- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of carpet cushion/underlay and gripper accessories
- types and uses of soft carpet cushion/underlay and gripper accessories installation tools and equipment
- workplace safety system requirements related to cutting and fitting carpet cushion/underlays and gripper accessories
- characteristics and requirements of sub-floor preparation
- work flow in relation to cutting and fitting carpet cushion/underlays, gripper strips and metal mouldings

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of two carpet cushion/underlay installations with one incorporating such obstructions as doorways, fittings and irregular (obtuse/acute) angles using the carpet gripper installation system
- Modify activities to cater for variations in workplace contexts and environment
- Work effectively with others
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to installing carpet cushion/underlays and gripper adhesives
 - specifications and work instructions

EVIDENCE GUIDE	
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Instructions	<ul style="list-style-type: none"> Workplace procedures relating to the use and operation of tools and equipment Workplace instructions, including job sheets, plans, drawings and designs Workplace procedures relating to reporting

RANGE STATEMENT	
	<p>and communications</p> <ul style="list-style-type: none"> • Manufacturer instructions for the use of equipment and materials
Carpet cushion/underlay	<ul style="list-style-type: none"> • is a flexible or fibrous material installed as a soft base under a floor covering. They may be single fibre, composite fibre, foam rubber or bonded foam
Tools and equipment	<ul style="list-style-type: none"> • are to include utility knife, straight edge, hammer, heavy-duty electrical drill, hacksaw, carpet gripper strip cutters, extension hammer driving bar, staple hammer, mitre box and nail driving bar • may include pneumatic 'T' nailer and nail gun
Materials	<ul style="list-style-type: none"> • are to include but are not limited to soft underlays, carpet gripper strips, metal mouldings, tapes, adhesives, nails, plug, staples and primers
Adhesives	<ul style="list-style-type: none"> • are to include solvent and water-based contact, construction adhesive, latex/resin/acrylic
Fixing trims	<ul style="list-style-type: none"> • are to include nails and tap IT nylon fasteners
Carpet grippers	<ul style="list-style-type: none"> • are teathed metal or timber strips to which floor coverings are attached to maintain its position, tension and shape
Metal mouldings	<ul style="list-style-type: none"> • are fitted at thresholds and abutments to other flooring surfaces

LMFFL2202A Install unpatterned tufted and bonded carpet floor coverings

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the competency required to install unpatterned tufted and bonded carpet floor coverings including preparation, cutting, layout, joining, power stretching, trimming and finishing using the carpet gripper installation system.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to a work room and on site environment and involves application of skills and knowledge at a sub-trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the installation of unpatterned tufted and bonded carpet floor coverings are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans/sketchers are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials	<p>2.1. Carpet to be installed is checked against order</p> <p>2.2. Carpet is acclimatised according to manufacturers' recommendations</p> <p>2.3. Underlay and gripper strips are inspected to confirm correct fitting</p> <p>2.4. Work area is cleared of scraps or other contaminants</p>
3. Lay floor covering	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Carpet pieces are laid out and checked for size, direction of pile match</p> <p>3.3. Carpet pieces are cut, sealed and joined</p> <p>3.4. Stretching and fixing methods are used following manufacturer instructions and Australian Standards</p> <p>3.5. Finished work is inspected for compliance with work order, workplace and Australian Standards of finish</p>
4. Complete housekeeping	<p>4.1. Unused materials are stored or recycled as required</p> <p>4.2. Tools and equipment are cleaned and stored appropriately</p> <p>4.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>4.4. Workplace documentation and/or reports are completed.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems when installing carpet when using the carpet gripper installation system to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of unpatterned tufted and bonded carpet using the carpet gripper installation system, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing unpatterned tufted and bonded carpet floor coverings
- organisational and site standards, requirements, policies and procedures for installing unpatterned tufted and bonded carpet floor coverings
- environmental protection requirements
- established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of tufted and bonded carpets
- types and uses of carpet installation tools, equipment and materials
- techniques for joining and stretching carpet
- workplace safety system requirements related to carpet gripper installation systems
- characteristics and requirements of soft underlays, gripper strips and metal mouldings
- work flow in relation to preparation, layout, stretching, cutting and finishing of carpet

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for preparing and presenting design information
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Complete a minimum of:
 - installation of tufted carpet
 - installation of bonded carpet using a carpet gripper installation system to connecting rooms, including at least one seam join and one cross join
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to installing tufted and fusion bonded carpet using the carpet

EVIDENCE GUIDE	
	<p>gripper installation system</p> <ul style="list-style-type: none"> • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting

RANGE STATEMENT	
	and communications <ul style="list-style-type: none"> • Manufacturer instructions for the use of equipment and materials
Tools and equipment	<ul style="list-style-type: none"> • are to include carpet knee kicker, power stretcher, carpet wall trimmer, carpet stair tool, trolley, hammer, utility knife, spiked carpet roller, weight or seam roller, awl, carpet spreader, carpet shears, napping shears, loop pile cutter, cushion backed cutter and hooked knife
Materials	<ul style="list-style-type: none"> • may include tufted and fusion bonded carpet

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the installation of <i>carpet tiles</i> are verified and complied with 1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks 1.3. Sub-floor condition is assessed for installation for carpet tiles 1.4. Suitable <i>adhesives</i> , trims and accessories are selected 1.5. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2. Set out materials	2.1. Carpet tiles to be installed are checked against the order 2.2. Carpet tiles are acclimatised according to manufacturers' recommendation 2.3. Materials for fixing are organised and used in accordance with relevant safety management requirements 2.4. Working lines and starting point are established
3. Lay floor covering	3.1. Instructions and sequence for laying and fixing are followed 3.2. Materials are laid out to meet specification requirements and to minimise waste 3.3. Material grains and patterns are matched or contrasted as appropriate 3.4. Tiles are accurately and clearly marked for cutting 3.5. Tiles are cut to required shape with minimum waste of materials and laid 3.6. Completed installation is checked for flaws in installation and materials and faults are rectified
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately

ELEMENT	PERFORMANCE CRITERIA
	4.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing carpet tiles using standard installation procedures to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of carpet tiles using standard installation procedures, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to install carpet tiles using standard installation procedures
- organisational and site standards, requirements, policies and procedures for the installation of carpet tiles using standard installation procedures
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- types, characteristics, uses and limitations of:
 - carpet tiles
 - carpet tile installation adhesives
- the types and uses of tile installation tools and equipment
- workplace safety system requirements related to carpet tile laying
- characteristics and requirements of sub-floor preparation
- work flow in relation to the floor covering operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the installation of carpet tiles using standard installation procedures
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - one full-spread installation, including appropriate trims and accessories
 - one grid-based installation, including appropriate trims and accessories
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to laying carpet tiles

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling, including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Carpet tiles

- may be backed or un-backed, fixed or un-fixed, wool, synthetic or combination of fibres, pile, needle-punch, tufted, fusion bonded and woven, modular and square to one metre

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturers' instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to installing unpatterned tufted and bonded <i>carpet</i> to <i>stairways</i> are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. Floor condition is assessed for suitability for installation of unpatterned tufted and bonded carpet</p> <p>1.4. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.5. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials	<p>2.1. Carpet to be installed is checked against order</p> <p>2.2. Tufted and bonded carpets are acclimatised according to manufacturer recommendations</p> <p>2.3. <i>Stairway</i> or step is measured and the required amount of floor covering, and underlay including allowances for type of stairs, is calculated and obtained</p> <p>2.4. Suitable adhesives, gripper strips and edge strips are selected</p> <p>2.5. Gripper strips are cut and installed as specified in AS/NZS2455.1.1995</p> <p>2.6. Underlay is checked against specified type and fitted as specified in AS/NZS2455.1.1995</p>
3. Lay floor coverings	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Carpet floor coverings are laid out to meet allowances for type of stair requirements and minimise waste</p> <p>3.3. Carpet floor coverings are accurately and clearly marked for cutting</p> <p>3.4. Carpet floor coverings are cut to required shape with minimum waste of materials and laid</p> <p>3.5. Instructions, sequence, fixing methods and equipment are used following specifications and Australian Standards AS/NZS2455.1.1995</p> <p>3.6. Installation is completed to specification</p>

ELEMENT	PERFORMANCE CRITERIA
	3.7. Finished stairway is checked for flaws in installation and materials and faults rectified
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing unpatterned tufted and bonded carpet to stairs to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing of unpatterned tufted and bonded carpet to stairs, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing unpatterned tufted and bonded carpet on stairs
- organisational and site standards, requirements, policies and procedures for the installation of unpatterned tufted and bonded carpet on stairs
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- types and characteristics of stairway
- types and uses of carpet installation tools, equipment and materials
- types, uses and limitations of stairway carpet fixing techniques
- characteristics of timber and concrete sub-floors
- workplace safety system requirements related to stairway carpet installation
- work flow in relation to the installation of carpets on stairways

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing unpatterned tufted and bonded carpet on stairways
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- To complete a minimum of the installation of one tufted carpet and one fusion bonded carpet to:
 - a box step stairway containing at least 12 steps, and
 - a kite winder treads stairway containing at least 3 steps
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to preparing and

EVIDENCE GUIDE	
	<p>installing tufted and bonded carpet to box and winder step</p> <ul style="list-style-type: none"> • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but are not limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Carpet	<ul style="list-style-type: none"> may include unpatterned tufted and fusion bonded carpet
Stairway	<ul style="list-style-type: none"> may include box steps and kite winder treads

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Tools and equipment	<ul style="list-style-type: none"> • are to include knee kicker, stair tool, carpet gripper cutters, trimmer, hammer, staple hammer, compressor, air staple gun, utility knife, straight edge, drill, hacksaws and sewing needles
Materials	<ul style="list-style-type: none"> • may include but are not limited to underlay, tapes and adhesives, trims, nosing, gripper strips, smooth edges and accessories

LMFFL2301A Install lay flat vinyl floor coverings

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the competency required to install lay flat vinyl floor coverings to single and connecting rooms including pattern matching seam cutting, joining and sealing.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to an on site environment and involves application of skills and knowledge at a sub-trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	1.1. Applicable legislative, OHS and organisational requirements relevant to installing lay flat vinyl floor coverings are verified and complied with 1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks 1.3. Sub-floor condition is assessed for installation of lay flat vinyl flooring 1.4. Sub-floor is prepared for lay flat vinyl floor covering 1.5. Suitable adhesives, trims and accessories are selected 1.6. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 1.7. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2. Set out materials	2.1. Lay flat vinyl coverings to be installed are checked against order 2.2. Lay flat vinyl floor coverings are acclimatised according to manufacturers' recommendations 2.3. Lay flat resilient floor coverings for fixing are organised and used in accordance with relevant safety management requirements 2.4. Working lines and starting point are established
3. Lay floor covering	3.1. Instructions and sequence for laying and fixing are followed 3.2. Lay flat vinyl floor coverings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate 3.3. Lay flat resilient floor coverings are accurately and clearly marked for cutting 3.4. Lay flat resilient floor coverings are cut to required pattern and shape with minimum waste of materials 3.5. Adhesives are applied (if required) 3.6. Seams are sealed 3.7. Completed installation is checked for flaws in installation and materials and faults rectified
4. Complete	4.1. Unused materials are stored or recycled as required

ELEMENT	PERFORMANCE CRITERIA
housekeeping	4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing lay flat vinyl floor coverings to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing lay flat vinyl floor coverings including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing lay flat vinyl floor coverings
- organisational and site standards, requirements, policies and procedures for installing lay flat vinyl floor coverings
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

- maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of:
 - lay flat vinyl floor coverings
 - lay flat vinyl floor covering installation adhesives
- types and uses of resilient floor covering installation tools and equipment
- workplace safety system requirements related to lay flat vinyl floor covering installation
- characteristics and requirements of sub-floor preparation
- work flow in relation to cutting and laying lay flat vinyl floor coverings

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing lay flat vinyl floor covering
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Cut, lay and fix lay flat vinyl floor coverings to a single room including pattern match at seams and cross joins, using free-hand, template and scribing method
- Cut, lay and fix lay flat vinyl floor coverings to connecting rooms, including pattern match at seams and cross joins, using free-hand, template and scribing method
- Cut, lay and fix lay flat vinyl floor coverings to a single room with a link up, including pattern match at seams and cross joins, using free-hand, template and scribing method
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for installation	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the installing laminate and engineered timber flooring are verified and complied with</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.4. Sub-floor condition is assessed for suitability for installation of laminate and engineered timber flooring</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the selection of a starting point, to ensure efficiency and quality of installation</p>
2. Set out materials for installation	<p>2.1. Laminate and engineered timber flooring is acclimatised according to manufacturer recommendations</p> <p>2.2. Laminate and engineered timber flooring for fixing is organised and used in accordance with relevant safety management requirements</p> <p>2.3. Skirting boards or cover trims are removed or undercut if required and stored for refitting or sent for machining</p> <p>2.4. Adhesives and edge strips are prepared for use as required</p> <p>2.5. Working lines and starting point are established</p>
3. Lay out flooring	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Appropriate underlay is laid according to manufacturers' recommendations</p> <p>3.3. Laminate and engineered timber flooring is laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins</p> <p>3.4. The aesthetics of the materials are maximised including matching grains and colours</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.5. Laminate and engineered timber flooring materials are accurately and clearly marked for cutting</p> <p>3.6. Materials are cut to length and size for final laying ensuring minimum waste</p>
4. Lay flooring	<p>4.1. Materials for fixing are organised and used in accordance with relevant safety management requirements</p> <p>4.2. Adhesives and edge strips/accessories are prepared for use as required</p> <p>4.3. Fixing methods and equipment are used following manufacturer recommendations</p> <p>4.4. Appropriate field and perimeter expansion joints are allowed</p> <p>4.5. Skirting boards or cover trims are fitted/refitted and finished</p> <p>4.6. Finished job is inspected and any imperfections are rectified following workplace procedures</p> <p>4.7. Any required preparations for sanding of flooring are made</p>
5. Complete housekeeping	<p>5.1. Unused materials are stored or recycled as required</p> <p>5.2. Tools and equipment are cleaned and stored appropriately</p> <p>5.3. Work area is cleaned and rubbish is disposed of appropriately</p> <p>5.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate installation problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - parquetry installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing requirement, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the installation of laminate and engineered timber flooring
- organisational and site standards, requirements, policies and procedures for the installation of laminate and engineered timber flooring
- types, characteristics, uses and limitations of:
 - laminate and engineered timber flooring
 - installation adhesives
 - underlays

REQUIRED SKILLS AND KNOWLEDGE

- the types and uses of installation tools and equipment
- workplace safety systems relevant to the installation of laminate and engineered timber flooring
- characteristics and requirements of sub-floor preparation
- work flow in relation to flooring installation operations
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing laminate and engineered timber flooring
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of three of the following different types of installation:
 - glue-together system
 - direct stick system
 - self-locking system
 - inserted plastic tongue system
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • a realistic installation requirement • workplace location or simulated workplace • materials and equipment relevant for the installation of laminate and engineered timber flooring • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Laminate and engineered timber flooring	<ul style="list-style-type: none"> includes timber and laminated flooring planks
Instructions	<ul style="list-style-type: none"> Workplace procedures relating to the use and operation of tools and equipment

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Workplace instructions, instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Sub-floor assessment	<ul style="list-style-type: none"> • is to include testing for moisture content, expansion, rot, structural strength, smoothness and plane
Tools and equipment	<ul style="list-style-type: none"> • are to include drop saw, jig saw, hand saw, undercut saw, plunge saw, hammer, bar scriber and utility knife • may include circular saw, bench saw, straight edge, glue gun, staple gun, nailers, flooring cramps, strap clamps and wall clamps
Materials	<ul style="list-style-type: none"> • may include but not be limited to flooring materials, underlay, edge strips, tapes and adhesives
Adhesives	<ul style="list-style-type: none"> • may include PVAs, epoxies and polyurethane elastomeric

LMFFL2502A Install impact and sound absorption underlay

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to install impact and sound absorption underlay over a new or existing sub-floor to provide impact and sound reduction in preparation for the installation of a laminate or engineered timber floor.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to an on site environment and involves application of skills and knowledge at a sub-trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to installing <i>impact and sound absorbing underlay</i> are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for suitability for installation of impact and sound absorption underlay for timber flooring installation</p> <p>1.4. Suitable <i>adhesives</i>, trims and accessories are selected if required</p> <p>1.5. Impact and sound absorption underlay is checked against work orders</p> <p>1.6. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.7. Sequence of work is planned, including the starting point, to ensure cutting, laying and fitting is in logical order</p>
2. Set out materials	<p>2.1. Impact and sound absorption underlay to be installed is checked against the order</p> <p>2.2. Impact and sound absorption underlay are acclimatised according to manufacturer recommendations</p> <p>2.3. Impact and sound absorption underlay for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.4. Working lines and starting point are established</p>
3. Cutting impact and sound absorption underlay	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Impact and sound absorption underlay is laid out to meet directional sequence, specification requirements and to minimise waste and joins as appropriate</p> <p>3.3. Impact and sound absorption underlay is cut to required shape with minimum waste of materials</p>
4. Lay impact and sound absorption underlay	<p>4.1. Materials for fixing are organised and used in accordance with relevant safety management requirements</p> <p>4.2. Adhesives and edge strips/accessories are prepared</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>for use as required</p> <p>4.3. Apply adhesive to sub-floor (if required)</p> <p>4.4. Impact and sound absorption underlay is fixed using methods and equipment which follow manufacturer instructions</p> <p>4.5. Completed installation is checked for flaws in installation and materials and faults rectified following workplace procedures</p>
5. Complete housekeeping	<p>5.1. Unused materials are stored or recycled as required</p> <p>5.2. Tools and equipment are cleaned and stored appropriately</p> <p>5.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>5.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing impact and sound absorption underlay to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing of impact and sound absorption underlay including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing impact and sound absorption underlay
- organisational and site standards, requirements, policies and procedures for installing impact and sound absorption underlay
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

maintenance

- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of impact and sound absorption underlay
- types and uses of impact and sound absorption underlay installation tools and equipment
- workplace safety system requirements related to cutting and fitting impact and sound absorption underlay
- characteristics and requirements of sub-floor preparation
- work flow in relation to cutting and fitting impact and sound absorption underlay

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing impact and sound absorption underlays
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of two impact and sound absorption underlay installations with one incorporating such obstructions as doorways, fittings and irregular (obtuse/acute) angles (dual-bonded and conventional)
- Communicate effectively and work safely with others in the work area
- Modify activities to cater for variations in workplace contexts and environment
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to install impact and sound absorption underlay • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Impact and sound absorption underlay	<ul style="list-style-type: none"> is a flexible or fibrous material installed as a soft base under timber floor covering. They may be single fibre, composite fibre, bonded foam or recycled rubber impact sound absorption underlays

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Adhesives	<ul style="list-style-type: none"> • are to include solvent and water-based contact, acrylic or polyurethane elastomeric
Tools and equipment	<ul style="list-style-type: none"> • are to include utility knife, straight edge, chalk line hammer, heavy-duty electrical drill, hacksaw and notched trowel
Materials	<ul style="list-style-type: none"> • are to include but are not limited to impact and sound absorption underlay, PVC tapes, adhesives, nails, plugs and primers

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the nailing of strip timber flooring onto a sub-floor applying top-nailing or secret nailing methods are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for suitability for nailing of strip timber flooring applying top-nailing or secret nailing methods consistent with Australian Standards, industry standards and manufacturer recommendations</p> <p>1.4. Suitable fixings and adhesives are selected as required.</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Prepare to nail strip timber flooring	<p>2.1. Instructions and sequence for nailing and fixing timber flooring are followed</p> <p>2.2. Work lines and starting point are established</p> <p>2.3. Timber flooring is laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>2.4. The aesthetics of the materials are maximised where appropriate, matching grains and colours</p> <p>2.5. Work station for power source for nail guns is established, air hoses are run to work site</p>
3. Nail strip timber flooring	<p>3.1. Nails, staples and adhesives for fixing are organised and used in accordance with relevant safety management requirements</p> <p>3.2. Nailing methods and equipment are used following manufacturer recommendations and Australian Standards</p> <p>3.3. Strip timber flooring is positioned using cramping procedures</p> <p>3.4. Top nailing or secret nailing methods are used as required for the job at hand</p> <p>3.5. Finished job is inspected and any imperfections are</p>

ELEMENT	PERFORMANCE CRITERIA
	rectified following workplace procedures
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Collect, organise and understand information related to work orders, basic plans and safety procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate problems related to nailing strip timber flooring onto plywood underlay and timber battens to avoid re-work and wastage
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Clarify and confirm work instructions
- Plan work within given task parameters
- Accept responsibility for given tasks
- Set, monitor and satisfy personal work goals
- Satisfy the competency requirements for the job
- Maintain current knowledge of tools and materials
- Maintain current knowledge and techniques of nailing strip timber flooring onto plywood underlay or timber battens.
- Seek learning opportunities
- Use the limited workplace technology related to nailing strip timber flooring onto plywood underlay and timber battens including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to nailing of strip timber flooring
- organisational and site standards, requirements, policies and procedures for nailing strip timber flooring on plywood underlay or timber battens
- types and uses of tools and equipment used during the nailing of strip timber flooring on the plywood underlay and timber battens
- basic wood working techniques relevant to the nailing of timber strip flooring onto

REQUIRED SKILLS AND KNOWLEDGE

- to plywood underlay and timber battens
- workplace safety system requirements relevant to the nailing of strip timber flooring onto plywood underlay and timber battens
- type, characteristics, uses and limitations of:
 - installation adhesives
 - nails or staples
- work flow in relation to the nailing of strip timber flooring onto plywood underlay and timber battens operations
- characteristics and requirements of sub-floor preparation
- environmental protection requirements
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for nailing strip timber flooring on plywood or battens
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete the nailing of strip timber flooring using:
 - top nailing methods
 - secret nailing methods
- Work effectively with others

Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - a realistic timber floor installation requirement
 - workplace location or simulated workplace
 - materials and equipment relevant to the nailing of

EVIDENCE GUIDE	
	<p>strip timber flooring</p> <ul style="list-style-type: none"> • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Nail Strip timber flooring onto plywood underlay & battens

- includes tongue and groove strip timber flooring onto plywood underlay and battens which may be over joists, concrete or a sub-floor to either raise a floor or correct the level of a floor.

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Adhesives	<ul style="list-style-type: none"> • may include PVA, polyurethane, elastomeric
Tools and equipment	<ul style="list-style-type: none"> • are to include secret nailer, top nailer hammer nail punch string line, tape measure, laser line. • may include circular saw, bench saw, straight edge, cramps, clamps, bar scribe, carpenter's pencil and utility knife.
Materials	<ul style="list-style-type: none"> • may include but not be limited to flooring materials, strip timber floor boards, plywood underlay, timber battens, edge strips, timber and metal mouldings, tapes, adhesives, metal fixings, ventilated skirtings, 65 x 2.8 mm, 50 x 2.8 mm bullet head nails, 65 x 2.5 mm, 50 x 2.5 mm T head nails, 50x15 gauge staples, 45x15 gauge staples.
Timber flooring	<ul style="list-style-type: none"> • may include timber plywood underlay manufactured under a JAS-ANZ accredited product certification scheme meeting the internationally recognised ISO Type 5 system for product reliability to AS/NZS 2269
Timber battens	<ul style="list-style-type: none"> • may include timber battens with a density less than or equal to 600Kg/m³, greater than 600Kg/m³

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the installation of expansion joints to timber and engineered flooring are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Timber and engineered flooring is assessed for the type, number and installation requirements of expansion joints consistent with Australian Standards, industry standards and manufacturer recommendations</p> <p>1.4. Suitable expansion joints, cover strips, fixings and adhesives, are selected as required.</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the position of each expansion joint, to ensure efficiency and quality of installation</p>
2. Set out expansion joints for installation	<p>2.1. Expansion joints are positioned according to the requirements of the flooring type, manufacturer specifications and Australian Standards.</p> <p>2.2. Timber or metal mouldings or cork expansion strip for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.3. Adhesives and fixings, are prepared for use as required</p> <p>2.4. Working lines and starting point are established</p>
3. Prepare expansion joints	<p>3.1. Instructions and sequence for cutting and fixing are followed</p> <p>3.2. Timber or metal mouldings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>3.3. The aesthetics of the materials are maximised where appropriate, matching grains and colours</p> <p>3.4. Timber or metal moulding or cork expansion strip materials are accurately and clearly marked for cutting</p> <p>3.5. Timber or metal moulding or cork expansion strip is</p>

ELEMENT	PERFORMANCE CRITERIA
	cut to length and size for final fixing ensuring minimum waste
4. Install expansion joints	<p>4.1. Timber or metal mouldings or cork expansion strip for fixing are organised and used in accordance with relevant safety management requirements</p> <p>4.2. Adhesives, <i>mechanical fixings</i> are prepared for use as required</p> <p>4.3. Fixing methods and equipment are used following manufacturer recommendations</p> <p>4.4. Timber or metal mouldings or cork expansion strip are fitted to perimeter wall expansion gaps, expansion joints in the body of the flooring or transitions of the timber or engineered flooring</p> <p>4.5. Finished job is inspected and any imperfections are rectified following workplace procedures</p>
5. Complete housekeeping	<p>5.1. Unused materials are stored or recycled as required</p> <p>5.2. Tools and equipment are cleaned and stored appropriately</p> <p>5.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>5.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems in the placement and fitting of expansion joints to timber or engineered flooring to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge and techniques of placement and fitting of expansion joints and cover strips to timber or engineered flooring
- seek learning opportunities
- use the limited workplace technology related to the placement and fitting of expansion joints to timber and engineered flooring including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to placement and fitting of expansion joints to timber and engineered flooring
- organisational and site standards, requirements, policies and procedures for the placement and fitting of expansion joints to timber and engineered flooring
- types, characteristics, uses and limitations of:

REQUIRED SKILLS AND KNOWLEDGE

- the placement and fitting of expansion joints for timber and engineered flooring
- timber or metal mouldings and cork expansion strip when fitting expansion joints to timber and engineered flooring
- types and uses of tools and equipment used during the placement and fitting of expansion joints to timber and engineered flooring.
- basic wood working techniques relevant to the placement and fitting of expansion joints to timber and engineered flooring.
- workplace safety system requirements relevant to the placement and fitting of expansion joints to timber and engineered flooring.
- work flow in relation to the placement and fitting of expansion joints to timber and engineered flooring.
- characteristics and requirements of expansion joint preparation
- environmental protection requirements
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing direct stick timber flooring on battens
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of the placement and fitting of expansion joints to:
 - one strip timber floor
 - one parquetry floor
 - one engineered floating floor
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - a realistic timber or engineered flooring requiring the placement and fitting of expansion joints

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to the placement and fitting of expansion joints • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but are not limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Expansion joint materials

- may include but not limited to skirtings, scotias, quads, beading, cover strips, threshold strips (end, edge and T mouldings) angle end sections, reducer strips, ramping strips and stair nosings.

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Materials	<ul style="list-style-type: none"> • may include but are not limited to adhesives, metal fixings, timber and metal mouldings and cork expansion strip
Adhesives	<ul style="list-style-type: none"> • are to include PVA, epoxies and polyurethane elastomeric
Mechanical fixings	<ul style="list-style-type: none"> • may include ring grooved nails, pins, staples screws, nylon plug and screws (tap-ins), rawl plugs
Tools and equipment	<ul style="list-style-type: none"> • are to include drop saw, jig saw, hand saw, hack saw, hammer, nail punch, bar scriber and utility knife • may include circular saw, bench saw, straight edge, staple gun

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational requirements</i> relevant to the fitting and fixing <i>timber and metal mouldings and trims</i> to timber and engineered flooring are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Finished timber/engineered flooring condition is assessed for suitability for installation of timber and metal mouldings and trims consistent with Australian Standards, industry standards and manufacturer recommendations</p> <p>1.4. Suitable <i>adhesives, mouldings, trims</i> and <i>fixings</i> are selected as required.</p> <p>1.5. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials for installation	<p>2.1. Timber or metal mouldings and trims are acclimatised according to manufacturer recommendations</p> <p>2.2. Timber or metal mouldings and trims for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.3. Adhesives and fixings, are prepared for use as required</p> <p>2.4. Working lines and starting point are established</p>
3. Cut mouldings/trims	<p>3.1. Instructions and sequence for cutting and fixing are followed</p> <p>3.2. Timber or metal mouldings and trims are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>3.3. The aesthetics of the materials are maximised where appropriate, matching grains and colours</p> <p>3.4. Timber or metal moulding and trim materials are accurately and clearly marked for cutting</p> <p>3.5. Timber or metal moulding and trim is cut to length and size for final fixing ensuring minimum waste</p>

ELEMENT	PERFORMANCE CRITERIA
4. Fix mouldings /trims	<p>4.1. Timber or metal mouldings and trims for fixing are organised and used in accordance with relevant safety management requirements</p> <p>4.2. Adhesives, <i>mechanical fixings</i> and accessories are prepared for use as required</p> <p>4.3. Fixing methods and equipment are used following manufacturer recommendations</p> <p>4.4. Skirting boards/mouldings are fitted to perimeter walls expansion joints are allowed</p> <p>4.5. Cover trims and edge strips are fitted/re-fitted to expansion joints and transitions of the timber flooring</p> <p>4.6. Finished job is inspected and any imperfections are rectified following workplace procedures</p>
5. Complete housekeeping	<p>5.1. Unused materials are stored or recycled as required</p> <p>5.2. Tools and equipment are cleaned and stored appropriately</p> <p>5.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>5.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing mouldings and edge trims to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - fitting and fixing timber and metal mouldings and trims to timber flooring techniques
- seek learning opportunities
- use the limited workplace technology related to the fitting and fixing timber and metal mouldings and trims to timber flooring, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to fitting and fixing timber and metal mouldings and trims to timber and engineered flooring
- Organisational and site standards, requirements, policies and procedures for the fitting and fixing timber and metal mouldings and trims to timber and engineered flooring

REQUIRED SKILLS AND KNOWLEDGE

- Types, characteristics, uses and limitations of:
 - adhesives and mechanical fixings used to install timber and metal mouldings and trims fitted to timber and engineered flooring
 - timber and metal mouldings and trims for fixing to timber and engineered flooring
- Types and uses of tools and equipment used during the fitting and fixing timber and metal mouldings and trims to timber flooring
- Basic wood working techniques relevant to the fitting and fixing of timber and metal mouldings and trims to timber flooring
- Workplace safety system requirements relevant to the fitting and fixing timber and metal mouldings and trims to timber flooring
- work flow in relation to the fitting and fixing timber and metal mouldings and trims to timber flooring
- characteristics and requirements of sub-floor preparation
- environmental protection requirements
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing direct stick timber flooring on battens
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of two installations of the following mouldings and trims types:
 - skirting boards
 - scotia
 - edge and end mouldings
 - metal cover strips
 - stair nosing
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • realistic mouldings and edge trim installation requirement • workplace location or simulated workplace • materials and equipment relevant to installing direct stick timber flooring • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Timber and metal mouldings and trims

- may include but not limited to skirtings , scotias, quads, beading, cover strips, threshold strips (end, edge and T mouldings) angle end sections, reducer strips, ramping strips and stair nosings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and analyse work requirements	1.1. Applicable <i>legislative</i> , <i>OHS</i> and <i>organisational</i> requirements relevant to the planning and costing of flooring technology work are verified and complied with 1.2. Details of customer requirements are obtained through discussion with customer or from <i>information</i> required 1.3. Details of the <i>site conditions</i> are confirmed from reports or physical inspection 1.4. Details of products and/or services required for the work are identified, developed and quantified 1.5. Delivery point and methods of transportation are determined 1.6. Details are recorded in accordance with enterprise practice
2. Develop a work plan	2.1. The technical and material options for completing the work are identified and considered 2.2. The outline work proposal is confirmed with the client and amended as necessary 2.3. <i>A detailed work plan</i> is developed and recorded
3. Estimate materials, time and labour	3.1. Types and quantities of <i>materials</i> required for the work plan are calculated 3.2. Types and duration of usage of major <i>tools and equipment</i> required to support the work plan are calculated 3.3. <i>Labour</i> requirements to support the preparation for and implementation of the work plan are calculated 3.4. Time requirements to complete the work plan are estimated
4. Calculate costs	4.1. Total materials, labour and equipment costs are calculated in accordance with enterprise procedures 4.2. Total job cost is calculated, including overheads and mark-up percentages 4.3. Final cost to customer is calculated
5. Document details and verify where necessary	5.1. Details of job costs and charges are documented in accordance with enterprise practice 5.2. Calculations, costs or other details are verified in accordance with enterprise practice 5.3. Customer quotation is prepared

ELEMENT	PERFORMANCE CRITERIA
	5.4. Details are documented for future reference in accordance with enterprise practice

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, work plans and safety procedures
- communicate ideas, information and advice to client to enable confirmation of work requirements, plans and specifications
- document quotations and tender support schedules
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- apply inspection and analysis techniques to anticipate work problems and plan around these
- recognise and respond to circumstances outside instructions or personal competence
- adopt a proactive relationship with the client
- plan activities covering the choice of work method, the preparation and layout of the worksite, the identification of equipment and materials and the incorporation of these into a work plan
- use mathematical ideas and techniques to correctly complete measurements, estimate material, labour and overhead requirements and accurately cost the product/service
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the workplace technology related to the planning and costing of the work including measuring devices, calculators and computing services

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the planning and costing of flooring technology work
- AS/NZS 2455 and AS1884 (1985)
- preparing and presenting design information
- organisational and site standards, requirements, policies and procedures for preparing and presenting design information

REQUIRED SKILLS AND KNOWLEDGE

- floor preparation methods and techniques
- floor covering, installation and finishing techniques applicable to the required streams
- types of major tools and equipment, their applications, planning and costing techniques and data
- costing techniques for labour and materials
- overhead components and costing techniques
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for planning and costing flooring operations
- Interpret specifications and instructions for products and materials to be used
- Interpret work orders
- Document and communicate work-related information including: customer requirements, products, materials and labour required, costing calculations for products, materials and labour, and special conditions
- Use of calculators, computer programs and other aids in the estimation and cost calculation processes
- Estimate and cost three varied jobs including:
 - estimate quantities of material required
 - determine the types and amount of labour required to complete the work
 - estimate time required to complete the work
 - estimate overheads associated with the job
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - a realistic planning and costing requirement
 - a customer requiring technical, planning and

EVIDENCE GUIDE	
	<p>costing advice</p> <ul style="list-style-type: none"> • specific information covering materials, equipment, labour and overheads required for the planning and costing work • specifications and work instructions • details of the work requirements and options
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with other related units of competency e.g. Inspect sub-floors</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and interpret operational and environmental information	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the establishment and maintenance of a safe work environment are verified and complied with 1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process which will be undertaken to complete work tasks 1.3. <i>Tools and equipment</i> to be used are identified and their operating characteristics are analysed 1.4. The flooring <i>materials</i> to be used, including <i>adhesives</i> are identified and their characteristics analysed
2. Identify hazards	2.1. Work area conditions are analysed to identify/recognise potential <i>hazards</i> 2.2. Relevant safety systems information is accessed and analysed to eliminate situations covered by existing and adequate procedures 2.3. The type and scope of unresolved hazards and their likely impact are recognised
3. Assess risk	3.1. Likelihood of the event happening is considered and determined 3.2. Consequence if the event should occur is evaluated and determined 3.3. Risk level (likelihood and consequence combined) is considered and determined
4. Identify and decide on risk treatment	4.1. Range of <i>treatments</i> which may eliminate or minimise the risk are identified 4.2. All possible options for resolution of the problem/dealing with the risk are identified and considered 4.3. Feasible options are subject to detailed analysis including the identification of resource requirements 4.4. Most appropriate treatment for dealing with the situation is selected
5. Implement the risk treatment	5.1. The course of action /treatment is planned and prepared in detail 5.2. Resources required for the treatment are acquired or obtained 5.3. Safety information and procedures are accessed and applied throughout the operations

ELEMENT	PERFORMANCE CRITERIA
	5.4. The treatment is implemented 5.5. Information on the treatment and implementation is communicated to the relevant people

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate possible hazards
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of treatment equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the workplace technology related to the risk management including tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to risk management in a flooring technology work environment
- organisational and site standards, requirements, policies and procedures for flooring technology
- types of tools and equipment, their operating characteristics and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- common flooring technology related hazards and the range of commonly applied treatments

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• environmental protection requirements• established communication channels and protocols• problem identification and resolution• appropriate mathematical procedures for estimation and measurement• procedures for the recording, reporting and maintenance of workplace records and information |

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for risk management in a flooring technology work environment
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of one formal risk assessment, including the determination and implementation of required treatments
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to establishing and maintaining a safe flooring technology work environment
 - specifications and work instructions

EVIDENCE GUIDE**Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling, including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Instructions

- Workplace procedures relating to the use and operation of tools and equipment
- Workplace instructions, including job sheets, plans, drawings and designs
- Workplace procedures relating to reporting

RANGE STATEMENT	
	<p>and communications</p> <ul style="list-style-type: none"> • Manufacturer instructions for the use of equipment and materials
Tools and equipment	<ul style="list-style-type: none"> • may include knives, angle grinder, scrapers, saws, hammers, mallets and chisels, staple gun, bolsters, hand brush and brooms, vacuum cleaners, trowels, scribes, rollers, spatulas, gauging tools, laser levels, sealers, drills, mixing paddles, gas bottle and gun, hot air welding gun, drop saw, nail gun, buckets, moisture meters and material pumps • equipment and machines may include grinders, demolition equipment, scarifiers, shot blasters and cutting equipment
Materials	<ul style="list-style-type: none"> • are to include but are not limited to soft underlays, carpet gripper strips, metal mouldings, tapes, adhesives, nails, plug, staples and primers
Adhesives	<ul style="list-style-type: none"> • may include solvent and water-based contact, construction adhesive, latex/resin/acrylic
Hazards and risks	<ul style="list-style-type: none"> • may include dust inhalation, power sources and leads, flying debris, fume inhalation, trips, falls, lack of control during pouring, machine safety, vibration (direct and indirect consequences)
Treatments	<ul style="list-style-type: none"> • may include the following: <ul style="list-style-type: none"> • dust and fumes extraction systems • isolation through testing, distance, barriers, entry limits, signage • power source protection such as earth leakage, coded leads • debris protections such as machine guards, skirts, distance, access controls • pour protection through area sealing and plugs

LMFFL3101A Inspect sub-floors

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to inspect and formally report on the condition of both timber and concrete sub-floors.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to an on site environment and involves application of skills and knowledge at a trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the inspection of sub-floors are verified and complied with</p> <p>1.2. Customer enquiry and <i>relevant information</i> is consulted to determine the type of proposed flooring operation and other work requirements</p> <p>1.3. Floor surface requirements for the proposed coverings are determined from manufacturer or workplace information</p> <p>1.4. <i>Tools, equipment</i> and required <i>materials</i> are obtained and prepared for the work</p>
2. Conduct inspection of timber flooring	<p>2.1. The type of floor construction materials and the building floor structure and substructure are identified</p> <p>2.2. <i>Datum lines</i> are run and checked to confirm dimensions</p> <p>2.3. Moisture testing is completed in accordance with the approved process and standard</p> <p>2.4. <i>Timber sub-flooring inspections</i> are completed to identify irregularities</p> <p>2.5. Ventilation flow is confirmed and irregularities noted</p> <p>2.6. Floor joists, bearers and stumps are checked for irregularities</p>
3. Conduct inspection of concrete flooring	<p>3.1. The type of floor construction materials and the building floor structure and substructure are identified</p> <p>3.2. Datum lines are run and checked to confirm dimensions</p> <p>3.3. Moisture testing is completed in accordance with the approved process and standard</p> <p>3.4. <i>Concrete sub floor inspections</i> are completed to identify irregularities</p> <p>3.5. Expansion joints are inspected to ensure they are clean and unobstructed</p>
4. Notify findings of inspection	<p>4.1. <i>Notification</i> of the findings of the inspection is completed in accordance with the current and relevant standards</p> <p>4.2. Copies of the notification are sent to appropriate personnel and suitably filed following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of inspection outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate sub-floor inspection problems to avoid re-work and wastage
- diagnose and identify the causes and consequences of sub-flooring irregularities
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the workplace technology related to the inspection of sub-floors including tools, equipment, calculators and measuring devices.

Required knowledge

- workplace safety system requirements related to floor inspection
- type, characteristics and defects of:
 - timber sub-floor structures
 - concrete sub-floor structures
- types and uses of inspection tools and equipment and procedures for their safe use, operation and maintenance
- requirements for floor condition for floor coverings

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for sub-floor inspection
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - one timber sub-floor inspection and written notification
 - one concrete sub-floor inspection and written notification
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - testing equipment, tools and materials relevant to sub-floor inspection
 - specifications and work instructions

EVIDENCE GUIDE**Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other related units of competency, e.g. Plan and cost flooring technology work

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to <i>sub-floor preparation</i> are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. Sub-floors are inspected to ensure that they are dry, smooth, plane, sound and clean in accordance with ASNZS 2455.2 (1995) and AS 1884 (1995) and the extent of preparation is confirmed</p> <p>1.4. Trial applications of surface materials are made to determine suitability of the primer to the sub-floor, and the appropriateness of the screed compounds to <i>level requirements</i>, and compatibility to the primer</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Material safety data sheets, or equivalent, are read and applied during the work</p> <p>1.7. Materials and equipment are prepared and positioned for use</p> <p>1.8. Surfaces are cleaned in accordance with manufacturer recommendation</p>
2. From a datum line, define the grading, ramping and set downs	<p>2.1. Establish grid and mark the floor</p> <p>2.2. Drill for and position pin height</p> <p>2.3. Clean sub-floor</p> <p>2.4. Establish existing height and the height of finished ramp to the required threshold</p> <p>2.5. Establish the width of the ramp appropriate to the height of the finished threshold and in accordance with building codes and client requirements</p> <p>2.6. Establish existing height and the height of finished floor waste to the required threshold</p> <p>2.7. Establish height of finished floor at the perimeter</p> <p>2.8. Establish height of the finished floor at the floor waste/drain</p>
3. Repair defects in sub-floor (including expansion joints)	<p>3.1. Establish extent of repairs required</p> <p>3.2. Remove unsound material and debris</p> <p>3.3. Determine type of materials to be used</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Prime affected area 3.5. Mix and install repair compound 3.6. Inspect completed work to ensure functionality is restored and the finish is plane and smooth
4. Treatment of expansion/control joints	4.1. Establish the extent of repair 4.2. Remove unsound material and debris to ensure the mechanics of the control/expansion joint are unimpeded 4.3. Prepare joint to ensure that repair compound does not impede the function of control/expansion joint 4.4. Prime affected area 4.5. Mix and install repair compound 4.6. Inspect completed work to ensure functionality of the control/expansion joint is not impeded 4.7. Recut the expansion/control joint as required
5. Apply primers and screed compounds	5.1. Surface coating is applied with the depth and coverage in accordance with manufacturer specifications and job requirements 5.2. Levelled floor is checked and cleared for further processing
6. Complete housekeeping	6.1. Unused materials are stored or recycled as required 6.2. Tools and equipment are cleaned and stored appropriately 6.3. Work area is cleaned and rubbish disposed of appropriately 6.4. Workplace documentation and/or reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate concrete sub-floor preparation problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the preparation of a concrete sub-floor including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to levelling sub-floors
- organisational and site standards, requirements, policies and procedures for levelling sub-floors
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

maintenance

- characteristics of materials, products and defects
- set up and operation of equipment
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- characteristics and requirements of concrete sub-floor preparation
- type, characteristics, uses and limitations of levelling compounds and primers
- workplace safety system requirements related to the application of levelling compounds and primers

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Complete to Australian Standards a minimum of two sub-floor preparations which are to include:
 - a patch and repair
 - a level pour
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the installation of <i>carpet tiles</i> using standard installation procedures are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for installation of carpet tiles</p> <p>1.4. Suitable adhesives, trims and accessories are selected</p> <p>1.5. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials	<p>2.1. Carpet tiles to be installed are checked against order</p> <p>2.2. Carpet tiles are acclimatised according to manufacturer recommendations</p> <p>2.3. Materials for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.4. Set out patterns, motifs, logos and custom design requirements</p> <p>2.5. Working lines and starting point are established</p>
3. Lay floor covering	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Materials are laid out to meet specification requirements and to minimise waste</p> <p>3.3. Material grains and patterns are matched or contrasted as appropriate</p> <p>3.4. Tiles are accurately and clearly marked for cutting</p> <p>3.5. Tiles are cut to required shape with minimum waste of materials and laid</p> <p>3.6. Complete installation is checked for flaws in installation and materials and faults are rectified</p>
4. Complete housekeeping	<p>4.1. Unused materials are stored or recycled as required</p> <p>4.2. Tools and equipment are cleaned and stored appropriately</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing carpet tiles using custom design requirements to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing of carpet tiles using custom design requirements including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing carpet tiles using custom design requirements
- organisational and site standards, requirements, policies and procedures for installing carpet tiles using custom design requirements
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- types, characteristics, uses and limitations of:
 - carpet tiles
 - carpet tile installation adhesives
- types and uses of carpet tile installation tools and equipment
- workplace safety system requirements related to carpet tile laying
- characteristics and requirements of sub-floor preparation
- work flow in relation to floor covering operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the installation of carpet tiles requirements
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - one carpet installation to multiple connecting rooms using multi-directional patterns/borders including appropriate trims and accessories
 - one full-spread installation that includes a motif/logo and including appropriate trim and accessories
 - one full-spread installation to large commercial site that includes a link-up and custom design requirement, including appropriate trims and accessories
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Carpet tiles

- may include backed or un-backed, fixed or un-fixed, wool, synthetic or combination of fibres, pile, needle-punch, tufted, fusion bonded and woven, modular and square to one metre

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Adhesives	<ul style="list-style-type: none"> • are to include pressure sensitive and wet acrylics, water and solvent based contacts and double sided-tape
Tools and equipment	<ul style="list-style-type: none"> • are to include utility knife, straight edge, square, chalk-line, tape measure, hacksaw, serrated trowel, hammer and napping shears
Materials	<ul style="list-style-type: none"> • are to include but are not limited to carpet tiles, trims, stair nosings, skirting, reducing and edge strips, adhesive and tapes

LMFFL3202A Install adhesive fixed carpet floor coverings

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the competency required to install adhesive fixed carpet floor coverings including preparation, cutting, laying, fixing, joining and finishing of direct stick and dual-bonded installation methods.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to a work room and on site environment and involves application of skills and knowledge at a trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to install <i>adhesive fixed carpet</i> floor coverings are verified and complied with</p> <p>1.2. Floor inspection report is consulted to confirm suitability of floor for carpet installation</p> <p>1.3. Instructions and/or plans/sketches are read and interpreted to identify the process required to complete work tasks</p> <p>1.4. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.5. Suitable perimeter finishing, joining materials, metal mouldings, cover and PVC strips are selected and prepared</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p> <p>1.7. Suitable primers and <i>adhesives</i> are selected and prepared for the installation</p>
2. Set out materials	<p>2.1. Carpet to be installed is checked against order</p> <p>2.2. Adhesive fixed carpet floor coverings are acclimatised according to manufacturer recommendations</p> <p>2.3. Underlay and carpet to be installed is checked against work instruction and appropriate standards</p> <p>2.4. Apply appropriate primers to the sub-floors</p>
3. Lay floor coverings	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Underlay is cut and installed to specification</p> <p>3.3. Carpet pieces are laid out and checked for size, direction of pile and pattern</p> <p>3.4. Carpet is trimmed to shape as necessary, joins are cut, sealed and installed following manufacturer instructions and Australian Standards</p> <p>3.5. Adhesives are applied following manufacturer instructions</p> <p>3.6. Carpet is installed following manufacturer instructions and Australian Standards</p> <p>3.7. Cover and finishing strips are appropriately fixed for the type of sub floor</p>

ELEMENT	PERFORMANCE CRITERIA
	3.8. Protective coverings are installed as specified 3.9. Finished work is inspected for compliance with work order, workplace and Australian Standards of finish
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems in the installation of adhesive fixed carpets and underlays to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of adhesive fixed carpets and underlays including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to adhesive fixed carpet and underlays carpet systems
- organisational and site standards, requirements, policies and procedures for adhesive fixed carpet and underlay carpet system
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- types, characteristics, uses and limitations of:
 - adhesive fixed carpets and underlays
 - installation adhesives
- types and uses of adhesive fixed carpet installation tools and equipment
- workplace safety system requirements, including ventilation needs, related to the installation of adhesive fixed carpets
- characteristics and requirements of sub-floor preparation
- work flow in relation to the cutting, laying, fixing, joining and finishing of adhesive fixed carpet

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for laying adhesive fixed carpet and underlay
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Complete a minimum of the following:
 - one direct stick carpet installation using a PVC backed carpet to connecting rooms, including at least one cross join and one seam join
 - one dual-bond carpet installation using a woven carpet to connecting rooms, including at least one cross join and one seam join
 - one dual-bond carpet installation using tufted carpet and pre-applied adhesive underlay to connection rooms, including at least one cross join and one seam join using gripper strips and heat bond tape
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge,

EVIDENCE GUIDE	
	<p>other than confirmatory questions, will usually be conducted in an off-site context</p> <ul style="list-style-type: none"> • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to lay adhesive fixed carpet floor coverings • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Adhesive fixed carpet	<ul style="list-style-type: none"> may include: tufted carpet, fusion-bonded carpet, woven carpet, needle punched carpet, foams backed carpet, rubber-backed, PVC backed carpet, SBR latex foam underlay, fibrous and bonded foam underlays

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> are to include knee kicker, water roller, carpet wall trimmer, carpet stair tool, hammer, tape measure, trimming knife, spiked carpet roller, carpet spreader, notched trowels and paint rollers, carpet shears, napping shears, loop pile cutter, cushion backed cutter, heat seaming irons, electrical leads, seaming board, heat seaming tapes, seam sealer and earth leakage device
Materials	<ul style="list-style-type: none"> may include but are not limited to architectural gripper strips, metal mouldings, cover strips, PVC trims and primers
Adhesives	<ul style="list-style-type: none"> may include: plasticised and rubber resin acrylic, water and solvent based adhesives and solvent based contact adhesive

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the installation of <i>custom design carpet floor coverings</i>, are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Resources required in terms of labour, equipment, materials and time are assessed</p> <p>1.4. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.5. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials	<p>2.1. The carpet to be installed and design requirements are checked against work orders</p> <p>2.2. Carpet is acclimatised according to manufacturer recommendations</p> <p>2.3. Type of perimeter finishing, joining materials, gripper strips, metal mouldings and cover strips are selected following specification or work order</p> <p>2.4. Underlay gripper strips and metal mouldings are inspected to confirm correct fitting</p> <p>2.5. Work area is cleared of scraps or other contaminants</p> <p>2.6. Work lines and starting point are established</p>
3. Install floor covering	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Patterns, motifs, logos and custom design requirements are set-out</p> <p>3.3. Carpet pieces are laid out and checked for size, direction of pile and pattern match</p> <p>3.4. Carpet pieces are accurately and clearly marked for cutting</p> <p>3.5. Carpet pieces are cut to required shape with minimum waste of materials</p> <p>3.6. Carpet pieces are joined using joining and installation methods appropriate to the installation system being used</p> <p>3.7. Carpet installation methods are to follow manufacturer instructions and Australian Standards</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.8. Cover and finishing strips are suitably fixed for the type of installation method, floor covering and sub floor</p> <p>3.9. Complete installation is checked for flaws in installation and materials and faults rectified</p> <p>3.10. Floor covering protection is installed as per specifications</p>
4. Complete housekeeping	<p>4.1. Unused materials are stored or recycled as required</p> <p>4.2. Tools and equipment are cleaned and stored appropriately</p> <p>4.3. Work area is cleaned and rubbish disposed of appropriate</p> <p>4.4. Workplace documentation and/or reports are completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems when installing custom design carpets and decorative finishes to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of custom designed carpets and decorative finishes including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the installation of custom design carpet and decorative finishes
- organisational and site standards, requirements, policies and procedures for the installing of custom design carpet
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- characteristics and requirements for underlays
- type, characteristics, uses and limitations of pattern carpets
- types and uses of carpet installation tools, equipment and materials
- techniques for:
 - stretching and joining carpet
 - adhesive bonding and joining of carpet
 - the use of Velcro and equivalent systems
- workplace safety system requirements related to carpet installation
- work flow in relation to preparation, layout, stretching, cutting and finishing of carpet

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing custom designed carpet and decorative finishes
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Complete a minimum of:
 - one installation of a needle punch carpet to wall or floor, containing a logo/motif using adhesive bonded installation systems
 - installation of a tufted carpet containing a motif and custom design concepts using the carpet gripper strip system of installation
 - installation of a woven carpet containing a motif and custom design concepts (bordered installation) and pattern matching, using the dual-bond system of installation
 - one installation of PVC backed carpet to a floor, containing a logo/motif and custom design concepts using adhesive bonded installation systems
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and

EVIDENCE GUIDE	
	<p>environmental constraints</p> <ul style="list-style-type: none"> • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to installing custom design carpet and decorative finishes • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Custom design carpet floor coverings	<ul style="list-style-type: none"> may include tufted carpet, woven carpet and fusion bonded carpet, needlepunch carpet, PVC backed carpet, boned foam underlay, SBR foam underlay, needlepunched fibre underlay

RANGE STATEMENT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the installation of <i>synthetic textile floor coverings</i> are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Sub-floor condition is assessed for suitability for installation</p> <p>1.5. Suitable <i>adhesives</i>, trims and accessories are selected if required</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials	<p>2.1. Synthetic textile floor covering material to be installed is checked against the order</p> <p>2.2. Synthetic textile floor covering flooring are acclimatised according to manufacturer recommendations</p> <p>2.3. Soft <i>underlays</i> for synthetic textile floor coverings are cut and laid to specification</p> <p>2.4. Working lines and starting point are established</p> <p>2.5. Adhesives and edge strips are prepared for use as required</p>
3. Lay floor covering	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Materials for fixing are organised and used in accordance with relevant safety management requirements</p> <p>3.3. Synthetic textile floor coverings are laid out to meet pattern and specification requirements and minimise waste and joins</p> <p>3.4. Synthetic textile floor coverings are accurately and clearly marked for cutting</p> <p>3.5. Synthetic textile floor coverings are cut to length, joins are cut and prepared for final laying</p> <p>3.6. Line marking is completed where required</p> <p>3.7. Cover trims are fitted and finished</p>

ELEMENT	PERFORMANCE CRITERIA
	3.8. Completed installation is checked for flaws in installation and materials and faults rectified
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriate 4.4. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Collect, organise and understand information related to work orders, basic plans and safety procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate problems installing synthetic textile floor coverings to sport facilities to avoid rework and wastage
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Clarify and confirm work instructions
- Plan work within given task parameters
- Accept responsibility for given tasks
- Set, monitor and satisfy personal work goals
- Satisfy the competency requirements for the job
- Maintain current knowledge of:
 - tools and materials
 - installation techniques
- Seek learning opportunities
- Use the limited workplace technology related to the installation of synthetic textile floor coverings to sports facilities including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing synthetic floor coverings for sports facilities
- Organisational and site standards, requirements, policies and procedures for installing synthetic floor coverings for sports facilities
- Environmental protection requirements
- Established communication channels and protocols
- Problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- Types of tools and equipment and procedures for their safe use, operation and maintenance
- Characteristics of materials, products and defects
- Set up and operation of equipment
- Products assembly techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Type, characteristics, uses and limitations of:
 - synthetic textile floor coverings used in sporting facilities
 - installation adhesives
 - underlay cushions
- Types and uses of installation tools and equipment
- Workplace safety system requirements related to installing synthetic textile floor coverings used in sporting facilities
- Characteristics and requirements of sub floor preparation
- Work flow in relation to flooring installation operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing synthetic textile floor coverings to sports facilities
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of two types of synthetic textile floor covering to a sports floor installation
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to installing synthetic textile floor coverings to sports facilities
 - specifications and work instructions

EVIDENCE GUIDE**Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to installing <i>carpet floor coverings</i> to custom designed stairs are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. Floor condition is assessed for suitability for installation of unpatterned tufted and bonded carpet</p> <p>1.4. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.5. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials	<p>2.1. Carpet to be installed is checked against order</p> <p>2.2. Carpet floor coverings are acclimatised according to manufacturer recommendations</p> <p>2.3. <i>Stairway</i> or step is measured and the required amount of floor covering, and underlay including allowances for type of stairs, is calculated and obtained</p> <p>2.4. Suitable adhesives, gripper strips and edge strips are selected</p> <p>2.5. Work lines and starting point are established</p> <p>2.6. Gripper strips (if required) are cut and installed as specified in AS/NZS2455.1.1995</p> <p>2.7. Underlay (if required) is checked against specified type and fitted as specified in AS/NZS2455.1.1995</p>
3. Lay floor coverings	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Carpet floor coverings are laid out to meet allowances for type of stair requirements and minimise waste</p> <p>3.3. Carpet floor coverings are accurately and clearly marked for cutting</p> <p>3.4. Carpet floor coverings are cut to required shape with minimum waste of materials and laid</p> <p>3.5. Instructions, sequence, fixing methods and equipment are used following specifications and Australian Standards AS/NZS2455.1.1995</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6. Installation is completed to specification 3.7. Finished stairway is checked for flaws in installation and materials and faults rectified
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriate 4.3. Work area is cleaned and rubbish disposed of appropriate 4.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing carpet floor coverings to custom designed stairs to avoid rework and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of carpet floor covering to custom designed stairs including tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing carpet floor coverings to custom designed stairs
- organisational and site standards, requirements, policies and procedures for installing carpet floor coverings to custom designed stairs
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Carpet floor coverings	<ul style="list-style-type: none"> may include tufted carpet, woven carpet, needle punch carpet and fusion bonded carpet
Instructions	<ul style="list-style-type: none"> Workplace procedures relating to the use and operation of tools and equipment Workplace instructions, including job sheets,

RANGE STATEMENT	
	<p>plans, drawings and designs</p> <ul style="list-style-type: none"> • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Tools and equipment	<ul style="list-style-type: none"> • are to include knee kicker, stair tool, carpet gripper cutters, trimmer, hammer, staple hammer, compressor, air staple gun, utility knife, straight edge, drill, hacksaws and sewing needles
Materials	<ul style="list-style-type: none"> • may include but are not limited to underlay, tapes and adhesives, trims, nosing, smooth edges and accessories
Stairway	<ul style="list-style-type: none"> • may include open newell, bullnose steps, circular, recessed steps, open tread, box steps and kit winder treads

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to installing <i>linoleum floor coverings</i> are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for suitability for installation of linoleum floor coverings</p> <p>1.4. Suitable <i>adhesives</i>, trims and accessories are selected</p> <p>1.5. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set-out materials	<p>2.1. Linoleum to be installed is checked against order</p> <p>2.2. Linoleum floor coverings are acclimatised according to manufacturer recommendations</p> <p>2.3. Linoleum floor coverings for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.4. Working lines and starting point are established</p> <p>2.5. Soft underlay (if required) is cut to specification</p> <p>2.6. Pre-form fillet is set out, cut and fitted (if required)</p>
3. Cut materials	<p>3.1. Linoleum floor coverings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>3.2. Linoleum floor coverings are accurately and clearly marked for cutting</p> <p>3.3. Linoleum floor coverings are cut to required pattern and shape with minimum waste of materials</p>
4. Lay linoleum	<p>4.1. Instructions and sequence for laying and fixing are followed</p> <p>4.2. Materials for <i>welding</i> and fixing are organised and used in accordance with relevant safety management requirements</p> <p>4.3. Welding and fixing methods and equipment are used following manufacturer instructions</p> <p>4.4. Resilient skirting, reducer and edge strips are set-out</p>

ELEMENT	PERFORMANCE CRITERIA
	and installed (as required) 4.5. Completed installation is checked for flaws in installation and materials and faults rectified
5. Complete housekeeping	5.1. Unused materials are stored or recycled as required 5.2. Tools and equipment are cleaned and stored appropriately 5.3. Work area is cleaned and rubbish disposed of appropriately 5.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing linoleum floor coverings to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to installing linoleum floor coverings including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to install linoleum floor coverings
- organisational and site standards, requirements, policies and procedures for installing linoleum floor coverings
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

- maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of:
 - weldable vinyl floor coverings
 - resilient floor covering installation adhesives
- types and uses of linoleum floor covering installation tools and equipment
- workplace safety system requirements related to resilient floor covering laying
- characteristics and requirements of sub-floor preparation
- work flow in relation to cutting, welding and laying linoleum floor coverings

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing linoleum floor coverings
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Cut, lay and heat weld, linoleum sheet floor coverings using fillet cove internal and external mitres to custom design and pattern scribe covering
- Cut, lay and heat weld, linoleum sheet floor coverings using pre-formed linoleum coving with internal and external mitres to a corridor and connecting room(s)
- Cut, lay and butt join linoleum sheet floor coverings to single/connecting room
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to installing linoleum floor coverings • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Linoleum floor coverings

- include:
 - linoleum sheet
 - bulletin board
 - linoleum tiles

RANGE STATEMENT	
	<ul style="list-style-type: none"> • preformed linoleum cove
Adhesives	<ul style="list-style-type: none"> • may include plasticised and rubber resin acrylic, two part epoxy, poly-methane and water based and solvent based contact adhesive

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to installing resilient floor coverings are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for suitability for installation of custom design resilient floor coverings</p> <p>1.4. Suitable adhesives, trims and accessories are selected</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials	<p>2.1. Resilient floor coverings to be installed are checked against order</p> <p>2.2. Resilient custom design floor coverings are acclimatised according to manufacturers' recommendations</p> <p>2.3. Resilient custom design floor coverings for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.4. Working lines and starting point are established and marked on the sub-floor</p> <p>2.5. Motifs, logos or custom designs are set out and marked on the sub-floor</p>
3. Lay floor covering	<p>3.1. Instructions and sequence for laying and fixing is followed</p> <p>3.2. Resilient custom design floor coverings are laid out to meet directional sequence, pattern match, and specification requirements and to minimise waste and joins as appropriate</p> <p>3.3. Resilient custom design flooring materials are accurately and clearly marked for cutting</p> <p>3.4. Resilient custom design floor coverings are cut to required shape ensuring minimum waste</p> <p>3.5. Materials for fixing are organised and used in accordance with relevant safety management requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6. Adhesives and edge strips/accessories are prepared for use as required 3.7. Welding and fixing methods and equipment are used following manufacturer instructions 3.8. Finished job is inspected and any imperfections are rectified following workplace procedures
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing resilient floor coverings to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to installing resilient floor coverings including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing resilient floor covering using custom designs and decorative finishes
- organisational and site standards, requirements, policies and procedures for installing resilient floor coverings using custom designs and decorative finishes
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of:
 - weldable resilient floor coverings
 - resilient floor covering installation adhesives
- types and uses of resilient floor covering installation tools and equipment
- workplace safety system requirements related to resilient floor covering laying
- characteristics and requirements of sub-floor preparation
- work flow in relation to cutting, welding and laying resilient sheet flooring.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing resilient floor coverings
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Cut and lay resilient floor coverings using custom designs and decorative finishes with internal and external mitres:
 - one piece and performed coving; and
 - custom designed and pattern scribed coving using commercial grade resilient floor coverings
- Cut and lay resilient floor coverings using custom design containing logo/motifs using commercial grade resilient floor coverings including decorative welding, inlays and borders

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Legislative requirements</p>	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
<p>OHS requirements</p>	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
<p>Organisational requirements</p>	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
<p>Resilient flooring coverings</p>	<ul style="list-style-type: none"> • may include: <ul style="list-style-type: none"> • homogenous/heterogeneous • linoleum sheet • encapsulated glass fibre

RANGE STATEMENT	
	<ul style="list-style-type: none"> • in laid • rotogravure
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications
Adhesives	<ul style="list-style-type: none"> • may include plasticised and rubber resin acrylic, two part epoxy, poly-methane and water based and solvent based contact adhesive
Tools and equipment	<ul style="list-style-type: none"> • are to include utility knife and hook, straight and concave blades, straight edge square, square, chalk and chalk-line, tape measure, hacksaw, serrated trowel, hammer, seam and edge trimmer, recess scribe and pre-formed linoleum recess scribes, scribing bar, welding gun and accessories, hot air gun, grooving tool, divider, pencil cove roller, hand roller, cover gauging tool, roller, gas bottle and gun, rubber mallet, paint brush and bucket, spatula knife, builders pencil, contact bucket, linoleum trolley, liquid seam sealer, seam sealer applicator and wall trimmer
Materials	<ul style="list-style-type: none"> • are to include but are not limited to resilient sheet flooring, skirting, reducing and edge strips, welding rod, coving accessories, tapes, pattern paper and adhesives
Welding	<ul style="list-style-type: none"> • is to include hot welding and chemical welding

Co-requisite units

Co-requisite units		

LMFFL3304A Install resilient tiles using custom design and decorative finishes

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the competency to install resilient tiles to multiple connecting rooms and/or large commercial sites using multi directional patterns, custom design, mechanically and hand cut motifs, logos and decorative finishes including the preparation, layout, cutting, laying and fixing of resilient tiles.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to a work room and on site environment and involves application of skills and knowledge at a trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the installation of <i>resilient tiles</i> using custom design and decorative finishes are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for installation of resilient tiles</p> <p>1.4. Suitable adhesives, trims and accessories are selected</p> <p>1.5. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials	<p>2.1. Resilient tiles to be installed are checked against order</p> <p>2.2. Resilient tiles are acclimatised according to manufacturer recommendations</p> <p>2.3. Materials for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.4. Set out patterns, motifs, logos and custom design requirements</p> <p>2.5. Working lines and starting point are established</p>
3. Lay floor covering	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Materials are laid out to meet specification requirements and to minimise waste</p> <p>3.3. Material grains and patterns are matched or contrasted as appropriate</p> <p>3.4. Tiles are accurately and clearly marked for cutting</p> <p>3.5. Tiles are cut to required shape with minimum waste of materials and laid</p> <p>3.6. Complete installation is checked for flaws in installation and materials and faults are rectified</p>
4. Complete housekeeping	<p>4.1. Unused materials are stored or recycled as required</p> <p>4.2. Tools and equipment are cleaned and stored</p>

ELEMENT	PERFORMANCE CRITERIA
	appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing resilient tiles using custom design requirements to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing of resilient tiles using custom design requirements, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing resilient tiles using custom design requirements
- organisational and site standards, requirements, policies and procedures for installing resilient tiles using custom design requirements
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- types, characteristics, uses and limitations of:
 - resilient tiles
 - resilient tile installation adhesives
- types and uses of resilient tile installation tools and equipment
- workplace safety system requirements related to resilient tile installation
- characteristics and requirements of sub-floor preparation
- work flow in relation to cutting and laying resilient tiles

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the installation of resilient tiles meeting custom design requirements
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to materials and equipment
 - maintain required production output and product quality
- Install resilient tiles where cutting and fixing is required on either a timber sub-floor, or a concrete sub-floor, in multiple rooms with complex design requirements
- Complete a minimum of:
 - one resilient installation to multiple connecting rooms using multi-directional patterns/borders, including appropriate trims and accessories
 - one resilient plank installation that includes a motif/logo and including appropriate trim and accessories
 - one resilient tile installation to large commercial site that includes a 'link-up' and custom design requirement, including appropriate trims and accessories
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and

EVIDENCE GUIDE	
	<p>environmental constraints</p> <ul style="list-style-type: none"> • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to installing resilient tiles • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set-out floor coverings	<p>2.1. Resilient wall covering to be installed is checked against order</p> <p>2.2. Resilient wall coverings are acclimatised according to manufacturer recommendations</p> <p>2.3. Resilient wall coverings for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.4. Working lines and starting point are established</p> <p>2.5. Pre-form fillet is cut and fitted (if required)</p> <p>2.6. <i>Feathering systems</i> and applications are prepared and applied in accordance with the installation plan</p>
3. Install resilient sheet	<p>3.1. Resilient wall coverings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>3.2. The aesthetics of the materials is maximised where appropriate, matching grains, colours and patterns</p> <p>3.3. Materials are cut to length and size, allowing for final adjustment, trimming and <i>welding</i> processes</p> <p>3.4. Header and/or perimeter contact adhesive is applied to surfaces</p> <p>3.5. Adhesive is applied to the body of the walls as specified by the adhesive manufacturer</p> <p>3.6. Resilient wall covering is positioned in accordance with the plan, pressed out and hand-rolled</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.7. Resilient wall covering is heated to form required <i>profiles</i></p> <p>3.8. Seams are prepared and welded in accordance with the plan, manufacturer instructions and industry standards</p> <p>3.9. Joins and/or seams are <i>trimmed and finished</i> to industry standards</p> <p>3.10. Resilient wall coverings are <i>sealed</i> to floor coverings, door and window frames, as well as fixtures and fittings in wet area installations</p> <p>3.11. Completed installation is checked for flaws in installation and materials and faults rectified following workplace procedures</p>
4. Complete housekeeping	<p>4.1. Unused materials are stored or recycled as required</p> <p>4.2. Tools and equipment are cleaned and stored appropriately</p> <p>4.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>4.4. Workplace documentation and/or reports are completed</p>

	<p>Australian Standards requirements</p> <ul style="list-style-type: none"> • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to installing resilient sheet to walls • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Resilient wall coverings

- may be:
 - homogeneous/heterogeneous
 - linoleum sheet
 - encapsulated glass fibre

