LMF02 Furnishing Training Package

Release: 6.0

CONTENTS

Imprint	18
Preliminary Information	19
History	20
Summary of AQF qualifications in this Training Package	24
Units of competency in this Training Package and their prerequisites	26
Summary mapping – LMF02v6	58
Overview	95
LMF02 development history	100
Overview of the Furnishing Training Package	107
Qualifications Framework	110
Qualification Pathways	117
Skill Sets	119
Employability Skills	119
Industry Requirements for Employability Skills	123
Assessment Guidelines	124
Competency Standards	137
Example Employability Skills unit	142
Competency Standards - Industry Contextualisation	144
Appendix A: Version 1	145
Appendix B: Version 2	169
Appendix C: Version 3	173
Appendix D: Version 4	179
Appendix E: Version 5	184
LMF10108 Certificate I in Furnishing	189
LMF20202 Certificate II in Furniture Finishing	205
LMF20309 Certificate II in Furniture Making	211
LMF20402 Certificate II in Glass and Glazing	220
LMF20502 Certificate II in Mattress and Base Making	226
LMF20602 Certificate II in Picture Framing	232
LMF20702 Certificate II in Soft Furnishing	238
LMF20802 Certificate II in Upholstery	245
LMF20908 Certificate II in Flooring Technology	251
LMF21008 Certificate II in Blinds and Awnings	259
LMF21108 Certificate II in Security Screens and Grills	266
LMF21208 Certificate II in Stained Glass and Lead Lighting	271
LMF21308 Certificate II in Coopering	277
LMF30202 Certificate III in Furniture Finishing	283
LMF30302 Certificate III in Furniture Making	291
LMF30502 Certificate III in Furniture Making (Wood Machining)	301
LMF30602 Certificate III in Glass and Glazing	311
LMF30702 Certificate III in Mattress and Base Making	320
LMF30802 Certificate III in Picture Framing	327
LMF30902 Certificate III in Soft Furnishing	335
LMF31002 Certificate III in Upholstery	344
LMF31102 Certificate III in Production Upholstery	353
LMF31208 Certificate III in Flooring Technology	362
LMF31308 Certificate III in Coopering	375
LMF31408 Certificate III in Musical Instrument Making and Repair	384
LMF31508 Certificate III in Piano Technology	393

LMF31608 Certificate III in Security Screens and Grills	403
LMF31708 Certificate III in Stained Glass and Lead Lighting.....	410
LMF31808 Certificate III in Blinds and Awnings.....	419
LMF31908 Certificate III in Interior Decoration (Retail Services).....	428
LMF32009 Certificate III in Kitchens and Bathrooms (Client Services)	435
LMF32109 Certificate III in Cabinet Making.....	443
LMF40202 Certificate IV in Furnishing Technology	456
LMF40308 Certificate IV in Musical Instrument Making and Repair.....	465
LMF40408 Certificate IV in Interior Decoration.....	474
LMF40508 Certificate IV in Furniture Design and Technology	484
LMF40609 Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces.....	496
LMF50202 Diploma of Furnishing Technology	506
LMF50308 Diploma of Stained Glass and Lead Lighting	516
LMF50408 Diploma of Interior Design and Decoration.....	525
LMF50508 Diploma of Furniture Design and Technology	538
LMF60102 Advanced Diploma of Furnishing Management.....	552
LMF60208 Advanced Diploma of Interior Design.....	558
LMF60308 Advanced Diploma of Furniture Design and Technology	572
LMFAH4001A Recommend security technology, hardware and services	590
LMFAH4002A Prepare architectural door hardware schedules	602
LMFBA1001A Construct a basic roll up blind	616
LMFBA2001A Use blinds and awnings sector hand and power tools.....	624
LMFBA2002A Set up, operate and maintain blinds and awnings sector static machines	634
LMFBA2004A Select and apply blinds and awnings hardware and fixings	645
LMFBA2005A Construct roll up and pull down style blinds and awnings.....	653
LMFBA2006A Construct vertical style blinds	664
LMFBA2007A Construct textiles for canopy style awnings	675
LMFBA2008A Construct plastic and timber Venetian-style blinds	686
LMFBA2009A Construct aluminium Venetian-style blinds.....	697
LMFBA2010A Construct metal louvre and canopy hooded style awnings	708
LMFBA2011A Construct aluminium roll up style awnings.....	717
LMFBA3001A Install interior blinds.....	727
LMFBA3002A Install exterior blinds and awnings	738
LMFBA3003A Install timber shutters	748
LMFBA3004A Construct folding arm style awnings.....	757
LMFBA3005A Construct framework for canopy- style awnings.....	768
LMFBA3006A Construct pleated style blinds.....	778
LMFBA3007A Construct wood weave style blinds.....	789
LMFBA3008A Construct pelmets	799
LMFBA3009A Provide advice to customers on blinds and awnings.....	809
LMFBA4001A Assess suitability of blinds or awnings	818
LMFCP2001A Use coopering sector hand and power tools.....	826
LMFCP2002A Produce barrels using non-fired processes	836
LMFCP3001A Apply product and material knowledge to coopering operations.....	847
LMFCP3002A Select and season timber for coopering production.....	857
LMFCP3003A Produce barrels using fired processes	867
LMFCP3004A Maintain and repair barrels.....	878
LMFDN4001B Produce drawings from design concepts.....	889
LMFDN4002B Produce line and component production drawings	896
LMFDN4003B Produce patterns and/or templates	902
LMFDN4004B Design, construct and test jigs	909
LMFDN4005B Work within a furniture design team.....	915

LMFDN5001B Generate and transfer complex computer-aided drawings and specifications	922
LMFDN5006B Manage furniture design	930
LMFFDT4001A Apply finishing techniques to custom furniture	938
LMFFDT4002A Assemble custom furniture	948
LMFFDT4003A Assess and record the lifecycle of a product.....	957
LMFFDT4004A Assess environmental impact of a design	969
LMFFDT4005A Construct and evaluate furniture prototypes and samples	980
LMFFDT4006A Establish and maintain a safe furniture making work environment.....	990
LMFFDT4007A Establish the design brief.....	1001
LMFFDT4008A Determine occupational health and safety implications of designs.....	1010
LMFFDT4009A Prepare and present furniture design information	1021
LMFFDT4010A Produce and evaluate developmental furniture models to scale	1031
LMFFDT4011A Set up, operate and maintain basic static woodworking machines for furniture designs	1043
LMFFDT4012A Produce ideation drawings	1052
LMFFDT4013A Research and select furniture finishes	1061
LMFFDT4014A Research and select furniture materials and technology	1072
LMFFDT4015A Research furniture styles and movements	1083
LMFFDT4016A Select, use and maintain hand tools for the creation of custom furniture.....	1092
LMFFDT4017A Set up and operate a wood turning lathe to produce off-centre work..	1102
LMFFDT4018A Produce templates and jigs for custom made furniture.....	1112
LMFFDT5001A Apply ergonomics, anthropometrics and proxemic considerations to a product.....	1122
LMFFDT5002A Apply resources sustainably	1132
LMFFDT5003A Assess and resolve technical integrity of a design.....	1142
LMFFDT5004A Develop self as a furniture designer	1152
LMFFDT5005A Construct custom furniture using advanced techniques.....	1162
LMFFDT5007A Design a batch or limited production item of furniture.....	1174
LMFFDT5008A Design a furniture product using high volume technology services (HVTS) in production.....	1184
LMFFDT5009A Design a one-off item of furniture	1194
LMFFDT5010A Research and recommend alternative manufacturing processes.....	1204
LMFFDT5011A Research and recommend machine technology	1214
LMFFDT5013A Evaluate furniture design proposals and concepts.....	1225
LMFFDT6001A Assess economic impact of a design	1237
LMFFDT6002A Design for mass production	1246
LMFFDT6003A Evaluate and participate in design industry networks.....	1259
LMFFDT6004A Investigate legal requirements for design.....	1268
LMFFDT6005A Work collaboratively on a design project	1277
LMFFF1001B Complete a basic furniture finishing product	1288
LMFFF2001B Use furniture finishing sector hand and power tools.....	1296
LMFFF2002B Dismantle/re-assemble furniture	1304
LMFFF2003B Remove surface coatings	1312
LMFFF2004B Prepare surfaces for finishing.....	1320
LMFFF2005B Maintain spray equipment and booth.....	1328
LMFFF2006B Apply surface coatings by spray gun	1336
LMFFF2007B Apply stains, fillers and bleach.....	1343
LMFFF2008B Apply surface coatings by hand.....	1351
LMFFF3001B Match and make up colours.....	1359
LMFFF3002B Set up, operate and maintain mechanical coatings systems.....	1367
LMFFF3003B Apply plural component coatings.....	1376
LMFFF3004B Apply soft rubber techniques	1385

LMFFF3005B Enhance finishes.....	1392
LMFFF3006B Repair and touch up surfaces	1400
LMFFF3007B Apply graining and decorative finishes	1410
LMFFF3008B Apply traditional French polishing techniques.....	1418
LMFFF3009B Set up, operate and maintain CNC coating systems.....	1427
LMFFL1001A Complete simple floor covering installation.....	1434
LMFFL2001A Use flooring technology sector hand and power tools.....	1443
LMFFL2002A Receive and prepare floor covering materials for installation	1453
LMFFL2003A Select, operate and maintain floor covering cutting machine	1464
LMFFL2004A Moisture test timber and concrete floors	1474
LMFFL2101A Remove existing floor coverings.....	1484
LMFFL2102A Prepare, select and apply smoothing and patching compounds	1493
LMFFL2103A Select and apply appropriate compounds and additives	1503
LMFFL2104A Prepare concrete sub-floors using wet cleaning methods	1514
LMFFL2105A Select, prepare and apply moisture barriers and damp proof membranes to concrete sub-floors.....	1524
LMFFL2106A Prepare walls for coverings	1533
LMFFL2107A Select, operate and maintain grinding equipment.....	1544
LMFFL2108A Select, operate and maintain shot blasting equipment.....	1554
LMFFL2109A Select, operate and maintain demolition equipment.....	1564
LMFFL2110A Select, operate and maintain scarifying equipment	1574
LMFFL2111A Coarse sand timber flooring.....	1584
LMFFL2112A Install hard underlays.....	1595
LMFFL2201A Install carpet cushion/underlays and gripper accessories	1606
LMFFL2202A Install unpatterned tufted and bonded carpet floor coverings	1617
LMFFL2203A Install carpet tiles using standard installation procedures.....	1626
LMFFL2204A Install unpatterned tufted and bonded carpet floor coverings to stairs..	1637
LMFFL2301A Install lay flat vinyl floor coverings	1647
LMFFL2302A Install resilient tiles using standard installation procedures	1658
LMFFL2501A Install laminate and engineered timber flooring	1668
LMFFL2502A Install impact and sound absorption underlay	1679
LMFFL2503A Nail strip timber flooring.....	1689
LMFFL2504A Install expansion joints	1700
LMFFL2505A Install mouldings and edge trims to timber flooring.....	1711
LMFFL3001A Plan and cost flooring technology work	1722
LMFFL3002A Establish and maintain a safe flooring technology work environment ...	1734
LMFFL3101A Inspect sub-floors	1745
LMFFL3102A Prepare, select and apply screed to concrete sub-floors	1756
LMFFL3201A Install carpet tiles using custom designs.....	1766
LMFFL3202A Install adhesive fixed carpet floor coverings.....	1776
LMFFL3203A Install commercial carpet floor coverings.....	1786
LMFFL3204A Install patterned carpet floor coverings	1796
LMFFL3205A Install custom design carpet and decorative finishes	1806
LMFFL3206A Install synthetic textile floor coverings to sports facilities	1817
LMFFL3207A Install carpet floor coverings to custom design stairs	1828
LMFFL3301A Install linoleum floor coverings.....	1838
LMFFL3302A Install commercial vinyl floor coverings	1849
LMFFL3303A Install resilient floor coverings using custom designs and decorative finishes	1860
LMFFL3304A Install resilient tiles using custom design and decorative finishes	1871
LMFFL3305A Install rubber floor coverings.....	1881
LMFFL3306A Install resilient sheet to walls.....	1892
LMFFL3307A Install resilient sheet to bench and counter tops.....	1903

LMFFL3308A	Install anti-static resilient floor coverings.....	1913
LMFFL3309A	Install conductive resilient floor coverings.....	1924
LMFFL3310A	Cut and install resilient floor coverings to stairs.....	1935
LMFFL3401A	Mix and apply epoxy and seamless floor coverings.....	1947
LMFFL3402A	Apply solvent based coatings to timber flooring	1958
LMFFL3403A	Apply water-based coatings to timber flooring	1969
LMFFL3404A	Apply oil-based coatings to timber flooring.....	1980
LMFFL3405A	Apply composite based coatings.....	1991
LMFFL3406A	Apply emulsion wax	2002
LMFFL3407A	Apply stains and fillers	2013
LMFFL3501A	Adapt and apply custom designs to timber flooring	2024
LMFFL3502A	Cut and install timber flooring materials to stairs.....	2034
LMFFL3503A	Install direct stick timber flooring.....	2044
LMFFL3504A	Inspect defective timber flooring	2055
LMFFL3505A	Install block parquetry flooring.....	2064
LMFFL3506A	Install cork tiles	2074
LMFFL3507A	Install patterned parquetry flooring.....	2084
LMFFL3508A	Install mosaic parquetry flooring	2094
LMFFL3509A	Install sprung timber flooring.....	2105
LMFFL3510A	Install strip timber flooring onto battens.....	2116
LMFFL3511A	Install strip timber flooring onto plywood.....	2127
LMFFL3512A	Repair timber flooring.....	2138
LMFFL3513A	Maintain timber, laminate and engineered flooring	2149
LMFFL3601A	Fine sand timber flooring	2160
LMFFL3602A	Edge sand timber flooring	2171
LMFFL3603A	Sand cork flooring.....	2182
LMFFL3604A	Sand and fill parquetry flooring	2194
LMFFL3605A	Apply finishes to cork flooring.....	2207
LMFFM1001B	Construct a basic timber furnishing product	2218
LMFFM1002B	Operate basic woodworking machines	2226
LMFFM2001B	Use furniture making sector hand and power tools	2234
LMFFM2002B	Assemble furnishing components.....	2242
LMFFM2003B	Select and apply hardware	2250
LMFFM2004B	Apply sheet laminates by hand.....	2258
LMFFM2005B	Join solid timber	2265
LMFFM2006B	Hand make timber joints	2273
LMFFM2007B	Follow plans to assemble production furniture	2281
LMFFM2008B	Bend and form cane	2289
LMFFM2009B	Construct cane furniture	2296
LMFFM2010B	Set up, operate and maintain basic static machines.....	2304
LMFFM2011B	Apply manufactured board conversion techniques.....	2314
LMFFM2012B	Set up, operate and maintain pressure and clamping machines	2323
LMFFM3001B	Construct chair and couch frames.....	2333
LMFFM3002B	Construct furniture using leg and rail method.....	2341
LMFFM3003B	Produce angled and curved furniture using manufactured board	2350
LMFFM3004B	Produce angled and curved furniture using solid timber	2359
LMFFM3005B	Fabricate custom furniture.....	2368
LMFFM3006B	Install furnishing	2378
LMFFM3007B	Prepare and apply decorative surfaces for furniture.....	2386
LMFFM3010B	Select timbers for furniture production	2394
LMFFM3011B	Produce manual and computer-aided production drawings.....	2401
LMFFM3012B	Prepare cutting list from plans and job specifications.....	2407
LMFFM3013B	Measure and draw site layout for manufactured furniture products	2414

LMFFM3020B Set up, operate and maintain sawing machines	2420
LMFFM3021B Set up, operate and maintain drilling machines	2430
LMFFM3022B Set up, operate and maintain joining machines.....	2439
LMFFM3023B Set up, operate and maintain planing and finishing machines.....	2448
LMFFM3024B Set up, operate and maintain multi-head planing and moulding machines.....	2457
LMFFM3025B Set up, operate and maintain routing and shaping machines	2466
LMFFM3026B Set up, operate and maintain mechanical wood turning lathes	2475
LMFFM3027B Set up, operate and maintain automated edge banding machines.....	2484
LMFFM3028B Fabricate synthetic solid surface products.....	2493
LMFFM3030B Set up, operate and maintain CNC sizing machines	2501
LMFFM3031B Set up, operate and maintain CNC machining and processing centres..	2508
LMFFM3032B Produce and maintain cutting tools	2517
LMFFM3033B Construct jigs and fixtures	2526
LMFFM4005A Hand carve wood to custom design	2534
LMFFM4006A Construct joints for custom furniture	2544
LMFFM4007A Produce curved and shaped components for custom furniture	2554
LMFFM4008A Produce timber veneered components for custom furniture	2564
LMFFT4001B Coordinate on-site installation of furnishing products	2575
LMFFT4002B Customise stock lines.....	2582
LMFFT4003B Organise production processes.....	2589
LMFFT4004B Establish and monitor production inventory requirements	2598
LMFFT4005B Install and commission CNC software.....	2606
LMFFT4006B Construct prototypes and samples.....	2613
LMFFT4007B Sample, inspect and test products to specifications.....	2622
LMFFT4008B Interpret and use workplace information	2629
LMFFT4009A Match furnishing style/materials to customer requirements	2635
LMFFT4010B Identify and calculate production costs	2642
LMFFT4011B Purchase materials and consumables	2650
LMFFT4012A Prepare a tender submission	2657
LMFFT5001B Evaluate and select production materials and equipment.....	2664
LMFFT5002B Establish and develop production processes and area layout	2671
LMFFT5003B Manage installation and commissioning of equipment	2680
LMFFT5004B Develop and document procedures and specifications.....	2688
LMFFT5005B Organise enterprise maintenance programs.....	2695
LMFFT5006B Plan production	2704
LMFFT5010B Optimise CNC operations.....	2712
LMFFT5011B Develop, trial and evaluate prototypes	2719
LMFFT5012B Determine production feasibility of designs.....	2729
LMFFT5013B Develop products and related processes.....	2736
LMFFT5014B Establish and monitor business information systems.....	2744
LMFFT5015B Establish and implement contracts for external goods or services	2752
LMFFT5016B Establish customer contracts.....	2761
LMFFT6001B Research and evaluate products, materials and processes	2768
LMFGG1001B Complete a basic glass and glazing project.....	2776
LMFGG2001B Use glass and glazing sector hand and power tools.....	2784
LMFGG2002B Apply First Aid.....	2792
LMFGG2003B Operate glass freefall rack and table	2801
LMFGG2004B Process thin glass by hand	2809
LMFGG2005B Move glass sheets by hand	2819
LMFGG2006B Move single glass sheets by mechanical means	2828
LMFGG2007B Process glass by basic machines	2836
LMFGG2008B Glaze/reglaze residential windows and doors	2846
LMFGG2009B Fabricate and assemble metal frames.....	2857

LMFGG2010B Fabricate and install insect and security screens.....	2867
LMFGG3001B Store and handle glass.....	2877
LMFGG3002B Assess glass and glazing requirements	2887
LMFGG3003B Move block/bulk glass sheet by mechanical means	2897
LMFGG3004B Process thick glass by hand	2906
LMFGG3005B Process glass by semi-automatic and automatic machines	2916
LMFGG3006B Apply film to glass	2926
LMFGG3007B Form glass	2936
LMFGG3008B Apply patterns and designs to glass.....	2945
LMFGG3009B Set up and operate glass laminating equipment	2954
LMFGG3010B Set up and operate glass toughening equipment	2964
LMFGG3011B Set up and operate glass silvering equipment.....	2974
LMFGG3012B Set up and operate insulated glass unit manufacturing equipment.....	2984
LMFGG3013B Construct and repair leadlight panels	2994
LMFGG3014 Prepare and install mirrors.....	3004
LMFGG3015B Fabricate and install shower screens and wardrobe doors.....	3014
LMFGG3016B Fabricate and install residential windows and doors	3024
LMFGG3017B Fabricate and install commercial glazing.....	3033
LMFGG3018B Prepare and install architectural engineered glazing	3043
LMFGG3019B Conduct commercial and structural glazing.....	3053
LMFGN2002B Move and store materials and products	3064
LMFGN3001B Read and interpret work documents	3073
LMFGN3002B Estimate and cost job	3081
LMFID1001A Plan the decoration of a simple space.....	3089
LMFID3002A Source and specify decoration products	3098
LMFID3005A Style a retail display.....	3108
LMFID4001A Research, analyse and apply colour for interior spaces	3119
LMFID4002A Decorate residential interiors.....	3132
LMFID4003A Prepare a materials board for client presentation	3145
LMFID4004A Research and recommend furniture and accessories	3157
LMFID4005A Research and recommend soft furnishings for interiors	3170
LMFID4006A Research and recommend hard materials and finishes for interiors	3182
LMFID4007A Identify materials, construction techniques and methods used in building interiors.....	3194
LMFID4008A Assess interior light and recommend light fittings.....	3201
LMFID4009A Research architectural styles and movements.....	3213
LMFID4010A Research interior decoration and design influences	3222
LMFID4011A Determine occupational health and safety implications of interior effects.....	3231
LMFID5001A Design residential interiors	3242
LMFID5002A Develop a decoration proposal for a complex site.....	3254
LMFID5003A Evaluate site for interior design brief	3264
LMFID5004A Specify structural elements, systems and services for interior spaces	3275
LMFID5005A Explore and apply creative design methodology to interior space	3285
LMFID5006A Design interior lighting.....	3293
LMFID5007A Decorate for events	3305
LMFID5008A Design for people with disabilities and the elderly.....	3317
LMFID5009A Research and recommend colour and applied finishes	3331
LMFID5010A Provide interior styling service	3343
LMFID5011A Specify soft furnishings for complete interior solution.....	3355
LMFID5012A Research and recommend artwork	3366
LMFID5013A Design for small to medium scale commercial or institutional interiors	3379
LMFID5014A Use CAD applications to complete models and documentation for interior design projects.....	3391

