of system and user accounts to understand the test environment</p> <p>1.2 Determine areas to test and test objectives, according to organisational standards</p> <p>1.3 Ensure accessibility of documentation</p> <p>1.4 Notify user representatives or approval authorities of objectives and scheduled test</p> <p>1.5 Notify operations staff of scheduled test to ensure preparedness and an understanding of implications</p>
2. Prepare test data	<p>2.1 Gather test schedules, according to organisational standards</p> <p>2.2 Correlate schedules with related functionality, according to organisational standards</p> <p>2.3 Check <b>testing schedule</b> prior to validation, according to organisational standards</p> <p>2.4 Prepare test drivers or stubs for test harness, according to organisational standards</p> <p>2.5 Register test plan, and initiate log entries, according to organisational standards</p>
3. Complete test plan and acceptance processes	<p>3.1 Use software metrics where appropriate</p> <p>3.2 Validate test and acceptance processes</p> <p>3.3 Ensure documentation and reporting comply with test plan and <b>quality benchmarks</b></p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - conduct presentations
  - liaise with system users and other internal staff
  - participate in teams
- literacy skills to:
  - analyse and evaluate information
  - interpret business and organisational requirements
  - prepare documentation and reports
- planning and organisational skills to develop strategic initiatives
- technical skills to:
  - participate in critical areas, including access control and pathing
  - identify, analyse and evaluate broad features of system testing and best practice in system testing.

### Required knowledge

- at least three different operating systems, with detailed knowledge of operating systems relevant to project requirements
- automated test tools, with detailed knowledge of features and processes in some areas
- organisational requirements
- system or application being tested
- testing techniques.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• interpret software specifications</li> <li>• consistently and accurately develop a comprehensive test plan that documents: <ul style="list-style-type: none"> <li>• test conditions or cases to be applied</li> <li>• data to be processed</li> <li>• automated testing coverage</li> <li>• expected results</li> </ul> </li> <li>• activities, dependencies and effort required to conduct the system test.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• system engineering management plan</li> <li>• test and evaluation program plan</li> <li>• system or application suitable for testing plus its associated documentation</li> <li>• organisational plans and documentation.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate preparing test data</li> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• items to be tested</li> <li>• features to be tested</li> <li>• tasks involved in testing</li> <li>• personnel involved</li> <li>• any risks requiring contingency planning</li> </ul> </li> <li>• evaluation of candidate's test plan describing the scope, approach, resources, and schedule of intended testing activities.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>Testing schedule</b> may relate to:	<ul style="list-style-type: none"> <li>• complexity</li> <li>• dependency</li> <li>• importance</li> <li>• security</li> <li>• testability</li> <li>• X-factor, where X is an unknown and may or may not impact on the test schedule.</li> </ul>
<b>Quality benchmarks</b> may include:	<ul style="list-style-type: none"> <li>• AS3925.1-1994 Software quality assurance - plans</li> <li>• AS4042-1992 Software configuration management plans</li> <li>• AS4043-1992 Software configuration management</li> <li>• AS/NZS 14102:1998 Information technology - guideline for evaluation and selection of computer-aided software engineering (CASE) tools</li> <li>• AS/NZS 4258:1994 Software user documentation process</li> <li>• AS/NZS ISO/IEC 12207:1997 Information technology - Software life cycle processes.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS514A Perform integration tests

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to ensure that the components of the system operate together to the expected standard.

## Application of the Unit

This unit applies to senior development staff responsible for ensuring that sub-systems function correctly when combined.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Prepare for test	<p>1.1 Prepare the <i>test environment</i></p> <p>1.2 Prepare the test scripts (online test) or test run (batch test) for running</p> <p>1.3 Review expected results against <i>test and acceptance criteria</i></p> <p>1.4 Confirm pre-existing modules and compile modification logs</p> <p>1.5 Perform static tests of each point of integration and verify correctness of arguments, positional parameters and return values in each integration suite</p> <p>1.6 Review results of earlier component testing and ensure critical issues are identified and taken into account</p>
2. Conduct test	<p>2.1 Select appropriate <i>test tools</i></p> <p>2.2 Run test scripts and document the results against <i>software life cycle</i> model</p> <p>2.3 Ensure that memory leakage, global name-space pollution and static variables are specifically addressed for each integration unit in line with test and acceptance criteria</p> <p>2.4 Follow and adopt integration standards where appropriate in line with <i>quality benchmarks</i></p> <p>2.5 Compare test results to requirements on completion of each integration component</p>
3. Analyse and classify results	<p>3.1 Summarise and classify test results and highlight areas of concern</p> <p>3.2 Compare the test results against the requirements and design specification and prepare report</p> <p>3.3 Notify operations of completion of the testing where appropriate</p> <p>3.4 Ensure attendees' details and comments are logged and signatures gained</p> <p>3.5 Schedule a feedback meeting to discuss report and possible next actions with stakeholders if necessary</p> <p>3.6 Ensure test reporting compliance with <i>documentation and reporting</i> standards</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to:
  - interpret technical documentation
  - write reports in required formats
- numeracy skills to take test measurements, and interpret and evaluate results
- planning and organisational skills to:
  - coordinate the test process in liaison with others
  - plan, prioritise and monitor own work
- problem-solving and contingency-management skills to develop strategic review results of earlier unit testing and identify critical issues
- research skills to identify, analyse and evaluate broad features of system testing and best practice in system testing
- technical skills to:
  - analyse data related to analysis and evaluation
  - use programming skills in programming languages relevant to project.