RANGE STATEMENT	
	<ul style="list-style-type: none"> • inlaid • rotogravure
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Adhesives	<ul style="list-style-type: none"> • are to include, but may not be limited to acrylic adhesives and water and solvent based contacts recommended by manufacturers
Tools and equipment	<ul style="list-style-type: none"> • may include flat trowel, notched trowel, pencil cove roller, wall roller, hand roller, cove and corner roller, recess scribe, hook and straight knife, chalk line, spirit level, tape measure, water level, laser level, height gauge, wall trolley, contact bucket/tray/roller brushes, scaffolding and step ladder
Materials	<ul style="list-style-type: none"> • are to include but are not limited to resilient wall coverings, skirting, reducing and edge strips, welding rod, coving accessories, tapes, pattern paper, fillers and adhesives
Feathering systems	<ul style="list-style-type: none"> • are to include the fitment of PVC edge fillet diminishing strip and the use of pre-mixed or mixed cementitious compounds
Welding	<ul style="list-style-type: none"> • is to include rod welding, self welding and fusion
Profiles	<ul style="list-style-type: none"> • are to include internal and external angles, bullnoses, coves and may include profiling to pipe work
Trimmed and finished	<ul style="list-style-type: none"> • is to include trimming weld rod, abrading and fusing external corners and chemically finishing to industry standards and manufacturer specifications
Sealed	<ul style="list-style-type: none"> • is to include the sealing of the resilient wall coverings at door and window frames, pipes, fixtures, fittings and floor coverings

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for installation	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to installing resilient coverings to bench and counter tops are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-strate condition is assessed for suitability for installation of resilient coverings to the bench/counter top</p> <p>1.4. Suitable adhesives, trims and accessories are selected</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p> <p>1.7. The aesthetics of the materials is maximised where appropriate, matching grains, colours and patterns</p>
2. Set out materials	<p>2.1. Resilient coverings to be installed are checked against order</p> <p>2.2. Resilient coverings are acclimatised according to manufacturer recommendations</p> <p>2.3. Resilient coverings for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.4. Working lines and starting point are established</p> <p>2.5. Pre-form fillet is cut and fitted (if required)</p> <p>2.6. Feathering systems and applications are prepared and applied in accordance with the installation plan</p>
3. Install resilient sheet	<p>3.1. Instructions and sequence for laying and fixing is followed</p> <p>3.2. Resilient coverings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>3.3. The aesthetics of the materials is maximised where appropriate, matching grains, colours and patterns</p> <p>3.4. Pattern templates of the bench/counter tops are produced (if required)</p> <p>3.5. Resilient coverings are accurately and clearly</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>marked for cutting</p> <p>3.6. Resilient coverings are cut to required pattern and shape with minimum waste of materials, allowing for final adjustment, trimming and <i>welding</i> processes</p> <p>3.7. Header and/or perimeter contact adhesive is applied to surfaces</p> <p>3.8. Resilient covering is positioned in accordance with the plan, pressed out and hand-rolled</p> <p>3.9. Sheet is heated to form required <i>profiles</i></p> <p>3.10. Seams are prepared and welded in accordance with the plan, manufacturer instructions and industry standards</p> <p>3.11. Joins and/or seams are <i>trimmed and finished</i> to industry standards</p> <p>3.12. Completed installation is checked for flaws in installation and materials and faults rectified following workplace procedures</p>
4. Complete housekeeping	<p>4.1. Unused materials are stored or recycled as required</p> <p>4.2. Tools and equipment are cleaned and stored appropriate</p> <p>4.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>4.4. Workplace documentation and/or reports are completed</p>

Required Skills and Knowledge

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing resilient sheet to bench and counter
- organisational and site standards, requirements, policies and procedures for installing resilient sheet to bench and counter
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of
 - weldable resilient coverings used on bench and counter tops
 - resilient coverings installation adhesives
- types and uses of resilient bench and countertop installation tools and equipment
- workplace safety system requirements related to bench and counter top resilient covering installation
- characteristics and requirements of sub-strate preparation to bench and counter tops
- work flow in relation to fixing, welding and finishing of resilient coverings to bench and countertops

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing resilient coverings to bench and counter tops
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Complete a minimum of:
 - one installation of resilient coverings to a bench/counter top which must include:
 - internal and external corners
 - a bull-nose and coved returns
 - and including rod and self welding and fusion welding requirements
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • materials and equipment relevant to installing resilient sheet to bench and counter tops • specifications and work instructions

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to install <i>anti-static resilient floor coverings</i> are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for suitability for installation of anti-static sheet vinyl floor covering</p> <p>1.4. Suitable <i>adhesives</i>, trims and accessories are selected if required</p> <p>1.5. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials	<p>2.1. Anti-static resilient floor covering to be installed is checked against order</p> <p>2.2. Vinyl floor coverings used in 'anti-static' installations are acclimatised according to manufacturer recommendations</p> <p>2.3. Vinyl floor coverings used in 'anti-static' installations are organised and used in accordance with relevant safety management requirements</p> <p>2.4. Working lines and starting point are established</p>
3. Lay floor covering	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Anti-static resilient floor coverings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>3.3. Anti-static resilient flooring materials are accurately and clearly marked for cutting</p> <p>3.4. Anti-static resilient flooring materials are cut to required shape ensuring minimum waste</p> <p>3.5. Adhesives and edge strips/accessories are prepared for use as required</p> <p>3.6. Anti-static resilient floor coverings for fixing are organised and used in accordance with relevant safety management requirements</p> <p>3.7. Anti-static resilient floor covering is laid and fixed</p>

ELEMENT	PERFORMANCE CRITERIA
	to meet job specifications 3.8. Anti-static resilient floor covering fixing methods and equipment are used following manufacturer recommendations 3.9. Completed installation is checked for flaws in installation and materials and faults rectified following workplace procedures
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing anti-static resilient floor coverings to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of anti-static resilient floor coverings including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to install anti-static resilient floor coverings
- organisational and site standards, requirements, policies and procedures for installing anti-static resilient floor coverings
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of:
 - anti-static resilient floor coverings
 - installation adhesives
- types and uses of installation tools and equipment
- workplace safety system requirements related to anti-static resilient floor coverings
- characteristics and requirements of sub floor preparation
- work flow in relation to the installation of anti-static resilient floor coverings

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the installation of anti-static resilient floor coverings
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to materials and equipment
 - maintain required production output and product quality
- Complete at least one anti-static resilient floor installation using a conductive acrylic adhesive system
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to installing anti-static resilient floor coverings
 - specifications and work instructions

EVIDENCE GUIDE**Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p> <p>1.7. Materials are laid out to meet pattern and specification requirements and minimise waste and joins</p>
2. Set out materials	<p>2.1. Resilient floor coverings to be installed are checked against order</p> <p>2.2. Conductive resilient floor coverings are acclimatised according to manufacturers' recommendations</p> <p>2.3. Conductive resilient floor coverings for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.4. Working lines and starting point are established</p>
3. Lay floor coverings	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Copper grid and isolating layer are installed to specification</p> <p>3.3. Conductive resilient floor coverings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>3.4. Conductive resilient floor coverings are accurately and clearly marked for cutting</p> <p>3.5. Conductive resilient floor coverings are cut to required pattern and shape with minimum waste of materials</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.6. Conductive resilient floor coverings for welding and fixing are organised and used in accordance with relevant safety management requirements</p> <p>3.7. Welding and fixing methods and equipment are used following manufacturer instructions</p> <p>3.8. Conductive resilient floor covering is laid and fixed to meet job specifications</p> <p>3.9. Vinyl skirting, reducer and edge strips are set-out and installed (as required)</p> <p>3.10. Completed installation is checked for flaws in installation and materials and faults rectified following workplace procedures</p>
4. Complete housekeeping	<p>4.1. Unused materials are stored or recycled as required</p> <p>4.2. Tools and equipment are cleaned and stored appropriately</p> <p>4.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>4.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing conductive resilient floor coverings to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing of conductive resilient floor coverings including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing conductive resilient floor coverings
- organisational and site standards, requirements, policies and procedures for installing conductive resilient floor coverings
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of:
 - conductive resilient floor covering
 - conductive adhesives
- types and uses of installation tools and equipment
- workplace safety system requirements related to conductive resilient floor coverings
- characteristics and requirements of sub floor preparation
- work flow in relation to the installation of conductive resilient floor coverings

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing conductive resilient floor coverings
- Interpret work order and locate and apply relevant information

 - prevent damage to materials and equipment
 - maintain required production output and product quality
- Complete a minimum of one installation of a static conductive resilient floor covering with an isolating layer and using conductive adhesive and earthing strip
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to installing conductive resilient floor coverings

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Conductive resilient floor coverings	<ul style="list-style-type: none"> Conductive resilient floor coverings include static conductive covering with a resistance reading of 10 4 to 10 8 using a copper grid and isolating layer

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications
Adhesives	<ul style="list-style-type: none"> • are to include conductive adhesives
Tools and equipment	<ul style="list-style-type: none"> • are to include utility knife (with hook, straight and concave blades), straight edge, square, chalk and chalk-line, tape measure, hacksaw, serrated trowel, hammer, seam and edge trimmer, recess scribe, scribing bar, welding gun and accessories, grooving tool, divider, hand roller, exacto knife, roller (65 kg), gas bottle and gun, rubber mallet, paint brush and bucket, spatula knife, dividers, builders pencil, contact bucket, brush and roller • may include linoleum trolley
Materials	<ul style="list-style-type: none"> • are to include but are not limited to conductive resilient flooring, trims and accessories, adhesives and copper earthing strips

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to cutting and installing resilient floor coverings to stairs are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for suitability for installation of resilient floor coverings to stairs</p> <p>1.4. Any remedial work to stairway is carried out</p> <p>1.5. Stairway or step is measured and the required amount of floor covering including allowances for type of stairs, is calculated and obtained</p> <p>1.6. Underlay (if required) is checked against specified type and fitting</p> <p>1.7. Suitable adhesives, trims and accessories are selected</p> <p>1.8. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.9. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set-out floor coverings	<p>2.1. Resilient floor coverings to be used are checked against order</p> <p>2.2. Resilient floor coverings are acclimatised according to manufacturer recommendations</p> <p>2.3. Resilient floor coverings for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.4. Working lines and starting point are established</p> <p>2.5. Pre-form fillet is cut and fitted (if required)</p>
3. Lay resilient floor coverings	<p>3.1. Instructions and sequence for laying and fixing is followed</p> <p>3.2. Resilient floor coverings are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>3.3. Patterns are cut as required for stairs and used to accurately and clearly mark resilient floor covering for cutting</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Resilient floor coverings are cut to required pattern and shape with minimum waste of materials</p> <p>3.5. Materials for welding and fixing are organised and used in accordance with relevant safety management requirements</p> <p>3.6. Welding and fixing methods, equipment and materials are used following manufacturers' instructions</p> <p>3.7. Resilient skirting, reducer and edge strips are set out and installed (as required)</p> <p>3.8. Completed installation is checked for flaws in installation and materials and faults rectified following workplace procedures</p>
4. Complete housekeeping	<p>4.1. Unused materials are stored or recycled as required</p> <p>4.2. Tools and equipment are cleaned and stored appropriately</p> <p>4.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>4.4. Workplace documentation and/or reports are completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems, cutting and installing resilient floor coverings to stairs to avoid rework and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the cutting and installing resilient floor coverings to stairs including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to cutting and installing resilient floor coverings to stairs
- organisational and site standards, requirements, policies and procedures for cutting and installing resilient coverings to stairs
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of:
 - weldable resilient floor coverings
 - resilient floor covering installation adhesives
- forming and welding techniques for installing resilient floor coverings to stairs
- types and uses of resilient floor covering installation tools and equipment
- workplace safety system requirements related to resilient floor covering installation
- characteristics and requirements of sub-floor preparation
- work flow in relation to cutting, welding and laying resilient flooring to stairs

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for cutting and installing resilient floor coverings to stairs
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of the installation of resilient floor coverings to:
 - a box step stairway, stringer and PVC stair nosing
 - a kite winder treads stairway, and PVC stair nosing
 - a bull nose step stairway PVC stair nosing
 - a recessed step stairway
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the work	<p>1.1. Applicable OHS, legislative, organisational and information requirements relevant to the application of epoxy and seamless floor coverings are verified and complied with</p> <p>1.2. Work orders and/or plans are read and interpreted</p> <p>1.3. The condition of the sub-floor is inspected and confirmed as suitable for use</p> <p>1.4. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.5. Floor preparation, including conventional and decorative formwork is established, levelled and secured</p>
2. Apply epoxy materials floor covering	<p>2.1. Surfaces are checked for contamination, moisture content and suitable preparation</p> <p>2.2. Materials and equipment are prepared and positioned for use</p> <p>2.3. Material safety data sheets, or equivalent, are read and applied during the work</p> <p>2.4. Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish</p> <p>2.5. Surface coatings are applied with the depth and coverage in accordance with manufacturer specifications and job requirements</p> <p>2.6. Decorative additives are applied in accordance with job requirements</p> <p>2.7. Floor is checked and cleared for further processing</p>
3. Finish the flooring	<p>3.1. Sanding/grinding equipment is set up in accordance with manufacturer instructions and operating procedures</p> <p>3.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>3.3. Equipment settings and adjustments are made and checked</p> <p>3.4. Trial runs are conducted to check machine operations and quality of finished work</p> <p>3.5. Sanding/grinding is completed to industry and manufacturer standards.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation and/or reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate epoxy and seamless application problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - epoxy and seamless application techniques
- seek learning opportunities
- use the limited workplace technology related to the epoxy and seamless application including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the application of epoxy and seamless floor coverings
- organisational and site standards, requirements, policies and procedures for moisture suppressant and barrier systems
- environmental protection requirements
- type, characteristics, uses and limitations of:
 - epoxy and seamless floor coverings
 - sanders/grinders

REQUIRED SKILLS AND KNOWLEDGE

- techniques for preparing epoxy and seamless materials, including decorative additives
- workplace safety system requirements related to sanding and grinding
- types and uses of relevant tools and equipment
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- characteristics and requirements of monolithic sub-floor preparation
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for preparing and presenting design information
- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Work effectively with others
- Complete a minimum of three of the following:
 - a trowelled epoxy floor
 - a self levelling epoxy floor
 - a flake floor
 - a seamless floor
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the preparation for and application of epoxy and

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and prepare for work requirements	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the application of finishes are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Coating material is selected with regard to durability, longevity, aesthetics, manufacturer recommendations and client expectations</p> <p>1.4. Selected coating materials are assessed as being compatible with each other, with the surface to be finished and with manufacturer recommendations</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Surface to be finished is inspected and assessed as being ready for coating</p> <p>1.7. Work sequence is planned to ensure efficiency and quality of application</p> <p>1.8. Workplace health and safety requirements, including isolation, ventilation and other personal protection needs, are observed throughout the work</p>
2. Apply finishing system	<p>2.1. Ventilation is checked before chemical fumes are released, and all OHS requirements are met including use of personal protective equipment</p> <p>2.2. Environmental protection regulations are complied with</p> <p>2.3. Coating material is applied in accordance with manufacturer recommendations</p> <p>2.4. Recommended drying times between coats are observed</p> <p>2.5. Buffing or sanding between coats, where required, is carried out according to manufacturer recommendations</p> <p>2.6. Final finish meets the requirements of the job</p>
3. Complete housekeeping	<p>3.1. Unused materials are resealed and stored</p> <p>3.2. Tools and equipment are cleaned, maintained and stored</p> <p>3.3. Work area is cleaned and waste material is removed and disposed of safely</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Barriers and signs are removed and stored 3.5. Workplace documentation/reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate coating problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate coating material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - solvent coating techniques
- seek learning opportunities
- use the workplace technology related to the application of finishes including tools, equipment, calculators and measuring devices
- interpret the technical specifications of materials and analyse their properties to optimise their use

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the application of finishing systems
- organisational and site standards, requirements, policies and procedures for finishing and coating
- methods of floor preparation from basic sanding to finishing sanding and edging
- characteristics of timber floor finishing in relation to ventilation, moisture content

REQUIRED SKILLS AND KNOWLEDGE

- and reaction to change of temperature and relative humidity
- type, characteristics, uses and limitation of solvent coating materials, including manufacturer recommendations
- types and uses of floor finishing tools and equipment
- workplace safety systems related to floor finishing processes
- work flow in relation to the application of solvent coatings to timber floors
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for applying finishes to timber, parquetry and cork floors
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Establish and maintain appropriate ventilation
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - minimise the risk of injury to self and others
 - achieve a final finish in accordance with Australian Standards and accepted industry practices
- Complete a minimum of:
 - application of two different solvent based products to two different timber species
- Identify faults/problems and identify and carry out corrective action
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • a realistic finishing requirement • materials and equipment relevant to the coating application • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting

RANGE STATEMENT	
	<p>and communications</p> <ul style="list-style-type: none"> • Manufacturer recommendations for the use of equipment and materials
Solvent coating materials	<ul style="list-style-type: none"> • may include but are not limited to resin solutions, epoxy resins, two can epoxy resins, two can polyurethanes, and moisture curing polyurethanes which may have matt, satin or gloss finish
Tools and equipment	<ul style="list-style-type: none"> • are to include orbital sander, rotary sander, hand sander, vacuum cleaner, brushes, applicators, rollers, roller tray, hammer, nail punch and spatula
Surfaces to be finished	<ul style="list-style-type: none"> • may include traditional tongue and groove strip flooring, gluedown or floating strip flooring, engineered timber flooring and block or mosaic parquet flooring
Surface inspection	<ul style="list-style-type: none"> • is to ensure that surface is free from dust and debris, moisture content is acceptable and stable and any preservatives, protective coatings or other contaminants are adequately removed
Work sequence	<ul style="list-style-type: none"> • is to include preparation, inspection, coating application(s) and intermediate steps, finalisation and acceptance inspection
Workplace health and safety requirements	<ul style="list-style-type: none"> • may include personal protective equipment which is to include that prescribed under legislation, regulation and enterprise policies and practices • may include isolation processes including barriers, tapes and entry access controls • may include breathing support and ventilation extraction systems
Application methods	<ul style="list-style-type: none"> • may include rags, brushes, rollers, applicators and spatula

LMFFL3403A Apply water-based coatings to timber flooring

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to select water-based coating systems appropriate for the job, to prepare for the work and to apply the selected coatings to timber and parquet floors.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to an on site environment and involves application of skills and knowledge at a trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and prepare for work requirements	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the application of finishes are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Coating material is selected with regard to durability, longevity, aesthetics, manufacturer recommendations and client expectations</p> <p>1.4. Selected coating materials are assessed as being compatible with each other, with the surface to be finished and with manufacturer recommendations</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Surface to be finished is inspected and assessed as being ready for coating</p> <p>1.7. Work sequence is planned to ensure efficiency and quality of application</p> <p>1.8. Workplace health and safety requirements, including isolation, ventilation and other personal protection needs, are observed throughout the work</p>
2. Apply finishing system	<p>2.1. Ventilation is checked before chemical fumes are released, and all OHS requirements are met including use of personal protective equipment</p> <p>2.2. Environmental protection regulations are complied with</p> <p>2.3. Coating material is applied in accordance with manufacturer recommendations</p> <p>2.4. Recommended drying times between coats are observed</p> <p>2.5. Buffing or sanding between coats, where required, is carried out according to manufacturer recommendations</p> <p>2.6. Final finish meets the requirements of the job</p>
3. Complete housekeeping	<p>3.1. Unused materials are resealed and stored</p> <p>3.2. Tools and equipment are cleaned, maintained and stored</p> <p>3.3. Work area is cleaned and waste material is removed and disposed of safely</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Barriers and signs are removed and stored 3.5. Workplace documentation/reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Collect, organise and understand information related to work orders, basic plans and safety procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate coating problems to avoid re-work and wastage
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate coating material requirements
- Clarify and confirm work instructions
- Plan work within given task parameters
- Accept responsibility for given tasks
- Set, monitor and satisfy personal work goals
- Satisfy the competency requirements for the job
- Maintain current knowledge of:
 - tools and materials
 - water-based coating techniques
- Seek learning opportunities
- Use the workplace technology related to the application of finishes including tools, equipment, calculators and measuring devices
- Interpret the technical specifications of materials and analyse their properties to optimise their use

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the application of finishing systems
- Organisational and site standards, requirements, policies and procedures for finishing and coating
- Methods of floor preparation from basic sanding to finishing sanding and edging
- Characteristics of timber floor finishing in relation to ventilation, moisture content

REQUIRED SKILLS AND KNOWLEDGE

- and reaction to change of temperature and relative humidity
- Type, characteristics, uses and limitations of water-based coating materials, including manufacturer recommendations
- Types and uses of floor finishing tools and equipment
- Workplace safety systems related to cork floor finishing processes
- Work flow in relation to the application of water-based coatings to timber floors
- Environmental protection requirements
- Established communication channels and protocols
- Problem identification and resolution
- Appropriate mathematical procedures for estimation and measurement
- Procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for applying finishes to timber, parquetry and cork floors
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Establish and maintain appropriate ventilation
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - minimise the risk of injury to self and others
 - achieve a final finish in accordance with Australian Standards and accepted industry practices
- Complete a minimum of:
 - application of two different water-based products to two different timber species
- Identify faults/problems and identify and carry out corrective action
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • a realistic finishing requirement • materials and equipment relevant to the coating application • specifications and work instructions

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate coating problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate coating material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - composite based coating techniques
- seek learning opportunities
- use the workplace technology related to the application of finishes including tools, equipment, calculators and measuring devices
- interpret the technical specifications of materials and analyse their properties to optimise their use

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the application of finishing systems
- organisational and site standards, requirements, policies and procedures for finishing and coating
- methods of floor preparation from basic sanding to finishing sanding and edging
- characteristics of floor finishing in relation to ventilation, moisture content of

REQUIRED SKILLS AND KNOWLEDGE

- timber, timber species and reaction to change of temperature and relative humidity
- type, characteristics, uses and limitation of composite based coating materials including manufacturer recommendations
- types and uses of floor finishing tools and equipment
- workplace safety systems related to floor finishing processes
- work flow in relation to the application of composite based coatings to timber floors
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- appropriate mathematical procedures for measurement and estimation of composite based coatings for a given area
- procedures for the recording, reporting and maintenance of workplace records and information.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for applying finishes to strip timber and parquetry flooring
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Establish and maintain appropriate ventilation
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - minimise the risk of injury to self and others
 - achieve a final finish in accordance with Australian Standards and accepted industry practices
- Complete a minimum of:
 - application of two different composite based products to two different timber species, one to strip timber flooring and one to parquetry flooring
- Identify faults/problems and identify and carry out corrective action
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • workplace location or simulated workplace • a realistic finishing requirement • materials and equipment relevant to the coating application • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Instructions	<ul style="list-style-type: none"> Workplace procedures relating to the use and operation of tools and equipment Workplace instructions, including job sheets, plans, drawings and designs Workplace procedures relating to reporting

RANGE STATEMENT	
	<p>and communications</p> <ul style="list-style-type: none"> • Manufacturer recommendations for the use of equipment and materials
Composite based coating materials	<ul style="list-style-type: none"> • may include but are not limited to oil modified urethanes (OMU) and Urethane oil/alkyd 'tung oil' based finishes which may provide a subdued, satin to semi-gloss appearance and are unlikely to edge bond boards. They darken with time and require more frequent maintenance particularly in high traffic areas. Acrylic floor polishes may be used to protect the finish.
Tools and equipment	<ul style="list-style-type: none"> • are to include brooms, brushes, vacuum cleaner, paint brushes, applicators, paint rollers, roller tray, spatula and masking tape and plastic sheeting.
Surfaces to be finished	<ul style="list-style-type: none"> • may include traditional tongue and groove strip timber flooring and block or mosaic parquetry flooring.
Surface inspection	<ul style="list-style-type: none"> • is to ensure that surface is free from dust and debris, moisture content is acceptable and stable and any preservatives, protective coatings or other contaminants are adequately removed
Work sequence	<ul style="list-style-type: none"> • is to include preparation, inspection, coating application(s) and intermediate steps, finalisation and acceptance inspection
Workplace health and safety requirements	<ul style="list-style-type: none"> • may include personal protective equipment which is to include that prescribed under legislation, regulation and enterprise policies and practices • may include isolation processes including barriers, tapes and entry access controls • may include breathing support and ventilation extraction systems
Application methods	<ul style="list-style-type: none"> • may include, brushes, rollers and applicators.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Identify and prepare for work requirements</p>	<p>1.1. Applicable legislative, <i>OHS</i> and <i>organisational requirements</i> relevant to the application of finishes are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. <i>Coating material</i> is selected with regard to durability, longevity, aesthetics, manufacturer recommendations and the client's expectations</p> <p>1.4. Selected coating materials are assessed as being compatible with each other, with the surface to be finished and with manufacturer recommendations</p> <p>1.5. <i>Tools, equipment</i> and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. <i>Surface to be finished</i> is <i>inspected</i> and assessed as being ready for coating</p> <p>1.7. <i>Work sequence</i> is planned to ensure efficiency and quality of application</p> <p>1.8. <i>Workplace health and safety requirements</i>, including isolation, ventilation and other personal protection needs, are observed throughout the work</p>
<p>2. Apply finishing system</p>	<p>2.1. Ventilation is checked before chemical fumes are released, and all OHS requirements are met including use of personal protective equipment</p> <p>2.2. Environmental protection regulations are complied with</p> <p>2.3. Coating material is prepared as per manufacturer specifications.</p> <p>2.4. Coating material is <i>applied</i> in accordance with manufacturer recommendations</p> <p>2.5. Recommended drying times between coats are observed</p> <p>2.6. Buffing or sanding between coats, where required, is carried out according to manufacturer recommendations</p> <p>2.7. Final finish meets the requirements of the job</p> <p>2.8. Floor maintenance instructions and warranty provisions are provided to the client in accordance with workplace procedures</p>

ELEMENT	PERFORMANCE CRITERIA
3. Complete housekeeping	3.1. Unused materials are resealed and stored 3.2. Tools and equipment are cleaned, maintained and stored 3.3. Work area is cleaned and waste material is removed and disposed of safely 3.4. Barriers and signs are removed and stored 3.5. Workplace documentation/reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Collect, organise and understand information related to work orders, basic plans and safety procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate coating problems to avoid re-work and wastage
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate coating material requirements
- Clarify and confirm work instructions
- Plan work within given task parameters
- Accept responsibility for given tasks
- Set, monitor and satisfy personal work goals
- Satisfy the competency requirements for the job
- Maintain current knowledge of:
 - tools and materials
 - emulsion and wax coating techniques
- seek learning opportunities
- use the workplace technology related to the application of finishes including tools, equipment, calculators and measuring devices
- interpret the technical specifications of materials and analyse their properties to optimise their use

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the application of finishing systems
- organisational and site standards, requirements, policies and procedures for finishing and coating
- methods of floor preparation from basic sanding to finishing sanding and edging
- characteristics of floor finishing in relation to ventilation, moisture content and

REQUIRED SKILLS AND KNOWLEDGE

- reaction to change of temperature and relative humidity
- type, characteristics, uses and limitation of emulsion and wax coating materials, including manufacturer recommendations
- types and uses of floor finishing tools and equipment
- workplace safety systems related to floor finishing processes
- work flow in relation to the application of emulsion and wax coatings to timber floors
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for applying finishes to timber, parquetry and cork floors
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Establish and maintain appropriate ventilation
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - minimise the risk of injury to self and others
 - achieve a final finish in accordance with Australian Standards and accepted industry practices
- Complete a minimum of:
 - application of two different emulsion wax products to two different timber/cork flooring types
- Identify faults/problems and identify and carry out corrective action
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and adapt the design	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to <i>timber flooring design</i> are verified and complied with 1.2. Client design concept is matched with <i>available custom designs</i> and the preferred design selected 1.3. Design concept is adapted to suit the dimensions of the floor area 1.4. <i>Scale representations</i> of the design application are prepared
2. Select the timber	2.1. Budget and availability constraints are used to identify realistic timber options 2.2. <i>Timber options</i> are analysed on the basis of durability, longevity, aesthetics, manufacturer recommendations and client expectations 2.3. Most appropriate timber options are selected and incorporated into the <i>job specification</i>
3. Select the finishing technique and materials	3.1. <i>Effects of finishing materials</i> on the final appearance of the design are identified and analysed 3.2. <i>Effects of the finishing techniques</i> on the final appearance of the design are identified 3.3. Finishing techniques and materials which best complement the design aesthetics are selected and incorporated into the job specification
4. Finalise the job specification	4.1. Job specifications covering <i>working drawings, material specifications</i> and costs are finalised 4.2. Client approval for the job specification is obtained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable the clarification of customer requirements and the compilation/presentation of job proposals and specifications
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise creativity
- use pre-checking and inspection techniques to anticipate design adaptation and application problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- encourage clients to consider innovative solutions
- plan and organise activities including the preparation and layout of the worksite and the obtaining of information and planning data to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements and costs
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - materials
 - timber flooring design options
- seek learning opportunities
- use the workplace technology including design software, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to timber flooring operations
- organisational and site standards, requirements, policies and procedures for timber flooring operations
- types, characteristics, uses and limitations of commonly used flooring timbers
- types, characteristics, uses, limitations and effects on timber of finishing materials
- availability and costs of flooring timbers
- manual and computer-aided drafting techniques

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for preparing and presenting design information
- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Adapt a minimum of two custom designs for timber flooring, including the preparation of detailed job specifications with:
 - one for a strip floor
 - one for a parquetry floor
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - realistic tasks covering a strip floor and parquetry floor
 - a range of custom designs
 - workplace location or simulated workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • information and equipment relevant to adapting and presenting design information • a client/simulated client
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling, including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Timber flooring design	<ul style="list-style-type: none"> refers to the pattern, logo or motif that is being incorporated into the timber floor
Available custom designs	<ul style="list-style-type: none"> are those created by others, including material providers, manufacturers and professional design outlets and made available through

RANGE STATEMENT	
	complementary or commercial means
Scale representations	<ul style="list-style-type: none"> depict the adaptation of the custom design to the specific dimensions of the intended flooring coverage and may be prepared manually or using computer-aided means
Timber options	<ul style="list-style-type: none"> include those timbers which are within the cost envelope and are capable of being used to achieve the design requirements in terms of colour, texture, hardness, workability, compatibility and endurance
Job specification	<ul style="list-style-type: none"> are to include the measurements, materials to be used and the preparation and application processes/procedures to be followed
Effect of finishing materials	<ul style="list-style-type: none"> include the colour matching/contrast requirements as well as durability, moisture management and other protection control requirements
Effects of finishing techniques	<ul style="list-style-type: none"> include the impact and effects of securing filling and sanding
Working drawings	<ul style="list-style-type: none"> may include but not be limited to drafted technical drawings or drawings produced on computer using computer aided drafting software packages
Material specifications	<ul style="list-style-type: none"> are to include the materials, construction methods and procedures, finishing methods and techniques, compatibility requirements and limitations and relevant national and industry standards

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for installation	1.1. Applicable legislative, OHS and organisational requirements relevant to the installing timber flooring materials to stairs and steps are verified and complied with 1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks 1.3. Floor condition is assessed for suitability for installation of timber flooring to stairs 1.4. Stairway or step are measured and the required amount flooring materials is calculated 1.5. Suitable adhesives, trims and accessories are selected if required 1.6. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 1.7. Sequence of work is planned, including a starting point, to ensure efficiency and quality of installation
2. Set out materials for installation	2.1. Timber flooring to be installed is checked against order 2.2. Timber flooring is acclimatised according to manufacturer recommendations 2.3. Materials for fixing is organised and used in accordance with relevant safety management requirements 2.4. Working lines and starting point are established
3. Lay out flooring material	3.1. Instructions and sequence for laying and fixing are followed 3.2. Materials are laid out to meet any design and specification requirements and minimise waste 3.3. The aesthetics of the materials are maximised including matching grains and colours 3.4. Underlay (if required) is checked against specified type, manufacturer recommendations and fitting 3.5. Any remedial work to stairway is carried out
4. Install flooring material	4.1. Flooring materials are cut following workplace procedures 4.2. Underlay (if required) is installed following manufacturer recommendations 4.3. Fixing methods and equipment are used following

ELEMENT	PERFORMANCE CRITERIA
	manufacturer recommendations 4.4. Flooring materials are installed to specifications to the sub floor following workplace procedures 4.5. Finished stairway is checked for flaws in installation and materials and faults rectified
5. Complete housekeeping	5.1. Unused materials are stored or recycled as required 5.2. Tools and equipment are cleaned and stored appropriately 5.3. Work area is cleaned and rubbish is disposed of appropriately 5.4. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing timber flooring materials to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - parquetry installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing timber flooring materials requirement including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the installation of timber flooring to stairs
- organisational and site standards, requirements, policies and procedures for the installation of timber flooring to stairs
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information
- types, characteristics, uses and limitations of timber flooring materials
- types and uses of timber flooring cutting and installation tools, equipment and materials
- characteristics of timber and monolithic sub floors
- techniques for preparing sub floors
- techniques and requirements for conducting moisture testing
- workplace safety system requirements relating to cutting and installing timber flooring materials
- work flow in relation to the installing of timber flooring materials, including cork, parquetry, floating floors and strip timber floors (non-structural)

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing timber flooring materials to stairs
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
 - conduct appropriate moisture testing
- Complete a minimum of three types of the timber flooring material installation to stairs from the following different options:
 - floating
 - strip timber flooring
 - cork
 - parquetry
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • a realistic installation requirement • workplace location or simulated workplace • materials and equipment relevant to the installation of timber flooring materials to stairs • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational requirements</i> relevant to the installation of <i>direct stick timber flooring</i> are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for suitability for installation of direct stick timber flooring consistent with Australian Standards, industry standards and manufacturer recommendations</p> <p>1.4. Suitable underlays, <i>adhesives</i>, trims and accessories are selected as required.</p> <p>1.5. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out materials for installation	<p>2.1. Pre-finished, engineered or direct stick timber flooring are acclimatised according to manufacturer recommendations</p> <p>2.2. Pre-finished, engineered or direct stick timber flooring for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.3. Skirting boards or cover trims are removed or undercut if required and stored for refitting or sent for machining</p> <p>2.4. Adhesives and edge direct sticks are prepared for use as required</p> <p>2.5. Working lines and starting point are established</p>
3. Cut flooring	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Appropriate underlay is laid according to manufacturer recommendations</p> <p>3.3. Pre-finished, engineered or direct stick timber flooring are laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>3.4. The aesthetics of the materials are maximised where appropriate, matching grains and colours</p> <p>3.5. Pre-finished, engineered or direct stick timber</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>flooring materials are accurately and clearly marked for cutting</p> <p>3.6. Timber battens are accurately and clearly marked for cutting</p> <p>3.7. Timber flooring is cut to length and size for final laying ensuring minimum waste</p>
4. Lay flooring	<p>4.1. Materials for fixing are organised and used in accordance with relevant safety management requirements</p> <p>4.2. Adhesives and edge direct sticks/accessories are prepared for use as required</p> <p>4.3. Fixing methods and equipment are used following manufacturer recommendations</p> <p>4.4. Appropriate field and perimeter expansion joints are allowed</p> <p>4.5. Skirting boards or cover trims are fitted/re-fitted and finished</p> <p>4.6. Finished job is inspected and any imperfections are rectified following workplace procedures</p>
5. Complete housekeeping	<p>5.1. Unused materials are stored or recycled as required</p> <p>5.2. Tools and equipment are cleaned and stored appropriately</p> <p>5.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>5.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing direct stick timber flooring to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - parquetry installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing direct stick timber flooring including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installation of direct stick timber flooring
- organisational and site standards, requirements, policies and procedures for the installation of direct stick timber flooring
- environmental protection requirements
- types, characteristics, uses and limitations of:
 - direct stick timber flooring installed
 - installation adhesives

REQUIRED SKILLS AND KNOWLEDGE

- types and uses of tools and equipment used during the installation of direct stick timber flooring
- basic wood working techniques relevant to the installation of timber direct stick flooring installed
- workplace safety system requirements relevant to the installation of direct stick timber flooring
- work flow in relation to the laying of direct stick timber flooring operations
- characteristics and requirements of sub-floor preparation
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing direct stick timber flooring on battens
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of three installations of the following types of installation:
 - glue-together system
 - direct stick system
 - self locking system
 - inserted plastic tongue system
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - a realistic direct stick timber floor installation

EVIDENCE GUIDE	
	<p>requirement</p> <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to installing direct stick timber flooring • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for the inspection	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the inspection of timber flooring are verified and complied with</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. The purpose, scope, formality and reporting requirements for the inspection are identified, clarified and agreed</p> <p>1.4. The need for and liability associated with for the outcome of <i>invasive inspection techniques</i> are documented and agreed</p> <p>1.5. Tools, equipment and materials required for the inspection are selected and checked prior to use to ensure that they are appropriate for the work and in a safe condition</p> <p>1.6. Sequence of work is planned to ensure efficiency and quality of outcome</p>
2. Conduct the inspection	<p>2.1. Initial visual and other non-invasive inspections are completed to identify and isolate further inspection needs</p> <p>2.2. <i>Finishing faults</i> and remedial options are identified and analysed</p> <p>2.3. <i>Structural faults</i> and remedial options are identified and analysed</p> <p>2.4. <i>Material faults</i> including infestation and moisture effects and remedial options are identified and analysed</p> <p>2.5. <i>Sub-floor faults</i>, their impacts and remedial options are identified and analysed</p> <p>2.6. Areas invasively inspected are made safe</p>
3. Report on the inspection	<p>3.1. The inspection report addresses the agreed terms of reference</p> <p>3.2. The report clearly identifies the scope of the inspection, the findings and the suggested options for addressing the faults or findings</p> <p>3.3. The report is presented to the client together with any required clarification</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of inspection requirements and specifications, coordination of work with other workers and customers, and the reporting of inspection outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to facilitate and ease inspections
- use pre-checking and checking techniques to anticipate inspection problems to avoid re-work and wastage
- apply cause and effect analytical tools in floor inspection
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of information, equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and confirm inspections findings
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - timber flooring techniques
- seek learning opportunities
- use the workplace technology related to the timber flooring inspections including computers, tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the inspection of timber floors
- organisational and site standards, requirements, policies and procedures for the inspection of timber floor
- legal prerogatives and responsibilities for invasive inspection techniques and effects
- commonly experienced:

REQUIRED SKILLS AND KNOWLEDGE

- finishing faults and repair/restoration options
- structural faults and repair/restoration options
- material faults and repair/restoration options
- sub-floor faults and repair/restoration options
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for inspecting timber flooring
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Inspect and correctly report on two timber floors where one requires invasive inspection techniques
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - realistic inspection requirements
 - a client/simulated client
 - workplace location or simulated workplace
 - materials and equipment relevant to inspection and presentation of findings

Method of assessment

Assessment must satisfy the endorsed assessment

EVIDENCE GUIDE

guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Invasive inspection techniques	<ul style="list-style-type: none"> are those which require significant removal of coatings and materials and where restoration is required, regardless of the inspection finding
Finishing faults	<ul style="list-style-type: none"> may include contaminated coating (dust, foreign objects), coating rejection, incorrect

RANGE STATEMENT	
	coating, swirl marks, scratches, drum marks, waves, taper tracks, striations, rippers, chatter marks and edgebonding
Structural faults	<ul style="list-style-type: none"> may include splits, cracks, broken boards, failed fixings and incorrect board size
Materials faults	<ul style="list-style-type: none"> may include warp, wane, curvature, shakes, insect defects, knots and resin pockets
Sub-floor faults	<ul style="list-style-type: none"> may include incorrect levels, soundness and moisture

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the installation of block parquetry are verified and complied with</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.4. Sub-floor condition is assessed for suitability for installation of block parquetry flooring consistent with Australian Standards, industry standards and manufacturer recommendations</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Skirting boards or cover trims are removed or undercut if required and stored for re-fitting</p> <p>1.7. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out block parquetry flooring	<p>2.1. Block parquetry flooring are acclimatised according to manufacturer recommendations</p> <p>2.2. Block parquetry flooring for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.3. Adhesives and edge strips are prepared for use as required</p> <p>2.4. Area to be covered is measured, working lines and starting point are established</p>
3. Layout and cut parquetry blocks	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Appropriate underlay is laid according to manufacturer recommendations</p> <p>3.3. Block parquetry flooring is laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins</p> <p>3.4. The aesthetics of the materials are maximised, including matching grains and colours</p> <p>3.5. Parquetry blocks are accurately and clearly marked for cutting</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6. Parquetry blocks are cut where required to provide appropriate size and shape ensuring minimum waste
4. Install block parquetry	4.1. Adhesives and edge strips/accessories are prepared for use as required 4.2. Adhesives are used following workplace procedures 4.3. Fixing methods and equipment are used following manufacturer recommendations 4.4. Parquetry is installed and fixed to produce required pattern 4.5. Appropriate field and perimeter expansion joints are allowed 4.6. Skirting boards or cover trims are fitted/refitted and finished 4.7. Finished job is inspected and any imperfections are rectified following workplace procedures
5. Complete housekeeping	5.1. Off-cuts or leftover materials are collected and removed following workplace procedures 5.2. Tools and equipment are cleaned, maintained and stored 5.3. Work area is cleaned and waste material is removed and disposed of safely 5.4. Documentation/reporting is completed following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate block parquetry installation problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - parquetry installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of block parquetry, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installation of block parquetry
- organisational and site standards, requirements, policies and procedures for the installation of block parquetry
- environmental protection requirements
- types, characteristics, uses and limitations of block parquetry flooring
- types and uses of tools and equipment used during the installation of block parquetry flooring

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing block parquet flooring
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Establish and maintain appropriate ventilation
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - minimise the risk of injury to self and others
 - achieve a final finish in accordance with Australian Standards and accepted industry practices
- Complete a minimum of two block parquet floors, which are to include at least:
 - one personally designed pattern
 - one block floor, herringbone pattern with a two block border
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - a realistic block parquet installation requirement

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to the installation of block parquetry • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to install <i>cork tiles</i> are verified and complied with 1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks 1.3. Floor condition is assessed for suitability for installation of cork tiles 1.4. Suitable <i>adhesives</i> , trims and accessories are selected 1.5. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 1.6. Sequence of work is planned to correctly identify the starting point and to ensure lay out and fixing is in logical order
2. Set out materials	2.1. Cork tiles to be installed are checked against order 2.2. Cork tiles are acclimatised according to manufacturer recommendation 2.3. Materials for fixing are organised and used in accordance with relevant safety management requirements 2.4. Working lines and starting point are established
3. Lay floor covering	3.1. Instructions and sequence for laying and fixing are followed 3.2. Tiles are laid out to meet specification requirements and to minimise waste 3.3. Tile grains and patterns are matched or contrasted as appropriate 3.4. Tiles are accurately and clearly marked for cutting 3.5. Tiles are cut to required shape with minimum waste of materials and laid 3.6. Completed installation is checked for flaws in installation and materials and faults rectified
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately

ELEMENT	PERFORMANCE CRITERIA
	4.4. Workplace documentation/reporting is completed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing cork tiles to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of cork tiles, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing cork tiles
- organisational and site standards, requirements, policies and procedures for the installation of cork tiles
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

maintenance

- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of:
 - cork tiles
 - cork tile installation adhesives
- types and uses of tile installation tools and equipment
- workplace safety system requirements related to cork tile laying
- characteristics and requirements of sub-floor preparation
- work flow in relation to the cork tile floor covering operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing cork tiles
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of one installation using either a wet or dry method including basic set-out and installation
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to installing cork tiles
 - specifications and work instructions

EVIDENCE GUIDE**Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the installation of patterned parquetry are verified and complied with</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.4. Sub-floor condition is assessed for suitability for installation of patterned parquetry flooring consistent with Australian Standards, industry standards and manufacturer recommendations</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Skirting boards or cover trims are removed or undercut if required and stored for refitting</p> <p>1.7. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Set out patterned parquetry flooring	<p>2.1. Patterned parquetry flooring are acclimatised according to manufacturer recommendations</p> <p>2.2. Patterned parquetry flooring for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.3. Adhesives and edge strips are prepared for use as required</p> <p>2.4. Area to be covered is measured, working lines and starting point are established</p>
3. Layout and cut parquetry patterns	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Appropriate underlay is laid according to manufacturer recommendations</p> <p>3.3. Patterned parquetry flooring is laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins</p> <p>3.4. The aesthetics of the materials are maximised including matching grains and colours</p> <p>3.5. Cutting jigs for pattern components are measured and set for repetitive use</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6. Parquetry blocks are set in appropriate jig and cut
4. Install patterned parquetry	<p>4.1. Adhesives and edge strips/accessories are prepared for use as required</p> <p>4.2. Adhesives are used following workplace procedures</p> <p>4.3. Fixing methods and equipment are used following manufacturer recommendations</p> <p>4.4. Parquetry is installed and fixed to produce required pattern</p> <p>4.5. Appropriate field and perimeter expansion joints are allowed</p> <p>4.6. Skirting boards or cover trims are fitted/refitted and finished</p> <p>4.7. Finished job is inspected and any imperfections are rectified following workplace procedures</p>
5. Complete housekeeping	<p>5.1. Off-cuts or leftover materials are collected and removed following workplace procedures</p> <p>5.2. Tools and equipment are cleaned, maintained and stored</p> <p>5.3. Work area is cleaned and waste material is removed and disposed of safely</p> <p>5.4. Documentation/reporting is completed following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate patterned parquetry installation problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - parquetry installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of patterned parquetry including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installation of patterned parquetry
- organisational and site standards, requirements, policies and procedures for the installation of patterned parquetry
- environmental protection requirements
- types, characteristics, uses and limitations of patterned parquetry flooring

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling, including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Instructions

- Workplace procedures relating to the use and operation of tools and equipment
- Workplace instructions, instructions, including job sheets, plans, drawings and designs
- Workplace procedures relating to reporting

RANGE STATEMENT	
	and communications <ul style="list-style-type: none"> • Manufacturer instructions for the use of equipment and materials
Sub-floor assessment	<ul style="list-style-type: none"> • is to include testing for moisture content, expansion, rot, structural strength, smoothness and plane
Tools and equipment	<ul style="list-style-type: none"> • are to include drop saw, hand saw, radial arm saw, router, stringline, chalk and chalk line, square, notched trowel, moisture meter, straight edge and template • may include plunge saw, jig saw, bench saw, band saw, circular saw, planer and laser level
Materials	<ul style="list-style-type: none"> • may include underlays, adhesives, timber fillers, skirting boards, cover trims and accessories
Adhesives	<ul style="list-style-type: none"> • may include PVAs, epoxys and polyurethane elastamercs

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the installation of mosaic parquetry are verified and complied with</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.4. Sub-floor condition is assessed for suitability for installation of mosaic parquetry flooring consistent with Australian Standards, industry standards and manufacturer recommendations</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Skirting boards or cover trims are removed or undercut if required and stored for refitting</p> <p>1.7. Sequence of work is planned, including start point, to ensure efficiency and quality of installation</p>
2. Set out mosaic parquetry flooring	<p>2.1. Mosaic parquetry flooring are acclimatised according to manufacturer recommendations</p> <p>2.2. Mosaic parquetry flooring for fixing are organised and used in accordance with relevant safety management requirements</p> <p>2.3. Adhesives and edge strips are prepared for use as required</p> <p>2.4. Area to be covered is measured, working lines and starting point are established</p>
3. Layout and cut parquetry mosaic fingers	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Appropriate underlay is laid according to manufacturers' recommendations</p> <p>3.3. Mosaic parquetry flooring is laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins</p> <p>3.4. The aesthetics of the materials are maximised including matching grains and colours</p> <p>3.5. Parquetry mosaic fingers are accurately and clearly marked for cutting</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6. Parquetry mosaic fingers are cut where required to provide appropriate size and shape ensuring minimum waste
4. Install mosaic parquetry	4.1. Adhesives and edge strips/accessories are prepared for use as required 4.2. Adhesives are used following workplace procedures 4.3. Fixing methods and equipment are used following manufacturer recommendations 4.4. Parquetry is installed and fixed to produce required pattern 4.5. Appropriate field and perimeter expansion joints are allowed 4.6. Skirting boards or cover trims are fitted/re-fitted and finished 4.7. Finished job is inspected and any imperfections are rectified following workplace procedures
5. Complete housekeeping	5.1. Off-cuts or leftover materials are collected and removed following workplace procedures 5.2. Tools and equipment are cleaned, maintained and stored 5.3. Work area is cleaned and waste material is removed and disposed of safely 5.4. Documentation/reporting is completed following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate mosaic parquetry installation problems, avoid re-working and avoid wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - parquetry installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of mosaic parquetry including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installation of mosaic parquetry
- organisational and site standards, requirements, policies and procedures for the installation of mosaic parquetry
- types, characteristics, uses and limitations of mosaic parquetry flooring
- types and uses of tools and equipment used during the installation of mosaic parquetry flooring
- types, uses and limitations of adhesives

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing mosaic parquetry flooring
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Establish and maintain appropriate ventilation
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - minimise the risk of injury to self and others
 - achieve a final finish in accordance with Australian Standards and accepted industry practices
- Complete a minimum of two mosaic parquetry floors, which are to include at least:
 - one personally designed pattern
 - one mosaic floor, herringbone pattern with a two mosaic border
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - a realistic mosaic parquetry installation requirement

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to the installation of mosaic parquetry • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned to identify the starting point and to ensure efficiency and quality of the work</p>
2. Set out materials	<p>2.1. Timber flooring to be installed is checked against order</p> <p>2.2. Timber flooring is acclimatised according to manufacturer recommendations</p> <p>2.3. Skirting boards or cover trims are removed or undercut if required and stored for refitting or sent for machining</p> <p>2.4. Timber flooring for fixing is organised and used in accordance with relevant safety management requirements</p> <p>2.5. Adhesives and edge strips are prepared for use as required</p> <p>2.6. Area to be covered is measured, working lines and starting point are established</p>
3. Cut timber flooring	<p>3.1. Instructions and sequence for laying and fixing are followed</p> <p>3.2. Underfloor pads are laid according to manufacturers' recommendations</p> <p>3.3. Timber flooring is laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>3.4. The aesthetics of the materials are maximised</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>including matching grains and colours</p> <p>3.5. Timber flooring is accurately and clearly marked for cutting</p> <p>3.6. Timber flooring is cut to length and size for final laying to provide appropriate size and shape ensuring minimum waste</p> <p>3.7. Materials for fixing are organised and used in accordance with relevant safety management requirements</p>
4. Lay flooring	<p>4.1. Instructions and sequence for laying and fixing are followed</p> <p>4.2. Materials for fixing are organised and used in accordance with relevant safety management requirements</p> <p>4.3. Fixing methods and equipment are used following manufacturer recommendations</p> <p>4.4. Appropriate field and perimeter expansion joints are allowed</p> <p>4.5. Skirting boards or cover trims are fitted/re-fitted and finished</p> <p>4.6. Finished job is inspected and any imperfections are rectified following workplace procedures</p>
5. Complete housekeeping	<p>5.1. Unused materials are stored or recycled as required</p> <p>5.2. Tools and equipment are cleaned and stored appropriately</p> <p>5.3. Work area is cleaned and rubbish is disposed of appropriately</p> <p>5.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing sprung timber flooring to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - parquetry installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing sprung timber flooring including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installation of sprung timber sports flooring
- organisational and site standards, requirements, policies and procedures for the installation of sprung timber sports flooring
- environmental protection requirements
- types and uses of tools and equipment used during the installation of sprung timber sports flooring
- workplace safety system requirements relevant to the installation of sprung timber

REQUIRED SKILLS AND KNOWLEDGE

sports flooring

- work flow in relation to the laying of sprung timber sports flooring
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information
- types, characteristics, uses and limitations of:
 - sprung timber sports flooring
 - installation adhesives
 - underfloor pads
- basic wood working techniques relevant to the installation of sprung timber sports flooring
- characteristics and requirements of sub floor preparation
- work flow in relation to flooring installation operations.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing sprung timber flooring
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of one type of sprung timber sports floor installation
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - a realistic sprung timber floor installation requirement
 - workplace location or simulated workplace
 - materials and equipment relevant to installing sprung timber flooring
 - specifications and work instructions

EVIDENCE GUIDE**Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational requirements</i> relevant to the installation of <i>strip timber flooring onto battens</i> are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for suitability for installation of strip timber flooring consistent with Australian Standards, industry standards and manufacturer recommendations</p> <p>1.4. Suitable moisture membrane, fixings, <i>adhesives</i>, trims and accessories are selected as required.</p> <p>1.5. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Lay moisture membrane	<p>2.1. Instructions and sequence for laying and fixing are followed</p> <p>2.2. Skirting boards or cover trims are removed or undercut if required and stored for refitting or sent for machining</p> <p>2.3. Moisture proof membrane is fixed following manufacturer recommendations and Australian Standards</p>
3. Cut and fix timber battens	<p>3.1. Timber flooring to be installed is checked against order</p> <p>3.2. Timber flooring is acclimatised according to manufacturer recommendations</p> <p>3.3. Area to be covered is measured, working lines and starting point are established</p> <p>3.4. <i>Timber battens</i> for fixing are organised and used in accordance with relevant safety management requirements</p> <p>3.5. Timber battens are accurately and clearly marked for cutting</p> <p>3.6. Timber battens are cut to length and size for final laying to provide appropriate size and shape ensuring minimum waste</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.7. Fixings are prepared for use as required</p> <p>3.8. Timber battens are fixed using methods and equipment that follows manufacturer recommendations</p>
4. Cut and fix timber flooring	<p>4.1. Instructions and sequence for laying and fixing timber flooring are followed</p> <p>4.2. Work lines and starting point are established</p> <p>4.3. Timber flooring is laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>4.4. The aesthetics of the materials are maximised where appropriate, matching grains and colours</p> <p>4.5. Fixing methods and equipment are used following manufacturer recommendations</p> <p>4.6. Timber flooring is cut to length and size for final laying to provide appropriate size and shape ensuring minimum waste</p>
5. Lay flooring	<p>5.1. Materials for fixing are organised and used in accordance with relevant safety management requirements</p> <p>5.2. Fixing methods and equipment are used following manufacturer recommendations and Australian Standards</p> <p>5.3. Appropriate field and perimeter expansion joints are allowed</p> <p>5.4. Skirting boards or cover trims are fitted and finished</p> <p>5.5. Finished job is inspected and any imperfections are rectified following workplace procedures</p>
6. Complete housekeeping	<p>6.1. Unused materials are stored or recycled as required</p> <p>6.2. Tools and equipment are cleaned and stored appropriately</p> <p>6.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>6.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing strip timber flooring onto battens to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - parquetry installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installing strip timber flooring onto battens, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installation of strip timber flooring
- organisational and site standards, requirements, policies and procedures for the installation of strip timber flooring
- environmental protection requirements
- types, characteristics, uses and limitations of:
 - strip timber flooring installed onto battens
 - installation adhesives

REQUIRED SKILLS AND KNOWLEDGE

- timber battens
- types and uses of tools and equipment used during the installation of strip timber flooring
- basic wood working techniques relevant to the installation of timber strip flooring installed onto to battens
- workplace safety system requirements relevant to the installation of strip timber flooring installed onto battens
- work flow in relation to the laying of strip timber flooring onto battens operations
- characteristics and requirements of sub-floor preparation
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing strip timber flooring on battens
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of one installation of strip timber flooring onto battens
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - a realistic strip timber floor installation requirement
 - workplace location or simulated workplace
 - materials and equipment relevant to installing strip timber flooring

Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling, including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Strip timber flooring onto battens	<ul style="list-style-type: none"> includes strip tongue and groove floating floors and manufactured engineered flooring used for indoor sporting applications
Instructions	<ul style="list-style-type: none"> Workplace procedures relating to the use and operation of tools and equipment

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Workplace instructions, instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Adhesives	<ul style="list-style-type: none"> • are to include PVA, polyurethane elastomeric
Tools and equipment	<ul style="list-style-type: none"> • are to include drop saw, jig saw, hand saw, undercut saw, hammer, bar scriber and utility knife • may include circular saw, bench saw, straight edge, cramps, clamps, staple gun, secret nailer, roller, sanding machines (drum, belt and rotary) and edger
Materials	<ul style="list-style-type: none"> • may include but not be limited to flooring materials, timber battens, edge strips, tapes, adhesives, metal fixings, ventilated skirtings
Timber battens	<ul style="list-style-type: none"> • may include timber battens with a density less than or equal to 600Kg/m³, greater than 600Kg/m³

LMFFL3511A Install strip timber flooring onto plywood

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to install tongue and groove strip timber flooring onto plywood which may be over joists, concrete or a sub-floor to either raise a floor or correct the level of a floor. The activity may include installing the plywood.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to an on site environment and involves application of skills and knowledge at the trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the installation of strip timber flooring onto plywood are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Sub-floor condition is assessed for suitability for installation of strip timber flooring consistent with Australian Standards, industry standards and manufacturer recommendations</p> <p>1.4. Suitable moisture membrane, fixings, adhesives, trims and accessories are selected as required.</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Lay moisture membrane	<p>2.1. Instructions and sequence for laying and fixing are followed</p> <p>2.2. Skirting boards or cover trims are removed or undercut if required and stored for refitting or sent for machining</p> <p>2.3. Moisture proof membrane is fixed following manufacturer recommendations and Australian Standards</p>
3. Cut and fix plywood underlay	<p>3.1. Timber flooring to be installed is checked against order</p> <p>3.2. Timber flooring is acclimatised according to manufacturer recommendations</p> <p>3.3. Area to be covered is measured, working lines and starting point are established</p> <p>3.4. Plywood underlay for fixing is organised and used in accordance with relevant safety management requirements</p> <p>3.5. Plywood underlay is accurately and clearly marked for cutting</p> <p>3.6. Plywood underlay is cut to length and size for final laying to provide appropriate size and shape ensuring minimum waste</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.7. Fixings are prepared for use as required</p> <p>3.8. Plywood underlay is fixed using methods and equipment that follows manufacturers' recommendations</p>
4. Cut and fix timber flooring	<p>4.1. Instructions and sequence for laying and fixing timber flooring are followed</p> <p>4.2. Work lines and starting point are established</p> <p>4.3. Timber flooring is laid out to meet directional sequence, pattern match, specification requirements and to minimise waste and joins as appropriate</p> <p>4.4. The aesthetics of the materials are maximised where appropriate, matching grains and colours</p> <p>4.5. Fixing methods and equipment are used following manufacturer recommendations</p> <p>4.6. Timber flooring is cut to length and size for final laying to provide appropriate size and shape ensuring minimum waste</p>
5. Lay flooring	<p>5.1. Materials for fixing are organised and used in accordance with relevant safety management requirements</p> <p>5.2. Fixing methods and equipment are used following manufacturer recommendations and Australian Standards</p> <p>5.3. Appropriate field and perimeter expansion joints are allowed</p> <p>5.4. Skirting boards or cover trims are fitted and finished</p> <p>5.5. Finished job is inspected and any imperfections are rectified following workplace procedures</p>
6. Complete housekeeping	<p>6.1. Unused materials are stored or recycled as required</p> <p>6.2. Tools and equipment are cleaned and stored appropriately</p> <p>6.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>6.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing strip timber flooring onto plywood underlay to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - strip timber flooring installation techniques onto plywood underlay
- seek learning opportunities
- use the limited workplace technology related to installing strip timber flooring onto plywood underlay, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installation of strip timber flooring
- organisational and site standards, requirements, policies and procedures for the installation of strip timber flooring on plywood underlay
- type, characteristics, uses and limitations of:
 - strip timber flooring installed onto plywood underlay
 - installation adhesives
 - plywood underlay

REQUIRED SKILLS AND KNOWLEDGE

- types and uses of tools and equipment used during the installation of strip timber flooring on the plywood underlay
- basic wood working techniques relevant to the installation of timber strip flooring installed onto to plywood underlay
- workplace safety system requirements relevant to the installation of strip timber flooring installed onto plywood underlay
- work flow in relation to the laying of strip timber flooring onto plywood underlay operations
- characteristics and requirements of sub-floor preparation
- environmental protection requirements
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing strip timber flooring on plywood
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Complete a minimum of one installation of strip timber flooring onto plywood underlay fixed to a concrete sub-floor
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - a realistic strip timber floor installation requirement
 - workplace location or simulated workplace
 - materials and equipment relevant to installing

EVIDENCE GUIDE	
	<p>strip timber flooring</p> <ul style="list-style-type: none"> • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the installing repairing timber flooring are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Work instructions or customer feedback are used to identify required work</p> <p>1.4. Damaged floor is inspected to determine probable causes of damage or faults and assist in the repair planning process</p> <p>1.5. Damage assessment and work plan are used to select required materials</p> <p>1.6. Timber materials are matched to existing materials</p> <p>1.7. Quantities of replacement flooring and materials required are confirmed from the work plan</p> <p>1.8. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.9. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p> <p>1.10. Sequence of work is planned to identify the starting point and to ensure efficiency and quality of the work</p>
2. Set out materials	<p>2.1. Timber flooring to be installed is checked against order</p> <p>2.2. Timber flooring to be installed is acclimatised according to manufacturer recommendations</p> <p>2.3. Area to be repaired is measured and starting points are marked</p> <p>2.4. Damaged sections of floor are removed and/or prepared for repair following workplace procedures</p> <p>2.5. Suitable adhesives/fasteners, fillers and/or stains are selected following workplace procedures or work instructions</p>
3. Repair flooring	<p>3.1. Replacement flooring materials are cut to provide appropriate alignment of joints</p> <p>3.2. Adhesives/fasteners are used following workplace procedures</p> <p>3.3. Replacement flooring materials are installed to</p>

ELEMENT	PERFORMANCE CRITERIA
	produce required finish 3.4. Damaged areas are filled and/or re-stained to complete repair following workplace procedures
4. Complete housekeeping	4.1. Off-cuts or leftover materials are collected and removed following workplace procedures 4.2. Tools and equipment are cleaned, maintained and stored 4.3. Work area is cleaned and waste material is removed and disposed of safely 4.4. Documentation/reporting is completed following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems repairing timber flooring to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - parquetry installation techniques
- seek learning opportunities
- use the limited workplace technology related to the repairing timber, parquetry and cork flooring, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to repairing timber flooring
- organisational and site standards, requirements, policies and procedures for the repairing of timber flooring
- environmental protection requirements
- types, characteristics, uses and limitations of timber floors
- types and uses of tools and equipment used during the installation of timber flooring

REQUIRED SKILLS AND KNOWLEDGE

- workplace safety system requirements relevant to the installation of timber flooring
- work flow in relation to the laying of timber flooring
- causes of imperfections and damage to timber flooring
- characteristics of timber and concrete sub-floors
- requirements of sub-floor ventilation
- techniques and requirements for conducting moisture testing
- workplace system requirements relating to inspecting and repairing timber flooring materials
- work flow in relation to the repair of timber flooring materials
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for repairing timber flooring
 - Interpret work order and locate and apply relevant information
 - Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
 - Apply ventilation standards
 - Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
 - Complete a minimum of two types of repair involving removing and replacing:
 - strip timber flooring
 - parquetry flooring and/or
 - floating flooring
 - Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - a realistic sprung timber floor installation requirement

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to repairing timber floors • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Repair timber flooring	<ul style="list-style-type: none"> includes repairs required to remove existing defective floor components which may have cracked, split or have been defaced or damaged and replace the defective component with a matching piece. It includes timber

RANGE STATEMENT	
	floors, timber parquetry, floating floors and cork floor coverings.
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Inspected	<ul style="list-style-type: none"> • To determine probable causes of damage or fault so that the correct remedial action can be undertaken and prevent further damage to repaired floor. This includes checking sub-floor ventilation, moisture, rot, insects, structural faults and/or fire damage. Following inspection damage is assessed and a repair plan is formulated. Cause of damage is reported to the client in accordance with Australian Standards.
Tools and equipment	<ul style="list-style-type: none"> • are to include drop saw, jig saw, hand saw, nail gun, moisture meter, glue gun, belt sander, drum sander, edge sander, rotary sander, hammer and chisels, planer, circular saw, combination saw
Materials	<ul style="list-style-type: none"> • may include but not be limited to flooring materials, underlay, edge strips, tapes, adhesives, underfloor pads and ventilated skirtings
Matched	<ul style="list-style-type: none"> • refers to the matching of timber product in terms of grade, colour and texture

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare maintenance plan	<p>1.1. Applicable legislative, OH&S and organisational requirements relevant to flooring maintenance requirements are verified and complied with</p> <p>1.2. Instructions or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Maintenance requirements for timber, laminate and engineered flooring are identified from relevant information sources</p> <p>1.4. Maintenance costs are identified and quantified</p> <p>1.5. Maintenance requirements are checked against warranty, insurance agreements and indemnity provisions</p> <p>1.6. Maintenance plan is developed to promote and sustain performance and production systems in line with enterprise requirements</p> <p>1.7. Effective workplace communication strategies are established with regard to maintenance plan, environmental and OHS policies, and enterprise requirements</p>
2. Implement maintenance plan	<p>2.1. Tools, equipment and materials are selected and checked prior to use</p> <p>2.2. Resource and supply requirements are identified, secured and included in enterprise budgets and operational considerations</p> <p>2.3. Prepared maintenance schedules and procedures are effectively communicated to customers, staff, contractors and suppliers to minimise negative impacts on maintenance systems and costs</p> <p>2.4. Maintenance plans and work sequences are implemented and scheduled to minimise disruption to customers operations</p> <p>2.5. Potential risks/hazards are assessed with regard to staff and supply problems, and contingency plans prepared accordingly</p> <p>2.6. Timber laminate and engineered flooring are maintained to manufacturer's specifications, OHS and enterprise requirements</p>
3. Monitor maintenance plan	<p>3.1. Maintenance activities and performance are monitored against maintenance plan for efficiency and effectiveness</p> <p>3.2. Workplace hazards and environmental implications</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>associated with maintenance procedures are monitored and controlled in line with OHS and customers requirements</p> <p>3.3. Costs are monitored and controlled within maintenance system budget requirements</p> <p>3.4. Relevant information with regard to the maintenance plan is documented in accordance with customer requirements</p> <p>3.5. Timber, laminate and engineered flooring are maintained in clean and safe operational condition</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, maintenance plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate coating problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the planning and implementing maintenance systems and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate coating material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of maintenance techniques
- seek learning opportunities
- use the workplace technology related to the maintenance activities and performance including tools, equipment, calculators and measuring devices
- interpret the technical specifications of materials and analyse their properties to optimise their use

Required knowledge

- State or Territory OH&S legislation, regulations, standards and codes of practice relevant to the preparation and implementation of maintenance systems
- organisational and site standards, requirements, policies and procedures for the preparation and implementation of maintenance systems for timber, laminate and engineered flooring
- the methods of the preparation and implementation of maintenance systems for timber, laminate and engineered flooring
- characteristics of maintenance systems for timber, laminate and engineered

REQUIRED SKILLS AND KNOWLEDGE

flooring in relation to ventilation, moisture content of timber, timber species and reaction to change of temperature and relative humidity

- the type, characteristics, uses and limitation of maintenance systems for timber, laminate and engineered flooring including manufacturers' recommendations
- the types and uses of tools and equipment maintaining timber, laminate and engineered flooring
- workplace safety systems related to processes for maintaining timber, laminate and engineered flooring
- work flow in relation to planning and implementing maintenance systems for timber, laminate and engineered flooring.
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- mathematical techniques may be applied to estimate and calculate maintenance and repair costings within budgetary guidelines
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for applying finishes to strip timber and parquetry flooring
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Establish and maintain appropriate ventilation
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - minimise the risk of injury to self and others
 - achieve a final finish in accordance with Australian Standards and accepted industry practices
- Prepare and implement maintenance system for one
 - strip timber floor
 - parquetry flooring
 - cork flooring
 - laminate floating flooring
 - pre-finished engineered flooring
- Identify faults/problems and identify and carry out corrective action
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be

EVIDENCE GUIDE	
	<p>conducted in an off-site context</p> <ul style="list-style-type: none"> • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • a realistic maintenance requirement • materials and equipment relevant to maintaining timber, laminate and engineered flooring • specifications and work instructions for maintenance systems
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OH&S, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OH&S, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Instructions	<ul style="list-style-type: none"> workplace procedures relating to the use and operation of tools and equipment workplace instructions, including job sheets, plans, drawings and designs workplace procedures relating to reporting and communications manufacturers' recommendations for the use of equipment and materials
Maintenance requirements	<ul style="list-style-type: none"> may include those related to wear, corrosion, design problems, equipment modifications, incorrect use and accidents, acts of nature
Information sources	<ul style="list-style-type: none"> may include operational diaries, manufactures in-service updates, operator manuals, environmental conditions, staff comment and/or personal testing, observation of

RANGE STATEMENT	
	structures, property improvement groups, relevant government departments, other enterprise operators, contractors and service representatives
Maintenance plan	<ul style="list-style-type: none"> is to cover relevant aspects of maintenance activities and schedules, maintenance costs and budget details, staff, resources and supply requirements, roles and responsibilities, contingency plan for staff and supply problems, reporting requirements, hazard and risk control measures, OHS procedures, personal protective clothing and equipment requirements, and environmental impact control measures
Enterprise requirements.	<ul style="list-style-type: none"> may include Standard Operating Procedures (SOP), industry standards, production schedules, Material Safety Data Sheets (MSDS), legislative and licensing requirements, work notes, product labels, manufacturers specifications, operator's manuals, enterprise policies and procedures (including waste disposal, recycling and re-use guidelines), and OHS procedures
Environmental policies	<ul style="list-style-type: none"> may include environmental impacts resulting from emissions, the unsafe use and disposal of maintenance debris (chemical residues), and hazardous substances (cleaning solvents). It may also include dust problems and unsafe cleaning and servicing activities
Tools and equipment	<ul style="list-style-type: none"> may include brooms, brushes, vacuum cleaner, mops, mop buckets, squeeze mops, dust mops, scissor mops, buffing pads, paint brushes, polimate and wool applicators, rotary brushes, scouring pads, paint rollers and roller tray
Work sequence	<ul style="list-style-type: none"> is to include preparation, inspection, coating application(s) and intermediate steps, finalisation and acceptance inspection
Risks/hazards	<ul style="list-style-type: none"> may include dust, mechanical vibration, hazardous substances (cleaning solvents), hazardous atmosphere, the presence of bystanders, adverse weather conditions, electricity, powerlines, mechanical malfunctions and other machinery including