LMFID5015A Decorate interiors for restoration projects.....	3401
LMFID6001A Resolve complex spatial design problems through modelling.....	3413
LMFID6002A Apply 3-D visualisation techniques to represent interior designs	3422
LMFID6003A Design for large scale commercial or institutional interiors	3432
LMFID6004A Design interiors for hospitality environments	3445
LMFID6005A Design for retail interiors	3458
LMFID6006A Design for conservation and restoration projects	3471
LMFID6007A Select and instruct consultants and contractors.....	3484
LMFID6008A Evaluate design project outcomes	3494
LMFID6009A Produce digital presentations for commercial projects	3504
LMFKB2001A Prepare for cabinet installation.....	3516
LMFKB2002A Provide assistance in cabinet installation	3523
LMFKB3001A Identify processes in kitchen and bathroom projects.....	3531
LMFKB3002A Determine requirements for installation of cabinets	3540
LMFKB3003A Check and measure fit of cabinets	3551
LMFKB3004A Conduct on-site adjustments to cabinets and components	3558
LMFKB3005A Fabricate cabinets for the built-in environment	3566
LMFKB3006A Install fitted cabinets and components	3575
LMFKB3007A Provide advice on cabinet design features.....	3583
LMFKB3008A Identify cabinet construction and installation methods	3593
LMFKB4001A Determine spatial planning considerations for kitchen design.....	3602
LMFKB4002A Research and recommend materials, components and finishes for kitchen designs.....	3611
LMFKB4003A Identify and document services required to support fitted furniture designs.....	3622
LMFKB4004A Determine spatial planning considerations for bathroom design	3632
LMFKB4005A Research and recommend materials, components and finishes for bathroom designs	3641
LMFKB4006A Prepare quotation and contract documentation for design project.....	3652
LMFKB4007A Design ancillary residential cabinetry	3660
LMFKB4008A Determine layout for laundry components.....	3669
LMFMB1001B Complete a basic mattress and base product.....	3678
LMFMB2001B Use mattress and base sector hand and power tools	3686
LMFMB2002B Prepare and assemble base unit.....	3694
LMFMB2003B Assemble mattress components.....	3702
LMFMB2004B Cut mattress and base fabrics	3710
LMFMB3001B Assemble springs for mattresses	3717
LMFMB3002B Make springs for mattresses and bases	3724
LMFMB3003B Set up, operate and maintain a tape edging machine	3732
LMFMB3004B Set up, operate and maintain a quilting machine.....	3740
LMFMI3001A Assemble instrument components	3748
LMFMI3002A Construct and apply decorative treatments and finishes to musical instruments.....	3759
LMFMI3003A Manufacture acoustic guitars.....	3769
LMFMI3004A Manufacture brass instruments.....	3780
LMFMI3005A Manufacture electric guitars.....	3791
LMFMI3006A Manufacture percussion instruments.....	3802
LMFMI3007A Manufacture special stringed instruments	3813
LMFMI3008A Manufacture stringed instruments	3824
LMFMI3009A Repair brass instruments	3835
LMFMI3010A Repair percussion instruments	3846
LMFMI3011A Repair woodwind instruments	3857
LMFMI4001A Repair acoustic guitars	3868

LMFMI4002A Repair electric guitars	3879
LMFMI4003A Repair special stringed instruments	3890
LMFMI4004A Repair stringed instruments.....	3901
LMFPP1001B Frame a simple artwork.....	3912
LMFPP2001B Use picture framing sector hand and power tools	3920
LMFPP2002B Cut mouldings to length	3929
LMFPP2003B Join mouldings	3937
LMFPP2004B Mount artwork.....	3946
LMFPP2005B Cut mat boards	3957
LMFPP2006B Cut and handle glazing materials for framing.....	3965
LMFPP2007B Assemble artwork package (basic).....	3974
LMFPP2008B Recognise and repair finishes of framing materials	3981
LMFPP3001B Deframe artwork	3990
LMFPP3002B Decorate mat boards.....	3998
LMFPP3003B Set up and operate CNC machines.....	4006
LMFPP3004B Prepare textiles for framing.....	4015
LMFPP3005B Recognise and handle artwork for framing.....	4024
LMFPP3006B Prepare design requirements for framing	4032
LMFPP3007B Apply frame finishes.....	4041
LMFPP3008B Assemble artwork package (complex)	4051
LMFPP3009B Install artwork	4060
LMFPP4001B Design and construct ornamental frames	4069
LMFPP4002B Determine and apply gilding techniques	4079
LMFPT3001A Develop knowledge of piano industry	4088
LMFPT3002A Select materials for piano repair and manufacture	4095
LMFPT3003A Repair upright and grand piano action, keys and pedals.....	4106
LMFPT3004A Rebuild upright and grand piano action, keys and pedals	4117
LMFPT3005A Re-string and re-pin a piano	4127
LMFPT3006A Regulate action, keys and pedals of upright pianos	4138
LMFPT3007A Regulate actions, keys and pedals of grand pianos	4147
LMFPT3008A Understand piano tuning theory and basic acoustics.....	4156
LMFPT3009A Develop control of tuning hammers.....	4163
LMFPT3010A Pitch raise.....	4172
LMFPT3011A Tune unisons aurally to a beatless condition	4181
LMFPT3012A Tune octaves aurally to appropriate stretch.....	4190
LMFPT3013A Tune a temperament octave to produce an equally tempered scale	4199
LMFPT3014A Tune a piano aurally and_or electronically within time and accuracy constraints	4208
LMFPT3015A Voice a piano.....	4220
LMFPT3016A Provide advice to customers on piano tuning and repair	4230
LMFSF1001B Produce basic soft furnishing accessories	4239
LMFSF2001B Cut single layer fabrics.....	4246
LMFSF2002B Machine sew materials	4253
LMFSF2003B Machine sew using specific techniques.....	4262
LMFSF2004B Hand sew soft furnishings	4272
LMFSF2005B Operate a steam press.....	4280
LMFSF2006B Calculate fabric quantities for window coverings.....	4287
LMFSF2007B Construct unlined curtains/drapes.....	4295
LMFSF2008B Construct lined curtains/drapes	4305
LMFSF2009B Construct padded pelmets.....	4315
LMFSF2010B Make up tracks for window coverings	4322
LMFSF2011B Fit and adjust curtain hardware.....	4329
LMFSF2012B Fit and adjust interior blinds	4336

LMFSF2013B Dress windows	4343
LMFSF2014B Use soft furnishing sector hand and power tools	4350
LMFSF3001B Operate drop cutting machines	4357
LMFSF3002B Use automated curtain pleating equipment.....	4365
LMFSF3003B Follow patterns to produce window toppings.....	4372
LMFSF3004B Construct roman style blinds.....	4380
LMFSF3005B Construct Austrian/festoon style blinds	4390
LMFSF3006B Chemically join textiles.....	4400
LMFSF3007B Lay out patterns and cut fabrics.....	4408
LMFSF3008B Measure up and calculate fabric quantities for window coverings	4416
LMFSF3009B Manufacture bedspreads.....	4423
LMFSF3010B Manufacture bed linen and table cloths.....	4431
LMFSF3011B Advise customers on interior decoration	4439
LMFSF3012B Install motorised curtains and blinds.....	4446
LMFSF3013B Follow patterns to produce soft furnishing accessories	4453
LMFSF3014B Provide technical advice to customers	4462
LMFSL2001A Assemble lead light and stained glass components.....	4468
LMFSL3001A Apply product and material knowledge to lead light and stained glass operations	4478
LMFSL3002A Paint glass.....	4487
LMFSL3003A Fire glass.....	4496
LMFSL3004A Protect stained glass and lead lighting.....	4505
LMFSL3005A Fabricate and install residential lead light and stained glass windows and doors.....	4514
LMFSL3006A Prepare and install architectural engineered lead light and stained glass	4525
LMFSL5001A Assess conservation requirements.....	4536
LMFSL5002A Remove heritage lead light and stained glass.....	4546
LMFSL5003A Conserve heritage lead light and stained glass	4556
LMFSL5004A Install heritage lead light and stained glass.....	4567
LMFSL5005A Apply innovation in contemporary lead light and stained glass	4577
LMFSS2001A Use security screens and grills hand and power tools.....	4587
LMFSS2002A Rectify faults in product.....	4598
LMFSS2003A Prepare product for Australian Standards testing	4607
LMFSS2004A Undertake surface preparation	4615
LMFSS3001A Install security screens and grills.....	4626
LMFSS3002A Apply patterns and designs to security screens and grills.....	4635
LMFSS3003A Resolve quality and compliance issues	4645
LMFUP1001B Complete a basic upholstery project	4655
LMFUP2001B Use upholstery sector hand and power tools.....	4664
LMFUP2002B Fit upholstery components	4674
LMFUP2003B Apply contemporary foundations to upholstered furniture	4682
LMFUP2004B Machine sew upholstery final cover materials (basic)	4690
LMFUP2005B Develop cutting plan and cut single layer upholstery fabric	4698
LMFUP2006B Dismantle/reassemble furniture for upholstering	4707
LMFUP3001B Apply traditional foundations to upholstered furniture	4715
LMFUP3002B Fit and apply final cover materials to furniture using basic techniques	4723
LMFUP3003B Fit and apply final cover materials to furniture using decorative techniques	4731
LMFUP3004B Lay out patterns and cut leather	4740
LMFUP3005B Machine sew upholstery final cover materials (complex).....	4748
LMFUP3006B Fit and apply leather to furniture	4756
LMFUP3007B Manufacture and fit loose covers.....	4765
LMFUP3008B Apply finishing techniques to upholstered furniture	4774
LMFUP3009B Develop cutting plan and cut multiple layer upholstery fabric.....	4783

LMFUP3010B Cut, sew and fit skirts to upholstered furniture	4792
LMFUP3011B Cut, sew and fit or fill cushions	4801
LMFUP3012B Apply marine sewing and installation techniques	4810
LMFUP3013B Cut and sew canvas and acrylics	4818
LMFUP3014B Set up, operate and maintain CNC cutting machines	4827
BSBADM311A Maintain business resources	4836
BSBADV512A Develop an advertising strategy and brief	4844
BSBCCO304B Provide sales solutions to customers	4855
BSBCMM301A Process customer complaints	4863
BSBCRT401A Articulate, present and debate ideas	4871
BSBCRT402A Collaborate in a creative process	4879
BSBCRT403A Explore the history and social impact of creativity	4888
BSBCRT501A Originate and develop concepts	4895
BSBCRT601A Research and apply concepts and theories of creativity	4907
BSBCUS201A Deliver a service to customers	4916
BSBCUS301A Deliver and monitor a service to customers	4924
BSBCUS402A Address customer needs	4932
BSBDES201A Follow a design process	4939
BSBDES202A Evaluate the nature of design in a specific industry context	4948
BSBDES301A Explore the use of colour	4955
BSBDES302A Explore and apply the creative design process to 2D forms	4963
BSBDES303A Explore and apply the creative design process to 3D forms	4971
BSBDES304A Source and apply design industry knowledge	4979
BSBDES305A Source and apply information on the history and theory of design	4987
BSBDES401A Generate design solutions	4994
BSBDES403A Develop and extend design skills and practice	5004
BSBDES502A Establish, negotiate and refine a design brief	5012
BSBDES601A Manage design realisation	5021
BSBDES602A Research global design trends	5029
BSBFIA301A Maintain financial records	5037
BSBFLM309C Support continuous improvement systems and processes	5046
BSBINM601A Manage knowledge and information	5055
BSBINN201A Contribute to workplace innovation	5064
BSBITU101A Operate a personal computer	5072
BSBITU306A Design and produce business documents	5079
BSBMGT402A Implement operational plan	5087
BSBMGT605B Provide leadership across the organisation	5095
BSBMGT608B Manage innovation and continuous improvement	5104
BSBMGT616A Develop and implement strategic plans	5112
BSBMGT617A Develop and implement a business plan	5119
BSBMKG413A Promote products and services	5126
BSBMKG501B Identify and evaluate marketing opportunities	5134
BSBMKG605B Evaluate international marketing opportunities	5143
BSBMKG608A Develop organisational marketing objectives	5155
BSBMKG609A Develop a marketing plan	5165
BSBPMG510A Manage projects	5173
BSBPRO301A Recommend products and services	5182
BSBPRO401A Develop product knowledge	5191
BSBRKG304B Maintain business records	5199
BSBRSK501A Manage risk	5208
BSBSMB401A Establish legal and risk management requirements of small business ...	5217
BSBSMB402A Plan small business finances	5226
BSBSMB403A Market the small business	5234

BSBSMB404A Undertake small business planning	5242
BSBSMB405A Monitor and manage small business operations.....	5253
BSBSMB406A Manage small business finances.....	5261
BSBSMB407A Manage a small team	5269
BSBWOR204A Use business technology	5278
CPCCBC4037A Prepare drawings for heritage works	5286
CPCCCM3001A Operate elevated work platforms.....	5297
CPCCOHS1001A Work safely in the construction industry	5310
CUFANM302A Create 3D digital animations	5322
CUFANM303A Create 3D digital models.....	5335
CUFANM502A Create 3D digital environments.....	5345
CUFDIG303A Produce and prepare photo images	5356
CUFDIG304A Create visual design components	5368
CUFDIG507A Design digital simulations	5380
CULMS010B Contribute to the preservation of cultural material	5392
CUVCOR04B Originate concept for own work and conduct critical discourse	5400
CUVCOR07B Use drawing techniques to represent the object or idea	5408
CUVCOR08B Produce drawings to represent and communicate the concept	5414
CUVCOR09B Select and apply drawing techniques and media to represent and communicate the concept	5420
CUVCRS03B Produce computer-aided drawings	5428
CUVCRS04B Produce technical drawings	5435
CUVDES01A Apply colour theory in response to a brief	5443
CUVDSP07B Research and apply techniques for graphic design	5451
CUVDSP11B Research and apply techniques for illustrative work.....	5460
CUVDSP15B Research and apply techniques for application to spatial design	5469
CUVICS04B Originate and develop a concept.....	5478
CUVVSP01B Produce calligraphy	5487
CUVVSP02B Research and experiment with techniques to produce calligraphy	5495
CUVVSP14B Apply techniques to produce drawings	5505
CUVVSP15B Produce drawings.....	5512
HLTFA301B Apply first aid	5520
LMTTF2014A Weld plastic materials	5533
LMTTF3004A Perform advanced welding of plastic materials	5542
MEM05003B Perform soft soldering	5551
MEM05007C Perform manual heating and thermal cutting.....	5558
MEM05012C Perform routine manual metal arc welding.....	5565
MEM05050B Perform routine gas metal arc welding	5572
MEM06001B Perform hand forging	5579
MEM09002B Interpret technical drawing.....	5586
MEM15001B Perform basic statistical quality control	5593
MEM16006A Organise and communicate information	5600
MEM16007A Work with others in a manufacturing, engineering or related environment.....	5607
MEM16008A Interact with computing technology.....	5614
MEM16013A Operate in a self-directed team.....	5621
MEM18001C Use hand tools.....	5630
MEM30001A Use computer aided drafting systems to produce basic engineering drawings.....	5637
MEM30004A Use CAD to create and display 3D models.....	5644
MEM30024A Participate in quality assurance techniques	5651
MSACMC210A Manage the impact of change on own work	5658
MSACMC614A Develop a communications strategy to support production.....	5666
MSACMS200A Apply competitive manufacturing practices	5674
MSACMS201A Sustain process improvements	5682

MSACMS601A Analyse and map a value chain	5689
MSACMS602A Manage a value chain.....	5697
MSACMS603A Develop manufacturing related business plans.....	5705
MSACMT220A Apply quick changeover procedures	5713
MSACMT221A Apply Just in Time (JIT) procedures	5721
MSACMT230A Apply cost factors to work practices	5730
MSACMT240A Apply 5S procedures in a manufacturing environment	5737
MSACMT250A Monitor process capability	5746
MSACMT251A Apply quality standards	5754
MSACMT260A Use planning software systems in manufacturing.....	5764
MSACMT261A Use SCADA systems in manufacturing.....	5771
MSACMT270A Use sustainable energy practices.....	5779
MSACMT271A Use sustainable environmental practices	5786
MSACMT280A Undertake root cause analysis.....	5794
MSACMT281A Contribute to the application of a proactive maintenance strategy	5802
MSACMT430A Improve cost factors in work practices	5810
MSACMT450A Undertake process capability improvements.....	5817
MSACMT452A Apply statistics to processes in manufacturing	5825
MSACMT630A Optimise cost of product.....	5834
MSACMT631A Undertake value analysis of product costs in terms of customer requirements	5841
MSACMT650A Determine and improve process capability.....	5849
MSACMT661A Determine and establish information collection requirements and processes	5857
MSACMT675A Facilitate the development of a new product.....	5865
MSAENV272B Participate in environmentally sustainable work practices	5875
MSAENV472A Implement and monitor environmentally sustainable work practices...5884	
MSAENV472B Implement and monitor environmentally sustainable work practices...5891	
MSAENV672B Develop workplace policy and procedures for environmental sustainability5901	
MSAPMOHS100A Follow OHS procedures	5910
MSAPMOHS200A Work safely.....	5916
MSAPMOHS300A Facilitate the implementation of OHS for a work group	5924
MSAPMOPS101A Make measurements.....	5932
MSAPMOPS363A Organise on site work.....	5938
MSAPMPER200B Work in accordance with an issued permit.....	5945
MSAPMSUP102A Communicate in the workplace.....	5956
MSAPMSUP106A Work in a team	5962
MSAPMSUP201A Receive or despatch goods	5968
MSAPMSUP240A Undertake minor maintenance	5975
MSAPMSUP273A Handle goods.....	5983
MSAPMSUP383A Facilitate a team.....	5989
MSAPMSUP390A Use structured problem solving tools.....	5995
PSPPROC602A Direct the management of contracts	6001
SIRRMER009A Produce perspective drawing, plans and elevations	6010
SIRRMER020A Create and implement exhibition space	6017
SIRRRPK010A Recommend home and home improvement products and services	6025
SIRXINV002A Maintain and order stock	6036
SIRXSLS004A Build relationships with customers	6045
TDTD297B Shift a load using manually-operated equipment.....	6057
TLIA1107C Package goods	6067
TLIA1307C Receive goods	6076
TLIA1607C Use inventory systems to organise stock control.....	6086
TLIA2107C Despatch stock	6097

TLID1007C Operate a forklift.....6107
TLID207C Shift a load using manually-operated equipment.....6118
TLID307E Handle dangerous goods/hazardous substances6128

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AEShareNet Free for Education Instant licence (AEShareNet-FfE Licence). The onus rests with you to ensure compliance with the AEShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AEShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education; and
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation;
2. make or give copies to learners;
3. charge for the education provided; and
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AEShareNet-FfE Licence conditions should be directed to the AEShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AEShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to Training Copyright, Department of Education, Employment and Workplace Relations, GPO Box 9880 Canberra City, ACT, 2601 or email copyright@training.com.au.

This work is the result of wide consultations with Australian industry participants. It is a collaborative view and does not necessarily represent the view of the Department or any specific body. For the sake of brevity it may omit factors which could be pertinent in particular cases.

While care has been taken in the preparation of this Training Package, the Department and the original developer do not warrant that any licensing or registration requirements specified here are either complete or up-to-date for your State or Territory. The Department and the original developer do not accept any liability for any damage or loss (including indirect and consequential loss) incurred by any person as a result of relying on the information contained in this Training Package.

The Commonwealth, through the Department of Education, Employment and Workplace Relations, does not accept any liability to any person for the information or advice (or the use of such information or advice) which is provided in this material or incorporated into it by reference. The information is provided on the basis that all persons accessing this material undertake responsibility for assessing the relevance and accuracy of its content. No liability is accepted for any information or services which may appear in any other format. No responsibility is taken for any information or services which may appear on any linked websites.

Preliminary Information

Important Note to Users

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

Check the version number before commencing training or assessment

This Training Package is Version - check whether this is the latest version by going to the National Training Information Service (www.ntis.gov.au) and locating information about the Training Package. Alternatively, contact Manufacturing Industry Skills Council at <http://www.mskills.com.au> to confirm the latest version number.

Explanation of version number conventions

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Packages national code (which remains the same during its period of endorsement).

Version modification history

The version details of this endorsed Training Package are in the table below. The latest information is at the top of the table.

Version	Release Date	Comments
6	23 March 2011	Inclusion of two new units of competency for architectural hardware specifying (LMFAH4001A and LMFAH4002A) as electives in LMF40202. ISC updates: <ul style="list-style-type: none"> • All qualifications adjusted for flexibility requirements and inclusion of sustainability units of competency • Four generic LMF units replaced with MSA generic units. Refer to History and Summary Mapping for details.
5.01	July 2010	ISC updates to two qualifications for flexibility requirements. One unit added to importation allowance and accredited courses included in LMF10108 and LMF30602.
5.00	November 2009	Version 5 incorporates one new Certificate IV qualification: <ul style="list-style-type: none"> • LMF40609 Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces Eight (8) new LMF specialist units and four (4) additional units imported from other Training Packages have been included. Refer to History below for details.