### Required knowledge

- at least two programming languages, with detailed knowledge of programming languages required by system
- automated test tools, with detailed knowledge of features and processes in some areas
- input and output requirements
- organisational practice and standards relating to integration testing
- system or application being tested
- testing techniques, with detailed knowledge of features and processes
- underlying test data.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• perform integration requirements for the units of the particular system</li> <li>• determine whether the units of the system operate according to requirement specifications</li> <li>• prepare reports in compliance with documentation and reporting standards.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• acceptance criteria</li> <li>• test plan</li> <li>• integration standards</li> <li>• requirements and design documents used in the analysis of the test</li> <li>• system or application suitable for testing</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate conducting a test using appropriate test tools and integration standards in line with quality benchmarks and ensuring that components have passed the integration tests at the interface level between each component</li> <li>• verbal or written questioning of underpinning skills and knowledge of compiling, linking and loading components together</li> <li>• evaluation of report prepared by candidate outlining testing procedures and test results.</li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p><b><i>Test environment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• data</li> <li>• network or communications and other equipment</li> <li>• operating system</li> <li>• other support software</li> <li>• program libraries.</li> </ul>
<p><b><i>Test and acceptance criteria</i></b> may relate to:</p>	<ul style="list-style-type: none"> <li>• type of test:             <ul style="list-style-type: none"> <li>• cohesion</li> <li>• efficiency</li> <li>• functional.</li> </ul> </li> </ul>
<p><b><i>Test tools</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• applications testing:             <ul style="list-style-type: none"> <li>• Cyrano Suite</li> <li>• DataShark</li> <li>• Datatect</li> <li>• preVue-C/S</li> </ul> </li> <li>• code, unit and class testing:             <ul style="list-style-type: none"> <li>• AssertMate</li> <li>• BoundsChecker</li> <li>• C-Cover</li> <li>• CodeReview</li> <li>• CodeWizard</li> <li>• DeepCover</li> <li>• FailSafe</li> <li>• Hindsight</li> <li>• Insure++</li> <li>• JavaPureCheck</li> <li>• JCAST</li> <li>• Logiscope</li> </ul> </li> <li>• stress load testing:             <ul style="list-style-type: none"> <li>• Astra SiteManager</li> <li>• Astra SiteTest</li> <li>• automated test facilities</li> <li>• AutoTester Web</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• e-Load</li> <li>• e-MONITO</li> <li>• E-TEST Suite</li> <li>• JavaLoad</li> <li>• LoadRunner.</li> </ul>
<p><i>Software life cycle</i> may include:</p>	<ul style="list-style-type: none"> <li>• AS/NZS15271:1999 Guide for AS/NZS ISO/IEC 12207 Information technology - Software life cycle processes</li> <li>• AS/NZS ISO/IEC12207:1997 Information technology - Software life cycle processes.</li> </ul>
<p><i>Quality benchmarks</i> may include:</p>	<ul style="list-style-type: none"> <li>• relevant quality standards:             <ul style="list-style-type: none"> <li>• AS 3925.1-1994 Software quality assurance - Plans</li> <li>• AS 4042-1992 Software configuration management plans</li> <li>• AS 4043-1992 Software configuration management</li> <li>• AS/NZS 14102:1998 Information technology - Guideline for evaluation and selection of CASE tools</li> <li>• AS/NZS 4258:1994 Software user documentation process</li> <li>• AS/NZS ISO/IEC 12207:1997 Information technology - Software life cycle processes</li> </ul> </li> <li>• standards for software review, mainly developed by:             <ul style="list-style-type: none"> <li>• Institute of Electrical and Electronics Engineers (IEEE)</li> <li>• International Organization for Standardization (ISO)</li> <li>• Software Engineering Institute (SEI)</li> <li>• US Department of Defence (DoD) standards.</li> </ul> </li> </ul> <p>Note: International and Australian standards are updated and changed on a regular basis. It is therefore important to check the Standards Australia website on a regular basis for new standards.</p>
<p><i>Documentation and reporting</i> may include:</p>	<ul style="list-style-type: none"> <li>• ISO, International Electrotechnical Commission (IEC) and Australian Standards (AS) standards</li> <li>• templates for information gathering processes</li> <li>• various organisational approaches to:             <ul style="list-style-type: none"> <li>• audit trails</li> <li>• naming standards</li> <li>• project-management templates</li> <li>• report writing</li> <li>• version control.</li> </ul> </li> </ul>