RANGE STATEMENT	
	hydraulics and exposed moving parts
Resource and supply	<ul style="list-style-type: none"> may include metallised polish, wax emulations, furniture protection felt pads, barrier mats, window coverings, wood floor cleaner, antistatic mop, vacuum cleaner, damp mop
Relevant information	<ul style="list-style-type: none"> may include maintenance performance, costs, problems, priorities, solutions, schedules, and completed work

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to fine sanding timber flooring are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Timber flooring is inspected for contamination, moisture content and suitability for fine sanding operations and any pre-sanding tasks are completed</p> <p>1.4. Timber flooring condition is assessed and the extent of fine sanding required to meet job specifications is confirmed</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. The job site is isolated and/or encapsulated to contain dust fallout from sanding operation</p> <p>1.7. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Conduct finish sanding operations	<p>2.1. Sanding equipment is set up in accordance with manufacturer instructions and operating procedures</p> <p>2.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>2.3. Equipment settings and adjustments are made and checked</p> <p>2.4. Sanding belts or papers are selected</p> <p>2.5. Trial runs are conducted to check machine operations and quality of finished work</p> <p>2.6. Sanding belts or papers are attached, routinely checked and changed as required</p> <p>2.7. Sanding is completed systematically and effectively within the minimum required timeframe</p> <p>2.8. Routine lubrication and adjustments to the equipment are completed as required</p> <p>2.9. Finished timber flooring is cleaned, inspected and any imperfections are rectified following workplace procedures</p>
3. Conduct edge sanding operations	<p>3.1. Edge sanding equipment is set up in accordance with manufacturer instructions and operating procedures</p> <p>3.2. Emergency stops, gauges, guards and controls are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>identified and checked</p> <p>3.3. Equipment settings and adjustments are made and checked</p> <p>3.4. Sanding papers are selected</p> <p>3.5. Trial runs are conducted to check machine operations and quality of finished work</p> <p>3.6. Sanding papers are attached, routinely checked and changed as required</p> <p>3.7. Edge sanding is completed systematically and effectively within the minimum required timeframe</p> <p>3.8. Routine lubrication and adjustments to the equipment are completed as required</p> <p>3.9. Finished timber flooring is cleaned, inspected and any imperfections are rectified following workplace procedures</p>
<p>4. Conduct <i>fine sanding</i> operations</p>	<p>4.1. Fine sanding equipment is set up in accordance with manufacturer instructions and operating procedures</p> <p>4.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>4.3. Equipment settings and adjustments are made and checked</p> <p>4.4. Sanding papers are selected</p> <p>4.5. Trial runs are conducted to check machine operations and quality of finished work</p> <p>4.6. Sanding papers are attached, routinely checked and changed as required</p> <p>4.7. Fine sanding is completed systematically and effectively within the minimum required timeframe</p> <p>4.8. Finished timber flooring is cleaned, inspected and any imperfections are rectified following workplace procedures</p>
<p>5. Complete housekeeping</p>	<p>5.1. Unused materials are stored or recycled as required</p> <p>5.2. Tools and equipment are cleaned and stored appropriately</p> <p>5.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>5.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems fine sanding timber floors to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the fine sanding of timber floors, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to moisture suppressants and barrier systems fine sanding timber flooring
- organisational and site standards, requirements, policies and procedures for fine sand timber flooring
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

- maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- characteristics and requirements of timber flooring fine sanding
- type, characteristics, uses and limitations of fine sanding timber flooring
- types and uses of relevant tools and equipment used to conduct fine sanding operations
- workplace safety system requirements related to fine sanding timber flooring.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for fine sanding of timber floors
- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Prepare three different types of timber floors from the following list:
 - strip
 - parquetry
 - cork
 - floating floor
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to fine sanding of timber floors

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Fine sanding

- includes fine sanding existing timber floors either after a coarse sand, or where only minor rectification of scratches or wear and tear has occurred or between coats

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Pre-sanding tasks	<ul style="list-style-type: none"> • may include isolating and/or encapsulating the job site, nail punching, filling, scraping, sweeping, vacuuming, cleaning and removal of all foreign objects such as nails, tacks, staples, etc
Tools and equipment	<ul style="list-style-type: none"> • are to include hammers, scrapers, nail punches, brooms and vacuums
Materials	<ul style="list-style-type: none"> • are to include but are not limited to sanding belts, sanding paper, discs, oil and lubricants and cleaning materials
Finish sanding	<ul style="list-style-type: none"> • is to include split drum and belt floor sanding machines using 60 - 100 grit papers
Sanding equipment	<ul style="list-style-type: none"> • is to include drum/belt sander, random orbital, rotary and edger sanders and may include a finishing machine
Edge sanding	<ul style="list-style-type: none"> • is to include edge sanding machines both rotary and orbital using the full range of grit papers depending on the general floor sanding process in train
Fine sanding	<ul style="list-style-type: none"> • is to include rotary and orbital floor sanding machines using 100 - 200 grit paper

3. Conduct fine	3.1. Rotary/orbital sanding equipment is set up in

ELEMENT	PERFORMANCE CRITERIA
<i>sanding</i> operations	<p>accordance with manufacturer instructions and operating procedures</p> <p>3.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>3.3. Equipment settings and adjustments are made and checked</p> <p>3.4. Sanding papers are selected</p> <p>3.5. Trial runs are conducted to check machine operations and quality of finished work</p> <p>3.6. Sanding papers are attached, routinely checked and changed as required</p> <p>3.7. Cork sanding is completed systematically and effectively within the minimum required timeframe</p> <p>3.8. Fine sanded cork flooring is cleaned, inspected and any imperfections are rectified following workplace procedures</p>
4. Conduct <i>edge sanding</i> operations	<p>4.1. Edge sanding equipment is set up in accordance with manufacturer instructions and operating procedures</p> <p>4.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>4.3. Equipment settings and adjustments are made and checked</p> <p>4.4. Sanding papers are selected</p> <p>4.5. Trial runs are conducted to check machine operations and quality of finished work</p> <p>4.6. Sanding papers are attached, routinely checked and changed as required</p> <p>4.7. The edge and difficult to get to areas are sanded and completed systematically to blend into the body of the sanded cork floor.</p> <p>4.8. Routine lubrication and adjustments to the equipment are completed as required</p> <p>4.9. Finished cork flooring is cleaned, inspected and any imperfections are rectified following workplace procedures</p>
5. Complete housekeeping	<p>5.1. Unused materials are stored or recycled as required</p> <p>5.2. Tools and equipment are cleaned and stored appropriately</p> <p>5.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>5.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems sanding cork floors to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the sanding of cork floors including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to moisture suppressants and barrier systems sanding cork flooring
- organisational and site standards, requirements, policies and procedures for sanding cork flooring
- characteristics of materials, products and defects
- set up and operation of sanding equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and

REQUIRED SKILLS AND KNOWLEDGE

information

- appropriate mathematical procedures for estimation and measurement
- characteristics and requirements of sanding cork flooring
- type, characteristics, uses and limitations of sanding cork flooring
- types and uses of relevant tools and equipment used to conduct fine sanding operations
- workplace safety system requirements related to sanding cork flooring
- types of tools and equipment and procedures for their safe use, operation and maintenance
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for fine sanding of cork floors
- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Sand three different types of cork floors from the following list:
 - cork tiles
 - cork planks
 - pattered cork tiles (bevelled edge)
 - stained cork tiles
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to sanding of cork floors

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Sanding

- includes sanding new or existing cork floors either after a finish sand, or where only minor rectification of scratches or wear and tear has occurred or between coats

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Pre-sanding tasks	<ul style="list-style-type: none"> • may include isolating and/or encapsulating the job site, nail punching, filling, scraping, sweeping, vacuuming, cleaning and removal of all foreign objects such as nails, tacks, staples, etc
Tools and equipment	<ul style="list-style-type: none"> • are to include hammers, scrapers, nail punches, brooms and vacuums
Materials	<ul style="list-style-type: none"> • are to include but are not limited to sanding belts, sanding paper, discs, oil and lubricants and cleaning materials
Finish sanding	<ul style="list-style-type: none"> • is to include split drum and belt floor sanding machines using 60 - 100 grit papers
Finishing sanding equipment	<ul style="list-style-type: none"> • is to include drum/belt sander, random orbital, rotary and edger sanders and may include a finishing machine
Fine sanding	<ul style="list-style-type: none"> • is to include rotary and orbital floor sanding machines using 100 - 200 grit paper
Edge sanding	<ul style="list-style-type: none"> • is to include edge sanding machines both rotary and orbital using the full range of grit papers depending on the general floor sanding process in train

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to course, finish and fine sand and fill parquetry floors in preparation to apply coating or recoat the flooring. This process may involve the use of a split drum/belt floor sander, rotary or orbital sanding machines and an edge sanding machine.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to an on site environment and involves application of skills and knowledge at a trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to <i>coarse, finish and fine sanding and filling</i> parquetry flooring are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Parquetry flooring is inspected for contamination, moisture content and suitability for coarse, finish and fine sanding operations and any <i>pre-sanding tasks</i> are completed</p> <p>1.4. Parquetry flooring condition is assessed and the extent of coarse, finish and fine sanding and filling required to meet job specifications is confirmed</p> <p>1.5. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. The job site is isolated and/or encapsulated to contain dust fallout from sanding operation</p> <p>1.7. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Conduct coarse sanding operations	<p>2.1. <i>Sanding equipment</i> is set up in accordance with manufacturer instructions and operating procedures</p> <p>2.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>2.3. Equipment settings and adjustments are made and checked</p> <p>2.4. Sanding belts or papers are selected</p> <p>2.5. Trial runs are conducted to check machine operations and quality of finished work</p> <p>2.6. Sanding belts or papers are attached, routinely checked and changed as required</p> <p>2.7. Coarse sanding is completed systematically and effectively with the grain, against the grain and across the grain within the minimum required timeframe</p> <p>2.8. Routine lubrication and adjustments to the equipment are completed as required</p> <p>2.9. Coarse sanded parquetry flooring is cleaned, inspected and any imperfections are rectified following workplace procedures</p>

ELEMENT	PERFORMANCE CRITERIA
3. Conduct <i>edge sanding</i> operations	<p>3.1. Edge sanding equipment is set up in accordance with manufacturer instructions and operating procedures</p> <p>3.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>3.3. Equipment settings and adjustments are made and checked</p> <p>3.4. Sanding papers are selected</p> <p>3.5. Trial runs are conducted to check machine operations and quality of finished work</p> <p>3.6. Sanding papers are attached, routinely checked and changed as required</p> <p>3.7. Edge sanding is completed systematically and effectively within the minimum required timeframe</p> <p>3.8. Routine lubrication and adjustments to the equipment are completed as required</p> <p>3.9. Edge sanded parquetry flooring is cleaned, inspected and any imperfections are rectified following workplace procedures</p>
4. Conduct <i>finish sanding</i> operations	<p>4.1. Finish sanding equipment is set up in accordance with manufacturer instructions and operating procedures</p> <p>4.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>4.3. Equipment settings and adjustments are made and checked</p> <p>4.4. Sanding papers are selected</p> <p>4.5. Trial runs are conducted to check machine operations and quality of finished work</p> <p>4.6. Sanding papers are attached, routinely checked and changed as required</p> <p>4.7. Finish sanding of the body and perimeter of the floor is completed systematically and effectively within the minimum required timeframe</p> <p>4.8. Fine sanded parquetry flooring is cleaned, inspected and any imperfections are rectified following workplace procedures</p>
5. Conduct filling operations	<p>5.1. <i>Surface to be filled</i> is <i>inspected</i> and assessed as being ready for filling with the selected filler</p> <p>5.2. <i>Work sequence</i> is planned to ensure efficiency and quality of application</p> <p>5.3. Ventilation is checked before chemical fumes are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>released, and all OHS requirements are met including use of personal protective equipment</p> <p>5.4. Environmental protection regulations are complied with</p> <p>5.5. Filling material is prepared as per manufacturer specifications.</p> <p>5.6. Trial applications of fillers are made to check equipment operation, materials consistency, viscosity and specified colour</p> <p>5.7. Faults and or inconsistencies in colour are identified and workplace procedures for rectification and adjustment are followed</p> <p>5.8. Filling material is applied in accordance with manufacturer recommendations</p> <p>5.9. Recommended drying times are observed before fine sanding</p> <p>5.10. Sanding between coats, where required, is carried out according to manufacturer recommendations</p> <p>5.11. Finished floors are inspected and approved for suitability for further processing</p> <p>5.12. Final finish meets the requirements of the job</p>
6. Conduct fine sanding operations	<p>6.1. Fine sanding equipment is set up in accordance with manufacturer instructions and operating procedures</p> <p>6.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>6.3. Equipment settings and adjustments are made and checked</p> <p>6.4. Sanding papers are selected</p> <p>6.5. Trial runs are conducted to check machine operations and quality of finished work</p> <p>6.6. Sanding papers are attached, routinely checked and changed as required</p> <p>6.7. Fine sanding of the body and perimeter of the floor is completed systematically and effectively within the minimum required timeframe</p> <p>6.8. Fine sanded parquet flooring is cleaned, inspected and any imperfections are rectified following workplace procedures</p>
7. Complete	7.1. Unused materials are stored or recycled as required

ELEMENT	PERFORMANCE CRITERIA
housekeeping	7.2. Tools and equipment are cleaned and stored appropriately 7.3. Work area is cleaned and rubbish disposed of appropriately 7.4. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems when coarse, finish, fine sanding and filling parquetry floors to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- Seek learning opportunities
- Use the limited workplace technology related to the coarse, finish, fine sanding and filling of parquetry floors including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to fine sanding parquetry flooring
- organisational and site standards, requirements, policies and procedures for coarse, finish and fine sanding and filling parquetry flooring
- characteristics, requirements and techniques for coarse, finish, fine sanding and filling parquetry flooring
- types and uses of relevant tools and equipment used to conduct coarse, finish and

REQUIRED SKILLS AND KNOWLEDGE

- fine sanding and filling operations
- workplace safety system requirements related to coarse, finish and fine sanding and filling parquetry flooring
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for fine sanding of parquetry floors
- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Prepare two different types of parquetry floors from the following list:
 - block (mandatory) and
 - mosaic or multi-directional patterned
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to fine sanding of parquetry floors
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment

EVIDENCE GUIDE

guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Fine sanding

- includes fine sanding existing parquet floors either after a finish sand, or where only minor rectification of scratches or wear and tear has occurred or between coats

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Pre-sanding tasks	<ul style="list-style-type: none"> • may include isolating and/or encapsulating the job site, nail punching, filling, scraping, sweeping, vacuuming, cleaning and removal of all foreign objects such as nails, tacks, staples, etc
Tools and equipment	<ul style="list-style-type: none"> • are to include hammers, scrapers, nail punches, brooms and vacuums
Materials	<ul style="list-style-type: none"> • are to include but are not limited to sanding belts, sanding paper, discs, oil and lubricants and cleaning materials
Sanding equipment	<ul style="list-style-type: none"> • may include split drum or belt sander, orbital or rotary finishing sanding machine
Edge sanding	<ul style="list-style-type: none"> • is to include edge sanding machines both rotary and orbital using the full range of grit papers depending on the general floor sanding process in train
Finish sanding	<ul style="list-style-type: none"> • is to include split drum and or belt floor sanding machines using 60 - 100 grit papers
Surface inspection	<ul style="list-style-type: none"> • is to ensure that surface is free from dust and debris, moisture content is acceptable and stable and any preservatives, protective coatings or other contaminants are adequately removed
Work sequence	<ul style="list-style-type: none"> • is to include preparation, inspection, coating application(s) and intermediate steps, finalisation and acceptance inspection
Application methods	<ul style="list-style-type: none"> • may include, trowels, applicators.
Filling material	<ul style="list-style-type: none"> • fillers are to include oil based, water-based and plastic (one-pot) filler
Fine sanding equipment	<ul style="list-style-type: none"> • is to include but limited to rotary and orbital floor sanding machines using 100 - 200 grit paper

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and prepare for work requirements	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the application of finishes are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Coating material is selected with regard to durability, longevity, aesthetics, manufacturer recommendations and client expectations</p> <p>1.4. Selected coating materials are assessed as being compatible with each other, with the surface to be finished and with manufacturer recommendations</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Surface to be finished is inspected and assessed as being ready for coating</p> <p>1.7. Work sequence is planned to ensure efficiency and quality of application</p> <p>1.8. Workplace health and safety requirements, including isolation, ventilation and other personal protection needs, are observed throughout the work</p>
2. Apply finishing system	<p>2.1. Ventilation is checked before chemical fumes are released, and all OHS requirements are met including use of personal protective equipment</p> <p>2.2. Environmental protection regulations are complied with</p> <p>2.3. Coating material is applied in accordance with manufacturer recommendations</p> <p>2.4. Recommended drying times between coats are observed</p> <p>2.5. Buffing or sanding between coats, where required, is carried out according to manufacturer recommendations</p> <p>2.6. Final finish meets the requirements of the job</p>
3. Complete housekeeping	<p>3.1. Unused materials are resealed and stored</p> <p>3.2. Tools and equipment are cleaned, maintained and stored</p> <p>3.3. Work area is cleaned and waste material is removed and disposed of safely</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Barriers and signs are removed and stored 3.5. Workplace documentation/reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate cork floor finishing problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate coating material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - cork coating techniques
- seek learning opportunities
- use the workplace technology related to the application of finishes, including tools, equipment, calculators and measuring devices
- interpret the technical specifications of materials and analyse their properties to optimise their use

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the application of finishing systems
- organisational and site standards, requirements, policies and procedures for finishing and coating
- methods of floor preparation from basic sanding to finishing sanding and edging
- characteristics of timber floor finishing in relation to ventilation, moisture content

REQUIRED SKILLS AND KNOWLEDGE

- and reaction to change of temperature and relative humidity
- type, characteristics, uses and limitation of coating materials, including manufacturer recommendations
- types and uses of floor finishing tools and equipment
- workplace safety systems related to cork floor finishing processes
- work flow in relation to the application of finishes to cork floors
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- appropriate mathematical procedures for estimation and measurement
- procedures for the recording, reporting and maintenance of workplace records and information.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for applying finishes to timber, parquetry and cork floors
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including the use of personal protective equipment
- Establish and maintain appropriate ventilation
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - minimise the risk of injury to self and others
 - achieve a final finish in accordance with Australian Standards and accepted industry practices
- Complete a minimum application of two differently based coating/finishing products
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Identify faults/problems and identify and carry out corrective action

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace.
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - a realistic finishing requirement

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • materials and equipment relevant to the application of finishes • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including design variations, tolerances, process, materials, finish and quantity</p> <p>1.2. Construction and assembly sequence are planned</p> <p>1.3. Procedures are determined for checking quality at each stage of the process</p> <p>1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.5. Suitable work area is selected for the task</p> <p>1.6. Preparatory drawings/set-outs for tasks are confirmed</p> <p>1.7. Cutting list for project components is accessed and interpreted</p> <p>1.8. Materials are selected following work instructions</p> <p>1.9. Tools and equipment suitable for construction are identified and checked for safe and effective operation</p>
2. Complete construction	<p>2.1. Material is set out and prepared according to work instructions and components are marked according to workplace procedures</p> <p>2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications</p> <p>2.3. Components are manufactured, including any specified shapes, angles or curves, and checked against set-outs and job requirements</p> <p>2.4. Components are assembled using jigs and/or clamps and fastenings</p> <p>2.5. Adhesives are applied according to workplace procedures and/or manufacturers' instructions</p> <p>2.6. Joining process is undertaken according to workplace procedures</p> <p>2.7. Assembled product is checked for compliance with specifications</p> <p>2.8. Item is finished in accordance with work instructions</p>
3. Finalise operation and maintain equipment	<p>3.1. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures</p> <p>3.2. Off-cuts and unused materials are collected and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>stored for reuse or disposed of following workplace procedures</p> <p>3.3. Waste and scrap materials are dealt with following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination with site supervisor, other workers and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate construction problems, avoid reworking and avoid wastage
- use the limited workplace technology related to this construction, including tools, equipment, materials and measuring devices

Required knowledge

- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs
- workflow in relation to furniture construction
- identification of hand and/or power tools, materials, equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work instructions and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - achieve required production output and product quality
- Adapt or vary furnishing product designs
- Construct, assemble and finish at least one basic furnishing product from the list in the Range Statement
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, materials, woodworking machinery and a work area.

Method of Assessment

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be conducted in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Basic timber furnishing products may typically include but are not limited to:

- occasional and coffee tables
- jewellery boxes
- tool boxes
- CD racks
- small cabinets
- entertainment units
- timber stools and clocks

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work involves reading and interpreting the project plan, using hand and power tools, operating basic woodworking machinery, applying quality requirements and applying product finishing techniques and materials
- Competency may be demonstrated in workplaces or simulated workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture and/or furniture components or a suitably simulated environment

Tools and equipment may include:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- planes

RANGE STATEMENT	
	<ul style="list-style-type: none"> • hand saws • power saws • cordless drills/screwdrivers • power drills • fixing and joining devices • jigs • clamping devices • pincers
Machines may include:	<ul style="list-style-type: none"> • band saws • cross cut saws • rip saws • panel planers • belt sander • horizontal borers • vertical drill presses • pedestal grinders and hand wood turning lathes
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • adhesives • screws • nails • bolts • dowels • metal fasteners • steel • plastics • primers and coating materials
Checking of constructed product is to cover:	<ul style="list-style-type: none"> • squareness • alignment • wind and hardware • fittings and attachments
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting

RANGE STATEMENT	
	and communication <ul style="list-style-type: none"> Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to identify job requirements, including quality, materials, equipment, and quantities 1.2. Workplace health and safety requirements, including ventilation requirements and personal protection needs, are observed throughout the work 1.3. Material for machining is selected and inspected for quality 1.4. Machines, cutting tools and jigs are identified and checked for safe and effective operation
2. Operate machines	2.1. Safety equipment, including emergency stops, gauges, guards and controls are checked 2.2. Machine start-up procedure is carried out in accordance with manufacturers' instructions 2.3. Material is fed into machine in accordance with manufacturers' instructions, safe handling procedures and standard workplace operating procedures 2.4. Machine is operated in accordance with its designed capacity and purpose, tooling requirements and to manufacturers' recommendations 2.5. Machine operation is monitored to ensure product quality and output 2.6. Waste quantities are checked and minimised 2.7. Items that do not meet quality requirements are recycled or discarded according to workplace procedures 2.8. Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons
3. Clean up work area and maintain equipment	3.1. Material that can be reused is collected and stored 3.2. Waste and scrap are removed following workplace procedures 3.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 3.4. Unserviceable equipment is reported in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, machine operations, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- plan and organise activities, including the preparation of the worksite and the obtaining of equipment and materials to avoid any back tracking, or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- apply basic arithmetical processes
- use checking techniques to identify, avoid or solve work problems
- use the workplace technology related to machine operations, including tools, equipment and basic measuring devices

Required knowledge

- the characteristics, uses and limitations of basic woodworking machines
- general workplace quality standards and procedures
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Identify work requirements
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Operate and monitor the machines and complete the tasks identified in the Range Statement for:
 - one saw
 - one planer
 - one drill
 - one sander
- Work effectively with others

Resource Implications

Access to basic woodworking machinery as identified in the Range Statement, standard operating procedures, and unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

The unit scope is to cover a minimum of one saw, one planer, one drill and one sander and related tasks from the following list:

- cross cut saw
- docking (oversize + 20mm)
- docking (accurate to +/- 0.25mm)
- docking square (no tolerance)
- rip saw
- parallel rip (oversize by 5mm+)
- scroll band saw
- off fence ripping
- freehand ripping
- freehand curve cutting
- panel saw
- cut flat panel board (off rip fence using scribe saw)
- cut flat panel board (off cross-cut fence using scribe saw)
- surface planer (buzzer/jointer)
- machine face
- machine edge
- panel planer (thicknesser)
- parallel plane width
- parallel plane thickness
- bobbin sander
- sand concave surface
- disc sander
- sand straight surface
- sand end grain
- belt sander (linisher)
- sand flat surfaces
- vertical drill press
- drill holes to pre-determined depths vertically
- select and replace drill bits
- hinge boring
- horizontal borer (single bit)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • drill holes to pre-determined depths horizontally • select and replace drill bits
Unit context	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Material to be machined may include but is not limited to:	<ul style="list-style-type: none"> • solid timber and manufactured board
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools	1.1.Types of hand and power tools and their functions identified 1.2.Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3.Sources of power supply recognised
2. Select hand tools	2.1.Hand tools selected are consistent with needs of the job 2.2.Selected hand tools are checked for serviceability and safety and any faults reported to supervisor 2.3.Equipment is selected to hold or support material for hand tools application where applicable
3. Use hand tools	3.1.Material is located and held in position for hand tool application 3.2.Hand tools are safely and effectively used according to their intended use 3.3.Hand tools are safely located when not in immediate use
4. Select power tools	4.1.Power tools are selected consistent with needs of the job in accordance with conventional work practice 4.2.Power tools are visually checked for serviceability and safety in accordance with OH&S requirements and any faults reported to supervisor 4.3.Equipment is selected to hold or support materials for power tool application as applicable
5. Use power tools	5.1.Material is located and held in position for power tool application as applicable 5.2.Power tools are safely and effectively used in application processes 5.3.Power tools are safely located when not in use
6. Clean up work area and tools	6.1.All tools are cleaned, maintained and stored 6.2.Equipment is cleaned, maintained and stored 6.3.Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid reworking and avoid wastage
- use workplace technology related to the operation and maintenance of hand and power tools

Required knowledge

- types, characteristics, uses, limitations and maintenance requirements of hand tools commonly used in furniture production
- types, characteristics, uses, limitations and maintenance requirements of power tools commonly used in furniture production
- workplace safety requirements and OHS legislation
- workflow within the workplace

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate and apply relevant information related to hand and power tools
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Adopt and carry out correct procedures prior to and during use of the range of hand and power tools stipulated in the range statement
- Carry out operator maintenance on hand and power tools, including the grinding of:
 - chisels
 - hard plane blades or irons
 - drill bits
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Furniture making sector hand and power tools. Materials used in the manufacturing and/or installation of furnishing products.

Method of Assessment

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

EVIDENCE GUIDE

	materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hand tools for furniture making are to include, but not be limited to:

- hand planes
- chisels
- hand saws
- spokeshave
- hammer
- mallet
- marking-out tools
- files
- rasps
- scraper
- screwdrivers and hand drill

Power tools for furniture making are to include, but not be limited to:

- drop saw
- circular power saw
- planer
- drill
- jig saw
- router
- trimmer
- biscuit machine
- brad/nail and staple gun and sanders

Unit scope

Work requires individuals to demonstrate skill, accuracy and dexterity in the application of tools to perform work tasks which should include dressing materials, cutting joints, finishing surfaces, cutting straight and compound angles, jointing materials, edge trimming and the basic grinding of cutting tools

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental

RANGE STATEMENT	
	legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Fault reporting	Reporting of faults in the operation of hand and power tools may be verbal or written
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for assembly	<p>1.1. Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity</p> <p>1.2. Assembly sequence are planned</p> <p>1.3. Procedures are determined for checking quality at each stage of the process</p> <p>1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.5. Suitable work area is selected for the task</p> <p>1.6. Tools and equipment suitable to the fixing method are selected and checked for safe operation</p> <p>1.7. Components, hardware, fittings and attachments are collected</p> <p>1.8. Fixing and joining devices are selected in line with work instructions and type of materials to be joined</p> <p>1.9. Jigs are selected and checked for suitability of purpose</p>
2. Assemble components	<p>2.1. Components are laid out and joined using jigs and appropriate fastenings</p> <p>2.2. Hand and/or power tools and equipment are used as required</p> <p>2.3. Assembled frame is checked for compliance with specifications</p> <p>2.4. Components are prepared, assembled and fitted as per specification</p> <p>2.5. Frames which do not meet quality specifications are repaired or tagged for further processing or recycling/disposal</p> <p>2.6. Finished products are organised and stored in holding area</p>
3. Clean work area and maintain equipment	<p>3.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures</p> <p>3.2. Waste and scrap are removed following workplace procedures</p> <p>3.3. Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures</p> <p>3.4. Equipment and work area clean-up is maintained in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate assembly problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the assembly, including tools, equipment, materials and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of common furnishing components
- the interpretation of basic furniture plans
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assemble at least four furnishing components from the list in the Range Statement
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, materials, cauls and jigs, woodworking machinery, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Furnishing components may include, but are not limited to:

- carcasses
- doors
- drawers
- frames
- shelves
- ends
- tops and limited basic end items

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the assembly of furnishing components
- Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools and equipment include, but are not limited to:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- planes
- hand saws

RANGE STATEMENT	
	<ul style="list-style-type: none"> • power saws • power drills/screwdrivers • clamps • screwdrivers • pincers • pneumatic tools
Materials to be used may include, but are not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • glues • screws • nails • dowels and knock-down fittings
Assembled component checking is to cover:	<ul style="list-style-type: none"> • alignment and squareness, • correct number and fitting of fasteners, • hardware, fittings and attachments, and • conformity to work instruction and quality requirements
Storage requirements	Storage of finished products must ensure that there is no obstruction to traffic, components are not damaged in storage, incompatible items are not stored together, and products are arranged to match the sequence of work
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Manufacturers' specifications and operational procedures

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work	1.1. Work instructions are used to determine job requirements, including design, colour, finish process and required hardware quality 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Types of hardware are identified and selected for the work 1.4. Tools, equipment and accessories for application are identified and checked for safe and effective operation 1.5. Surfaces are cleaned and prepared to enable accurate colour matching
2. Apply and/or fit and finish	2.1. Hardware items are laid out/placed in the required design 2.2. Machinery is used in accordance with workplace procedures, including use of personal protective equipment 2.3. Joining/securing process is undertaken according to workplace procedures 2.4. Adhesives are applied according to workplace procedures and/or manufacturers' instructions 2.5. Work is checked against required quality standards
3. Finalise operation and maintain equipment	3.1. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures 3.2. Machinery is cleaned and left in a safe mode 3.3. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices 3.4. Unused hardware is collected and stored for reuse or disposal following workplace procedures 3.5. Waste and scrap materials are dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate application problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the selection and application of hardware, including tools, equipment, calculators and measuring devices

Required knowledge

- types, characteristics, uses and limitations of hardware
- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self or others
- Select and apply each item in the range of hardware stipulated in the Range Statement
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, hardware materials, woodworking machinery, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hardware

Hardware to be covered here is to include at a minimum hinges, handles, drawer-runners, metal drawer systems, sliding rail systems, rotating storage systems and slide-out storage systems

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in selecting and applying hardware
- Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools and equipment may include, but are not limited to:

- measuring tapes or rulers
- levelling devices
- hammers
- mallets
- squares
- bevels
- chisels
- planes
- hand saws
- power saws
- power drills/screwdrivers
- pneumatic tools

RANGE STATEMENT	
	<ul style="list-style-type: none"> • clamps • screwdrivers • pincers
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • hinges • hardware consumables • cleaning chemicals and materials
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work	1.1. Work instructions are used to determine job requirements, including: process, materials, finish and quantity 1.2. Application sequence is planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Tools and equipment suitable for application are identified and checked for safe and effective operation
2. Layout and prepare materials	2.1. Laminates are selected and checked for flaws following work instructions 2.2. Laminates are prepared for application and laid out 2.3. Suitable joining processes are selected and prepared
3. Apply and/or fit and finish	3.1. Laminates are measured, marked and cut to size and applied to the base material 3.2. Tools and equipment are used in accordance with workplace procedures, including use of personal protective equipment 3.3. Adhesives are applied according to workplace procedures and/or manufacturers' instructions 3.4. Final trim and finishing are completed to specifications 3.5. Work is checked against required quality standards
4. Finalise operation and maintain equipment	4.1. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures 4.2. Tools and equipment are cleaned and left in a safe mode 4.3. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices 4.4. Off-cuts and unused materials are collected and stored for reuse or disposal following workplace procedures 4.5. Waste and scrap materials are dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate application problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the application, including tools, equipment, calculators and measuring devices

Required knowledge

- types, characteristics, uses and limitations of laminates
- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Apply and finish laminates to at least three different surfaces, including at least two requiring laminate edging
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, laminates and finishing materials, woodworking machinery, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in applying laminates by hand
- Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools and equipment may include, but are not limited to:

- measuring tapes or rulers
- mallets
- squares
- bevels
- chisels
- planes
- hand saws
- power saws
- power drills/screwdrivers
- pneumatic tools
- clamps
- screwdrivers
- rollers
- laminate trimmers and cutters and hand routers

Materials to be used may include but are not limited to:

- timber
- manufactured board
- laminates

RANGE STATEMENT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work	1.1. Work instructions are used to determine job requirements including process, materials, finish and quantity 1.2. Work sequence is planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Tools and equipment suitable for application are identified and checked for safe and effective operation
2. Layout and prepare materials	2.1. Timbers are selected and checked for defects following work instructions 2.2. Suitable joining processes are selected and prepared 2.3. Timbers are prepared for joining and laid out
3. Join timber	3.1. Timbers are measured, marked and cut to size 3.2. Machinery is used in accordance with workplace procedures, including use of personal protective equipment 3.3. Adhesives are applied according to workplace procedures and/or manufacturers' instructions 3.4. Final trim and finishing are completed to specifications 3.5. Work is checked against required quality standards
4. Finalise operation and maintain equipment	4.1. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures 4.2. Machinery is cleaned and left in a safe mode 4.3. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices 4.4. Off-cuts and unused materials are collected and stored for reuse or disposal following workplace procedures 4.5. Waste and scrap materials are dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the installation of underlay and gripper strips, including tools, equipment, calculators and measuring devices

Required knowledge

- types, characteristics (including cupping, expansion, twisting, bowing, spring and grain direction), uses and limitations of timbers
- the interpretation of plan representation of furniture design
- joining techniques and their effect on timbers
- types of sawing methods, including back sawn and quarter sawn, and the impact of these on joining
- preparation of drawings/set-outs
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical Aspects of Evidence</p>	<ul style="list-style-type: none"> • Interpret work order and locate and apply relevant information • Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • minimise the risk of injury to self and others • prevent damage to goods, equipment and products • maintain required production output and product quality • Join at least four solid timber tops of a minimum of three sections and using a minimum of four different widening joints • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
<p>Resource Implications</p>	<p>Access to plans, hand and/or power tools, equipment, joining and finishing materials, woodworking machinery, and a work area.</p>
<p>Method of Assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</p>
<p>Context of Assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Joining techniques are to cover widening joints, including the following edge joining methods:

- butt, dowel
- moulded edge joint (finger-joint, tongue in groove, zig-zag)
- biscuit joint
- slip-tongue joint

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in joining solid timber
- Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Machines may include:

- panel saw
- cross-cut saw
- rip saw
- surface planers
- panel planer
- spindle moulder
- sanders and vertical and horizontal drills

Tools and equipment may include, but are not limited to:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels

RANGE STATEMENT	
	<ul style="list-style-type: none"> • chisels • planes • hand saws • power saws • power drills • biscuit machines • pneumatic tools • dowel jigs • hoses • clamps and pincers
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • solid timber • plywoods • adhesives abrasives and cleaning materials
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturers' instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work	1.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 1.3. Product purpose, furniture style and joint type are identified from workplace documentation 1.4. Tools, adhesives and fasteners are selected to match the joint type
2. Make joint	2.1. Cutting and joining lines are marked out to suit joint type 2.2. Measurements and calculations are checked for accuracy to ensure quality outcomes 2.3. Timber is joined in accordance with workplace requirements 2.4. Fasteners and adhesives are used to make joints firm where required 2.5. Finished joint is checked against quality requirements
3. Complete housekeeping	3.1. Unused materials are stored or recycled as required 3.2. Tools and equipment are cleaned and stored appropriately 3.3. Work area is cleaned and rubbish disposed of appropriately 3.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate carpet requirements and other material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the installation of conventional unjoined carpet, including tools, equipment, calculators and measuring devices

Required knowledge

- characteristics, properties and selection criteria of adhesives used
- capabilities and limitations of tools used
- matching requirements of adhesives and fasteners to timbers/materials used
- workflow in relation to the furniture items being made or repaired

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Select appropriate joint types for the furniture item
- Utilise at least three different adhesive types
- To produce a minimum of four different joint types as specified in the Range Statement in accordance with industry standards on tolerances with at least two produced substantially by hand operations
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Timber, chisels, mallets, mortise gauges, vernier dial calipers, vices, dovetail saws, planes, files and drills.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant carpet installation equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Joins include:

- dowel
- mortise and tenon
- dovetail
- lap joint
- biscuit joint
- finger joint
- housing joint
- mitre and bridle joints

Unit context

- Work involves the use of tools to create hand made timber joints
- Workplace health and safety requirements may include: OH&S legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
- Work is carried out in accordance with legislative obligations, organisation insurance requirements, environment legislation, and manual handling procedures and relevant regulations

Tools and equipment are to include:

- chisels
- mallets
- mortise gauges
- vernier calipers
- vices
- dovetail saws
- tenon saws
- coping saws
- planes
- files
- hand drills
- power drills
- dowel jigs and power routers

RANGE STATEMENT	
Tools and equipment may also include:	<ul style="list-style-type: none"> • portable biscuit machines • power planers • power saws and power sanders
Timbers may include:	<ul style="list-style-type: none"> • indigenous and overseas timbers
Workplace requirements include:	<ul style="list-style-type: none"> • visual appearance • tolerance • gaps or play in joints and strength
Quality requirements include:	<ul style="list-style-type: none"> • alignment • neatness • firmness and acceptable tolerances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools • Production planning figures • Work instructions, including job sheets, plans, drawing and designs • Workplace procedures relating to reporting and communication • Manufacturers' instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for assembly	1.1. Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity 1.2. Assembly sequence is planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Tools and equipment suitable to the assembly are selected and checked for safe operation 1.7. Fixing and joining devices are selected in line with work instructions and type of materials to be joined 1.8. Components, hardware, fittings and attachments are collected
2. Assemble furniture	2.1. Components are laid out and joined using appropriate fastenings 2.2. Hand and/or power tools are used as required 2.3. Assembled furniture is checked for compliance with specifications 2.4. Doors, drawers, shelves and/or runners are prepared and fitted as per set out 2.5. Hardware and decorative accessories are applied to specification 2.6. Item is prepared for finishing, including the removal of bruises, scratches, dents and marks 2.7. Work is checked against required standard and non-conforming items rectified 2.8. Finished products are organised and stored in holding area

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the assembly including tools, equipment, calculators and measuring devices

Required knowledge

- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assemble at least two items of production furniture, one of manufactured board and one of solid timber construction, with each featuring:
 - a door
 - a drawer and
 - shelving
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, materials, cauls and jigs, woodworking machinery, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Furniture may include but is not limited to:

- wall units
- vanity units
- kitchen cabinets
- side-boards/buffets
- drawer units
- display cabinets
- counters
- tables
- beds and clocks

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the assembly of furniture
- Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools and equipment may include, but are not limited to:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- planes
- hand saws

RANGE STATEMENT	
	<ul style="list-style-type: none"> • power saws • power drills/screwdrivers • pneumatic tools • clamps • screwdrivers • pincers
Materials to be used may include, but are not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • glass • alloys • adhesives • screws • nails • dowels • knock-down fittings • metal fasteners and associated hardware
Assembled furniture checking process is to cover:	<ul style="list-style-type: none"> • alignment and squareness • correct number and fitting of fasteners • hardware, fittings and attachments, and • conformity to work instruction and quality requirements
Storage of assembled furniture must ensure that:	<ul style="list-style-type: none"> • there is no obstruction to traffic • products are not damaged in storage • incompatible items are not stored together, and • products are arranged to match the sequence of work
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.2. Tools, machines and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 1.3. Furniture design, tolerances, process, materials and quantities are determined from work instructions 1.4. Work sequence is planned 1.5. Procedures are determined for checking quality at each stage of the process 1.6. Suitable work area is selected for the task 1.7. Preparatory drawings/set-outs for tasks are completed where required
2. Complete bending and forming process	2.1. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications 2.2. Materials are visually inspected for flaws and faults 2.3. Cane is machine sanded to remove exterior blemishes, flaws or faults 2.4. Cane is prepared by straightening where required and marked for bending 2.5. Cane is heated in ovens in accordance with design/pattern bending requirements 2.6. Cane is bent in accordance with design/pattern requirements 2.7. Product is checked against plans at identified checkpoints to ensure compliance with specifications 2.8. Non-conformity with the required quality standards is rectified
3. Finalise operation	3.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices 3.2. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures 3.3. Off-cuts and unused materials are collected and stored for reuse or disposed of following workplace procedures 3.4. Waste and scrap materials are dealt with following

ELEMENT	PERFORMANCE CRITERIA
	workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the installation, including tools, equipment, calculators and measuring devices

Required knowledge

- the interpretation of plan representation of cane furniture design
- the preparation of drawings/set-outs
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to cane bending and forming

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Bend and form cane for a minimum of three furniture items, including
 - two or three seater lounge
 - oval dining table
 - dining chair
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, machines, cane and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant machines, tools, equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Cane furniture may include:

- lounge chairs
- dining chairs
- tables
- side tables
- coffee tables
- entertainment units
- bookcases

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work involves reading and interpreting plans, developing set-outs, using hand and/or power tools, equipment and operating machinery
- Competency may be demonstrated in workplaces involved in the manufacture of cane furniture

Tools and equipment may include, but are not limited to:

- hand sanders and planers

Machines may include, but are not limited to:

- bench saws
- drop saws
- stationary sanding machines
- ovens
- bending presses

Personal protective equipment

Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices

RANGE STATEMENT	
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturers' instructions for the use of equipment and materials

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the notification of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate inspection problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the construction including tools, equipment and measuring devices

Required knowledge

- the interpretation of plan representation of cane furniture design
- the preparation of drawings/set-outs
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to cane furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Construct a minimum of three cane furniture items products, including:
 - two or three seater lounge
 - oval dining table
 - dining chair
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, cane and woodworking machinery, materials and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant construction equipment, materials, work instructions and deadlines.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design, quality, materials, equipment, and quantities 1.2. Cutting list and job specifications are read and interpreted 1.3. Workplace health and safety requirements, including ventilation requirements and personal protection needs, are observed throughout the work 1.4. Material for machining is selected and inspected for quality 1.5. Machines, cutting tools and jigs are identified and checked for safe and effective operation 1.6. Procedures are determined for minimising waste material 1.7. Procedures are identified for maximising energy efficiency while completing the job
2. Set up machines	2.1. Safety equipment, including emergency stops, gauges, guards and controls are checked 2.2. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturers' instructions 2.3. Trial runs are conducted to check machine operation, accuracy and quality of finished work 2.4. Necessary adjustments are made to machine settings
3. Operate machines	3.1. Machine start-up procedure is carried out in accordance with manufacturers' instructions 3.2. Material is fed into machine in accordance with manufacturers' instructions, safe handling procedures and standard workplace operating procedures 3.3. Machine is operated in accordance with its designed capacity and purpose, tooling requirements and to manufacturers' recommendations 3.4. Machine operation is monitored to ensure product quality and output 3.5. Waste quantities are checked and minimised 3.6. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures 3.7. Problems with the required work and/or the operation of the machine are identified and reported

ELEMENT	PERFORMANCE CRITERIA
	to appropriate persons
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.4. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures 4.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures 4.6. Equipment and tooling are maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, machine operations, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate machining problems, avoid reworking and avoid wastage
- use the workplace technology related to machine operations, including tools, equipment and measuring devices

Required knowledge

- the range, characteristics, uses and limitations of basic static machines
- characteristics of materials and uses of products produced
- general workplace quality standards and procedures
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Read and interpret cutting lists and job specifications to prepare for work
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up, operate and monitor the machines and complete the tasks identified in the Range Statement (above)
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to basic static machinery as identified in the Range Statement, standard operating procedures, and unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

The unit scope is to cover all the following basic machines and functions or tasks:

- cross-cut saw
- remove/replace saw blade
- blade selection/identification
- docking (oversize + 20mm)
- docking (accurate to +/- 0.25mm)
- docking square (no tolerance)
- machine fault finding
- rip saw
- remove/replace saw blade
- blade selection/identification
- set up riving knife to AS 1473
- parallel rip (oversize by 5mm+)
- machine fault finding
- scroll band saw
- remove/replace saw blade
- fold, unfold, reverse saw blade
- blade selection
- off fence ripping
- freehand ripping
- freehand curve cutting
- machine fault finding
- panel saw
- remove/replace saw blade
- set up scribe saw
- set up riving knife to AS 1473
- cut flat panel board (off rip fence using scribe saw)
- cut flat panel board (off cross-cut fence using scribe saw)
- machine fault finding
- surface planer (buzzer/jointer)
- machine face
- machine edge

RANGE STATEMENT

	<ul style="list-style-type: none"> • machine chamfer or bevel • machine fault finding • panel planer (thicknesser) • parallel plane width • parallel plane thickness • machine fault finding • bobbin sander • sand concave surface • machine fault finding • disc sander • sand straight surface • sand convex surface • sand end grain • machine fault finding • belt sander (including finisher, edge sander and stroke [lacey] sander) • remove/replace belts • sand veneer face of flat panel board • sand solid timber face • sand solid timber edges (remove arris/shape) • machine fault finding • vertical drill press • select and replace drill bits • drill holes to pre-determined depths vertically • hinge boring • machine fault finding • horizontal borer (single bit) • select and replace drill bits • drill holes to pre-determined depths horizontally • hinge boring • machine fault finding
Unit context	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set-up, operation and maintenance of machines • Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Material to be machined may include but is not limited to:	<ul style="list-style-type: none"> • solid timber • manufactured board and metal
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design, quality, materials, equipment, and quantities 1.2. Cutting list and job specifications are read and interpreted 1.3. Workplace health and safety requirements, including ventilation requirements and personal protection needs, are observed throughout the work 1.4. Material for machining is selected and inspected for quality 1.5. Cutting patterns are applied to minimise waste material 1.6. Procedures are identified for maximising energy efficiency while completing the job
2. Set up machines	2.1. Safety equipment, including emergency stops, gauges, guards and controls are checked 2.2. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturers' instructions 2.3. Machines, cutting tools and jigs are identified and checked for safe and effective operation 2.4. Trial runs are conducted to check machine operation, accuracy and quality of finished work 2.5. Necessary adjustments are made to machine settings
3. Apply conversion techniques	3.1. Machine start-up procedure is carried out in accordance with manufacturers' instructions 3.2. Material is fed/placed into machine in accordance with manufacturers' instructions, safe handling procedures and standard workplace operating procedures 3.3. Machine is operated in accordance with its designed capacity and purpose, tooling requirements and to manufacturers' recommendations 3.4. Machine operation is monitored to ensure product quality and output 3.5. Waste quantities are checked and minimised 3.6. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures 3.7. Problems with the required work and/or the

ELEMENT	PERFORMANCE CRITERIA
	operation of the machine are identified and reported to appropriate persons
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored</p> <p>4.2. Waste and scrap are removed following workplace procedures</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</p> <p>4.4. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures</p> <p>4.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</p> <p>4.6. Equipment and tooling are maintained in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, manufactured board conversion techniques, machine operations, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate conversion problems, avoid reworking and avoid wastage
- use the workplace technology related to conversion, including tools, equipment and measuring devices

Required knowledge

- types, characteristics, uses and limitations of manufactured board
- the range, characteristics, uses and limitations of panel-saw, scoring saw, NC beam saw and wall saw
- general workplace quality standards and procedures
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Read and interpret cutting lists and job specifications to prepare for work
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply at least five different conversion techniques/operations covering the:
 - preparation of cutting plans to minimise waste
 - selection of the correct materials
 - application of conversion techniques including at least one surfaced board requiring the use of a scoring saw
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to conversion machinery as identified in the Range Statement, standard operating procedures, and unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

EVIDENCE GUIDE

materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Unit Descriptor

Unit descriptor	This unit covers the competency to set up, operate and maintain pressure and clamping machines using their full potential and capacities in the production of furniture
------------------------	---

Application of the Unit

Application of the unit	
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design, quality, materials, equipment, and quantities 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Material for machining is selected and inspected for quality 1.4. Pressure and clamping machines, cutting tools and jigs are identified and checked for safe and effective operation 1.5. Procedures are determined for minimising waste material 1.6. Procedures are identified for maximising energy efficiency while completing the job
2. Set up machines	2.1. Safety equipment, including emergency stops, gauges, guards and controls are checked 2.2. Pressure and clamping machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions 2.3. Trial runs are conducted to check machine operation, accuracy and quality of finished work 2.4. Necessary adjustments are made to machine settings
3. Operate machines	3.1. Machine start-up procedure is carried out in accordance with manufacturers' instructions 3.2. Material is placed into machine in accordance with manufacturers' instructions, tooling requirements, safe handling procedures and standard workplace operating procedures 3.3. Machine is operated in accordance with its designed capacity and purpose, and to manufacturers' recommendations 3.4. Machine operation is monitored to ensure product quality and output 3.5. Items that do not meet quality requirements are recycled or discarded according to workplace procedures 3.6. Problems with the required work and/or the operation of the machine are identified and reported

ELEMENT	PERFORMANCE CRITERIA
	to appropriate persons
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures 4.5. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures 4.6. Tooling is maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to pressure and clamping operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate pressure and clamping problems, avoid reworking and avoid wastage
- use the workplace technology related to pressure and clamping, including tools, equipment, calculators and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of pressure and clamping machines
- pressure and clamping processes and techniques
- characteristics of materials and uses of products produced
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage and wastage of goods, equipment and products
 - maintain required production output and product quality
- Identify, set up, operate and maintain at least one pneumatically/hydraulically operated pressure and clamping machine to perform a significant production function covering three variable and different set up situations
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to pressure and clamping machinery as identified in the Range Statement, standard operating procedures, and unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace

EVIDENCE GUIDE	
	simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Pressure and clamping machines are to include:</p>	<ul style="list-style-type: none"> • manual clamps and presses • hydraulic vacuum presses and clamping machines and may include post forming machines
<p>Material to be pressed/clamped may include:</p>	<ul style="list-style-type: none"> • solid timber • manufactured board and decorative treatments • including laminates
<p>Products may include:</p>	<ul style="list-style-type: none"> • vacuum formed doors • widening joints • framed construction • drawers and laminating veneers
<p>Unit scope</p>	<p>Work requires individuals to read and interpret production instructions, complete adjustments to machine configurations and settings, using jigs and fixtures, selection and application of adhesives and the operation of machines to finish products</p>
<p>Unit context</p>	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines • Competency may be demonstrated in workplaces involved in the manufacture of domestic and commercial furniture, including

RANGE STATEMENT	
	kitchen and bathroom cabinets and/or furniture components
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • screwdrivers • hammers and spanners
Materials are to include:	<ul style="list-style-type: none"> • pressure and clamping machine consumables • oils and lubricants and trial materials
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity 1.2. Construction and assembly sequence is planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Preparatory drawings/set-outs for tasks are completed 1.7. Cutting list for components is developed 1.8. Materials are selected following work instructions 1.9. Tools and equipment suitable for construction are identified and checked for safe and effective operation
2. Complete construction	2.1. Material is set out and prepared according to work instructions and components are marked according to workplace procedures 2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications 2.3. Components are manufactured including any specified shapes, angles or curves and checked against set-outs and job requirements 2.4. Components are assembled using jigs and/or clamps and fastenings 2.5. Adhesives are applied according to workplace procedures and/or manufacturers' instructions 2.6. Joining process is undertaken according to workplace procedures 2.7. Assembled chair/couch is checked for compliance with specifications 2.8. Item is finished to suitable state for surface preparation 2.9. Any non-conformity with the required quality standards is rectified
3. Finalise operation and maintain	3.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices

ELEMENT	PERFORMANCE CRITERIA
equipment	<p>3.2. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures</p> <p>3.3. Off-cuts and unused materials are collected and stored for reuse or disposed following workplace procedures</p> <p>3.4. Waste and scrap materials are dealt with following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> • collect, organise and understand information related to work orders, plans and safety procedures • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems • plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage • work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity • use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements • use pre-checking and inspection techniques to anticipate construction problems, avoid reworking and avoid wastage • use the limited workplace technology related to the construction, including tools, equipment, materials and measuring devices

- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, materials, cauls and jigs, woodworking machinery, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Chair and couch frames may include but are not limited to:

- dining chairs
- office chairs
- lounge chairs
- sofas/settees

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work involves reading and interpreting plans, developing set-outs using hand and power tools, equipment and operating woodworking machinery
- Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture and/or furniture components

Tools and equipment may include, but are not limited to:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- planes
- hand saws
- power saws
- cordless drills/screwdrivers
- power drills
- fixing and joining devices

RANGE STATEMENT	
	<ul style="list-style-type: none"> • jigs • clamping devices • pinches
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • band saws • cross cut saws • docking saws • mitre saws • panel and rip saws • surface planers (buzzers) • panel planers (thicknessers) • lacey sanders • horizontal borers • vertical drill presses • edge sanders • pedestal grinders • wood turning lathes • presses
Materials to be used may include but not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • adhesives • screws • nails • bolts • dowels • metal fasteners • steel • plastics
Checking of constructed product is to cover:	<ul style="list-style-type: none"> • squareness • alignment • wind and hardware • fittings and attachments
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate construction problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the construction, including tools, equipment and measuring devices

Required knowledge

- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs/rods
- the types, characteristics, properties and limitations of timber used in furniture construction
- material selection and structural standards
- application of ergonomic principles and guidelines to furniture construction
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Construct a minimum of two furniture products which are to include:
 - a table with a drawer, and
 - a chair with shaped and angled components
- and require the jointing processes listed in the Range Statement
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, woodworking machinery, materials, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Furniture to be constructed using the leg and rail method may include:

- dining
- occasional
- hall and side tables
- dining and occasional chairs
- and cabinets

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Unit scope

Work involves reading and interpreting plans, developing set-outs, using static machines, using hand and power tools to construct furniture using traditional jointing methods (mortise and tenon, mitre, dowel and bridle)

Tools and equipment may include, but are not limited to:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- planes
- hand saws
- power saws
- cordless drills/screwdrivers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • power drills • fixing and jointing devices • pneumatic tools • jigs • clamps and pincers
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • band saws • cross cut saws • jig saws • panel and rip saws • surface planers • panel planers • belt sanders • horizontal borers • vertical drill presses • furniture mortise and tenoner • dovetailers • pedestal grinders • wood turning lathes • veneer guillotines and presses
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • adhesives • screws • nails • dowels • knock down fittings
Checking of constructed product is to cover:	<ul style="list-style-type: none"> • squareness • parallel • twist • and distortion and product faults
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity 1.2. Construction and assembly sequence are planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Preparatory drawings and set-outs for tasks are completed 1.7. Cutting list for components is developed 1.8. Materials are selected following work instructions 1.9. Tools and equipment suitable for construction are identified and checked for safe and effective operation
2. Complete construction	2.1. Materials are set out and prepared according to work instructions and components are marked according to industry practices 2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications 2.3. Materials are bent and formed in accordance with the plan 2.4. Components are manufactured and checked against set-outs for tolerances, fit and accuracy 2.5. Components are assembled and checked against set-outs for accuracy, fit, twist and distortion 2.6. Doors, drawers and shelves are assembled and fitted 2.7. Product is prepared for final finish, including the removal of bruises, scratches, dents and marks 2.8. Product is checked against plans at identified checkpoints
3. Finalise operation	3.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices 3.2. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures 3.3. Off-cuts and unused materials are collected and

ELEMENT	PERFORMANCE CRITERIA
	<p>stored for reuse reuse or disposed following workplace procedures</p> <p>3.4. Waste and scrap materials are dealt with following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to furniture design interpretation work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate production problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the production, including tools, equipment and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of solid timbers most common to furniture production
- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs/rods and geometrical concepts
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Produce a minimum of two significant timber products which must include:
 - one curved cabinet with rails, and
 - one item involving oval design using traditional construction methods and jointing
- Conduct operator maintenance on machines and related tools and equipment
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, cauls and jigs, woodworking machinery, materials, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Furniture	Manufactured solid timber furniture is to include, at a minimum, angular structures and curved cabinets incorporating rails and oval design
Material bending and forming techniques are to include:	<ul style="list-style-type: none"> • steam/heat and bend • and groove and bend
Unit scope	Work involves reading and interpreting plans, developing set-outs, preparing and using jigs, templates and shaped cauls, using hand and/or power tools and equipment and operating woodworking machinery
Unit context	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Competency may be demonstrated in workplaces involved in the manufacture of solid timber domestic furniture, commercial furniture and/or furniture components
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • measuring tapes or rulers • hammers • mallets • squares • bevels • chisels • planes • hand saws • power saws • power drills/screwdrivers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • pneumatic tools • clamps • screwdrivers • pincers
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • band saws • cross cut saws • mitre saws • panel and rip saws • surface planers • panel planers • belt sanders • horizontal borers • vertical • drill presses • dovetailers • pedestal grinders • wood turning lathes • veneer guillotines and presses
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • adhesives • screws • nails • dowels • knockdown fittings • glass • decorative finishes • abrasive paper and finishing materials
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine custom job requirements, including design, tolerances, process, materials, finish and quantity 1.2. Construction and assembly sequence are planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Preparatory drawings and set-outs for tasks are completed 1.7. Cutting list for components is developed 1.8. Materials are selected following work instructions 1.9. Tools and equipment suitable for construction are identified and checked for safe and effective operation
2. Complete construction	2.1. Materials are set out and prepared according to work instructions and components are marked according to industry practices 2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications 2.3. Materials are bent and formed in accordance with the plan 2.4. Components are manufactured and checked against set-outs for tolerances, fit and accuracy
3. Assemble custom furniture	3.1. Components are assembled and checked against set-outs for accuracy, fit, twist and distortion 3.2. Doors, drawers and shelves are assembled and fitted 3.3. Hardware and decorative accessories are applied to specification 3.4. Product is prepared for final finish, including the removal of bruises, scratches, dents and marks 3.5. Product is checked against plans at identified checkpoints
4. Clean work area and maintain equipment	4.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures 4.2. Waste and scrap are removed following workplace

ELEMENT	PERFORMANCE CRITERIA
	procedures 4.3. Tools and equipment used are cleaned, inspected for serviceable condition, maintained and stored appropriately in accordance with workplace procedures 4.4. Equipment and work area clean-up is maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to furniture design interpretation work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate production problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the fabrication, including tools, equipment and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of solid timbers most common to furniture production
- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs/rods
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling practices for equipment, products and materials
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Produce one significant furniture item
 - custom developed machining processes and outcomes
 - custom development and completion of assembly techniques and processes
 - the satisfaction of customer specifications in terms of dimensions, materials, function and aesthetics
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, cauls and jigs, woodworking machinery, materials, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

EVIDENCE GUIDE	
Context of Assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Custom furniture</p>	<p>Custom furniture is defined as one-off manufacture in response to specific customer requirements. It does not include variations or modification to a production line item</p> <p>Custom furniture may include, but is not limited to: wall units, vanity units, kitchen cabinets, side-boards/buffets, drawer units, display cabinets, counters, tables, beds</p>
<p>Unit context</p>	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work involves reading and interpreting plans, customer liaison, developing set-outs, using hand and/or power tools, equipment and operating woodworking machinery • Competency may be demonstrated in workplaces involved in the manufacture of solid timber domestic furniture, commercial furniture and/or furniture components
<p>Material bending and forming techniques are to include:</p>	<ul style="list-style-type: none"> • steam and bend • and machined curves

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work	1.1. Work instructions are used to determine job requirements, including: location, type of installation, tolerances, process, finish and quality 1.2. Installation location and sequence are planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Hardware, fittings and attachments are collected 1.6. Tools and equipment suitable for installation are identified and checked for safe and effective operation 1.7. Fixing and joining devices are selected in line with work instructions and types of materials 1.8. Required installation aids are selected and checked for suitability for purpose
2. Complete installation	2.1. Site is prepared for installation 2.2. Furnishing products are prepared to site requirements 2.3. Hand and/or power tools and equipment are used in accordance with workplace requirements, including use of personal protective equipment 2.4. Fixing methods are undertaken according to site conditions 2.5. Installed furniture product is checked for compliance with specification 2.6. Tops and/or appliances are installed in accordance with plans and specifications 2.7. Hardware and decorative accessories are installed 2.8. Work is checked against required quality standards
3. Finalise operation clean work site	3.1. Work site is cleaned, hand and/or power tools are checked for serviceable condition, returned and stored in accordance with workplace procedures 3.2. Unused materials are returned and/or stored 3.3. Waste and scrap materials are dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, installation plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the installation, including tools, equipment and measuring devices

Required knowledge

- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs
- workflow in relation to furniture production
- identification of hand and/or power tools, materials, equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Install four different and significant furnishing products, including at least:
 - one floor mounted, and
 - one wall mounted
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, materials, woodworking machinery, furnishing products and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Furnishing products for installation may include but are not limited to:

- kitchen cabinets
- bathroom cabinets
- wall units
- desks
- counters
- wardrobes
- dressing tables
- entertainment units
- laundry cabinets

Appliances to be installed may include but are not limited to:

- ovens
- range hoods
- sinks
- basins
- cooktops
- refrigerators

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the installation of furnishing products
- Competency may be demonstrated on work sites of enterprises involved in the installation of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets

Tools and equipment may

- measuring tapes or rulers

RANGE STATEMENT	
include but not be limited to:	<ul style="list-style-type: none"> • hammers • mallets • squares • bevels • chisels • levels • plumb lobs • planes • hand saws • power saws • power planers • cordless drills • screwdrivers • power drills • explosive fixing gun • clamps • supporting devices • screwdrivers
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • laminates • granite • marble • stainless steel • adhesives • screws • nails • masonry anchors • dowels • cavity wall fixing
Product checking is to cover:	<ul style="list-style-type: none"> • level • plumb • twirl • and alignment of doors and/or drawers
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets,

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work	1.1. Work instructions are used to determine job requirements, including: design, tolerances, process, materials, finish and quantity 1.2. Construction sequence are planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Tools and equipment suitable for construction are identified and checked for safe and effective operation
2. Layout and prepare materials	2.1. Materials are selected and checked for flaws following work instructions 2.2. Materials are laid out to requirements 2.3. Suitable joining points are selected 2.4. Material is prepared for cutting
3. Construct and apply decorative surfaces	3.1. Material is cut to size and required thickness 3.2. Materials are laid out in the required design 3.3. Machinery is used in accordance with workplace procedures, including use of personal protective equipment 3.4. Items are cut to requirements 3.5. Joining process is undertaken according to workplace procedures 3.6. Adhesives are applied according to workplace procedures and/or manufacturers' instructions 3.7. Work is checked against required quality standards 3.8. Any non-conformity with the required quality standards is rectified
4. Finalise operation and maintain equipment	4.1. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures 4.2. Machinery is cleaned and left in a safe mode 4.3. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices 4.4. Off-cuts and unused materials are collected and stored for reuse or disposal following workplace

ELEMENT	PERFORMANCE CRITERIA
	procedures 4.5. Waste and scrap materials are dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to decorative surfaces, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate preparation and application problems, avoid reworking reworking and avoid wastage
- use the limited workplace technology related to the preparation and application, including tools, equipment and measuring devices

Required knowledge

- types, characteristics, uses and limitations of decorative surfaces
- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Prepare and apply a minimum of three different decorative surfaces to various substrates
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, materials, cauls and jigs, woodworking machinery, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Decorative surfaces are to include:

- veneers and inlays

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in preparation and application of decorative surfaces
- Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

Tools and equipment may include, but are not limited to:

- measuring tapes or rulers
- knives
- mallets
- squares
- bevels
- chisels
- planes
- clamps and portable vacuum presses

Machines may include, but are not limited to:

- band saws
- mitre saws
- panel saws
- sanders
- presses and veneer guillotines

RANGE STATEMENT	
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • veneer • brass • alloys • adhesives • perspex and decorative laminates
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine timber requirement	<p>1.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.2. Structural requirements for timbers are determined from workplace documentation</p> <p>1.3. Timber is assessed for suitability in accordance with selection criteria</p> <p>1.4. Written report is prepared substantiating selection of timber</p>
2. Evaluate timber selected	<p>2.1. Other materials which may be incorporated into furnishing item are identified and compatibility factors to be considered are recorded for inclusion in production plans</p> <p>2.2. Moisture content of timber selected is determined to ensure compliance with production requirements</p> <p>2.3. Density and working properties of timber are determined to ensure compliance with production requirements</p> <p>2.4. Any faults or features in the timber are identified and strategies are suggested to overcome/minimise their effects</p> <p>2.5. Recommendations on any changes to appropriate finishes and adhesives are recorded for inclusion in production plans</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, drawings, plans and safety procedures
- communicate ideas and information related to selection of timbers and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any wastage
- work with others and in a team by recognising dependencies and using cooperative approaches
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities, measure timber moisture content and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems
- use workplace technology related to the selection of timbers, including tools, equipment, calculators and measuring devices

Required knowledge

- characteristics and uses of a range of available indigenous and overseas timber
- commonly used complementary materials and their compatibility when used in conjunction with others
- impact of climate change and workshop conditions on timbers
- timber seasoning methods, techniques and faults
- solid timber conversion techniques

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- From a range of ten common furniture species samples, identify the species correctly, match it to a specified application and justify the choice
- Correctly identify natural and seasoning faults in selected timbers
- Use a moisture meter to measure the moisture content in a minimum of three samples, including one hard and one soft timber
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Timber, moisture content measuring devices.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may, where appropriate, be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant equipment and tools, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Furnishing items include:	<ul style="list-style-type: none"> • solid timber furniture • upholstered furniture and occasional items
Unit context	<ul style="list-style-type: none"> • Work involves the selection of appropriate timbers for use in the production of furniture items • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Timbers may include:	<ul style="list-style-type: none"> • indigenous and overseas timbers
Selection criteria may include:	<ul style="list-style-type: none"> • aesthetic appeal • shape • volumes required and characteristics
Working properties may include:	<ul style="list-style-type: none"> • hardness • strength and brittleness
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices</p>
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, prototypes, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturers' instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify object to be drawn	<p>1.1. The purposes and any operational characteristics of object to be drawn are identified</p> <p>1.2. Production materials and method are identified</p>
2. Establish drawing criteria and limitations	<p>2.1. Type of drawing to be completed is identified</p> <p>2.2. Drawing requirements are established and documented identifying dimensions, angles, shapes and finished sizes</p> <p>2.3. Drawing conventions and specifications to be noted on the drawing are identified</p> <p>2.4. Appropriate medium for drawings is identified and selected</p>
3. Quantify and draft initial drawing	<p>3.1. Dimensions are plotted from criteria and documented specifications</p> <p>3.2. Dimensional points are connected to match appropriate drawing views</p> <p>3.3. Any production notes or special requirements are noted</p> <p>3.4. Drawing conventions and specifications are noted on the documentation</p>
4. Complete drawing	<p>4.1. Angles, shapes and dimensions are checked against specifications and sample</p> <p>4.2. Adjustments are made to the drawing within scope of authority</p> <p>4.3. Drawing is checked for compliance with workplace documentation requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to drawings work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of drawing outcomes and problems
- plan and organise activities to avoid any back tracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow
- use mathematical ideas and techniques to correctly complete measurements, calculate area, perimeter, volume, mass, scales and ratios, and estimate material requirements
- use pre-checking techniques to anticipate drawing problems and avoid reworking
- use the limited workplace technology related to drawing tools, equipment, calculators and measuring devices

Required knowledge

- furniture design and planning criteria
- structural geometry
- measurement techniques and equipment/tools
- the theory and practice of calculations (addition, subtraction, multiplication, division)
- the types, techniques and processes of manual production drawing
- the types of computer-aided drawing equipment, software, techniques and processes
- conventional signs and markings for drawings

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical Aspects of Evidence</p>	<ul style="list-style-type: none"> • Identify the factors and criteria relevant to the drawings • Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment • Communicate effectively to enable accurate drawings • Prepare production drawings of furniture/furnishings: <ul style="list-style-type: none"> • covering a scope of at least three products • applying both manual and computer-aided techniques and processes
<p>Resource Implications</p>	<p>Information on the subjects for drawing, suitable work area appropriate to the activity, computer-aided drawing systems, measuring, calculating and recording devices.</p>
<p>Method of Assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</p>
<p>Context of Assessment</p>	<p>Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Scope of drawing	<ul style="list-style-type: none"> • Drawing is to be limited to that used for manufacture/ production purposes and is not to encompass original design concepts • Drawing is to be completed using both manual and computer-aided design techniques and processes
Unit scope	Drawings are to be in metric scale and cover all dimensions of the furniture and furnishings
Calculations	Calculations are to be performed both manually and with the aid of a calculator
Unit context	<ul style="list-style-type: none"> • Workplace health and safety requirements may include OH&S legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Work procedures relating to production drawing • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read plans and job specifications	1.1. Job specifications, set-out rods and plans are used to determine the job requirements, including cutting list, dimension, design, quality materials and processes 1.2. Job components are established according to job specification and workplace procedures 1.3. Geometry of components are established according to specifications
2. Prepare cutting lists	2.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 2.2. Cutting list is checked and set out in accordance with workplace procedures and the plans and specifications 2.3. Components are identified and described using common workplace terminology 2.4. Sizes and tolerance of components are established and documented in accordance with workplace procedures 2.5. Processing requirements are identified and documented 2.6. Dimensional allowances for further processing are identified and documented
3. Read and interpret cutting lists	3.1. Cutting list is read and interpreted in accordance with the job requirements 3.2. Quantities and dimensions are interpreted 3.3. Quality standards and waste factors are considered 3.4. Processing methods are established 3.5. Processing time is identified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to production processes, material characteristics, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate cutting requirements and material requirements
- use pre-checking and inspection techniques to anticipate preparation problems, avoid reworking and avoid wastage
- use the workplace technology related to the cutting lists, including aids, tools, equipment, calculators and measuring devices