		In addition, typographical errors have been corrected in the
		Range Statement for the following unit: <ul style="list-style-type: none"> LMFGG2007B Process glass by basic machines All items listing equipment should be 'May include'.
4.00	4 May 2009	Version 4 incorporates units of competency and qualifications for kitchens and bathrooms.
3.00	February 2009	Version 3 incorporates units of competency and qualifications for new sectors in interior decoration and design and furniture design and technology. It also includes a modified Certificate I in Furnishing. Errors and omissions identified in LMF02v2 have been corrected - see History below for details.
2.00	TBA	Version 2 incorporates units and qualifications for new sectors in coopering, blinds and awnings, musical instrument making and repair, piano technology, floor technology, security screens and grills, stained glass and lead lighting. It includes revised qualifications in soft furnishing. It also includes reformatting of all units of competency and qualifications to comply with the new template requirements and to include employability skills. Imported units in all existing qualifications have been replaced with current versions.
1.00	10 February 2003	Primary release

History

History

Version 6

- All LMF02 qualifications have been amended as follows:

- Certificate II to Advanced Diploma have had *MSAENV272B Participate in environmentally sustainable work practices* added to the core – this has involved increasing the number of units required to compete the qualification in most cases as otherwise the sustainability unit would have replaced a technical unit that has been deemed necessary for the outcome. In future stakeholders may be prepared to reduce the overall unit requirements without losing the technical integrity of the qualification.
- Certificates IV and Diploma have had *MSAENV472B Implement and monitor environmentally sustainable work practices* added to the electives
- Advanced Diplomas have had *MSAENV672B Develop workplace policy and procedures for environmental sustainability* added to the electives
- Wherever used *LMFCR0001B Follow safe working policies and practices* has been replaced by *MSAPMOHS100A Follow OHS procedures* in Certificates I and II and by *MSAPMOHS200A Work safely* for Cert III and above.
- Wherever used *LMFCR0002B Communicate in the workplace* has been replaced by *MSAPMSUP102A Communicate in the workplace*
- Wherever used *LMFCR0003B Carry out measurements and calculations* has been replaced by *MSAPMOPS101A Make measurements*
- Wherever used *LMFCR0004B Work effectively with others* has been replaced by *MSAPMSUP106A Work in a team*
- Qualification notes have been revised to include a more detailed qualification description, extended job roles/employment outcomes and application, information on pathways into and from the qualification, licensing advice and a common format for the packaging rules
- Electives have been grouped as A, B etc. and all qualifications have a group defining allowable importation from units in the LMF Package, other Training Packages and accredited courses. Where previous packaging did not allow enough imported units it has been amended to the minimum required; where it was already more than required it has been kept as is
- Packaging has been amended to meet the NQC flexibility rules and remove entry requirements, including some ambiguous references to completion of lower level qualifications in packaging advice in order to achieve the outcome (exception see comment on LMF60102 Advanced Diploma of Furnishing Management)
- One superseded imported unit has been updated: TLID307E.

Version 5

The following qualification and new units have been incorporated into LMF02v5:

LMF40609 Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces

New units	
LMFKB4001A	Determine spatial planning considerations for kitchen designs
LMFKB4002A	Research, recommend and specify materials, components and finishes for kitchen designs
LMFKB4003A	Identify and document services required to support kitchen and bathroom designs

LMFKB4004A	Determine spatial planning considerations for bathroom designs
LMFKB4005A	Research, recommend and specify materials, components and finishes for bathroom designs
LMFKB4006A	Prepare quotation and contract documentation for design project
LMFKB4007A	Design ancillary residential cabinetry
LMFKB4008A	Determine layout for laundry components
New imported units	
BSBSMB403A	Market the small business
BSBCUS402	Address customer needs
BSBSMB406A	Manage small business finances
BSBMKG413A	Promote products and services

Version 4 - summary of changes to LMF02 Version 3

Revised qualification
LMF20309 Certificate II in Furniture Making
New qualifications
LMF32009 Certificate III in Kitchens and Bathrooms (Client Services)
LMF32109 Certificate III in Cabinet Making

A total of 37 units of competency for inclusion in LMF02 have been endorsed. These are made up of:

10 new LMF specialist units

27 units imported from other Training Packages (not previously imported to LMF).

Description of changes to LMF02 Version 3

The key changes from LMF02 Version 2 to LMF02 Version 3 are:

- The inclusion of units of competency and qualifications in two new sectors:
 - Interior decoration and design
 - Furniture design and technology

- Revision of the Certificate I in Furnishing to include a pathway for interior decoration and design
- Modification of the Certificate I in Furnishing to remove pathways inserted in error for security screens and grills, and stained glass and lead lighting (these sectors do not have a Certificate I pathway).
-
- **Errors and omissions in Version 2 corrected in Version 3**

The following errors in LMF02v2 have been corrected in the packaging rules and summary mapping tables.

Error	Correction	Qualifications affected
LMFBA2005A – incorrect title	Correct title is: <i>LMFBA2005A Construct roll up and pull down style blinds and awnings</i>	LMF10102, 21008 and 31808
BSBSMG402A BSBSMG403A	Correct codes are: <i>BSBSMB402A</i> <i>BSBSMB403A</i>	LMF40308 and 50308
Unit coded LMFBA2003A in blinds and awnings certificate does not exist	Unit removed from table and number of specialist units to be chosen from Group 2 adjusted to 14. Number from Group 3 adjusted to 6. No change to overall numbers.	LMF31808
LMFFL3001A	LMFFL3001B	LMF31208
CUVDES01B	CUVDES01A	LMF31408
LMFFM2002B	Correct title is <i>Assemble furnishing components</i>	LMF31508
CUVCOR07B LMFGN2002B CUVVSP14B	Listed twice in same group – corrected	LMF31708
TLIA1007C	Unit code should be: <i>TLID1007C</i>	LMF31808
TLID307B	TLID307D	LMF31808

LMF60208	Advanced Diploma of Interior Design
LMF60308	Advanced Diploma of Furniture Design and Technology

Units of competency in this Training Package and their prerequisites

Code	Title	Prerequisite
LMFAH4001A	Recommend security technology, hardware and services	None
LMFAH4002A	Prepare architectural door hardware schedules	None
LMFBA1001A	Construct a basic roll up blind	None
LMFBA2001A	Use blinds and awnings sector hand and power tools	None
LMFBA2002A	Set up, operate and maintain blinds and awnings sector static machines	None
LMFBA2004A	Select and apply blinds and awnings sector hardware and fixings	None
LMFBA2005A	Construct roll up and pull down style blinds and awnings	None
LMFBA2006A	Construct vertical-style blinds	None
LMFBA2007A	Construct textiles for canopy-style awnings	None

LMFBA2008A	Construct plastic and timber Venetian-style blinds	None
LMFBA2009A	Construct aluminium Venetian-style blinds	None
LMFBA2010A	Construct metal louvre and canopy hooded style awnings	None
LMFBA2011A	Construct aluminium roll up style awnings	None
LMFBA3001A	Install interior blinds	None
LMFBA3002A	Install exterior blinds and awnings	None
LMFBA3003A	Install timber shutters	None
LMFBA3004A	Construct folding arm style awnings	None
LMFBA3005A	Construct framework for canopy-style awnings	None
LMFBA3006A	Construct pleated-style blinds	None
LMFBA3007A	Construct wood weave-style blinds	None
LMFBA3008A	Construct pelmets	None
LMFBA3009A	Provide advice to customers on blinds and awnings	None
LMFBA4001A	Assess suitability of blinds or awnings	None
LMFCP2001A	Use coopering sector hand and power tools	None
LMFCP2002A	Produce barrels using non-fired processes	None
LMFCP3001A	Apply product and material knowledge to coopering operations	None
LMFCP3002A	Select and season timber for coopering production	None
LMFCP3003A	Produce barrels using fired processes	None
LMFCP3004A	Maintain and repair barrels	None
LMFDN4001B	Produce drawings from design concepts	None

LMFDN4002B	Produce line and component production drawings	None
LMFDN4003B	Produce patterns and/or templates	None
LMFDN4004B	Design, construct and test jigs	None
LMFDN4005B	Work within a furniture design team	None
LMFDN5001B	Generate and transfer complex computer-aided drawings and specifications	None
LMFDN5006B	Manage furniture design	None
LMFFDT4001A	Apply finishing techniques to custom furniture	None
LMFFDT4002A	Assemble custom furniture	None
LMFFDT4003A	Assess and record the lifecycle of a product	None
LMFFDT4004A	Assess environmental impact of a design	None
LMFFDT4005A	Construct and evaluate furniture prototypes and samples	None
LMFFDT4006A	Establish and maintain a safe furniture making work environment	None
LMFFDT4007A	Establish the design brief	None
LMFFDT4008A	Determine occupational health and safety implications of designs	None
LMFFDT4009A	Prepare and present furniture design information	None
LMFFDT4010A	Produce and evaluate developmental furniture models to scale	None
LMFFDT4011A	Set up, operate and maintain basic static woodworking machines for furniture designs	None
LMFFDT4012A	Produce ideation drawings	None

LMFFDT4013A	Research and select furniture finishes	None
LMFFDT4014A	Research and select furniture materials and technology	None
LMFFDT4015A	Research furniture styles and movements	None
LMFFDT4016A	Select, use and maintain hand tools for the creation of custom furniture	None
LMFFDT4017A	Set up and operate a wood turning lathe to produce off-centre work	None
LMFFDT4018A	Produce templates and jigs for custom made furniture	None
LMFFDT5001A	Apply ergonomics, anthropometrics and proxemic considerations to a product	None
LMFFDT5002A	Apply resources sustainably	None
LMFFDT5003A	Assess and resolve technical integrity of a design	None
LMFFDT5004A	Develop self as a furniture designer	None
LMFFDT5005A	Construct custom furniture using advanced techniques	None
LMFFDT5007A	Design a batch or limited production item of furniture	None
LMFFDT5008A	Design a furniture product using high volume technology services (HVTS) in production	None
LMFFDT5009A	Design a one-off item of furniture	None
LMFFDT5010A	Research and recommend alternative manufacturing processes	None
LMFFDT5011A	Research and recommend machine technology	None
LMFFDT5013A	Evaluate furniture design proposals and concepts	None
LMFFDT6001A	Assess economic impact of a design	None

LMFFDT6002A	Design for mass production	None
LMFFDT6003A	Evaluate and participate in design industry networks	None
LMFFDT6004A	Investigate legal requirements for design	None
LMFFDT6005A	Work collaboratively on a design project	None
LMFFF1001B	Complete a basic furniture finishing product	None
LMFFF2001B	Use furniture finishing sector hand and power tools	None
LMFFF2002B	Dismantle/re-assemble furniture	None
LMFFF2003B	Remove surface coatings	None
LMFFF2004B	Prepare surfaces for finishing	None
LMFFF2005B	Maintain spray equipment and booth	None
LMFFF2006B	Apply surface coatings by spray gun	None
LMFFF2007B	Apply stains, fillers and bleach	None
LMFFF2008B	Apply surface coatings by hand	None
LMFFF3001B	Match and make up colours	None
LMFFF3002B	Set up, operate and maintain mechanical coatings systems	None
LMFFF3003B	Apply plural component coatings	None
LMFFF3004B	Apply soft rubber techniques	None
LMFFF3005B	Enhance finishes	None
LMFFF3006B	Repair and touch up surfaces	None
LMFFF3007B	Apply graining and decorative finishes	None
LMFFF3008B	Apply traditional French polishing techniques	None
LMFFF3009B	Set up, operate and maintain CNC coating	None

	systems	
LMFFL1001A	Complete simple floor covering installation	None
LMFFL2001A	Use flooring technology sector hand and power tools	None
LMFFL2002A	Receive and prepare floor covering materials for installation	None
LMFFL2003A	Select, operate and maintain floor covering cutting machine	None
LMFFL2004A	Moisture test timber and concrete floors	None
LMFFL2101A	Remove existing floor coverings	None
LMFFL2102A	Prepare, select and apply smoothing and patching compounds	None
LMFFL2103A	Select and apply appropriate compounds and additives	None
LMFFL2104A	Prepare concrete sub-floors using wet cleaning methods	None
LMFFL2105A	Select, prepare and apply moisture barriers and damp proof membranes to concrete sub-floors	None
LMFFL2106A	Prepare walls for covering	None
LMFFL2107A	Select, operate and maintain grinding equipment	None
LMFFL2108A	Select, operate and maintain shot blasting equipment	None
LMFFL2109A	Select, operate and maintain demolition equipment	None
LMFFL2110A	Select, operate and maintain scarifying equipment	None
LMFFL2111A	Coarse sand timber flooring	None
LMFFL2112A	Install hard underlays	None

LMFFL2201A	Install carpet cushion/underlays and gripper accessories	None
LMFFL2202A	Install unpatterned tufted and bonded carpet floor coverings	None
LMFFL2203A	Install carpet tiles using standard installation procedures	None
LMFFL2204A	Install unpatterned tufted and bonded carpet floor coverings to stairs	None
LMFFL2301A	Install lay flat vinyl floor coverings	None
LMFFL2302A	Install resilient tiles using standard installation procedures	None
LMFFL2501A	Install laminate and engineered timber flooring	None
LMFFL2502A	Install impact and sound absorption underlay	None
LMFFL2503A	Nail strip timber flooring	None
LMFFL2504A	Install expansion joints	None
LMFFL2505A	Install mouldings and edge trims to timber flooring	None
LMFFL3001B	Plan and cost flooring technology work	None
LMFFL3002A	Establish and maintain a safe flooring technology work environment	None
LMFFL3101A	Inspect sub-floors	None
LMFFL3102A	Prepare, select and apply screed to concrete sub-floors	None
LMFFL3201A	Install carpet tiles using custom designs	None
LMFFL3202A	Install adhesive fixed carpet floor coverings	None
LMFFL3203A	Install commercial carpet floor coverings	None
LMFFL3204A	Install patterned carpet floor coverings	None

LMFFL3205A	Install custom design carpet and decorative finishes	None
LMFFL3206A	Install synthetic textile floor coverings to sports facilities	None
LMFFL3207A	Install carpet floor coverings to custom design stairs	None
LMFFL3301A	Install linoleum floor coverings	None
LMFFL3302A	Install commercial vinyl floor coverings	None
LMFFL3303A	Install resilient floor coverings using custom designs and decorative finishes	None
LMFFL3304A	Install resilient tiles using custom design and decorative finishes	None
LMFFL3305A	Install rubber floor coverings	None
LMFFL3306A	Install resilient sheet to walls	None
LMFFL3307A	Install resilient sheet to bench and countertops	None
LMFFL3308A	Install anti-static resilient floor coverings	None
LMFFL3309A	Install conductive resilient floor coverings	None
LMFFL3310A	Cut and install resilient floor coverings to stairs	None
LMFFL3401A	Mix and apply epoxy and seamless floor coverings	None
LMFFL3402A	Apply solvent based coatings to timber floors	None
LMFFL3403A	Apply water based coatings to timber floors	None
LMFFL3404A	Apply oil based coatings to timber floors	None
LMFFL3405A	Apply composite based coatings	None
LMFFL3406A	Apply emulsion wax coatings	None

LMFFL3407A	Apply stains and fillers	None
LMFFL3501A	Adapt and apply custom designs to timber flooring	None
LMFFL3502A	Cut and install timber flooring to stairs	None
LMFFL3503A	Install direct stick timber flooring	None
LMFFL3504A	Detect defective timber flooring	None
LMFFL3505A	Install block parquetry flooring	None
LMFFL3506A	Install cork tiles	None
LMFFL3507A	Install patterned parquetry	None
LMFFL3508A	Install sheet mosaic parquetry	None
LMFFL3509A	Install sprung timber flooring	None
LMFFL3510A	Install strip timber flooring onto battens	None
LMFFL3511A	Install strip flooring onto plywood	None
LMFFL3512A	Repair timber flooring	None
LMFFL3513A	Maintain timber, Laminate and engineered flooring	None
LMFFL3601A	Fine sand timber flooring	None
LMFFL3602A	Edge sand timber flooring	None
LMFFL3603A	Sand cork flooring	None
LMFFL3604A	Sand and fill parquetry flooring	None
LMFFL3605A	Apply finishes to cork flooring	None
LMFFM1001B	Construct a basic timber furnishing product	None
LMFFM1002B	Operate basic woodworking machines	None
LMFFM2001B	Use furniture making sector hand and power tools	None

LMFFM2002B	Assemble furnishing components	None
LMFFM2003B	Select and apply hardware	None
LMFFM2004B	Apply sheet laminates by hand	None
LMFFM2005B	Join solid timber	None
LMFFM2006B	Hand make timber joints	None
LMFFM2007B	Follow plans to assemble production furniture	None
LMFFM2008B	Bend and form cane	None
LMFFM2009B	Construct cane furniture	None
LMFFM2010B	Set up, operate and maintain basic static machines	None
LMFFM2011B	Apply manufactured board conversion techniques	None
LMFFM2012B	Set up, operate and maintain pressure and clamping machines	None
LMFFM3001B	Construct chair and couch frames	None
LMFFM3002B	Construct furniture using leg and rail method	None
LMFFM3003B	Produce angled and curved furniture using manufactured board	None
LMFFM3004B	Produce angled and curved furniture using solid timber	None
LMFFM3005B	Fabricate custom furniture	None
LMFFM3006B	Install furnishing products	None
LMFFM3007B	Prepare and apply decorative surfaces for furniture	None
LMFFM3010B	Select timbers for furniture production	None
LMFFM3011B	Produce manual and computer-aided production drawings	None

LMFFM3012B	Prepare cutting list from plans and job specifications	None
LMFFM3013B	Measure and draw site layout for manufactured furniture products	None
LMFFM3020B	Set up, operate and maintain sawing machines	None
LMFFM3021B	Set up, operate and maintain drilling machines	None
LMFFM3022B	Set up, operate and maintain joining machines	None
LMFFM3023B	Set up, operate and maintain planing and finishing machines	None
LMFFM3024B	Set up, operate and maintain multi-head planing and moulding machines	None
LMFFM3025B	Set up, operate and maintain routing and shaping machines	None
LMFFM3026B	Set up, operate and maintain mechanical wood turning lathes	None
LMFFM3027B	Set up, operate and maintain automated edge banding machines	None
LMFFM3028B	Fabricate synthetic solid surface products	None
LMFFM3030B	Set up, operate and maintain CNC sizing machines	None
LMFFM3031B	Set up, operate and maintain CNC machining and processing centres	None
LMFFM3032B	Produce and maintain cutting tools	None
LMFFM3033B	Construct jigs and fixtures	None
LMFFM4005A	Hand carve wood to custom design	None
LMFFM4006A	Construct joints for custom furniture	None
LMFFM4007A	Produce curved and shaped components for custom furniture	None

LMFFM4008A	Produce timber veneered components for custom furniture	None
LMFFT4001B	Coordinate on-site installation of furnishing products	None
LMFFT4002B	Customise stock lines	None
LMFFT4003B	Organise production processes	None
LMFFT4004B	Establish and monitor production inventory requirements	None
LMFFT4005B	Install and commission CNC software	None
LMFFT4006B	Construct prototypes and samples	None
LMFFT4007B	Sample, inspect and test products to specifications	None
LMFFT4008B	Interpret and use workplace information	None
LMFFT4009B	Match furnishing style/materials to customer requirements	None
LMFFT4010B	Identify and calculate production costs	None
LMFFT4011B	Purchase materials and consumables	None
LMFFT4012B	Prepare a tender submission	None
LMFFT5001B	Evaluate and select production materials and equipment	None
LMFFT5002B	Establish and develop production processes and area layout	None
LMFFT5003B	Manage installation and commissioning of equipment	None
LMFFT5004B	Develop and document procedures and specifications	None
LMFFT5005B	Organise enterprise maintenance programs	None
LMFFT5006B	Plan production	None
LMFFT5010B	Optimise CNC operations	None

LMFFT5011B	Develop, trial and evaluate prototypes	None
LMFFT5012B	Determine production feasibility of designs	None
LMFFT5013B	Develop products and related processes	None
LMFFT5014B	Establish and monitor business information systems	None
LMFFT5015B	Establish and implement contracts for external goods or services	None
LMFFT5016B	Establish customer contracts	None
LMFFT6001B	Research and evaluate products, materials and processes	None
LMFGG1001B	Complete a basic glass and glazing project	None
LMFGG2001B	Use glass and glazing sector hand and power tools	None
LMFGG2002B	Apply First Aid	None
LMFGG2003B	Operate glass freefall rack and table	None
LMFGG2004B	Process thin glass by hand	None
LMFGG2005B	Move glass sheets by hand	None
LMFGG2006B	Move single glass sheets by mechanical means	None
LMFGG2007B	Process glass by basic machines	None
LMFGG2008B	Glaze/re-glaze residential windows and doors	None
LMFGG2009B	Fabricate and assemble metal frames	None
LMFGG2010B	Fabricate and install insect and security screens	None
LMFGG3001B	Store and handle glass	None
LMFGG3002B	Assess glass and glazing requirements	None

LMFGG3003B	Move block/bulk glass sheet by mechanical means	None
LMFGG3004B	Process thick glass by hand	None
LMFGG3005B	Process glass by semi-automatic and automatic machines	None
LMFGG3006B	Apply film to glass	None
LMFGG3007B	Form glass	None
LMFGG3008B	Apply patterns and designs to glass	None
LMFGG3009B	Set up and operate glass laminating equipment	None
LMFGG3010B	Set up and operate glass toughening equipment	None
LMFGG3011B	Set up and operate glass silvering equipment	None
LMFGG3012B	Set up and operate insulated glass unit manufacturing equipment	None
LMFGG3013B	Construct and repair leadlight panels	None
LMFGG3014B	Prepare and install mirrors	None
LMFGG3015B	Fabricate and install shower screens and wardrobe doors	None
LMFGG3016B	Fabricate and install residential windows and doors	None
LMFGG3017B	Fabricate and install commercial glazing	None
LMFGG3018B	Prepare and install architectural engineered glazing	None
LMFGG3019B	Conduct commercial and structural glazing	None
LMFGN2002B	Move and store materials and products	None
LMFGN3001B	Read and interpret work documents	None