Systems administration and support

## ICASAS515A Manage the testing process

### Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

### Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to effectively manage and administer the end-to-end testing process, including test definition, execution and reporting.

### Application of the Unit

This unit applies to senior staff responsible for managing the testing team and its activities.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams, including teams concerned with planning and evaluation functions. Group or team coordination may also be involved.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Develop test schedule	1.1 Determine testing requirements and objectives 1.2 Review test plan, where available 1.3 Develop testing timeline and allocate <b>resources</b> 1.4 Document test objectives and schedule according to test procedures and distribute to <b>appropriate person</b> 1.5 Obtain feedback and incorporate relevant changes
2. Complete test procedures	2.1 Copy necessary code into the <b>testing environment</b> 2.2 Allocate and manage personnel carrying out the testing process 2.3 Administer alterations or changes to the code 2.4 Integrate code into production environment
3. Review the completeness and accuracy of the system	3.1 Administer full system test to ensure suitability of the system 3.2 Document outcomes of system test for use in subsequent development phases 3.3 Evaluate results of system test to determine acceptability of system

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- communication skills to:
  - liaise with colleagues and staff
  - negotiate with team members
  - present information
- literacy skills to analyse and evaluate information
- planning and organisational skills to:
  - estimate scope, time, cost and quality
  - scope communications and risk management
- problem-solving skills to develop strategic initiatives and review procedures and documentation used in the system test
- research skills to identify, analyse and evaluate:
  - broad features of system testing
  - best practice in system testing
- technical skills to use application software to analyse, evaluate and present information.

### Required knowledge

- automated test tools, with detailed knowledge of some features and processes
- organisational procedures
- system requirements, with detailed knowledge of the particular system requirements and features
- system or application being tested
- testing techniques.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• develop a test schedule</li> <li>• manage the procedure</li> <li>• review and accept or reject a pre-implemented system based on test outcomes.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs</li> <li>• human resources</li> <li>• requirements and design documentation</li> <li>• test plan</li> <li>• test hardware and environments (testing to be carried out on the same platform as the completed system, with scheduled testing to be on the production platform and the production environment required as part of test preparation)</li> <li>• system or application suitable for testing.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate developing a test schedule</li> <li>• verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> <li>• entire system requirements, both development and implementation</li> <li>• testing process</li> </ul> </li> <li>• evaluation of candidate's documented test outcomes: <ul style="list-style-type: none"> <li>• confirming functionality</li> <li>• addressing any software issues.</li> </ul> </li> </ul>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p>

	<p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b>Resources</b> may include:	<ul style="list-style-type: none"> <li>• personal computer (PC)</li> <li>• staff</li> <li>• time</li> <li>• software.</li> </ul>
<b>Appropriate person</b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b>Testing environment</b> may include:	<ul style="list-style-type: none"> <li>• dedicated network</li> <li>• live network</li> <li>• testing network</li> <li>• development network</li> <li>• production network.</li> </ul>

## Unit Sector(s)

Systems administration and support

# ICASAS516A Perform stress and load tests on integrated platforms

## Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

## Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and perform tests to ensure the ability of a system to cope with expected high levels of data volume.