Required knowledge

- characteristics of materials and tooling used and use of products programmed
- identification of equipment, processes and procedures
- pattern techniques for optimising materials

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical Aspects of Evidence</p>	<ul style="list-style-type: none"> • Locate, interpret and apply relevant information • Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment • Identify materials and tools used in the work process • Follow work instructions, operating procedures and manufacturers' instructions to: <ul style="list-style-type: none"> • minimise the risk of injury to self and others • prevent damage to goods, equipment and products • maintain optimum production output and product quality • Interpret production plans and prepare cutting lists on a minimum of four occasions with lists each having at least ten different components and, overall, the lists incorporating four different types of material • Work effectively with others • Modify activities to cater for variations in workplace context and environment
<p>Resource Implications</p>	<p>Access to plans and specifications, standard cutting list formats, workplace standard processing procedures.</p>
<p>Method of Assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</p>
<p>Context of Assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers work involved in the reading of plans and specifications and the preparation of cutting lists for the production of furniture components • Preparation of cutting lists may be completed by both manual and computer assisted/generated means
Unit context	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the reading of plans and specifications and the preparation of cutting lists • Competency may be determined in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Materials to be considered may include but are not limited to:	<ul style="list-style-type: none"> • solid timber • manufactured board • metal • plastics • glass
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices</p>

RANGE STATEMENT	
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain measurements	<p>1.1. The purpose of obtaining measurements is clarified and confirmed</p> <p>1.2. The most appropriate method of obtaining the measurement is selected and applied</p> <p>1.3. Accurate measurements are obtained, confirmed and recorded</p> <p>1.4. Calculations required for the measurement or validation are selected and correctly applied</p> <p>1.5. Quality assurance requirements, standards and tolerances associated with enterprise operations are recognised and adhered to</p>
2. Draw site layout	<p>2.1. The intended use of the site is clarified and confirmed</p> <p>2.2. A site plan is prepared showing all features and measurements</p> <p>2.3. A site elevation is completed showing all features and measurements</p> <p>2.4. The details of the proposed furniture products, including all relevant dimensions are incorporated into the plan and elevation</p> <p>2.5. Unique and non-complying features which may impact on manufacture and/or installation are highlighted and referred to the appropriate party</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- plan and organise activities to avoid any back tracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow
- use mathematical ideas and techniques to correctly complete measurements, calculate area, perimeter, volume, mass, scales and ratios and estimate material requirements
- use pre-checking techniques to anticipate measurement and drawing problems and avoid reworking
- use workplace technology related to measurement and drawing, including tools, equipment, calculators and measuring devices

Required knowledge

- furniture design and planning criteria
- drawing techniques, technologies and processes
- furniture installation methods, criteria and techniques
- structural geometry
- measurement techniques and equipment/tools
- the theory and practice of calculations (addition, subtraction, multiplication, division)
- conventional signs and markings for plans and drawings

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical Aspects of Evidence</p>	<ul style="list-style-type: none"> • Identify the factors relevant to the measurements and drawings • Communicate effectively to enable accurate calculations, measurements and drawings • Accurately measure and record particulars for required sector sites and materials • Draw accurate, scaled plans and elevations relevant to the site using manual or computer-aided methods • Superimpose the furniture product accurately to scale onto the plan and elevation • Identify and communicate on measurements and dimensions which may impact on manufacture and/or installation
<p>Resource Implications</p>	<p>Information on the site and products for measurement and calculation, suitable work area appropriate to the activity, suitable site plans/drawings and/or specifications, and measuring, calculating and recording devices.</p>
<p>Method of Assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</p>
<p>Context of Assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	This unit applies to the measurement and drawing of site layout related to the manufacture and installation of furniture, cabinets, glass, soft furnishings, upholstery, picture framing, and floor covering products
Drawing	Drawing may be manual or computer aided
Measurements	Measurements are to be in metric scale, cover all dimensions of the site and furnishings and involve the use of rulers, tape measures, squares and service detectors. They may involve laser or equivalent technology
Critical dimensions that may impact on manufacture and installation include:	<ul style="list-style-type: none"> • the square of the structure • angles floor to walls • walls to ceiling • vertical walls • horizontal floor and ceiling • service locations and critical structural criteria
Calculations to include:	<ul style="list-style-type: none"> • area • perimeter • volume • mass • scales and ratios (ingredients/elements and triangulation) and require the application of addition • subtraction • multiplication and division processes • Calculations are to be performed both manually and with the aid of a calculator
Unit context	<ul style="list-style-type: none"> • Workplace health and safety requirements may include OH&S legislation, building codes, material safety management systems, hazardous substances and dangerous goods

RANGE STATEMENT	
	codes and local safe operating procedures <ul style="list-style-type: none"> • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the measuring and drawing of site layouts • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design, quality, materials, equipment, and quantities 1.2. Cutting list and job specifications are read and interpreted 1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.4. Material for machining is selected and inspected for quality 1.5. Sawing machines, cutting tools and jigs are identified and checked for safe and effective operation 1.6. Procedures are determined for minimising waste material 1.7. Procedures are identified for maximising energy efficiency while completing the job
2. Set up machines	2.1. Safety equipment, including emergency stops, gauges, guards and controls are checked 2.2. Saw settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions 2.3. Trial runs are conducted to check saw operation, accuracy and quality of finished work 2.4. Necessary adjustments are made to saw settings
3. Operate machines	3.1. Saw start-up procedure is carried out in accordance with manufacturers' instructions 3.2. Material to be sawed is positioned in accordance with manufacturers' instructions, tooling requirements, safe handling procedures and standard workplace operating procedures 3.3. Saw is operated in accordance with its designed capacity and purpose, and to manufacturers' recommendations 3.4. Saw operation is monitored to ensure product quality and output 3.5. Waste quantities are checked and minimised 3.6. Items that do not meet quality requirements are recycled or discarded according to workplace procedures 3.7. Problems with the required work and/or the

ELEMENT	PERFORMANCE CRITERIA
	operation of the saw are identified and reported to appropriate persons
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace 4.5. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures 4.6. Tooling is maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to sawing operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate saw depths and estimate material requirements
- use pre-checking and inspection techniques to anticipate sawing problems, avoid reworking and avoid wastage
- use the workplace technology related to sawing, including tools, equipment and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of sawing machines
- sawing processes and techniques
- characteristics of materials and uses of products produced
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up, operate and maintain at least four different types of saws, which must include those stipulated in the Range Statement and cover the use of safety cut-outs and guards
- Conduct operator maintenance on the machines and related equipment
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to sawing machinery as identified in the Range Statement, standard operating procedures, and unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace

EVIDENCE GUIDE	
	simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Sawing machines are to include:</p>	<ul style="list-style-type: none"> • cross-cut saws • circular rip saws • sliding table panel saws and scroll-band saws and may include: NC beam saws • wall saws • band resaws and straight line edgers
<p>Material to be machined is to include:</p>	<ul style="list-style-type: none"> • solid timber and manufactured board and may include: laminates • plastics • acrylics • synthetic solids
<p>Unit scope</p>	<p>Work involves reading and interpreting plans, deep ripping, cutting angles and compound angles, trenching flat panel components, shaping components, using jigs and fixtures, breaking down boards, maintaining machine parts and saw blades</p>
<p>Unit context</p>	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines • Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom

RANGE STATEMENT	
	cabinets and/or furniture components
Tools and equipment are to include:	<ul style="list-style-type: none"> • machine-specific tools and may include: screwdrivers • hammers • spanners • jigs and fixtures
Materials are to include:	<ul style="list-style-type: none"> • sawing machine consumables • oils and lubricants and trial materials
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

	operation of the drill are identified and reported to appropriate persons
4. Clean up work area and maintain equipment	4.1. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.2. Unserviceable equipment is tagged and faults identified in accordance with workplace 4.3. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures 4.4. Tooling is maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to drilling operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate drill depths and estimate material requirements
- use pre-checking and inspection techniques to anticipate drilling problems, avoid reworking and avoid wastage
- use the workplace technology related to drilling, including tools, equipment and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of drilling machines
- drilling processes and techniques
- characteristics of materials and uses of products produced
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up and operate at least the two different types of drills, a single-head multi-spindle machine and at least one other from the Range Statement (including the use of safety cut-outs and guards), and their application to a variety of materials
- Conduct operator maintenance on the machines and associated equipment
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to drilling machinery as identified in the Range Statement, standard operating procedures, and unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

EVIDENCE GUIDE	
Context of Assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Drilling machines are to include:</p>	<ul style="list-style-type: none"> • single-head multi-spindle machines and may include: single-head • single-spindle vertical and horizontal machines and multi-head multi-spindle machines
<p>Material to be machined may include but is not limited to:</p>	<ul style="list-style-type: none"> • solid timber • manufactured board • metal • glass
<p>Unit scope</p>	<p>Work involves reading and interpreting working drawing and manufacturers' hardware specification, drilling pattern selection, cutter fitting to meet job specification and the adjustment and use of pressures and stops</p>
<p>Unit context</p>	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines • Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
<p>Tools and equipment are to include machine-specific tools and may include, but not be</p>	<ul style="list-style-type: none"> • screwdrivers • hammers • spanners

RANGE STATEMENT	
limited to:	<ul style="list-style-type: none"> • jigs and fixtures
Materials are to include:	<ul style="list-style-type: none"> • drilling machine consumables • oils and lubricants and trial materials
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design, quality, materials, equipment, and quantities 1.2. Cutting list and job specifications are read and interpreted 1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.4. Material for machining is selected and inspected for quality 1.5. Joining machines, cutting tools and jigs are identified and checked for safe and effective operation 1.6. Procedures are determined for minimising waste material 1.7. Procedures are identified for maximising energy efficiency while completing the job
2. Set up machines	2.1. Safety equipment, including emergency stops, gauges, guards and controls are checked 2.2. Joining machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions 2.3. Trial runs are conducted to check machine operation, accuracy and quality of finished work 2.4. Necessary adjustments are made to machine settings
3. Operate machines	3.1. Machine start-up procedure is carried out in accordance with manufacturers' instructions 3.2. Material is fed into machine in accordance with manufacturers' instructions, tooling requirements, safe handling procedures and standard workplace operating procedures 3.3. Machine is operated in accordance with its designed capacity and purpose, and to manufacturers' recommendations 3.4. Machine operation is monitored to ensure product quality and output 3.5. Waste quantities are checked and minimised 3.6. Items that do not meet quality requirements are recycled or discarded according to workplace procedures 3.7. Problems with the required work and/or the

ELEMENT	PERFORMANCE CRITERIA
	operation of the machine are identified and reported to appropriate persons
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace 4.5. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures 4.6. Tooling is maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to joining operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate joining problems, avoid reworking and avoid wastage
- use the workplace technology related to joining, including tools, equipment, calculators and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of joining machines
- joining processes and techniques
- characteristics of materials and uses of products produced
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required skills

- collect, organise and understand information related to routing and shaping operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate routing and shaping problems, avoid reworking and avoid wastage
- use the workplace technology related to routing and shaping, including tools, equipment, calculators and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of routing and shaping machines
- routing and shaping processes and techniques
- characteristics of materials and uses of products produced
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage and wastage of goods, equipment and products
 - maintain required production output and product quality
- Identify, set up and operate to their full capabilities, at least two different types of routing and shaping machines, as specified in the Range Statement, including the use of safety cut-outs and guards
- Conduct operator maintenance on the machines and related equipment/material
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to routing and shaping machinery as identified in the Range Statement, standard operating procedures, and unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

EVIDENCE GUIDE	
Context of Assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Routing and shaping machines are to include:</p>	<ul style="list-style-type: none"> spindle moulding machine and overhead or inverted pin routing machine
<p>Material to be routed and shaped may include:</p>	<ul style="list-style-type: none"> solid timber manufactured board plastics and laminates
<p>Unit scope</p>	<p>Work involves setting up fences and guides, maintaining cutters, selecting feed and spindle speeds, the use of feed unit, safety pressure devices/ guards, linear, convex and concave shaping, rebating, moulding and grooving material and using jigs and fixtures</p>
<p>Unit context</p>	<ul style="list-style-type: none"> OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
<p>Tools and equipment are to include:</p>	<ul style="list-style-type: none"> machine-specific tools and may include screwdrivers hammers spanners jigs and fixtures

RANGE STATEMENT	
Materials are to include:	<ul style="list-style-type: none"> • routing and shaping machine consumables • oils and lubricants and trial materials
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design, quality, materials, equipment, and quantities 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Material for turning is selected and inspected for quality 1.4. Machines, cutting tools and templates are identified and checked for safe and effective operation 1.5. Procedures are determined for minimising waste material 1.6. Procedures are identified for maximising energy efficiency while completing the job
2. Set up machines	2.1. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions 2.2. Trial runs are conducted to check machine operation, accuracy and quality of finished work 2.3. Necessary adjustments are made to machine settings
3. Operate machines	3.1. Machine start-up procedure is carried out in accordance with manufacturers' instructions 3.2. Material is fed into machine in accordance with manufacturers' instructions, tooling requirements, safe handling procedures and standard workplace operating procedures 3.3. Machine is operated in accordance with its designed capacity and purpose, and to manufacturers' recommendations 3.4. Machine operation is monitored to ensure product quality and output 3.5. Waste quantities are checked and minimised 3.6. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures 3.7. Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons
4. Clean up work area and maintain	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace

ELEMENT	PERFORMANCE CRITERIA
equipment	procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace 4.5. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to lathe operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate set-up, operating and maintenance problems, avoid reworking and avoid wastage
- use the limited workplace technology related to lathe operations, including tools, equipment, calculators and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of lathes
- characteristics of materials and uses of products produced
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up, operate and maintain at least two different lathes, including the use of safety cut-outs and guards, to complete the following:
 - off-hand grind a range of cutters
 - manufacture and apply a template
 - complete a minimum of two detailed turnings which are to include fillets, beads, covers and square shoulder
- Conduct operator maintenance on the lathes
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to the lathes as identified in the Range Statement, standard operating procedures, and unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to automated edge banding machine operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate set-up, operating and maintenance problems, avoid reworking and avoid wastage
- use the limited workplace technology related to automated edge banding machines, including tools, equipment, calculators and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of machines
- characteristics, uses and limitations of board products, edging products and adhesives
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up and operate an automated (not fully automatic) edging machine to complete the following:
 - the set-up and application of at least three different edge treatment materials
 - the identification and correction of at least two real or simulated machining faults
- Conduct operator maintenance on the machines and equipment
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to an automated edge banding machine, standard operating procedures, and unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of

EVIDENCE GUIDE	
	competency.
Context of Assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Automated edge banding machines</p>	<p>Automated edge banding machines are those which use automated processes to apply and finish edge treatments</p> <p>Machines are to include a standard automated edger (not fully automatic) and may include a soft forming machine</p>
<p>Unit scope</p>	<p>Work involves applying and processing an edge trim to a manufactured board</p>
<p>Unit context</p>	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines • Competency may be demonstrated in workplaces involved in the manufacture of domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
<p>Material to be processed may include but is not limited to:</p>	<ul style="list-style-type: none"> • solid timber and manufactured board
<p>Edgings may include, but not be limited to:</p>	<ul style="list-style-type: none"> • solid timber • laminates • plastics • non-ferrous materials and foils

RANGE STATEMENT	
Operator maintenance	Operator maintenance is to include the cleaning and refurbishing of the gluing station
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity 1.2. Fabrication sequence are planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Preparatory drawings and set-outs for tasks are completed 1.7. Cutting list for components is developed 1.8. Materials are selected following work instructions 1.9. Tools and equipment suitable for fabrication are identified and checked for safe and effective operation
2. Complete fabrication	2.1. Materials are set out and prepared according to work instructions and components are marked according to industry practices 2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications 2.3. Components are fabricated and checked against set-outs for accuracy tolerances, fit and distortion 2.4. Doors, drawers, shelves or decorative treatments are fitted as required 2.5. Product is prepared for final finish, including the removal of bruises, scratches, dents and marks 2.6. Product is checked against plans at identified checkpoints
3. Finalise operation	3.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices 3.2. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures 3.3. Off-cuts and unused materials are collected and stored for reuse or disposed following workplace procedures 3.4. Waste and scrap materials are dealt with following

ELEMENT	PERFORMANCE CRITERIA
	workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to synthetic solid surface materials, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate fabrication problems, avoid reworking and avoid wastage
- use the limited workplace technology related to fabrication, including tools, equipment and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of synthetic solid surface materials
- the interpretation of plan representation of furniture design
- the preparation of drawings and set-outs
- identification of hand and/or power tools, materials, machines, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical Aspects of Evidence</p>	<ul style="list-style-type: none"> • Interpret work order and locate and apply relevant information • Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment • Follow work instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> • minimise the risk of injury to self or others • prevent damage to goods, equipment or products • maintain required production output and product quality • Fabricate a minimum of three synthetic solid surface material products, including at least one full benchtop • Work effectively with others • Modify activities to cater for variations in workplace context and environment
<p>Resource Implications</p>	<p>Access to plans, hand and/or power tools, machines, equipment, materials, and a work area.</p>
<p>Method of Assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</p>
<p>Context of Assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Synthetic solid surface products	<ul style="list-style-type: none"> • Synthetic solid surface products are generally acrylic or polyester sheet based materials • There are a range of commercially licensed products, including Corian, Aztec, Trezzini and others
Synthetic solid surface products are to include benchtops and may include:	<ul style="list-style-type: none"> • edges • sinks • bowls • other containers and waterproof wall treatments
Unit context	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work involves reading and interpreting plans, developing set-outs, using hand and/or power tools, equipment and operating machinery
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • measuring tapes or rulers • hammers • mallets • squares • bevels • chisels • planes • hand saws • power saws • power drills/screwdrivers • air compressor and hoses • clamps

RANGE STATEMENT	
	<ul style="list-style-type: none"> • screwdrivers • pincers
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • panel saws • routers • edge moulders • point to point • heat applicators • sanding and buffing machines
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • synthetic solid surface materials • timber • manufactured board • glues • screws • nails • dowels • knockdown fittings
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including: design, quality, materials, equipment and quantities 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Material for machining is selected and inspected for appropriate quality 1.4. Procedures are determined for minimising waste material 1.5. Procedures are identified for maximising energy efficiency while completing the job
2. Set up machines	2.1. CNC program is set to job requirements 2.2. Safety equipment, including emergency stops, gauges, guards and controls are checked 2.3. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturers' instructions 2.4. Machines, cutting tools and jigs are checked for safe and effective operation 2.5. Trial runs are conducted to check machine operation and quality of finished work 2.6. Final adjustments are made to CNC programs and equipment according to workplace procedures
3. Operate machines	3.1. Machines are operated and monitored to ensure product quality and output 3.2. Waste quantities are checked and minimised 3.3. Problems with the required work are identified and reported to appropriate persons 3.4. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures 3.5. Any authorised changes in working procedures are followed
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with

ELEMENT	PERFORMANCE CRITERIA
	<p>workplace procedures</p> <p>4.4. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures</p> <p>4.5. Unserviceable equipment is tagged and faults identified in accordance with workplace</p> <p>4.6. Equipment and tooling is maintained in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to CNC sizing operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, compute input data and estimate material requirements
- use pre-checking and inspection techniques to anticipate CNC sizing problems, avoid reworking and avoid wastage
- use the workplace technology related to CNC sizing, including machinery, tools, equipment and measuring devices

Required knowledge

- types, characteristics, uses and limitations of CNC sizing machines
- CNC theory, practices and techniques
- characteristics of materials used and uses of products produced
- workflow processes
- procedures for reporting materials, product or equipment faults

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Identify, set up and operate CNC sizing equipment, including the use of safety cut-outs and guards, to produce a range of complex cutting patterns to its full potential
- Conduct operator maintenance on the machine and related equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

CNC controlled equipment, standard operating procedures, unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
CNC sizing machines	CNC sizing machines are to include CNC beam saws and may include double end profiling machines
Unit scope	Work involves computer programming skills, reading and interpreting drawings, stock control, setting cutting speeds, computer-aided machining operations, saw and tool maintenance
Material to be sized is to include:	<ul style="list-style-type: none"> • solid timber • manufactured board • laminate • solid synthetic materials and plastics
Unit context	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines • Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Tools	Tools are to include machine-specific tools and may include screwdrivers, hammers and spanners
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including: design, quality, materials, equipment and quantities 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Material for machining is selected and inspected for appropriate quality 1.4. Procedures are determined for minimising waste material 1.5. Procedures are identified for maximising energy efficiency while completing the job
2. Set up for machining and processing	2.1. CNC program is set to job requirements 2.2. Safety equipment, including emergency stops, gauges, guards and controls are checked 2.3. Machining and processing settings and adjustments are made in accordance with job requirements and machining and processing and tool manufacturers' instructions 2.4. Machining and processing, cutting tools and jigs are checked for safe and effective operation 2.5. Trial runs are conducted to check machining and processing operation and quality of finished work 2.6. Final adjustments are made to CNC programs and equipment according to workplace procedures
3. Operate machining and processing centres	3.1. Machining and processing centres are operated and monitored to ensure product quality and output 3.2. Waste quantities are checked and minimised 3.3. Problems with the required work are identified and reported to appropriate persons 3.4. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures 3.5. Any authorised changes in working procedures are followed
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with

ELEMENT	PERFORMANCE CRITERIA
	<p>workplace procedures</p> <p>4.4. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures</p> <p>4.5. Unserviceable equipment is tagged and faults identified in accordance with workplace</p> <p>4.6. Equipment and tooling is maintained in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to CNC machining and processing centre operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, compute input data and estimate material requirements
- use pre-checking and inspection techniques to anticipate CNC machining and processing centre problems, avoid reworking and avoid wastage
- use the workplace technology related to CNC machining and processing centre, including machining and processing, tools, equipment and measuring devices

Required knowledge

- types, characteristics, uses and limitations of CNC machining and processing centres
- CNC theory, practices and techniques
- characteristics of materials used and uses of products produced
- workflow processes
- procedures for reporting materials, product or equipment faults

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Identify, set up and operate CNC machining and processing centre equipment to complete detailed profiling, including:
 - development and application of sub-program
 - development and application of parametric program, and
 - application of CAD/CAM functions
- Conduct operator maintenance on the machining and processing centre equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

CNC controlled equipment, standard operating procedures, unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

EVIDENCE GUIDE

	materials, work instructions and deadlines.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including development, quality, materials, equipment, and quantities 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Material for machining is selected and inspected for quality 1.4. Machines, grinding tools and accessories are identified and checked for safe and effective operation 1.5. Procedures are determined for minimising waste material 1.6. Procedures are identified for maximising energy efficiency while completing the job
2. Set up machines	2.1. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions 2.2. Grinding operations are checked for accuracy and quality of finished work 2.3. Necessary adjustments are made to machine settings
3. Operate machines	3.1. Machine start-up procedure is carried out in accordance with manufacturers' instructions 3.2. Tooling is machined in accordance with manufacturers' instructions, safe handling procedures and standard workplace operating procedures 3.3. Machine is operated in accordance with its designed capacity and purpose, and to manufacturers' recommendations 3.4. Machine operation is monitored to ensure product quality and output 3.5. Waste quantities are checked and minimised 3.6. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures 3.7. Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons 3.8. Daily routine lubrication and adjustments to the machines are made

ELEMENT	PERFORMANCE CRITERIA
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace 4.5. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to cutting tool operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate production and maintenance problems, avoid reworking and avoid wastage
- use the limited workplace technology related to cutting tool operations, including tools, equipment and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of grinding machines
- cutter development geometry and principles
- characteristics, properties and limitations of cutter steels
- grinding practices and techniques
- types, characteristics and limitations of grinding adhesives and processes
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete the following:
 - develop and produce a set of two matching profile cutters, and
 - produce a set of profile cutters from a template the candidate has manufactured, or
 - maintain a router cutter and solid profile cutter head
- Conduct operator maintenance on the machines/ equipment
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to grinding machinery as identified in the Range Statement, standard operating procedures, and unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the purpose of the jig or fixture	1.1. Purpose of the jig or fixture and the equipment it is to be used on is established 1.2. Proposed service life of jig or fixture is established 1.3. Tolerances allowed are identified 1.4. Materials for jig construction are established 1.5. Quality requirements for each stage of the construction process are identified
2. Plan jig or fixture construction	2.1. Plan of proposed jig or fixture is produced 2.2. Approval of design is gained through workplace procedures 2.3. Steps or stages in production are planned, noting check points for measurements and tests
3. Collect materials and equipment	3.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 3.2. Sufficient materials to complete the project are assembled ready for use 3.3. Suitable work area is selected 3.4. Hand and/or power tools are identified and checked for serviceability and assembled in work area 3.5. Appropriate equipment required is identified and checked for serviceability
4. Construct the jig or fixture	4.1. Production plan is followed to construct the jig or fixture 4.2. Tools and equipment are used in accordance with workplace procedures 4.3. Quality checks are conducted at the identified points 4.4. Modifications are identified and recommended within workplace procedures 4.5. Modifications to the plan are documented and followed 4.6. Jig or fixture is checked for fitness for purpose
5. Clean up work area and maintain equipment	5.1. Any faulty and/or defective equipment is isolated and reported to appropriate persons 5.2. Material which can be reused is collected and stored 5.3. Waste and scrap are removed following workplace procedures 5.4. All tools, equipment and personal protective equipment are cleaned, maintained and appropriately

ELEMENT	PERFORMANCE CRITERIA
	stored 5.5. Work area is cleaned in accordance with workplace procedures

Required Skills and Knowledge

Required knowledge

- types, characteristics, uses and limitations of jigs and fixtures
- criteria for selecting material for use in jigs and fixtures
- requirements for cutting, shaping and joining materials
- identification of equipment, processes and procedures
- workflow in relation to the use of jigs and fixtures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- The selection of materials and the construction of a minimum of three different types of jigs/fixtures, including one for a shaping machine and one which is adjustable
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Job context, materials and equipment for jig or fixture construction.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Machines for which jigs and fixtures are made may include, but are not limited to:

- band saws
- cross cut saws
- jig saws
- mitre saws
- panel and rip saws
- belt sanders
- panel planers
- surface planers
- horizontal borers
- vertical drill presses
- mortisers
- tenoners
- spindle moulders
- overhead and inverted pin routing machines

The uses for jigs and fixtures may include, but are not limited to:

- holding
- shaping
- drilling
- cutting
- routing

Jigs and fixtures are used in the production of, but are not limited to:

- chair legs
- shaping curved components
- end panels
- trenching
- grooving

Tools and equipment may include, but are not limited to:

- measuring tapes or rulers
- hammers
- mallets
- squares
- bevels
- chisels
- planes
- hand saws

RANGE STATEMENT	
	<ul style="list-style-type: none"> • power saws • power drills/screwdrivers • pneumatic tools • clamps • screwdrivers • pincers
Unit context	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines • Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Material used in the construction of jigs and fixtures may include, but is not limited to:	<ul style="list-style-type: none"> • solid timber • manufactured board • metal • plastics • synthetic solids • laminates and non-ferrous materials
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Co-requisite units

Co-requisite units		

LMFFM4005A Hand carve wood to custom design

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit covers the competency to confirm the design requirements, select the wood, hand carve it to custom design and prepare the carving for finishing.

Application of the Unit

Application of the unit

This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of furniture maker operations. The competency applies to a work room and on site environment and involves application of skills and knowledge at the highly skilled craftsman or artisan level. These skills and knowledge are to be used within the scope of the individual's job and authority.

This unit requires employability skills in initiative and enterprise, planning and organising and problem solving in order to undertake hand carving to design requirements. Communication skills are used to access and interpret work requirements and self management skills are applied to ensure project requirements are met. Technology is used to complete work.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm the design requirements	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements and instructions relevant to the hand carving of wood are verified and complied with</p> <p>1.2. The product design requirements are accessed and confirmed as being feasible</p> <p>1.3. The produce design requirements are elaborated on as required and documented to enterprise requirements</p>
2. Select and prepare the wood to be hand carved	<p>2.1. The design requirements in terms of product specification and product usage are analysed and confirmed</p> <p>2.2. The <i>wood species</i> which may satisfy the product specifications are identified</p> <p>2.3. The wood for carving is selected from a detailed analysis and comparison of the product specification and the characteristics, properties and costs of the available wood species</p> <p>2.4. The selected wood is <i>prepared</i> for hand carving</p>
3. Select carving tools	<p>3.1. <i>Carving tools</i> selected are the most appropriate for the job</p> <p>3.2. Selected carving tools are checked for serviceability, <i>sharpness</i>, maintenance compliance and safety</p> <p>3.3. Faults are rectified or passed to qualified persons for rectification</p> <p>3.4. Equipment is selected to hold or support material for hand tools application where applicable</p>
4. Carve the wood	<p>4.1. The <i>method and style of wood carving</i> are selected to meet the design requirements and the selected wood</p> <p>4.2. The carving patterns are applied to and enfaced on the wood to guide the carving and optimise the use of the wood</p> <p>4.3. Carving tools are applied initially to bulk clearances which confirm the wood grain selection and the appropriateness of the tools</p> <p>4.4. Carving tools are applied to the precision requirements of the product design</p> <p>4.5. Quality checks, tests and inspections are carried out throughout the carving operation and adjustments to maintain product quality are</p>

ELEMENT

PERFORMANCE CRITERIA

implemented

5. Finalise the work sequence

5.1. The product is *prepared for finishing* in accordance with the design specification

5.2. Carving tools are cleaned, maintained and stored in accordance with manufacturer specification

5.3. Work area is cleared and waste removed

5.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Demonstrates skills to:

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- interpret and apply technical and quality information in the identification, selection and maintenance of commercially superior carving tools
- interpret, apply and elaborate on specifications for wood carving products
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques which relate to hand carving to avoid re-work and wastage
- identify the most appropriate tool, the specifications and the methods for maintaining the high precision needs throughout the wood carving sequence
- recognise and respond to circumstances outside instructions or previously recognised personal competence
- adapt designs to incorporate the impact of wood carving operations on the intended materials
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of installation techniques
- seek learning opportunities
- use the limited workplace technology related to the selection and high precision use of hand tools

Demonstrates knowledge of:

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to hand carving of wood
- terminology covering hand carving operations and materials

REQUIRED SKILLS AND KNOWLEDGE

- types, characteristics, used and limitations of timber species for hand carving
- techniques for the design and documentation of specifications for hand carved products
- organisational and site standards, requirements, policies and procedures for hand carving of wood
- types, characteristics, uses, limitations and maintenance requirements of the range of tools used in wood carving
- processes for evaluating the quality of carving tools in terms of specifications, safety, maintainability and commercial reputation
- the range of commonly used hand carving techniques
- established communication channels and protocols
- problem identification and resolution
- workplace safety requirements and OHS legislation
- work flow within the workplace

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the use of hand tools
- Interpret product design and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Hand carve a minimum of two significant products including:
 - the interpretation and necessary adoption of the design specifications
 - the selection of timber for the carving
 - the completion of the carving to specification or commercially acceptable standard
 - the preparation of the products for finishing
- Carry out operator maintenance on hand tools including the grinding and sharpening of a range of knives and chisels
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:

EVIDENCE GUIDE

- workplace location or simulated workplace
 - two significant hand carving requirements including design brief or specification
 - a range of optional timbers
 - range of quality carving tools
 - materials for the preparation of the product for finishing
- Method of assessment**
- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
 - Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
 - Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
 - Assessment may be applied under project related conditions (real or simulated) and require evidence of process
 - Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
 - Assessment may be in conjunction with assessment of other related units of competency

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

- Legislative requirements**
- are to be in accordance with applicable legislation from all levels of government that affect organisational operation.
 - Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
- OHS requirements**
- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures.
 - Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
- Organisational requirements**
- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
- Instructions**
- workplace procedures relating to the use and operation of tools and equipment
 - production planning figures
 - workplace instructions, including job sheets, plans, specifications, drawings and designs
 - workplace procedures relating to reporting and communications
 - manufacturer instructions for the use of equipment

- Wood species for carving** • and materials
• may include lime, ash, maple, cherry, English oak, American oak, Japanese oak, walnut, Brazilian mahogany, sycamore, holly, apple, pear, beech, teak, iroko, rosewood, ebony, ramin and blackwood
- Preparation of wood for hand carving** • includes confirmation of grain, identification and response to faults, knots and contaminants, cutting of wood to workable size and shape
- Carving tools** • may include carving knives, chisels (straight, curved, short bent, front bent, spoon bit, back bent, skew, fishtail, spade, parting tool, macaroni, fluterino, backeroni), palm tools, rasps, rifflers, punches, gouges, venier and router
- Tool sharpening** • involves grinding and sharpening using a sandstone wheel or high speed carborundum stone, a fine oilstone, or a fine carving stone
• sharpening a carver's chisel/implement involves sharpening bevels on both sides and rounding off bevels
- Methods and styles of wood carving** • include chip carving, relief carving, Scandinavian flat plane, caricature carving, love spoon, treen and whittling
- Preparation for finishing** • includes sanding (using abrasive papers, glasspaper, garnet paper, aluminium oxide paper and/or silicon-carbide paper), scraping, filling holes and cracks (using stoppers, cellulose filler, shellac sticks, wax sticks) and remedying tool marks (using hot water or hot iron)

Unit Sector(s)

Sector Furniture design and technology

LMFFM4006A Construct joints for custom furniture

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the competency required to join timber by constructing joints using hand and portable power tools. It includes adapting/designing joints that are compatible with the product material, purpose and style of the furniture
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of furnishing maker operations. The competency applies to a work room and on site environment and involves application of skills and knowledge at a highly skilled craftsman or artisan level. These skills and knowledge are to be used within the scope of the person's job and authority
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work	<p>1.1. Applicable <i>legislative, OH&S</i> and <i>organisational</i> requirements relevant to constructing joints for custom furniture are verified and complied with</p> <p>1.2. <i>Instructions</i>, plans and/or design briefs are read and interpreted to identify furniture joint requirements</p> <p>1.3. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Product purpose, furniture style and construction material are identified</p> <p>1.5. Joints are identified and type of joint to be used is selected and adapted/developed as necessary</p> <p>1.6. Tools, adhesives and fasteners are selected to match the joint type</p> <p>1.7. Quality checking procedures are developed and documented for each step in the joint construction process</p>
2. Make joint	<p>2.1. Cutting and joining lines are marked out to suit joint type</p> <p>2.2. Measurements and calculations are checked for accuracy to ensure quality outcomes</p> <p>2.3. Timber features are identified and optimal usage criteria are observed</p> <p>2.4. Timber is cut to specification, inspected and prepared for joining</p> <p>2.5. Timber is joined in accordance with the job specifications</p> <p>2.6. Fasteners and adhesives are used to make joints firm where required</p> <p>2.7. Finished joint is checked against quality requirements</p>
3. Complete housekeeping	<p>3.1. Unused materials are stored or recycled as required</p> <p>3.2. Tools and equipment are cleaned and stored appropriately</p> <p>3.3. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices</p> <p>3.4. Work area is cleaned and rubbish disposed of appropriately</p> <p>3.5. Workplace documentation and/or reports are</p>

ELEMENT	PERFORMANCE CRITERIA
	completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Collect, organise and understand information related to work orders, basic plans and safety procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- Work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate custom furniture jointing problems to avoid re-work and wastage
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities including the preparation and layout of the worksite and the obtaining of tools and materials to avoid any back tracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Clarify and confirm work instructions
- Plan work within given task parameters
- Accept responsibility for given tasks
- Set, monitor and satisfy personal work goals
- Satisfy the competency requirements for the job
- Maintain current knowledge of jointing tools and materials
- Maintain current knowledge of precision timber jointing techniques
- Seek learning opportunities
- Use the workplace technology related to the selection, preparation, operation and maintenance of hand and power tools including calculators and measuring devices
- Apply knowledge of timber technology to optimise the selection and use of timber varieties

Required knowledge

- State or Territory OH&S legislation, regulations, standards and codes of practice relevant to moisture suppressants and barrier systems
- Organisational and site standards, requirements, policies and procedures for the creation of joints
- Types of tools and equipment used in joint construction and procedures for their safe use, operation and maintenance
- Characteristics and properties of timber being used

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• Characteristics, properties and selection criteria of adhesives used• Matching requirements of adhesives and fasteners to timbers/materials used• Environmental protection requirements• Established communication channels and protocols• Problem identification and resolution• Work flow in relation to the furniture items being made or repaired |

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for preparing and presenting design information
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Select appropriate joint types for the furniture item
- To produce a minimum of four different joint types as specified in the Range Statement in accordance with industry standards and tolerances with at least two produced substantially by hand operations
- Utilise at least three different adhesive types
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the design

EVIDENCE GUIDE	
	<p>and application of jointing techniques</p> <ul style="list-style-type: none"> • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other joint related units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OH&S, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OH&S requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OH&S, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Joints for custom furniture	<ul style="list-style-type: none"> are to include dowel, mortise and tenon, dovetail, lap joint, biscuit joint, finger joint, housing joint, mitre or bridle joints
Tools and equipment	<ul style="list-style-type: none"> are to include chisels, mallets, mortise gauges, vernier callipers, vices, dovetail saws, tenon

RANGE STATEMENT	
	<p>saws, coping saws, planes, files, hand drills, power drills, dowel jigs and power routers</p> <ul style="list-style-type: none"> • may include portable biscuit machines, power planers, power saws and power sanders
Materials	<ul style="list-style-type: none"> • may include timber (both indigenous and overseas), adhesives and fasteners
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Production planning figures • Workplace instructions, including job sheets, plans, specifications, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturers' instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the production of <i>curved and shaped</i> components for custom furniture are verified and complied with</p> <p>1.2. <i>Instructions</i> or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. <i>Production materials</i> are identified, evaluated and selected</p> <p>1.4. <i>Tools and equipment</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.5. Techniques for bending, forming and shaping components are identified, evaluated and selected for the particular applications</p> <p>1.6. Sequence of work is planned, including the starting point, to ensure efficiency and quality of construction</p> <p>1.7. Quality checking procedures are developed and documented for each step in the production process</p>
2. Complete construction	<p>2.1. Component specifications are set out according to work instructions and materials marked according to industry practices</p> <p>2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications</p> <p>2.3. <i>Material bending, forming and shaping</i> are undertaken in accordance with the production plan</p> <p>2.4. Components are checked against specified tolerances, fit and accuracy</p>
3. Complete housekeeping	<p>3.1. Unused materials are stored or recycled as required</p> <p>3.2. Tools and equipment are cleaned, maintained and stored appropriately</p> <p>3.3. Faulty or defective equipment is tagged and reported in accordance with workplace practices</p> <p>3.4. Work area is cleaned and rubbish disposed of appropriately</p> <p>3.5. Workplace documentation or reports are completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Demonstrates skills to:

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems in the production of curved and shaped components to avoid re-work and wastage
- innovate and modify techniques for bending, forming and shaping where conventional techniques are not achieving results
- select most appropriate and efficient bending or shaping technique for the given job
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and obtaining equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of installation techniques
- seek learning opportunities
- use the limited workplace technology related to the production of curved and shaped components for custom furniture including tools, equipment and measuring devices

Demonstrates knowledge of:

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the production of curved and shaped components for custom furniture
- organisational and site standards, requirements, policies and procedures for the production of curved and shaped components for custom furniture
- techniques for timber bending, forming and shaping
- types, characteristics, uses, limitations and maintenance requirements of solid

REQUIRED SKILLS AND KNOWLEDGE

timbers commonly used in furniture production

- types, characteristics, uses and limitations on hand and power tools used in timber bending, forming and shaping
- the interpretation of plan representation of furniture design
- techniques for the preparation of drawings/set-outs/rods and geometrical concepts
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- work flow within the workplace

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the production of curved and shaped components for custom furniture
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Produce a minimum of six significant timber curved components, five from solid timber and one using ply:
 - one involving shaping from solid timber using hand techniques
 - one involving shaping from solid timber using machine techniques
 - one involving laminating
 - one involving use of heat/steam
 - one involving other techniques
- Items must demonstrate appropriate design, use of materials and strength for purpose
- Conduct operator maintenance on machines and related tools and equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in

EVIDENCE GUIDE

an off-site context

- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - realistic curved and shaped component tasks
 - materials and equipment relevant to production of curved and shaped components for custom furniture
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other related units of competency

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

- | | |
|------------------------------------|--|
| Legislative requirements | <ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation. • Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to producing timber <i>veneered components</i> for custom made furniture</p> <p>1.2. <i>Instructions</i>, plans or design briefs are read and interpreted to identify processes and materials to complete work tasks</p> <p>1.3. Suitable timber or timber veneer material is identified, evaluated and selected</p> <p>1.4. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.5. Sequence of work is planned and documented, including the starting point, to ensure efficiency and quality of finish</p> <p>1.6. Quality checking procedures are developed and documented for each step in the veneering process</p>
2. Prepare timber veneer	<p>2.1. Timber is selected and the cutting face is prepared</p> <p>2.2. Veneer timber is cut along grain at the specified thickness</p> <p>2.3. Veneer thickness and consistency are monitored with respect of size and tolerances</p> <p>2.4. Veneer is dressed to the required tolerances for further use</p>
3. Layout and prepare materials	<p>3.1. Design of veneer is laid out</p> <p>3.2. Veneers are selected and checked for flaws</p> <p>3.3. Veneers are matched and method of <i>joining to adjacent veneers</i> is selected and prepared for</p> <p>3.4. <i>Veneers</i> are prepared for application and laid out</p> <p>3.5. <i>Suitable joining processes</i> to backing and adjacent veneers are selected and prepared</p> <p>3.6. The <i>style of edge finish</i> is selected and prepared for</p>
4. Apply and/or fit and finish	<p>4.1. Veneers are measured, marked and cut to size and applied to base material</p> <p>4.2. Adhesives are applied according to workplace procedures and manufacturers' instructions</p> <p>4.3. Selected joining process is applied in accordance with workplace procedures including the use of protective equipment</p>

ELEMENT	PERFORMANCE CRITERIA
	4.4. Final trim and finishing are completed to specifications
	4.5. Work is checked against required quality standards
	4.6. Any non-conformity with the required quality standard is rectified
5. Complete housekeeping	5.1. Unused materials are stored or recycled as required
	5.2. Tools and equipment are cleaned, maintained and stored appropriately
	5.3. Faulty or defective equipment is tagged and reported in accordance with workplace practices
	5.4. Work area is cleaned and rubbish disposed of appropriately
	5.5. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Demonstrates skills to:

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate veneering production and application problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of installation techniques
- seek learning opportunities
- use the limited workplace technology related to the production of timber veneer components, including tools, equipment, calculators and measuring devices.

Demonstrates knowledge of:

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the production of timber veneer components
- organisational and site standards, requirements, policies and procedures for the production of timber veneer components
- types, characteristics, uses and limitations of veneers
- techniques for the manufacture and application of veneers
- types, characteristics, uses and limitations of different veneering timbers
- the interpretation of plan representation of furniture design
- the preparation of drawings/set outs
- types, characteristics, uses and limitations of tools and equipment and procedures

REQUIRED SKILLS AND KNOWLEDGE

for their safe use, operation and maintenance

- work flow in relation to furniture production
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for producing timber veneer components
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Prepare a minimum of one significant veneer including:
 - the selection of materials
 - the preparation of the cutting face
 - the cutting and dressing of the veneer
- Apply and finish veneers to at least three different surfaces - one flat, one curved and one being a laminate, including at least two requiring veneer edging
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - realistic task for the preparation/production of a veneer
 - realistic tasks related to the application of veneers

EVIDENCE GUIDE

Method of assessment

- materials and equipment relevant to the production and application of veneers
- specifications and work instructions
- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other related units of competency

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

- Legislative requirements**
- are to be in accordance with applicable legislation from all levels of government that affect organisational operation.
 - Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
- OHS requirements**
- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures.
 - Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
- Organisational requirements**
- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
- Veneered components**
- refers to the thin slices of wood, usually thinner than 3 mm (1/8"). Timber veneer is usually glued and pressed onto core panels of different material (such as wood, particle board or medium density fibreboard). They are also used in parquetry, marquetry, intarsia and inlays.
- Instructions**
- workplace veneering instructions, including job sheets, plans, specifications, drawings and designs

- workplace procedures relating to reporting and communications
 - manufacturer instructions for the use of equipment and materials
- Tools and equipment**
- are to include but are not limited to knives, chisels, measuring tapes or rules, mallets, squares, levels, planes, band saws, rotary lathe, slicing machine, half round lathe, power saws, power drills/screwdrivers, hand drills, pneumatic tools, clamps, screwdrivers, rollers, laminate trimmers, cutters and hand routers, sand paper, wire wool and sanding block
- Materials**
- may include but are not limited to timber, manufactured board, laminates, timber strips, adhesives, cleaning materials and tapes
- Veneers**
- where two or more layers of veneer are adhered to each other they are referred to as laminates. A laminate may be employed to provide structured strength or shape (eg the back of a chair) that also has visual appeal. Alternatively, a veneer may be applied to a laminate of different material for visual appeal whilst maintaining other structural benefits. In most of these latter cases the laminate used is entirely covered from exterior view.
- Suitable joining processes**
- Employ one of the following methods:
 - **Mechanical Press.** A press that uses two flat plates being brought together to press the veneer to the substrate during the gluing process. It may be purely mechanical using a screw or level action or be closed with a hydraulic ram. This method is only used for veneering flat surfaces.
 - **Vacuum Technique.** This involves the component being veneered being placed in a form of bag from which the air is extracted. This method is favoured for veneering curved surfaces and also by smaller operators because of its flexibility.
 - **Hot Glue Hammering.** This is a traditional method of veneering and is not now widely used. It involves using hot glue on the surfaces being veneered and then hammering the veneer to the subsurface with a hammer. The earliest known examples of veneer used this method.
- Joining to adjacent veneers**
- Refers to the joining of adjacent sheets of veneer. This may be by:
 - butting two right angle edges together then 'stitching' the veneer using a hot melt glue or tape

- (commonly used for flat surfaces) or
- using a scarf joint then gluing the surfaces together (commonly used on curved surfaces)
- Style and edge finish**
- may be either solid timber or veneer to cover the exposed edge

Unit Sector(s)

Sector Furniture design and technology

LMFFT4001B Coordinate on-site installation of furnishing products

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the competency to coordinate tradespersons who provide services involved in the installation, refurbishment, restoration or repair of furnishing products, primarily in a kitchen, bathroom or laundry setting.
------------------------	--

Application of the Unit

Application of the unit	
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the coordination of trade services involved in the project	1.1. Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity 1.2. Load bearing walls are located 1.3. Work site is inspected for compliance with contract documentation, including confirmation that all work can be undertaken as a non-structural improvement 1.4. Additional information or revised drawings are sourced where necessary 1.5. Tradespersons are identified for the required installing services 1.6. Timeframes for carrying out the work are developed
2. Coordinate and inspect trade service outcomes	2.1. Appropriate trade services are coordinated in accordance with relevant timeframes 2.2. The impact of any variations are assessed and timeframes are varied as necessary 2.3. Trade works are progressively checked to ensure compliance with contract documentation 2.4. Satisfactory performance of trade services carried out by trade provider is monitored 2.5. The rectification of identified faults is organised and coordinated 2.6. The restoration of the site is coordinated to ensure compliance with contractual and industry standards
3. Verify trade work compliance with contract requirements	3.1. Final trade work is inspected, assessed and accepted or rejected 3.2. Payments for accepted trade services are authorised

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to multi-trade work instructions and work orders, building and structural plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with tradespeople, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the coordination of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate time and material requirements
- use pre- and progressive checking and inspection techniques to anticipate coordination problems, avoid re-working and avoid wastage
- use workplace technology related to the coordination, including communication equipment, time and management aids and other measuring devices

Required knowledge

- the tasks, functions, responsibilities and regulatory requirements for tradespeople involved in water supply and drainage, supply of power and lighting, ceiling and wall linings, tiling and waterproofing, flooring and painting
- relevant building codes, regulations and codes of practice
- plan interpretation techniques and standards
- workplace coordination and communication techniques
- conflict resolution techniques

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret contracts and work orders and locate and apply relevant information.
- Apply safety coordination requirements for equipment, products and materials, including ventilation requirements and the use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Coordinate a site involving at least three tradespeople on three separate occasions
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to work instructions, plans, work orders, associated and supporting tradespeople, industry and other standards, communications equipment and work areas.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Furnishing products may include:	<ul style="list-style-type: none"> • cabinets and the full range of products required in the installation • refurbishment • restoration or repair of furnishing • particularly in kitchens • bathrooms or laundries
Coordinated tradespersons	<p>Those who, by regulation and competency, have the authority to work on:</p> <ul style="list-style-type: none"> • water supply • fixtures and fittings • drainage • natural and artificial lighting • power sources • ceiling and wall linings • waterproofing and sealants • ceramic tiling • interior painting • floor/finish coverings
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.</p>
Information and procedures	<ul style="list-style-type: none"> • Contractual documents and explanatory notes • Building codes, Australian Standards and CSIRO Notes on the Science of Building

RANGE STATEMENT

	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess requirements	1.1. Customer/specification is consulted to determine requirements: 1.1.1. Cost and feasibility of requirements is evaluated 1.1.2. Development requirements are explored, taking into consideration process, material, quantity, cost and outcome requirements 1.1.3. Codes, regulations and technical documentation are consulted to establish design limitations, where applicable 1.1.4. Specialist expertise is consulted as required
2. Propose options	2.1. Options for the use and modification of stock lines are defined and proposed to the customer to determine most appropriate modifications 2.2. Modification of stock lines is considered to take into account production, facility, ergonomic requirements, OHS and environmental factors
3. Develop modifications to stock lines	3.1. Modifications are developed to meet customer specifications/standards, use and all legislative or regulatory requirements 3.2. Verification of the development is undertaken in accordance with workplace procedures
4. Coordinate implementation and testing of modifications	4.1. Implementation of modifications is arranged and coordinated 4.2. Outcome is tested and assessed to establish conformance to requirements 4.3. Variations to the design are carried out where necessary 4.4. Documentation is prepared to meet all requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to the customisation of stock lines, including the relevant technical, regulatory, ergonomic, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment, systems and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and dimensions, create and test customisation options, and estimate material requirements
- create and apply systematic problem solving techniques to anticipate customisation problems, avoid re-working and avoid wastage
- use the workplace technology related to the customisation, including machinery, tools and equipment, calculators and measuring devices and control systems

Required knowledge

- company business policies and plans, including procedures for product modification and product development
- ergonomic principles for furniture design and manufacture
- enterprise design practices and processes
- the range of company products, market, work systems and equipment
- relevant regulatory requirements, recognised standards and codes, and industry practices

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical Aspects of Evidence</p>	<ul style="list-style-type: none"> • Locate, interpret and apply relevant information • Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment • For a minimum of one significant stock line: <ul style="list-style-type: none"> • identify the impact of decisions in terms of commercial, environmental and safety risks • evaluate existing stock line designs and propose modifications • evaluate design and design modification performance • coordinate modification and testing • Suggest improvements to stock line designs and where authorised, negotiate changes • Work effectively with others
<p>Resource Implications</p>	<p>Stock lines, including design, production specifications and procedures, customer requirements and access to realistic customisation options.</p>
<p>Method of Assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.</p>
<p>Context of Assessment</p>	<p>Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • Work involved in customisation of existing stock lines to satisfy particular site and/or customer requirements • Work is generally performed with little external assistance and with minimal supervision or direction. The development of modifications may require the assistance and cooperation of others
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • The proposing of modifications to existing stock lines to satisfy customer requirements is undertaken in accordance with established enterprise procedures and practices • Customers may be internal or external
Tools and equipment may include:	<ul style="list-style-type: none"> • any normally used in producing/constructing/assembling the stock lines of the enterprise
Personal protective equipment	<ul style="list-style-type: none"> • that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Product drawings, prototype, design brief, patterns, specifications and/or specifications • Machine manufacturers' specifications and operational procedures • Workplace instructions, including, job sheets,

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect information and analyse job requirements	1.1. Job specifications are read and key requirements are noted: <ul style="list-style-type: none"> 1.1.1. Steps and stages in the process are identified 1.1.2. Clarification of specifications is sought where required 1.1.3. Equipment capabilities are assessed in terms of meeting job specifications 1.1.4. Enterprise production plans, including run time and quantities are compared with plant capabilities
2. Complete preparatory activities	2.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work <ul style="list-style-type: none"> 2.2. Reports are made to appropriate personnel 2.3. Proposals for modifications/adaptation of equipment are made 2.4. Requirements for tooling/dies are listed 2.5. Raw material requirements are listed and communicated to appropriate personnel
3. Organise operational plans	3.1. Operational work plans, including timeframes and milestones are developed <ul style="list-style-type: none"> 3.2. Production operations are organised ensuring optimum use of resources 3.3. Operational plans are recorded and amended in accordance with enterprise procedures and industry practice
4. Conduct trials to monitor equipment operation and product quality	4.1. Equipment is set up to make appropriate use of guards, warning devices and safety features, and standard operating procedures are modified to suit the production <ul style="list-style-type: none"> 4.2. Equipment operations are monitored to ensure variations or inconsistencies in output are identified, reported and rectified 4.3. Required adjustments to equipment controls and settings are made to ensure consistency and continuity in production 4.4. Equipment maintenance, set-up and close-down procedures are planned and documented 4.5. Product quality is inspected and compared to requirements

ELEMENT	PERFORMANCE CRITERIA
	4.6.Process is modified where required to improve product quality
5. Monitor product finish	5.1.Product finish is checked for conformity to design specification 5.2.Any non-conformity in product finish is noted and possible causes investigated and documented
6. Evaluate production process	6.1.Productivity information and reports are prepared and processed 6.2.All procedures for the process are checked for conformity with trial outcomes 6.3.Work procedures are authorised by appropriate personnel for implementation 6.4.Recommendations for variations to design specifications are made to appropriate personnel.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to the organisation of production processes, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the conceptual requirements, coordination of work with site supervisors, workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment, systems and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, complete production computations and estimate material requirements
- create and apply systematic problem solving techniques to anticipate production problems, avoid reworking and avoid wastage
- use the workplace technology related to production, including machinery, plant, tools and equipment, calculators and measuring devices and computing/computer-aided systems

Required knowledge

- organisational and workflow theory
- work leadership theory
- company business policies and plans, including procedures for setting up for production
- company products, market, work systems and equipment
- machine processes relevant to the production
- quality procedures, inspection and testing requirements
- legislative requirements of the work activities

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Analyse job requirements and materials and equipment capabilities
- For a specified and significant production operation organise the implementation of operational plans, including:
 - conduct of trials
 - coordination of the production process
 - evaluation of the production process
 - reporting on the success of the process
- Lead others and work effectively to organise for production
- Encourage participation of employees in the planning of work activities and changes
- Suggest improvements to production operations and where appropriate, negotiate changes

Resource Implications

Production equipment, raw materials, personnel and production plans and schedules.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers the work involved in the operational organisation, preparation, trialling and monitoring of production processes for enterprises within the furnishing industry • Operational resources include personnel, equipment and machinery, production materials and consumables, and infrastructure
Unit context	<ul style="list-style-type: none"> • OHS legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem solving skills
Operational planning information	<p>Information may be obtained from sources such as enterprise production plan/schedule, product drawings and specifications, equipment instructions and capacities, relevant standards, inspection requirements and design rules, customer orders, archives, records and cutting lists</p>
Workplace environment	<ul style="list-style-type: none"> • Work is generally performed with little assistance from others and with minimal supervision or direction • Organising production is undertaken in accordance with established enterprise procedures and practices • Customers or suppliers may be internal or external

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify materials requirements	1.1. Drawings and specifications for materials are read and interpreted 1.2. Sources of product supply are identified 1.3. Normal quantity supply and matching storage facilities and equipment are identified 1.4. Material safety data sheets or other supplier safety information are read and any relevant engineering controls or personal protection equipment are identified, any additional resources required for safe workplace handling and storage of the materials are documented and reported 1.5. Procedures to deal with fire or explosion risk, spills or injury are identified and recorded
2. Monitor consumables and production materials	2.1. Consumables and production materials are checked for conformity to design specification and capacity to meet the requirements of the end product 2.2. Any non-conformity in materials is noted and possible causes investigated and documented, including any variations, which may need to be made to the production process or materials used 2.3. Materials and consumables are compared with competitive products, market information and recommendations are made on preferred options 2.4. Preparation procedures for consumables and production materials are identified and checked for required additives, consumables and other materials or equipment requirement 2.5. Materials ordering, storage, safe movement and waste disposal needs are identified
3. Document materials estimates	3.1. All procedures for the estimates process are checked for conformity with workplace procedures 3.2. Cost reports (including time, maintenance) are prepared 3.3. Estimates are authorised by appropriate personnel for implementation 3.4. Recommendations for variations to materials specifications are made to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to the production inventory, including the relevant technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of the inventory requirements and availability and the reporting of outcomes and proposals
- plan and organise activities to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly calculate inventory requirements, taking into account lead times, re-order triggers, impacts of turnover and supply margins
- create and apply systematic problem solving techniques to anticipate interruptions to supply and to avoid surplus holdings and wastage
- use the workplace technology, including calculators and measuring devices and computing/computer-aided systems

Required knowledge

- company business policies and plans, including procedures for company products, market, work systems and equipment
- authorised production processes and plans and related materials and consumables
- materials and process characteristics and special requirements
- commercial supply systems, including standard documentation support processes
- cost-benefit analysis or equivalent techniques

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Identify process requirements in terms of materials and specialist equipment
- Identify appropriate materials and consumables to match production and product quality standards
- Identify commercially viable sources of materials and consumables
- Calculate materials and other resource requirements and costs
- Cost and document requirements
- Identify the impact of decisions in terms of commercial, environmental and safety risks

Resource implications

Access to production plans, materials and consumables specifications, commercial supply system indices, directories and catalogues, financial resources and delegations, and appropriate software.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- This unit covers the work involved in identifying and documenting appropriate amounts of materials and consumables to support production
- Decisions are made within the context of application of process, materials knowledge and estimates and extensive knowledge of the required production output and product quality standards
- The function is undertaken in accordance with established enterprise procedures, and practices may include requirements recommended by manufacturers

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem solving skills

Workplace environment

- Work may involve individual and team related activities and will normally relate to the standard forms of activity performed in the enterprise and industry
- Work is performed with minimal supervision or direction
- Customers or suppliers may be internal or external

Machines/equipment may include:

any machine typically used in the furnishing industry

RANGE STATEMENT	
	<ul style="list-style-type: none"> • microprocessor or computer-controlled machines <p>both production and facility equipment used in the enterprise</p>
Materials may include but are not limited to:	<ul style="list-style-type: none"> • timber • metal alloys • cloth, glass • flooring materials • the full range of consumables required to directly support the production process
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions • Manufacturer specifications and instructions • Production process supply support information and specifications • Commercial supply system indices, catalogues and bulletins • Supplier evaluation histories • Budgetary/fiscal constraints • Legislation/regulation/national and industry codes and practices relevant to the product • Quality and Australian standards and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for software installation	1.1. Program format and operational intent is accurately determined and required applications identified 1.2. Specifications are checked for required operating conditions 1.3. Program instructions are checked for compliance with specifications 1.4. Software timers are set to specification where required
2. Install automatic process machine control program	2.1. Appropriate program loading technique is selected 2.2. External loading devices are correctly connected to automatic process machine control systems 2.3. Machine control system is placed in correct operational mode to accept program loading 2.4. Program is downloaded in accordance with manufacturer recommended procedure and enterprise requirements 2.5. Checks are made during and after downloading to ensure accurate and complete data transfer 2.6. External program loading devices and connections are disconnected from process and machine control system
3. Commission automatic process and machine control program	3.1. Operation of the equipment using the program is observed 3.2. Outputs are checked and measured for compliance with specifications 3.3. External inputs are checked for compliance with specifications, according to specified procedures 3.4. Total operation is checked for compliance with specifications where applicable 3.5. Location of program master copy storage is confirmed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to CNC installation and commissioning, including the relevant technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with site managers, supervisors, and other workers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the coordination of equipment, systems and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and calculations required during the installation and commissioning
- create and apply systematic problem solving techniques to anticipate installation and commissioning problems, avoid reworking and avoid wastage
- use the workplace technology related to the installation and commissioning, including calculators, measuring devices and other computing/computer-aided systems

Required knowledge

- computer science theory
- CNC control system characteristics, applications and limitations
- procedures and techniques for programming CNC equipment
- operation requirements of equipment and work systems to be programmed

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information
- Apply safety requirements throughout the sequence, including the use of personal protective clothing and equipment
- Install and commission CNC software on at least two different machines and
 - identify requirements of tasks and organise work to achieve goals and results
 - select and install software programs for the CNC equipment
 - select and apply appropriate loading techniques
 - check and adjust machine operations and programming
 - suggest improvements to CNC controlled operations and where authorised, negotiate changes
- Modify activities to cater for variations in workplace cultures and environment
- Work effectively with others

Resource implications

CNC equipment, software, production materials.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope	<ul style="list-style-type: none"> • This unit covers the work involved in installing and commissioning of CNC process and machine control programs used in the furnishing industry • The installation and commissioning of CNC programs is undertaken in accordance with established enterprise procedures, and practices may include requirements recommended by manufacturers/developers
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate analytical and organisational ability, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • Work may involve individual and team related activities in workplaces where the CNC equipment is either new or being substantially upgraded • Work is generally performed without other qualified assistance • Customers are normally internal
Machines	<p>Machines requiring CNC software installation and commission include individual production/manufacturing or treatment machines and processing and machining centres</p>
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and</p>

RANGE STATEMENT	
	enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Manufacturer specifications and instructions • Procedures for installing and commissioning CNC programs • Organisation work specifications and requirements • Legislation/regulation/national and industry codes and practices relevant to the installation and commissioning • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish the work requirements	1.1. Purpose of the prototype or sample is identified from plans and drawings 1.2. Materials specifications for the item are identified from workplace documentation 1.3. Ergonomic requirements are identified, clarified and satisfied throughout the work process 1.4. Construction requirements and methods are identified appropriate for the materials used
2. Plan prototype or sample construction	2.1. Work plan for the item construction is drafted 2.2. OHS requirements, including personal protection needs, are observed throughout the work 2.3. Compatibility of materials in specifications is checked and any discrepancies reported 2.4. Steps or stages in construction are identified, noting checkpoints for measurements and tests 2.5. Suitable work area is located and cleared ready for work
3. Obtain materials and equipment	3.1. Materials are selected according to specifications and assembled ready for use 3.2. Compatibility of materials with specifications is checked and any discrepancies reported 3.3. Equipment and accessories suitable for working the specified material are assembled 3.4. Appropriate jigs and other construction aids are identified and where required adjusted to suit the work
4. Construct the prototype or sample	4.1. Work plan is followed to construct the item 4.2. Checks are conducted at the identified points 4.3. Modifications to designs and plans are identified and recommended within workplace procedures 4.4. Modifications to the plan are documented and followed 4.5. Prototype or sample is checked for fitness for purpose

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to the construction requirement, including the relevant technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of the construction requirements, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment, systems and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and dimensions, create accurate and scaled drawings, and estimate material requirements
- create and apply systematic problem solving techniques to anticipate construction problems, avoid re-working and avoid wastage
- use the workplace technology related to the construction, including machinery, tools and equipment, calculators and measuring devices and computing/computer-aided systems

Required knowledge

- characteristics of the materials used in relation to the use of the end item
- design features and requirements for the prototype or sample
- operation of tools and equipment used and the application of the finished product
- identification of equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order, plans and specifications and locate and apply relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Construct a minimum of two different prototypes/samples and:
 - identify compatibility/incompatibility of materials, adhesives, fittings, fasteners, for the application
 - select and apply appropriate joinery, construction and finishing techniques
 - select and use appropriate materials, equipment and processes for the item being constructed
 - demonstrate how the design of the prototype components will influence the working lifetime of the item
 - ensure that the prototype satisfies the original or varied specification
- Modify activities to cater for variations in workplace contexts and environment
- Work effectively with others

Resource implications

Materials, work order, specifications, plans, tools, equipment and consumables.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning

EVIDENCE GUIDE	
	knowledge. Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.
Context of assessment	Assessment may occur on the job or in a simulated workplace facility with relevant process equipment, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- This unit covers the work involved in constructing prototypes and samples of products from plans and drawings
- Prototypes and samples may be produced by hand, by using appropriate machines, tools and equipment or by computer assisted production and will reflect the finished products produced by the enterprise
- The unit requires the use of hand and power tools, basic static and specialised machines, and the application of joinery, construction and finishing techniques

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate analytical and organisational ability, discretion, judgement and problem solving skills

Workplace environment

- The construction of prototypes and samples is undertaken in accordance with established enterprise procedures and practices
- Work is generally performed with little external assistance and with minimal supervision or direction
- Customers may be internal or external

Machines/equipment may include:

- any machine typically used in the furnishing sector concerned
- microprocessor or computer-controlled machines

RANGE STATEMENT	
	<ul style="list-style-type: none"> • both production and facility equipment used in the enterprise
Materials	<p>Materials to be used to construct prototypes and samples will represent those normally used by the enterprise in its production processes. They may include but are not limited to:</p> <ul style="list-style-type: none"> • timber • metal alloys • glass • fabrics and textiles • plastics • leather • adhesives • fillers and finishes as appropriate
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices</p>
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions • Designer/drawer specifications and instructions • Organisation work specifications and requirements • Legislation/regulations/national or industry codes and practices relevant to the prototype/sample construction • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify specifications and test procedures	<p>1.1. Product quality specifications are read, drawings interpreted and test parameters are identified</p> <p>1.2. Test methods for each required test parameter are identified and the most efficient test method is noted</p> <p>1.3. Any requirement for testing by personnel external to the work area is identified and appropriate permission is obtained</p> <p>1.4. Design features that impact on testing and inspection are identified</p>
2. Select evidence	<p>2.1. Appropriate conforming and/or non-conforming products, materials and/or waste are selected for testing in accordance with enterprise requirements</p> <p>2.2. Observations of operators and copies of procedures are collected</p>
3. Conduct and interpret tests	<p>3.1. Tests are conducted following workplace procedures and results are documented</p> <p>3.2. Comparisons of all data collected are made</p> <p>3.3. Any recommendations are noted and considered for feasibility</p>
4. Report findings	<p>4.1. Findings of tests are documented</p> <p>4.2. Any potential or existing problems and appropriate recommendations are identified and reported in accordance with enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to quality checking processes, including the relevant technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with site supervisor, other workers and customers, and the reporting of outcomes and findings
- plan and organise activities, including the obtaining of equipment, systems and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and calculations required in quality checking processes and estimation of material requirements
- create and apply systematic problem solving techniques to anticipate problems, avoid re-working and avoid wastage
- use the workplace technology related to quality checking, including machinery, tools and equipment, calculators and measuring devices and computing/computer-aided systems

Required knowledge

- general quality systems theory
- sampling techniques for commonly encountered materials
- inspection techniques and faults common within the sector products
- testing techniques (destructive and non-destructive) relevant to the sector and related equipments/aids
- workflow in relation to required times and stages where quality checking is required

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Interpret work order and determine test requirements • Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment • Follow work instructions, operating procedures and inspection practices to arrange/conduct a minimum of four different processes covering sampling, inspection and testing • Analyse test results and interpret outcomes against requirements • Modify activities to cater for variations in workplace contexts and environment • Work effectively with others
<p>Resource implications</p>	<p>Production or product finishing facility, testing equipment and procedures.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- This unit covers the work involved in collecting samples and their inspections and testing to check product quality
- Extent of sampling and the nature of inspection and testing will be undertaken in accordance with industry standards and practices and will reflect the type of product, the materials and processes used in its manufacture and its end use. It may include:
 - samples of raw materials
 - components,
 - assemblies
 - end products
- Materials to be sampled will represent those normally used by the enterprise in its production processes. They may include but are not limited to:
 - timber
 - metal alloys
 - glass, fabrics and textiles
 - plastics
 - leather
 - adhesives
 - fillers and finishes as appropriate

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate

RANGE STATEMENT	
	organisational and analytical ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • Sampling, inspecting, testing and reporting of findings is undertaken in accordance with established enterprise procedures and practices • Work is generally performed with little external assistance and with minimal supervision or direction • Customers or suppliers of material to be sampled may be internal or external
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions • Designer/drawer specifications and instructions • Quality systems documentation or equivalent containing sampling, inspecting and testing frequency and criteria • Organisation work specifications and requirements • Legislation/regulation/national and industry codes and practices relevant to the products • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify situations where statistics are used in the workplace	1.1. Types of statistical representations of data used in the workplace are identified 1.2. Users of statistical data in the workplace are identified 1.3. Statistical data representations are matched for applications to: <ul style="list-style-type: none"> 1.3.1. monitoring workflow 1.3.2. inventory and stock levels 1.3.3. customer surveys 1.3.4. supplier and market analysis
2. Collect data	2.1. Purpose of data collection is identified 2.2. Sources of information are identified 2.3. Data collection methods are used 2.4. Mathematical processes are used to arrange data 2.5. Data collected is checked for accuracy 2.6. Potential for inaccurate results arising from variables is estimated and described
3. Use calculations to present data for analysis	3.1. Data collected is represented on graphs, tables, averages and percentages as required 3.2. Spreadsheets, flow charts and/or graphs are used to present data
4. Interpret trends and patterns from numerical data	4.1. Non-conforming results outside of the predicted outcome are noted and reasons identified 4.2. Trends or patterns in data are noted 4.3. Possible reasons for trends or patterns are generated 4.4. Potential solutions are identified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and interpret information related to production, distribution, resource and safety issues
- communicate ideas and information by means and methods which are comprehensible to supervisors, other workers and customers
- access and interpret business information in a timely manner so that it may be used to avoid any backtracking, workflow interruptions or wastage
- work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly create and interpret statistical information
- create and apply systematic problem solving techniques to anticipate changing information requirements or influences
- use the workplace technology related to workplace information, including equipment, calculators and measuring devices and computing/computer-aided systems

Required knowledge

- contemporary business information and statistical reporting, forecasting and presentation techniques
- mathematical calculations, including:
 - addition
 - subtraction
 - multiplication
 - division
 - percentage
- company business policies and plans, including procedures for reports
- company quality systems and business equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Use general and statistical data representations to explain work processes and/or outcomes
- Identify and read graphs, charts, tables and statistical results
- Interpret general and statistical data accurately
- Use appropriate workplace language and communication technologies
- Maintain workplace records

Resource implications

Range of business information and statistical data, graphical, tabular and spreadsheet presentation capabilities.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers the work involved in interpreting and using statistics to manage performance in the areas of production, services and organisation • The application of statistics can be computer assisted, either integrated into the enterprise processes, or stand-alone. Hand held calculators, graphs, charts and mathematical tables may also be used.
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate analytical ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • The use of statistics within an enterprise is undertaken in accordance with established enterprise procedures and practices • Work is generally performed with little external assistance and with minimal supervision or direction. The development of modifications may require the assistance and cooperation of others • Customers may be internal or external
Tools and equipment	<p>Tools and equipment are to include appropriate computing systems for the storage, manipulation, management and presentation of statistical information</p>

RANGE STATEMENT	
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions • Organisation work specifications and requirements • Benchmarking information and standards • Legislation/regulations/national and industry codes and practices relevant to the product • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine customer requirements	1.1. Customer is consulted to determine requirements 1.2. Examples of furnishing styles and materials are shown to the customer 1.3. Limitations and benefits of styles and materials are explained 1.4. Options for the use and modification of styles or materials are defined and proposed to the customer 1.5. Product requirements are explored, taking into consideration design parameters, material, process, quantity, cost and outcome requirements 1.6. Cost and feasibility of customer requirements/options is evaluated
2. Match options to customer requirements	2.1. Customer specifications/standards and user requirements are compared to furnishing styles and materials options 2.2. Range of best fit styles and materials are presented to the customer for evaluation 2.3. Customer queries are answered and examples used to illustrate answers
3. Document requirements	3.1. Requirements are confirmed and/or approved in the appropriate format 3.2. Specification details are established and confirmed, including quality standards in accordance with enterprise procedures 3.3. Required completion date and any delivery requirements are documented 3.4. Special instructions to production team are added where required 3.5. Appropriate cost details are incorporated when necessary

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to furnishing styles and materials, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements and the oral and written reporting of outcomes to the client
- plan and organise activities to access products, equipment, systems and materials to avoid any backtracking, interruptions or communication break-downs
- work with other and in team by recognising dependencies and using cooperative approaches
- use mathematical ideas and techniques to correctly complete measurements, calculate area and dimensions, create accurate and scaled drawings, estimate material requirements and calculate costs
- create and apply systematic problem solving techniques to anticipate problems, avoid re-working and avoid wastage
- use the workplace technology related to the matching process, including computer-aided systems

Required knowledge

- the range of company products, market, work systems and equipment
- relevant furnishing styles and materials
- company business policies and plans, including procedures for product modification and product development
- legislative requirements of the work activities

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Locate, interpret and apply relevant information • Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment • On two occasions involving different products, match furnishing style/materials to meet customer requirements and: <ul style="list-style-type: none"> • evaluate design and design requirements • evaluate furnishing styles and materials and compare them to customer requirements • suggest improvements to stock line designs and materials and where appropriate, negotiate changes • identify the impact of decisions in terms of commercial, environmental and safety risks • Work effectively with others
<p>Resource implications</p>	<p>Product lists, furnishing style catalogues or references and customer requirements.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.</p>

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information	1.1.Details of the particular product and competition products are obtained 1.2.Details of the proposed production operation are obtained and analysed 1.3.Labour unit cost projections are obtained and agreed 1.4.Logistic support contracts, supply agreements or equivalent are obtained and analysed 1.5.Details of proposed warehousing and physical distribution systems and related cost factors are obtained 1.6.Information is converted to usable form and stored ready for retrieval and application
2. Estimate materials and labour	2.1.Types and quantities of materials required for production are estimated and recorded 2.2.Time requirements for production activities and other lead times are estimated 2.3.Labour requirements for direct production and handling operations are estimated and recorded
3. Determine/calculate overheads	3.1.Components contributing to overhead costs are identified 3.2.Overhead costs to be attributed to work in accordance with commercial and enterprise procedures are identified
4. Calculate costs	4.1.Total materials costs and labour costs are calculated in accordance with enterprise procedures 4.2.Total production cost is calculated, including overheads and mark-up percentages 4.3.Final cost to customer is calculated in conjunction with marketing/sales personnel
5. Document details and verify where necessary	5.1.Details of costs and charges are documented in accordance with enterprise practice 5.2.Costs, calculations or other details are verified by other enterprise personnel, as required 5.3.Details are documented for future reference in accordance with enterprise practice

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to production costing including the relevant technical, commercial, industrial and accounting requirements
- communicate ideas and information to enable clarification of the production and related requirements and to present the outcomes in an appropriate manner
- plan and organise activities to avoid backtracking and re-working of solutions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly estimate and validate labour, materials and on-costs and calculate production costs
- create and apply systematic problem solving techniques to anticipate costing problems, avoid re-working and avoid wastage
- use the workplace technology related to costing, including calculators and measuring devices and computing/computer-aided systems

Required knowledge

- production systems documentation processes
- enterprise costing procedures
- mathematical formulae and processes relevant to costing
- components of labour costs
- enterprise/commercial approach to overhead costs
- enterprise/commercial approaches to warehousing and physical distribution costs
- enterprise information management processes, including storage requirements

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- For a significant mass production operation, determine the production and product costs using the following or equivalent steps:
 - obtain all information relevant to the determination of costs
 - interpret plans, specifications and instructions for production and materials to be used
 - estimate quantities of materials required
 - determine the types and amount of labour required to complete the work
 - estimate time required to complete the work
 - determine/calculate overheads
 - document the process and outcomes
- Work effectively with others

Resource implications

Access is required to real or appropriately simulated situations involving estimation and costing of production operations and products.