LMFGN3002B	Estimate and cost job	None
LMFID1001A	Plan the decoration of a simple space	None
LMFID3002A	Source and specify decoration products	None
LMFID3005A	Style a retail display	None
LMFID4001A	Research, analyse and apply colour for interior spaces	None
LMFID4002A	Decorate residential interiors	None
LMFID4003A	Prepare a materials board for client presentation	None
LMFID4004A	Research and recommend furniture and accessories	None
LMFID4005A	Research and recommend soft furnishings for interiors	None
LMFID4006A	Research and recommend hard materials and finishes for interiors	None
LMFID4007A	Identify materials, construction techniques and methods used in building interiors	None
LMFID4008A	Assess interior light and recommend light fittings	None
LMFID4009A	Research architectural styles and movements	None
LMFID4010A	Research interior decoration and design influences	None
LMFID4011A	Determine occupational health and safety implications of interior effects	None
LMFID5001A	Design residential interiors	None
LMFID5002A	Develop a decoration proposal for a complex site	None
LMFID5003A	Evaluate site for interior design brief	None
LMFID5004A	Specify structural elements, systems and	LMFID5003A

	services for interior spaces	
LMFID5005A	Explore and apply creative design methodology to interior space	None
LMFID5006A	Design interior lighting	LMFID4008A
LMFID5007A	Decorate for events	None
LMFID5008A	Design for people with disabilities and the elderly	None
LMFID5009A	Research and recommend colour and applied finishes	LMFID4001A
LMFID5010A	Provide interior styling service	None
LMFID5011A	Specify soft furnishings for complete interior solution	None
LMFID5012A	Research and recommend artwork	None
LMFID5013A	Design for small to medium scale commercial or institutional interiors	None
LMFID5014A	Use CAD applications to complete models and documentation for interior design projects	None
LMFID5015A	Decorate interiors for restoration projects	None
LMFID6001A	Resolve complex spatial design problems through modelling	None
LMFID6002A	Apply 3-D visualisation techniques to represent interior designs	LMFID5014A
LMFID6003A	Design for large scale commercial or institutional interiors	None
LMFID6004A	Design interiors for hospitality environments	None
LMFID6005A	Design for retail interiors	None
LMFID6006A	Design for conservation and restoration projects	None
LMFID6007A	Select and instruct consultants and	None

	contractors	
LMFID6008A	Evaluate design project outcomes	None
LMFID6009A	Produce digital presentations for commercial projects	LMFID5014A
LMFKB2001A	Prepare for cabinet installation	None
LMFKB2002A	Provide assistance in cabinet installation	None
LMFKB3001A	Identify processes in kitchen and bathroom projects	None
LMFKB3002A	Determine requirements for installation of cabinets	None
LMFKB3003A	Check and measure fit of cabinets	None
LMFKB3004A	Conduct on-site adjustments to cabinets and components	None
LMFKB3005A	Fabricate cabinets for the built-in environment	None
LMFKB3006A	Install fitted cabinets and components	None
LMFKB3007A	Provide advice on cabinet design features	None
LMFKB3008A	Identify cabinet construction and installation methods	None
LMFKB4001A	Determine spatial planning considerations for kitchen designs	None
LMFKB4002A	Research, recommend and specify materials, components and finishes for kitchen designs	None
LMFKB4003A	Identify and document services required to support kitchen and bathroom designs	None
LMFKB4004A	Determine spatial planning considerations for bathroom designs	None
LMFKB4005A	Research, recommend and specify materials, components and finishes for bathroom designs	None

LMFKB4006A	Prepare quotation and contract documentation for design project	None
LMFKB4007A	Design ancillary residential cabinetry	None
LMFKB4008A	Determine layout for laundry components	None
LMFMB1001B	Complete a basic mattress and base product	None
LMFMB2001B	Use mattress and base sector hand and power tools	None
LMFMB2002B	Prepare and assemble base unit	None
LMFMB2003B	Assemble mattress components	None
LMFMB2004B	Cut mattress and base fabrics	None
LMFMB3001B	Assemble springs for mattresses	None
LMFMB3002B	Make springs for mattresses and bases	None
LMFMB3003B	Set up, operate and maintain a tape edging machine	None
LMFMB3004B	Set up, operate and maintain a quilting machine	None
LMFMI3001A	Assemble instrument components	None
LMFMI3002A	Construct and apply decorative treatments and finishes to musical instruments	None
LMFMI3003A	Manufacture acoustic guitars	None
LMFMI3004A	Manufacture brass instruments	None
LMFMI3005A	Manufacture electric guitars	None
LMFMI3006A	Manufacture percussion instruments	None
LMFMI3007A	Manufacture special stringed instruments	None
LMFMI3008A	Manufacture stringed instruments	None
LMFMI3009A	Repair brass instruments	None

LMFMI3010A	Repair percussion instruments	None
LMFMI3011A	Repair woodwind instruments	None
LMFMI4001A	Repair acoustic guitars	None
LMFMI4002A	Repair electric guitars	None
LMFMI4003A	Repair special stringed instruments	None
LMFMI4004A	Repair stringed instruments	None
LMFPPF1001B	Frame a simple artwork	None
LMFPPF2001B	Use picture framing sector hand and power tools	None
LMFPPF2002B	Cut mouldings to length	None
LMFPPF2003B	Join mouldings	None
LMFPPF2004B	Mount artwork	None
LMFPPF2005B	Cut mat boards	None
LMFPPF2006B	Cut and handle glazing materials for framing	None
LMFPPF2007B	Assemble artwork package (basic)	None
LMFPPF2008B	Recognise and repair finishes of framing materials	None
LMFPPF3001B	Deframe artwork	None
LMFPPF3002B	Decorate mat boards	None
LMFPPF3003B	Set up and operate CNC machines	None
LMFPPF3004B	Prepare textiles for framing	None
LMFPPF3005B	Recognise and handle artwork for framing	None
LMFPPF3006B	Prepare design requirements for framing	None
LMFPPF3007B	Apply frame finishes	None
LMFPPF3008B	Assemble artwork package (complex)	None

LMFPP3009B	Install artwork	None
LMFPP4001B	Design and construct ornamental frames	None
LMFPP4002B	Determine and apply gilding techniques	None
LMFPT3001A	Develop knowledge of piano industry	None
LMFPT3002A	Select materials for piano repair and manufacture	None
LMFPT3003A	Repair upright and grand piano actions, keys and pedals	None
LMFPT3004A	Rebuild upright and grand piano actions, keys and pedals	None
LMFPT3005A	Re-string and re-pin a piano	None
LMFPT3006A	Regulate actions keys and pedals of upright pianos	None
LMFPT3007A	Regulate actions keys and pedals of grand pianos	None
LMFPT3008A	Understand piano tuning theory and basic acoustics	None
LMFPT3009A	Develop control of tuning hammers	None
LMFPT3010A	Pitch raise	LMFPT3007A
LMFPT3011A	Tune unisons aurally to a beatless condition	LMFPT3007A
LMFPT3012A	Tune octaves aurally to appropriate stretch	None
LMFPT3013A	Tune a temperament octave to produce an equally tempered scale	None
LMFPT3014A	Tune a piano aurally and-or electronically within time and accuracy constraints	(LMFPT3007A LMFPT3008A LMFPT3009A LMFPT3010A)
LMFPT3015A	Voice a piano	None
LMFPT3016A	Provide advice to customers on piano	None

	tuning and repair	
LMFSF1001B	Produce basic soft furnishing accessories	None
LMFSF2001B	Cut single layer fabrics	None
LMFSF2002B	Machine sew materials	None
LMFSF2003B	Machine sew using specific techniques	None
LMFSF2004B	Hand sew soft furnishings	None
LMFSF2005B	Operate a steam press	None
LMFSF2006B	Calculate fabric quantities for window coverings	None
LMFSF2007B	Construct unlined curtains/drapes	None
LMFSF2008B	Construct lined curtains/drapes	None
LMFSF2009B	Construct padded pelmets	None
LMFSF2010B	Make up tracks for window coverings	None
LMFSF2011B	Fit and adjust curtain hardware	None
LMFSF2012B	Fit and adjust interior blinds	None
LMFSF2013B	Dress windows	None
LMFSF2014B	Use soft furnishing sector hand and power tools	None
LMFSF3001B	Operate drop cutting machines	None
LMFSF3002B	Use automated curtain pleating equipment	None
LMFSF3003B	Follow patterns to produce window toppings	None
LMFSF3004B	Construct Roman-style blinds	None
LMFSF3005B	Construct Austrian/festoon-style blinds	None
LMFSF3006B	Chemically join textiles	None
LMFSF3007B	Lay out patterns and cut fabrics	None

LMFSF3008B	Measure up and calculate fabric quantities for window coverings	None
LMFSF3009B	Manufacture bedspreads	None
LMFSF3010B	Manufacture bed linen and table cloths	None
LMFSF3011B	Advise customers on interior decoration	None
LMFSF3012B	Install motorised curtains and blinds	None
LMFSF3013B	Follow patterns to produce soft furnishing accessories	None
LMFSF3014B	Provide technical advice to customers	None
LMFSL2001A	Assemble lead light and stained glass components	None
LMFSL3001A	Apply product and material knowledge to lead light and stained glass operations	None
LMFSL3002A	Paint glass	None
LMFSL3003A	Fire glass	None
LMFSL3004A	Protect stained glass and lead lighting	None
LMFSL3005A	Fabricate and install residential lead light and stained glass windows and doors	None
LMFSL3006A	Prepare and install architectural engineered lead light and stained glass	None
LMFSL5001A	Assess conservation requirements	None
LMFSL5002A	Remove heritage lead light and stained glass	None
LMFSL5003A	Conserve heritage lead light and stained glass	None
LMFSL5004A	Install heritage lead light and stained glass	None
LMFSL5005A	Apply innovation in contemporary lead light and stained glass	None
LMFSS2001A	Use security screens and grills hand and	None

	power tools	
LMFSS2002A	Rectify faults in product	None
LMFSS2003A	Prepare product for Australian Standards testing	None
LMFSS2004A	Undertake surface preparation	None
LMFSS3001A	Install and replace security screens and grills	None
LMFSS3002A	Apply patterns and designs to security screens and grills	None
LMFSS3003A	Resolve quality and compliance issues	None
LMFUP1001B	Complete a basic upholstery project	None
LMFUP2001B	Use upholstery sector hand and power tools	None
LMFUP2002B	Fit upholstery components	None
LMFUP2003B	Apply contemporary foundations to upholstered furniture	None
LMFUP2004B	Machine sew upholstery final cover materials (basic)	None
LMFUP2005B	Develop cutting plan and cut single layer upholstery fabric	None
LMFUP2006B	Dismantle/re-assemble furniture for upholstering	None
LMFUP3001B	Apply traditional foundations to upholstered furniture	None
LMFUP3002B	Fit and apply final cover materials to furniture using basic techniques	None
LMFUP3003B	Fit and apply final cover materials to furniture using decorative techniques	None
LMFUP3004B	Lay out patterns and cut leather	None
LMFUP3005B	Machine sew upholstery final cover materials (complex)	None

LMFUP3006B	Fit and apply leather to furniture	None
LMFUP3007B	Manufacture and fit loose covers	None
LMFUP3008B	Apply finishing techniques to upholstered furniture	None
LMFUP3009B	Develop cutting plan and cut multiple layer upholstery fabric	None
LMFUP3010B	Cut, sew and fit skirts to upholstered furniture	None
LMFUP3011B	Cut, sew and fit or fill cushions	None
LMFUP3012B	Apply marine sewing and installation techniques	None
LMFUP3013B	Cut and sew canvas and acrylics	None
LMFUP3014B	Set up, operate and maintain CNC cutting machines	None
BCG2007A	Operate Elevated Work Platforms (EWP)	TBA

Summary mapping – LMF02v6

Changes to units of competency

New units of competency in LMF02v6

Code	Title	Details of change	Comment
LMFAH4001A	Recommend security technology, hardware and services	New unit	
LMFAH4002A	Prepare architectural door hardware schedules	New unit	
MSAENV272B	Participate in environmentally sustainable work practices	New to LMF02	
MSAPMSOHS100A	Follow OHS procedures	New to LMF02. Replaces LMFCR0001B	Equivalent

Updated imported units in LMF02v6

Code	Title	Details of change	Comment
MSAENV472B	Implement and monitor environmentally sustainable work practices	Updated from A version	Equivalent
MSAENV672B	Develop workplace policy and procedures for environmental sustainability	Updated from A version	Equivalent
TLID307E	Handle dangerous goods/hazardous substances	Updated from D version	Equivalent

Units not carried forward in LMF02v6

Code	Title	Details of change	Comment
LMFCR0001B	Follow safe working policies and practices	Replaced by MSAPMOHS100A <i>Follow OHS procedures</i>	Equivalent

Code	Title	Details of change	Comment
LMFCR0001 B	Follow safe working policies and practices	Replaced by MSAPMOHS100A <i>Follow OHS procedures</i>	Equivalent
LMFCR0002 B	Communicate in the workplace	Replaced by MSAPMSUP102A <i>Communicate in the workplace</i>	Equivalent
LMFCR0003 B	Carry out measurements and calculations	Replaced by MSAPMOPS <i>Make measurements</i>	Equivalent
LMFCR0004 B	Work effectively with others	Replaced by MSAPMSUP106A <i>Work in a team</i>	Equivalent

LMF02v6 – ISC upgrade changes to qualifications

All qualifications have been adjusted as follows:

to meet the 1/3 elective and 1/6 importation requirements

to include sustainability units in core and electives

imported units updated

LMF generic units replaced by MSA generic units

Note:

- Where a sustainability unit has been added to the core, one unit has been added to the total required to maintain the same elective choice.
- Overall qualification outcomes are considered equivalent – in all cases, the same units may be selected as chosen previously.

Code	Title	Details of change
LMF10108	Certificate I in Furnishing	Increase from 6 to 7 units - 4 core, 3 electives (1 import added). LMF generic units replaced with MSA generic units.
LMF20202	Certificate II in Furniture Finishing	Increase from 12 to 13 units – 8 core, 5 electives (2 imports). Ratio of core and electives changed to comply with 1/3 elective requirement. LMF generic units replaced with MSA generic units.
LMF20309	Certificate II in Furniture Making	Increase from 12 to 13 units – 5

Code	Title	Details of change
LMF10108	Certificate I in Furnishing	Increase from 6 to 7 units - 4 core, 3 electives (1 import added). LMF generic units replaced with MSA generic units.
		core, 8 electives. (3 imports). LMF generic units replaced with MSA generic units.
LMF20402	Certificate II in Glass and Glazing	Increase from 12 to 13 units – 5 core, 8 electives (3 imports). LMF generic units replaced with MSA generic units.
LMF20502	Certificate II in Mattress and Base Making	Increase from 12 to 13 units – 7 core, 6 electives (5 imports). LMF generic units replaced with MSA generic units.
LMF20602	Certificate II in Picture Framing	Increase from 12 to 13 units – 7 core, 6 electives (3 imports). LMF generic units replaced with MSA generic units.
LMF20702	Certificate II in Soft Furnishing	Increase from 12 to 13 units – 6 core, 7 electives (4 imports). LMF generic units replaced with MSA generic units.
LMF20802	Certificate II in Upholstery	Increase from 13 to 14 units – 7 core, 7 electives (4 imports). LMF generic units replaced with MSA generic units.
LMF20908	Certificate II in Flooring Technology	Increase from 13 to 14 units – 6 core, 8 electives (3 imports). LMF generic units replaced with MSA generic units.
LMF21008	Certificate II in Blinds and Awnings	Increase from 13 to 14 units – 6 core, 8 electives (3 imports). LMF generic units replaced with

		MSA generic units.
LMF31508	Certificate III in Piano Technology	Increase from 24 to 25 units – 5 core, 20 electives (5 imports) LMF generic units replaced with MSA generic units.
LMF31608	Certificate III in Security Screens and Grills	Increase from 26 to 27 units – 15 core, 12 electives (10 imports). LMF generic units replaced with MSA generic units.
LMF31708	Certificate III in Stained Glass and Lead Lighting	Increase from 24-25 – 16 core, 9 electives (7 imports). LMF generic units replaced with MSA generic units.
LMF31808	Certificate III in Blinds and Awnings	Increase from 24 to 25 units – 15 core, 10 electives (5 imports). LMF generic units replaced with MSA generic units.
LMF31908	Certificate III in Interior Decoration (Retail Services)	Increase from 12 to 13 units – 4 core, 9 electives (3 imports). LMF generic units replaced with MSA generic units.
LMF32009	Certificate III in Kitchens and Bathrooms (Client Services)	Increase from 12 to 13 units – 8 core, 5 electives (3 imports) LMF generic units replaced with MSA generic units.
LMF32109	Certificate III in Cabinet Making	Increase from 27 to 28 units – 6 core, 22 electives (5 imports). LMF generic units replaced with MSA generic units.
LMF40202	Certificate IV in Furnishing	Increase from 18 to 19 units – 5

Code	Title	Details of change
LMF10108	Certificate I in Furnishing	Increase from 6 to 7 units - 4 core, 3 electives (1 import added). LMF generic units replaced with MSA generic units.
	Technology	core, 14 electives (5 imports) LMF generic units replaced with MSA generic units. New architectural hardware units added to electives.
LMF40308	Certificate IV in Musical Instrument Making and Repair	Increase from 18 to 19 units – 5 core, 14 electives (4 imports) LMF generic units replaced with MSA generic units.
LMF40408	Certificate IV in Interior Decoration	Increase from 18 to 19 units – 8 core, 11 electives (4 imports). Code for LMFFDT4012A corrected, LMFFDT4015A included in electives.
LMF40508	Certificate IV in Furniture Design and Technology	Increase from 18 to 19 units – 6 core, 13 electives (5 imports)
LMF40609	Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces	No change to number required (20) – 13 core, 7 electives. 1 additional import to bring to the 3 required.
LMF50202	Diploma of Furnishing Technology	30 units required - 3 core, 27 electives (5 imports). Sustainability unit included in core. Reformatted to remove entry requirements and embed Certificate IV units.
LMF50308	Diploma of Stained Glass and Lead Lighting	25 units required - 11 core, 14 electives (5 imports). Sustainability unit included in core. Reformatted to remove entry requirements and embed Certificate IV units.
LMF50408	Diploma of Interior Design and Decoration	Increase from 28 to 29 units – 10 core, 19 electives.

Code	Title	Details of change
LMF10108	Certificate I in Furnishing	Increase from 6 to 7 units - 4 core, 3 electives (1 import added). LMF generic units replaced with MSA generic units.
		4 additional imports to bring to the 5 required.
LMF50508	Diploma of Furniture Design and Technology	Increase from 25 to 26 units – 8 core, 18 electives. 3 additional imports to bring to the 5 required.
LMF60102	Advanced Diploma of Furnishing Management	No change to packaging. Sustainability unit added to electives.
LMF60208	Advanced Diploma of Interior Design	Increase from 38 to 39 units – 14 core, 25 electives. 5 additional imports to bring to the 7 required. Code for LMFFDT4012A corrected, LMFFDT4015A included in electives
LMF60308	Advanced Diploma of Furniture Design and Technology	Increase from 35 to 36 units – 9 core, 27 electives. 5 additional imports to bring to the 7 required.

LMF02v5**New qualification**

LMF40609 Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces

New units of competency in LMF02v5**New units**

LMFKB4001A Determine spatial planning considerations for kitchen designs

LMFKB4002A	Research, recommend and specify materials, components and finishes for kitchen designs
LMFKB4003A	Identify and document services required to support kitchen and bathroom designs
LMFKB4004A	Determine spatial planning considerations for bathroom designs
LMFKB4005A	Research, recommend and specify materials, components and finishes for bathroom designs
LMFKB4006A	Prepare quotation and contract documentation for design project
LMFKB4007A	Design ancillary residential cabinetry
LMFKB4008A	Determine layout for laundry components
BSBSMB403A	Market the small business
BSBCUS402	Address customer needs
BSBSMB406A	Manage small business finances
BSBMKG413A	Promote products and services

LMF05v4

Revised qualification	Change
LMF20309 Certificate II in Furniture Making	Replaces <i>LMF20302</i> . Modification of mandatory requirements and addition of 2 new units – equivalent in overall outcomes.
New qualifications	
LMF32009 Certificate III in Kitchens and Bathrooms (Client Services)	New qualification
LMF32109 Certificate III in Cabinet Making	Replaces <i>LMF30402 Certificate III in Furniture Making (Cabinet Making)</i> . New qualification based on LMF30402. Includes modification of mandatory requirements and addition of new units of competency for a new stream. There is partial equivalence for the furniture pathway.