## Application of the Unit

This unit applies to senior staff who are responsible for ensuring that the proposed system can handle anticipated loads.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

<b>Element</b>	<b>Performance Criteria</b>
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

## Elements and Performance Criteria

1. Create test plan	<p>1.1 Determine scope, objectives and specific tests in order to place load on the <i>system</i>, including expected results and performance impact</p> <p>1.2 Determine and document standards for acceptance and compliance with <i>client</i></p> <p>1.3 Determine and document clear responsibilities and contact points with third-party suppliers for support</p> <p>1.4 Identify testing resources and tools from a range of available sources</p> <p>1.5 Identify and record base-system loads or level of activity against which the test will be measured</p> <p>1.6 Identify processes or steps in test, including automated testing</p> <p>1.7 Assemble test-plan documentation and distribute to <i>appropriate person</i></p>
2. Undertake test	<p>2.1 Implement test plan according to test plan sequencing</p> <p>2.2 Confirm that each technology <i>component</i> operates correctly within integrated platform</p> <p>2.3 Confirm that integrated platform operates to project and industry standards</p> <p>2.4 Undertake documentation of testing outcomes to meet project standards</p> <p>2.5 Detect faults</p>
3. Diagnose and resolve faults	<p>3.1 Identify and document faults according to <i>project plan</i></p> <p>3.2 Diagnose faults and take corrective action</p> <p>3.3 Manage problem-resolution processes according to project procedures</p> <p>3.4 Enforce compliance standards with third-party suppliers, as skills required</p>
4. Update documentation	<p>4.1 Update appropriate project and system documentation to record and present test findings to development staff for their attention, if test is unsuccessful</p>

## Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

### Required skills

- analytical skills to analyse, diagnose, and evaluate the development of new criteria, knowledge and procedures
- communication skills to:
  - gain consensus on concepts and clarify responsibilities
  - negotiate with client, third-party suppliers and technical staff
  - present information
- literacy skills to:
  - develop procedures
  - interpret technical specifications, standards documents and related documentation
  - update documentation
- planning and organisational skills to:
  - determine responsibilities and contact points with third-party suppliers for support
  - determine specific tests in order to place load on the system, and determine expected results and performance impact
  - estimate project scope and objectives
- technical skills to:
  - conduct tests
  - diagnose faults.

### Required knowledge

- automated test tools, with detailed knowledge of features and processes in some areas
- organisational requirements relating to stress and load testing
- program design and performance
- system or application requirements and performance
- testing techniques, with detailed knowledge of features and processes in some areas.

## Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• test the system's ability to cope with expected high levels of data volume while meeting the predetermined performance standards</li> <li>• identify problems and fault-resolution strategies that may occur during stress testing</li> <li>• ensure system operates in the manner expected under expected conditions</li> <li>• ensure supporting material, such as procedures and forms, is accurate and suitable for the purpose intended</li> <li>• determine that stated conditions reflect the upper limits expected by client</li> <li>• ensure there are no unacceptable reductions in service</li> <li>• ensure individual elements and the overall system provide the desired result or functionality</li> <li>• ensure documentation is available and accurate.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> <li>• business requirements</li> <li>• project documentation, including templates, standards, specifications and client user and technical manuals</li> <li>• business rules and expected loads</li> <li>• base tools</li> <li>• technical components of system, including software, hardware and network</li> <li>• staffing resources, including development, operations and client user representatives</li> <li>• system or application suitable for testing</li> <li>• appropriate learning and assessment support when required</li> <li>• modified equipment for people with special needs.</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct observation of candidate preparing for test, and recording and investigating discrepancies and corrections after test</li> </ul>

	<ul style="list-style-type: none"> <li>• verbal or written questioning of skills and knowledge for identifying acceptance criteria and developing test plans</li> <li>• evaluation of candidate’s documented record of test results and recommended solutions.</li> </ul>
<p><b>Guidance information for assessment</b></p>	<p>Holistic assessment with other units to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

## Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<b><i>System</i></b> may include:	<ul style="list-style-type: none"> <li>• application service provider (ASP)</li> <li>• applications</li> <li>• databases</li> <li>• gateways</li> <li>• internet service provider (ISP)</li> <li>• operating system</li> <li>• servers.</li> </ul>
<b><i>Client</i></b> may include:	<ul style="list-style-type: none"> <li>• external organisation</li> <li>• individual</li> <li>• internal department</li> <li>• internal employee.</li> </ul>
<b><i>Appropriate person</i></b> may include:	<ul style="list-style-type: none"> <li>• authorised business representative</li> <li>• client</li> <li>• supervisor.</li> </ul>
<b><i>Component</i></b> may include:	<ul style="list-style-type: none"> <li>• databases</li> <li>• networks</li> <li>• servers</li> <li>• software integration.</li> </ul>
<b><i>Project plan</i></b> may include:	<ul style="list-style-type: none"> <li>• parties and their responsibilities</li> <li>• planning and preparation that begins in the design phase, and runs concurrently with design, code and implementation</li> <li>• project budget</li> <li>• project objectives</li> <li>• project scope</li> <li>• schedule.</li> </ul>