Access is required to specifications and costs of relevant equipment and materials and information on labour costs and availability, on costs, safety costs, regulations, quality standards, and enterprise procedures.

Access is required to all necessary facilities and associated equipment, including calculators, computers and relevant software.

Method of assessment

Assessment methods must confirm consistency or the potential for consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of performance and samples of work outcomes and questioning on underpinning knowledge.

Assessment may be conducted over time and may be in conjunction with assessment of other units of

EVIDENCE GUIDE	
	competency.
Context of assessment	Assessment may occur on the job or in a simulated workplace facility with a relevant scenario, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • Work involves the estimating and costing of production and products in a significant mass production environment • Work may involve referral of matters to other enterprise personnel
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate organisational and administrative ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • Work undertaken in accordance with established procedures involving a range of products, equipment and installation sites • Interaction with customers and other personnel from the operator's workplace • Use of relevant tools, equipment and resources, including: <ul style="list-style-type: none"> • measuring equipment • product sales literature • product samples
Overhead costs	<p>Overheads may be calculated for a specific product or be a constant component based on historical records and may include such costs as rental/lease costs, utilities, non-production resources, depreciation of plant and equipment, warehousing margins, physical distribution unit costs, insurance and other costs incurred by doing</p>

RANGE STATEMENT	
	business
Information and procedures	<ul style="list-style-type: none"> • Enterprise production plan and schedule • Enterprise financial management policy and procedures • Enterprise policy and procedures for cost and apportioning overheads • Labour employment costs (awards, EBA, contracts) • Material/supply costs (contracts, standing agreements, market rates, warehousing margins) • Physical distribution contracts or arrangements • Australian, international and enterprise quality standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify purchasing requirements	1.1. Purchasing requirements are identified from material specifications, orders and instructions in accordance with workplace procedures 1.2. Purchasing requirements are prioritised, where required, in consultation with others 1.3. Quantities, quality of goods, price limitations and delivery requirements are determined or confirmed in consultation with appropriate personnel
2. Source materials and consumables	2.1. Source/s of materials and/or consumables are identified from workplace preferred supplier lists or through networks and knowledge of local and/or overseas suppliers 2.2. Difficulties in supply are reported in accordance with workplace procedures 2.3. Availability of supply is confirmed
3. Check costings	3.1. Alternative suppliers are contacted to check costings 3.2. Actual costs are compared to predicted costs 3.3. Any recommendations regarding alternative suppliers are communicated to appropriate personnel following workplace procedures 3.4. Delegation to order goods/materials/equipment is exercised
4. Purchase materials and consumables`	4.1. Capacity of supplier to meet price, quality and delivery expectations is checked 4.2. Purchase order/list is developed in accordance with workplace procedures 4.3. Order is placed with supplier and delivery schedules are confirmed 4.4. Appropriate orders and invoices are exchanged according to workplace procedures
5. Maintain and monitor material and consumable supplies	5.1. Stock is regularly monitored using inventory records and physical checks, where applicable, to ensure maintenance of supply 5.2. Up-to-date records of materials and consumables are maintained 5.3. Acquisition requirements are documented in accordance with workplace procedures
6. Liaise with other departments	6.1. Communication channels with other departments are established in accordance with workplace procedures

ELEMENT	PERFORMANCE CRITERIA
	6.2. Liaison with other departments is conducted to ensure customer requirements are achieved

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to the purchasing systems and activities, including the relevant technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of purchasing with site supervisor, other workers and customers, and the reporting of outcomes and problems
- plan and organise activities to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly, calculate and estimate material requirements
- create and apply systematic problem solving techniques to anticipate purchasing problems, avoid re-working and avoid wastage
- use the workplace technology related to the purchasing, including calculators and measuring devices and computing/computer-aided systems

Required knowledge

- contemporary supply/purchasing systems theory
- company operating procedures, including procedures for purchasing materials and consumables
- material and consumable usage rates
- operation requirements of equipment and work systems in own work area

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Purchase materials on a minimum of four occasions, including two different materials and at least one perishable consumable
- Suggest improvements to purchasing operations and where authorised, negotiate changes
- Modify activities to cater for variations in workplace cultures and environment
- Work effectively with others

Resource implications

Production operation with consumable and material requirements, preferred supplier lists and workplace procedures.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify opportunity to provide goods and/or services	1.1. Opportunities that are within the operational scope of the business unit or organisation are identified 1.2. Organisational resources which are available, or expertise which may be accessed, is identified and matched to opportunities 1.3. The feasibility of undertaking the proposed project/work is assessed and approval is sought according to organisational policy and procedures
2. Analyse tender requirements	2.1. Tender specifications and scope of tender requirement is identified and clarified with the originator if required 2.2. Proposed methodology for satisfying the request is developed 2.3. Required resources are identified and their availability confirmed with the provider in accordance with organisational procedures 2.4. Methodology is adjusted to accommodate the availability of resources and expertise available
3. Prepare a tender estimate	3.1. Estimate is prepared, taking all requirements into account and providing for contingencies as required by organisational policies, procedures and requirements 3.2. Costing of estimate conforms to organisational policies and procedures 3.3. The estimate satisfies the total requirement. Where this cannot be provided, an explanation/compromise/option is identified 3.4. Estimate is checked for accuracy and detail in accordance with organisational procedures
4. Submit a tender	4.1. Tender is prepared in accordance with organisational policy and procedures 4.2. Tender addresses required details and meets originator's requirements 4.3. Tender is submitted within the required timeframe in the form required by the request 4.4. Organisational requirements for record keeping and documentation of tenders are completed
5. Review tender process	5.1. Changes and variations to the tender are negotiated to meet the needs of the client and the organisation in accordance with contractual arrangements,

ELEMENT	PERFORMANCE CRITERIA
	<p>organisational policy, procedure and delegated authority</p> <p>5.2. The tender content and process is reviewed and evaluated, using the outcome and the feedback provided by client and stakeholders</p> <p>5.3. Procedures are adjusted if required to improve subsequent bids</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to the tendering process, including the relevant legal, technical, regulatory, fiscal, cultural, environmental and safety requirements
- communicate ideas and information in a form which will satisfy the tender brief in clearly understandable terms and also market the offer to the client
- plan and organise activities, including the research, analysis, preparation of the tender to avoid any backtracking or wastage
- work with others in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete calculations relevant to the identification, costing, scheduling and management of the tender
- create and apply systematic problem solving techniques to anticipate tendering problems, avoid re-working and avoid wastage
- use the workplace technology related to tendering, including calculators, computing/computer-aided systems, communications media and presentation aids

Required knowledge

- enterprise operating procedures and requirements
- organisation resources, capacities and capabilities
- tender management, preparation, submission and review processes
- tender evaluation processes
- financial and legal requirements for tendering
- relevant legislation relating to tendering and contracting for goods and/or services of the organisation

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply all relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- On a minimum of two occasions and for different/significant goods or services, prepare and submit formal tenders that are framed to serve marketing purposes and which address or are supported by:
 - the full requirements of the tender brief
 - total resource requirements
 - total costings covering all components and scenarios
 - appropriate legislative requirements
 - options for the client
- Negotiate changes/variations to tender and conduct review of outcome
- Work effectively with others

Resource implications

Access to Requests for Tender, previous tenders and outcomes, information relating to relevant resources, appropriate staff/advisers and supporting technology.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit scope</p>	<ul style="list-style-type: none"> • This unit covers the work involved in the preparation of tenders to secure work/orders for products • The work requires the analysis of, at times, complex requirements, the preparation and presentation of the tender and the follow-up action for both successful and unsuccessful tenders
<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate analytical ability, discretion, judgement and problem solving skills
<p>Workplace environment</p>	<ul style="list-style-type: none"> • Work is undertaken in accordance with established enterprise procedures and practices • Work is generally performed with little external assistance and with minimal supervision or direction • Customers may be internal or external
<p>Information and procedures</p>	<ul style="list-style-type: none"> • Work procedures/instructions • Tender brief/specifications issued by the requesting agency • Organisation work specifications and requirements • Legislation/regulations/national and industry codes and practices relevant to the product • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine production requirements	1.1. Requirements for production activities are identified, including: 1.2. types of products produced and related materials and equipment 1.3. quantities of products in order, in store, in production 1.4. storage and handling requirements 1.5. stock management methods 1.6. A rating system is developed to facilitate comparisons of cost/benefits and other qualitative properties of equipment and systems
2. Gather data and specifications	2.1. Current best practice and future trends for manufacturing the products are assessed to establish comparisons and benchmarks 2.2. Steps required for production processes are identified and flow charts produced, where necessary 2.3. Specifications are identified to match the production process 2.4. Consultations are conducted with relevant employees and management to identify additional or altered specifications 2.5. Materials, tooling, and/or equipment requirements for the production are identified and documented 2.6. Existing equipment and stock on hand is evaluated to match requirements of the proposed operations 2.7. OHS requirements to provide safe work systems for the equipment and materials are identified, including: <ul style="list-style-type: none"> 2.7.1. associated training requirements 2.7.2. work practices 2.7.3. equipment 2.8. Appropriate data is compiled
3. Evaluate equipment and materials against requirements	3.1. Materials are assessed for required quality, finish, durability and conformity to standards 3.2. Equipment options are identified 3.3. Equipment and materials are selected based on comparisons of performance, cost and specifications compared to the prepared rating system

ELEMENT	PERFORMANCE CRITERIA
4. Prepare report and recommendations	4.1. Recommendations are developed to meet requirements of the workplace 4.2. Report of recommendations is prepared and forwarded according to workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to production materials and equipment, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with managers/supervisors, workers and customers, the coordinated evaluation of options and the reporting of outcomes
- plan and organise activities, including the systematic identification, research and evaluation of options
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly model the options and statistically compare results and potentials
- create and apply systematic problem solving techniques which will avoid re-working and wastage
- use the full scope of available workplace technology related to production materials and equipment and to their analysis and evaluation

Required knowledge

- industry sector developments and trends in terms of materials and equipment
- company business policies and plans, including future production systems and products
- company products, market, work systems and equipment
- legislative requirements of the work activities

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Lead others and work effectively to improve production quality and outcomes
- Evaluate materials, equipment and work processes considering:
 - product innovations and potential
 - nature of products produced and the associated markets for the products
 - workforce availability and capabilities
 - equipment capabilities and availabilities
 - cost benefit analysis (or equivalent)
- Identify the impact of decisions in terms of commercial, environmental and safety risks
- Encourage participation of employees in the planning of work activities and changes

Resource implications

Access to production plans, process machinery, equipment, materials and a work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and/or samples and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers the work involved in evaluating and selecting the materials and equipment required in the production process • The unit applies to those with responsibility for resource coordination and leadership of others individually and in teams
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • The function is undertaken in accordance with established enterprise procedures and practices may include requirements recommended by manufacturers • Customers or suppliers may be internal or external
Machines/equipment may include:	<ul style="list-style-type: none"> • any machine typically used in the furnishing industry • microprocessor or computer-controlled machines • both production and facility equipment used in the enterprise
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices</p>
Information and procedures	<ul style="list-style-type: none"> • Trade journals and publications

RANGE STATEMENT

	<ul style="list-style-type: none"> • Work procedures/instructions • Manufacturer specifications and instructions • Standard forms of workplace process and procedure • Organisation work specifications and requirements • Legislation, regulations and codes of practice • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify production area objectives	1.1. Production objectives are clearly and unambiguously identified and clarified in conjunction with design, engineering, production and other relevant staff in accordance with company requirements 1.2. Production area processes and specifications are identified
2. Determine production staffing and resource requirements	2.1. Production staffing requirements are determined based on task requirements and necessary competencies 2.2. Suitable staff and/or contractors are selected based on competence and availability in accordance with company requirements 2.3. Required materials, tools, equipment, assembly or fabrication jigs and other physical resources needed for the production are identified and a specification drawn up detailing the required quality and quantities 2.4. Costings of staffing and resource requirements are developed in accordance with company procedures
3. Establish the area layout and process	3.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 3.2. Layout of equipment, materials and other factors take account of area layout work plans, recognising the resourcing available and factors of cost effectiveness and efficiency 3.3. Production area tasks and component activities are clearly identified and specified and staff assigned to them based on their competence, experience and availability 3.4. The production team is briefed and trained on their respective roles and responsibilities in accordance with company procedures
4. Review production progress and outcomes	4.1. Production progress is closely monitored against required quality of products and adherence to both budget and time schedule and reported to appropriate personnel in accordance with company requirements 4.2. Opportunities for preventative or corrective changes are identified using outcomes of monitoring activity or feedback from production staff 4.3. Preventative or corrective action is recommended and implemented where appropriate

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. Changes are communicated to relevant personnel in a logical and easily understood manner</p> <p>4.5. Changes are monitored to confirm improvement to production efficiency</p> <p>4.6. Adequate records are maintained of all key information pertaining to the production process in accordance with company requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to production processes and area layout, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with managers and supervisors, workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment, systems and materials to avoid any back tracking, workflow interruptions or wastage
- work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, dimensions and flow, and estimate material requirements
- create and apply systematic problem solving techniques to anticipate production processes and area layout problems, avoid re-working and wastage
- use the workplace technology related to production processes and area layout, including machinery, tools and equipment, calculators and measuring devices and computing/computer-aided systems

Required knowledge

- process engineering techniques and systems
- production and manufacturing processes applicable to the product
- materials handling techniques and options
- equipment and machines to be used to achieve business outcome
- business processes used in workplace
- resource availability, including competencies of individuals in the team/group

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- For a significant production process, either establish the process and area layout or review and make recommendations on an existing process. In either case:
- identify/confirm production area objectives
- determine production staffing and resource requirements
- establish the area layout and process
- monitor and review achievements
- document the outcomes
- Communicate and consult effectively with team members, management and user departments

Resource implications

The resources should relate specifically to the business policies, procedures and range of products and equipment. Resources may include:

- the business environment
- relevant documentation
- legislation and statutory requirements
- industry codes of practice
- OHS legislation, regulations and codes of practice
- access to a work team

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers the work involved in establishing the production processes and area layout in the furnishing industry • The unit may require workflow analysis, planning and modification in a new or existing plant layout situation • The function is undertaken in accordance with established enterprise procedures and practices may include requirements recommended by manufacturers
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • Work may involve individual and team related activities and will normally relate to the standard forms of activity performed in the enterprise and industry • Work is performed with minimal supervision or direction • Customers or suppliers may be internal or external
Machines/equipment may include:	<ul style="list-style-type: none"> • any machine typically used in the furnishing industry • microprocessor or computer-controlled machines • both production and facility equipment used in

RANGE STATEMENT	
	the enterprise
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • hand tools • other equipment
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • metal alloys • fabric • glass • plastics and a full range of consumables required for production
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions • Manufacturers' specifications and instructions • Standard forms of workplace process and layout • Organisation work specifications and requirements • Legislation/regulation/national and industry codes and practices relevant to the product • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare work	1.1. Items to be included in work plan and specification document are identified and confirmed 1.2. Legal, environmental and OHS requirements related to installation and commissioning of equipment/systems are identified 1.3. Work plan for installation and commissioning of equipment/systems is drawn up, including management and reporting procedures 1.4. Specification document is prepared according to workplace and/or manufacturer procedures
2. Coordinate and monitor installation arrangements	2.1. Arrangements for the installation and commissioning of equipment, including necessary legal, insurance and safety requirements are coordinated in accordance with workplace and/or legislative procedures 2.2. Contract arrangements for the installation and commissioning of equipment/systems are coordinated in accordance with workplace procedures 2.3. Installation process, including testing, is monitored to ensure compliance with contractual requirements 2.4. Variations are dealt with to ensure installation meets specification requirements
3. Manage installation schedules and budgets	3.1. Installation process is monitored to ensure compliance with installation specifications, schedule and budget 3.2. Scheduling and budgeting processes are adjusted where variations or alternative plans are indicated 3.3. Deviations are documented and reported
4. Administer legal, environmental and occupational health and safety requirements	4.1. Formal processes of the organisation are used to document the administration of regulatory requirements 4.2. Legal, environmental and OHS requirements related to installation and commissioning of equipment/systems are defined 4.3. Monitoring of the process is carried out to ensure compliance with legal, environmental and occupational health and safety requirements related to installation and commissioning of equipment/systems

ELEMENT	PERFORMANCE CRITERIA
5. Conduct trials to confirm operating status of equipment	5.1. Machine operations are evaluated in a trial run and results confirmed against requirements 5.2. Machines are adjusted to achieve performance outcome specifications 5.3. Employee duties are communicated to match equipment operating requirements 5.4. Maintenance documentation is completed and processed 5.5. Process and machine specification documentation is completed and appropriate records maintained
6. Assess and report on completion of installation	6.1. Completed work is assessed to confirm required specifications have been met 6.2. Report on work completed is prepared in accordance with enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to the installation and commissioning, including the relevant technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with managers, supervisors, workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment, systems and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and dimensions and estimate material requirements
- create and apply systematic problem solving techniques to anticipate installation and commissioning problems, avoid re-working and wastage
- use the workplace technology related to installation and commissioning, including machinery, tools and equipment, calculators and measuring devices and computing/computer-aided systems

Required knowledge

- risk management process
- requirements for installation and commissioning of equipment
- extent of responsibility for each stage of the process
- company business policies and plans, including procedures for equipment installation
- company products, market, work systems and equipment
- legislative requirements of the work activities

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Manage the installation and commissioning of a significant equipment within a production or simulated production environment, including the following tasks:
 - identify the impact of decisions in terms of commercial, environmental and safety risks
 - plan and arrange equipment installation and commissioning
 - lead others and work effectively to arrange for installation and commissioning of equipment
 - allocate tasks considering:
 - competency requirements for the work
 - requirements of workplace operating procedures
 - complete post installation trials and evaluation
- Work effectively with others

Resource implications

Equipment for installation, installation and commissioning service providers.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit scope</p>	<ul style="list-style-type: none"> • This unit applies to the planning and management of equipment installation and commissioning in the furnishing industry • The installation and commissioning may follow an established process or it may require a unique process to cover a one-off situation • The work may involve a multi-disciplinary group, including those with specific regulatory authority for aspects of the work
<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate organisational ability, discretion, judgement and problem solving skills
<p>Workplace environment</p>	<ul style="list-style-type: none"> • Work is generally performed within a team or group environment, but may be on a one-to-one basis with a client or client group • Work is performed with minimal supervision and direction • Customers or suppliers may be internal or external
<p>Machines/equipment may include:</p>	<ul style="list-style-type: none"> • any machine typically used in the furnishing industry • microprocessor or computer-controlled machines • both production and facility equipment used in the enterprise

RANGE STATEMENT	
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions • Manufacturer specifications and instructions • Standard forms of workplace process and procedure • Organisation work specifications and requirements • Legislation/regulations/national and industry codes and practices relevant to the product • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify relevant requirements	1.1. Information required for operating procedures is identified and assembled 1.2. Specification requirements and format are established and confirmed, where necessary 1.3. Requirements for information entry, storage, output and quality of document production are identified in accordance with enterprise procedures 1.4. Document and work sheet design is appropriate for efficient entry of information and maximised appearance and presentation of document 1.5. Range of functions incorporated the document design reflects the nominated requirements
2. Prepare specifications	2.1. Specifications are written in an appropriate format, to ensure requirements can be met 2.2. Special needs are incorporated in the specifications 2.3. Specifications are written in a manner that is clear and understood in the workplace
3. Prepare standard operating procedures and/or manuals	3.1. Documentation is prepared to formalise processes for achieving the enterprise objectives 3.2. Responsibility for all updates and changes to the procedures or manuals is assigned or designated
4. Review procedures and specifications against standards	4.1. Compliance with procedures and specification requirements is monitored in relation to the required application 4.2. Results are assessed, reported and/or acted upon according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to the target subject, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information clearly and concisely so that all users can interpret and follow the procedure/specification
- plan and organise activities to avoid any back tracking or workflow interruptions
- work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete or confirm measurements and calculations required for the procedure/specification
- create and apply systematic problem solving techniques to anticipate procedural problems, avoid re-working and wastage
- use the workplace technology related to the development and production of procedures and specifications

Required knowledge

- technical writing and presentation techniques
- company operating procedures, including procedures for documenting and changing specifications and procedures
- operation requirements of equipment and work systems in own work area

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Identify and itemise steps and stages in processes and procedures
- Complete a significant operational procedure, incorporating safety obligations, and covering:
 - full analysis of the topic area
 - step-by-step operational procedure
 - specification which is part of the procedure or a supporting document
- Modify activities to cater for variations in workplace cultures and environment
- Work effectively with others

Resource implications

Enterprise or equivalent formats for procedures/specifications and subjects/topics.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

This unit covers the work involved in the writing of specifications and procedures for the workplace, including:

- operating procedures
- complex cutting lists and specification sheets

The function is undertaken in accordance with established enterprise procedures and practices may include requirements recommended by manufacturers

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem solving skills

Workplace environment

- Work may involve individual and team related activities and will normally relate to the standard forms of activity performed in the enterprise and industry
- Work may be on a one-to-one basis with a client or client group
- Customers or suppliers may be internal or external

Machines/equipment may include:

- any machine typically used in the furnishing sector concerned
- microprocessor or computer-controlled machines
- both production and facility equipment used in

RANGE STATEMENT	
	<p>the enterprise</p> <ul style="list-style-type: none"> Tools and equipment may be involved
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> Work procedures/instructions Manufacturer specifications and instructions Standard forms of workplace process and layout Organisation work specifications and requirements Legislation/regulations/national and industry codes and practices relevant to the procedure/specification Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Clarify maintenance requirements	1.1. Equipment specifications, service requirements and workplace procedures are checked for recommended maintenance intervals and processes 1.2. Special requirements for maintenance are separated from normal lubrication, adjustment and maintenance schedules 1.3. Comparisons with previous experience, future equipment use, production requirements and standard operating procedures are made 1.4. An outline plan for maintenance and a related work schedule is identified and developed
2. Establish maintenance systems	2.1. Costings for process are identified based on work schedule (equipment/staff off-line), equipment manufacturers' recommendations, charges for materials, equipment and consumables and external/internal labour charges 2.2. Required production interruptions, processes and procedures are documented and recorded 2.3. Maintenance providers, internal/external, are identified 2.4. Maintenance systems options are analysed and recommendations processed to management 2.5. Approvals for the maintenance systems concepts and resources are obtained
3. Organise maintenance activities	3.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 3.2. Production schedules and staff rosters are checked to identify times when the maintenance process may be scheduled, including optimum timing for shut down 3.3. Permission from supervisory personnel is obtained for timing of maintenance to optimise the maintenance process and production 3.4. Detailed work plans are developed in accordance with: <ul style="list-style-type: none"> 3.4.1. production schedules 3.4.2. availability of expertise 3.4.3. scheduling of resource availability 3.5. Employees with the required competencies are identified and where necessary appropriate training

ELEMENT	PERFORMANCE CRITERIA
	<p>and assessment is facilitated</p> <p>3.6. Approvals for production schedule, employee work pattern and maintenance schedule adjustments are obtained</p> <p>3.7. Work plan is refined to ensure the maintenance program will maintain workplace outputs in terms of workplace policy</p>
4. Resource maintenance requirements	<p>4.1. Consumables, equipment and expertise are located and coordinated to meet maintenance work schedule</p> <p>4.2. Externally sourced equipment, consumables and expertise are identified and appropriate arrangements made for procurement</p>
5. Complete maintenance procedures	<p>5.1. The maintenance work schedule is completed following the work plan</p> <p>5.2. Appropriate readings, measurements and recordings are made and compared to equipment, product and other relevant specifications</p> <p>5.3. Areas requiring further testing are identified and appropriate procedures for testing recommended to supervisory staff</p> <p>5.4. Appropriate adjustments to the work schedule plan are made based on experience and documentation completed</p> <p>5.5. Maintenance records are completed and forwarded to appropriate personnel</p> <p>5.6. Areas where changes to equipment operation or routine maintenance are required to maintain optimum work output and equipment life are noted</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to equipment maintenance systems, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable the documentation and clarification of the maintenance requirements, coordination of work with site managers and supervisors, workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the allocation of human resources and the obtaining of equipment, systems and materials to avoid any backtracking, workflow interruptions or wastage
- work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly identify and establish the statistical basis for the management and monitoring of maintenance programs
- create and apply systematic problem solving techniques to anticipate maintenance problems, avoid re-working and avoid wastage
- use the workplace technology related to maintenance, including machinery, tools and equipment, calculators and measuring devices and computing/ computer-aided systems

Required knowledge

- contemporary equipment maintenance theories covering benefits and costs
- the effects of production schedules, time and resource requirements when scheduling the maintenance process
- risk analysis processes
- company operating procedures, including procedures for maintenance
- operation requirements of equipment and work systems in the work area
- competency requirements of the work activities
- relevant OHS requirements

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant technical and production information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- To establish the maintenance program for a real or simulated significant production operation, including:
 - coordination of maintenance within the context of production schedules
 - identification of resource requirements for maintenance, including skills of employees involved
 - recording and reporting requirements to provide system visibility and accountability potential
- Complete a benefit analysis of an existing and significant maintenance program
- Suggest improvements to maintenance operations and where authorised, negotiate changes
- Modify activities to cater for variations in workplace cultures and environment
- Work effectively with others

Resource implications

Access to production information and schedules, equipment specifications and workshop manuals for production process equipment requiring maintenance.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers the work involved in establishing, organising and implementing both preventative and reactive maintenance programs in a furnishing enterprise • The competency entails the provision of maintenance with regard for the production schedule and of the plant, equipment and facilities operated by the enterprise
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate organisational ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • The coordination of maintenance is undertaken in accordance with established enterprise procedures and practices and may include manufacturers' recommendations • Work is generally performed with little external assistance and with minimal supervision or direction • Work activities of other employees are supervised and assistance to others is provided • Customers are normally internal
Machines/equipment may include:	<ul style="list-style-type: none"> • any machine typically used in the furnishing sector concerned • microprocessor or computer-controlled machines • both production and facility equipment used in

RANGE STATEMENT	
	the enterprise
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions • Manufacturer specifications and instructions • Organisation work specifications and requirements • Legislation/regulations/national and industry codes and practices relevant to maintenance systems • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish production requirements	1.1.Data from the sales/market forecast is interpreted for inclusion in the production plan 1.2.Specifications and supporting data are analysed 1.3.Projected requirements regarding product quantity, quality, raw materials and performance characteristics are established 1.4.Production capacity of machines and personnel is determined and/or confirmed 1.5.Resources required, including raw materials supply requirements for the production line, are identified
2. Prepare production plan	2.1.Information and details to include in the production plan are assembled and confirmed, where necessary 2.2.Inefficiencies and constraints are considered and potential improvements or variations to the plan are identified, where applicable 2.3.Production plan is prepared in accordance with enterprise procedures
3. Monitor and coordinate variations to plan	3.1.Production plan is monitored to ensure efficient and effective production performance and any variations required are identified 3.2.Plans are modified, where necessary, to reflect out of stock and overstock situations, machine and human resource requirements or variations 3.3.Implementation of plan variations is coordinated to ensure compliance with instructions/specifications
4. Maintain records	4.1.Production planning records are maintained and reports prepared, where necessary, in accordance with enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to the production planning, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with managers, supervisors, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the planning and scheduling of equipment, systems and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete production computations and establish a statistical base for monitoring operational efficiency, and estimate material requirements
- create and apply systematic problem solving techniques to anticipate production planning problems, avoid re-working and avoid wastage
- use the workplace technology related to production planning, including machinery, tools and equipment, calculators, measuring devices and computing/computer-aided systems

Required knowledge

- production processes, products, machines, planning and forecasting software
- work and workplace organisation systems
- suppliers, their capabilities and customer requirements
- safety and environmental aspects of relevant enterprise activities
- workplace procedures and reporting/recording processes
- relevant regulatory requirements and codes of practice

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Interpret/analyse data for production planning • Apply workplace health and safety policies in production operations • For a significant production requirement: <ul style="list-style-type: none"> • establish and confirm the production requirements • prepare the production plan • monitor and coordinate variations to the plan • maintain records • Work effectively with others
<p>Resource implications</p>	<p>Access to real or appropriately simulated production planning situations in a furnishing enterprise context</p> <p>This includes real or simulated work areas, materials, equipment, and information on work specifications, relevant safety procedures and regulations, quality standards, organisation procedures and customer requirements.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts</p> <p>Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- Work involves planning of production in a furnishing enterprise
- The competency will relate to the interface between sales/marketing, purchasing and production areas and may involve dealing with the unpredictability of variables, such as sales, raw materials, machinery availability, operator availability and quality variations
- Production operations may include: repetitive production runs, short runs, quick changes, indent orders, stock replenishment

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate conceptual, analytical and organisational ability, judgement and problem solving skills

Unit context

- Work may be conducted in a large-scale production or small business situation in one of the following sectors:
 - cabinet making
 - wood machining
 - furniture polishing
 - glass and glazing
 - soft furnishing
 - upholstery
 - bed and mattress making
 - floor covering and finishing

RANGE STATEMENT	
	<ul style="list-style-type: none"> • picture framing and musical instruments • Production planning may include the establishment of an overall plan for manufacture/product delivery in conjunction with marketing/merchandising area • The competency is applied under limited guidance in line with a broad plan, budget or strategy
Workplace organisation systems may include:	<ul style="list-style-type: none"> • just in time • quick response • quality systems • team processes and benchmarking
Machinery/equipment	Machinery/equipment will be that required for the particular sector operations
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Enterprise business plan • Production procedures/flows • Previous production plans • Production and planning policies and other documentation • Machine/equipment manufacturer specifications and instructions • Organisation work orders • Job procedures • Work instructions • Legislation/regulations/national and industry codes and practices relevant to the production environment and processes

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify optimal operating conditions	1.1. The production potential of the components of the system are identified 1.2. Production orders and plans are analysed to identify sustained production requirements 1.3. Integration options are identified and analysed to ascertain the optimal integration model 1.4. Software and programming requirements to attain and sustain optimal integration are identified and recorded
2. Prepare for software installation	2.1. Program format and operational intent is accurately determined and required applications identified 2.2. Specifications are checked for required operating conditions 2.3. Program instructions are checked for compliance with specifications 2.4. Software timers are set to specification where required
3. Install and integrate automatic process machine control programs	3.1. Appropriate program loading technique is selected 3.2. External loading devices are correctly connected to automatic process machine control systems 3.3. Machine control system is placed in correct operational mode to accept program loading 3.4. Program is downloaded in accordance with manufacturers' recommended procedure and enterprise requirements 3.5. Checks are made during and after downloading to ensure accurate and complete data transfer 3.6. External program loading devices and connections are disconnected from process and machine control system 3.7. Integration protocols and actions are completed
4. Commission automatic process and machine control programs	4.1. Operation of the production system using the programs is observed 4.2. Outputs are checked and measured for compliance with specifications 4.3. External inputs are checked for compliance with specifications, according to specified procedures 4.4. Total operation is checked for compliance with specifications where applicable

ELEMENT	PERFORMANCE CRITERIA
	4.5. Location of program master copy storage is confirmed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to CNC production optimisation, including the relevant technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with site managers, supervisors, and other workers, and the reporting of work outcomes and problems
- plan and organise activities, including the obtaining of systems and materials to avoid any backtracking, workflow interruptions or unnecessary systems downtime
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly calculate flow and systems parameters
- create and apply systematic problem solving techniques to anticipate problems, avoid re-working and wastage
- use the full scope and potential workplace technology related to CNC production operations

Required knowledge

- company operating procedures, including procedures for programming CNC equipment
- operation requirements of equipment and work systems to be programmed

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Locate, interpret and apply relevant information • Apply safety requirements throughout the sequence, including the use of personal protective clothing and equipment • On a minimum of two occasions with at least one involving a CNC Machining and Processing Centre, optimise production, and • Suggest improvements to CNC controlled operations and where authorised, negotiate changes • Modify activities to cater for variations in workplace cultures and environment • Work effectively with others
<p>Resource implications</p>	<p>CNC production equipments, software, production materials and a production plan/schedule</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency or the potential for consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation and questioning on underpinning knowledge.</p> <p>Assessment may be conducted over time and may be in conjunction with assessment of other units of competency</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers the work involved in optimising CNC process and machine control programs used in the furnishing industry. It requires the integration of process machines that may normally function on a stand-alone basis. • The optimisation of CNC programs is undertaken in accordance with established enterprise procedures and practices may include requirements recommended by manufacturers/developers
Production systems	Production systems are to include CNC machining and processing centres
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate analytical and organisational ability, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • Work is generally performed without other qualified assistance • Customers are normally internal
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Enterprise production plans and schedules • CNC and production systems manufacturers' specifications and instructions • Standard form of installing and commissioning

RANGE STATEMENT

	<p>CNC programs</p> <ul style="list-style-type: none"> • Organisation work specifications and requirements • Legislation/regulations/national and industry codes and practices relevant to the installation and commissioning • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop prototype specifications	1.1. The purpose and outline requirements for the prototype are identified from design concepts and/or customer requirements 1.2. Materials are identified following detailed analysis of the options 1.3. Detailed prototype design specifications are prepared and documented 1.4. Construction requirements and methods are identified appropriate for the materials to be used 1.5. Ergonomic requirements are identified, clarified and satisfied throughout the work process
2. Plan and prepare prototype construction	2.1. Work plan for the prototype construction is drafted 2.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 2.3. Compatibility of materials in specifications is checked and any discrepancies reported 2.4. Steps or stages in construction are identified, noting checkpoints for quality checks 2.5. Suitable work area is located and cleared ready for work 2.6. Materials and consumables to meet specifications are prepared for use 2.7. Equipment and accessories suitable for working the specified material are prepared for use 2.8. Appropriate jigs and other construction aids are identified and where required adjusted to suit the work
3. Produce the prototype	3.1. Work plan is followed to produce the prototype 3.2. Checks are conducted at the identified points 3.3. Modifications to designs and plans are identified and recommended and managed within workplace procedures 3.4. Modifications to the plan are documented and followed 3.5. Prototype or sample is checked for compliance with specifications
4. Trial and evaluate the prototype	4.1. Trial objectives and processes are developed, specified and documented

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. Personnel involved in the trial and evaluation are prepared for their responsibilities and functions</p> <p>4.3. Trial equipment, tools and materials are prepared and certified prior to use</p> <p>4.4. Prototype trials are conducted and results captured and recorded in accordance with the trial specification</p> <p>4.5. Results of trials are evaluated and evaluation records and recommendations are processed in accordance with enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to the prototype development including the relevant technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of the development requirements, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment, systems and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and dimensions, create accurate and scaled drawings, and estimate material requirements
- create and apply systematic problem solving techniques to anticipate problems, avoid re-working and wastage
- use the workplace technology related to the development, including calculators and measuring devices and computing/computer-aided systems

Required knowledge

- intellectual property law requirements
- the elements and principles of design
- trends and detailed knowledge of furniture construction
- destructive and non-destructive testing techniques and processes
- use of colour and other features
- the range, properties and characteristics of materials used
- safety and environmental aspects of relevant enterprise activities
- workplace procedures and reporting process
- relevant OHS legislation, regulatory requirements and codes of practice

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order, plans and specifications and locate and apply relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
 - minimise the risk of injury to self or others
- Develop and evaluate a minimum of two different prototypes and:
 - develop the prototype specification
 - identify compatibility/incompatibility of materials, adhesives, fittings, fasteners, for the application
 - select and use appropriate materials, equipment and processes for the item being constructed
 - demonstrate how the design of the prototype components will influence the working lifetime of the item
 - ensure that the prototype satisfies the original or varied specification
 - prepare for and conduct evaluation trials
 - record outcomes and make recommendations for future activities
- Modify activities to cater for variations in workplace contexts and environment
- Work effectively with others

Resource implications

Access to real or appropriately simulated situations involving the development and trialing of prototypes

This includes real or simulated work areas, materials, equipment, and information on design concepts, customer requirements, quality standards, organisation procedures, relevant safety procedures and regulations.

EVIDENCE GUIDE	
Method of assessment	<p>Assessment methods must confirm consistency, or the potential for consistency, of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation or work and questioning on underpinning knowledge.</p> <p>Assessment may be conducted over time and in conjunction with assessment of other units of competency.</p>
Context of assessment	<p>Assessment may occur on the job or in a simulated workplace facility with relevant design inputs, staff, process equipment, simulated work procedures and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit scope</p>	<ul style="list-style-type: none"> • This unit covers the work involved in developing, constructing, trialing and evaluating prototypes from design concepts and/or customer requirements • Prototypes may be produced by hand, by using appropriate machines, tools and equipment or by computer assisted production and will reflect the finished products produced by the enterprise
<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate conceptual, analytical and organisational ability, discretion, judgement and problem solving skills
<p>Workplace environment</p>	<ul style="list-style-type: none"> • The development and trialing of prototypes is undertaken in accordance with established enterprise procedures and practices • This work may be carried out on a team basis or with the support of dedicated specialist personnel • Customers may be internal or external
<p>Machines/equipment may include:</p>	<ul style="list-style-type: none"> • any machine typically used in the furnishing sector concerned • microprocessor or computer-controlled machines • both production and facility equipment used in the enterprise

RANGE STATEMENT	
Materials for prototypes	<ul style="list-style-type: none"> • those normally used by the enterprise in its production processes. They may include but are not limited to: <ul style="list-style-type: none"> • timber • metal alloys • glass • fabrics and textiles • plastics • leather • cardboard and paper • adhesives • fillers and finishes as appropriate
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Design concepts/customer requirements • Designer's/drawer's specifications and instructions • Work procedures/instructions • Organisation work specifications and requirements • Legislation/regulations/national or industry codes and practices relevant to the prototype/sample construction • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define the design objectives and detail	1.1. The purpose of the design is defined and/or clarified 1.2. The potential market for the design product is considered and defined 1.3. Intended production materials and outline production processes are identified and agreed as the basis for determination
2. Establish the design assessment criteria	2.1. Criteria for the assessment of production material options are established 2.2. Criteria for the assessment of product functionality are established 2.3. Criteria for the assessment of production process options and impacts of these on overall business operations are established 2.4. Criteria for the assessment of safety and potential liability issues are established 2.5. Criteria for assessment of costs and marketability are established
3. Apply the assessment criteria	3.1. The determination process, including personnel, information/input collection and recording, scoring or grading criteria and decision making processes are established and agreed 3.2. Products which are competitors/potential competitors in the market place are selected for comparative purposes 3.3. The design is scored/graded against agreed criteria and the results recorded 3.4. Competition products are scored/graded against the agreed criteria and the results recorded 3.5. Assessment results are completed in accordance with the agreed process
4. Determine feasibility and options	4.1. Assessment results of the design and competition products are analysed 4.2. Designs which fail to satisfy assessment and provide no optional potential are rejected 4.3. Designs which fail to satisfy assessment but which have optional/alternative potential are referred to the appropriate party 4.4. Designs which satisfy potential are conditionally endorsed, with the conditions being recorded and passed to the appropriate party

ELEMENT	PERFORMANCE CRITERIA
	4.5. Formal records of the determination are completed and processed in accordance with enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to the design, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with team members and the reporting of work outcomes and problems
- plan and organise activities to avoid any back tracking or reworking requirements
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete calculations necessary to support the determination process
- create and apply systematic problem solving techniques to anticipate problems, and avoid unsubstantiated decisions
- use the workplace technology available to assist in the administration of the determination system, including computing/computer-aided systems

Required knowledge

- intellectual property law requirements
- design core and professional practices
- ergonomic principles for furniture design and manufacture
- the elements and principles of design and how they can be used to create good design in the furnishing industry
- the industry and detailed knowledge of contemporary products
- range of product materials and their characteristics
- materials, trims, accessories and their properties and characteristics
- costing processes
- workplace procedures and reporting process
- relevant OHS legislation, regulatory requirements and codes of practice

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, access and interpret all required information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- For a minimum of two different product designs, determine and report on their feasibility by completing the following or equivalent steps:
 - define the design objectives and detail
 - establish assessment criteria
 - apply assessment criteria impartially
 - determine feasibility options
- Communicate effectively with team and customers
- Maintain accurate records
- Work effectively with others

Resource implications

Access to real or appropriately simulated situations involving the feasibility of designs.

They may include real or simulated work areas, materials, equipment, and information on work specifications, customer requirements, relevant safety procedures and regulations, quality standards and enterprise procedures.

Method of assessment

Assessment methods must confirm consistency, or the potential for consistency, of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of work activities and questioning on underpinning knowledge.

Assessment may be conducted over time and may be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant background information, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- Work involves the establishment and application of systematic, fair and balanced processes to determine the production feasibility of a design.
- Activities may include:
 - researching design trends and developments
 - generating and presenting ideas
 - liaison with client and/or other functional areas
 - compiling information
 - preparing costings
- Judgement may be required in planning and selecting appropriate processes or procedures for self and others

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate conceptual, analytical and organisational ability, discretion, judgement and problem solving skills

Workplace environment

- The competency can refer to enterprise and client initiated ideas or requests
- The competency may involve applications associated with original design, adaptation of designs or interpretation of sketches, single or multiple production styles and ranges, and made to order
- The competency is applied under broad guidance

RANGE STATEMENT**Information and procedures**

- Enterprise business plans
- Business reports, trade journals, etc.
- Product research information covering trends, materials options and market coverage
- Organisation work procedures
- Legislation/regulations/national and industry codes and practices relevant to furnishing and ergonomics
- Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess product feasibility	1.1. Provisional specifications are identified and interpreted, in consultation with others, where required 1.2. Provisional specifications are subject to feasibility modelling and analysis 1.3. Recommendations from the feasibility study are processed
2. Participate in developing/engineering prototype product	2.1. Product or process specifications are interpreted and/or preliminary specifications are developed from the feasibility study 2.2. Specifications are used to develop or engineer the prototype product 2.3. Results are analysed and decisions to move to a trial are confirmed
3. Conduct trials	3.1. Trial procedures/parameters are established and recorded 3.2. Organisation and liaison issues with production areas are resolved 3.3. Raw materials are checked or selected and machines and skill availability allocated against requirements 3.4. Trials are carried out in accordance with the established procedures
4. Analyse, interpret and report results	4.1. Results of the trials are analysed to determine performance and acceptability for production 4.2. Variations and improvements necessitated by the findings are recorded and/or trialed 4.3. Reports and recommendations are prepared and processed in accordance with enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to product and process development, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with managers, supervisors, team members and customers, and the reporting of work outcomes and findings
- plan and organise activities, including the allocation and coordination of functions and the obtaining of equipment, systems and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches
- use mathematical ideas and techniques to correctly complete calculations required to support the product development and to estimate flow and material requirements
- create and apply systematic problem solving techniques to anticipate development problems, avoid re-working and wastage
- use the workplace technology related to development, including machinery, tools and equipment, calculators and measuring devices and computing/computer-aided project management systems

Required knowledge

- intellectual property obligations and codes of practice
- products and process development processes and procedures
- team management and coordination processes
- recording and reporting processes (as they may apply in the enterprise)
- safety and environmental aspects of relevant enterprise activities
- technical background relevant to the sector

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Either individually or as part of a multi-disciplinary team develop a significant product and related processes, including to:
 - interpret/develop specifications
 - conduct feasibility studies
 - produce prototype
 - organise/conduct trials
 - assess results against specifications
 - communicate effectively with development team and customers
 - prepare reports/presentations
- Work effectively with others

Resource implications

Access to real or appropriately simulated situations requiring the development of products and related processes

This includes real or simulated work areas, materials, equipment, and information on work specifications, relevant safety procedures and regulations, quality standards, organisation procedures and customer requirements.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated

EVIDENCE GUIDE

	work instructions and deadlines.
--	----------------------------------

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- Work involves activities contributing to development of products or processes within the enterprise
- The competency may involve applications associated with original creation, adaptation of designs or interpretation of sketches within contexts related to single or multiple production runs
- Activities may include: work allocation, reviewing/evaluating processes and products, liaising with relevant personnel, client and/or other functional areas

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving skills

Work responsibilities will vary in scope according to:

- size of the workplace
- range of designs
- specialisation in the workplace and workplace quality standards

The competency is used independently within routine and non-routine situations.

Information and procedures

- Work specifications
- Provisional product specifications and design brief
- Provisional marketing strategies

RANGE STATEMENT

	<ul style="list-style-type: none"> • Organisational work procedures • Manufacturers' technical specifications • Legislation/regulations/national and industry codes and practices relevant to the product • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the need	1.1. Information required for the effective management of the business activities is identified 1.2. An outline information collect plan is developed and enhanced through research and consultation with key players 1.3. The information from the plan is translated into defined information objectives or targets
2. Identify the source and information collection mechanism	2.1. Each information objective is analysed to identify the best source 2.2. Options for mechanisms to collect information from the preferred source are identified and assessed 2.3. The options for information collection mechanisms are selected and recorded
3. Establish systems management processes	3.1. Procedures for each information management process are developed 3.2. Responsibilities for each component of the system are defined, allocated and documented 3.3. Quality assurance specifications, mechanisms and processes are established to maintain system integrity
4. Monitor systems effectiveness	4.1. The collection, flow and accuracy of information is monitored against specifications 4.2. Regular monitoring of the relevance and use of information is carried out 4.3. Ineffective, inefficient or redundant systems are upgraded or dispensed with 4.4. Systems documentation is maintained and current

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to business information systems, including the relevant legal, technical, regulatory, fiscal, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements and the unambiguous explanation of business information systems, management, process, quality and maintenance requirements
- plan and organise activities to avoid any backtracking, re-working, interruptions or wastage
- work with others to foster a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to establish or validate information needs and to select statistical and other information presentation methods
- create and apply systematic problem solving techniques
- use the workplace technology to collect, present, maintain and archive business information

Required knowledge

- information management theory
- contemporary information management techniques
- theory and application of statistics
- company business policies and plans, including procedures for reports
- company quality systems and business equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Individually, or as a member of a management team, establish a business information system for a significant production/manufacturing business, including:
 - the identification of information needs
 - the identification of source and collection options
 - the development of information management processes (procedures) for significant needs
 - the development of related systems quality assurance specifications, mechanisms and processes
- Review an existing information management process and report on effectiveness and change recommendations
- Work effectively with others

Resource implications

An operational or simulated business environment with responsibilities for all management functions, including logistics, personnel, production, distribution and finance together with supporting business plans and records.

Method of assessment

Assessment methods must confirm consistency, or the potential for consistency, of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.

Assessment may be conducted over time and can be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a simulated workplace facility with relevant management structures, production processes, simulated work instructions and

EVIDENCE GUIDE

	deadlines.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Document goods/services to be contracted	1.1. Specifications for the contract are drawn up identifying: <ul style="list-style-type: none"> 1.1.1. goods and/or services to be provided 1.1.2. criteria to be met 1.1.3. financial arrangements 1.2. Contract details are checked for compliance with enterprise purchasing policy or procedures 1.3. Contract is provided to potential suppliers in accordance with the enterprise practices
2. Negotiate contract with supplier	2.1. Requirements of the supply contract are discussed 2.2. Contract specification requirements are understood by the relevant parties 2.3. Areas of ambiguity or concern are clarified and resolved 2.4. Negotiations are undertaken with selected supplier for the contracting of required goods or services on a "without prejudice" basis 2.5. Conditions for supply of goods/services are agreed between the enterprise and the supplier, including the determination of key performance indicators 2.6. Alternative suppliers are negotiated with if agreement is unable to be reached 2.7. Contract price and conditions are negotiated and agreed 2.8. Negotiations conform to established enterprise requirements and relevant legislation
3. Complete contract negotiations	3.1. Contract documentation is drafted in accordance with relevant legislation, enterprise procedures and negotiated conditions of service and supply 3.2. Technical support in the drafting of contracts is accessed where required 3.3. Contract provisions are confirmed internally as required by enterprise practices or purchasing policy 3.4. Contract documentation is signed and exchanged between the relevant parties
4. Complete enterprise contract requirements	4.1. Supply of contracted goods or services is monitored and appropriate financial arrangements are approved 4.2. Workplace approved systems are used to file information to ensure traceability of orders and

ELEMENT	PERFORMANCE CRITERIA
	financial transactions 4.3. Organisational systems that require interaction with suppliers are identified and used where appropriate 4.4. Quality assurance procedures for supplied goods/services are identified and applied 4.5. Information about the contract is communicated to appropriate personnel 4.6. Documentation relating to regulatory requirements, including supplier safety information is obtained and stored in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to contracting, including the relevant legal, technical, regulatory, fiscal, cultural, environmental and safety requirements
- communicate ideas and information in a clear and unambiguous fashion and ensure that all communications satisfy the intent and legal requirements associated with contracting
- plan and organise activities, including the preparation, completion, execution and finalisation of the contract within the specified timeframe and to avoid any back tracking, workflow interruptions or wastage
- work with others in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete calculations required to establish and implement the contract
- create and apply systematic problem solving techniques to anticipate contracting problems, avoid supply difficulties
- use the workplace technology related to contracting, including calculators, computing/computer-aided systems and relevant contracting software

Required knowledge

- enterprise operating procedures and requirements
- organisation resources, capacities and capabilities
- contract management, preparation, submission and review processes
- contract evaluation processes
- financial and legal requirements for contracting
- relevant legislation relating to contracting and contracting for goods and/or services of the organisation

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information to the contract negotiations and provisions
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Establish and implement at least two significant contracts covering the following actions/activities:
 - establish the specification of the goods/service
 - identify and access probable suppliers
 - negotiate contracts considering:
 - legal and financial considerations requirements for the contract
 - requirements of workplace policy and procedures
 - discuss contract provisions and provide necessary explanations
 - check contract provisions as required by enterprise procedures
 - finalise contracts and file appropriate documentation
 - identify the impact of contract outcomes in terms of commercial risks
- Suggest improvements to purchasing operations and where appropriate, negotiate changes
- Work effectively with others

Resource implications

Goods or services required to be contracted, appropriate purchase order, formal contact or other documentation, enterprise supply or purchasing policy, suppliers

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.

Assessment should be conducted over time and will

EVIDENCE GUIDE	
	generally be in conjunction with assessment of other units of competency.
Context of assessment	Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers the work involved in organising the initiation and completion of contract arrangements with identified suppliers. Contracts are generally in written form • The function is undertaken in accordance with established enterprise procedures and practices may include requirements recommended by manufacturers
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate organisational ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • Work is generally performed on a one-to-one basis with the client or client group • Customers or suppliers may be internal or external • The competency may apply in the workplaces that are involved in the function
Machines/equipment may include:	<ul style="list-style-type: none"> • any machine typically used in the furnishing sector concerned • micro-processor or computer controlled machines • both production and facility equipment used in the enterprise.
Tools	Tools, equipment and spares or consumables may be involved

RANGE STATEMENT	
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions • Specification of the required goods or services • Supply system directories, indices, catalogues • Prevailing contract law • Legislation/regulations/national and industry codes and practices relevant to the goods/services • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish customer needs	1.1. Intended use of goods or services is established in conjunction with the customer 1.2. Implications of customer requests are explained 1.3. Potential options of goods or services are explained describing costs, performance characteristics and implications for use
2. Evaluate available goods and/or services to meet needs	2.1. Information on characteristics of available goods or services is investigated 2.2. Performance characteristics and costs of potential options are compared in relation to customer identified needs and provisional recommendations are made 2.3. Availability of recommended goods or services is established 2.4. Recommendations or selection of services or goods are made to customer
3. Determine and agree parameters for contract	3.1. Workplace contract format is used, adapting sections as required 3.2. Specification of services or goods to be provided is detailed within contract 3.3. Legal requirements are included within contract details 3.4. Draft contract provision is explained to customers and required amendments agreed 3.5. Formal agreement with terms of the contract by the customer is achieved

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to contracting, including the relevant legal, technical, regulatory, fiscal, cultural, environmental and safety requirements
- communicate ideas and information in a clear and unambiguous fashion and ensure that all communications satisfy the intent and legal requirements associated with contracting
- plan and organise activities, including the preparation, completion, execution and finalisation of the contract within the specified timeframe and to avoid any backtracking, workflow interruptions or wastage
- work with others in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete calculations required to establish and implement the contract
- create and apply systematic problem solving techniques to anticipate contracting problems, avoid supply difficulties
- use the workplace technology related to contracting, including calculators, computing/computer-aided systems and relevant contracting software

Required knowledge

- enterprise operating procedures and requirements
- organisation resources, capacities and capabilities
- contract management, preparation, submission and review processes
- contract evaluation processes
- financial and legal requirements for contracting
- relevant legislation relating to contracting and contracting for goods and/or services of the organisation

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information to the contract negotiations and provisions
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Establish and implement at least two significant contracts covering the following actions/activities:
 - establish the specification of the goods/service
 - identify and access probable suppliers
 - negotiate contracts considering:
 - legal and financial considerations requirements for the contract
 - requirements of workplace policy and procedures
 - discuss contract provisions and provide necessary explanations
 - check contract provisions as required by enterprise procedures
 - finalise contracts and file appropriate documentation
 - identify the impact of contract outcomes in terms of commercial risks
- Suggest improvements to purchasing operations and where appropriate, negotiate changes
- Work effectively with others

Resource implications

Customer request, goods/services, workplace contract documentation.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

EVIDENCE GUIDE	
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant commercial contracting practices and systems, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	This unit covers the work involved in contracting the sale of goods or services to customers
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate administrative and organisational ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • The function is undertaken in accordance with established enterprise procedures and practices may include requirements recommended by potential contractors • Work is generally performed within a team or group environment • Customers or suppliers may be internal or external
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions • Specification of the required goods or services • Supply system directories, indices, catalogues • Contract law • Legislation/regulation/national and industry codes and practices relevant to the goods/services • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research global market trends	1.1. Global market trends are researched and/or forecast in relation to products and processes 1.2. Developments in technology are investigated to ensure all possibilities are considered
2. Research production materials	2.1. Issues which may impact on the availability of current production materials are analysed and likely changes are forecast 2.2. Availability of new and/or alternative materials is researched and projections of potential benefits is completed
3. Identify manufacturing capabilities or implications	3.1. Manufacturing capabilities are defined in consultation with relevant personnel on issues such as human resources, materials, financial restraints, equipment capabilities, timelines and efficiency 3.2. Options or requirements for utilisation of external resources to undertake part of the work is determined when defining production capabilities
4. Evaluate and recommend product and materials options	4.1. Relevant information related to products, materials and processes is identified and compiled into usable data form 4.2. The impact of national and international trends on products and materials is analysed and preferred courses or options are identified 4.3. Other parameters are clarified, in consultation with production development, sales/marketing team, management and/or client, where required 4.4. Reports and/or presentations are prepared in accordance with enterprise procedures for input into business planning

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to national and international developments and trends in products, materials and processes
- communicate ideas and information to enable clarification of the requirements, coordination of work, the presentation/reporting of outcomes, findings and recommendations
- plan and organise activities, including the preparation and implementation of the formation collection strategy and plan, and actions to avoid any back tracking, interruptions or unproductive effort
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise information availability and workflow
- use mathematical ideas and techniques to correctly compile comparative data required for the description, analysis and evaluation of options
- create and apply systematic problem solving techniques to anticipate problems, avoid re-working and avoid inaccurate or inconclusive data
- use the workplace and commercial technology related to research, modelling and evaluation and to the storage and retrieval of information

Required knowledge

- relevant OHS legislation, regulatory requirements and copyright obligations and codes of practice
- sources of information on the appropriate furnishing sector, global and local trends
- existing research networks
- product specifications, materials and processes (existing and already forecast)
- business planning processes and techniques
- safety and environmental aspects of relevant enterprise activities

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply workplace health and safety policies in work operations
- Communicate effectively with customers, support agencies and colleagues
- Individually or as part of a management team, research and evaluate a significant product, its materials and processes, and:
 - research/forecast trends
 - define manufacturing capabilities/implications
 - identify the options in terms of the product and materials and the feasibility of production processes
 - evaluate options and provide balanced support for recommendations
 - provide formal recommendations for preferred business options

Resource implications

Access to real or appropriately simulated product, materials and process research and evaluation situations. This includes real or simulated work areas, materials, equipment, and information on work specifications and production processes, relevant safety procedures and regulations, quality standards, enterprise procedures and customer requirements.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • Work involves activities associated with researching and evaluating new or alternate products, materials and related processes as a contribution to business planning • Significant research and analytical capabilities and judgement is required for this strategic function
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements
Workplace environment	<ul style="list-style-type: none"> • The competency can refer to enterprise and/or client initiated concepts, ideas or needs • Activities may relate to all the sector criteria normally required to evaluate products, materials and processes • The competency is applied without guidance in line with a broad plan, budget or existing strategy
Information and procedures	<ul style="list-style-type: none"> • Current and proposed product specifications • Design briefs • Marketing strategies • Organisation work procedures • Customer requirements • Legislation, regulations, and codes of practice • National and international sector publications related to products and materials innovations and change • National and international materials/resource forecast documents

RANGE STATEMENT

	<ul style="list-style-type: none"> • National and international trade fairs, expositions and symposiums • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements including design variations, tolerances, process, materials, finish and quantity 1.2. Work sequence is planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Preparatory drawings/set outs for tasks are confirmed 1.7. Materials are selected following work instructions 1.8. Tools and equipment suitable for the work are identified and checked for safe and effective operation
2. Fabricate and assemble components	2.1. Material is set out according to work instructions, prepared, and components are marked according to workplace procedures 2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications 2.3. Components are fabricated including any specified shapes, angles or curves and checked against set out and job requirements 2.4. Components are fitted to job requirements 2.5. Assembly process is undertaken according to workplace procedures 2.6. Item is checked for compliance with specifications 2.7. Item is finished in accordance with work instructions
3. Finalise operation and maintain equipment	3.1. Work area is cleaned, hand and/or power tools and equipment is cleaned, maintained and stored in accordance with workplace procedures 3.2. Off-cuts and unused materials are collected and stored for re-use or disposed following workplace procedures 3.3. Waste and scrap materials are dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination with work supervisor, other workers and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate working problems, avoid re-working and wastage
- use the limited workplace technology related to this glass and glazing project including tools, equipment, materials and measuring devices

Required knowledge

- the interpretation of plan representation of product design
- the preparation of drawings/set outs
- workflow in relation to glass and glazing projects
- identification of glass and glazing hand and basic processing tools, materials, equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work instructions and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - achieve required production output and product quality
- Adapt or vary glass and glazing designs
- Prepare, fabricate and assemble at least one basic glass and glazing project which:
 - is of thin glass (annealed glass of less than or 6 mm thick or laminated glass of less than or 6.38 mm thick)
 - requires the use of glass and glazing hand tools and basic glass and glazing processing machines
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Access to plans/designs, glass and glazing hand tools and/or basic processing machines, equipment, materials, a work area and a specified project.

Method of assessment

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be conducted in conjunction with assessment of other relevant units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Workplace health and safety requirements include OHS legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work involves reading and interpreting plans, developing set-outs, using hand and power tools, operating basic machinery, applying quality requirements and applying product finishing techniques and materials
- Work is conducted under supervision and guidance

Basic glass and glazing unit may include but is not limited to:

- fish tank
- display case
- flower vase/box
- ornamental box/case

Project is to be determined in consultation with supervisor/teacher

Tools and equipment may include, but are not limited to:

- flat felt covered cutting tables
- tungsten wheel glass cutters
- speed cutters
- circle cutters
- L-squares and straight edges
- tape measures
- glass handling gloves
- safety glasses
- gauntlets
- aprons
- marking pens

RANGE STATEMENT	
	<ul style="list-style-type: none"> • chinagraph pencils • templates and lubricants
Tables appropriate for cutting large glass sheets include:	<ul style="list-style-type: none"> • air flotation tables • roller castor tables or tilt tables with air flotation • breaker bars or roller castors
Edging equipment includes but is not limited to:	<ul style="list-style-type: none"> • finishing or belt machines • diamond or pencil edgers • pumice or cork polishers • horizontal wheels • finger slotters and hand tools
Drilling equipment may include, but is not limited to:	<ul style="list-style-type: none"> • portable • wall-mounted and free-standing diamond drill presses and saws
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • annealed glass (less than or 6mm thick) and laminated glass (less than or 6.38mm thick) as deemed appropriate for the project
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gloves • safety glasses • gauntlets • footwear • earmuffs • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the handling of glass • Workplace procedures relating to the setting and operation of glass cutting, drilling and edging machines • Workplace procedures relating to the use of other tools and equipment • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures • Safety standards include personal protective equipment, OHS regulations and enterprise

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools	1.1.Types of hand and power tools and their functions identified 1.2.Sources of, and access to power supply recognised 1.3.OHS requirements for using hand and power tools recognised and implemented
2. Select hand tools	2.1.Hand tools selected consistent with needs of job 2.2.Hand tools are checked for serviceability and safety and any faults reported to supervisor in accordance with enterprise procedures 2.3.Equipment selected to hold, position or support material for power tools application where applicable
3. Use hand tools	3.1.Material located and held in position for hand tool application 3.2.Hand tools safely and effectively used according to their intended use 3.3.Hand tools safely located when not in immediate use
4. Select power tools	4.1.Appropriate personal protective equipment selected, correctly fitted and used 4.2.Power tools selected consistent with needs of job in accordance with conventional work practice 4.3.Power tools visually checked for serviceability/safety in accordance with OHS requirements and any faults reported to supervisor in accordance with enterprise procedures 4.4.Equipment selected to hold, position or support materials for power tool application where applicable
5. Use power tools	5.1.Material located and held in position for power tool application where applicable 5.2.Power tools safely and effectively used in application processes 5.3.Power tools safely switched and located when not in use
6. Clean up work area and tools	6.1.All tools cleaned, maintained and stored 6.2.Equipment cleaned, maintained and stored 6.3.Documentation completed in accordance with enterprise procedures 6.4.Work area cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- correctly and safely select, use and maintain hand and power tools
- meet quality standards of finish
- communicate effectively with supervisors and other workers
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity

Required knowledge

- workflow within the workplace
- workplace safety requirements and OH&S legislation
- function and purpose of hand and power tools used in the workplace

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Demonstrate compliance with OHS regulations applicable to workplace operations
- Adopt and carry out correct procedures prior to, during and after use of hand and power tools
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - identify each of the glass and glazing sector hand and power tools
 - indicate their applications and limitations
 - effectively and safely use them in the workplace environment
 - maintain and safely store them
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Indicate compliance with organisational policies and procedures including quality assurance requirements

Resource implications

Glass and glazing sector hand and power tools, materials used in the manufacturing and/or processing of glass and glazing products, operating procedures, work area and workplace requirements

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other relevant units of competency.