New units of competency in LMF02v4

New LMF units	
LMFKB2001A	Prepare for cabinet installation
LMFKB2002A	Provide assistance in cabinet installation
LMFKB3001A	Identify processes in kitchen and bathroom projects
LMFKB3002A	Determine requirements for installation of cabinets
LMFKB3003A	Check and measure fit of cabinets
LMFKB3004A	Conduct on-site adjustments to cabinets and components
LMFKB3005A	Fabricate cabinets for the built-in environment
LMFKB3006A	Install fitted cabinets and components
LMFKB3007A	Provide advice on cabinet design features
LMFKB3008A	Identify cabinet construction and installation methods
New imported units	
BSBCCO304A	Provide sales solutions to customers
BSBCMM301A	Process customer complaints
BSBFIA301A	Maintain financial records
CPCCOHS1001A	Work safely in the construction industry
MSACMC210A	Manage the impact of change on own work
MSACMS200A	Apply competitive manufacturing practices
MSACMS201A	Sustain process improvements
MSACMT220A	Apply quick changeover procedures
MSACMT221A	Apply Just in Time (JIT) procedures
MSACMT240A	Apply 5S procedures in a manufacturing environment
MSACMT250A	Monitor process capability
MSACMT251A	Apply quality standards
MSACMT260A	Use planning software systems in manufacturing

MSACMT261A	Use SCADA systems in manufacturing
MSACMT270A	Use sustainable energy practices
MSACMT271A	Use sustainable environmental practices
MSACMT280A	Undertake root cause analysis
MSACMT281A	Contribute to the application of a proactive maintenance strategy
MSAPMOPS363A	Organise on site work
MSAPMPER200B	Work in accordance with an issued permit
MSAPMSUP102A	Communicate in the workplace
MSAPMSUP106A	Work in a team
MSAPMSUP201A	Receive or despatch goods
MSAPMSUP240A	Undertake minor maintenance
MSAPMSUP273A	Handle goods
MSAPMSUP390A	Use structured problem solving tools
SIRXINV002A	Maintain and order stock

Mapping of qualifications in LMF02v3

LMF02 Version 3 against Version 2

LMF10108 Certificate I in Furnishing	LMF10102 Certificate I in Furnishing	Modification – additional pathways.
LMF31908 Certificate III in Interior Decoration (Retail Services)		New qualification
LMF40408 Certificate IV in Interior Decoration		New qualification
LMF40508 Certificate IV in Furniture Design and Technology		New qualification
LMF50408 Diploma of Interior Design and Decoration		New qualification
LMF50508 Diploma of Furniture Design and		New qualification

Technology		
LMF60208 Advanced Diploma of Interior Design		New qualification
LMF60308 Advanced Diploma of Furniture Design and Technology		New qualification
Note		
Imported units have been updated in all qualifications carried forward from Version 2.		

Mapping of LMF02 Version 2 against LMF02 Version 1

LMF02 Version 2 Qualifications	Relationship to LMF02 Version 1 Qualifications
LMF10102 Certificate I in Furnishing	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF20202 Certificate II in Furniture Finishing	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF20302 Certificate II in Furniture Making	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF20402 Certificate II in Glass and Glazing	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF20502 Certificate II in Mattress and Base Making	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF20602 Certificate II in Picture Framing	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF20702 Certificate II in Soft Furnishing	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated. Qualification rules modified to comply with packaging protocols
LMF20802 Certificate II in	Clarified and reformatted for NTIS compliance,

Upholstery	employability skills components added and imported units updated.
LMF20908 Certificate II in Flooring Technology	New qualification. Replaces LMF20102 Certificate II in Floor Covering and Finishing but is not equivalent.
LMF21008 Certificate II in Blinds and Awnings	New qualification
LMF21108 Certificate II in Security Screens and Grills	New qualification
LMF21208 Certificate II in Stained Glass and Lead Lighting	New qualification
LMF21308 Certificate II in Coopering	New qualification
LMF30202 Certificate III in Furniture Finishing	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF30302 Certificate III in Furniture Making	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF30402 Certificate III in Furniture Making (Cabinet Making)	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF30502 Certificate III in Furniture Making (Wood Machining)	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF30602 Certificate III in Glass and Glazing	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF30702 Certificate III in Mattress and Base Making	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF30802 Certificate III in Picture Framing	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF30902 Certificate III in Soft Furnishing	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.

	Qualification rules modified to comply with packaging protocols.
LMF31002 Certificate III in Upholstery	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF31102 Certificate III in Production Upholstery	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF31208 Certificate III in Flooring Technology	New qualification. Replaces LMF30102 Certificate III in Floor Covering and Finishing but is not equivalent.
LMF31308 Certificate III in Coopering	New qualification
LMF31408 Certificate III in Musical Instrument Making and Repair	New qualification
LMF31508 Certificate III in Piano Technology	New qualification
LMF31608 Certificate III in Security Screens and Grills	New qualification
LMF31708 Certificate III in Stained Glass and Lead Lighting	New qualification
LMF31808 Certificate III in Blinds and Awnings	New qualification
LMF40202 Certificate IV in Furnishing Technology	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF40308 Certificate IV in Musical Instrument Making and Repair	New qualification
LMF50202 Diploma of Furnishing Technology	Clarified and reformatted for NTIS compliance, employability skills components added and imported units updated.
LMF50308 Diploma of Stained Glass and Lead Lighting	New qualification
LMF60102 Advanced Diploma of Furnishing Management	Clarified and reformatted for NTIS compliance, employability skills components added and imported

units updated.

Mapping of units of competency - LMF02v3 to LMF02v2

LMFID1001A Plan the decoration of a simple space	New unit
LMFID3002A Source and specify decoration products	New unit
LMFID3005A Style a retail display	New unit
LMFID4001A Research, analyse and apply colour for interior spaces	New unit
LMFID4002A Decorate residential interiors	New unit
LMFID4003A Prepare a materials board for client presentation	New unit
LMFID4004A Research and recommend furniture and accessories	New unit
LMFID4005A Research and recommend soft furnishings for interiors	New unit
LMFID4006A Research and recommend hard materials and finishes for interiors	New unit
LMFID4007A Identify materials, construction techniques and methods used in building interiors	New unit
LMFID4008A Assess interior light and recommend light fittings	New unit
LMFID4009A Research architectural styles and movements	New unit
LMFID4010A Research interior decoration and design influences	New unit
LMFID4011A Determine occupational health and safety implications of interior effects	New unit
LMFID5001A Design residential interiors	New unit
LMFID5002A Develop a decoration proposal for a complex site	New unit
LMFID5003A Evaluate site for interior design brief	New unit
LMFID5004A Specify structural elements, systems and services for interior spaces	New unit
LMFID5005A Explore and apply creative design methodology to	New unit

interior space

LMFID5006A Design interior lighting	New unit
LMFID5007A Decorate for events	New unit
LMFID5008A Design for people with disabilities and the elderly	New unit
LMFID5009A Research and recommend colour and applied finishes	New unit
LMFID5010A Provide interior styling service	New unit
LMFID5011A Specify soft furnishings for complete interior solution	New unit
LMFID5012A Research and recommend artwork	New unit
LMFID5013A Design for small to medium scale commercial or institutional interiors	New unit
LMFID5014A Use CAD applications to complete models and documentation for interior design projects	New unit
LMFID5015A Decorate interiors for restoration projects	New unit
LMFID6001A Resolve complex spatial design problems through modelling	New unit
LMFID6002A Apply 3-D visualisation techniques to represent interior designs	New unit
LMFID6003A Design for large scale commercial or institutional interiors	New unit
LMFID6004A Design interiors for hospitality environments	New unit
LMFID6005A Design for retail interiors	New unit
LMFID6006A Design for conservation and restoration projects	New unit
LMFID6007A Select and instruct consultants and contractors	New unit
LMFID6008A Evaluate design project outcomes	New unit
LMFID6009A Produce digital presentations for commercial projects	New unit
LMFFDT4001A Apply finishing techniques to custom furniture	New unit

LMFFDT4002A Assemble custom furniture	New unit
LMFFDT4003A Assess and record the lifecycle of a product	New unit
LMFFDT4004A Assess environmental impact of a design	New unit
LMFFDT4005A Construct and evaluate furniture prototypes and samples	New unit
LMFFDT4006A Establish and maintain a safe furniture making work environment	New unit
LMFFDT4007A Establish the design brief	New unit
LMFFDT4008A Determine occupational health and safety implications of designs	New unit
LMFFDT4009A Prepare and present furniture design information	New unit
LMFFDT4010A Produce and evaluate developmental furniture models to scale	New unit
LMFFDT4011A Set up, operate and maintain basic static woodworking machines for furniture designs	New unit
LMFFDT4012A Produce ideation drawings	New unit
LMFFDT4013A Research and select furniture finishes	New unit
LMFFDT4014A Research and select furniture materials and technology	New unit
LMFFDT4015A Research furniture styles and movements	New unit
LMFFDT4016A Select, use and maintain hand tools for the creation of custom furniture	New unit
LMFFDT4017A Set up and operate a wood turning lathe to produce off-centre work	New unit
LMFFDT4018A Produce templates and jigs for custom made furniture	New unit
LMFFDT5001A Apply ergonomics, anthropometrics and proxemic considerations to a product	New unit
LMFFDT5002A Apply resources sustainably	New unit
LMFFDT5003A Assess and resolve technical integrity of a design	New unit

LMFFDT5004A Develop self as a furniture designer	New unit
LMFFDT5005A Construct custom furniture using advanced techniques	New unit
LMFFDT5007A Design a batch or limited production item of furniture	New unit
LMFFDT5008A Design a furniture product using high volume technology services (HVTs) in production	New unit
LMFFDT5009A Design a one-off item of furniture	New unit
LMFFDT5010A Research and recommend alternative manufacturing processes	New unit
LMFFDT5011A Research and recommend machine technology	New unit
LMFFDT5013A Evaluate furniture design proposals and concepts	New unit
LMFFDT6001A Assess economic impact of a design	New unit
LMFFDT6002A Design for mass production	New unit
LMFFDT6003A Evaluate and participate in design industry networks	New unit
LMFFDT6004A Investigate legal requirements for design	New unit
LMFFDT6005A Work collaboratively on a design project	New unit

New imported units version 3

Training Package source

BCGBC4037A Prepare drawing for heritage works	BCG03 General Construction
BSBADV512A Create an advertising brief	BSB07 Business Services
BSBCRT401A Articulate, present and debate ideas	BSB07 Business Services
BSBCRT402A Collaborate in a creative process	BSB07 Business Services
BSBCRT403A Explore the history and social impact of creativity	BSB07 Business Services
BSBCRT501A Originate and develop concepts	BSB07 Business Services
BSBCRT601A Research and apply concepts and theories of creativity	BSB07 Business Services

BSBDES201A Follow a design process	BSB07 Business Services
BSBDES202A Evaluate the nature of design in a specific industry context	BSB07 Business Services
BSBDES301A Explore the use of colour	BSB07 Business Services
BSBDES302A Explore and apply the creative design process to 2D forms	BSB07 Business Services
BSBDES303A Explore and apply the creative design process to 3D forms	BSB07 Business Services
BSBDES304A Source and apply design industry knowledge	BSB07 Business Services
BSBDES305A Source and apply information on the history and theory of design	BSB07 Business Services
BSBDES401A Generate design solutions	BSB07 Business Services
BSBDES403A Develop and extend design skills and practice	BSB07 Business Services
BSBDES502A Establish, negotiate and refine a design brief	BSB07 Business Services
BSBDES601A Manage design realisation	BSB07 Business Services
BSBDES602A Research global design trends	BSB07 Business Services
BSBMGT402A Implement operational plan	BSB07 Business Services
BSBMKG501B Identify and evaluate marketing opportunities	BSB07 Business Services
BSBMKG605B Evaluate international marketing opportunities	BSB07 Business Services
BSBMKG608A Develop organisational marketing objectives	BSB07 Business Services
BSBMKG609A Develop a marketing plan	BSB07 Business Services
BSBPMG510A Manage projects	BSB07 Business Services
BSBWOR204A Use business technology	BSB07 Business Services
CUFANM302A Create 3D animations	CUF07 Screen and Media
CUFANM303A Create digital 3D models	CUF07 Screen and Media
CUFANM502A Create digital 3D environments	CUF07 Screen and Media
CUFDIG303A Produce and prepare photo images	CUF07 Screen and Media

CUFDIG304A Create visual design components	CUF07 Screen and Media
CUFDIG507A Design digital simulations	CUF07 Screen and Media
CUVCRS03B Produce computer-aided drawings	CUV03 Visual Arts, Craft & Design
CUVCRS04B Produce technical drawings	CUV03 Visual Arts, Craft & Design
CUVDSP11B Research and apply techniques for illustrative work	CUV03 Visual Arts, Craft & Design
MEM15001B Perform basic statistical quality control	MEM05 Metal and Engineering
MEM16006A Organise and communicate information	MEM05 Metal and Engineering
MEM16007A Work with others in a manufacturing, engineering or related environment	MEM05 Metal and Engineering
MEM16008A Interact with computing technology	MEM05 Metal and Engineering
MEM16013A Operate in a self directed team	MEM05 Metal and Engineering
MEM30001A Use computer aided drafting systems to product basic engineering drawings	MEM05 Metal and Engineering
MEM30004A Use CAD to create and display 3D models	MEM05 Metal and Engineering
MEM30024A Participate in quality assurance techniques	MEM05 Metal and Engineering
MSACMC614A Develop a communications strategy to support production	MSA07 Manufacturing
MSACMS601A Analyse and map a value chain	MSA07 Manufacturing
MSACMS602A Manage a value chain	MSA07 Manufacturing
MSACMS603A Develop manufacturing related business plans	MSA07 Manufacturing
MSACMT230A Apply cost factors to work practices	MSA07 Manufacturing
MSACMT430A Improve cost factors in work practices	MSA07 Manufacturing

MSACMT450A Undertake process capability improvements	MSA07 Manufacturing
MSACMT452A Apply statistics to processes in manufacturing	MSA07 Manufacturing
MSACMT630A Optimise cost of product	MSA07 Manufacturing
MSACMT631A Undertake value analysis of product costs in terms of customer requirements	MSA07 Manufacturing
MSACMT650A Determine and improve process capability	MSA07 Manufacturing
MSACMT661A Determine and establish information collection requirements and processes	MSA07 Manufacturing
MSACMT675A Facilitate the development of a new product	MSA07 Manufacturing
MSAENV472A Implement and monitor environmentally sustainable work practices	MSA07 Manufacturing
MSAENV672A Develop workplace policy and procedures for sustainability	MSA07 Manufacturing
MSAPMOHS200A Work safely	MSA07 Manufacturing
PSPPROC602A Direct the management of contracts	PSP04 Public Sector
SIRRMER009A Produce perspective drawings, plans and elevations	SIR07 Retail Services
SIRRMER020A Create and implement exhibition space	SIR07 Retail Services
SIRRRPK010A Recommend home and home improvement products and services	SIR07 Retail Services
SIRXSL004A Build relationships with customers	SIR07 Retail Services

Units in LMF02 Version 2

Relationship to units in LMF02 Version 1

LMFCR0001B	Follow safe working policies and practices	Reformatted with Employability skills statement added
LMFCR0002B	Communicate in the workplace	Reformatted with ES added
LMFCR0003B	Carry out measurements and calculations	Reformatted with ES added
LMFCR0004B	Work effectively with others	Reformatted with ES added
LMFGN2002B	Move and store materials and products	Reformatted with ES added
LMFGN3001B	Read and interpret work documents	Reformatted with ES added
LMFGN3002B	Estimate and cost job	Reformatted with ES added
LMFDN4001B	Produce drawings from design concepts	Reformatted with ES added
LMFDN4002B	Produce line and component production drawings	Reformatted with ES added
LMFDN4003B	Produce patterns and/or templates	Reformatted with ES added
LMFDN4004B	Design, construct and test jigs	Reformatted with ES added
LMFDN4005B	Work within a furniture design team	Reformatted with ES added
LMFDN5001B	Generate and transfer complex computer-aided drawings and specifications	Reformatted with ES added
LMFDN5006B	Manage furniture design	Reformatted with ES added
LMFFT4001B	Coordinate on-site installation of furnishing products	Reformatted with ES added
LMFFT4002B	Customise stock lines	Reformatted with ES added
LMFFT4003B	Organise production processes	Reformatted with ES added
LMFFT4004B	Establish and monitor production inventory requirements	Reformatted with ES added
LMFFT4005B	Install and commission CNC software	Reformatted with ES added
LMFFT4006B	Construct prototypes and samples	Reformatted with ES added
LMFFT4008B	Sample, inspect and test products to specifications	Reformatted with ES added
LMFFT4008B	Interpret and use workplace information	Reformatted with ES added

LMFFT4009B	Match furnishing style/materials to customer requirements	Reformatted with ES added
LMFFT4010B	Identify and calculate production costs	Reformatted with ES added
LMFFT4011B	Purchase materials and consumables	Reformatted with ES added
LMFFT4012B	Prepare a tender submission	Reformatted with ES added
LMFFT5001B	Evaluate and select production materials and equipment	Reformatted with ES added
LMFFT5002B	Establish and develop production processes and area layout	Reformatted with ES added
LMFFT5003B	Manage installation and commissioning of equipment	Reformatted with ES added
LMFFT5004B	Develop and document procedures and specifications	Reformatted with ES added
LMFFT5005B	Organise enterprise maintenance programs	Reformatted with ES added
LMFFT5006B	Plan production	Reformatted with ES added
LMFFT5010B	Optimise CNC operations	Reformatted with ES added
LMFFT5011B	Develop, trial and evaluate prototypes	Reformatted with ES added
LMFFT5012B	Determine production feasibility of designs	Reformatted with ES added
LMFFT5013B	Develop products and related processes	Reformatted with ES added
LMFFT5014B	Establish and monitor business information systems	Reformatted with ES added
LMFFT5015B	Establish and implement contracts for external goods or services	Reformatted with ES added
LMFFT5016B	Establish customer contracts	Reformatted with ES added
LMFFT6001B	Research and evaluate products, materials and processes	Reformatted with ES added
LMFFF1001B	Complete a basic furniture finishing product	Reformatted with ES added
LMFFF2001B	Use furniture finishing sector hand and power tools	Reformatted with ES added
LMFFF2002B	Dismantle/re-assemble furniture	Reformatted with ES added

LMFFF2003B	Remove surface coatings	Reformatted with ES added
LMFFF2004B	Prepare surfaces for finishing	Reformatted with ES added
LMFFF2005B	Maintain spray equipment and booth	Reformatted with ES added
LMFFF2006B	Apply surface coatings by spray gun	Reformatted with ES added
LMFFF2007B	Apply stains, fillers and bleach	Reformatted with ES added
LMFFF2008B	Apply surface coatings by hand	Reformatted with ES added
LMFFF3001B	Match and make up colours	Reformatted with ES added
LMFFF3002B	Set up, operate and maintain mechanical coatings systems	Reformatted with ES added
LMFFF3003B	Apply plural component coatings	Reformatted with ES added
LMFFF3004B	Apply soft rubber techniques	Reformatted with ES added
LMFFF3005B	Enhance finishes	Reformatted with ES added
LMFFF3006B	Repair and touch up surfaces	Reformatted with ES added
LMFFF3007B	Apply graining and decorative finishes	Reformatted with ES added
LMFFF3008B	Apply traditional French polishing techniques	Reformatted with ES added
LMFFF3009B	Set up, operate and maintain CNC coating systems	Reformatted with ES added
LMFFM1001B	Construct a basic timber furnishing product	Reformatted with ES added
LMFFM1002B	Operate basic woodworking machines	Reformatted with ES added
LMFFM2001B	Use furniture making sector hand and power tools	Reformatted with ES added
LMFFM2002B	Assemble furnishing components	Reformatted with ES added
LMFFM2003B	Select and apply hardware	Reformatted with ES added
LMFFM2004B	Apply sheet laminates by hand	Reformatted with ES added
LMFFM2005B	Join solid timber	Reformatted with ES added
LMFFM2006B	Hand make timber joints	Reformatted with ES added
LMFFM2007B	Follow plans to assemble production furniture	Reformatted with ES added

LMFFM2008B	Bend and form cane	Reformatted with ES added
LMFFM2009B	Construct cane furniture	Reformatted with ES added
LMFFM2010B	Set up, operate and maintain basic static machines	Reformatted with ES added
LMFFM2011B	Apply manufactured board conversion techniques	Reformatted with ES added
LMFFM2012B	Set up, operate and maintain pressure and clamping machines	Reformatted with ES added
LMFFM3001B	Construct chair and couch frames	Reformatted with ES added
LMFFM3002B	Construct furniture using leg and rail method	Reformatted with ES added
LMFFM3003B	Produce angled and curved furniture using manufactured board	Reformatted with ES added
LMFFM3004B	Produce angled and curved furniture using solid timber	Reformatted with ES added
LMFFM3005B	Fabricate custom furniture	Reformatted with ES added
LMFFM3006B	Install furnishing products	Reformatted with ES added
LMFFM3007B	Prepare and apply decorative surfaces for furniture	Reformatted with ES added
LMFFM3010B	Select timbers for furniture production	Reformatted with ES added
LMFFM3011B	Produce manual and computer-aided production drawings	Reformatted with ES added
LMFFM3012B	Prepare cutting list from plans and job specifications	Reformatted with ES added
LMFFM3013B	Measure and draw site layout for manufactured furniture products	Reformatted with ES added
LMFFM3020B	Set up, operate and maintain sawing machines	Reformatted with ES added
LMFFM3021B	Set up, operate and maintain drilling machines	Reformatted with ES added
LMFFM3022B	Set up, operate and maintain joining machines	Reformatted with ES added
LMFFM3023B	Set up, operate and maintain planing and finishing machines	Reformatted with ES added

LMFFM3024B	Set up, operate and maintain multi-head planing and moulding machines	Reformatted with ES added
LMFFM3025B	Set up, operate and maintain routing and shaping machines	Reformatted with ES added
LMFFM3026B	Set up, operate and maintain mechanical wood turning lathes	Reformatted with ES added
LMFFM3027B	Set up, operate and maintain automated edge banding machines	Reformatted with ES added
LMFFM3028B	Fabricate synthetic solid surface products	Reformatted with ES added
LMFFM3030B	Set up, operate and maintain CNC sizing machines	Reformatted with ES added
LMFFM3031B	Set up, operate and maintain CNC machining and processing centres	Reformatted with ES added
LMFFM3032B	Produce and maintain cutting tools	Reformatted with ES added
LMFFM3033B	Construct jigs and fixtures	Reformatted with ES added
LMFFM4005A	Hand carve wood to custom design	New unit
LMFFM4006A	Construct joints for custom furniture	New unit
LMFFM4007A	Produce curved and shaped components for custom furniture	New unit
LMFFM4008A	Produce timber veneered components for custom furniture	New unit
LMFGG1001B	Complete a basic glass and glazing project	Reformatted with ES added
LMFGG2001B	Use glass and glazing sector hand and power tools	Reformatted with ES added
LMFGG2002B	Apply First Aid	Reformatted with ES added
LMFGG2003B	Operate glass freefall rack and table	Reformatted with ES added
LMFGG2004B	Process thin glass by hand	Reformatted with ES added
LMFGG2005B	Move glass sheets by hand	Reformatted with ES added
LMFGG2006B	Move single glass sheets by mechanical means	Reformatted with ES added
LMFGG2007B	Process glass by basic machines	Reformatted with ES added