EVIDENCE GUIDE	
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- This unit covers work involving the use of hand and power tools in applications relating to the glass and glazing sector of the furnishing industry
- Work requires individuals to demonstrate skill, accuracy and dexterity in the application of tools to work tasks
- Work is carried out in accordance with statutory requirements, OHS legislation, environmental legislation, manual handling procedures, relevant health regulations and organisation insurance requirements
- OHS requirements may include: safe working practices, use of tools and equipment, use of power tools, safe handling and storage of materials in accordance with enterprise procedures

Hand tools used in the glass and glazing sector may include:

- tungsten wheel glass cutters
- speed cutters
- circle cutters
- radius and oval cutters
- vacuum straight edges
- lever and vacuum lifters
- plate and running pliers
- pop rivet pliers and general hand tools

Power tools used in the glass and glazing sector may include:

- Portable electric drills, screwdrivers, grinders, circular saws and jigsaws, plunge routers and sanders
- Drop, radius, mitre and upcut saws, bench drills and grinders
- Portable pneumatic drills, screwdrivers, grinders, nail and staple guns, pop rivet guns and compressors

Personal protective equipment

Personal protective equipment is to include that

RANGE STATEMENT	
	<p>prescribed under legislation, regulation and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • ear protection • hard hats • safety footwear • aprons and overalls

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the need for First Aid	1.1. Initial assessment is made of extent and nature of First Aid required from personal observation and/or witness reports 1.2. Initial assessment is reported to personnel/emergency services in accordance with workplace procedures
2. Ensure the safety of patient and carer	2.1. Hygiene is maintained for protection of patient and carer 2.2. Hazards to the patient and carer are identified and appropriate action is taken to prevent further injury to either party 2.3. Patient is made as comfortable as possible and reassured by word, manner and actions
3. Assess patient and apply First Aid	3.1. Patient is assessed against the DRABC (danger, response, airway, breathing, ventilation and circulation) model 3.2. Vital signs are measured, recorded and any changes noted and reported as appropriate 3.3. Treatment appropriate to the patient's injuries is provided in accordance with recognised First Aid techniques 3.4. First Aid equipment is operated/applied in accordance with recognised procedures and standards 3.5. Patient's condition is monitored and reported as required by workplace procedures, with treatment being modified as appropriate 3.6. Treatment is maintained until qualified medical assistants assume responsibility or until the patient is evacuated 3.7. Provide additional assistance as requested by medical/emergency services personnel 3.8. Details of First Aid administered are reported in accordance with workplace procedures
4. Complete work	4.1. First Aid equipment is recovered (if practical), cleaned, inspected/tested, refurbished, replaced and stored as appropriate 4.2. Medical waste is disposed of in accordance with workplace requirements 4.3. Equipment faults are rectified and reported in accordance with workplace procedures

ELEMENT	PERFORMANCE CRITERIA
	4.4. Documentation is completed as required by legislative, regulatory and workplace requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and analyse information related to workplace health and safety systems and procedures and the application of these to work situations
- communicate ideas and information on workplace safety issues, including the treating and recording/reporting of workplace incidents/accidents/illnesses and interpersonal communication with casualties
- plan and organise activities, including the inspection of first aid support facilities and treatment areas to ensure their completeness, adequacy, equipment and serviceability
- work with others and in a team to promote an awareness of first aid within the workplace and its provision when required
- use mathematical ideas and techniques to correctly complete measurements and calculations associated with assessment, treatment and monitoring of patient's condition
- use problem solving skills to assess and determine treatments and priorities in providing first aid to a patient
- use the workplace technology related to the reporting, recording and responding to workplace injuries and illnesses

Required knowledge

- workplace procedures and requirements for the treatment of workplace injuries/illnesses
- reporting responsibilities and requirements
- the provision of first aid including:
 - systems of the body (respiratory, skeletal, digestive, circulatory, nervous, urinary, skin)
 - causes and management of unconsciousness
 - priorities for life support (DRABC model)
 - resuscitation techniques
 - bleeding control and laceration treatment
 - patient assessment
 - principles of initial patient management
 - management and treatment of fractures and soft tissue injuries
 - management and treatment of burns

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Accurately follow workplace procedures for reporting injuries/illnesses and providing First Aid in the workplace • Identify and respond to injuries/illnesses occurring in the workplace • Apply emergency response First Aid • Provide appropriate treatment to and monitor patient's condition • Accurately report and document injuries and illnesses and treatment provided
<p>Resource implications</p>	<p>First Aid kit, stretchers and medical/First Aid facility Enterprise health and safety policies and procedures Personal protective equipment Patients</p>
<p>Method of assessment</p>	<p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be conducted in conjunction with assessment of other relevant units of competency.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant equipment, work instructions, casualties and urgency.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • The provision of First Aid and workplace responsibilities is to conform to OHS legislation, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, relevant health regulations and organisation insurance requirements • Work involves assessing situations, identifying appropriate control measures, awareness of emergency services responsibilities and responsiveness, treating injuries and maintaining equipment • Work may be conducted without supervision and guidance
First Aid	<ul style="list-style-type: none"> • First Aid is that assistance given to a patient who has suffered an injury or illness in the workplace. It is that assistance which is deemed necessary to attempt to resuscitate, stabilise and/or treat the patient until qualified medical personnel assume responsibility or until the patient is evacuated for appropriate medical treatment. • First Aid may include: <ul style="list-style-type: none"> • cardio-pulmonary resuscitation (CPR) • bleeding control • spinal injury care • basic patient management
Resources implications may include:	<ul style="list-style-type: none"> • First Aid kit • personal protective equipment • stretcher (may be improvised)
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and

RANGE STATEMENT	
	enterprise policies and practices.
Information and procedures may include:	<ul style="list-style-type: none"> • OHS legislation, regulations, codes of practice, environmental legislation, Australian Standards and codes of practice relating to hazards in the workplace, including: <ul style="list-style-type: none"> • obligations under relevant safety and health legislation and common law • local medical and emergency services • provisions relating to roles and responsibilities of health and safety representatives and/or OHS committees • risk management policies and procedures • First Aid procedures <ul style="list-style-type: none"> • safe manual handling and lifting procedures • emergency, fire and accident procedures • materials safety procedures • personal safety procedures • procedures for the use of personal protective equipment • job procedures and work instructions
Emergency services may include:	<ul style="list-style-type: none"> • support provided by ambulance, police, fire or SES personnel and equipment
Personnel may include:	<ul style="list-style-type: none"> • supervisors • managers • team leaders • First Aid attendants/other medically trained staff • specified OHS personnel • other persons authorised or nominated by the enterprise or industry to perform, approve, inspect and direct specified work

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements in the form of type and quantity of glass to be moved are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for operation of a freefall rack and table, including personal protection needs, are observed throughout the work</p> <p>1.3. The process for moving glass through the freefall rack and table is identified</p>
2. Prepare for work	<p>2.1. Work sequence is planned in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Planned route for relocating glass is checked for hazards and the work area is cleared of obstructions</p> <p>2.4. The area is cleared of unauthorised personnel prior to and during freefall operations in accordance with workplace procedures</p> <p>2.5. Freefall rack and table is checked for correct operation, is levelled and cleared of any foreign material</p>
3. Freefall glass	<p>3.1. If used, air supply is checked for operation</p> <p>3.2. Freefall equipment is operated in accordance with workplace procedures to move glass safely</p> <p>3.3. Problems occurring during operation are identified and reported to appropriate persons in accordance with workplace procedures</p> <p>3.4. Authorised changes in working procedures and/or requirements are followed</p>
4. Complete work	<p>4.1. Waste and scrap material is removed for disposal or recycling as required</p> <p>4.2. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.3. Workplace documentation is completed as required</p> <p>4.4. Tools, equipment and unused materials are removed and stored appropriately</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the operation of freefalling rack and table

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- the principles and techniques of freefalling glass from a rack to a table
- workplace safety system requirements related to the freefalling of glass
- workflow in relation to freefalling of glass using rack and table

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Plan the freefalling of glass using the rack and table operation
- Interpret work order/job instruction and locate and apply relevant information to relocate glass using a rack and table
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - demonstrate pre-free fall glass inspections and safety procedures
 - move, position and operate air and tilt drop benches
 - freefall factory run sizes (FRS) glass up to and including 10 mm thick
 - freefall 6.38 mm (or greater) laminated glass
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Glass freefall rack and table, workplace operating procedures, glass sheets, personal protective equipment and an appropriate work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

EVIDENCE GUIDE	
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant freefall rack and table equipment, glass sheet, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the planning, setting up and freefalling of glass from a rack to a table • Work may be performed in workplaces which are involved in the manufacture, processing and/or installation of sheet glass • Work is generally performed individually, with general supervision and may be part of a production process
Glass	Glass may be annealed or laminated
Tools and equipment are to include:	<ul style="list-style-type: none"> • storage rack • drop bench • glass handling equipment and hand tools
Equipment may include:	<ul style="list-style-type: none"> • air flotation and tilt benches with pneumatic breaker bars
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • annealed and laminated glass
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses

RANGE STATEMENT	
	<ul style="list-style-type: none"> • hard hats • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of freefalling equipment • Workplace procedures relating to the handling and movement of glass • Workplace instructions, including job sheets, plans, cutting lists, drawings and designs • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • Manufacturer instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements including materials, types of cuts, shapes and edges, processes and quantities required are identified from work instructions or job order in accordance with workplace procedures</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Cutting list and quality standards are determined and procedures identified in accordance with workplace requirements and industry standards</p> <p>1.5. Glass to be cut, shaped and drilled is selected using information from the work order including, type of glass, thickness, colour and dimensions</p> <p>1.6. Machines, equipment and settings required to perform the work are identified</p>
2. Prepare for work	<p>2.1. Sequence of work is planned to ensure processing is conducted in a logical order</p> <p>2.2. Suitable cutting, shaping, drilling, edging and lubrication methods are selected</p> <p>2.3. Glass processing table is selected and work surface is cleared of debris and dust</p> <p>2.4. Work area is cleared of obstructions and potential hazards with cullet bins located close to work area</p> <p>2.5. Glass is checked for imperfections and damage prior to handling</p> <p>2.6. Glass to be processed is located in the work area using correct manual handling procedures</p> <p>2.7. Glass is measured accurately to minimise waste and within specified tolerances according to enterprise standards</p> <p>2.8. Components and controls of machines including emergency stops and guards are identified and tested for working order</p>
3. Process glass	<p>3.1. Tools and equipment are operated and monitored in accordance with manufacturers' instructions and workplace procedures to ensure correct product quality and output</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. Glass is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of machines/equipment</p> <p>3.3. Problems occurring during work operations are identified and reported to appropriate persons</p> <p>3.4. Authorised changes in working procedures are followed</p> <p>3.5. Completed product is inspected for quality of work and repaired, reprocessed or discarded in accordance with workplace procedures</p>
4. Complete	<p>4.1. Processed glass is labelled and stored following workplace procedures ensuring there are no projections</p> <p>4.2. Scraps and off-cuts are removed for disposal or recycling as required</p> <p>4.3. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.4. Workplace documentation is completed as required</p> <p>4.5. Tools, equipment and unused materials are removed and stored appropriately</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate glass requirements and minimise waste
- use pre-checking and inspection techniques to anticipate processing problems, avoid re-working and wastage
- use the limited workplace technology related to the processing

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- identification of glass processing equipment, functions and procedures
- the set up and operation of glass processing equipment including procedures for reporting product defects or equipment faults
- workplace safety system requirements related to glass processing
- workflow in relation to glass processing

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work orders and plan processing operations
- Identify the materials, patterns/plans, processes, machines, equipment and settings to undertake a glass processing task
- Apply AS4667 Quality requirements for cut to size and processed glass
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Set up for and prepare to process glass
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - identify and use AS4677 Quality requirements for cut-to-size and processed glass
 - complete straight cuts by hand and portable diamond saws, simple shapes, truncated and radius corners, circles, fan holes, pay holes and ovals in annealed and laminated glass up to and including 6.38 mm and up to 1.0 m²
 - rough and smooth arris annealed and laminated glass up to and including 6.38 mm by hand and up to 0.5 m²
 - drill holes with portable diamond drills and tungsten spear point drills in annealed and laminated glass up to and including 6.38 mm and up to 0.5 m²
 - calculate the cost of glass and edgework
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Glass sheet/product, processing facilities/equipment (such as cutting equipment and glass edging equipment),

EVIDENCE GUIDE	
	table, work area, work orders and appropriate safety and personal protection equipment.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant glass processing equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements may include legislation, Australian Standard and building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the planning, preparation and processing of thin glass sheet
<p>Thin glass is:</p>	<ul style="list-style-type: none"> • annealed sheet glass less than or equal to 6mm thick. It may include mirrors. • laminated glass less than or equal to 6.38mm thick
<p>Glass processing by hand includes:</p>	<ul style="list-style-type: none"> • cutting • shaping • cutting by portable diamond saws • drilling and edging. <p>Edging may include arising</p>
<p>Tools and equipment are to include:</p>	<ul style="list-style-type: none"> • flat felt covered cutting tables • tungsten wheel glass cutters • speed cutters • circle cutters • portable diamond saws • L-squares and straight edges • tape measures • glass handling gloves • safety glasses • gauntlets

RANGE STATEMENT	
	<ul style="list-style-type: none"> • aprons • marking pens • chinagraph pencils • templates and lubricants
Tools and equipment may include:	<ul style="list-style-type: none"> • tables appropriate for cutting large glass sheets include mobile air floatation tables • roller castor tables or tilt tables with air floatation and breaker bars
Edging tools include but are not limited to:	<ul style="list-style-type: none"> • edging stones and hand arising blocks
Drilling equipment may include, but is not limited to:	<ul style="list-style-type: none"> • portable diamond drills and tungsten spear point hand drills
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • annealed and laminated glass for residential and commercial glazing • furniture applications and mirrors
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and Australian Standard policies and practices. It may include:</p> <ul style="list-style-type: none"> • gloves • safety glasses • gauntlets • footwear • earmuffs • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment required for the handling and processing of glass • Workplace instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials • AS4667 Quality requirements for cut to size and processed glass

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for task	<p>1.1. Work requirements in the form of type and quantity of glass to be relocated are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for movement of glass sheets by hand, including personal protection needs, are observed throughout the work</p> <p>1.3. Glass sheets to be moved are identified and weight, shape, points of balance and dimensions are estimated or calculated</p> <p>1.4. Manual handling procedures for lifting, lowering and carrying, pushing and pulling are identified</p> <p>1.5. Risks to self, others, material and equipment are identified arising from the required lifting, load carrying, set down or movement of the glass</p> <p>1.6. Need for glass lifting equipment or team lifting determined</p> <p>1.7. Team lifting processes are considered for application including:</p> <ul style="list-style-type: none"> 1.7.1. nomination of team leader 1.7.2. calculation of capacity of team 1.7.3. techniques to be used 1.7.4. tasks of team members <p>1.8. Glass is checked for imperfections and damage prior to movement</p>
2. Plan glass movement	<p>2.1. Locations for glass storage are identified and routes to be followed determined</p> <p>2.2. Required clearances are compared to available space and adjustments made</p> <p>2.3. Process for relocating glass is planned including predicting and planning for potential difficulties</p> <p>2.4. Proposed process is checked against advisory standards and workplace procedures for compliance</p>
3. Relocate glass	<p>3.1. Actions of lifting, lowering and carrying, pulling and pushing are carried out in accordance with approved advisory standards and workplace procedures</p> <p>3.2. Team lifting tasks (if used) are coordinated according to approved advisory standards</p> <p>3.3. Planned process and route are followed</p> <p>3.4. Glass is relocated without damage to material,</p>

ELEMENT	PERFORMANCE CRITERIA
	personnel or equipment 3.5. Glass is labelled and stored following workplace procedures ensuring there are no projections 3.6. Relocation is checked to see that it meets work requirements, with any differences reported
4. Complete work	4.1. Work area is cleaned and rubbish disposed of as appropriate 4.2. Workplace documentation is completed as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and unnecessary effort and plan routes, including the avoidance/overcoming of obstacles/hazards
- use the limited workplace technology related to the relocation of glass sheets by hand

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements and the behaviour of glass sheets when lifted and moved
- workflow in relation to the movement of glass by hand
- the principles, requirements and techniques of moving glass sheets by hand
- workplace safety system requirements related to the moving of glass sheets by hand

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to plan the relocation of glass by hand
- Apply safe handling requirements for moving glass by hand, including use of personal protective equipment
- Plan the movement of the glass sheets
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - demonstrate safety and inspection procedures prior to lifting
 - safely lift and relocate annealed and laminated glass up to and including 1.2 m² (17 kg)
 - safely team lift and relocate annealed and laminated glass up to and including 4.5 m² (68 kg)
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Glass sheet to be relocated, workplace operating procedures and personal protection equipment and an appropriate work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

EVIDENCE GUIDE	
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with glass sheets, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • This unit covers work involving the movement of glass sheets by hand • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the planning and conduct of the operation. This may include team lifting • Work is generally performed individually, with general supervision and may be part of a production process • Work may be performed in workplaces which are involved in the manufacture, processing and/or installation of sheet glass • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
<p>Sheet glass may include, but is not limited to:</p>	<ul style="list-style-type: none"> • glass for residential and commercial windows and doors • tinted and heat reflecting • mirrors and furniture applications <p>Glass may be annealed or laminated</p>

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for task	<p>1.1. Work requirements in the form of type and quantity of glass to be relocated are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for movement of glass sheets by mechanical means, including personal protection needs, are observed throughout the work</p> <p>1.3. Glass sheets to be moved are identified and weight is estimated or calculated</p> <p>1.4. Appropriate mechanical handling equipment is identified</p> <p>1.5. Risks to self, others, material and equipment are identified arising from the required lifting, load carrying, set down or movement of the glass</p> <p>1.6. Equipment and controls including emergency stops and guards are identified and checked for safe operation</p> <p>1.7. Damaged or worn parts are reported to appropriate personnel</p> <p>1.8. Glass is checked for imperfections and damage prior to movement</p>
2. Plan glass movement	<p>2.1. Locations for glass storage are identified and routes to be followed determined</p> <p>2.2. Required clearances are compared to available space and adjustments made</p> <p>2.3. Process for relocating glass is planned including predicting and planning for potential difficulties</p> <p>2.4. Proposed process is checked against advisory standards and workplace procedures for compliance</p>
3. Relocate glass	<p>3.1. Equipment is operated in accordance with approved advisory standards, manufacturers' instructions, workplace procedures and OH&S requirements</p> <p>3.2. Planned process and route are followed</p> <p>3.3. Glass is relocated without damage to material, personnel or equipment</p> <p>3.4. Glass is labelled and stored following workplace procedures ensuring there are no projections</p> <p>3.5. Relocation is checked to see that it meets work requirements, with any differences reported</p>
4. Complete work	4.1. Waste and scrap material is removed for disposal or

ELEMENT	PERFORMANCE CRITERIA
	recycling as required 4.2. Work area is cleaned and rubbish disposed of as appropriate 4.3. Workplace documentation is completed as required 4.4. Handling equipment is cleaned, maintained and stored according to workplace procedures

Required Skills and Knowledge

Required knowledge
<ul style="list-style-type: none"> • the qualities and characteristics of glass, including the hazards and handling requirements and the behaviour of glass sheets when lifted and moved • workflow in relation to the movement of glass by mechanical means • the principles, requirements and techniques of moving glass sheets by mechanical means • workplace safety system requirements related to the moving of glass sheets by mechanical means • capabilities, operating processes and procedures of mechanical handling equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to plan the relocation of glass using mechanical means
- Select and use appropriate equipment and techniques to relocate glass sheets
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - identify personal protective safety apparel and safety regulations for overhead lifting
 - identify and safely use gantry cranes up to 4.9 safe working load (SWL), including relevant standards and regulations
 - identify and use scissor grabs and vacuum rigs for lifting single glass sheets
 - follow pre safety and inspection procedures
 - calculate the weight, safely load and secure glass
 - relocate single sheets of glass by vacuum and scissor grabs up to 4.5 m² (170 kg)
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Mechanical glass handling equipment, glass sheet to be relocated, workplace operating procedures and personal protection equipment and an appropriate work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and

EVIDENCE GUIDE	
	questioning on underpinning knowledge. Assessment may be in conjunction with assessment of other relevant units of competency.
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant mechanical equipment, glass sheets, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • This unit covers work involving the movement of glass sheets by mechanical means • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the planning and conduct of the operation. • Work is generally performed individually, with general supervision and may be part of a production process • Work may be performed in workplaces which are involved in the manufacture, processing and/or installation of sheet glass • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
Glass may include, but is not limited to:	<ul style="list-style-type: none"> • annealed • laminated • toughened • tinted • heat reflecting and mirrors
Mechanical handling equipment is to include but is not limited to:	<ul style="list-style-type: none"> • gantry cranes up to 4.9swl • scissor and vacuum grabs
Tools and equipment are to include:	<ul style="list-style-type: none"> • air and tilt tables • A-frames and stillage racks
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • annealed and laminated glass
Personal protective equipment	<p>Personal protective equipment is that prescribed under legislation, regulation and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gauntlets

RANGE STATEMENT	
	<ul style="list-style-type: none"> • gloves • safety glasses • hard hats • safety footwear • aprons and overalls

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements including materials, types of cuts, shapes and edges, processes and quantities required are identified from work instructions or job order in accordance with workplace procedures</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, of the appropriate quality, serviceable and in a safe condition</p> <p>1.4. Cutting list and quality standards are determined and procedures identified in accordance with workplace requirements and industry standards</p> <p>1.5. Glass to be cut, shaped, drilled or edged is selected using information from the work order, including type of glass, thickness, colour and dimensions</p> <p>1.6. Machines, equipment and settings required to perform the work are identified</p>
2. Prepare for work	<p>2.1. Technique and sequence of work is planned to ensure processing is conducted in a logical order</p> <p>2.2. Procedures for monitoring quality of materials, work in progress and finished items are identified in accordance with workplace requirements and industry practice</p> <p>2.3. Suitable cutting, shaping, drilling, and edging machines are selected</p> <p>2.4. Glass processing table is selected and work surface is cleared of debris and dust</p> <p>2.5. Components and controls of machines including emergency stops and guards are identified and tested for working order</p> <p>2.6. Work area is cleared of obstructions and potential hazards</p> <p>2.7. Glass to be processed is located in the work area using appropriate handling techniques</p> <p>2.8. Glass is measured accurately to minimise waste and within specified tolerances according to enterprise standards</p> <p>2.9. Components and controls of machines including emergency stops and guards are identified and tested</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>for working order</p> <p>2.10. Glass is checked for imperfections and damage prior to handling</p>
3. Conduct processing operations	<p>3.1. Tools and equipment are operated and monitored in accordance with manufacturers' instructions and workplace procedures to ensure correct product quality and output</p> <p>3.2. Glass is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of machines/equipment</p> <p>3.3. Problems occurring during work operations are identified and reported to appropriate persons in accordance with enterprise procedures</p> <p>3.4. Waste quantities are checked to ensure that they are within allowable limits</p> <p>3.5. Authorised changes in working procedures are followed</p> <p>3.6. Completed product is inspected for quality of work and repaired, reprocessed or discarded in accordance with workplace procedures</p>
4. Complete work	<p>4.1. Processed glass is labelled and stored following workplace procedures ensuring there are no projections</p> <p>4.2. Scraps and off-cuts are removed for disposal or recycling as required</p> <p>4.3. Work area clean up is completed following workplace procedures</p> <p>4.4. Equipment is cleaned and stored according to workplace requirements</p> <p>4.5. Workplace documentation is completed in accordance with workplace requirements</p> <p>4.6. Tools, equipment and unused materials are removed and stored appropriately</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and weight, estimate glass requirements and minimise waste
- use pre-checking and inspection techniques to anticipate processing problems, avoid re-working and wastage
- use the limited workplace technology related to the processing of glass by basic machine, including handling aids, tools, equipment, calculators and measuring devices

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- workplace safety system requirements related to glass processing by basic machines
- identification of glass processing equipment, including its functions and procedures
- the set up and operation of glass processing equipment including procedures for reporting machine/product defects or equipment faults
- workflow in relation to glass processing

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work orders and plan processing operations
- Identify the materials, patterns/plans, processes, machines, equipment and settings to undertake a glass cutting, drilling, shaping and/or edging task by basic machines
- Apply safe handling requirements for machines, equipment, products and materials, including use of personal protective equipment
- Apply AS4667 Quality requirements for cut to size and processed glass
- Set up for and prepare to process glass
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - identify and use AS4667 Quality requirements for cut-to-size and processed glass
 - complete straight cuts, simple shapes, truncated and radius corners, circles, fan holes, pay holes and ovals in glass up to 6 mm annealed and 6.38 mm laminated glass up to 1.0 m²
 - cut 6 mm annealed and 6.38 mm laminated glass using a diamond saw
 - arris, grind and polish flat, round and mitre edges on 6 mm annealed and 6.38 mm laminated glass up to 0.5 m²
 - drill holes with tungsten and diamond drill bits in 6 mm annealed and 6.38 mm laminated glass up to 0.5 m²
 - calculate the cost of glass and edgework
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

EVIDENCE GUIDE	
Resource implications	Glass sheet/product, processing facilities/equipment (such as basic cutting and edging machines), table, work area, work orders and appropriate safety and personal protection equipment.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant glass processing machines, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • This unit covers work involving cutting, shaping, drilling and/or edging of glass by basic machines • Work requires individuals to demonstrate discretion, judgement and problem solving skills in determining the appropriate techniques, methods and equipment to be used to process glass by basic machines. This may be demonstrated either individually or in a team environment • OHS requirements may include legislation, building codes, material safety management systems, hazardous substance and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
Glass is:	<ul style="list-style-type: none"> • annealed glass less than or equal to 6mm thick • laminated glass less than or equal to 6.38mm thick
Glass processing includes:	<ul style="list-style-type: none"> • straight cutting • circle cutting • freehand cutting • drilling and edging
Edging may include:	<ul style="list-style-type: none"> • arrising • flat • round and mitre grinding • flat • round and mitre polishing and bevelling
Tools and equipment may include:	<ul style="list-style-type: none"> • flat felt covered cutting tables • tungsten wheel glass cutters

RANGE STATEMENT	
	<ul style="list-style-type: none"> • speed cutters • circle cutters • L-squares and straight edges • tape measures • glass handling gloves • safety glasses • gauntlets • aprons • marking pens • chinagraph pencils • templates and lubricants
Tables appropriate for cutting large glass sheets include:	<ul style="list-style-type: none"> • air flotation tables • roller castor tables or tilt tables with air flotation • breaker bars or roller castors
Edging equipment may include but is not limited to:	<ul style="list-style-type: none"> • finishing or belt machines • diamond or pencil edgers • pumice or cork polishers • horizontal wheels • finger slotters and hand tools
Drilling equipment may include, but is not limited to:	<ul style="list-style-type: none"> • portable • wall-mounted and free-standing diamond drill presses and saws
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • annealed and laminated glass for residential and commercial glazing and furniture applications
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and Australian Standard policies and practices. It may include:</p> <ul style="list-style-type: none"> • gloves • safety glasses • gauntlets • footwear • earmuffs • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of glass cutting, drilling and

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements in the form of type of glass and the method of fixing are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for glazing/reglazing of windows and doors, including personal protection needs, are observed throughout the work</p> <p>1.3. The process for fitting glass to window and door frames is identified</p>
2. Prepare for work	<p>2.1. Work sequence is planned in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials (less glass and frames) are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Type of glass to be fitted and frames are selected to match:</p> <ul style="list-style-type: none"> 2.3.1. customer order 2.3.2. existing glass type 2.3.3. requirements for security, noise or light control 2.3.4. Australian Standards <p>2.4. Glass is checked for type, size and imperfections</p> <p>2.5. Glass fixing method is selected according to:</p> <ul style="list-style-type: none"> 2.5.1. specification 2.5.2. type of glass and frame 2.5.3. security requirements 2.5.4. sealing methods 2.5.5. Australian Standards <p>2.6. Frame condition is assessed to ensure suitability for glazing in accordance with customer order and Australian Standards. Defective frames are reported for repair or replacement in accordance with workplace procedures</p> <p>2.7. Fixing and sealing materials are prepared by mixing or cutting to length as appropriate</p>
3. Identify site conditions and restraints	<p>3.1. On-site difficulties are recognised and action taken to resolve in accordance with regulations and workplace requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. Covering material is applied where necessary to protect existing fixtures and fittings</p> <p>3.3. Special characteristics of the window or door which may affect the finished job are identified and corrective action taken</p>
4. Perform glazing	<p>4.1. Frame is prepared to receive glass by:</p> <ul style="list-style-type: none"> 4.1.1. checking size against specification 4.1.2. removing remains of glass and any sealants 4.1.3. cleaning 4.1.4. surface preparation (if required) <p>4.2. Glass is fixed to the frame using the selected method and in accordance with recognised industry procedures and Australian Standards</p> <p>4.3. Solvents and sealants are used in accordance with manufacturer recommendations and Australian Standards</p> <p>4.4. Excess sealing material is removed</p> <p>4.5. Glass and frame are cleaned after fixing</p>
5. Complete work	<p>5.1. Completed installation is checked to ensure compliance with customer requirements and specifications</p> <p>5.2. Tools, equipment and materials are cleaned and stored following workplace procedures</p> <p>5.3. Work area is cleaned and left in a safe condition and rubbish disposed of as appropriate</p> <p>5.4. Waste and scrap materials are removed for disposal or recycling as required</p> <p>5.5. Workplace documentation is completed in accordance with workplace requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the glazing of simple window and door frames

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- the techniques, methods, materials and process of glazing simple/complex window and door frames
- workplace safety system requirements related to the glazing simple/complex window and door frames
- relevant Australian Standards
- workflow in relation to fitting glass
- characteristics, purpose and operation of tools and equipment used in glazing simple/complex window and door frames
- identification of equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to glaze/reglaze simple/complex windows and doors
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Glaze the following:
 - timber putty faced and beaded window sashes, including fixed, sliding, double hung, casement and awning sashes
 - metal channel and beaded window sashes, including fixed, sliding, double hung, casement and awning sashes
 - timber putty faced and beaded doors, including fixed, sliding, hinged, pivot and bi-fold doors
 - metal channel and beaded doors, including fixed, sliding, hinged, pivot and bi-fold doors
- Include the following for each:
 - select glass thickness and type in accordance with AS1288
 - calculate glazing clearance and cutting size
 - cut glass to AS4667 Quality requirements for cut to size and processed glass
 - select glazing tools, equipment, glazing sealants, vinyls and tapes
 - prepare working area
 - prepare glazing rebates and channels prior to installation
 - clean glass, tools, equipment and work area
 - calculate the cost of glass, glazing materials and

EVIDENCE GUIDE	
	<p>labour</p> <ul style="list-style-type: none"> • Re-glaze timber and metal windows and doors, including: <ul style="list-style-type: none"> • prepare work area and drop sheets • select reglazing tools and equipment • hack out/remove beads and glass safely from timber windows and doors • remove and disassemble metal window sashes and doors and remove glass safely • select glass thickness and type in accordance with AS1288 • calculate glazing clearance and cutting size • cut glass to industry standards AS4667 • select glazing tools, equipment, glazing sealants, vinyls and tapes • glaze timber and metal windows and doors • install sash cords, unique and spring balances on timber and metal double hung windows • clean glass, tools, equipment and work area • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
Resource implications	Frames, glass, fixing material, sealants, workplace operating procedures and work orders, personal protective equipment and an appropriate work area/site.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant glazing equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the handling and installation of glass products
- Work may be performed in workplaces which are involved in on-site and off-site fabrication, installation and/or replacement of glass to commercial or residential windows, doors and other openings or to other frames

Glaze/re-glaze

- Involves the installation of glass to metal and/or timber doors, windows and other frames and reglazing of existing windows and doors
- Residential glazing/re-glazing is confined to simple doors and windows and may include:
 - residential windows, such as fixed, sliding, casement, awning and double hung and louveres
 - residential doors, such as sliding, hinged, pivot and bi-fold
- Glazing or reglazing for non-residential situations is addressed in commercial and architectural/engineering AQF III units

Types of glass may include but are not limited to:

- annealed glass
- toughened glass
- laminated glass
- wired glass

RANGE STATEMENT	
	<ul style="list-style-type: none"> • tinted and heat reflective glass • coated glass and insulated glass units.
Tools and equipment are to include:	<ul style="list-style-type: none"> • tungsten wheel glass cutters • speed cutters • cutting lubricants • running pliers • straight edges and squares • tape measures • glass handling and lifting equipment • hack-out knives • chisels • putty knives • sprig/diamond guns • vinyl cutters and rollers • pry bars • sealant guns • blade and phillips head screwdrivers • pop rivet guns • electric and pneumatic drills • rubber mallets • claw hammers • nail punches and PPE equipment
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • all forms of flat glass and acrylic glazing products • plastic • aluminium • steel • solid timber • gaskets • sealants • adhesives • glazing tapes and setting blocks
Methods of glazing may include:	<ul style="list-style-type: none"> • channel glazing • beaded glazing and double glazing
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and Australian Standard policies and practices. It may include:</p> <ul style="list-style-type: none"> • gloves

RANGE STATEMENT	
	<ul style="list-style-type: none"> • safety glasses • gauntlets • safety footwear • hard hats • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the glazing of simple windows and doorframes • Australian Standards AS1288, 2208, 4667, 2047, 4666 • Equipment and material manufacturers' specifications and operational procedures • On-site procedures and regulations relating to the handling and movement of glass • Work instructions, including job sheets, plans, drawings and designs • Safety standards include personal protective equipment, OHS regulations and enterprise requirements

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements and components	<p>1.1. Work requirements in the form of product to be fabricated, its use, specifications, components and attachments are identified from work instructions</p> <p>1.2. Australian Standards relating to glass components and products associated with the process are identified</p> <p>1.3. Workplace health and safety requirements for fabrication and assembly of metal frames, including personal protection needs, are observed throughout the work</p> <p>1.4. Components attachments, materials and tools required for the fabrication and assembly are identified and their availability, suitability (in terms of size, quantity, finish and profile), quality and serviceability ascertained</p> <p>1.5. Tools, equipment and fixing and joining devices suitable for the method of fixing are identified</p> <p>1.6. The process for the fabrication and assembly of metal frames is identified</p>
2. Prepare for fabrication and assembly	<p>2.1. Work sequence is planned in a logical order to suit the product specifications</p> <p>2.2. Tools, equipment, components, attachments and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Jigs identified as being required are prepared or selected and checked for suitability for purpose</p> <p>2.4. Measurements are checked for accuracy, legibility and tolerance</p> <p>2.5. Mating or directional marks are noted and positioned</p> <p>2.6. Machines and equipment are set up in accordance with production objectives, manufacturers' instructions and workplace procedures</p>
3. Fabricate and assemble components	<p>3.1. Machines, tools and equipment are operated in accordance with manufacturer instructions and workplace procedures to produce components in conformance to specifications</p> <p>3.2. Components are laid out and assembled using:</p> <p>3.2.1. jig (if required)</p> <p>3.2.2. appropriate fastenings</p>

ELEMENT	PERFORMANCE CRITERIA
	3.2.3. appropriate tools and equipment 3.3. Frames are assembled ensuring conformity to specifications, alignment and appropriate fastening
4. Complete work	4.1. Completed frame is inspected to ensure compliance with quality standards and customer requirements 4.2. Completed frame is inspected to ensure compliance with quality standards and customer requirements 4.3. Equipment is cleaned, inspected and stored in accordance with workplace procedures, with unserviceable items tagged, faults identified and appropriate personnel are informed 4.4. Work area is cleaned and rubbish disposed of as appropriate 4.5. Workplace documentation is completed in accordance with enterprise requirements 4.6. Waste materials are removed from work area and disposed of in accordance with relevant statutory requirements and enterprise requirements 4.7. Tools, equipment and unused materials are removed and stored appropriately

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise component and material sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the fabrication and assembly of metal frames

Required knowledge

- workflow in relation to frame production
- workplace safety system requirements related to the fabrication and assembly of metal frames
- operation of tools and equipment used in the fabrication and assembly process
- identification of equipment, processes and procedures
- relevant Australian Standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to fabricate and assemble metal frames
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete work from product specification data sheets
- Identify and select product materials
- Fabricate frame and sash components, including:
 - cutting
 - tooling
 - routing
 - milling
 - drilling
 - crimping
- Identify, select and install component hardware, including:
 - weather seals
 - wheels
 - stays
 - hinges
 - guides
 - locks
- Assemble frames, including:
 - glass
 - gaskets
 - tapes
 - sealants

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • adhesives • fasteners • Reveal linings and flashings in accordance with AS2047, Section 6 • Label and certify frames in accordance with AS2047, Section 8 • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
Resource implications	Frame components, consumables, workplace operating procedures, personal protective equipment, an appropriate work area, tools and equipment.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of machines and in the assembly of frames
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work may be performed in workplaces which are involved in the manufacture of frames from aluminium and/or steel

Fabrication and assembly

This includes the selection of materials, components and attachments required for a metal frame, its fabrication and assembly prior to its installation.

Fabrication may include but is not limited to:

- cutting
- routing
- milling
- pressing
- drilling
- crimping

Tools and equipment may include:

- assembly benches
- drop and up-cut saws
- pneumatic
- hydraulic and manual presses
- frame and sash tooling
- copy routers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • end millers • crimpers • electric and pneumatic powered drills and screwdrivers • pop rivet guns • pleuws guns and general hand tools
Materials may include but are not limited to:	<ul style="list-style-type: none"> • aluminium alloys and steel • hardware • fasteners • plastics • sealants • tapes • vinyl • gaskets and timber reveals <p>Glass includes annealed glass, safety glass, patterned glass, tinted, heat reflective and insulated glass units.</p>
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and Australian Standard policies and practices. It may include:</p> <ul style="list-style-type: none"> • gloves • safety glasses • gauntlets • safety footwear • hard hats • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the setting and operation of machinery • Machine manufacturer specifications and operational procedures • Work instructions, including job sheets, cutting lists plans, drawings and designs • Safety standards, including personal protective equipment, OHS regulations and enterprise requirements • AS2047 Windows in Buildings

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for work	<p>1.1. Work requirements in the form of type of insect or security screen to be fabricated and installed are identified from work instructions. This includes the identification of its pattern or plan</p> <p>1.2. Workplace health and safety requirements for fabrication and installation of insect or security screens, including personal protection needs, are observed throughout the work</p> <p>1.3. The process for fabricating and installing insect or security screens is identified</p> <p>1.4. Quantities of materials required are calculated from plans or work instructions or by measuring the screen opening in accordance with Australian Standards and industry practice</p> <p>1.5. Cutting lists are prepared from plans, work instructions or measurements of opening to suit the type of screen to be installed</p> <p>1.6. Fittings, fixings and joining devices or materials are selected in line with specifications or type of materials to be joined or fixed</p> <p>1.7. Tools and equipment appropriate to the work method are identified</p>
2. Prepare for work	<p>2.1. Work sequence is determined in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Components of the insect or security screen are checked against specifications or job order for: size, quantity, finish and profile</p>
3. Fabricate and install insect or security screen	<p>3.1. Materials are measured and marked to cutting list requirements and most economical use of materials</p> <p>3.2. Materials are cut and stamped to cutting list requirements in accordance with workplace procedures or industry practice</p> <p>3.3. Components of insect or security screen are assembled in accordance with recognised industry standards</p> <p>3.4. Fittings are installed to screen in accordance with workplace procedures or industry practice</p>

ELEMENT	PERFORMANCE CRITERIA
	3.5. Insect or security screen is installed in opening in accordance with recognised industry standards
4. Complete work	4.1. Installed insect or security screen is inspected for quality of work and repaired, refabricated or reinstalled as required in accordance with workplace procedures 4.2. Material which can be reused is collected and stored 4.3. Waste and scrap materials are removed for disposal or recycling as required 4.4. Work area is cleaned and rubbish disposed of as appropriate 4.5. Tools, equipment and unused materials are cleaned and removed and stored appropriately 4.6. Workplace documentation is completed in accordance with workplace requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the fabrication and installation of insect and security screens

Required knowledge

- workflow in relation to the fabrication and installation of insect and security screens
- characteristics of materials used and uses of products produced
- workplace safety system requirements related to fabricating and installing insect and security screens
- identification of equipment, processes and procedures
- relevant Australian Standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Plan the fabrication and installation of insect and security screens
- Interpret work order/job instruction and locate and apply relevant information to fabricate and install insect and security screens
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - measure for insect and security windows and doors
 - identify and select product materials used within the industry/workplace
 - fabricate frame and components, including optimisation of materials, cutting, tooling, drilling and crimping to ensure compliance to Australian Standards
 - identify, select and install component hardware including wheels, hinges, guides, locks and closures
 - assemble frames including mesh and grills to comply with Australian Standard requirements
 - apply fixing techniques and procedures relating to the correct installation of insect and security screens, doors and window grills
 - apply current Australian Standards and type testing procedures
 - calculate cost of insect and security screens and doors
- Work effectively with others
- Modify activities to cater for variations in workplace

EVIDENCE GUIDE	
	contexts and environment.
Resource implications	Aluminium framing material, aluminium security grill material, aluminium sheeting, insect screen mesh, fittings, fixing/fasteners, workplace operating procedures, personal protective equipment and an appropriate work area.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant fabrication and installation equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the fabrication and installation process
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations, Australian standards and organisation insurance requirements
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work is generally performed individually, with general supervision and may be part of a production process

Insect and security screens may include:

- fixed
- sliding and emergency exit grills to suit various commercial and domestic window types
- sliding and hinged door applications

Tools and equipment are to include:

- assembly benches
- drop and up-cut saws
- pneumatic and manual presses
- stamping and notching tools
- copy routers
- end millers
- crimpers
- electric and pneumatic powered drills and screwdrivers
- pop rivet guns
- fly screen spline rollers
- soft rubber mallets
- knives
- bolt cutters or mechanical shears

RANGE STATEMENT	
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • extruded door framing • corner stakes • interlocks • fly mesh • security mesh • fittings and fixing/fasteners and anti jemmy protection hardware
Fittings include:	<ul style="list-style-type: none"> • hinges • wheels • lock mechanisms that comply with Australian standards • door closures and lock guards
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and Australian Standard policies and practices. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • safety footwear • hard hats • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the fabrication and installation of insect screens and security doors and windows • Equipment or tool manufacturers' specifications and operational procedures • Work instructions, including job sheets, plans, drawings and designs • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • Australian Standards

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify storage requirements	<p>1.1. Work requirements in the form of type and quantity of glass to be stored are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for storage and handling of glass, including personal protection needs, are observed throughout the work</p> <p>1.3. Glass to be stored is checked against paperwork and any discrepancies are reported according to workplace procedures</p> <p>1.4. Storage requirements are identified from manufacturer instructions, statutory regulations and workplace procedures</p> <p>1.5. Locations for glass storage are identified and checked for availability and suitability</p> <p>1.6. The process and procedures for moving, handling and storing are identified</p> <p>1.7. Team lifting processes are considered for application including:</p> <p>1.7.1. nomination of team leader</p> <p>1.7.2. calculation of capacity of team</p>
2. Prepare for glass movement	<p>2.1. Work sequence is planned in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Planned route for relocating glass is determined and checked for hazards and the work area is cleared of obstructions</p> <p>2.4. Risks to self and others are identified and acted upon according to statutory requirements and workplace procedures</p> <p>2.5. Required clearances are compared to available space and adjustments made</p> <p>2.6. Process for relocating glass is planned including predicting and planning for potential difficulties</p> <p>2.7. Proposed process is checked against code of practice and workplace procedures for compliance</p>
3. Relocate glass	<p>3.1. Safety checks are carried out on required handling equipment, and any damaged or worn parts are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>reported according to workplace practices</p> <p>3.2. Handling equipment is operated safely and correctly in accordance with manufacturers' instructions and workplace procedures</p> <p>3.3. Planned process and route are followed</p> <p>3.4. Glass is relocated without damage to material, personnel or equipment</p> <p>3.5. Glass is labelled and stored following workplace procedures ensuring there are no projections</p> <p>3.6. Relocation is checked to see that it meets work requirements, with any differences reported</p>
4. Complete job requirements	<p>4.1. Handling equipment is cleaned, maintained and stored according to workplace procedures</p> <p>4.2. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.3. Workplace documentation is completed as required according to workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the operation of handling, relocating and storing glass

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- workflow in relation to the movement and storage of glass
- glass storage requirements
- identification of equipment, processes and procedures
- workplace safety system requirements related to the handling, relocation and storage of glass

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Plan the handling, relocation and storing of glass
- Interpret work order/job instruction and locate and apply relevant information to relocate and store glass
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - identify, select and use personal safety apparel
 - identify equipment for the handling and storage of glass
 - calculate the weight of glass
 - handle annealed and laminated glass up to and including 1.2 m² (17 kg)
 - team handle annealed and laminated glass up to and including 4.5 m² (68 kg)
 - relocate single sheets of glass by vacuum and scissor grabs up to 4.5 m² (170 kg)
 - safely load and secure glass
 - relocate blocks and end caps of glass sheets by grabs, slings and chains up to 2t
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Glass to be stored, workplace operating procedures, personal protective equipment, an appropriate work area and others to assist as required.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

EVIDENCE GUIDE	
	<p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	<p>Assessment may occur on the job or in a workplace simulated facility with relevant glass handling equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the planning and conduct of the operation. This may be demonstrated either individually or in a team environment
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work is generally performed individually, with general supervision and may be part of a production process

Storing and handling glass

The storage and handling of glass is a necessary function of all workplaces working in the manufacture, processing and/or installation of sheet glass or glass products. It involves the handling, moving and storing of glass in quantities appropriate to the workplace requirement and may involve team lifting as well as the application of individual skills.

Glass

Glass may be annealed, laminated, toughened, patterned, tinted and heat reflecting. It includes:

- domestic and commercial glass
- mirrors
- shower screens
- furniture glass
- safety glass
- patterned or specialty glass

Tools and equipment are to

- hand trolleys

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • pallet truck • gantry crane • scissor • sling and jumbo grabs • air and tilt tables • vacuum lifters
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • annealed and laminated glass
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies. It may include:</p> <ul style="list-style-type: none"> • gloves • safety glasses • hard hats • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the handling and movement of glass • Work instructions, delivery dockets, job sheets and plans • Workplace procedures relating to reporting and communication • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • Quality standards include AS4667 Quality requirements for cut to size and processed glass • Manufacturer instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirement	<p>1.1. Customer requirements and expectations regarding glass and glazing work or technical advice are identified and confirmed through a process of liaison and consultation</p> <p>1.2. Workplace health and safety requirements for process for assessing glass and glazing requirements, including personal protection needs, scaffolding and lifting equipment, are observed throughout the work</p> <p>1.3. Requirements are recorded and confirmed according to workplace requirements</p> <p>1.4. The process for assessing glass and glazing requirements is identified</p>
2. Prepare for work	<p>2.1. Work sequence is planned in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Research materials are accessed and analysed for applicability</p> <p>2.4. Site visit is conducted if possible to confirm requirements and to identify any restrictions or unforeseen hazards/considerations</p> <p>2.5. Product sources are contacted to ascertain current state of art/developments if appropriate</p>
3. Conduct assessment	<p>3.1. Influencing factors are identified and their significance and impact on the end product determined</p> <p>3.2. Specifications for the requirement are documented in accordance with workplace procedures</p> <p>3.3. Products/types of glass are identified and their application determined</p> <p>3.4. Technical or other professional advice is sought if applicable and available in accordance with workplace procedures</p> <p>3.5. Possible solutions may be modelled or trialled in accordance with workplace procedures</p> <p>3.6. Optimal solution is identified and specifications confirmed</p>
4. Complete work	4.1. Solution is converted into work instructions/job

ELEMENT	PERFORMANCE CRITERIA
	orders in accordance with workplace procedures 4.2. Other documentation, including any advice/referral to customer, is completed in accordance with workplace practices 4.3. Work area is cleaned and rubbish disposed of as appropriate

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to glass and glazing, work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of information and reference materials to facilitate assessment, avoid workflow interruptions and assist efficacy of solutions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for application and assemble required resources
- apply knowledge, analytical skills and tools to assist in the assessment of glass and glazing requirements to plan work, providing effective and acceptable solutions
- use the workplace technology related to the assessment of glass and glazing requirements

Required knowledge

- workplace operating procedures and AS1288
- the qualities and characteristics of glass, including types, qualities, applications and limitations
- products and processes and current trends and developments in glass and glazing techniques/applications
- workflow and operating requirements of work systems in own work area
- workplace safety system requirements related to the handling and installation of glass

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret glass and glazing requirement and accurately determine solutions to meet work situations/customer queries
- Identify and confirm requirements/customer expectations
- Locate, interpret and apply information for situation to be assessed
- As a minimum, demonstrate the ability to:
 - apply the requirements of AS1288 (requires an understanding of scope, definitions, abbreviations and symbols)
 - determine thickness limits for standard nominal thickness of glass
 - identify and calculate aspect ratios
 - identify regional boundaries, terrain categories and their description
 - determine minimum nominal glass thicknesses for various glazing situations using wind loading design charts and tables
 - identify types of safety glazing materials
 - determine the safety glazing materials for various glazing situations
 - determine safety glazing material thicknesses from flow charts
 - identify basic installation details for glazing
 - identify the design considerations and glazing techniques for toughened glass assemblies
- Work effectively with others
- Modify activities to cater for variations in workplace cultures and environment

Resource Implications

Work requirements, workplace operating procedures, personal protective equipment and an appropriate work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

EVIDENCE GUIDE	
	<p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of Assessment	<p>Assessment may occur on the job or in a simulated workplace facility with relevant glass and glazing requirements, simulated work instructions and commitments.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the planning, setting up and freefalling of glass from a rack to a table
- Work may be performed in workplaces which are involved in the manufacture, processing and/or installation of sheet glass
- Work is generally performed individually and may be on a one-to-one basis with a customer/supervisor, with only limited supervision and may be part of a production process

Glass and glazing assessment

- Glass and glazing assessment involves the assessment required for all glass and glazing tasks. It may be a formal and documented process or an informal on-the-job assessment of a situation/requirement.
- Factors which may influence the assessment include:
 - residential and commercial applications
 - building height/limitations
 - wind loading considerations
 - regional boundaries/zones
 - terrain description/categories
 - human impact considerations

RANGE STATEMENT	
Tools and equipment may include:	<ul style="list-style-type: none"> • tape measures • calculators • glass thickness and glazing material indicators • product data and samples • relevant standards/codes • stationery and calculator
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • hard hats • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions relating to assessment of glass and glazing requirements • Regulatory/legislative requirements, particularly those pertaining to building codes, OHS and environmental requirements • Manufacturer specifications and instructions, particularly those pertaining to new products/developments • Organisation work specifications and requirements • Authorised organisational or external personnel • Australian standards: AS1288, 2208, 1170.2, HB125 • Workplace experience/expertise and previous projects/work

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for task	<p>1.1. Work requirements in the form of type and quantity of glass to be relocated are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for movement of block glass sheet by mechanical means, including personal protection needs, are observed throughout the work</p> <p>1.3. Blocks of glass sheet to be moved are identified and weight is estimated or calculated</p> <p>1.4. Appropriate mechanical handling equipment is identified</p> <p>1.5. Risks to self, others, material and equipment are identified arising from the required lifting, load carrying, set down or movement of the glass</p> <p>1.6. Equipment and controls including emergency stops and guards are identified and checked for safe operation</p> <p>1.7. Damaged or worn parts are reported to appropriate personnel</p> <p>1.8. Glass is checked for imperfections and damage prior to movement</p>
2. Plan glass movement	<p>2.1. Locations for glass storage are identified and routes to be followed determined</p> <p>2.2. Required clearances are compared to available space and adjustments made</p> <p>2.3. Process for relocating glass is planned including predicting and planning for potential difficulties</p> <p>2.4. Proposed process is checked against advisory standards and workplace procedures for compliance</p>
3. Relocate glass	<p>3.1. Equipment is operated in accordance with approved advisory standards, manufacturers' instructions, workplace procedures and OH&S requirements</p> <p>3.2. Planned process and route are followed</p> <p>3.3. Glass is relocated without damage to material and equipment or injury</p> <p>3.4. Glass is labelled and stored following workplace procedures ensuring there are no projections</p> <p>3.5. Relocation is checked to see that it meets work requirements, with any differences reported</p>
4. Complete work	<p>4.1. Waste and scrap material is removed for disposal or</p>

ELEMENT	PERFORMANCE CRITERIA
	recycling as required 4.2. Work area is cleaned and rubbish disposed of as appropriate 4.3. Workplace documentation is completed as required 4.4. Handling equipment is cleaned, maintained and stored according to workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and unnecessary effort and plan routes including the avoidance/overcoming of obstacles/hazards
- use the limited workplace technology related to the relocation of block glass sheet by mechanical means

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements and the behaviour of block glass sheet when lifted and moved
- workflow in relation to the movement of glass by mechanical means
- the principles, requirements and techniques of moving block glass sheet by mechanical means
- workplace safety system requirements related to the moving of block glass by mechanical means
- capabilities, operating processes and procedures of mechanical handling equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order/job instruction and locate and apply relevant information to plan the relocation of glass using mechanical means
- Select and use appropriate equipment and techniques to relocate block glass sheet
- Apply safe handling requirements for equipment, products and materials, include use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - identify personal protective safety apparel and safety regulations for overhead lifting
 - identify and safely use gantry cranes up to 4.9 swl, including standards and regulations
 - identify and use block grabs, slings and chains for lifting blocks or end caps of glass sheets
 - calculate the weight of glass
 - safely load and secure glass
 - relocate blocks and end caps of glass sheets by grabs, slings and chains up to 2 t
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Mechanical glass handling equipment, glass sheet to be relocated, workplace operating procedures and personal protection equipment and an appropriate work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and

EVIDENCE GUIDE	
	questioning on underpinning knowledge. Assessment may be in conjunction with assessment of other relevant units of competency.
Context of Assessment	Assessment may occur on the job or in a workplace simulated facility with relevant mechanical equipment, block glass sheet, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Unit context</p>	<ul style="list-style-type: none"> • This unit covers work involving the movement of block glass sheet by mechanical means • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the planning and conduct of the operation • Work is generally performed individually, with general supervision and may be part of a production process • Work may be performed in workplaces which are involved in the manufacture, processing and/or installation of sheet glass • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
<p>Block/bulk glass may be:</p>	<ul style="list-style-type: none"> • end caps • cased or factory run size (FRS) blocks <p>Glass may be annealed or laminated</p>
<p>Mechanical handling equipment is to include:</p>	<ul style="list-style-type: none"> • gantry cranes up to 4.9swl • block grabs • slings and chains
<p>Tools and equipment are to include:</p>	<ul style="list-style-type: none"> • glass handling equipment and general hand tools
<p>Materials are to include but are not limited to:</p>	<ul style="list-style-type: none"> • annealed and laminated glass
<p>Personal protective equipment overhead lifting. It may include:</p>	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices for overhead lifting. It may include:</p> <ul style="list-style-type: none"> • gauntlets

RANGE STATEMENT	
	<ul style="list-style-type: none"> • gloves • safety glasses • safety footwear • hard hats • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the handling and movement of glass • Work instructions, including job sheets and plans • Equipment manufacturer instructions • Safety standards including personal protective equipment, OHS regulations and enterprise requirements • Manufacturer instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements including materials, types of cuts, shapes and edges, processes and quantities required are identified from work instructions or job order in accordance with workplace procedures</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Cutting list and quality standards are determined and procedures identified in accordance with workplace requirements and industry standards</p> <p>1.5. Glass to be cut, shaped, drilled or edged is selected using information from the work order including: type of glass, thickness, colour and dimensions</p> <p>1.6. Machines, equipment and settings required to perform the work are identified</p>
2. Prepare for work	<p>2.1. Sequence of work is planned to ensure processing is conducted in a logical order</p> <p>2.2. Suitable cutting, shaping, drilling, edging and lubrication methods are selected</p> <p>2.3. Glass processing table is selected and work surface is cleared of debris and dust</p> <p>2.4. Work area is cleared of obstructions and potential hazards with cullet bins located close to work area</p> <p>2.5. Glass is checked for imperfections and damage prior to handling</p> <p>2.6. Glass to be processed is located in the work area using correct manual handling procedures</p> <p>2.7. Glass is measured accurately to minimise waste and within specified tolerances according to enterprise standards</p> <p>2.8. Components and controls of machines including emergency stops and guards are identified and tested for working order</p>
3. Process glass	<p>3.1. Tools and equipment are operated and monitored in accordance with manufacturers' instructions and workplace procedures to ensure correct product quality and output</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. Glass is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of machines/equipment</p> <p>3.3. Problems occurring during work operations are identified and reported to appropriate persons</p> <p>3.4. Authorised changes in working procedures are followed</p> <p>3.5. Completed product is inspected for quality of work and repaired, reprocessed or discarded in accordance with workplace procedures</p>
4. Complete work	<p>4.1. Processed glass is labelled and stored following workplace procedures ensuring there are no projections</p> <p>4.2. Scraps and off-cuts are removed for disposal or recycling as required</p> <p>4.3. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.4. Workplace documentation is completed as required</p> <p>4.5. Tools, equipment and unused materials are removed and stored appropriately</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate glass requirements and minimise waste
- use pre-checking and inspection techniques to anticipate processing problems, avoid re-working and avoid wastage
- use the limited workplace technology related to the processing of glass including handling aids, tools, equipment, calculators and measuring devices

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- identification of glass processing equipment, functions and procedures
- the set up and operation of glass processing equipment including procedures for reporting product defects or equipment faults
- workplace safety system requirements related to glass processing
- workflow in relation to glass processing

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work orders and plan processing operations
- Identify the materials, patterns/plans, processes, machines, equipment and settings to undertake a glass processing task
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Set up for and prepare to process glass
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - identify and use AS4667 Quality requirements for cut to size and processed glass
 - complete straight cuts by hand and diamond saws, simple shapes, truncated and radius corners, circles and ovals in annealed and laminated glass greater than 6.38 mm and up to 1.0 m²
 - rough and smooth arris annealed and laminated glass greater than 6.38 mm by hand up to 0.5 m²
 - drill holes with portable diamond drills and tungsten spear point drills in annealed and laminated glass greater than 6.38 mm up to 0.5 m²
 - calculate the cost of glass and edgework
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Glass sheet/product, processing facilities/equipment (such as cutting equipment and glass edging equipment), table, work area, work orders and appropriate safety and personal protection equipment.

Method of assessment

Assessment methods must confirm consistency of

EVIDENCE GUIDE	
	<p>performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	<p>Assessment may occur on the job or in a workplace simulated facility with relevant glass processing equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous substance and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the planning, preparation and processing of thin glass sheet
Thick glass is:	<ul style="list-style-type: none"> • annealed sheet glass greater than 6mm thick • laminated glass greater than 6.38mm thick
Glass processing by hand includes:	<ul style="list-style-type: none"> • its cutting • use of portable diamond saws • shaping • drilling and edging. Edging may include arising
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • flat felt covered cutting tables • tungsten wheel glass cutters • speed cutters • circle cutters • portable diamond saws • L-squares and straight edges • tape measures • glass handling gloves • safety glasses • gauntlets • aprons • marking pens • chinagraph pencils

RANGE STATEMENT	
	<ul style="list-style-type: none"> • templates and lubricants
Tables appropriate for cutting large glass sheets include:	<ul style="list-style-type: none"> • air flotation tables • roller castor table or tilt table with air flotation or roller castors
Edging tools includes but is not limited to:	<ul style="list-style-type: none"> • edging stones and hand arrisers
Drilling equipment may include, but is not limited to:	portable diamond drills and tungsten spear point hand drills
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • annealed and laminated glass for residential and commercial windows and doors • structural glass • mirrors • table tops and shower screens
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • gloves • safety glasses and footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment required for the handling and processing of glass • Workplace instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials • Quality standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements including materials, types of cuts, shapes and edges, processes and quantities required are identified from work instructions or job order in accordance with workplace procedures</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, of the appropriate quality, serviceable and in a safe condition</p> <p>1.4. Cutting list and quality standards are determined and procedures identified in accordance with workplace requirements and industry standards</p> <p>1.5. Glass to be cut, shaped, drilled or edged is selected using information from the work order including: type of glass, thickness, colour and dimensions</p> <p>1.6. Machines, equipment and settings required to perform the work are identified</p> <p>1.7. Information required to be entered into machine to match work requirements or job order is identified and calculated</p>
2. Prepare for work	<p>2.1. Technique and sequence of work is planned to ensure processing is conducted in a logical order</p> <p>2.2. Procedures for monitoring quality of materials, work in progress and finished items are identified in accordance with workplace requirements and industry practice</p> <p>2.3. Tools, equipment and attachments required for the work are assembled and checked for good working order</p> <p>2.4. Components and controls of machines including emergency stops and guards are identified and tested for working order</p> <p>2.5. Information required by machine for required process is entered</p> <p>2.6. Work area is cleared of obstructions and potential hazards</p> <p>2.7. Glass to be processed is located in the work area using appropriate handling techniques</p> <p>2.8. Glass to be processed is checked for imperfections</p>

ELEMENT	PERFORMANCE CRITERIA
	and damage
3. Conduct processing operations	<p>3.1. Tools and equipment are operated and monitored in accordance with manufacturers' instructions and workplace procedures to ensure correct product quality and output</p> <p>3.2. Glass is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of machines/equipment</p> <p>3.3. Problems occurring during work operations are identified and reported to appropriate persons in accordance with enterprise procedures</p> <p>3.4. Waste quantities are checked to ensure that they are within allowable limits</p> <p>3.5. Authorised changes in working procedures are followed</p> <p>3.6. Completed product is inspected for quality of work and repaired, reprocessed or discarded in accordance with workplace procedures</p>
4. Complete work	<p>4.1. Processed glass is labelled and stored following workplace procedures ensuring there are no projections</p> <p>4.2. Scraps and off-cuts are removed for disposal or recycling as required</p> <p>4.3. Work area clean up is completed following workplace procedures</p> <p>4.4. Equipment is cleaned and stored according to workplace requirements</p> <p>4.5. Workplace documentation is completed in accordance with workplace requirements</p> <p>4.6. Tools, equipment and unused materials are removed and stored appropriately</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and weight, estimate glass requirements and minimise waste
- use pre-checking and inspection techniques to anticipate processing problems, avoid re-working and wastage
- use the developing workplace technology related to the processing of glass by semi-automatic and automatic machines including computers, handling aids, tools and equipment

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- workplace safety system requirements related to glass processing by semi-automatic and automatic machines
- identification of semi-automatic and automatic glass processing machines, including their functions and procedures
- the set up and operation of semi-automatic and automatic glass processing machines including procedures for reporting machine/product defects or equipment faults
- workflow in relation to glass processing

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work orders and plan processing operations
- Identify the materials, patterns/plans, processes, machines, equipment and settings to undertake a glass cutting, drilling, shaping and/or edging task with semi-automatic or automatic machines
- Apply safe handling requirements for machines, equipment, products and materials, including use of personal protective equipment
- Set up for and prepare to process glass
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - process and upload computerized cutting data from optimisation software programs
 - load and position stock sheets onto semi-automatic and automatic cutting tables
 - perform pre-cutting tool and machinery checks
 - cut given dimensions from stock sheets with minimal wastage/off-cuts
 - cut shapes from optimisation data
 - remove, pack and store cut glass including labelling for despatch
 - calculate the cost of glass and edgework
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Semi-automatic, automatic or computerised glass processing equipment, optimisation software programs, work area, standard operating procedures, work orders, unprocessed materials and appropriate safety and personal protection equipment.

EVIDENCE GUIDE	
Method of Assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of Assessment	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • This unit covers work involving cutting, shaping, drilling and/or edging of glass by semi-automatic and automatic machines • Work requires individuals to demonstrate discretion, judgement and problem solving skills in determining the appropriate techniques, methods and equipment to be used to process glass by basic machines. This may be demonstrated either individually or in a team environment • OHS requirements may include legislation, building codes, quality standards, material safety management systems, hazardous substance and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
Glass	<p>Glass may be annealed or laminated. It may include but is not limited to:</p> <ul style="list-style-type: none"> • float glass and coated glass
Glass processing includes:	<ul style="list-style-type: none"> • cutting • shaping • drilling and edging
Cutting may include but is not limited to:	<ul style="list-style-type: none"> • straight line cutting • shape cutting • circle and oval cutting.
Edging may include:	<ul style="list-style-type: none"> • arrising • flat and mitre grinding • polishing and bevelling
Semi-automatic and automatic	<ul style="list-style-type: none"> • semi-automatic, automatic and computerised cutting shaping and edging machines.

RANGE STATEMENT	
machines include but are not limited to:	Machines may be manual or computer-navigated.
Information requirements of computerised machines, (CNC) may include but are not limited to:	<ul style="list-style-type: none"> • glass thickness • size • type • stock sheet size • off-cut sizes • print-out information or spreadsheets
Tools and equipment are to include:	<ul style="list-style-type: none"> • flat felt covered cutting tables • gloves • safety glasses • marking pens • chinagraph pencils • templates and lubricants
Tables appropriate for cutting large glass sheets include:	<ul style="list-style-type: none"> • air flotation tables • roller castor table or tilt table with air flotation or roller castors
Edging equipment includes but is not limited to:	<ul style="list-style-type: none"> • semi-automatic and computer-navigated straight line and variable angle edgers • straight line and shape edgers • bevellers and brilliant cutters
Glass cutting equipment includes but is not limited to:	<ul style="list-style-type: none"> • semi-automatic and computer-navigated straight line annealed and laminated glass cutters • shape cutters • laser glass cutters • diamond saws and water-jet cutters
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • annealed and laminated glass for residential and commercial windows and doors • architectural glazing • mirrors and furniture applications
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gloves • gauntlets • safety glasses • footwear • aprons/overalls

RANGE STATEMENT	
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications, operational and maintenance procedures • Workplace procedures relating to the setting and operation of computerised glass cutting, shaping, drilling and edging machines • Work instructions, including job sheets, cutting lists and plans • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • AS4667 Quality requirements for cut to size and process glass

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements in the form of type and quantity of glass and type and colour/nature of film are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for application of film to glass, including personal protection needs, are observed throughout the work</p> <p>1.3. Equipment, accessories and materials are identified for the application of film in accordance with workplace procedures</p> <p>1.4. Materials Safety Data Sheets and/or product application and safety information are read and used to guide work practices</p> <p>1.5. Particular process techniques, time and safety requirements are noted and used to plan work</p> <p>1.6. The process for applying film to glass is identified</p>
2. Prepare for work	<p>2.1. Work sequence is planned in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Film to be applied is checked for defects or damage</p> <p>2.4. Surfaces are measured and materials and templates cut without causing damage according to accepted industry methods, materials and procedures</p> <p>2.5. Glass is cleaned/prepared using approved methods, materials and equipment following film and product manufacturer instructions and/or workplace practices</p> <p>2.6. Glass is checked for damage and suitable preparation</p> <p>2.7. Any faults/flaws are identified and reported in accordance with workplace procedures</p> <p>2.8. Appropriate workplace documentation is completed and handled as required by measuring, cutting and surface preparation outcomes</p>
3. Apply film	<p>3.1. Equipment and accessories are used to apply the film in accordance with manufacturers' and workplace instructions</p> <p>3.2. Surfaces are kept clean and free of contamination according to the specifications and procedures for materials/product used</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Problems occurring during operation are identified and reported to appropriate persons in accordance with workplace procedures</p> <p>3.4. Authorised changes in working procedures and/or requirements are followed</p> <p>3.5. the application of film outcomes</p>
4. Inspect tinted product and refurbish work area	<p>4.1. Windows are inspected and any film faults are rectified in accordance with workplace procedures</p> <p>4.2. Australian Standard sticker is applied if appropriate</p> <p>4.3. Tinted products are removed for storage/further processing as required by workplace procedures</p>
5. Complete work	<p>5.1. Waste and scrap material is removed for disposal or recycling as required</p> <p>5.2. Work area is cleaned and rubbish disposed of as appropriate</p> <p>5.3. Appropriate workplace documentation to reflect application and inspection is completed and handled as required by workplace procedures</p> <p>5.4. Tools, equipment and unused materials are removed and stored appropriately</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and markings, calculate work requirements, optimise film and glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the application of film to glass

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- workflow in relation to the application of film to glass
- workplace safety system requirements and relevant technical information for applying film to glass
- relevant Australian Standards
- measuring and cutting procedures
- surface preparation procedures including cleaning agents and relevant cleaning procedures
- relevant application methods including equipment, processes and procedures
- statutory legislation appropriate to the range of duties (including ADRs)

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to apply film to glass
- Identify film products and equipment required and plan work sequence
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - indicate ideal shapes for accurate pattern making
 - have a sound knowledge of glass types and the need for care in cutting both film and glass
 - demonstrate accuracy in cutting film from patterns and trimming film on glass
 - demonstrate a knowledge of cleaning all types of glass to ensure it is correctly prepared in accordance of film manufacturers' recommendations prior to film application
 - follow film manufacturers' guidelines for correct squeegee procedure for the application of various films (to be determined by films normally applied in the workplace)
 - demonstrate a knowledge of film manufacture to ensure correct handling, storage and application of all films
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Film, glass sheet/product for coating, work area, tools, personal protective equipment, cleaning and other consumables and work orders.