LMFGG2008B	Glaze/reglaze residential windows and doors	Reformatted with ES added
LMFGG2009B	Fabricate and assemble metal frames	Reformatted with ES added
LMFGG2010B	Fabricate and install insect and security screens	Reformatted with ES added
LMFGG3001B	Store and handle glass	Reformatted with ES added
LMFGG3002B	Assess glass and glazing requirements	Reformatted with ES added
LMFGG3003B	Move block/bulk glass sheet by mechanical means	Reformatted with ES added
LMFGG3004B	Process thick glass by hand	Reformatted with ES added
LMFGG3005B	Process glass by semi-automatic and automatic machines	Reformatted with ES added
LMFGG3006B	Apply film to glass	Reformatted with ES added
LMFGG3007B	Form glass	Reformatted with ES added
LMFGG3008B	Apply patterns and designs to glass	Reformatted with ES added
LMFGG3009B	Set up and operate glass laminating equipment	Reformatted with ES added
LMFGG3010B	Set up and operate glass toughening equipment	Reformatted with ES added
LMFGG3011B	Set up and operate glass silvering equipment	Reformatted with ES added
LMFGG3012B	Set up and operate insulated glass unit manufacturing equipment	Reformatted with ES added
LMFGG3013B	Construct and repair leadlight panels	Reformatted with ES added
LMFGG3014B	Prepare and install mirrors	Reformatted with ES added
LMFGG3015B	Fabricate and install shower screens and wardrobe doors	Reformatted with ES added
LMFGG3016B	Fabricate and install residential windows and doors	Reformatted with ES added
LMFGG3017B	Fabricate and install commercial glazing	Reformatted with ES added
LMFGG3018B	Prepare and install architectural engineered glazing	Reformatted with ES added

LMFGG3019B	Conduct commercial and structural glazing	Reformatted with ES added
LMFMB1001B	Complete a basic mattress and base product	Reformatted with ES added
LMFMB2001B	Use mattress and base sector hand and power tools	Reformatted with ES added
LMFMB2002B	Prepare and assemble base unit	Reformatted with ES added
LMFMB2003B	Assemble mattress components	Reformatted with ES added
LMFMB2004B	Cut mattress and base fabrics	Reformatted with ES added
LMFMB3001B	Assemble springs for mattresses	Reformatted with ES added
LMFMB3002B	Make springs for mattresses and bases	Reformatted with ES added
LMFMB3003B	Set up, operate and maintain a tape edging machine	Reformatted with ES added
LMFMB3004B	Set up, operate and maintain a quilting machine	Reformatted with ES added
LMFPPF1001B	Frame a simple artwork	Reformatted with ES added
LMFPPF2001B	Use picture framing sector hand and power tools	Reformatted with ES added
LMFPPF2002B	Cut mouldings to length	Reformatted with ES added
LMFPPF2003B	Join mouldings	Reformatted with ES added
LMFPPF2004B	Mount artwork	Reformatted with ES added
LMFPPF2005B	Cut mat boards	Reformatted with ES added
LMFPPF2006B	Cut and handle glazing materials for framing	Reformatted with ES added
LMFPPF2007B	Assemble artwork package (basic)	Reformatted with ES added
LMFPPF2008B	Recognise and repair finishes of framing materials	Reformatted with ES added
LMFPPF3001B	Deframe artwork	Reformatted with ES added
LMFPPF3002B	Decorate mat boards	Reformatted with ES added
LMFPPF3003B	Set up and operate CNC machines	Reformatted with ES added
LMFPPF3004B	Prepare textiles for framing	Reformatted with ES added

LMFPPF3005B	Recognise and handle artwork for framing	Reformatted with ES added
LMFPPF3006B	Prepare design requirements for framing	Reformatted with ES added
LMFPPF3007B	Apply frame finishes	Reformatted with ES added
LMFPPF3008B	Assemble artwork package (complex)	Reformatted with ES added
LMFPPF3009B	Install artwork	Reformatted with ES added
LMFPPF4001B	Design and construct ornamental frames	Reformatted with ES added
LMFPPF4002B	Determine and apply gilding techniques	Reformatted with ES added
LMFSF1001B	Produce basic soft furnishing accessories	Reformatted with ES added
LMFSF2001B	Cut single layer fabrics	Reformatted with ES added
LMFSF2002B	Machine sew materials	Reformatted with ES added
LMFSF2003B	Machine sew using specific techniques	Reformatted with ES added
LMFSF2004B	Hand sew soft furnishings	Reformatted with ES added
LMFSF2005B	Operate a steam press	Reformatted with ES added
LMFSF2006B	Calculate fabric quantities for window coverings	Reformatted with ES added
LMFSF2007B	Construct unlined curtains/drapes	Reformatted with ES added
LMFSF2008B	Construct lined curtains/drapes	Reformatted with ES added
LMFSF2009B	Construct padded pelmets	Reformatted with ES added
LMFSF2010B	Make up tracks for window coverings	Reformatted with ES added
LMFSF2011B	Fit and adjust curtain hardware	Reformatted with ES added
LMFSF2012B	Fit and adjust interior blinds	Reformatted with ES added
LMFSF2013B	Dress windows	Reformatted with ES added
LMFSF2014B	Use soft furnishing sector hand and power tools	Reformatted with ES added
LMFSF3001B	Operate drop cutting machines	Reformatted with ES added
LMFSF3002B	Use automated curtain pleating equipment	Reformatted with ES added

LMFSF3003B	Follow patterns to produce window toppings	Reformatted with ES added
LMFSF3004B	Construct Roman-style blinds	Reformatted with ES added
LMFSF3005B	Construct Austrian/festoon-style blinds	Reformatted with ES added
LMFSF3006B	Chemically join textiles	Reformatted with ES added
LMFSF3007B	Lay out patterns and cut fabrics	Reformatted with ES added
LMFSF3008B	Measure up and calculate fabric quantities for window coverings	Reformatted with ES added
LMFSF3009B	Manufacture bedspreads	Reformatted with ES added
LMFSF3010B	Manufacture bed linen and table cloths	Reformatted with ES added
LMFSF3011B	Advise customers on interior decoration	Reformatted with ES added
LMFSF3012B	Install motorised curtains and blinds	Reformatted with ES added
LMFSF3013B	Follow patterns to produce soft furnishing accessories	Reformatted with ES added
LMFSF3014B	Provide technical advice to customers	Reformatted with ES added
LMFUP1001B	Complete a basic upholstery project	Reformatted with ES added
LMFUP2001B	Use upholstery sector hand and power tools	Reformatted with ES added
LMFUP2002B	Fit upholstery components	Reformatted with ES added
LMFUP2003B	Apply contemporary foundations to upholstered furniture	Reformatted with ES added
LMFUP2004B	Machine sew upholstery final cover materials (basic)	Reformatted with ES added
LMFUP2005B	Develop cutting plan and cut single layer upholstery fabric	Reformatted with ES added
LMFUP2006B	Dismantle/re-assemble furniture for upholstery	Reformatted with ES added
LMFUP3001B	Apply traditional foundations to upholstered furniture	Reformatted with ES added
LMFUP3002B	Fit and apply final cover materials to furniture using basic techniques	Reformatted with ES added

LMFUP3003B	Fit and apply final cover materials to furniture using decorative techniques	Reformatted with ES added
LMFUP3004B	Lay out patterns and cut leather	Reformatted with ES added
LMFUP3005B	Machine sew upholstery final cover materials (complex)	Reformatted with ES added
LMFUP3006B	Fit and apply leather to furniture	Reformatted with ES added
LMFUP3007B	Manufacture and fit loose covers	Reformatted with ES added
LMFUP3008B	Apply finishing techniques to upholstered furniture	Reformatted with ES added
LMFUP3009B	Develop cutting plan and cut multiple layer upholstery fabric	Reformatted with ES added
LMFUP3010B	Cut, sew and fit skirts to upholstered furniture	Reformatted with ES added
LMFUP3011B	Cut, sew and fit or fill cushions	Reformatted with ES added
LMFUP3012B	Apply marine sewing and installation techniques	Reformatted with ES added
LMFUP3013B	Cut and sew canvas and acrylics	Reformatted with ES added
LMFUP3014B	Set up, operate and maintain CNC cutting machines	Reformatted with ES added
LMFFL1001A	Complete simple floor covering installation	Replaces LMFFC1001A
LMFFL2001A	Use flooring technology sector hand and power tools	Replaces LMFFC2001A
LMFFL2002A	Receive and prepare floor covering materials for installation	New unit
LMFFL2003A	Select, operate and maintain floor covering cutting machine	New unit
LMFFL2004A	Moisture test timber and concrete floors	New unit
LMFFL2101A	Remove existing floor coverings	Replaces LMFFC2002A
LMFFL2102A	Prepare, select and apply smoothing and patching compounds	Replaces LMFFC2005A
LMFFL2103A	Select and apply appropriate compounds and additives	Replaces LMFFC2005A

LMFFL2104A	Prepare concrete sub-floors using wet cleaning methods	Replaces LMFFC2005A
LMFFL2105A	Select, prepare and apply moisture barriers and damp proof membranes to concrete sub-floors	Replaces LMFFC2005A
LMFFL2106A	Prepare walls for covering	Replaces LMFFC2005A
LMFFL2107A	Select, operate and maintain grinding equipment	New unit
LMFFL2108A	Select, operate and maintain shot blasting equipment	New unit
LMFFL2109A	Select, operate and maintain demolition equipment	New unit
LMFFL2110A	Select, operate and maintain scarifying equipment	New unit
LMFFL2111A	Coarse sand timber flooring	Replaces LMFFC2004A
LMFFL2112A	Install hard underlays	Replaces LMFFC2003A
LMFFL2201A	Install carpet cushion/underlays and gripper accessories	Replaces LMFFC2006A
LMFFL2202A	Install unpatterned tufted and bonded carpet floor coverings	Replaces LMFFC2007A
LMFFL2203A	Install carpet tiles using standard installation procedures	Replaces LMFFC3002A
LMFFL2204A	Install unpatterned tufted and bonded carpet floor coverings to stairs	Replaces LMFFC3005A
LMFFL2301A	Install lay flat vinyl floor coverings	Replaces LMFFC2008A
LMFFL2302A	Install resilient tiles using standard installation procedures	Replaces LMFFC3011A
LMFFL2501A	Install laminate and engineered timber flooring	Replaces LMFFC2009A
LMFFL2502A	Install impact and sound absorption underlay	New unit
LMFFL2503A	Nail strip timber flooring	New unit
LMFFL2504A	Install expansion joints	New unit

LMFFL2505A	Install mouldings and edge trims to timber flooring	New unit
LMFFL3001A	Plan and cost flooring technology work	New unit. Replaces LMFFC3006A, LMFFC3017A and LMFFC3038A
LMFFL3002A	Establish and maintain a safe flooring technology work environment	New unit
LMFFL3101A	Inspect sub-floors	Replaces LMFFC3001A
LMFFL3102A	Prepare, select and apply screed to concrete sub-floors	Replaces LMFFC2005A
LMFFL3201A	Install carpet tiles using custom designs	Replaces LMFFC3002A
LMFFL3202A	Install adhesive fixed carpet floor coverings	Replaces LMFFC3003A
LMFFL3203A	Install commercial carpet floor coverings	Replaces LMFFC3004A
LMFFL3204A	Install patterned carpet floor coverings	Replaces LMFFC3004A
LMFFL3205A	Install custom design carpet and decorative finishes	Replaces LMFFC3004A
LMFFL3206A	Install synthetic textile floor coverings to sports facilities	New unit
LMFFL3207A	Install carpet floor coverings to custom design stairs	Replaces LMFFC3005A
LMFFL3301A	Install linoleum floor coverings	Replaces LMFFC3010A
LMFFL3302A	Install commercial vinyl floor coverings	Replaces LMFFC3010A
LMFFL3303A	Install resilient floor coverings using custom designs and decorative finishes	Replaces LMFFC3010A
LMFFL3304A	Install resilient tiles using custom design and decorative finishes	Replaces LMFFC3011A
LMFFL3305A	Install rubber floor coverings	Replaces LMFFC3012A
LMFFL3306A	Install resilient sheet to walls	Replaces LMFFC3013A
LMFFL3307A	Install resilient sheet to bench and countertops	Replaces LMFFC3013A

LMFFL3308A	Install anti-static resilient floor coverings	Replaces LMFFC3014A
LMFFL3309A	Install conductive resilient floor coverings	Replaces LMFFC3015A
LMFFL3310A	Cut and install resilient floor coverings to stairs	Replaces LMFFC3016A
LMFFL3401A	Mix and apply epoxy and seamless floor coverings	Replaces LMFFC3025A
LMFFL3402A	Apply solvent based coatings to timber floors	Replaces LMFFC3037A
LMFFL3403A	Apply water based coatings to timber floors	Replaces LMFFC3037A
LMFFL3404A	Apply oil based coatings to timber floors	Replaces LMFFC3037A
LMFFL3405A	Apply composite based coatings	Replaces LMFFC3025A
LMFFL3406A	Apply emulsion wax coatings	New unit
LMFFL3407A	Apply stains and fillers	New unit
LMFFL3501A	Adapt and apply custom designs to timber flooring	New unit
LMFFL3502A	Cut and install timber flooring to stairs	Replaces LMFFC3033A
LMFFL3503A	Install direct stick timber flooring	Replaces LMFFC3032A
LMFFL3504A	Detect defective timber flooring	Replaces LMFFC3001A
LMFFL3505A	Install block parquetry flooring	Replaces LMFFC3030A
LMFFL3506A	Install cork tiles	Replaces LMFFC3031A
LMFFL3507A	Install patterned parquetry	Replaces LMFFC3030A
LMFFL3508A	Install sheet mosaic parquetry	Replaces LMFFC3030A
LMFFL3509A	Install sprung timber flooring	Replaces LMFFC3034A
LMFFL3510A	Install strip timber flooring onto battens	New unit
LMFFL3511A	Install strip flooring onto plywood	New unit
LMFFL3512A	Repair timber flooring	Replaces LMFFC3035A
LMFFL3513A	Maintain timber, laminate and engineered flooring	New unit

LMFFL3601A	Fine sand timber flooring	Replaces	LMFFC3036A
LMFFL3602A	Edge sand timber flooring	New unit	
LMFFL3603A	Sand cork flooring	New unit	
LMFFL3604A	Sand and fill parquetry flooring	New unit	
LMFFL3605A	Apply finishes to cork flooring	New unit	
LMFCP2001A	Use coopering sector hand and power tools	New unit	
LMFCP2002A	Produce barrels using non-fired processes	New unit	
LMFCP3001A	Apply product and material knowledge to coopering operations	New unit	
LMFCP3002A	Select and season timber for coopering production	New unit	
LMFCP3003A	Produce barrels using fired processes	New unit	
LMFCP3004A	Maintain and repair barrels	New unit	
LMFMI3001A	Assemble instrument components	New unit	
LMFMI3002A	Construct and apply decorative treatments and finishes to musical instruments	New unit	
LMFMI3003A	Manufacture acoustic guitars	New unit	
LMFMI3004A	Manufacture brass instruments	New unit	
LMFMI3005A	Manufacture electric guitars	New unit	
LMFMI3006A	Manufacture percussion instruments	New unit	
LMFMI3007A	Manufacture special stringed instruments	New unit	
LMFMI3008A	Manufacture stringed instruments	New unit	
LMFMI3009A	Repair brass instruments	New unit	
LMFMI3010A	Repair percussion instruments	New unit	
LMFMI3011A	Repair woodwind instruments	New unit	
LMFMI4001A	Repair acoustic guitars	New unit	
LMFMI4002A	Repair electric guitars	New unit	

LMFMI4003A	Repair special stringed instruments	New unit
LMFMI4004A	Repair stringed instruments	New unit
LMFPT3001A	Develop knowledge of piano industry	New unit
LMFPT3002A	Select materials for piano repair and manufacture	New unit
LMFPT3003A	Repair upright and grand piano actions, keys and pedals	New unit
LMFPT3004A	Rebuild upright and grand piano actions, keys and pedals	New unit
LMFPT3005A	Re-string and re-pin a piano	New unit
LMFPT3006A	Regulate actions keys and pedals of upright pianos	New unit
LMFPT3007A	Regulate actions keys and pedals of grand pianos	New unit
LMFPT3008A	Understand piano tuning theory and basic acoustics	New unit
LMFPT3009A	Develop control of tuning hammers	New unit
LMFPT3010A	Pitch raise	New unit
LMFPT3011A	Tune unisons aurally to a beatless condition	New unit
LMFPT3012A	Tune octaves aurally to appropriate stretch	New unit
LMFPT3013A	Tune a temperament octave to produce an equally tempered scale	New unit
LMFPT3014A	Tune a piano aurally and-or electronically within time and accuracy constraints	New unit
LMFPT3015A	Voice a piano	New unit
LMFPT3016A	Provide advice to customers on piano tuning and repair	New unit
LMFSS2001A	Use security screens and grills hand and power tools	New unit
LMFSS2002A	Rectify faults in product	New unit

LMFSS2003A	Prepare product for Australian Standards testing	New unit
LMFSS2004A	Undertake surface preparation	New unit
LMFSS3001A	Install and replace security screens and grills	New unit
LMFSS3002A	Apply patterns and designs to security screens and grills	New unit
LMFSS3003A	Resolve quality and compliance issues	New unit
LMFSL2001A	Assemble lead light and stained glass components	New unit
LMFSL3001A	Apply product and material knowledge to lead light and stained glass operations	New unit
LMFSL3002A	Paint glass	New unit
LMFSL3003A	Fire glass	New unit
LMFSL3004A	Protect stained glass and lead lighting	New unit
LMFSL3005A	Fabricate and install residential lead light and stained glass windows and doors	New unit
LMFSL3006A	Prepare and install architectural engineered lead light and stained glass	New unit
LMFSL5001A	Assess conservation requirements	New unit
LMFSL5002A	Remove heritage lead light and stained glass	New unit
LMFSL5003A	Conserve heritage lead light and stained glass	New unit
LMFSL5004A	Install heritage lead light and stained glass	New unit
LMFSL5005A	Apply innovation in contemporary lead light and stained glass	New unit
LMFBA1001A	Construct a basic roll up blind	New unit
LMFBA2001A	Use blinds and awnings sector hand and power tools	New unit
LMFBA2002A	Set up, operate and maintain blinds and awnings sector static machines	New unit
LMFBA2004A	Select and apply blinds and awnings sector	New unit

	hardware & fixings	
LMFBA2005A	Construct roll up and pull down style blinds and awnings	New unit
LMFBA2006A	Construct vertical style blinds	New unit
LMFBA2007A	Construct textiles for canopy-style awnings	New unit
LMFBA2008A	Construct plastic and timber Venetian-style blinds	New unit
LMFBA2009A	Construct aluminium Venetian-style blinds	New unit
LMFBA2010A	Construct metal louvre and canopy hooded style awnings	New unit
LMFBA2011A	Construct aluminium roll up style awnings	New unit
LMFBA3001A	Install interior blinds	New unit
LMFBA3002A	Install exterior blinds and awnings	New unit
LMFBA3003A	Install timber shutters	New unit
LMFBA3004A	Construct folding arm style awnings	New unit
LMFBA3005A	Construct framework for canopy-style awnings	New unit
LMFBA3006A	Construct pleated style-blinds	New unit
LMFBA3007A	Construct wood weave style-blinds	New unit
LMFBA3008A	Construct pelmets	New unit
LMFBA3009A	Provide advice to customers on blinds and awnings	New unit
LMFBA4001A	Assess suitability of blinds or awnings	New unit

Explanation of the review date

The review date (shown on the title page and in the header of each page) indicates when the Training Package is expected to be reviewed in the light of changes such as changing technologies and circumstances. The review date is not an expiry date. Endorsed Training Packages and their components remain current until they are reviewed or replaced.

Overview

What is a Training Package?

A Training Package is an integrated set of nationally endorsed competency standards, assessment guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, recognising and assessing people's skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training which suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Skills Framework?

The National Skills Framework applies nationally, is endorsed by the Ministerial Council for Vocational and Technical Education, and comprises the Australian Quality Training Framework 2010 (AQTF 2010), and Training Packages endorsed by the National Quality Council (NQC).

How are Training Packages developed?

Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained. Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency, and even gain a qualification, without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off-the-job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

Who can deliver and assess using Training Packages?