EVIDENCE GUIDE	
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency .</p>
Context of assessment	<p>Assessment may occur on the job or in a workplace simulated facility with relevant application equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of film application equipment. This may be demonstrated either individually or in a team environment
- Work may be performed in workplaces which are involved in the manufacture, processing and/or installation of glass and/or the application of film to glass for domestic, commercial or automotive application. These may be in enterprise facilities or at customer's premises/location
- Work is generally performed individually, with general supervision and may be part of a production process

Glass includes:

- automotive
- domestic and commercial glass
- mirrors
- shower screens and furniture glass
- Glass may be annealed, laminated or toughened

Window film may include but is not limited to:

- solar
- reflective
- tinted
- safety

RANGE STATEMENT	
	<ul style="list-style-type: none"> • security and decorative film
Tools and equipment are to include:	<ul style="list-style-type: none"> • squeegees and holsters • five-way cutting-in tools • edge bumping gold card tools • hard edge spear cards • screen wiping tools • trim knives • scrapers • scourers • measures • drop sheets • calculator • chamois • steamers • heat guns • flushing units • filter units • hand tools (pliers, files, screwdrivers and spanners)
Materials may include but are not limited to:	<ul style="list-style-type: none"> • window film • trim and scraper blades • slip solution • glass cleaner • adhesive remover and other consumables (towel, steel wool, etc)
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Film manufacturer specifications and instructions • Vehicle manufacturer specifications/insurance company instructions/statutory requirements (including ADRs) • Customer's requirements • Workplace procedures relating to the handling

RANGE STATEMENT

	<p>and movement of glass and the application of film</p> <ul style="list-style-type: none"> • Safety standards, including personal protective equipment, OHS regulations, enterprise requirements and special requirements specified by MSDS and instructions • Work instructions including job sheets, cutting lists, plans, drawings and designs • Quality and Australian Standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements are identified from work instructions to determine:</p> <ul style="list-style-type: none"> 1.1.1. materials to be used 1.1.2. pattern or mould to be used 1.1.3. process required to complete work tasks 1.1.4. number of sheets to be formed and holding area for completed items 1.1.5. the correct kiln settings for the glass being formed <p>1.2. Workplace health and safety requirements relevant to forming glass, including personal protection needs, are observed throughout the work</p> <p>1.3. The process for obtaining materials and moving completed work to the next process is identified</p> <p>1.4. Procedures are identified for checking:</p> <ul style="list-style-type: none"> 1.4.1. quality of materials and items produced 1.4.2. working condition of kiln and any other equipment/attachments 1.4.3. quality requirements for each stage of the forming process <p>1.5. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency</p>
2. Prepare for work	<p>2.1. Work sequence is planned in a logical order to suit the job</p> <p>2.2. Kiln, tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Kiln components and controls, including emergency stops and guards are identified and checked for correct operation</p>
3. Conduct glass forming operations	<p>3.1. Kiln and forming equipment is operated, adjusted and monitored in accordance with workplace procedures to ensure correct product quality and output</p> <p>3.2. Problems occurring during work operations are identified and reported to appropriate persons in accordance with workplace procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Authorised changes in working procedures and/or requirements are followed
4. Complete work	4.1. Product is inspected for quality against work instructions, and items that do not meet requirements are reworked or discarded 4.2. Waste and scrap material is removed for disposal or recycling as required 4.3. Tools, equipment and unused materials are removed and/or stored as appropriate 4.4. Work area and kiln is cleaned and rubbish disposed of as appropriate 4.5. Workplace documentation is completed as required by workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, minimise wastage and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the forming of glass

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- identification of equipment, processes and procedures for forming glass
- procedures for reporting materials, product or equipment faults
- workplace safety system requirements related to the forming of glass
- workflow in relation to forming of glass
- characteristics of materials used and uses of products produced

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and prepare to form glass
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of forming glass of four differing patterns using varying slumping techniques to the capacity of the kiln being used. Patterns may be existing moulds or improvised designs.
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Glass forming equipment, work area, work order, standard operating procedures, unprocessed materials.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- This unit covers work involving the operation and monitoring of glass forming in kilns
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment
- Work is generally performed individually, with general supervision and may be part of a production process
- Work may be performed in workplaces which are involved in the manufacture of customised formed glass products

Forming glass

- Forming glass is the texturing or patterning of glass by bringing float glass to a semi-molten state and forming or slumping it over a pattern. As kiln-formed glass is custom manufactured, patterns/artwork are specific to a project. Moulds and patterns are formed to produce textures and patterns for the industry (glass merchants, architects, designers, shop fitters, signwriters and bathroom supplies, commercial and domestic)
- Glass being formed may include but is not limited to:
 - sheet glass
 - float glass

RANGE STATEMENT	
	<ul style="list-style-type: none"> patterned glass
Tools and equipment are to include:	<ul style="list-style-type: none"> kiln bed (sand bed screed flat and firm to create the patterns or artwork) moulds and items for background patterns such as paint rollers wire trowels
Materials are to include but are not limited to:	<ul style="list-style-type: none"> float glass sand and patterning material such as silicone dowel sea shells
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> gauntlets gloves safety glasses hard hats safety footwear aprons and overalls
Information and procedures	<ul style="list-style-type: none"> Equipment manufacturer specifications and operational procedures Workplace procedures relating to the setting and operation of glass forming equipment Work instructions, including job sheets, plans, drawings and designs Safety standards include personal protective equipment, OHS regulations and enterprise requirements Quality standards and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work instructions are used to identify:</p> <ul style="list-style-type: none"> 1.1.1. material to be used for application of design or pattern 1.1.2. pattern or plan to be followed 1.1.3. process required to complete work tasks 1.1.4. items to which pattern or design is to be applied 1.1.5. holding area for completed items 1.1.6. the material curing time (if required) for the type of material used and type of glass <p>1.2. Workplace health and safety requirements for application of patterns and designs to glass surfaces, including personal protection needs, are observed throughout the work</p> <p>1.3. Tools and equipment suitable to the work method are identified</p> <p>1.4. The process for applying patterns and designs to glass surfaces is identified</p>
2. Prepare for work	<p>2.1. Work sequence is planned in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Pattern or design template (if required) is produced from plan or design or drafted from existing design or pattern</p> <p>2.4. Procedures are identified for checking:</p> <ul style="list-style-type: none"> 2.4.1. quality of materials and items produced 2.4.2. quality requirements for each stage of the application process
3. Apply pattern or design to glass surface	<p>3.1. Pattern or design template is applied or glass surface is masked as necessary with appropriate materials</p> <p>3.2. Pattern or design is applied to glass surface in accordance with workplace procedures or industry practice</p> <p>3.3. Problems occurring during operation are identified and reported to appropriate persons in accordance with workplace procedures</p> <p>3.4. Any authorised changes in working procedures are</p>

ELEMENT	PERFORMANCE CRITERIA
	followed
4. Complete work	4.1. Product is inspected for quality of work and repaired or discarded as required in accordance with workplace procedures 4.2. Waste and scrap material is removed for disposal or recycling as required 4.3. Work area is cleaned and rubbish disposed of as appropriate 4.4. Workplace documentation is completed as required 4.5. Tools and equipment are cleaned and stored following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the application of designs and/or patterns to glass surfaces

Required knowledge

- the qualities and characteristics of glass and materials, including the hazards and handling requirements
- procedures, techniques and means of applying patterns and designs to glass surfaces
- workplace safety system requirements related to the application of patterns and designs to glass surfaces
- workflow in relation to other stages of the work process

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to apply patterns and/or designs to glass surfaces
- Prepare to apply patterns and designs to glass surfaces
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - draw and cut freehand designs.
 - set up, process, upload and cut designs from computerised software programs
 - stage sandblasting on glass
 - stage screen printing on glass
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Template materials/patterns, masking materials, application equipment, workplace operating procedures, unprocessed glass, personal protective equipment and an appropriate work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant pattern/design process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Workplace documentation is completed in</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>accordance with workplace requirements</p> <p>4.8. Tools, equipment and unused materials are removed and stored appropriately</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for handling and processing and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to the operation of glass laminating equipment

Required knowledge

- procedures for the set up, operation and operator maintenance of glass laminating equipment
- workflow relating to the operation of glass laminating equipment.
- characteristics of materials used and uses of products produced in the glass laminating process
- workplace procedures for the reporting of material, product or equipment faults
- workplace safety system requirements related to the operation of glass laminating equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to operate glass laminating equipment
- Plan the conduct of glass laminating operations
- Set up, operate, monitor and perform operator maintenance of glass laminating equipment
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - identify and demonstrate glass flopping and washing operation and procedures
 - identify and demonstrate the white room operation and procedures
 - safely load glass into the pre-press oven and stacker
 - operate the pre-press oven and stacker during the glass laminating process
 - operate an air lifter
 - operate an autoclave
 - safely complete the requirements of the packing area
 - operate a laminating cutting table
 - carry out post laminating procedures
 - perform testing, classification and marking of toughened glass in accordance with AS/NZS 2208 Safety glazing materials
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

EVIDENCE GUIDE	
Resource implications	Glass laminating equipment, workplace operating procedures, unprocessed materials, personal protective equipment and an appropriate work area.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant glass laminating equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- This unit covers work involving the set up, operation and monitoring of glass laminating equipment
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of glass laminating machines
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work is generally performed individually, with general supervision and may be part of a production process

Glass laminating equipment

- Glass laminating equipment includes that equipment and machines involved in the process of laminating glass. This involves the insertion of an intermediary layer between two layers of glass
- Laminated glass includes:
 - safety
 - automotive
 - bullet and bandit resistant
 - patterned laminated glass

Tools and equipment are to include:

- glass flopping and washing machines
- white room
- hoist
- pre-press oven
- glass stacker

RANGE STATEMENT	
	<ul style="list-style-type: none"> • air lifter • autoclave • packing equipment • cutting machine • FMF machine • standards stamping equipment (including stamp)
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • annealed float • sheet and patterned glass
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • hard hats • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the setting up and operation of glass laminating machinery • Machine manufacturers' specifications and operational procedures • Workplace procedures relating to the handling and movement of glass • Work instructions including job sheets, cutting lists, plans, drawings and designs • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • AS/NZS2208 Safety glazing material

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work requirements from work instructions to ascertain:</p> <ul style="list-style-type: none"> 1.1.1. material to be used 1.1.2. process required to complete work tasks 1.1.3. the required machine settings and adjustments 1.1.4. number of sheets to be toughened and holding area for completed items <p>1.2. Workplace health and safety requirements relevant to operating glass toughening equipment, including personal protection needs, are observed throughout the work</p> <p>1.3. Work sequence is planned in a logical order to suit the job</p> <p>1.4. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, of the required quality, serviceable and in a safe condition</p> <p>1.5. Machines are identified and checked for safe and effective operation, including emergency stops, gauges, guards and controls</p> <p>1.6. Procedures are identified for checking:</p> <ul style="list-style-type: none"> 1.6.1. quality of materials and items produced 1.6.2. working condition of equipment 1.6.3. quality requirements for each stage of the toughening process <p>1.7. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency</p>
2. Set up equipment	<p>2.1. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions</p> <p>2.2. Trial runs are conducted to check machine operation, accuracy and quality of finished work</p> <p>2.3. Necessary adjustments are made to machine settings</p>
3. Conduct glass toughening operations	<p>3.1. Glass to be toughened is prepared for process in accordance with workplace procedures or industry practice</p> <p>3.2. Glass to be toughened is positioned on furnace load</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>table and stamped with product identification in accordance with workplace procedures or industry practice</p> <p>3.3. Glass is loaded into furnace in accordance with manufacturers' instructions and workplace procedures</p> <p>3.4. Correct furnace pre-start, start-up and set-up procedures are completed in accordance with manufacturer instructions and workplace procedures</p> <p>3.5. Furnace operation is monitored and adjustments made as required in accordance with manufacturer instructions or workplace procedures</p> <p>3.6. Problems occurring during work operations are identified and reported to appropriate persons</p> <p>3.7. Correct furnace shut-down and end of shift procedures are followed in accordance with manufacturer instructions and workplace procedures</p> <p>3.8. Glass is unloaded from furnace in accordance with manufacturers' instructions and workplace procedures</p>
4. Complete work and maintain equipment	<p>4.1. Product is inspected for quality of work and items which do not meet quality requirements discarded or returned for reprocessing in accordance with workplace procedures</p> <p>4.2. Completed work is placed in holding area in accordance with workplace procedures</p> <p>4.3. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.4. Equipment is cleaned and inspected for serviceability in accordance with workplace procedures</p> <p>4.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</p> <p>4.6. Equipment is maintained in accordance with workplace procedures</p> <p>4.7. Workplace documentation is completed in accordance with workplace requirements</p> <p>4.8. Tools, equipment and unused materials are removed and stored appropriate</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for handling and processing and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to the operation of glass toughening equipment

Required knowledge

- procedures for the set up, operation and operator maintenance of glass toughening equipment
- workflow relating to the operation of glass toughening equipment
- workplace procedures for the reporting of material, product or equipment faults
- characteristics of materials used and uses of products produced in the glass toughening process
- identification of equipment, processes and procedures
- workplace safety system requirements related to the operation of glass toughening equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to operate glass toughening equipment
- Plan the conduct of glass toughening operations
- Set up, operate, monitor and perform operator maintenance of glass toughening equipment
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - identify the features of the glass toughening process including the principles, purpose and properties of toughened glass
 - identify the procedures required in the glass toughening process
 - perform pre-inspection and preparation procedures on glass for toughening
 - safely load and operate a glass toughening furnace
 - perform testing, classification and marking of toughened glass in accordance with AS/NZS 2208 Safety glazing materials
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Glass toughening equipment, workplace operating procedures, unprocessed materials, personal protective equipment and an appropriate work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace

EVIDENCE GUIDE	
	<p>relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	<p>Assessment may occur on the job or in a workplace simulated facility with relevant glass toughening equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- This unit covers work involving the set up, operation and monitoring of equipment used to toughen glass
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of glass toughening machines and equipment
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OH&S requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work is generally performed individually, with general supervision and may be part of a production process

Glass toughening equipment

Glass toughening equipment includes that equipment and machines involved in the process of toughening glass. This involves the controlled heating and cooling of glass.

Tools and equipment are to include:

- glass washing machines and toughening furnaces

Furnace controls may include but are not limited to:

- operating controls
- lift
- pump
- furnace lever
- furnace rollers
- quench potentiometer
- fans
- dampers

RANGE STATEMENT	
	<ul style="list-style-type: none"> actuators inlet veins and gearboxes
Materials are to include but are not limited to:	<ul style="list-style-type: none"> clear tinted and patterned annealed glass
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> gauntlets gloves safety glasses hard hats safety footwear aprons and overalls
Information and procedures	<ul style="list-style-type: none"> Workplace procedures relating to the setting up and operation of glass toughening equipment Machine manufacturer specifications and operational procedures Workplace procedures relating to the handling and movement of glass Work instructions, including job sheets, cutting lists, plans, drawings and designs Safety standards include: personal protective equipment, OHS regulations and enterprise requirements AS/NZS 2208 Safety glazing materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work requirements from work instructions to ascertain:</p> <ul style="list-style-type: none"> 1.1.1. material to be used 1.1.2. process required to complete work tasks 1.1.3. number of sheets to be silvered and holding area for completed items <p>1.2. Workplace health and safety requirements relevant to operating glass silvering equipment including personal protection needs, are observed throughout the work</p> <p>1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency</p> <p>1.4. Work sequence is planned in a logical order to suit the job</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, of the required quality, serviceable and in a safe condition</p> <p>1.6. Machines are identified and checked for safe and effective operation, including emergency stops, gauges, guards and controls</p> <p>1.7. Procedures are identified for checking:</p> <ul style="list-style-type: none"> 1.7.1. quality of materials and items produced 1.7.2. working condition of equipment 1.7.3. quality requirements for each stage of the silvering process <p>1.8. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency</p> <p>1.9. The processes for obtaining materials and moving completed work to the next process are identified</p>
2. Prepare glass for silvering	<p>2.1. If applicable, existing silver is removed by acid washing, cleaning and/or polishing</p> <p>2.2. Glass to be silvered is washed with detergent in accordance with workplace procedures or industry practice</p> <p>2.3. Glass to be silvered is rinsed with demineralised</p>

ELEMENT	PERFORMANCE CRITERIA
	water in accordance with workplace procedures or industry practice
3. Conduct glass silvering operations	<p>3.1. Tinning solution is applied in accordance with workplace procedures or industry practice</p> <p>3.2. Glass is rinsed with demineralised water in accordance with workplace procedures or industry practice</p> <p>3.3. Silver solution is applied to glass in accordance with workplace procedures or industry practice</p> <p>3.4. Glass is washed and blow dried in accordance with workplace procedures or industry practice</p> <p>3.5. Backing paint is applied in accordance with workplace procedures or industry practice</p>
4. Complete work	<p>4.1. Product is inspected for quality of work and items which do not meet quality requirements discarded or returned for reprocessing in accordance with workplace procedures</p> <p>4.2. Completed work is placed in holding area in accordance with workplace procedures</p> <p>4.3. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.4. Equipment is cleaned and inspected for serviceability and stored in accordance with workplace procedures</p> <p>4.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</p> <p>4.6. Workplace documentation is completed in accordance with workplace requirements</p> <p>4.7. Tools, equipment and unused materials are removed and stored appropriately</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for handling and processing and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to the operation of glass silvering equipment

Required knowledge

- procedures for the planning, preparation, operation and completion of glass silvering operations
- workflow in relation to the operation of glass silvering equipment
- workplace procedures for the reporting of material, product or equipment faults
- relevant Australian Safety Standards
- identify, handle and store hazardous chemicals
- characteristics of materials used and uses of products produced by glass silvering operations
- workplace safety system requirements related to the operation of glass silvering equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to operate glass silvering equipment
- Plan and prepare for the conduct of glass silvering operations
- Conduct glass silvering operations
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - prepare silvering formulae
 - perform equipment checks
 - set up and prepare silvering equipment
 - clean and prepare glass for silvering
 - apply tinning, silvering and copper solutions on glass
 - dry and apply packing paint
 - strip, buff, clean, prepare and re-silver mirrors
 - handle and store mirrors
 - clean solution tanks, lines, spray guns and equipment after use
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Glass silvering equipment, demineralised water, acid, silvering chemicals, backing paint, workplace operating procedures, unprocessed materials, personal protective equipment and an appropriate work area.

Method of assessment

Assessment methods must confirm consistency of

EVIDENCE GUIDE	
	<p>performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	<p>Assessment may occur on the job or in a workplace simulated facility with relevant glass silvering equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of glass silvering machines and equipment
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work is generally performed individually, with general supervision and may be part of a production process

Glass silvering

Glass silvering involves processes and equipment to silver glass for the manufacture of mirrors and other glass products

Tools and equipment are to include:

- semi-automatic and computer-navigated silvering equipment
- buffing and cleaning tables
- spray booths
- copper plating electrodes
- extractor fans
- dual nozzle spray guns
- compressors
- solution containers
- heated drying racks
- water distiller
- silvering formulas
- tinning solution
- backing paint and stripping acid tanks for resilvering

RANGE STATEMENT	
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • annealed • sheet • laminated and toughened glass
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • respiratory masks • hard hats • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the setting up and operation of glass silvering processes and equipment • Equipment manufacturer specifications and operational procedures • Workplace procedures relating to the handling and movement of glass • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • Australian Standards

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work requirements from work instructions to ascertain:</p> <ul style="list-style-type: none"> 1.1.1. material to be used 1.1.2. process required to complete work tasks 1.1.3. the required size of the units 1.1.4. number of insulated glass units required and holding area for completed items <p>1.2. Workplace health and safety requirements relevant to operating insulating glass equipment including personal protection needs, are observed throughout the work</p> <p>1.3. Work sequence is planned in a logical order to suit the job</p> <p>1.4. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, of the required quality, serviceable and in a safe condition</p> <p>1.5. IGU machines, tools and equipment are identified and checked for safe and effective operation, including emergency stops, gauges, guards and controls</p> <p>1.6. Procedures are identified for checking:</p> <ul style="list-style-type: none"> 1.6.1. quality of materials and items produced 1.6.2. working condition of equipment 1.6.3. quality requirements for each stage of the IGU manufacturing process <p>1.7. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency</p>
2. Set up equipment	<p>2.1. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions</p> <p>2.2. IGU spacers are cut and sorted into order of run in accordance with workplace procedures</p> <p>2.3. Desiccant to be used in process is tested in accordance with industry standards and workplace practices</p> <p>2.4. Trial runs are conducted to check machine operation, accuracy and quality of finished work</p>

ELEMENT	PERFORMANCE CRITERIA
<p>3. Conduct insulated glass unit manufacturing operations</p>	<p>2.5. Necessary adjustments are made to machine settings</p> <p>3.1. Glass sheets are loaded into IGU machine using the appropriate mechanical handling equipment</p> <p>3.2. IGU spacers are assembled in accordance with specification/order and workplace procedures</p> <p>3.3. IGU machine is operated to wash and dry glass and to press the unit</p> <p>3.4. Unit is unloaded from IGU machine and relocated for sealing using appropriate mechanical handling equipment in accordance with workplace practices</p> <p>3.5. Primary and secondary seal equipment is operated in accordance with workplace procedures</p> <p>3.6. Testing for water vapour (dewpoint) and integrity of sealing (moisture) is conducted in accordance with workplace procedures</p> <p>3.7. Serviceable units are labelled and stored in accordance with industry standards and workplace procedures, with items not meeting quality requirements being discarded or returned for reprocessing in accordance with workplace procedures</p>
<p>4. Complete work and maintain equipment</p>	<p>4.1. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.2. IGU machine is cleaned and inspected for serviceability in accordance with workplace procedures</p> <p>4.3. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</p> <p>4.4. Equipment and tooling is maintained in accordance with workplace procedures</p> <p>4.5. Documentation is completed in accordance with workplace requirements</p> <p>4.6. Tools, equipment and unused materials are removed and stored appropriately</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for handling and processing and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to the operation of insulated glass unit manufacturing equipment

Required knowledge

- procedures for the set up, operation and operator maintenance of insulated glass unit manufacturing equipment
- workflow relating to the operation of insulated glass unit manufacturing equipment
- characteristics of materials used and uses of products produced in the insulated glass unit manufacturing process
- workplace procedures for the reporting of material, product or equipment faults
- workplace safety system requirements related to the operation of insulated glass unit manufacturing equipment

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to the operation of insulated glass unit manufacturing equipment
- Plan the conduct of insulated glass unit manufacturing operations
- Set up, operate and monitor insulated glass unit (IGU) manufacturing equipment and the quality testing of IGU
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to prepare, set up, manufacture and conduct the appropriate quality testing of five differing IGU patterns to the capacity of the IGU machine
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Insulated glass unit manufacturing equipment, workplace operating procedures, unprocessed materials, personal protective equipment and an appropriate work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant insulated glass unit

EVIDENCE GUIDE	
	manufacturing equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • This unit covers work involving the set up, operation and monitoring of insulated glass unit manufacturing equipment, including quality testing of IGU • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of insulating glass unit manufacturing machines • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • OH&S requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures • Work is generally performed individually, with general supervision and may be part of a production process
Insulated glass units (IGU)	Insulated glass units are two sheets of glass that are separated by a spacer, sealed to form an airtight unit
Tools and equipment are to include:	<ul style="list-style-type: none"> • cutting equipment (saws, etc.) • spacer preparation equipment (appropriate size) • sieve machine and desiccant equipment • primary seal equipment • secondary seal equipment • basic hand tools (screwdriver, scraper, etc.) • mechanical handling equipment
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • customer requirements for glass (annealed • toughened or laminated) • corner keys for spacers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • appropriate primary (polyisobutylene) and secondary sealant (polysulphide) and separation paper
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • hard hats • safety footwear • aprons • hearing protection • overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the setting up and operation of insulated glass unit manufacturing machinery • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the handling and movement of glass • Work instructions including job sheets, cutting lists, plans, drawings and designs • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • Australian Standards: <ul style="list-style-type: none"> • AS1288 Glass in buildings, selection and installation. • AS2208 Safety glazing materials in buildings • AS4666 Insulating glass units • AS4667 Quality requirements for cut to size and processed glass

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the work requirements	1.1. Purpose of the leadlight panel is established 1.2. Performance requirement of the panel is identified in terms of safety, quality and function 1.3. Construction method and materials to be used in the panel to be constructed or repaired are identified 1.4. Leadlight panel to be repaired is inspected to identify faults 1.5. Faults found are compared with customer requirements and any previous identified faults
2. Plan leadlight panel construction/repair	2.1. Plan or design of leadlight panel to be constructed/repared is analysed to identify work requirements, methods and/or specifications 2.2. Workplace health and safety requirements for construction and repair of leadlight panels, including personal protection needs, are observed throughout the work 2.3. Work sequences are identified and a personal work plan is developed when required 2.4. Steps or stages in construction/repair are planned, noting check points for (any) measurements and tests 2.5. Approval of work construction plan is obtained as required by workplace procedures 2.6. Suitable work area is identified
3. Identify suitable materials and equipment	3.1. Tools are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 3.2. Leadlight construction materials are selected according to specification of performance requirements, proposed use, cost and availability of materials, if required, matching the original: <ul style="list-style-type: none"> 3.2.1. texture 3.2.2. colour 3.2.3. thickness 3.2.4. opacity 3.3. Equipment suitable for working the chosen material is identified
4. Construct/repair the leadlight panel	4.1. Plan is followed to construct/repair the leadlight panel

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. Checks are conducted at the identified points</p> <p>4.3. Modifications are identified and recommended within workplace procedures</p> <p>4.4. Modifications to the plan are documented and appropriate approvals are sought in accordance with workplace procedures</p>
5. Complete work	<p>5.1. Leadlight panel is inspected for quality of work and repaired or reconstructed as required in accordance with workplace procedures</p> <p>5.2. Material which can be reused is collected and stored</p> <p>5.3. Waste and scrap material is removed for disposal or recycling as required</p> <p>5.4. Work area is cleaned and rubbish disposed of as appropriate</p> <p>5.5. Equipment is cleaned and stored according to workplace requirements</p> <p>5.6. Workplace documentation is completed in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the construction/repair of leadlight panels

Required knowledge

- end use of the panel and required safety, quality and structural standards
- characteristics, including the hazards and workplace safety system requirements associated with the materials used in leadlight panel construction
- operation of tools and equipment used in constructing/repairing leadlight panels
- processes and procedures involved in the construction/repair process
- the impact of design features of the leadlight panel on purpose, materials and construction
- relevant Australian Standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction to identify requirements and plan the process to construct/repair leadlight panels
- Select and use appropriate materials and processes for the panel being constructed/repared
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - construct leadlight panels
 - measure openings for leadlight panels
 - design, including construction of cartoon
 - construct templates
 - identify and select materials, including glass and lead came
 - cut basic and complex shapes in clear, patterned and coloured glass
 - lead up, flux and solder
 - weatherproof, cement, pick and polish
 - glaze, including putty facing and beading up
 - may include reinforcement bar installation
- Repair leadlight panels:
 - remove leadlight from opening to be repaired
 - construct templates, cartoons and rubbings
 - identify and select replacement materials
 - disassemble lead and broken glass panels
 - cut glass to suit
 - lead up, weatherproof, cement, pick and polish
 - reglaze repaired leadlight panel

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
Resource implications	Appropriate leadlighting materials, work area, work order, specifications, tools, personal protective equipment, equipment and consumables.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant leadlight construction/repair equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the construction/repair of leadlight panels
- Work involves measuring, design and selection of materials and tools, and assembly, weatherproofing and polishing of leadlight panels
- Work involves removal, disassembling, selection of replacement materials, and assembly, weatherproofing, polishing and glazing of repaired leadlight panels
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work is generally performed individually, with general supervision and may be part of a production process

Repair methods may include:

- releading
- Dutchman's repair and lead lifting

Tools and equipment may include:

- timber benches
- light boxes
- glass grinders
- lead knives
- lead vice
- lathekins
- farrier's nails
- glass cutters
- grozing and small running pliers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • soldering irons and bits • suede • cleaning and polishing brushers and pickers
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • coloured/plain glass panels • patterns/templates • timber lathes • ornamental fittings • lead came • solder and fluxes
Occupational Health and Safety	<p>OHS requirements may address:</p> <ul style="list-style-type: none"> • material handling • work processing • work space and ventilation considerations • material disposal processes
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • glass handling gloves • safety glasses
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to constructing/repairing leadlight panels • Workplace procedures relating to the handling and movement of glass and glass panels • Equipment manufacturers' specifications and operational procedures • Work instructions, including job sheets, cutting lists, plans, patterns, templates, drawings and/or designs • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • Quality and Australian Standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and plan work requirement	<p>1.1. Work requirements in the form of type, pattern/plan and quantity of mirrors to be prepared and installed are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for fabrication and installation of mirrors, including personal protection needs, are observed throughout the work</p> <p>1.3. Work sequence is planned in a logical order to suit the job</p> <p>1.4. Quantities of materials required are calculated from plans or work instructions or by measuring the installation site</p> <p>1.5. Fixing and joining devices or materials are selected in line with specifications or type of materials to be joined and the surface on which the mirror is to be installed</p> <p>1.6. Tools and equipment suitable to the work method are identified</p>
2. Prepare for work	<p>2.1. Compatible materials, fixings, tools and equipment needed to complete the work are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.2. Components of the mirror are checked against specifications or job order for: size, quantity, finish and profile</p>
3. Fabricate and install mirror	<p>3.1. Frame, if required, is fabricated in accordance with workplace procedures or industry practice</p> <p>3.2. Mirror glass, if required, is cut to size in accordance with workplace procedures or industry practice</p> <p>3.3. Mirror is edgeworked, if required, in accordance with workplace procedures or industry practice</p> <p>3.4. Holes, if required, are drilled in frame or mirror in accordance with workplace procedures or industry practice</p> <p>3.5. Mirror is installed using appropriate fixing method in accordance with workplace procedures or industry practice</p>
4. Complete work	<p>4.1. Installed mirror is inspected for quality of work and repaired, refabricated or reinstalled as required in accordance with workplace procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. Waste, unused and scrap material is removed for disposal or recycling as required</p> <p>4.3. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.4. Tools, equipment and unused materials are removed and stored appropriately according to workplace requirements</p> <p>4.5. Workplace documentation is completed in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the fabrication and installation of mirrors

Required knowledge

- workflow in relation to the fabrication and installation of mirrors
- workplace safety system requirements related to the fabrication and installation of mirrors
- characteristics of materials used and uses of products produced
- identification of equipment, processes and procedures related to the fabrication and installation of mirrors
- relevant Australian Standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to fabricate and install mirrors
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - measure for mirror installations
 - cut and float mirror up to 6 mm, including vinyl backed
 - carry out edgeworking
 - drill holes in mirrors
 - prepare walls
 - construct and fit mirror frames and J-mould
 - identify and use water, spirit, dumpy and laser levels
 - set plumb and level lines
 - fit framed, wall, safety and security mirrors, including return mirrors with minimal deflection
 - clean and present finished mirrors
 - calculate the cost of mirrors, edgework, materials and labour
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Mirrors, aluminium framing material, fixing/fasteners, workplace operating procedures, personal protective equipment and an appropriate work area.

Method of assessment

Assessment methods must confirm consistency of

EVIDENCE GUIDE	
	<p>performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	<p>Assessment may occur on the job or in a workplace simulated facility with relevant fabrication and installation equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the fabrication and installation process. This may be demonstrated either individually or in a team environment • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the planning, fabrication and installation of mirrors • Work is generally performed individually, with general supervision and may be part of a production process
<p>Preparing and installing mirrors involves:</p>	<ul style="list-style-type: none"> • the fabrication and installation of mirrors to satisfy customer/work orders
<p>Mirrors may include:</p>	<ul style="list-style-type: none"> • framed • frameless • wall • return • safety and security mirrors
<p>Tools and equipment may include:</p>	<ul style="list-style-type: none"> • tungsten wheel glass cutters • speed cutters • straight edges and squares • plate and running pliers • glass lifting and handling equipment • personal safety equipment

RANGE STATEMENT	
	<ul style="list-style-type: none"> • glass edging equipment • diamond drills and saws • water • spirit • dumpy and laser levels • plumb bobs • chalk lines • tape measures • portable drills • general hand tools
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • timber and metal framing materials • J-mould • float and vinyl backed mirrors • fixings and fasteners
Fixings and fasteners include:	<ul style="list-style-type: none"> • adhesive tapes • screws and rosettes • mirror and spring clips • hollow wall fasteners • rawl plugs • cloth and glues • and non-acidic silicones
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • hard hats • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the fabrication and installation of mirrors • Equipment or tool manufacturer specifications and operational procedures • Work instructions, including job sheets, plans, cutting lists, drawings and designs • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • AS1288, 4667

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for work	<p>1.1. Work requirements in the form of type of shower screen/wardrobe door to be fabricated and installed are identified from work instructions. This includes the identification of its pattern or plan</p> <p>1.2. Workplace health and safety requirements for fabrication and installation of shower screens and wardrobe doors, including personal protection needs, are observed throughout the work</p> <p>1.3. The process for fabricating and installing shower screens and wardrobe doors is identified</p> <p>1.4. Glass fixing method and joining devices or materials are identified in line with specifications or type of materials to be used and Australian Standards</p> <p>1.5. Quantities of materials required are calculated from plans or work instructions or by measuring the fixture opening</p> <p>1.6. Tools and equipment appropriate to the fixing method are identified</p>
2. Prepare for work	<p>2.1. Work sequence is determined in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Components of the shower screen/wardrobe door are checked against specifications or job order for: size, quantity, finish and profile</p>
3. Fabricate and install shower screen/wardrobe door	<p>3.1. If required, aluminium frame is fabricated in accordance with workplace procedures or industry practice</p> <p>3.2. Fittings are attached to screen in accordance with workplace procedures or industry practice</p> <p>3.3. Shower screen/wardrobe door is installed in shower opening/wardrobe in accordance with workplace procedures or industry practice</p> <p>3.4. Shower screen is waterproof sealed in accordance with workplace procedures or industry practice</p>
4. Complete work	<p>4.1. Shower screen/wardrobe door is inspected for quality of work and repaired, refabricated or reinstalled as required in accordance with workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures 4.2. Material which can be reused is collected and stored 4.3. Waste and scrap material is removed for disposal or recycling as required 4.4. Work area is cleaned and rubbish disposed of as appropriate 4.5. Tools, equipment and unused materials are cleaned and removed and stored appropriately 4.6. Workplace documentation is completed in accordance with workplace requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding reworking and wastage
- use the limited workplace technology related to the fabrication and installation of shower screens and wardrobe doors

Required knowledge

- workflow in relation to the fabrication and installation of shower screens and wardrobe doors
- characteristics of materials used and uses of products produced
- workplace safety system requirements related to the fabrication and installation of shower screens and wardrobe doors
- identification of equipment, processes and procedures
- relevant Australian Standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Plan the fabrication and installation of shower screens and wardrobe doors
- Interpret work order/job instruction and locate and apply relevant information to fabricate and install shower screens and wardrobe doors
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - measure for installation each of sliding, pivot, bi-fold, semi-frameless and frameless shower screens and sliding wardrobe doors
 - work from product specification data sheets
 - identify and select product materials
 - select glass in accordance with AS1288
 - fabricate frame and sash components, including cutting, tooling and drilling
 - identify, select and install component hardware including weather seals, wheels, hinges, guides and handles
 - assemble frames, including glass and gaskets
 - install shower screens and wardrobe doors
 - calculate the cost of shower screens and wardrobe doors
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Shower screen/wardrobe door glass, aluminium framing material, fixtures, waterproof sealant, workplace operating procedures, personal protective equipment and

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for work	<p>1.1. Work requirements in the form of type of window or door to be fabricated and installed are identified from work instructions. This includes the identification of its pattern or plan</p> <p>1.2. Workplace health and safety requirements for fabrication and installation of windows and doors including personal protection needs, are observed throughout the work</p> <p>1.3. The process for fabricating and installing windows and doors is identified</p> <p>1.4. Types and quantities of materials required are calculated from plans or work instructions or by measuring the fixture opening in accordance with Australian Standards and industry practice</p> <p>1.5. Cutting lists are prepared from plans, work instructions or measurements of opening to suit the window or door to be installed</p> <p>1.6. Fittings, fixings and joining devices or materials are selected in line with specifications or type of materials to be joined or fixed and Australian standards</p> <p>1.7. Tools and equipment appropriate to the fixing method are identified</p>
2. Prepare for work	<p>2.1. Work sequence is determined in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Components of the window or door are checked against specifications or job order for: size, quantity, finish and profile</p>
3. Fabricate and install window or door	<p>3.1. Materials are measured and marked to cutting list requirements and most economical use of materials</p> <p>3.2. Materials are cut to cutting list requirements in accordance with workplace procedures or industry practice</p> <p>3.3. Components of window or door are assembled in accordance with recognised industry standards</p> <p>3.4. Fittings are installed to window or door in accordance with workplace procedures or industry</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>practice</p> <p>3.5. Window or door is installed in opening using appropriate fixing method in accordance with recognised industry standard</p>
4. Complete work	<p>4.1. Installed window or door is inspected for quality of work and repaired, re-fabricated or re-installed as required in accordance with workplace procedures</p> <p>4.2. Material which can be re-used is collected and stored</p> <p>4.3. Waste and scrap material is removed for disposal or recycling as required</p> <p>4.4. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.5. Tools, equipment and unused materials are cleaned and removed and stored appropriately</p> <p>4.6. Workplace documentation is completed in accordance with workplace requirements</p>

Required Skills and Knowledge

Required knowledge

- workflow in relation to the fabrication and installation of windows and doors
- characteristics of materials used and uses of products produced
- workplace safety system requirements related to the fabrication and installation of windows and doors
- identification of equipment, processes and procedures
- relevant Australian standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Plan the fabrication and installation of windows and doors
- Interpret work order/job instruction and locate and apply relevant information to fabricate and install windows and doors
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - measure for the installation of windows and doors
 - work from product specification data sheets and specifier software programs
 - identify and select product materials, including selection of mullions and transoms in relation to wind loading.
 - fabricate frame and sash components including cutting, tooling, routing, milling, drilling and crimping
 - identify, select and install component hardware, including weather seals, wheels, stays, hinges, guides and locks
 - apply the window energy rating system (WERS)
 - select and cut glass in accordance with AS1288 and AS4667
 - assemble frames, including glass, gaskets, tapes, sealants, adhesives, fasteners, reveal linings and flashings in accordance with AS2047, section 6
 - label and certify frames in accordance with AS2047, section 8
 - install residential windows and doors
 - calculate cost of residential windows and doors

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
Resource implications	Aluminium framing material, timber framing material, door or window glass, fittings, fixing/fasteners, workplace operating procedures, personal protective equipment and an appropriate work area.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant fabrication and installation equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the fabrication and installation process • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations, Australian standards, building codes and organisation insurance requirements • OHS requirements may include legislation, Australian standards, building codes, material safety management systems and local safe operating procedures • Work is generally performed individually, with general supervision and may be part of a production process
Residential windows may include:	<ul style="list-style-type: none"> • aluminium sliding • double hung • casement and awning windows • louvre windows and double glazed windows
Residential doors may include:	<ul style="list-style-type: none"> • aluminium sliding • hinged and bi-fold doors
Tools and equipment may include:	<ul style="list-style-type: none"> • assembly benches • drop and up-cut saws • pneumatic • hydraulic and manual presses • frame and sash tooling • copy routers • end millers • crimpers • electric and pneumatic powered drills and screwdrivers • pop rivet guns • glue guns and general hand tools

RANGE STATEMENT	
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • aluminium alloys and steel • hardware • fasteners • plastics • sealants • tapes • vinyl • gaskets • timber reveals and flashings
Glass includes:	<ul style="list-style-type: none"> • annealed glass • safety glass • patterned glass • tinted • heat reflective and insulated glass units
Hardware includes:	<ul style="list-style-type: none"> • locks • wheels • stays • hinges • springs and balances and any component required for the operation of residential windows
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • hard hats • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the fabrication and installation of windows and doors • Equipment or tool manufacturer specifications and operational procedures • Work instructions, including job sheets, plans, drawings and designs • Safety standards include personal protective equipment, OHS regulations and enterprise

RANGE STATEMENT

	requirements <ul style="list-style-type: none"> • Australian standards: <ul style="list-style-type: none"> • AS2047 Windows in buildings, selection and installation • AS1288 Glass in buildings, selection and installation • AS4667 Quality requirements for cut to size and processed glass • AS4666 Insulating glass units • WERS - The Window Energy Rating System

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements in the form of type of glass, frames and the method of fixing are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for fabrication and installation of commercial glazing, including personal protection needs, are identified and observed throughout the work</p> <p>1.3. The process for fabricating and installing commercial glazing is identified</p>
2. Prepare for work	<p>2.1. Work sequence is planned in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials, other than glass and frames, are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Type of glass to be fitted and frames is selected to match:</p> <p>2.3.1. customer order</p> <p>2.3.2. requirements for security, noise or light control</p> <p>2.3.3. Australian Standards</p> <p>2.4. Glass is checked for type, size and imperfections</p> <p>2.5. Glass fixing method is selected according to:</p> <p>2.5.1. specification</p> <p>2.5.2. type of glass and frame</p> <p>2.5.3. security requirements</p> <p>2.5.4. sealing methods</p> <p>2.5.5. Australian Standards</p>
3. Identify site conditions and restraints	<p>3.1. Site safety hazards are recognised and corrective action taken to reduce injury to self and others</p> <p>3.2. Other on-site difficulties are identified and action taken to resolve in accordance with regulations and enterprise agreements</p> <p>3.3. Special characteristics of the glass aperture are identified in relation to the effect of the glass fitting process on the finished job</p> <p>3.4. Covering material is applied where necessary to protect existing fixtures and fittings</p>
4. Prepare frame	4.1. Frame condition is assessed to ensure suitability for

ELEMENT	PERFORMANCE CRITERIA
	<p>glazing in accordance with customer order and Australian Standards</p> <p>4.2. Defective frames are reported for repair or replacement in accordance with workplace procedures</p> <p>4.3. Frame is prepared (if required) to receive glass by:</p> <p>4.3.1. cleaning</p> <p>4.3.2. surface preparation (if required)</p> <p>4.3.3. checking size against specification</p> <p>4.4. Fixing and sealing materials are prepared by mixing or cutting to length as appropriate</p>
5. Fit glass	<p>5.1. Glass is fixed to the frame using the selected method and in accordance with recognised Australian and industry standards</p> <p>5.2. Solvents and sealants are used in accordance with manufacturer recommendations and Australian Standards</p> <p>5.3. Excess sealing material is removed</p> <p>5.4. Glass and frame are cleaned after fixing</p>
6. Complete work	<p>6.1. Completed installation is checked to ensure compliance with customer requirements, specifications and Australian Standards</p> <p>6.2. Workplace documentation is completed in accordance with workplace requirements</p> <p>6.3. Work area is cleaned and left in a safe condition and rubbish removed from work area and disposed of in accordance with relevant statutory requirements and workplace requirements</p> <p>6.4. Tools, equipment and materials are cleaned and stored following workplace procedures</p> <p>6.5. Waste and scrap material is removed for disposal or recycling as required</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the fabrication and installation of commercial glazing

Required knowledge

- the types, qualities and characteristics of glass, including the hazards and handling requirements
- the techniques, methods, materials and process of fabricating and installing commercial glazing
- workflow in relation to the fabrication and installation of commercial glazing
- relevant Australian Standards
- the application and operation of tools and equipment used
- identification of equipment, processes and procedures
- workplace safety system requirements related to the fabrication and installation of commercial glazing

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to fabricate and install commercial glazing
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- To complete a minimum of:
 - measuring for the installation of commercial windows, shopfronts and doors
 - work from product specification data sheets and specified software programs
 - identify and select product materials in relation to wind loading requirements.
 - fabricate frame and sash components including cutting, tooling/milling, routing, drilling and crimping
 - identify, select and install component hardware, including weather seals, wheels, stays, hinges and COC pivots, guides and locks
 - select and cut glass to AS1288 and AS4667
 - assemble frames, including glass, gaskets, tapes, sealants, adhesives, fasteners in accordance with AS2047
 - install commercial windows, framed and frameless shop fronts and returns, supporting fins and doors
 - calculate the cost of commercial windows, shopfronts and doors
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

EVIDENCE GUIDE	
Resource implications	Frames, glass, fixing material, sealants, workplace operating procedures and work orders, personal protective equipment and an appropriate work area/site.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant fabrication and installation equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the planning and fitting of glass in commercial applications
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures

Commercial fabrication and glazing

Commercial fabrication and glazing covers work involving the fabrication, assembly, glazing and installation of framed and frameless shop fronts and returns, fixed and operable windows, hinged, pivot, sliding and automatic doors. It may include:

- toughened glass assemblies
- aluminium glazing systems, including planar assemblies, curtain wall systems, spider assemblies, panel wall systems (hung and stacked)
- Armourview balustrading
- watertight glazing techniques, including use of silicone

Tools and equipment may include:

- assembly benches
- drop and up-cut saws
- pneumatic
- hydraulic and manual presses
- frame and sash tooling
- copy routers
- end millers
- crimpers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • electric and pneumatic powered drills and screwdrivers • pop rivet guns • glue guns and general hand tools
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • all forms of flat glass and acrylic glazing products • plastic • aluminium • steel • solid timber • gaskets • sealants and adhesives
Types of glass may include but are not limited to:	<ul style="list-style-type: none"> • annealed glass • toughened glass • laminated glass • bandit resistant glass • bullet resistant glass and heat reflective glass
Methods of glazing may include:	<ul style="list-style-type: none"> • pocket • flush • channel • and double glazing
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • hard hats • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to fitting of glass for commercial applications • On-site procedures and regulations relating to the handling and movement of glass • Work instructions including job sheets, cutting lists, plans, patterns, templates, drawings and/or designs • Safety standards, include personal protective equipment, OHS regulations and enterprise requirements

RANGE STATEMENT

	<ul style="list-style-type: none"> • Australian Standards: <ul style="list-style-type: none"> • AS1228 Glass in buildings, selection and installation • AS4667 Quality requirements for cut size and processed glass • AS2047 Windows in buildings, selection and installation • AS2208 Safety glazing materials in buildings • AS2343 Bullet resistant panels and elements • AS3555 Intruder resistant building panels

Work area is cleaned and left in a safe condition and rubbish removed from work area and disposed of in accordance with relevant statutory requirements and enterprise requirements</p> <p>5.4. Tools, equipment and materials are cleaned and stored following workplace procedures</p> <p>5.5. Waste and scrap material is removed for disposal or recycling as required</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to the preparation and installation of structural glazing

Required knowledge

- the types, qualities and characteristics of glass, including the hazards and handling requirements
- the techniques, methods, materials and process of preparing and installing structural glazing
- relevant Australian Standards
- workflow in relation to the preparation and installation of structural glazing
- the application and operation of tools and equipment used
- identification of equipment, processes and procedures
- workplace safety system requirements related to the preparation and installation of structural glazing

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to fabricate and install structural glazing
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- To complete a minimum of:
 - measure glass for curtain walls, balustrades, suspended and overhead glazing
 - select glass to comply with AS1288
 - cut and process glass in accordance with AS4667
 - identify and erect appropriate ladders and scaffolding to comply with the relevant regulations and standards
 - identification and application of glazing, structural sealants and tapes
 - install glazing materials and weatherproofing
 - calculate the cost of glass and labour
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Frames, glass, fixing material, sealants, workplace operating procedures and work orders, personal protective equipment and an appropriate work area/site.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

EVIDENCE GUIDE	
	Assessment may be in conjunction with assessment of other relevant units of competency.
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant fabrication and installation equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. --	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements in the form of type of glass, frames and the method of fixing are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for fabrication and installation of commercial glazing, including personal protection needs, are identified and observed throughout the work</p> <p>1.3. The process for fabricating and installing commercial glazing is identified</p>
2. Prepare for work	<p>2.1. Work sequence is planned in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials, other than glass and frames, are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Type of glass to be fitted and frames are selected to match:</p> <p>2.3.1. customer order</p> <p>2.3.2. existing glass type</p> <p>2.3.3. requirements for security, noise or light control</p> <p>2.3.4. relevant Australian Standards</p> <p>2.4. Glass fixing method is selected according to:</p> <p>2.4.1. specification</p> <p>2.4.2. type of glass and frame</p> <p>2.4.3. security requirements</p> <p>2.4.4. sealing methods</p> <p>2.4.5. Australian Standards</p> <p>2.5. Glass is checked for type, size and imperfections</p>
3. Identify site conditions and restraints	<p>3.1. Site safety hazards are recognised and corrective action taken to reduce injury to self and others</p> <p>3.2. Other on-site difficulties are recognised and action taken to resolve in accordance with regulations and enterprise requirements</p> <p>3.3. Covering material is applied where necessary to protect existing fixtures and fittings</p> <p>3.4. Special characteristics of the window or door which may affect the finished job are identified and corrective action taken</p>

ELEMENT	PERFORMANCE CRITERIA
4. Prepare frame and materials	<p>4.1. Frame condition (if applicable) is assessed to ensure suitability for glazing in accordance with customer requirements and Australian Standards</p> <p>4.2. Defective frames are reported for repair or replacement in accordance with workplace procedures</p> <p>4.3. Frame is prepared (if required) to receive glass by:</p> <ul style="list-style-type: none"> 4.3.1. removing any remains of glass and sealants 4.3.2. cleaning 4.3.3. surface preparation (if required) 4.3.4. checking size against specification <p>4.4. Fixing and sealing materials are prepared by mixing or cutting to length as appropriate</p>
5. Fit glass	<p>5.1. Glass is fixed to the frame using the selected method and in accordance with recognised industry procedures and Australian Standards</p> <p>5.2. Solvents and sealants are used in accordance with manufacturers' recommendations and Australian Standards</p> <p>5.3. Excess sealing material is removed</p> <p>5.4. Glass and frame are cleaned after fixing</p>
6. Complete work	<p>6.1. Completed installation is checked to ensure compliance with customer requirements, specifications and Australian Standards</p> <p>6.2. Workplace documentation is completed in accordance with workplace requirements</p> <p>6.3. Work area is cleaned and left in a safe condition and rubbish removed from work area and disposed of in accordance with relevant statutory requirements and workplace requirements</p> <p>6.4. Tools, equipment and materials are cleaned and stored following workplace procedures</p> <p>6.5. Waste and scrap material is removed for disposal or recycling as required</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to commercial and structural reglazing

Required knowledge

- the types, qualities and characteristics of glass, including the hazards and handling requirements
- relevant Australian Standards
- the techniques, methods, materials and process of commercial and structural reglazing
- workflow in relation to fitting glass
- the application and operation of tools and equipment used
- identification of equipment, processes and procedures
- workplace safety system requirements related to commercial and structural reglazing

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to conduct commercial and structural reglazing
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to glass, frames, equipment and products
 - maintain required production output and product quality
- To complete a minimum of:
 - safely remove broken glass from commercial and architectural frames
 - prepare frame and opening including cleanup and/or frame repair
 - measure glass for commercial windows, doors, show and food cabinets including sliding tracks, shop fronts and returns, architectural, curtain wall, structural and overhead glazing
 - select glass to comply with AS1288
 - cut and process glass in accordance with AS4667
 - identify and work with ladders and scaffolding to the relevant regulations and standards
 - identify and apply glazing, structural sealants and tapes
 - install and weatherproof glazing materials
 - calculate the cost of glass and labour
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Frames, glass, fixing material, sealants, workplace operating procedures and work orders, personal protective equipment and an appropriate work area/site.

EVIDENCE GUIDE	
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the handling and installation of glass products
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures

Commercial and structural reglazing

- Commercial and structural reglazing covers work involving the on-site replacement of glass for commercial, structural and other architectural engineered applications. It includes:
 - commercial windows and doors, including: casement, sash, awning and double hung windows, shopfronts and returns, louvres, hinged, pivot and sliding doors and windows, automatic doors, mirrors, furniture applications, showcases, sliding tracks and food cabinets
 - curtain walls, balustrading, structural and suspended glazing and overhead glazing
- It may also include:
 - toughened glass assemblies
 - aluminium glazing systems, including planar assemblies, curtain wall systems, spider assemblies, panel wall systems (hung and stacked)
 - Armour-view balustrading
 - watertight glazing techniques, including

RANGE STATEMENT	
	knowledge of silicone
Tools and equipment may include:	<ul style="list-style-type: none"> • glass cutters • pliers • hack-out knives • drills • putty knives • tape measures • scaffolding • ladders
Materials may include but are not limited to:	<ul style="list-style-type: none"> • all forms of flat glass and acrylic glazing products • plastic • aluminium • steel • solid timber • gaskets • sealants and adhesives
Types of glass may include but are not limited to:	<ul style="list-style-type: none"> • annealed glass • toughened glass • laminated glass • wired glass • bandit resistant glass • bullet resistant glass • heat reflective glass • sputter coated and spandral glass
Methods of glazing may include:	<ul style="list-style-type: none"> • pocket • flush • channel glazing • structural and double glazing
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • hard hats • safety footwear • aprons and overalls

RANGE STATEMENT	
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures and regulations relating to handling, movement and fitting of glass for commercial and structural applications • Quality and Australian Standards and procedures • Equipment and material manufacturer specifications and operational procedures • Work instructions including job sheets, cutting lists, plans, patterns, templates, drawings and/or designs • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • Australian Standards: <ul style="list-style-type: none"> • AS1288 Glass in buildings, selection and installation • AS2208 Safety glazing materials in buildings • AS4667 Quality requirements for cut to size and processed glass

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify products to be stored and appropriate stock records/inventory systems	1.1. Materials, goods and products to be stored are identified 1.2. Potential uses, frequency of use of the materials or frequency of dispatch to other work sections or customers are identified 1.3. Size, shape and special storage requirements are determined 1.4. Requirements for safe storage are identified and forwarded to appropriate personnel 1.5. Stock/inventory systems records are maintained 1.6. Relevant product information, including instructions, care labels and product identification information, are located 1.7. When required reorder documentation is forwarded to appropriate personnel
2. Establish storage areas	2.1. Storage areas selected meet requirements for storing product type and quantity 2.2. Appropriate workplace clearances for use of storage areas are obtained 2.3. Storage areas are cleared of waste and contaminants and any required safety equipment is installed 2.4. Storage areas are planned to safely and effectively store goods based on frequency of use, safe height, weight and size 2.5. Storage arrangements take into account potential damage to raw materials or finished products from: <ul style="list-style-type: none"> 2.5.1. other stored items 2.5.2. handling 2.5.3. rearranging 2.5.4. crushing/scratching/contamination 2.6. Access and working space for safe use by appropriate manual handling equipment, forklifts or safe lifting by personnel is ensured
3. Move materials	3.1. Movement activities are completed as an individual or working directly with others as required by the work tasks 3.2. Roles and related responsibilities for the successful completion of the safe lifting activity are identified and applied 3.3. Materials handling equipment appropriate to the task is

ELEMENT	PERFORMANCE CRITERIA
	<p>selected and used in accordance with regulatory and/or site requirements</p> <p>3.4. Feedback from others is constructively accepted and acted on to continuously improve team and work performance</p>
4. Store materials, goods and products	<p>4.1. Condition of materials, goods and products is observed on arrival and any product below specification is returned to appropriate work areas</p> <p>4.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>4.3. Materials, goods and products are stored observing any requirements for separation of particular types of hazardous or incompatible materials, goods or products</p> <p>4.4. Materials are stacked appropriately for weight loading, size and crushability of goods or products</p> <p>4.5. Products are located to enable access to frequently required items</p> <p>4.6. Work is undertaken in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to the movement and storage of materials and products, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the storage site to avoid any back tracking or work flow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate storage requirements and material requirements
- use checking and inspection techniques to anticipate movement and storage problems, avoid reworking and avoid wastage
- use the limited workplace technology related to movement and storage including inventory systems, tools, equipment and measuring and recording devices

Required knowledge

- workflow in relation to use of goods and materials in store
- potential hazards including fire and explosion risk, security issues and operator safety around products to be stored
- appropriate controls and safety equipment to manage risk
- requirements for minimising damage to and maintaining contaminant-free unfinished materials goods and completed products
- requirements of working with others in a team

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply information relevant to the requirements of the goods to be moved or stored
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Plan layout of storage areas
- Interpret regulations and workplace order requirements
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Establish and maintain storage areas for:
 - raw materials
 - production outputs
- Use a range of non-regulated materials handling devices
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Storage area, manual materials handling equipment, products/materials for storage.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

EVIDENCE GUIDE

materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit context	<ul style="list-style-type: none"> OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Materials	Materials may include perishable and non-perishable inventory required to support production operations
Materials handling equipment	Materials handling equipment covered by this unit is restricted to non-regulated machines and appliances
Products may include:	<ul style="list-style-type: none"> furniture furnishing items components and other outcomes (outputs of the local production processes)
Tools and equipment may include but are not limited to:	<ul style="list-style-type: none"> pre-fabricated and fixed shelving open and enclosed pallets shipping containers non-motorised lifting and movement aids
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> Workplace procedures relating to the use of tools and equipment Work instructions, including job sheets, cutting lists, plans, drawings and designs Workplace procedures relating to reporting and communication

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify document type and purpose	1.1. Key information is identified, such as title, version, scale, legend and keys 1.2. Any relevant explanatory or additional information needed to interpret the document is located Clarification is sought to confirm the intention of information
2. Read and interpret the document	2.1. Information such as symbols, abbreviations, acronyms and technical terms are identified and interpreted in terms of: <ul style="list-style-type: none"> 2.1.1. the work to be completed 2.1.2. any Australian Standards requirements 2.1.3. the equipment and tools to be used 2.1.4. the items to be produced or repaired 2.2. Document information is compared to component or supplier advice for use of the materials and, where relevant, Australian Standards 2.3. Design and style features shown in drawings are identified by industry recognised terms
3. Plan own work sequence	3.1. Work sequence, required tools and equipment and tasks to be performed are identified from the documents 3.2. Work sequence is planned, identifying stages where checks against specifications must be made 3.3. Specifications noted in the work plan are checked for accuracy against the drawings and specifications, and any errors are rectified
4. Maintain document files	4.1. Plans and documents are handled carefully and maintained intact 4.2. Any explanatory documentation, additional information and/or modification information is kept with the work plan and original documentation according to workplace procedures 4.3. All documentation is replaced in workplace filing or storage system for retrieval by others as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to the range of work documents relevant to the sector
- communicate ideas and information to enable confirmation of work requirements and specifications
- plan and organise activities to avoid any back tracking, work flow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise information management
- use mathematical ideas and techniques to correctly interpret the content of work documents
- identify alternative methods of accessing and sources of work information
- use workplace technology related to work documentation, its access and storage

Required knowledge

- different types of work documents used in the furnishing industry, and their function
- conventions and symbols of plans, drawings and specifications
- workplace procedures for maintenance of documentation

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Recognise and explain the meanings of symbols, technical terms and conventions of specifications and plans
- Check accuracy of copied specifications
- Maintain condition of documentation
- Locate, read and interpret a minimum of 10 selected/specified work documents which must include:
 - Australian Standards relevant to the sector
 - manufacturer technical instructions and specifications
 - real or simulated local work documents including:
 - work plans
 - material safety data sheets
 - relevant building codes
 - job procedures
 - safe work instructions or equivalent
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to a range of drawings, standards, plans, specifications and cutting lists relevant to the work.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and generally be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the reading of work documents and the preparation of work plans
- Competency may be determined in workplaces involved in the manufacture and or installation of musical instruments, domestic furniture, commercial furniture, kitchen and bathroom cabinets, furniture components, picture frames, soft furnishings, floor covering and finishing, and glass and glazing

Work documents to be considered are to include but may not be limited to:

- standards
 - drawings
 - cutting lists
 - job specifications and architect/builder plans or equivalent and manufacturer specifications and/or operating instructions
- Work documents are to include hard copy and may include computerised versions

Information and procedures

- Workplace plans, drawings and specifications applicable to all sectors of the industry
- Australian Standards applicable to the industry sectors
- Workplace procedures relating to the preparation of own work plans and the

RANGE STATEMENT	
	maintenance of work documentation <ul style="list-style-type: none"> • Supplier and manufacturer technical data and information • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information	1.1.Details of customer requirements are obtained through discussion with customer or from information supplied 1.2.Details of products and/or services to be provided are developed 1.3.Delivery point and methods of transportation are determined where necessary 1.4.Details are recorded in accordance with enterprise practice
2. Estimate materials, time and labour	2.1.Types and quantities of materials required for product manufacture are estimated 2.2.Labour requirements to achieve product manufacture and perform required services are estimated 2.3.Time requirements to manufacture and/or install item and perform required services are estimated
3. Calculate costs	3.1.Total materials, labour and overhead costs are calculated in accordance with enterprise procedures 3.2.Total job cost is calculated, including overheads and mark-up percentages 3.3.Final cost to customer is calculated
4. Document details and verify where necessary	4.1.Details of costs and charges are documented in accordance with enterprise practice 4.2.Costs, calculations or other details are verified in accordance with enterprise practice 4.3.Customer quotation is prepared 4.4.Details are documented for future reference in accordance with enterprise practice

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, costs and government charges
- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- complete an outline plan of activities, including the preparation and layout of the worksite, the obtaining of equipment and materials, and the avoidance of back tracking, work flow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use mathematical ideas and techniques to correctly complete measurements, estimate material, labour and overhead requirements and accurately cost the product/service
- use checking techniques to anticipate and overcome costing problems
- use workplace technology related to the estimation and validation of job costs

Required knowledge

- range of products and services offered by the enterprise
- enterprise or equivalent costing procedures
- components of overheads costs
- components of labour costs
- labour rates and approximate costs of products and materials
- basic mathematical processes

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret specifications and instructions for products and materials to be used
- Interpret work orders
- Document and communicate work-related information including:
 - customer requirements
 - products, materials and labour required
 - costing calculations for products, materials and labour
 - special conditions
- Use of calculators, computer programs and other aids in the estimation and cost calculation processes
- Estimate and cost three varied jobs including:
 - estimate quantities of material required
 - determine the types and amount of labour required to complete the work
 - estimate time required to complete the work
 - estimate overheads associated with the job

Resource Implications

Access is required to real or appropriately simulated situations involving estimation and costing of products and services.

Access is required to specifications and costs of relevant of products, equipment and materials and information on labour costs and availability, safety procedures, regulations, quality standards, and enterprise procedures.