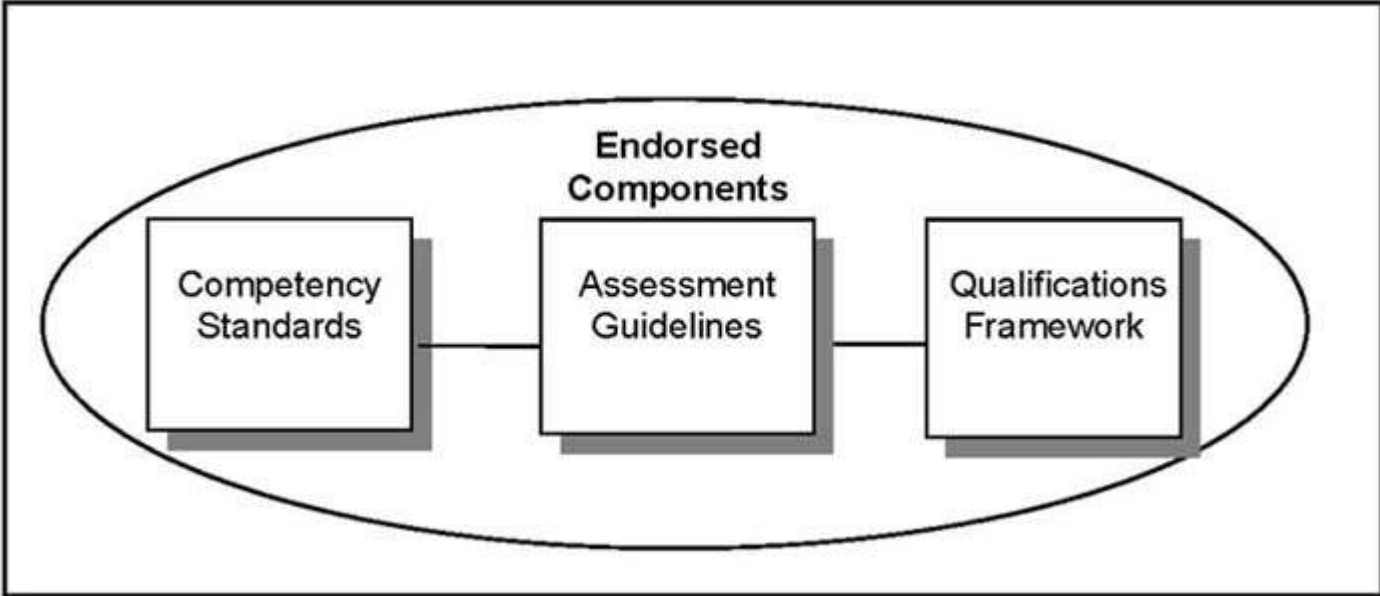

Training and assessment using Training Packages must be conducted by a Registered Training Organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO, as specified in the AQTF 2010.

Training Package Components

Training Packages are made up of mandatory components endorsed by the NQC, and optional support materials.

Training Package Endorsed Components

The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.

Competency Standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment Guidelines

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the AQTF 2010. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

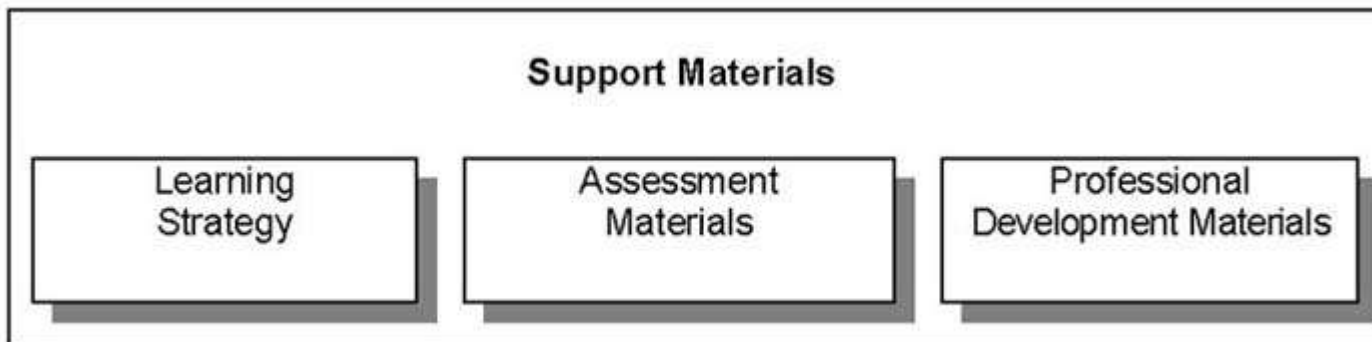

Qualifications Framework

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the "packaging rules". The packaging rules must be followed to ensure the integrity of nationally recognised qualifications issued.

Training Package Support Materials

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.

Training Package support materials are produced "by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and Government agencies.

Where such materials have been quality assured through a process of "noting" by the NQC, they display the following official logo. Noted support materials are listed on the National Training Information Service (NTIS), together with a detailed description and information on the type of product and its availability < www.ntis.gov.au >.

It is not compulsory to submit support materials for noting; any resources that meet the requirements of the Training Package can be used.

Training Package, Qualification and Unit of Competency Codes

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, **and with the code always before the title.**

Training Package Codes

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example LMF02. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

Qualification Codes

Within each Training Package, each qualification has a unique eight-character code, for example LMF10108. Qualification codes are developed as follows:

- the first three letters identify the Training Package;
- the first number identifies the qualification level (noting that, in the qualification titles themselves, arabic numbers are **not** used);
- the next two numbers identify the position in the sequence of the qualification at that level; and
- the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

Unit of Competency Codes

Within each Training Package, each unit of competency has a unique code. Unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package. Unit codes are developed as follows:

- a typical code is made up of 12 characters, normally a mixture of uppercase letters and numbers, as in LMFAH4001A;
- the first three characters signify the Training Package - LMF02 - in the above example and up to eight characters, relating to an industry sector, function or skill area, follow;
- the last character is always a letter and identifies the unit of competency version. An "A" at the end of the code indicates that this is the original unit of competency. "B", or another incremented version identifier means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent; and
- where changes are made that alter the outcome, a new code is assigned and the title is changed.

Training Package, Qualification and Unit of Competency Titles

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

Training Package Titles

The title of each endorsed Training Package is unique and relates the Training Packages broad industry coverage.

Qualification Titles

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- first, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma, Advanced Diploma, Vocational Graduate Certificate, or Vocational Graduate Diploma;
- this is followed by the words "in" for Certificates I to IV, and "of" for Diploma, Advanced Diploma, Vocational Graduate Certificate and Vocational Graduate Diploma;
- then, the industry descriptor, for example Telecommunications; and
- then, if applicable, the occupational or functional stream in brackets, for example (Computer Systems).

For example:

- LMF10108 Certificate I in Furnishing

Unit of Competency Titles

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example:

- LMFAH4001A Recommend security technology, hardware and services

LMF02 development history

LMF02 Version 1

Endorsed in 2002.

LMF02 Version 2

The key changes from LMF02 Version 1 to LMF02 Version 2 are:

- Inclusion of units of competency and qualifications in seven new sectors
- Review of packaging frameworks for Soft Furnishing
- Replacement of Floor Covering and Finishing qualifications with Flooring Technology qualifications
- Inclusion of employability skills and qualification statements
- Reformatting of all units, including addition of mandatory statements, to comply with new DEST requirements
- Reformatting of all qualification frameworks to comply with new DEST requirements.

Rationale for changes to the LMF02 Training Package

Incorporation of Coopering units and qualifications in LMF02 Version 2

A Cooper is a maker and repair of wooden barrels or casks. The trade is authoritatively traced to the production of barrels in Babylon in about 900 B.C. The Coopers Company Guild received its Charter in London in 1501, but records of Coopers Guilds are in existence some 200 years earlier.

The Stage III development requirements for the outstanding Furnishing Training Package components were covered in detail in the February 2003 report titled Stage 3 Furnishing Training Package Feasibility Exercise.

This report recommended the development of a Coopering sector within a new version of the Furnishing Training Package. This is of particular relevance as recently emerging export requirements need to be matched with appropriate specialist skills.

The new Coopering units and qualifications were developed for LMF02 Version 2 to target this skill area.

Incorporation of Flooring Technology units and qualifications in LMF02 Version 2

The review of the Floor Covering (LMF02) training package resulted from concerns expressed by industry practitioners, manufacturers and some providers that the package did not fully reflect the needs of industry in terms of technological advances, realistic workplace applications, flexibility and emerging specialisations.

The review requirement also coincided with a number of other initiatives in the Flooring Industry including:

- The formal launch of the Flooring Industry Initiative in Victoria in June 2005
- The formation and meeting of the most comprehensive national industry flooring group in recent history during July 2005
- The formal recognition of the Flooring Industry as a skills shortage discipline by the Federal Government on 28 March 2006
- The formal launch of the Flooring Industry Initiative in NSW in June 2006.

The LMF02 Floor Covering units and qualifications were upgraded and replaced in LMF02 Version 2 to form the new Flooring Technology units and qualifications.

Expansion of units and qualifications for Furniture Makers

The Stage III development requirements for the outstanding Furnishing Training Package components were covered in detail in the February 2003 report titled Stage 3 Furnishing Training Package Feasibility Exercise.

During the initial stages of development it became clear that the object of this exercise was much broader than the fine woods concept. Fine furniture involves woods and, increasingly, a range of non-timber materials. It was agreed by the expert national Technical Advisory Group that the focus should actually be an advanced furniture maker. This discipline combines the strengths of a highly skilled technical craftsman/artisan with a strong practical applied design component and requisite business skills.

Units and qualifications were developed for LMF02 Version 2 to cover skills at the Certificate IV and Diploma levels for furniture makers.

- *Incorporation of Musical Instrument Making and Repair units and qualifications in LMF02 Version 2*

Musical instrument making is an ancient traditional skill with evidence of this going back many thousand years. In Australia, the bulk of instrument makers and repairers are hobbyists who produce a range of instruments and repair a limited range of instruments within close societies.

There are a relatively small number of professional musical instrument makers and repairers, some of whom have overseas qualifications, who market their products

within Australia and Internationally.

The majority of instrument makers in Australia specialise in those instruments which are wood based such as violins, violas, cellos and guitars. There are also a small number who build percussion instruments.

The Stage III development requirements for the outstanding Furnishing Training Package components were covered in detail in the February 2003 report titled Stage 3 Furnishing Training Package Feasibility Exercise.

This report recommended the development of a Musical Instrument Making and Repair Sector within the Furnishing Training Package.

Units and qualifications were developed for LMF02 Version 2 to cover skills at the Certificate III and Certificate IV levels for musical instrument makers and repairers.

Incorporation of Piano Technician units and qualification in LMF02 Version 2

A piano technician is a tuner and repairer of upright, grand and player pianos. The trade is authoritatively traced to the invention of the pianoforte in Italy in the early 1700s, which is where its name derives. The pianoforte was a far more complicated instrument than the harpsichord and required greater skill in tuning the instrument. Over the next 100 years the modern piano was developed, and this saw an even greater focus on the tuner. The first recorded apprentice was in 1787, with a five year term and continued employment guaranteed. However, workers who just tuned and repaired pianofortes were recorded as working throughout the 1700s.

The Stage III development requirements for the outstanding Furnishing Training Package components were covered in detail in the February 2003 report titled Stage 3 Furnishing Training Package Feasibility Exercise.

Units and qualification were developed for LMF02 Version 2 to cover skills at the Certificate III level for piano technicians.

Incorporation of Security Grills and Screens units and qualifications in LMF02 Version 2

Security Grills and Screens is a significant sector with a potential for an extensive training requirement. It is a sector which is currently in a state of steady growth as domestic and commercial establishments attempt to enhance their security. Increases in insurance premiums and the perception of increasing risk of theft or other crime are the catalysts for this growth. However, the current boom in the building industry also flows on into this sector. Concern was expressed that the lack of regulation and standards and the lack of accredited training allowed 'backyard' operators to participate in the industry with less than glowing results. That public safety is at risk is a significant concern – in addition to keeping offenders out, there is a concern that safe egress from secured premises is possible. It is likely that demand for its product will cause the sector to continue to grow.

Units and qualifications were developed for LMF02 Version 2 to cover skills at the Certificate II and Certificate III levels for the Security Grills and Screens sector.

Incorporation of Stained Glass and Lead Lighting units and qualifications in LMF02 Version 2

Stained Glass and Lead Lighting covers entry, basic requirements and limited tasks at Certificate II. Certificate III covers the notional trade level requiring the production and installation of stained glass and/or lead lighting. There is no legitimate requirement for a Certificate IV as those who operate at this level are narrowly skilled specialists.

The Stage III development requirements for the outstanding Furnishing Training Package components were covered in detail in the February 2003 report titled Stage 3 Furnishing Training Package Feasibility Exercise. The report recommended the development of a Stained Glass and Lead Lighting Sector within the Furnishing Training Package. Units and qualifications were developed for LMF02 Version 2 at the Certificate II and Certificate III levels to cover Stained Glass and Lead Lighting skill outcomes.

Incorporation of Blinds and Awnings units and qualifications in LMF02 Version 2

The Stage III development requirements for the outstanding Furnishing Training Package components were covered in detail in the February 2003 report titled Stage 3 Furnishing Training Package Feasibility Exercise.

This report recommended the development of a Blinds and Awnings Sector within the Furnishing Training Package. Units and qualifications were developed for LMF02 Version 2 at the Certificate II and Certificate III levels to cover skill outcomes in the blinds and awnings sector.

LMF02 Version 3

The key changes from LMF02 Version 2 to LMF Version 3 are:

- The inclusion of units of competency and qualifications in two new sectors:
 - Interior decoration and design
 - Furniture design and technology

The revision of the Certificate I in Furnishing to include interior decoration and design pathways.

In 2003, the then Light Manufacturing ITAB received a report titled *Stage 3 Furnishing Training Package Feasibility Exercise and Interior Decoration Feasibility Project*. This report recommended the development of a Furniture Design sector to meet emerging industry needs and to replace a number of existing accredited State courses.

It was determined that the existing LMF02 Diploma of Furnishing Technology and Advanced Diploma of Furnishing Management met the training needs for technical and management skills for the non-furniture sectors but that new higher level qualifications were required to meet the needs of furniture design and interior decoration and design sectors.

The new units and qualifications have full support of the industry. This development has resulted from industry identified needs and in response to the following evolving trends identified in the MSA Environmental Scan:

- increased requirements for RTOs to comply with Training Packages
- increased recognition of non-formal skills pathways

- attempts to lift overall educational achievement levels.

Development has drawn on the experience and expertise of industry and RTOs to make the changes required by industry and to ensure LMF continues to meet their training and assessment requirements well into the future.

LMF02 Version 4

The kitchens and bathrooms sector is growing in Australia and according to industry representatives now employs more trade qualified cabinet makers than any other sector in the furnishing related industries (industry representatives estimate up to 80%). This reflects a significant shift in the application of furniture making skills from the more traditional skill base in the production of free standing furniture to work with 'fitted' furniture such as that used in kitchens and bathrooms.

MSA identified an industry need for an updating of the Training Package components within the Furnishing Training Package LMF02 in order to more appropriately meet these current skill needs.

Specifically, the industry needs identified and addressed in this project include:

- Review of the currently endorsed Certificate II in Furniture Making and Certificate III in Furniture Making (Cabinet Making) in order to integrate the needs of the kitchen and bathroom sector and remove mandatory requirements that are not necessary to this sector.
- Development of new units of competency to cover current skill gaps in the area of fitted cabinet manufacture and onsite installation in kitchens, bathrooms and other ancillary areas.
- Development of a new qualification and units of competency to cover skills used to support clients in the selection and ordering of kitchens and bathrooms from a showroom environment.

In addition, MSA and industry identified a need for coverage of skills in the design of kitchens and bathrooms. Extensive research and consultation was conducted and drafts of a new qualification and related units of competency were developed. While there was significant support for a new Certificate IV targeting kitchen and bathroom design, a consensus position from industry representatives on the qualification packaging and titling was not achieved by the time the project concluded. However agreement on content at the unit of competency level was achieved. MSA has decided to include further consultation and development work on the proposed Certificate IV qualification in the Furnishing Training Package Redevelopment Project which has recently commenced.

The new components in Version 4 have been developed and validated extensively with industry and RTO representatives. This includes representation from cabinet makers, kitchen and bathroom manufacturers, installers and designers, unions, licensing bodies, RTOs, and industry associations from around Australia.

The project outcomes are qualifications and units of competency that reflect the skill requirements of the kitchens and bathrooms industry and incorporate the latest information on industry practice, gathered directly from enterprises and industry associations.

LMF02 Version 5

The development of new components for the kitchen and bathroom sector was identified as an industry Training Package requirement within MSA's Continuous Improvement Plan for 2008-2009.

The Kitchens and Bathrooms Project commenced in March 2008 and aimed to identify and target the skill needs of this industry sector through an extension of coverage of the Furnishing Training Package LMF02. It was initiated in response to both industry requests and MSA response to the growth of this sector in Australia. MSA appointed Richard Jenkins & Associates as the consultant for the project.

The project resulted in the following qualifications being submitted for endorsement in version 4 of the Furnishing Training Package.

- LMF20309 Certificate II in Furniture Making
- LMF30409 Certificate III in Cabinet Making
- LMF32009 Certificate III in Kitchens and Bathrooms (Client Services)

The Kitchens and Bathrooms project in 2008 also examined the needs of people working as designers of kitchens, bathrooms and other interior spaces. While draft units were developed, agreement on a qualification was not able to be achieved during the MSA Kitchens and Bathrooms project and the finalisation of a design qualification was deferred to the Furnishing Training Package Redevelopment Project which is currently underway.

The kitchens and bathrooms sector is growing in Australia. One indicator according to industry representatives is that the sector now employs more trade qualified cabinet makers than any other sector in the furnishing related industries (industry representatives estimate up to 80%). Another form of growth is that people competent in kitchen and bathroom design, installation and renovation are being recognised by the public as also capable of undertaking similar work in other interior spaces where cabinetry design, installation and renovation is involved. This breadth of capability has been recognised through additional coverage at the unit level and through the title of the qualification now proposed for endorsement.

MSA and industry identified a need for coverage of skills in the design of kitchens and bathrooms and interior spaces as part of the previous Kitchens and Bathrooms project. There has been strong support for a design qualification that recognises the designer's ability to meet customer needs through the ability to combine design skills with detailed knowledge of externally manufactured kitchen and bathroom products and components and the on-site installation and renovation process.

The new Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces now offers national recognition and opportunities for formal training in one of the growth areas of the Furnishing Training Package coverage.

LMF02 Version 6

Two new units of competency for architectural hardware specifying have been developed for inclusion as electives in LMF40202 Certificate IV in Furnishing Technology and for use in Skill Sets related to architectural hardware specifying.

The two new units are:

- LMFAH4001A Recommend security technology, hardware and services
- LMFAH4002A Prepare architectural door hardware schedules

The units have been developed by MSA in response to an increased demand for architectural hardware specifiers in more recent years especially around the need to meet state and federal regulatory requirements

These units are related to the niche area of architectural hardware. This is an important specialist occupational area which involves technical knowledge of door and window locking systems, automatic door closers, hinge arrangements and emergency exiting devices that would be required to meet national standards and building codes. The technical knowledge also encompasses the interpretation of complex building designs and drawings that architects and builders submit as part of quotations.

Architectural hardware specifiers use their technical knowledge to provide advice to clients on product selection and to prepare schedules on architectural hardware products needed for construction projects.

The national Architectural Door Hardware Association which represents over fifty member companies informed MSA that members are having difficulties in recruiting suitably qualified technicians (often known as specifiers). This difficulty is compounded by the difficulty of finding suitable accredited training to support new entrants to architectural hardware. The two new units will address skill areas which this project has identified as not able to be addressed by existing units. These include the development of architectural hardware product knowledge, understanding of relevant industry codes of practice and standards, and the preparation of client briefs.

Overview of the Furnishing Training Package

The furnishing industry has a long and proud history of being an excellent employer and trainer of new entrants to its industry. The industry is highly divergent, containing long-standing occupations such as Cabinet Making, Wood Machining, Polishing, Upholstery and Mattress and Base Making.

In the past 20 years other furnishing occupations have been recognised with structured training, including Floor Finishing and Covering, Glazing, Picture Framing, Soft Furnishing and Interior Decorating. While these occupations represent more significant numbers of people in the industry, furnishing also caters for a number of equally important, yet small sectors and/or emerging industries, such as Piano Tuning and Repair, Musical Instrument Making and Repair, Blinds and Awning, Coopering, Security Screens and Grills, Stained Glass and Lead Lighting.

The furnishing industry is grouped into sub-sectors which define related production techniques or products and various allied manufacturing activities and services. These are described in the Training Package as:

- Flooring Technology
- Furniture Finishing
- Furniture Making
- Glass and Glazing
- Mattress and Base Making
- Picture Framing
- Soft Furnishing
- Upholstery
- Blinds and Awnings
- Coopering
- Stained Glass and Lead Lighting
- Musical Instrument Making and Repair
- Piano Technology
- Security Screens and Grills
- Furnishing Management
- Interior Decoration and Design
- Furniture Design and Technology.

The size of the furnishing industry is most surprising as it is commonly regarded as a small industry. While the enterprises that form the industry are predominantly small businesses (95 per cent of enterprises employing between one and 20 people), the number of enterprises and employees clearly demonstrate that it should be more accurately viewed as a medium-sized industry.

The industry represents 3.2 per cent of gross domestic product equating to approximately \$49 billion turnover and employs 3.1 per cent of the Australian workforce. The workforce of well in excess of 100,000 (full-time equivalents) is employed in small business enterprises across Australia. This picture of the industry is rarely portrayed due to statistical collections by the Australian Bureau of Statistics

attributing much of the furnishing industry turnover and employment, particularly in the growing manufactured board sector, to general manufacturing and related services.

An Industry Undergoing Change

The Australian furnishing industry, or at least major parts of it are at the crucial point along the evolutionary path. Technology advances in materials and a more discerning and demanding client group are impacting on the market place. There is an increased demand for unique and locally designed products.

At the other end of the spectrum there are increasing quantities of mass-produced third-world imports being marketed by prominent suppliers. This trend can only be arrested if the Australian industry can find ways to produce stock lines which can compete in terms of quality and cost.

The need for an appropriately skilled and responsive workforce has never been so evident as it is now.

Directions for Furnishing Training

The Furnishing Training Package is designed to assist enterprises and Registered Training Organisations in developing the skills required to support sustained industry success within national and global markets.

This will require a fundamental shift in thinking by all industry partners. In particular, partners must work together to ensure that vocational education and training enables employees (actual and prospective) to both:

- gain the competencies which are required to meet current and emerging industry and enterprise requirements, and
- gain qualifications which are nationally recognised, respected and transferable.