Access is required to all necessary facilities and associated equipment including calculators, computers and relevant software.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of

EVIDENCE GUIDE	
	competency.
Context of Assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- The estimation and job costing covered here is to be that undertaken by a tradesperson in relation to a sector product for a single client or customer
- The client or customer may be external or internal
- Estimation and costing is to include overheads, labour and materials

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

Workplace context

- Work organisation procedures and practices relating to the provision of information and preparation of quotations
- Reporting actions which may include: verbal and written communication in accordance with enterprise policies and procedures
- Oral, written or visual communication including: completion of standard forms, interpretation of information and instructions associated with workplace activities, and recording and reporting of work outcomes
- Use of calculators and/or computers running appropriate software for estimating and calculating necessary details

Information and procedures

- Enterprise work orders and instructions
- Industry codes and symbols
- Product designs, patterns and prototypes
- Building/architectural plans

RANGE STATEMENT

	<ul style="list-style-type: none"> • Australian, international and enterprise quality standards and procedures • Work scheduling documentation • Job procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the decoration requirements	1.1. Applicable OHS requirements relevant to decorating a simple space are verified and complied with 1.2. Project brief is reviewed and clarified with supervisor to identify decoration requirements 1.3. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.4. Communication requirements for decoration project are identified
2. Plan the space decoration	2.1. Space dimensions and locations of features are measured and recorded 2.2. Sketches and drawings are prepared to illustrate the space 2.3. Plan layout is prepared 2.4. Theme is selected and alternative options provided 2.5. Colours are selected and confirmed 2.6. Supplies necessary to complete the project are selected 2.7. Materials and processes are selected 2.8. Furnishings and other accessories are selected and placement coordinated 2.9. Costing and timeline estimates are compiled and developed into a full project proposal 2.10. Decoration proposal is considered for its environmental qualities
3. Present decoration proposal	3.1. Colour board presentation is made 3.2. Drawings are completed to show layout of decorative components 3.3. Presentation of the design and decoration plan is made

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work orders, basic plans and safety procedures
- communicating ideas and information and the reporting of work outcomes and problems
- accurately recording and maintaining information relating to interior decoration and design functions
- recognising and responding to circumstances outside instructions or personal competence
- exploring ideas
- applying design principles
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarifying and confirming work instructions
- planning own work within the given task parameters
- learning of thinking, problem solving and conceptual techniques
- using technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- elements and principles of design
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- problem identification and resolution techniques

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively plan the decoration of a simple space in the designated timeframe • Effectively apply design elements and principles to decorate a simple space • Comply with established safe practices and procedures for decorating a simple space • Communicate decoration ideas effectively
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to designing and decorating a small space • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Project brief	<ul style="list-style-type: none"> may include but not be limited to the aims, objectives, any design requirements, image requirements and function, effect or feel trying to be achieved, budget and timelines
Simple space	<ul style="list-style-type: none"> may include but not be limited to a room within a domestic residence such as bedroom, bathroom, kitchen, laundry, living space, multi-purpose room, storage room, study, garage, rumpus room, media room, toilet, pantry, family room, entertainment area, hall and workstation
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language

RANGE STATEMENT	
Sketches and drawings	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand, drafted technical drawings or drawings produced on computer using CAD software packages
Layout	<ul style="list-style-type: none"> may include but not be limited to is to include the plan of how a room will be designed and decorated showing the placement of design elements and decorative features, including plans, section elevations and other projections
Themes	<ul style="list-style-type: none"> may include but not be limited to variations of colour ways, furnishing trends and decoration trends
Supplies	<ul style="list-style-type: none"> may include but not be limited to paints, furnishings, decorations and other internal fit-out products
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Costing	<ul style="list-style-type: none"> may include but not be limited to the cost of products and materials used during completion of the project, labour and overhead expenses
Timelines	<ul style="list-style-type: none"> may include but not be limited to the agreed project time span set and agreed for the project
Colours	<ul style="list-style-type: none"> may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, contrast, harmony, effects on space, formulas and colour wheels
Colour board presentation	<ul style="list-style-type: none"> may include but not be limited to a presentation on board displaying the colour usage and coordination with surface finishes and textiles used throughout the project
Furnishings	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built in cabinetry or fittings, light fittings, lamps, picture framing, tapware, laundry fittings, bathroom fittings, toilet fittings and kitchen fittings

RANGE STATEMENT	
Environmental qualities may include	<ul style="list-style-type: none"> may include but not be limited to use of sustainable resources, use of lighting, selection of furnishings and materials

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess client product need	1.1. Client is engaged and design and decoration needs discussed 1.2. Budget, time, colour and function parameters for decoration product are identified 1.3. Client documentation is completed
2. Source and assess suitability of products	2.1. Products are researched and suitable choices made for potential use 2.2. Performance and characteristics of products are evaluated and recorded 2.3. Use requirements of the product are analysed for appropriateness to the application 2.4. Quality and compliance issues are assessed to ensure the products state manufacturers' specifications for use 2.5. Environmental issues are considered in sourcing and selecting products 2.6. Sustainability of products is assessed in terms of durability and wear 2.7. Manufacturing standards and equipment are reviewed to comply with the chosen materials 2.8. Sources or suppliers of products are found and recorded 2.9. Costs associated with purchasing and obtaining the products are recorded and reported
3. Specify products	3.1. Products are selected according to the style of the space 3.2. Final selection of products and finishes is compiled and verified based on the assessment of suitability 3.3. Presentation of the product and finish information is made to the client

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work orders, basic plans and safety procedures
- communicating ideas and information
- accurately recording and maintaining information relating to products
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- recognising and responding to circumstances outside instructions or personal competence
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarifying and confirming work instructions
- planning own work within the given task parameters
- accepting responsibility for given tasks
- setting, monitoring and satisfying personal work goals
- learning of thinking, problem solving and conceptual techniques
- maintaining current knowledge of tools and materials
- maintaining current knowledge of interior decoration and design techniques
- using the workplace technology related to product and finishes specification including calculators, measuring and recording devices, computers

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for sourcing and specifying decoration products
- organisational and site standards, requirements, policies and procedures for sourcing and specifying decoration products
- applicable Australian Standards
- basic understanding in elements and principles of design
- ergonomics, anthropometrics, proxemics and aesthetic values of available product range
- characteristics of materials, products and defects
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively source and specify decoration products to provide the client with cost effective options which meet the project brief requirements • Effectively apply design elements and principles to the sourcing and specifying of decoration products • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for sourcing and specifying decoration products • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to sourcing and specifying products and finishes • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and

EVIDENCE GUIDE	
	application
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Products	<ul style="list-style-type: none"> • may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built-in cabinetry or fittings, light fittings, lamps, picture framing, tapware, laundry fittings, bathroom fittings, toilet fittings and kitchen fittings • may also include but not be limited to finishes such as paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Research	<ul style="list-style-type: none"> • may include but not be limited to computer internet research, viewing swatches, studying the Pantone Matching System (PMS), journals (directions magazines), design shows, retail and wholesale outlets and trade fairs
Performance and characteristics	<ul style="list-style-type: none"> • may include but not be limited to assessment of products to determine if they meet the requirements of the intended end use application and how well they do it, and the durability and composition of the product
Quality	<ul style="list-style-type: none"> • may include but not be limited to an inspection system for ensuring that pre-determined quality standards are being met, highlighting non-conformances requiring intervention
Compliance	<ul style="list-style-type: none"> • may include but not be limited to ensuring that the product meets with Australian Standards or ISO 9000 series quality standards and state and territory manufacturing specifications (where applicable)
Environmental issues	<ul style="list-style-type: none"> • may include but not be limited to how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from, similarly what impact will be felt by reducing

RANGE STATEMENT	
	or stopping material from the source
Sustainability	<ul style="list-style-type: none"> may include but not be limited to life of the product, durability, maintenance and repair issues and what protective elements it may possess
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Sources	<ul style="list-style-type: none"> may include but not be limited to suppliers, wholesalers, retailers, manufacturers and designers
Costs	<ul style="list-style-type: none"> may include but not be limited to the cost of products and materials together with the cost of obtaining them either locally, interstate or overseas
Space	<ul style="list-style-type: none"> may include but not be limited to commercial or domestic spaces, rooms such as bedrooms, bathrooms, kitchens, laundries, living spaces, multi-purpose rooms, storage rooms, studies, offices, garages, rumpus rooms, media rooms, toilets, pantries, entertainment areas, halls and work stations

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for display	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to styling a retail display are verified and complied with</p> <p>1.2. Project brief is reviewed and confirmed with client to identify display requirements</p> <p>1.3. Parameters for the display are assessed and confirmed</p> <p>1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. Communication with others is established and maintained</p>
2. Plan and design display	<p>2.1. Market needs are evaluated and a display brief developed that capitalises on current trends</p> <p>2.2. Display dimensions are measured and needs of the display space assessed</p> <p>2.3. Sketches and drawings are prepared to illustrate the display</p> <p>2.4. Plan layout is prepared</p> <p>2.5. Theme is selected and alternative options provided</p> <p>2.6. Supplies, products and finishes necessary to complete the project are sourced and costed</p> <p>2.7. Materials and processes are specified</p> <p>2.8. Costings and timelines are compiled and developed</p>
3. Style display	<p>3.1. Final selection of products and finishes is coordinated</p> <p>3.2. Arrangement is resolved to meet client needs and display brief</p> <p>3.3. Trims and hardware are selected and coordinated with the products or finishes</p> <p>3.4. Graphics and text style for signage are selected and applied</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- sketching and drawing
- collecting, organising and understanding information related to work orders, basic plans and safety procedures
- communicating ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- accurately recording and maintaining information relating to interior decoration and design functions
- working with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- using pre-checking and inspection techniques to ensure the tools and equipment are serviceable and ready to use
- accurately recording and maintaining information relating to the design of products
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative interior decoration and design processes
- initiating new ideas and work techniques
- planning and organising activities including the preparation and layout of own worksite and the obtaining and use of tools, equipment and materials to avoid any backtracking, work flow interruptions or wastage
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarifying and confirming work instructions
- using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for styling a retail display
- organisational and site standards, requirements, policies and procedures for styling a retail display
- basic understanding of elements and principles of design
- concepts of ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively style a retail display with the products, finishes, trims and hardware to promote trends and design concepts to potential clients • Effectively apply design elements and principles to style a retail display • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for styling a retail display • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to styling a retail display • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Scope of brief

- may include but not be limited to the aims, objectives, milestones for the project, the point of reference for everyone, elements and principles of design and may include organisational or personal profiles, target

RANGE STATEMENT	
	audience, budget, timeline, consultation requirements, colour requirements, image requirements and function
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Displays	<ul style="list-style-type: none"> may include but not be limited to an effective display of a simulated and designed space to sell and promote ideas, concepts, trends, products and decorations associated with the outlet
Sketches and drawings	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand, drafted technical drawings or drawings produced on computer using CAD software packages. These usually contain project specifications
Layout	<ul style="list-style-type: none"> may include but not be limited to the plan of how a room will be designed and decorated showing the placement of design elements and decorative features
Themes	<ul style="list-style-type: none"> may include but not be limited to variations of colour ways (based on directions media),

RANGE STATEMENT	
	furnishing trends and decoration trends
Supplies	<ul style="list-style-type: none"> may include but not be limited to paints, furnishings, decorations and other internal fit-out products
Products	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built in cabinetry or fittings, light fittings, lamps, picture framing, tapware, laundry fittings, bathroom fittings, toilet fittings and kitchen fittings
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Material	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Costings	<ul style="list-style-type: none"> may include but not be limited to the cost of products and materials used during completion of the project, labour and overhead expenses
Timelines	<ul style="list-style-type: none"> may include but not be limited to the agreed project time span set and agreed for the project
Trims and hardware	<ul style="list-style-type: none"> may include but not be limited to haberdashery, cabinet hardware such as knobs and handles, light fittings, rugs, tie backs and curtain rods

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess colour requirements for the project	1.1. Project brief is reviewed and clarified with client to identify colour requirements 1.2. Parameters for the colour application are assessed and confirmed 1.3. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.4. Communication with others is established and maintained 1.5. Applicable OHS, legislative and organisational requirements relevant to researching, analysing and applying colours are verified and complied with
2. Research colour schemes for interior decoration	2.1. Colour psychology is researched and analysed in accordance with the needs of the project 2.2. Impact of colours upon an interior space are researched and information compiled 2.3. Additive and subtractive colour mixing is researched for interior decoration applications 2.4. Cultural and historical influences on colour use are examined
3. Explore colour schemes	3.1. Colour wheels are used to mix and match alternative colour schemes in assisting with suitability of colours to a space 3.2. Colour systems and colour combinations are explored for interior design application 3.3. Relationship of colours juxtaposed are assessed for their suitability in the space and proportions 3.4. Effect of light is assessed against the impact of colours being proposed for use in certain spaces 3.5. Coordination and visual perception of colours is assessed in accordance with the project brief 3.6. A range of colour mixing techniques are used to match samples 3.7. Light sources are used to mix and throw coloured light onto a range of coloured surfaces to evaluate and record colour effect perceptions 3.8. Contrast and harmony of colours are ascertained through selection of colours in accordance with the project brief
4. Present colour	4.1. Final selection of colours is compiled and verified

ELEMENT	PERFORMANCE CRITERIA
scheme	based on the research and analysis and presented to the client 4.2. Presentation of the colour information is made to the client and specifications recorded 4.3. A range of <i>rendering media</i> is used to present colour schemes 4.4. Colour application is <i>critiqued</i> to assess the effectiveness of the project brief to meet client needs

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting organising and understanding information related to work orders, basic plans and safety procedures
- communicating ideas and information to enable confirmation of work requirements and presentation of colour concepts
- experimenting with, and refining, colour ideas
- researching colour concepts and applications
- recognising and responding to circumstances outside instructions or personal competence
- initiating new ideas and work techniques
- planning and organising activities to meet work requirements
- clarifying and confirming work instructions
- setting, monitoring and satisfying personal work goals
- accepting responsibility for given tasks
- learning of thinking, problem solving and conceptual techniques
- maintaining current knowledge of tools and materials

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for researching, analysing and applying colours
- organisational and site standards, requirements, policies and procedures for researching, analysing and applying colours
- elements and principles of design
- creativity and artistic relevance
- colour systems and theories
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- colours, furnishings and decorations
- psychology of colours
- sketching and drawing
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively research, analyse and apply colours to provide the client with cost effective options which meet the project brief requirements for a minimum of two projects • Visually present colour schemes to illustrate how ideas meet overall project requirements • Effectively apply design elements and principles to researching, analysing and applying colours • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching, analysing and applying colours • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to researching, analysing and applying colours • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes, effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, product based colour systems such as Munsell or similar, colour matching system such as Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited

RANGE STATEMENT	
	to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Colour psychology	<ul style="list-style-type: none"> may include but not be limited to influences such as strength, boldness, excitement, determination, desire, courage, enthusiasm, cheerfulness, affordability, stimulation, creativity, attention-grabbing, comfort, liveliness, intellect, happiness, energy, durability, reliability, safety, honesty, optimism, harmony, freshness, depth, stability, professionalism, loyalty, reliability, honour, trust, power, nobility, luxury, mystery, royalty, elegance, magic, conservatism, traditionalism, intelligence, seriousness, endurance, relaxing, confident, casual, reassuring, earthy, elegance, sophistication, formality, strength, cleanliness, purity, newness, virginity, peace, innocence and simplicity

RANGE STATEMENT	
Colours	<ul style="list-style-type: none"> • may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, language, tonal, translucent, contrast, harmony, effects on space, formulas and colour wheels • may also include but not be limited to hue, chromaticity, saturation, value, luminance, tints, tones, shades, complimentary, primary, secondary and tertiary colours
Interior space	<ul style="list-style-type: none"> • may include but not be limited to commercial or residential spaces, rooms such as bedrooms, bathrooms, kitchens, laundries, living spaces, multi-purpose rooms, storage rooms, studies, garages, rumpus rooms, media rooms, toilets, pantries, entertainment areas, halls and work stations, offices, cafes, shops and restaurants
Additive and subtractive colour mixing	<ul style="list-style-type: none"> • may include but not be limited to two types of colour mixing. The mixing of lights or differently coloured beams projected onto a screen occurs according to the principle of additive colour mixing. The mixing of pigments or paints according to the principles of subtractive colour mixing
Cultural	<ul style="list-style-type: none"> • may include but not be limited to demography, geography (local, regional, national), religious, climatic, societal, cultural, lifestyle, attitudinal, gratification, honour, living conditions, infrastructure, status and habitude
Historical	<ul style="list-style-type: none"> • may include but not be limited to colour study of early civilisation, Berlin & Kay, Aristotle, Newton, Hippocrates, Leonardo Da Vinci, the Renaissance, Goethe's theory of colours, Chevreul and Bauhaus School
Colour wheel	<ul style="list-style-type: none"> • may include but not be limited to a wheel that is formed by placing the primary and secondary and possibly further colours in order around a circle. Traditionally colours are represented on a wheel of 12 colours: three primary colours, three secondary colour (created by mixing primary colours), and six tertiary colours (created by mixing the primary and secondary colours). Modern day

RANGE STATEMENT	
	and electronic colour wheels have endless possibilities
Effects of light	<ul style="list-style-type: none"> may include but not be limited to naturally occurring light caused by windows, doors, changes in space size, sky lights, artificial light using fluorescent, halogen, or incandescing methods, and reflective light
Contrast	<ul style="list-style-type: none"> may include but not be limited to opposing elements of colour which are suitably different yet work together
Harmony	<ul style="list-style-type: none"> may include but not be limited to colours that work well together, that produce a colour scheme that looks attractive; the colour wheel can be used as a valuable tool for determining harmonious colours
Researching	<ul style="list-style-type: none"> may include but not be limited to computer internet research, viewing swatches, studying the PMS, journals (directions magazines), design shows, retail and wholesale outlets and trade fairs
Trends	<ul style="list-style-type: none"> may include but not be limited to new directions resulting from events that are at times subtle and others significant. Colour trends develop the same way. Colour experts gather information from around the world and study changing events and ideas to produce a comprehensive colour story, in the same way that designers seek unique styles and incorporate current philosophies into their work
Rendering media	<ul style="list-style-type: none"> Dry media - may include but not be limited to pencils, charcoal, pastels and spirit-based markers Wet media - may include but not be limited to ink and water-based paints CAD
Critique	<ul style="list-style-type: none"> may include but not be limited to the process of undertaking a critical analysis of a colour, the process used to decide upon it, and the application methodology and final outcomes

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to decorate residential interiors for the solution of interior decoration projects in accordance with project briefs.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required to analyse a design brief, conduct research and generate decoration ideas and concepts to create a visual experience in a previously defined interior space. This unit includes skills required to select materials and finishes for surface decoration and to arrange the objects and elements within the space. This unit does not cover skills required to alter established structural aspects of the building or building services.</p> <p>This unit covers employability skills in teamwork and communication in order to work with others in the design process. Planning and organising and problem skills are required to apply design processes and initiative and enterprise are required to develop to design ideas. Self management and learning skills are applied to assess and reflect on own design skills and identify areas for improvement.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	1.1. Applicable OHS, legislative and organisational requirements relevant to decorating for residential spaces are verified and complied with 1.2. Project brief is reviewed, confirmed and clarified with client 1.3. Parameters for the project are assessed and confirmed 1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.5. Communication with others is established and maintained 1.6. Problems or underlying factors to be addressed by the project brief are verified
2. Conduct research for the design	2.1. Areas for research are identified 2.2. Impacts of cultural, social and economic influences and trends are identified and analysed 2.3. Ergonomic and anthropometric influences are identified and analysed 2.4. Environmental issues are identified and analysed 2.5. Other relevant information is assessed and used to guide research 2.6. Design influences are prioritised for relevancy to design brief 2.7. Collected information is documented
3. Confirm the design brief	3.1. Design requirements are translated in a manner which is clear and concise 3.2. Factors affecting the outcome of the project are documented 3.3. Criteria for assessing and evaluating design concepts are determined 3.4. Final design brief outlining all the requirements is compiled, produced and refined with the client
4. Generate decoration concepts	4.1. Creative methodologies are used to generate a range of decoration concepts and themes 4.2. Concepts are assessed against the project brief to select most viable solution 4.3. Concept is presented to client using a range of concept presentation methods

ELEMENT	PERFORMANCE CRITERIA
	4.4. Ideas are discussed with client and concept is modified according to feedback
5. Translate concepts into 3D decoration ideas	5.1. The elements and principles of design that are derived from the concept are explored 5.2. A range of 3-D decoration ideas are generated from the concept 5.3. Surface <i>materials</i> , finishes, and <i>colours</i> are explored and assessed for their ability to express the concept 5.4. Furniture, <i>fixtures</i> , <i>fittings</i> and <i>accessories</i> are explored and assessed for their ability to express the concept 5.5. The allocation and arrangement of objects within the space are explored 5.6. 2-D and 3-D sketches are developed to document the 3-D space
6. Revise and refine solution	6.1. Planning is revised and refined, and ergonomics considered 6.2. Regulatory requirements relating to decoration are assessed to determine compliance 6.3. <i>Finishes</i> , fittings, fixtures, furniture, materials, and accessories are selected 6.4. Colour scheme is selected to complement the space and create the required visual experience 6.5. <i>Environmental aspects</i> of decoration solution are examined and areas for improved sustainability are identified and incorporated where possible 6.6. Preliminary <i>drawings</i> are developed
7. Present decoration solution to client	7.1. Final presentation is prepared for the client 7.2. Final presentation is presented to the client with key features and benefits of the solution explained 7.3. Client is engaged to gain feedback on decoration elements
8. Reflect on decoration process	8.1. Client feedback and response is analysed to determine success in achieving client satisfaction 8.2. Own performance in the design process is examined to identify strengths and weaknesses 8.3. Areas for improvement are identified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- preparing and presenting research information
- collecting, organising and understanding information
- communicating ideas and information
- presenting ideas visually
- accurately recording and maintaining information relating to the project
- working and communicating with others to gain information
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative design process
- planning own work within the given task parameters
- maintaining current knowledge of tools and materials
- maintaining current knowledge of design techniques
- applying principles and elements of design
- communicating decoration concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- drawing using manual and computer based techniques
- sequencing operations
- meeting specifications
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for decorating for residential space
- organisational and site standards, requirements, policies and procedures for decorating for residential space
- Australian Standards and the Building Code of Australia
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- historical design styles and movements
- current ethical issues in society affecting designs

REQUIRED SKILLS AND KNOWLEDGE

- current market segments
- aesthetic aspect of elements and principles in 3-D design
- ergonomic and anthropometric standards
- construction technologies
- techniques for the preparation and presentation of research information
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- colours, furnishings and decorations
- sketching and drawing techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively analyse a project brief to determine client requirements • Work through the decoration process collecting the required information • Effectively establish criteria for the intended solutions to meet the requirements of the project brief • Effectively design for at least two interior residential spaces to provide the client with creative solutions that satisfy the project brief • Visually and verbally present decoration solution • Effectively apply design elements and principles in designing for residential space • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing for residential space • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to decorating residential interiors • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target

RANGE STATEMENT	
	market, budget, timeline, consultation requirements, and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes, effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Areas for research	<ul style="list-style-type: none"> may include but not be limited to similar products and typologies and spaces, materials, social and cultural influences, site analysis, site conditions and functional requirements
Environmental issues	<ul style="list-style-type: none"> may include but not be limited to use of renewable resources, energy efficiency, conservation of resources, recycling, waste, by-products, emissions and environmental consciousness/green design
Other information	<ul style="list-style-type: none"> may include but not limited to industry codes and symbols, Australian and international Standards and regulations, historical literature on design styles and movement, ethical reference material, supplier's material data sheets, ergonomic and anthropometric statistical information, market research documents, photographic reference material, site plans and drawings and information on:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • lifestyle requirements • cultural issues • proxemics • costs • product performance and characteristics • existing conditions
Documentation	<ul style="list-style-type: none"> • may include but not be limited to working notes, hand written records, typed information and reports, diagrams, sketches, tables, matrixes, images and visual essays
Creative methodologies	<ul style="list-style-type: none"> • may include but not be limited to brainstorming, word association, imaging, modelling, lateral thinking and application of a range of media
Concepts	<ul style="list-style-type: none"> • may include but not be limited to ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation
Concept presentation methods	<ul style="list-style-type: none"> • may include but not limited to mood board, concept board, 3-D models, sketches and photos
Materials	<ul style="list-style-type: none"> • may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Colours	<ul style="list-style-type: none"> • may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, contrast, harmony, effects on space, formulas and colour wheels
Fixtures, fittings and accessories	<ul style="list-style-type: none"> • may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built in cabinetry or fittings, light fittings, lamps and picture framing • may also include but not be limited to accessories such as trinkets, ceramics, trays, vases, carvings, baskets, pots, plants, candles, clocks, silverware, mirrors, frames, screens, floral displays, haberdashery, glassware, fireplace items, gifts, hand crafts, water features, photographs, pottery, personal items, statues, book ends, bowls and bottles

RANGE STATEMENT	
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Environmental aspects	<ul style="list-style-type: none"> may include but not limited to how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from, energy consumption in achieving the material, greenhouse gases created, waste levels, resource utilisation and transport effects. Similarly what impact will be felt by reducing or stopping material from the source
Drawings	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand, drafted technical drawings or drawings produced on computer using CAD software packages. These usually contain project specifications may also include but not be limited to elevations, sections, plans, perspectives

LMFID4003A Prepare a materials board for client presentation

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to prepare a materials or sample board for client presentation, for interior decoration and design projects.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for competent workplace performance in interior decoration and design operations of all sizes. The preparation of a materials board includes visual demonstration of colour, materials, samples, finishes and textiles used in the decoration and design project.</p> <p>This unit requires communication skills in order to interpret and document information relating to design and to express ideas to others. Planning and organising and problem solving skills, with initiative and enterprise are applied in the preparation of a materials board to support communication and presentation. Self management and learning skills are used to gather and apply feedback about design concepts.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify presentation requirements from project brief	1.1. Applicable OHS, legislative and organisational requirements relevant to presenting documentation are verified and complied with 1.2. Project brief is reviewed to determine presentation requirements 1.3. Parameters for the project are confirmed with client 1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.5. Communication with others is established and maintained 1.6. All required information is accessed and interpreted to inform the presentation process
2. Prepare materials board	2.1. Substrate for the materials board is obtained in the selected colour and cut to the desired size 2.2. Fabric swatches are gathered and selected fabrics cut to size 2.3. Paint swatches are proportionally arranged and selected paint samples set aside 2.4. Visual information is gathered and prepared in accordance with the design theme and project brief 2.5. Products, materials and accessories are gathered and selected items prepared 2.6. Material and sample board components are composed and arranged before secure fixing to base board 2.7. Fixtures are labelled or a legend compiled to translate the parts and colours 2.8. Materials board is finalised and alternatives prepared in readiness for presentation 2.9. Sketches and drawings are completed and prepared for positioning of products, materials and accessories
3. Prepare for client presentation	3.1. Presentation methodology is developed and prepared 3.2. Materials board presentation is made to the client, selling the attributes of the design solution 3.3. Presentation of materials board information is supported using multimedia and computer based strategies

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- drawing designs
- making presentations
- sourcing information
- collecting, organising and understanding information related to design requirements
- maintaining accurate records
- communicating ideas and information
- sequencing operations
- carrying out work according to OHS practices
- using pre-checking and inspection techniques to ensure the tools and equipment are serviceable and ready to use
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative interior decoration and design processes
- initiating new ideas and work techniques
- planning and organising activities including the preparation and layout of own worksite and the obtaining and use of tools, equipment and materials to avoid any backtracking, work flow interruptions or wastage
- maintaining current knowledge of tools and materials
- maintaining current knowledge of interior decoration and design techniques

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for preparing a materials board and client presentation
- organisational and site standards, requirements, policies and procedures for preparing a materials board and client presentation
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- colour, furnishing and decoration options
- psychology of colours

Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target

RANGE STATEMENT	
	market, budget, timeline, consultation requirements and colour requirements
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Substrate	<ul style="list-style-type: none"> may include but not be limited to matt board, sponge board, frames, mounts or 3-D relief boards
Colours	<ul style="list-style-type: none"> may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, language, tonal, translucent, contrast, harmony, effects on space, formulas and colour wheels may also include but not be limited to hue, chromaticity, saturation, value, luminance, tints, tones, shades, complimentary, primary, secondary and tertiary colours
Fabric swatches	<ul style="list-style-type: none"> may include but not be limited to small pieces of fabric cut as samples from rolls of fabric or commercial display fabric swatches used for retail purposes
Paint swatches	<ul style="list-style-type: none"> may include but not be limited to painted cards or commercially available paint cards

RANGE STATEMENT	
	(available free in paint and hardware shops)
Visual information	<ul style="list-style-type: none"> may include but not be limited to photographs, magazine clippings, drawings and sketches
Themes	<ul style="list-style-type: none"> may include but not be limited to variations of colour ways (based on directions media), furnishing trends and decoration trends
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Accessories	<ul style="list-style-type: none"> may include but not be limited to haberdashery, cabinet hardware such as knobs and handles, light fittings, rugs, tie backs and curtain rods
Secure fixing	<ul style="list-style-type: none"> may include but not be limited to spray glue (in booth with extraction fan), double-sided tape, blue tack and Velcro
Sketches and drawings	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand, drafted technical drawings or drawings produced on computer using CAD software packages. These usually contain project specifications
Materials board	<ul style="list-style-type: none"> may include but not be limited to a presentation on board displaying the colour usage and coordination with surface finishes, materials and textiles used throughout the project
Presentation methodology	<ul style="list-style-type: none"> may include but not be limited to a justification of the selections made for the decoration or design proposal, a visual presentation and prepared script to accompany the colour board
Multimedia	<ul style="list-style-type: none"> may include but not be limited to presentation boards, portfolios, photography, overhead projectors, data projectors, video and other forms of multi media
Computer based strategies	<ul style="list-style-type: none"> may include but not be limited to PowerPoint presentations, CAD demonstrations, written presentations and other scenarios utilising different software applications

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret decoration requirements from project brief	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to researching and recommending furniture and accessories are verified and complied with</p> <p>1.2. <i>Project brief</i> is reviewed and clarified with <i>client</i> to determine requirements for furniture and accessories</p> <p>1.3. <i>Parameters</i> for furniture and accessories are assessed and confirmed</p> <p>1.4. <i>Resources</i> are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. <i>Communication</i> with others is established and maintained</p>
2. Research furniture	<p>2.1. <i>Aesthetic</i> and <i>style</i> requirements of the <i>furniture</i> are assessed</p> <p>2.2. Intended application for the furniture is analysed and reviewed</p> <p>2.3. New furniture technologies are researched and reported</p> <p>2.4. <i>Tactile</i> requirements of the furniture in relation to the design are researched</p> <p>2.5. <i>Properties</i> of the <i>materials</i> used in the production of furniture are analysed and evaluated</p> <p>2.6. <i>Manufacturing processes</i> and available expertise for the desired furniture are assessed</p> <p>2.7. Costs and availability of furniture are assessed and compared</p> <p>2.8. <i>Environmental impact</i> of furniture materials used are assessed</p> <p>2.9. <i>Longevity and restorability</i> qualities of furniture are researched</p> <p>2.10. Space is measured for furniture requirements, calculating quantities and requirements</p> <p>2.11. Principles of <i>anthropometrics, ergonomics</i> and spatial relationships are applied</p>
3. Research accessories	<p>3.1. Aesthetic and colour requirements of the <i>accessories</i> are assessed</p> <p>3.2. Intended application for the accessories is analysed and reviewed</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. New accessory technologies are researched and reported</p> <p>3.4. Tactile requirements of the accessories in relation to the design are researched</p> <p>3.5. Properties of the materials used in the production of accessories are analysed and evaluated</p> <p>3.6. Manufacturing processes and available expertise for the desired accessories are assessed</p> <p>3.7. Costs and availability of accessories are assessed and compared</p> <p>3.8. Environmental impact of accessory materials used is assessed</p> <p>3.9. Longevity and restorability qualities of accessories are researched</p> <p>3.10. Space is measured for accessory requirements, calculating quantities and requirements</p> <p>3.11. <i>Sketches and drawings</i> are completed and prepared for positioning of products, materials and accessories</p>
4. Make recommendations to client	<p>4.1. Quantities and <i>qualities</i> of selected furniture and accessories are presented and promoted to the client</p> <p>4.2. <i>Performance and characteristics</i> of selected furniture and accessories are presented and promoted to the client</p> <p>4.3. <i>Costs</i> associated with purchasing and obtaining the furniture and accessories are provided in <i>quote</i> form to the client</p> <p>4.4. Presentation of research information and samples is made, highlighting the findings and rationale for the furniture and accessories chosen</p> <p>4.5. Feedback and follow up is instigated and maintained with the client</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work briefs, basic plans and safety procedures
- communicating ideas and information
- accurately recording and maintaining information
- using computer operations for internet access and searches
- analysing performance characteristics
- comparing findings
- communicating with suppliers
- maintaining accurate records
- clarifying and checking task-related information
- carry out work according to OHS practices
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative interior decoration and design processes
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- maintaining current knowledge of interior decoration and design techniques
- using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for researching and recommending furniture and accessories
- organisational and site standards, requirements, policies and procedures for researching and recommending furniture and accessories
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- furniture types and styles
- accessory types and styles
- design themes and design development
- colours, furnishings and decorations

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively research and recommend furniture and accessories to assist with informing the design and decoration process and arrive at a solution which meets client requirements • Effectively apply design elements and principles to the research and recommendation of furniture and accessories • Effectively research and recommend furniture and accessories in accordance with the project brief • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching and recommending furniture and accessories • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to researching and recommending furniture • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with

EVIDENCE GUIDE	
	<p>application of underpinning knowledge</p> <ul style="list-style-type: none">• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target

RANGE STATEMENT	
	market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes, effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Aesthetics	<ul style="list-style-type: none"> may include but not be limited to the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Styles	<ul style="list-style-type: none"> may include but not be limited to furniture designers and key figures such as Frank Lloyd Wright, Charles Eames and Antonio Gaudi may include but not be limited to schools and movements, such as Bauhaus in Germany, Federal style in the United States, and Art Nouveau in Europe may include but not be limited to periods and styles, such as the neo-classical Adams style, the simple lines of Art Deco, and the asymmetrical style of Rococo may also include but not be limited to decorative details, such as rosettes, foots, hinges, and mouldings

RANGE STATEMENT	
Furniture	<ul style="list-style-type: none"> may include but not be limited to kitchen and bathroom furniture, family rooms, lounges, bedrooms, dining rooms, rumpus rooms, offices, reception areas, hallways, laundries, media rooms and entertainment rooms
Tactile	<ul style="list-style-type: none"> may include but not be that perceived by the sense of touch and producing the effect of three-dimensional depth
Properties	<ul style="list-style-type: none"> may include but not be limited to durability, level of fire retardancy, fibre make up, composition, textile use, material use, finishes, quality, environmental sustainability, ergonomics, flammability, maintenance requirements, wear and tear and construction methods
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles (wool, cotton, polyester, silk, nylon and blends), fibreglass, foam, cardboard, paper products or any other manipulable substance
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Environmental impact	<ul style="list-style-type: none"> may include but not be limited to how the sourcing and use of materials effects the environment and how its continued use will effect the area the material was sourced from, energy consumption in processing the material, greenhouse gases created, waste levels and resource utilisation. Similarly what impact will be felt by reducing or stopping use of the material
Longevity and restorability	<ul style="list-style-type: none"> may include but not be limited to an analysis of how long the material is expected to maintain its structure and colour, while maintaining quality of aesthetic value and how readily the material can be repaired or replaced

RANGE STATEMENT	
Anthropometrics	<ul style="list-style-type: none"> may include but not be limited to the scientific study of the measurements of the human body
Ergonomics	<ul style="list-style-type: none"> may include but not be limited to the study of the efficiency of persons in their working environment
Accessories	<ul style="list-style-type: none"> may include but not be limited to trinkets, ceramics, trays, vases, carvings, baskets, pots, plants, candles, clocks, silverware, mirrors, frames, screens, floral displays, haberdashery, glassware, fireplace items, gifts, hand crafts, water features, photographs, pottery, personal items, statues, book ends, bowls and bottles
Sketches and drawings	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand, drafted technical drawings or drawings produced on computer using CAD software packages. These usually contain project specifications
Quality	<ul style="list-style-type: none"> may include but not be limited to an inspection system for ensuring that pre-determined quality standards are being met, highlighting non-conformances requiring intervention
Performance and characteristics	<ul style="list-style-type: none"> may include but not be limited to the assessment of products to determine if they meet the requirements of the intended end use application and how well they do it, the durability and composition of the product
Costs	<ul style="list-style-type: none"> may include but not be limited to the cost of products and materials together with the cost of obtaining them either locally, interstate or overseas
Quoting	<ul style="list-style-type: none"> may include but not be limited to a price for a project taking account of the sizes associated with the project, the cost of materials, labour and overheads

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to research and recommend soft furnishings for various decoration and design solutions to meet client and project brief requirements.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for competent research and recommendation of soft furnishings which include curtains and window fittings, carpets, rugs and textiles used in upholstery, cushions and trimmings, in order to achieve integrated decoration and design solutions to meet a project brief.</p> <p>This unit requires employability skills in initiative and enterprise and problem solving in order to direct the research and selection of suitable soft furnishings. Communication skills are used to access and interpret information using information technologies and complete required documentation. Self management and learning skills are applied in the review of information and arrangements to ensure project needs are met.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess soft furnishing requirements for the project	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to researching and recommending soft furnishings are verified and complied with</p> <p>1.2. <i>Project brief</i> is reviewed to determine desired effects for interior space</p> <p>1.3. <i>Parameters</i> for the project are assessed and confirmed</p> <p>1.4. <i>Resources</i> are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. <i>Communication</i> with others is established and maintained</p>
2. Research materials for soft furnishings	<p>2.1. <i>Aesthetic</i>, visual characteristics and <i>colour</i> requirements of the <i>soft furnishings</i> are assessed</p> <p>2.2. Intended applications for the soft furnishings are analysed and reviewed</p> <p>2.3. New soft furnishing and material technologies are researched and assessed against the project brief</p> <p>2.4. <i>Tactile</i> requirements of the soft furnishings in relation to the design are researched</p> <p>2.5. <i>Properties</i> of the materials used in the production of soft furnishings are analysed and evaluated</p> <p>2.6. <i>Manufacturing processes</i> and available expertise for the <i>materials</i> are assessed</p> <p>2.7. Costs and availability of materials are assessed and compared</p> <p>2.8. <i>Environmental impact</i> and benefits of materials are assessed</p> <p>2.9. <i>Durability, restorability</i> and maintenance care quality of materials are researched and requirements for residential and industrial applications examined</p>
3. Research and recommend decorative treatments for windows and openings	<p>3.1. Range of <i>window treatments</i>, their application and fixing technologies are researched</p> <p>3.2. New technologies in window treatments are researched and relevance for decorative project identified</p> <p>3.3. The features, limitations and environmental impact of window treatments are identified</p> <p>3.4. The types of openings and their requirements are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>identified and a range of possible creative solutions determined</p> <p>3.5. Window or opening is measured and details recorded accurately for a range of window treatments</p> <p>3.6. Fabric requirements are calculated, and manufacturing requirements determined for a range of window treatments taking into consideration <i>pattern repeats</i></p> <p>3.7. Window treatment is selected and specified to meet client requirements and minimise environmental impact</p> <p>3.8. Fixing technology is specified appropriate to selected window treatment</p> <p>3.9. Cost estimates are calculated and assessed against project budget</p>
4. Research and recommend soft floor coverings	<p>4.1. Range of <i>floor coverings</i>, their application and installation requirements are researched</p> <p>4.2. The features, limitations and environmental impact of floor coverings are identified</p> <p>4.3. Floor area is measured and details recorded accurately for flooring solution</p> <p>4.4. Flooring solution is selected and details specified to meet client requirements</p> <p>4.5. <i>Cost</i> estimates are calculated and assessed against project budget</p>
5. Document and present decorative recommendations	<p>5.1. Soft furnishings are selected to achieve parameters of design brief</p> <p>5.2. Specifications are documented for all soft furnishing recommendations</p> <p>5.3. Schedule is presented to support decorative solution</p> <p>5.4. Sample board is created to enhance and support the decorative intention</p> <p>5.5. Feedback and follow up is instigated and maintained with the client</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work briefs, basic plans and safety procedures
- communicating ideas and information
- accurately recording and maintaining information
- using computer operations for internet access and searches
- analysing performance characteristics
- comparing findings
- communicating with suppliers
- maintaining accurate records
- clarifying and checking task-related information
- carrying out work according to OHS practices
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative interior decoration and design processes
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- maintaining current knowledge of interior decoration and design techniques
- using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- organisational and site standards, requirements, policies and procedures for researching and recommending soft furnishings
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- soft material types and textiles
- design themes and design development
- colours, furnishings and decoration options
- sketching and drawing techniques
- procedures for the recording, reporting and maintenance of workplace records and information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hard material requirements for project	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to researching and recommending <i>hard materials</i> are verified and complied with</p> <p>1.2. <i>Project brief</i> is reviewed to determine desired effects for interior space</p> <p>1.3. <i>Parameters</i> for the project are assessed and confirmed with <i>client</i></p> <p>1.4. <i>Resources</i> are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. <i>Communication</i> with <i>appropriate personnel</i> is established and maintained</p>
2. Identify types and features of hard materials	<p>2.1. Types of hard materials and their suitability to wall, floor, ceiling and stair applications is identified</p> <p>2.2. Types of hard materials and their suitability to window and door applications are identified</p> <p>2.3. Other hard material products and their features and applications are identified</p> <p>2.4. Hard material requirements for application in a residential environment are analysed</p> <p>2.5. Hard material requirements for application in a commercial or industrial environment are analysed</p> <p>2.6. Environmental and sustainability considerations for hard materials are examined</p>
3. Research hard materials	<p>3.1. <i>Aesthetic</i> requirements of the space are assessed</p> <p>3.2. New hard material technologies are researched and reported</p> <p>3.3. <i>Tactile</i> requirements of the hard materials in relation to the design are researched</p> <p>3.4. <i>Application methods</i> and available expertise for the desired effect are assessed</p> <p>3.5. <i>Manufacturing processes</i> and available expertise for the desired material are assessed</p> <p>3.6. Costs of hard materials are assessed and compared</p> <p>3.7. <i>Environmental impact</i> of hard materials are assessed</p> <p>3.8. <i>Longevity and restorability</i> of hard materials are researched</p> <p>3.9. <i>Hazards</i> associated with the use and application of</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>hard materials are researched</p> <p>3.10. Quality of hard materials are assessed</p>
<p>4. Recommend hard materials</p>	<p>4.1. <i>Elements and principles of design</i> are used to examine the appropriateness of hard materials for client brief requirements</p> <p>4.2. Hard materials are selected to meet client brief requirements</p> <p>4.3. Presentation of research information is made, highlighting the findings and rationale for the hard materials chosen</p> <p>4.4. Presentation includes a range of presentation strategies including one or more materials boards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work briefs, basic plans and safety procedures
- communicating ideas and information
- accurately recording and maintaining information
- using computer operations for internet access and searches
- analysing performance characteristics
- comparing findings
- communicating with suppliers
- maintaining accurate records
- clarifying and checking task-related information
- carrying out work according to OHS practices
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative interior decoration and design processes
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- maintaining current knowledge of interior decoration and design techniques
- using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to researching and recommending hard materials
- organisational and site standards, requirements, policies and procedures for researching and recommending hard materials
- elements and principles of design
- aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- research techniques
- effects of finishes and finishing techniques
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information

	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Hard materials

- may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, traditional finishes, plastic coatings, UV protected coatings, liquid coatings, synthetic coatings, synthetics, paper, glass, vinyls,

RANGE STATEMENT	
	<p>textiles, laminates, plastics, stainless steel, metals, veneers, ceramics and stone based products</p> <ul style="list-style-type: none"> • may also include but not be limited to solid timber (native and imported), manufactured timber products, reconstituted products, composite materials, plastic, metal, alloys, stone based products, glass, fibreglass, foam, synthetics, cardboard, paper products or any other manipulable substance
Project brief	<ul style="list-style-type: none"> • may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements, colour requirements
Parameters	<ul style="list-style-type: none"> • may include but not be limited to scope of brief, approval to make changes, effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Client	<ul style="list-style-type: none"> • may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Resources	<ul style="list-style-type: none"> • may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> • may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Appropriate personnel	<ul style="list-style-type: none"> • may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Aesthetics	<ul style="list-style-type: none"> may include but not be limited to the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Tactile	<ul style="list-style-type: none"> may include but not be limited to that perceived by the sense of touch and producing the effect of three-dimensional depth
Application methods	<ul style="list-style-type: none"> may include but not be limited to spraying, painting, applicators, gluing, vacuum wrapping, rubbing and bonding
Manufacturing processes	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Environmental impact	<ul style="list-style-type: none"> may include but not be limited to how the making and use of finishes and materials effects the environment and how its continued use will effect those around you, energy consumption in applying the material, greenhouse gases created, waste levels and resource utilisation. Similarly what impact will be felt by reducing or stopping use of the finish or materials
Longevity and restorability	<ul style="list-style-type: none"> may include but not be limited to an analysis of how long the finish or material is expected to last, while maintaining quality of aesthetic value and how readily the finish or material can be upgraded, repaired or replaced
Hazards	<ul style="list-style-type: none"> may include but not be limited to toxins and gases released by some finishes, glues and materials which may be harmful to people if not used correctly
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture and colour
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub-dominant or subordinate relationship, emphasis, proximity,

Co-requisite units		

LMFID4007A Identify materials, construction techniques and methods used in building interiors

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit deals with the skills and knowledge required to research and document the materials, construction techniques and methods associated with the construction of residential buildings.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for competent workplace performance in interior decoration businesses of all sizes. The ability to demonstrate knowledge of the materials and methods associated with the construction of residential buildings must be shown.</p> <p>This unit requires employability skills in communication and planning and organising to access and interpret information using a range of information sources. Self management and learning skills are applied in the review of information to ensure building processes are correctly identified.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Demonstrate knowledge of structural components and materials used</p>	<p>1.1. Residential building process is delineated into separate construction stages and expressed chronologically</p> <p>1.2. Trades, construction techniques and materials associated with each stage are summarised</p> <p>1.3. Individual component members are identified and sorted into structural or non-structural categories</p> <p>1.4. Demolition methods for the removal of existing work can be identified</p>
<p>2. Interpret plans and specifications</p>	<p>2.1. Specific components and materials on given building plans are located</p> <p>2.2. Construction methods are explained from a given plan</p> <p>2.3. Specific component details in a given building specification are located and identified</p> <p>2.4. Bill of quantities and other relevant specification documents are interpreted</p> <p>2.5. Prime cost items are located and extracted from a given <i>set of documents</i></p>
<p>3. Specify the materials and methods involved in the refurbishment of wet areas</p>	<p>3.1. Properties of materials used in wet area construction are evaluated</p> <p>3.2. Installations of wet area cabinetry are specified</p>
<p>4. Develop and maintain relevant and current reference material</p>	<p>4.1. Relevant Building Services Authority building licensing requirements applicable to interior decoration projects are complied with</p> <p>4.2. Evidence of contact with industry suppliers to obtain information relevant to building components and equipment used in residential interiors is presented</p> <p>4.3. An index to the portfolio to reflect industry topics and to allow easy access to the information is provided</p> <p>4.4. Future additions of reference material are allowed for and details of the information such as date, source, author and reference to any related information are included</p> <p>4.5. A strategy to ensure that the portfolio remains current and accurate is prepared</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- the ability to analyse given situations, and determine materials used and construction methods and techniques
- presenting findings in a creative and convincing format
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for identifying building materials and methods
- organisational and site standards, requirements, policies and procedures for identifying building materials and methods
- relevant Australian Standards and the Building Code of Australia
- awareness of different forms of construction
- local environmental plans and relevant building authorities
- basic building and architectural terminology
- common structural and non-structural components of a residential building
- geographical implications of a building site/location
- materials and methods involved in the refurbishment of a wet area
- materials and methods involved in the construction and installation of contemporary built-in cabinetry
- equipment involved in the installation of home theatre systems
- climate control devices including fans, heaters and air conditioners
- research techniques
- demolition methods
- trades, construction techniques and materials associated with each stage
- residential building process

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Access and interpret information about building materials and processes • Identify key elements and participants in the building process • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to identifying materials, techniques and methods used in building interiors • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Set of documents	<ul style="list-style-type: none"> • may include but not be limited to drawings, plans, schedules, specifications and bill of quantities

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret lighting requirements from project brief	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to researching and recommending light fittings are verified and complied with</p> <p>1.2. Project brief is reviewed and clarified with client to determine lighting requirements</p> <p>1.3. Parameters for the project are assessed and confirmed</p> <p>1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. Communication with others is established and maintained</p> <p>1.6. Available budget for lighting is verified</p>
2. Assess natural light sources	<p>2.1. Site analysis is conducted to assess the natural light and ultraviolet penetration</p> <p>2.2. Project brief and building plans are acquired to assess aspect and orientation</p> <p>2.3. Window treatments and placement are examined to analyse their efficiency in controlling light</p> <p>2.4. Selection of colours for walls, ceilings and furnishings, and wall hangings are reviewed in their effect on raising or lowering the affect of light into the space</p> <p>2.5. Characteristics of natural light are researched and reported in accordance with the project brief goals</p> <p>2.6. Methods of light control and light control devices are assessed for their affect on natural light</p>
3. Assess artificial light sources	<p>3.1. Artificial light sources and their properties are assessed for adequacy in achieving desired lighting effects</p> <p>3.2. Environmental impact of artificial lighting devices are researched and assessed and current technologies identified</p> <p>3.3. Location of artificial lights are identified and required changes to location to meet desired effects are determined</p> <p>3.4. Affect of artificial lighting on the colour spectrum is analysed</p> <p>3.5. Technical terms associated with artificial lighting are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>used to communicate lighting requirements</p> <p>3.6. <i>Special effects</i> that can be achieved using artificial lighting are identified</p> <p>3.7. Industry standards and requirements for artificial lighting are researched and identified</p>
4. Select light fittings	<p>4.1. Research is conducted to determine cost and energy efficient light fittings to meet the requirements of an integrated decoration solution</p> <p>4.2. Required locations of light fittings are identified</p> <p>4.3. Light fittings are selected and specifications documented</p> <p>4.4. <i>Electricity board is assessed</i> to determine potential complications with selected light fittings</p> <p>4.5. Electrician is consulted to confirm costings and installation requirements to implement lighting schedule</p>
5. Draw and present lighting layouts for an interior space	<p>5.1. Lighting layout is documented using industry symbols and conventions</p> <p>5.2. Selection of light fittings are related to layout including furniture, ceiling forms and natural light</p> <p>5.3. Formats for schedules of light fittings are researched</p> <p>5.4. Lighting schedule is completed</p> <p>5.5. Costings are determined and documented</p> <p>5.6. Lighting layout is presented to client</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work briefs, basic plans and safety procedures
- communicating ideas and information
- accurately recording and maintaining information
- using computer operations for internet access and searches
- analysing performance characteristics
- comparing findings
- communicating with suppliers
- maintaining accurate records
- clarifying and checking task related information
- carrying out work according to OHS practices
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative interior decoration and design processes
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- maintaining current knowledge of interior decoration and design techniques
- using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for assessing interior light and recommending light fittings
- organisational and site standards, requirements, policies and procedures
- Australian Lighting Standards and drawing conventions
- research sources for lighting
- ergonomics, anthropometrics, proxemics and aesthetic values
- natural light characteristics and controls
- design themes and design development
- sketching and drawing techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols

	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Light fittings	<ul style="list-style-type: none"> may include but not be limited to lamps, ceiling lights, wall lights, spot lights and flood lights
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and

RANGE STATEMENT	
	criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Site analysis	<ul style="list-style-type: none"> may include but not be limited to a visit to the building (home, office or other) to achieve a feel for the intention of the project brief and how natural light may effect it, to assess the level of radiation from the sun into the space and the angles and obstructions caused by other buildings, vegetation or man made objects. It includes recording information and taking photos
Natural light	<ul style="list-style-type: none"> may include but not be limited to light emitted directly by the sun or reflected from it
Ultraviolet	<ul style="list-style-type: none"> may include but not be limited to light that is so blue humans cannot see it. A band of the electromagnetic spectrum between the visible and the X-ray. Photons of ultraviolet light are more energetic than photons of visible light

RANGE STATEMENT	
Aspect and orientation	<ul style="list-style-type: none"> may include but not be limited to the direction in which a building or space is facing, e.g. north, east, south, west, or any variation of this
Window treatments	<ul style="list-style-type: none"> may include but not be limited to blinds, curtains, awnings, shutters, shades or window tinting
Colours	<ul style="list-style-type: none"> may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, contrast, harmony, effects on space, formulas and colour wheels
Wall hangings	<ul style="list-style-type: none"> may include but not be limited to mirrors, paintings, water colours, etchings, framed memorabilia and certificates
Space	<ul style="list-style-type: none"> may include but not be limited to commercial or domestic spaces, rooms such as bedrooms, bathrooms, kitchens, laundries, living spaces, multi-purpose rooms, storage rooms, studies, offices, garages, rumpus rooms, media rooms, toilets, pantries, entertainment areas, halls and work stations
Characteristics	<ul style="list-style-type: none"> may include but not be limited to energy efficiency, glare, reflection, intensity and dynamic (not constant value)
Methods of light control	<ul style="list-style-type: none"> may include but not be limited to window treatments, sails, building extensions, patios, motorised or automated devices
Light control devices	<ul style="list-style-type: none"> may include but not be limited to motorised or automated mechanisms linked to window treatments
Artificial lighting devices	<ul style="list-style-type: none"> may include but not be limited to lamps, ceiling lights, spotlights, dimmers, wall lights, LED, energy efficient globes, incandescent, halogen, fluorescent, discharge lamps
Special effects	<ul style="list-style-type: none"> may include but not be limited to dimming, spotlight, flooding, brightness, creating space, creating focus
Electricity board is assessed	<ul style="list-style-type: none"> may include but not be limited to identification of approximate age of board, number of circuits, safety switches, signs of rewiring

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan research	1.1. Applicable OHS, legislative and organisational requirements relevant to researching architectural styles are verified and complied with 1.2. Relevant research sources of information on architectural styles are located 1.3. Formal and informal research techniques are selected to access the information 1.4. Scope of research is determined
2. Conduct research and document findings	2.1. Research is conducted using a range of research techniques 2.2. Geographical research is conducted to detect influences 2.3. Historical, cultural, economic and environmental influences on architectural styles and movements are examined 2.4. Features of architecture are identified 2.5. Significant trends in decorative art and architecture and the use of materials and techniques are analysed 2.6. The influence and impact of architecture on interior decoration and design and the relationship of the two disciplines is analysed 2.7. Research information is applied to current architectural design trends, philosophy and surrounding buildings 2.8. Information is documented to develop reference materials to inform decoration and design projects 2.9. Research materials and results of the research are organised and compiled into easy to access facilities for further reference
3. Maintain currency with architectural styles and movements	3.1. Research sources and compiled information are regularly checked for usefulness in informing design and decoration projects 3.2. Current cultural, economic and environmental influences on architecture are analysed 3.3. Opportunities to update and expand research of styles and movements are scheduled 3.4. Findings from research are regularly incorporated into design outcomes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- conducting research
- reading and interpreting information
- maintaining accurate records
- communicating within the workplace
- carrying out work according to OHS practices
- conducting internet searches
- assessing the value of information
- sketching and recording information visually

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for researching architectural styles and movements
- organisational and site standards, requirements, policies and procedures for researching architectural styles
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of research techniques
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- procedures for the recording and documentation of information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively research a range of architectural styles and movements to assist with informing current design practices • Effectively analyse design elements and principles in architecture • Use research techniques • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching architectural styles • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to researching architectural styles used in Australia • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and

EVIDENCE GUIDE	
	<p>application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency

Co-requisite units		

LMFID4010A Research interior decoration and design influences

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to research significant influences on contemporary and historical interior decoration and design styles.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for the implementation of research techniques to access a range of information sources on historical, 20th Century and contemporary interior decoration and design styles. It also covers the analysis of information to identify how these influences inform current and future decoration and design projects.</p> <p>This unit requires employability skills in initiative and enterprise and problem solving in order to direct the research and analyse research implications. Communication skills are used to access and interpret information using information technologies and document findings. Self management and learning skills are applied in the location and analysis of new information and the assessment of the value of information.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Research and analyse significant influences on interior decoration and design</p>	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to researching interior decoration and design influences are verified and complied with</p> <p>1.2. Relevant research sources of information on interior decoration and design influences are located</p> <p>1.3. Significant historical influences on interior decoration and design are investigated</p> <p>1.4. Effects of influences on interior decoration and design preferences are identified</p> <p>1.5. Current interior decoration trends are researched, to identify influences on their adoption and dissemination</p>
<p>2. Research and analyse historical development of interior decoration</p>	<p>2.1. Research is conducted using a range of research techniques</p> <p>2.2. Significant decorators and designers in interior decoration and design history are identified and their styles and practices analysed</p> <p>2.3. Key developments and trends affecting interior decoration and design are identified and their impact on styles and practices analysed</p> <p>2.4. Changes in decoration and design trends and philosophy are examined and influences on styles and practices analysed</p> <p>2.5. Historical influences on the development of contemporary styles and practices, including architectural, cultural, economic and environmental, are examined</p> <p>2.6. Information is documented to develop reference materials to inform interior decoration and design projects</p> <p>2.7. Research materials and results of the research are organised and compiled into easy to access facilities for further reference</p>
<p>3. Maintain currency with decoration styles and movements</p>	<p>3.1. Research sources and compiled information are regularly checked for usefulness in informing decoration and design projects</p> <p>3.2. Impact of environmental considerations on decoration and design is analysed</p> <p>3.3. Information sources on design predictions and trends are identified and accessed to maintain currency of</p>

ELEMENT	PERFORMANCE CRITERIA
	industry knowledge

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- conducting research and analysing information
- reading and interpreting information
- maintaining accurate records
- communicating within the workplace
- carrying out work according to OHS practices
- conducting internet searches
- assessing the value of information

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for researching decoration and design styles and movements
- organisational and site standards, requirements, policies and procedures for researching decoration and design styles
- types of research techniques
- decoration and design themes and development
- procedures for the recording and documentation of information

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively research design influences to assist with informing current design practices • Identify historical developments of interior decoration and design practices and how they influence current styles and practices • Use research techniques and develop research facilities • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching interior decoration and design
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to researching interior decoration and design • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and

EVIDENCE GUIDE	
	<p>application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Significant influences

- may include but not be limited to social, economic, gender and sexuality, demographics, age, politics, aspirations, environment and work

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

RANGE STATEMENT	
Research sources	<ul style="list-style-type: none"> may include but not be limited to scientific texts, historical texts and journals, oral histories, journals, periodicals, images, objects, films, videos, microfiche, internet, technical information, stories, libraries, museums, universities and collection catalogues
Information	<ul style="list-style-type: none"> may include but not be limited to philosophy, histories, cultural issues, spiritual issues, religious issues, histories of Australian and imported design trends, linguistics, aesthetics, politics, gender and identity issues, land and place, signs and symbols, criticism, new technologies and light
Research techniques	<ul style="list-style-type: none"> may include but not be limited to internet searches, interview, discussion, book, journal reviews, film, documentary reviews and onsite visits
Significant decorators and designers	<ul style="list-style-type: none"> may include but not be limited to Florence Broadhurst, Marc Newson, Philippe Starck, Ron Arad and Ettore Sottsass
Documented	<ul style="list-style-type: none"> may include but not be limited to freehand drawings, sketches, ideation drawings, working drawings, computer generated documentation, pictures, illustrations, photos, multimedia presentations, materials or theme boards, specifications and measurements
Facilities	<ul style="list-style-type: none"> may include but not be limited to files, computer files, indices, databases, charts and diagrams
Environmental considerations	<ul style="list-style-type: none"> may include but not be limited to sustainability, use of environmentally friendly materials, energy efficiency and water efficiency

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify principles of OHS	<p>1.1. <i>Duty of care</i> and <i>responsibilities of individuals and organisations</i> are defined</p> <p>1.2. Concepts of <i>hierarchy of control</i> are identified and related to the workplace</p> <p>1.3. Codes of practice relating to specific workplace risks are identified</p> <p>1.4. Importance of a <i>systematic approach</i> to OHS is understood</p> <p>1.5. Applicable <i>legislative, OHS</i> and <i>organisational requirements</i> relevant to interior decoration and design are identified</p>
2. Assess OHS implications for interior decoration and design	<p>2.1. <i>Hazards associated with materials</i> used in interiors are identified</p> <p>2.2. <i>Hazards associated with effects</i> are identified</p> <p>2.3. Safety measures implemented to control hazards are identified and implications for interior decoration and design evaluated</p> <p>2.4. Information resources on safety aspects of materials, effects and technology used in interior decoration and design are identified and accessed</p> <p>2.5. Furniture and joinery ergonomics are assessed</p>
3. Assess OHS implications for customers	<p>3.1. <i>Range of customers</i> for interior decoration and design are identified and <i>potential hazards for customers</i> determined</p> <p>3.2. Safety measures implemented to control hazards to customers are identified and implications for decoration and design are evaluated</p>
4. Assess risk	<p>4.1. Likelihood of hazards causing harm is considered and determined</p> <p>4.2. Consequence if the event should occur is evaluated and determined</p> <p>4.3. Risk level (likelihood and consequence combined) is considered and determined</p>
5. Apply risk control measures to decoration and design solutions	<p>5.1. Project brief is analysed and potential safety issues identified</p> <p>5.2. Solutions are evaluated for OHS implications</p> <p>5.3. Range of options which may eliminate or minimise risks are identified</p> <p>5.4. Most appropriate treatment for addressing risk is</p>

ELEMENT	PERFORMANCE CRITERIA
	selected and applied to solution

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work orders, basic plans and safety procedures
- communicating ideas and information to enable confirmation of safety and risk management requirements and specifications, coordination of the required work with site supervisor, other workers and customers, and the reporting of safety outcomes and problems
- working with others and in a team by recognising dependencies and using cooperative approaches to optimise safety management
- using pre-checking and inspection techniques to anticipate possible hazards
- recognising and responding to circumstances outside instructions or personal competence
- planning and organising activities including the preparation and layout of the worksite and the obtaining of treatment equipment and materials to avoid any back tracking, work flow interruptions or wastage
- using mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements for the management of workplace safety
- clarifying and confirming work instructions
- planning work within given task parameters
- accepting responsibility for given tasks
- setting, monitoring and satisfying personal work goals
- satisfying the competency requirements for the job
- maintaining current knowledge of workplace safety standards and instructions
- seeking learning opportunities
- using the workplace technology related to the risk management including tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to risk management in an interior decoration and design environment
- organisational and site standards, requirements, policies and procedures for interior decoration and design
- types of tools and equipment, their operating characteristics and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- common interior decoration and design related hazards and the range of commonly applied treatments

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• environmental protection requirements• established communication channels and protocols• problem identification and resolution• appropriate mathematical procedures for estimation and measurement• procedures for the recording, reporting and maintenance of workplace records and information |

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for risk management in an interior decoration and design work environment • Locate and apply safety information • Assess safety aspects of interior decoration and design solutions for a range of customers • Address risks and hazards in interior decoration and design • Complete a minimum of three risk assessments of interior decoration and design solutions including the determination of required treatments • Work effectively with others
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to determining OHS implications of interior effects • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation

EVIDENCE GUIDE	
	<p>of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none"> • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Duty of care	<p>Duty of care requires everything 'reasonably practicable' to be done to protect the health and safety of others at the workplace. This duty is placed on:</p> <ul style="list-style-type: none"> • all employers • their employees • any others who have an influence on the hazards in a workplace
Responsibilities of individuals and organisations	<ul style="list-style-type: none"> • may include but not be limited to complying, as far possible, with all activities carried out in accordance with the standard and reporting anything that might affect compliance with the standard
Hierarchy of control	<ul style="list-style-type: none"> • may include but not be limited to the range of feasible options for managing the risk to health and safety. The hierarchy normally ranges over the following controls: elimination of the hazard; its substitution with a less harmful version; its redesign; engineering controls; isolation of the hazard from people at the workplace; safe work practices; redesigning work systems; and the use of personal protective equipment by people at the workplace
Systematic approach	<ul style="list-style-type: none"> • may include but not be limited to hazard identification, risk assessment, risk control, review
Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant

RANGE STATEMENT	
	industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Materials	<ul style="list-style-type: none"> may include but not be limited to adhesives, nails, and staples, paint, treatments and finishes, fixtures, fabrics, animal skin, wood, metal, plastic, foam and oils
Hazards associated with materials	<ul style="list-style-type: none"> may include but not be limited to chemical properties such as toxicity, fumes, combustibility physical properties such as strength, weakness, splintering, breakage, weight components such as adhesives, nails, and staples manual handling requirements
Effects	<ul style="list-style-type: none"> may include but not be limited to furniture, fixtures, finishes, accessories, soft furnishings, lighting and special effects
Hazards associated with effects	<ul style="list-style-type: none"> may include but not be limited to chemical properties such as toxicity, fumes, combustibility physical properties such as strength, weakness, splintering, breakage, weight

RANGE STATEMENT	
	<ul style="list-style-type: none"> • components such as adhesives, nails, and staples • manual handling requirements • location and positioning considerations such as accessibility and obstruction, fixing and securing • placement of power sources and leads • ergonomics
Range of customers	<ul style="list-style-type: none"> • may include but not be limited to aged and the elderly, people with disabilities, children, adults
Potential hazards to customers	<ul style="list-style-type: none"> • may include but not be limited to allergies to materials, injury from materials or components, injury due to design faults, lack of stability, breakages, difficult to handle or install effects and electric shock

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	1.1. Applicable OHS, legislative and organisational requirements relevant to designing for residential spaces are verified and complied with 1.2. Project brief is reviewed, confirmed and clarified with client 1.3. Key requirements for the project are assessed and confirmed and constraints determined 1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.5. Communication with others is established and maintained 1.6. Relevant research is conducted to gain all information which may be used to inform the design process 1.7. All required information is accessed and interpreted to inform the design process
2. Conduct project research	2.1. Site analysis is conducted to assess the requirements of the space requiring work 2.2. Intended function of the space is ascertained from the client 2.3. Contextual information relating to the brief is researched and evaluated 2.4. Functional and planning issues are determined specific to the site and client requirements 2.5. Research material is organised and presented in the form of a design proposal 2.6. Project is planned to make effective use of time and available resources
3. Develop design concepts	3.1. Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief 3.2. Concepts are presented through appropriate presentation methods 3.3. Viability of concepts are assessed in conjunction with others 3.4. Environmental implications of the project are assessed and design concepts reviewed to ensure maximum energy efficiency achieved in solution 3.5. Access issues relating the project are identified and

ELEMENT	PERFORMANCE CRITERIA
	addressed in design solution
4. Design the space	<p>4.1. Ideas are translated into 3-D space satisfying functional criteria</p> <p>4.2. Evidence of 3-D notions are explored through modelling</p> <p>4.3. The arrangement and allocation of space is explored to express the concept</p> <p>4.4. Idea with the greatest potential for success is presented to promote the design's acceptance using both 2-D and 3-D representations.</p> <p>4.5. Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined</p> <p>4.6. A colour and materials palette is selected to enhance spatial ideas</p> <p>4.7. Design is modified in response to critical feedback without losing integrity of the design intention</p>
5. Revise and refine solution	<p>5.1. Ergonomic and anthropometric principles are assessed in respect to the space and the intended products</p> <p>5.2. Spatial planning is further revised and resolved in response to client feedback</p> <p>5.3. Materials, colours, furniture, finishes, fixtures and fittings are selected appropriate to the concept and brief parameters</p> <p>5.4. Feedback is received through consultation with the client and incorporated into design solution</p>
6. Prepare a fully rendered client presentation	<p>6.1. Resource requirements are identified for presentation</p> <p>6.2. Final design solution is communicated effectively and creatively using a range of techniques and media</p> <p>6.3. Documentation drawings and material selections are prepared that are consistent with, and that best communicate, the design intent</p> <p>6.4. Work is completed to plan and within brief constraints</p> <p>6.5. Client feedback and response is analysed to determine success in achieving client satisfaction</p> <p>6.6. Own performance in the design process is examined to identify strengths and weaknesses</p> <p>6.7. Areas for improvement are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- drawing using manual and computer based techniques
- sequencing operations
- meeting specifications
- computer aided design techniques
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for residential space
- organisational and site standards, requirements, policies and procedures for designing for residential space
- Australian Standards and the Building Code of Australia relating to interior residential design
- environmental protection requirements relating to interior residential design
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- colours, furnishings and decorations
- sketching and drawing to architectural drawing standards
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively design for at least two residential interiors to provide the client with creative solutions that satisfy the design brief • Effectively apply design elements and principles in designing for residential space • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing for residential space • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to designing for residential space • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, budget,

RANGE STATEMENT	
	<p>timeline, consultation requirements and colour requirements</p>
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Relevant research	<ul style="list-style-type: none"> may include but not be limited to similar products and typologies, materials, social and cultural influences, site analysis, site conditions and functional requirements
Information	<ul style="list-style-type: none"> may include but not be limited to lifestyle requirements, cultural issues, ergonomics, anthropometrics, proxemics, costs, product performance and characteristics, and existing conditions
Site analysis	<ul style="list-style-type: none"> may include but not be limited to a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site and recording information and taking photos
Creative methodologies	<ul style="list-style-type: none"> may include but not be limited to brainstorming, word association, imaging, modelling, lateral thinking and application of a range of media
Presentation methods	<ul style="list-style-type: none"> may include but not be limited to mood board, concept board, 3-D models, sketches, photos
Environmental implications	<ul style="list-style-type: none"> may include but not be limited to how the use of raw materials effects the ecology and environment and how its continued use will

RANGE STATEMENT	
	effect the area it has been sourced from, energy consumption in achieving the material, greenhouse gases created, waste levels, resource utilisation and transport effects. Similarly what impact will be felt by reducing or stopping material from the source
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Colours	<ul style="list-style-type: none"> may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, contrast, harmony, effects on space, formulas and colour wheels
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Fixtures and fittings	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built in cabinetry or fittings, light fittings, lamps and picture framing may also include but not be limited to accessories such as trinkets, ceramics, trays, vases, carvings, baskets, pots, plants, candles, clocks, silverware, mirrors, frames, screens, floral displays, haberdashery, glassware, fireplace items, gifts, hand crafts, water features, photographs, pottery, personal items, statues, book ends, bowls and bottles
Design drawings	<ul style="list-style-type: none"> may include but not be limited to drafted technical drawings or drawings produced on computer using CAD software packages to architectural standards. These contain project specifications may also include but not be limited to elevations, sections, plans and perspectives

LMFID5002A Develop a decoration proposal for a complex site

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the knowledge and skills required to develop a complete proposal for a complex site that satisfies the requirements of a client brief.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required to specify the furniture, fixtures, fittings and artworks for a complex site which may include a high end residential or commercial site with multiple themes and usage areas.</p> <p>This unit covers employability skills in teamwork and communication in order to work with others in the decoration process. Planning and organising and problem solving skills are required to apply decoration processes and initiative and enterprise are required to develop decoration ideas. Self management and learning skills are applied to assess and reflect on own skills and identify areas for improvement.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	1.1. Applicable OHS, legislative and organisational requirements relevant to designing for complex sites are verified and complied with 1.2. Project brief is reviewed, confirmed and clarified with client 1.3. Key requirements for the project are assessed and confirmed and constraints determined 1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.5. Communication with others involved in the project is established and maintained 1.6. Relevant research is conducted to gain all information which may be used to inform the decoration process 1.7. All required information is accessed and analysed to inform the decoration process
2. Conduct project research	2.1. Site analysis is conducted to assess the requirements and environmental aspects of the spaces requiring work 2.2. Intended function of the spaces are ascertained from the client 2.3. Contextual information relating to the brief is researched and evaluated 2.4. Functional and planning issues are determined specific to the site and client requirements 2.5. Research material is organised and presented in the form of a decoration proposal 2.6. Project is planned to make effective use of time and available resources
3. Generate decorative themes and concepts	3.1. Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the project brief 3.2. Ideas are translated into two and three-dimensional space resolution using a range of techniques and media 3.3. Themes and concepts are presented to the client using support documentation, sketches, mood boards, and concept boards 3.4. Viability of concepts are assessed in conjunction

ELEMENT	PERFORMANCE CRITERIA
	<p>with others</p> <p>3.5. Client feedback is obtained and ideas revised and refined accordingly</p>
<p>4. Select and specify internal finishes, furniture, furnishings, lighting and object d'art</p>	<p>4.1. Internal elements and wall and floor finishes are selected and specified according to brief parameters</p> <p>4.2. Materials board and schedules are developed</p> <p>4.3. Lighting effects are designed and detailed</p> <p>4.4. Furniture, accessories and art objects are selected, specified and costed using established workplace system</p> <p>4.5. Furnishings and window treatments are selected to enhance the design scheme within the constraints of the brief and budget</p> <p>4.6. Rendered 2-D and 3-D drawing of the scheme are prepared to represent the desired effect</p>
<p>5. Present a fully resolved scheme and evaluate client response</p>	<p>5.1. Final decoration solution is presented to the client in a professional manner using a range of digital media</p> <p>5.2. Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined without losing design integrity</p> <p>5.3. Own performance in the design process is examined to identify strengths and weaknesses</p> <p>5.4. Areas for improvement are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- drawing using manual and computer based techniques
- sequencing operations
- meeting specifications
- computer aided design techniques
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for decorating high end residential and commercial spaces
- organisational and site standards, requirements, policies and procedures
- Australian Standards and the Building Code of Australia relating to decoration projects
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution techniques
- elements and principles of design
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs used for drawings and preparation of decoration documentation
- design themes and design development
- colours, furnishings and decorations
- sketching and drawing to architectural drawing standards
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively interior design for at least two complex sites to provide the client with creative solutions that satisfy the design brief • Effectively apply design elements and principles in designing for complex sites • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing for complex sites • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to developing a decoration proposal for a complex site • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Complex space	<ul style="list-style-type: none"> may include but not be limited to high end residential or commercial site with multiple themes and usage areas
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and

RANGE STATEMENT	
	criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, pantone matching system (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Relevant research	<ul style="list-style-type: none"> may include but not be limited to similar products and typologies, materials, social and cultural influences, site analysis, site conditions and functional requirements
Information	<ul style="list-style-type: none"> may include but not be limited to lifestyle requirements, cultural issues, ergonomics, anthropometrics, proxemics, costs, product performance and characteristics, and existing conditions
Site analysis	<ul style="list-style-type: none"> may include but not be limited to a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site and recording information and taking photos
Environmental aspects	<ul style="list-style-type: none"> may include but not be limited to how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from, energy consumption in achieving the material, green house gases created, waste levels, resource utilisation and transport effects.

RANGE STATEMENT	
	similarly what impact will be felt by reducing or stopping material from the source
Design drawings	<ul style="list-style-type: none"> may include but not be limited to drafted technical drawings or drawings produced on computer using CAD software packages to architectural standards. these contain project specifications

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for site evaluation	1.1. Applicable OHS, legislative and organisational requirements relevant to conducting site visits are verified and complied with 1.2. Scope of brief is reviewed and any available drawings accessed 1.3. Parameters for the project are assessed and confirmed 1.4. Site visit is arranged with client 1.5. Tools used to assist in site evaluation are prepared
2. Assess structural aspects of interior space	2.1. Wall construction and features are identified and suitability to design requirements are determined 2.2. Flooring construction and features are identified and suitability to design requirements are determined 2.3. Roof construction and features are identified and suitability to design requirements are determined 2.4. Other structures and their features are analysed to determine requirements to meet design brief 2.5. Changes required for structural aspects to meet design brief are identified and implications examined 2.6. Measurements are undertaken and recorded to inform budget calculations and design documentation 2.7. Costs associated with making structural changes are estimated
3. Assess materials used in interior space	3.1. Materials used in interior walls are identified and their features, applications and limitations assessed 3.2. Materials used in flooring are identified and their features, applications and limitations assessed 3.3. Finishes and other materials used are assessed and implications for design brief are identified 3.4. Properties of the materials used in structures are analysed and evaluated
4. Assess services	4.1. Plumbing, water and drainage features that may impact on design brief are identified and assessed 4.2. Features of electrical service are assessed to determine suitability for design requirements 4.3. Other services are assessed to determine suitability for design requirements
5. Conduct additional research to support	5.1. Specialist professionals are consulted to verify or further determine outcomes relevant to design

ELEMENT	PERFORMANCE CRITERIA
site evaluation	<p>requirements</p> <p>5.2. Building information, plans, drawings and materials data is accessed to gain additional information relevant to the project</p> <p>5.3. New technologies are researched to determine relevance to project</p> <p>5.4. <i>Longevity and restorability</i> quality of structures and materials are researched</p> <p>5.5. <i>Environmental considerations</i> for project are identified and further information accessed to ensure currency of knowledge</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- measurement
- observation
- researching
- ability to resource information
- accessing and applying the Building Code of Australia
- ability to resource information appropriate to interior construction
- documentation skills/report writing
- mathematical skills for estimating quantities
- ability to establish drawing requirements
- ability to document construction details in a range of scales
- notation of materials, techniques and finishes
- apply safety procedures

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for evaluating a site
- organisational and site standards, requirements, policies and procedures for evaluating a site
- the role of Australian Standards and the Building Code of Australia
- elements and principles of design
- characteristics of materials, products and defects
- procedures for documenting workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution techniques
- basic building and architectural terminology
- common structural and non-structural components of a residential building
- materials and methods involved in interior refurbishment
- local regulations/ councils etc
- construction techniques/ technologies
- statutory planning regulations affecting interior design
- sub-contractors roles

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively assess structural and non structural elements of a site to determine implications for interior design • Identify the features and implications of construction techniques identified in the range of variables • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for assessing a site • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to assessing viability of structures for domestic properties • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct project evaluation	1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to conducting site visits and preparing design specifications are verified and complied with 1.2. <i>Project brief</i> is reviewed and <i>parameters</i> for the project are assessed and confirmed 1.3. Site measurements and drawings are analysed and information on structures and services confirmed 1.4. Construction methods used are identified and implications for design determined
2. Design <i>structural aspects</i> of design	2.1. Location and features of walls are determined and documented 2.2. Location and features of flooring are determined and documented 2.3. Location and features of ceilings are determined and documented 2.4. Location and features of other structures are determined and documented 2.5. Implications of structural designs are identified and addressed 2.6. Costs associated with making structural changes are calculated 2.7. <i>Environmental considerations</i> and <i>access implications</i> for structural ideas are identified and integrated into the design