This is unashamedly an 'industry driven' approach, with the Units of Competency, qualifications and assessment guidelines reflecting the requirements of the industry sectors, enterprises and their employees. In keeping with the national policy of increasing the openness of the training market, the Furnishing Training Package aims to support more direct involvement by enterprises in the training and assessment of their workforces, and enable Registered Training Organisations to develop and deliver the services which individuals and enterprises value.

- The endorsed components of the Training Package provide the foundation on which this purchaser/provider partnership approach will be built.

The Furnishing Training Package is subject to continuous improvement with new occupational areas and industry sectors being included as industry identifies the needs. It is suggested that users confirm the status of the units and qualifications prior to use.

Confirmation can be obtained from:

Qualifications Framework

The Australian Qualifications Framework

What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the *AQF Implementation Handbook*.

http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications

Training Packages can incorporate the following eight AQF qualifications.

- Certificate I in ...
- Certificate II in ...
- Certificate III in ...
- Certificate IV in ...
- Diploma of ...
- Advanced Diploma of ...
- Vocational Graduate Certificate of ...
- Vocational Graduate Diploma of ...

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) may issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the *AQF Implementation Handbook* and the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Statement of Attainment

A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). Issuance of Statements of Attainment must comply with the advice provided in the current *AQF Implementation Handbook* and the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Under the AQTF 2010, RTOs must recognise the achievement of competencies as recorded on a qualification or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes

The *AQF Implementation Handbook* provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

Certificate I

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas;
- demonstrate basic practical skills, such as the use of relevant tools;
- perform a sequence of routine tasks given clear direction
- receive and pass on messages/information.

Certificate II

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas;
- apply a defined range of skills;
- apply known solutions to a limited range of predictable problems;
- perform a range of tasks where choice between a limited range of options is required;
- assess and record information from varied sources;
- take limited responsibility for own outputs in work and learning.

Certificate III

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team co-ordination may be involved.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning
- take limited responsibility for the output of others.

Certificate IV*Characteristics of Learning Outcomes*

Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature. Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills. Applications involve responsibility for, and limited organisation of, others.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
- identify, analyse and evaluate information from a variety of sources
- take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others.

Diploma*Characteristics of Learning Outcomes*

Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and co-ordination.

The self directed application of knowledge and skills, with substantial depth in some areas where judgment is required in planning and selecting appropriate equipment, services and techniques for self and others.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team co-ordination may be involved.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters
- take some responsibility for the achievement of group outcomes.

Advanced Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.

The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.

Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of specialised knowledge with depth in some areas
- analyse, diagnose, design and execute judgements across a broad range of technical or management functions
- generate ideas through the analysis of information and concepts at an abstract level
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
- demonstrate accountability for personal outputs within broad parameters
- demonstrate accountability for personal and group outcomes within broad parameters.

Vocational Graduate Certificate

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.
- Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts.
- Generate and evaluate ideas through the analysis of information and concepts at an abstract level.
- Demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts.
- Demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

Vocational Graduate Diploma

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and

within highly varied and highly specialised contexts.

- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.
- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.

Qualifications and Packaging Rules

Qualification Pathways

The following pathways charts are provided to show the types of pathways into and from qualifications that are possible with this Training Package. For more information about qualifications and pathways contact ((CONTACT DETAILS OF THE INDUSTRY SKILLS COUNCIL))

((INDUSTRY SPECIFIC CHART OR CHARTS))

Skill Sets

Definition

Skill sets are defined as single units of competency, or combinations of units of competency from an endorsed Training Package, which link to a licence or regulatory requirement, or defined industry need.

Wording on Statements of Attainment

Skill sets are a way of publicly identifying logical groupings of units of competency which meet an identified need or industry outcome. Skill sets are not qualifications.

Where skill sets are identified in a Training Package, the Statement of Attainment can set out the competencies a person has achieved in a way that is consistent and clear for employers and others. This is done by including the wording ‘these competencies meet *[insert skill set title or identified industry area]* need’ on the Statement of Attainment. This wording applies only to skill sets that are formally identified as such in the endorsed Training Package. See the 2010 edition of the AQF Implementation Handbook for advice on wording on Statements of Attainment. http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf

Skill Sets in this Training Package

This section provides information on Skill Sets within this Training Package, with the following important disclaimer: Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Where this section is blank, nationally recognised Skill Sets have yet to be identified in this industry.

[Note to developers: Provide advice about SkillSets including:

advice about other requirements of regulations that may need to be met such as any requirements for Australian citizenship or evidence of a certain period of work experience
 advice about logical clusters that may meet industry needs; this could be similar to advice in the qualification packaging rules about choice of electives for particular pathways, but should be specific to the Skill Set

advice about the circumstances under which Skill Sets, rather than a particular qualification, could be delivered – where this is appropriate]

[Insert Skill Sets]

Employability Skills

Employability Skills replacing Key Competency information from 2006

In May 2005, the approach to incorporate Employability Skills within Training Package qualifications and units of competency was endorsed. As a result, from 2006 Employability Skills will progressively replace Key Competency information in Training Packages.

Background to Employability Skills

Employability Skills are also sometimes referred to as generic skills, capabilities or Key Competencies. The Employability Skills discussed here build on the Mayer Committee's Key Competencies, which were developed in 1992 and attempted to describe generic competencies for effective participation in work.

The Business Council of Australia (BCA) and the Australian Chamber of Commerce and Industry (ACCI), produced the *Employability Skills for the Future* report in 2002 in consultation with other peak employer bodies and with funding provided by the Department of Education, Science and Training (DEST) and the Australian National Training Authority (ANTA). Officially released by Dr Nelson (Minister for Education, Science and Training) on 23 May 2002, copies of the report are available from the DEST website at:

http://www.dest.gov.au/archive/ty/publications/employability_skills/index.htm.

The report indicated that business and industry now require a broader range of skills than the Mayer Key Competencies Framework and featured an Employability Skills Framework identifying eight Employability Skills*:

- communication
- teamwork
- problem solving
- initiative and enterprise
- planning and organising

- self-management
- learning
- technology.

The report demonstrated how Employability Skills can be further described for particular occupational and industry contexts by sets of facets. The facets listed in the report are the aspects of the Employability Skills that the sample of employers surveyed identified as being important work skills. These facets were seen by employers as being dependent both in their nature and priority on an enterprise's business activity.

*Personal attributes that contribute to employability were also identified in the report but are not part of the Employability Skills Framework.

Employability Skills Framework

The following table contains the Employability Skills facets identified in the report *Employability Skills for the Future*.

Skill	Facets Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.
Communication that contributes to productive and harmonious relations across employees and customers	<ul style="list-style-type: none"> • listening and understanding • speaking clearly and directly • writing to the needs of the audience • negotiating responsively • reading independently • empathising • using numeracy effectively • understanding the needs of internal and external customers • persuading effectively • establishing and using networks • being assertive • sharing information • speaking and writing in languages other than English
Teamwork that contributes to productive working relationships and outcomes	<ul style="list-style-type: none"> • working across different ages irrespective of gender, race, religion or political persuasion • working as an individual and as a member of a team • knowing how to define a role as part of the team

	<ul style="list-style-type: none"> • applying teamwork to a range of situations e.g. futures planning and crisis problem solving • identifying the strengths of team members • coaching and mentoring skills, including giving feedback
Problem solving that contributes to productive outcomes	<ul style="list-style-type: none"> • developing creative, innovative and practical solutions • showing independence and initiative in identifying and solving problems • solving problems in teams • applying a range of strategies to problem solving • using mathematics, including budgeting and financial management to solve problems • applying problem-solving strategies across a range of areas • testing assumptions, taking into account the context of data and circumstances • resolving customer concerns in relation to complex project issues
Initiative and enterprise that contribute to innovative outcomes	<ul style="list-style-type: none"> • adapting to new situations • developing a strategic, creative and long-term vision • being creative • identifying opportunities not obvious to others • translating ideas into action • generating a range of options • initiating innovative solutions
Planning and organising that contribute to long and short-term strategic planning	<ul style="list-style-type: none"> • managing time and priorities - setting time lines, coordinating tasks for self and with others • being resourceful • taking initiative and making decisions • adapting resource allocations to cope with contingencies • establishing clear project goals and deliverables

	<ul style="list-style-type: none"> • allocating people and other resources to tasks • planning the use of resources, including time management • participating in continuous improvement and planning processes • developing a vision and a proactive plan to accompany it <ul style="list-style-type: none"> • predicting - weighing up risk, evaluating alternatives and applying evaluation criteria • understanding basic business systems and their relationships • collecting, analysing and organising information
Self-management that contributes to employee satisfaction and growth	<ul style="list-style-type: none"> • having a personal vision and goals • evaluating and monitoring own performance • having knowledge and confidence in own ideas and visions • articulating own ideas and visions • taking responsibility
Learning that contributes to ongoing improvement and expansion in employee and company operations and outcomes	<ul style="list-style-type: none"> • managing own learning • contributing to the learning community at the workplace • using a range of mediums to learn - mentoring, peer support and networking, IT and courses • applying learning to technical issues (e.g. learning about products) and people issues (e.g. interpersonal and cultural aspects of work) • having enthusiasm for ongoing learning • being willing to learn in any setting - on and off the job • being open to new ideas and techniques • being prepared to invest time and effort in learning new skills • acknowledging the need to learn in order to accommodate change
Technology that contributes to the	<ul style="list-style-type: none"> • having a range of basic IT skills

effective carrying out of tasks	<ul style="list-style-type: none"> • applying IT as a management tool • using IT to organise data • being willing to learn new IT skills • having the OHS knowledge to apply technology • having the appropriate physical capacity
---------------------------------	---

Employability Skills Summary

An Employability Skills Summary exists for each qualification. Summaries provide a lens through which to view Employability Skills at the qualification level and capture the key aspects or facets of the Employability Skills that are important to the job roles covered by the qualification. Summaries are designed to assist trainers and assessors to identify and include important industry application of Employability Skills in learning and assessment strategies. The following is important information for trainers and assessors about Employability Skills Summaries.

- Employability Skills Summaries provide examples of how each skill is applicable to the job roles covered by the qualification.
- Employability Skills Summaries contain general information about industry context which is further explained as measurable outcomes of performance in the units of competency in each qualification.
- The detail in each Employability Skills Summary will vary depending on the range of job roles covered by the qualification in question.
- Employability Skills Summaries are not exhaustive lists of qualification requirements or checklists of performance (which are separate assessment tools that should be designed by trainers and assessors after analysis at the unit level).
- Employability Skills Summaries contain information that may also assist in building learners' understanding of industry and workplace expectations.
-

Industry Requirements for Employability Skills

This is a technology based industry and a key role of operations personnel is the solving of problems. They are largely self managed and are expected to operate in both permanent and *ad hoc* teams as required. The communication of key safety, health, environmental and operational information to other personnel on site is a vital requirement.

Assessment Guidelines

Introduction

These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the *Australian Quality Training Framework (AQTF) Essential Standards for Initial and Continuing Registration*. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

Assessment System Overview

This section provides an overview of the requirements for assessment when using this Training Package, including a summary of the AQTF requirements; licensing/registration requirements; and assessment pathways.

Quality assessment underpins the credibility of the vocational education and training sector. The Assessment Guidelines of a Training Package are an important tool in supporting quality assessment.

Assessment within the National Skills Framework is the process of collecting evidence and making judgements about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

Assessment must be carried out in accordance with the:

- benchmarks for assessment
- specific industry requirements
- principles of assessment
- rules of evidence
- assessment requirements set out in the AQTF

Benchmarks for Assessment

The endorsed units of competency in this Training Package are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

Principles of Assessment

All assessments carried out by RTOs are required to demonstrate compliance with the principles of assessment:

- validity
- reliability
- flexibility
- fairness
- sufficiency

These principles must be addressed in the:

design, establishment and management of the assessment system for this Training Package development of assessment tools, and the conduct of assessment.

Validity

Assessment is valid when the process is sound and assesses what it claims to assess. Validity requires that:

- | | |
|-----|---|
| (a) | assessment against the units of competency must cover the broad range of skills and knowledge that are essential to competent performance |
|-----|---|

(b)	assessment of knowledge and skills must be integrated with their practical application
(c)	judgement of competence must be based on sufficient evidence (that is, evidence gathered on a number of occasions and in a range of contexts using different assessment methods). The specific evidence requirements of each unit of competency provide advice on sufficiency

Reliability

Reliability refers to the degree to which evidence presented for assessment is consistently interpreted and results in consistent assessment outcomes. Reliability requires the assessor to have the required competencies in assessment and relevant vocational competencies (or to assess in conjunction with someone who has the vocational competencies). It can only be achieved when assessors share a common interpretation of the assessment requirements of the unit(s) being assessed.

Flexibility

To be flexible, assessment should reflect the candidate's needs; provide for recognition of competencies no matter how, where or when they have been acquired; draw on a range of methods appropriate to the context, competency and the candidate; and support continuous competency development.

Fairness

Fairness in assessment requires consideration of the individual candidate's needs and characteristics, and any reasonable adjustments that need to be applied to take account of them. It requires clear communication between the assessor and the candidate to ensure that the candidate is fully informed about, understands and is able to participate in, the assessment process, and agrees that the process is appropriate. It also includes an opportunity for the person being assessed to challenge the result of the assessment and to be reassessed if necessary.

Sufficiency

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency. Sufficiency is also one of the rules of evidence.

Rules of Evidence

The rules of evidence guide the collection of evidence that address the principles of validity and reliability, guiding the collection of evidence to ensure that it is valid, sufficient, current and authentic.

Valid

Valid evidence must relate directly to the requirements of the unit of competency. In ensuring evidence is valid, assessors must ensure that the evidence collected supports demonstration of the outcomes and performance requirements of the unit of competency together with the knowledge and skills necessary for competent performance. Valid evidence must encapsulate the breadth and depth of the unit of competency, which will necessitate using a number of different assessment methods.

Sufficient

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency.

Current

In assessment, currency relates to the age of the evidence presented by a candidate to demonstrate that they are still competent. Competency requires demonstration of current performance, so the evidence collected must be from either the present or the very recent past.

Authentic

To accept evidence as authentic, an assessor must be assured that the evidence presented for assessment is the candidate's own work.

Assessment Requirements of the Australian Quality Training Framework

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the AQTF as expressed in the AQTF 2010 *Essential Standards for Registration*.

The AQTF 2010 *Essential Standards for Initial and Continuing Registration* can be downloaded from < www.training.com.au >.

The following points summarise the assessment requirements.

Registration of Training Organisations

Assessment must be conducted by, or on behalf of, an RTO formally registered by a State or Territory Registering Body in accordance with the AQTF. The RTO must have the specific units of competency and/or AQF qualifications on its scope of registration.

Quality Training and Assessment

Each RTO must provide quality training and assessment across all its operations. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*, Standard 1.

Assessor Competency Requirements

Each person involved in training, assessment or client service must be competent for the functions they perform. AQTF 2010 *Essential Standards for Initial and Continuing Registration*, Standard 1 for assessor (and trainer) competency requirements. See also the AQTF 2010 *Users' Guide to the Essential Standards for Registration* Appendix 2.

Assessment Requirements

The RTOs assessments, including RPL, must meet the requirements of the relevant endorsed Training Package. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Assessment Strategies

Each RTO must have strategies for training and assessment that meet the requirements of the relevant Training Package or accredited course and are developed in consultation with industry stakeholders. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

National Recognition

Each RTO must recognise the AQF qualifications and Statements of Attainment issued by any other RTO. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Access and Equity and Client Outcomes

Each RTO must adhere to the principles of access and equity and maximise outcomes for its clients. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Monitoring Assessments

Training and/or assessment provided on behalf of the RTO must be monitored to ensure that it is in accordance with all aspects of the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Recording Assessment Outcomes

Each RTO must manage records to ensure their accuracy and integrity. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Issuing AQF Qualifications and Statements of Attainment

Each RTO must issue AQF qualifications and Statements of Attainment that meet the requirements of the current AQF Implementation Handbook and the endorsed Training Packages within the scope of its registration. An AQF qualification is issued once the full requirements for a qualification, as specified in the nationally endorsed Training Package are met. A Statement of Attainment is issued when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). See the AQTF and the edition of the AQF Implementation Handbook-available on the AQF Council website < www.aqf.edu.au>.

Awards, Licensing and other Regulatory Issues

Various awards and agreements apply within the manufacturing industry. This Training Package was designed to allow for these different arrangements. It is appropriate to use this Training Package as part of an award/agreement, but it has not been designed to fit any particular award or agreement.

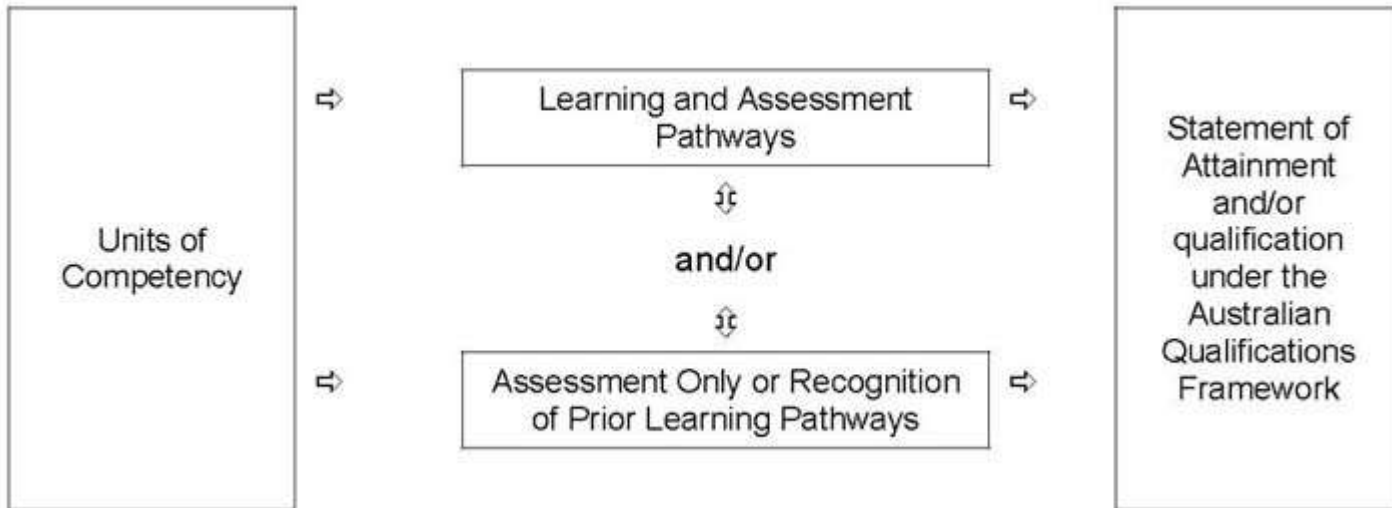

There are no general licensing issues, however specific licenses may be required in some jobs. The local regulations should be checked for details. The industry is generally subject to a range of regulatory control. These vary with the nature of the facility and to some extent on its location as most regulations are State based and many are enforced by local government. This Training Package allows for these differences without mandating them to specific units of competency which would not be appropriate.

Pathways

The competencies in this Training Package may be attained in a number of ways including through:

- formal or informal education and training
- experiences in the workplace
- general life experience, and/or
- any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, an assessment-only or recognition pathway, or a combination of the two as illustrated in the following diagram.

Each of these assessment pathways leads to full recognition of competencies held - the critical issue is that the candidate is competent, not how the competency was acquired.

Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package, and the AQTF, 2 where relevant, the Australian Qualifications Framework.

Learning and Assessment Pathways

Usually, learning and assessment are integrated, with assessment evidence being collected and feedback provided to the candidate at anytime throughout the learning and assessment process.

Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace.

Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

Credit Pathways

Credit is the value assigned for the recognition of equivalence in content between different types of learning and/or qualifications which reduces the volume of learning required to achieve a qualification.

Credit arrangements must be offered by all RTOs that offer Training Package qualifications. Each RTO must have a systematic institutional approach with clear, accessible and transparent policies and procedures.

Competencies already held by individuals can be formally assessed against the units of competency in this Training Package, and should be recognised regardless of how, when or where they were acquired, provided that the learning is relevant to the unit of competency outcomes.

• Recognition of Prior Learning

Recognition of Prior Learning (RPL) is an assessment process which determines the credit outcomes of an individual application for credit.

The availability of Recognition of Prior Learning (RPL) provides all potential learners with access to credit opportunities.

The recognition of prior learning pathway is appropriate for candidates who have previously attained skills and knowledge and who, when enrolling in qualifications, seek to shorten the duration of their training and either continue or commence working. This may include the following groups of people:

- existing workers;
- individuals with overseas qualifications;
- recent migrants with established work histories;
- people returning to the workplace;
- and people with disabilities or injuries requiring a change in career.

As with all assessment, RPL assessment should be undertaken by academic or teaching staff with expertise in the subject, content of skills area, as well as knowledge of and expertise in RPL assessment policies and procedures.

Assessment methods used for RPL should provide a range of ways for individuals to demonstrate that they have met the required outcomes and can be granted credit. These might include:

- questioning (oral or written) consideration of a portfolio and review of contents
consideration of third party reports and/or other documentation such as documentation such as articles, reports, project material, papers, testimonials or other products prepared by the RPL applicant that relate to the learning outcomes of the relevant qualification component
mapping of learning outcomes from prior formal or non-formal learning to the relevant qualification components
- observation of performance, and participation in structured assessment activities the individual would normally be required to undertake if they were enrolled in the qualification component/s.

In a Recognition of Prior Learning (RPL) pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the AQTF must be met.

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, work samples and/or observation of the candidate. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:

- authentic (the candidate's own work); valid (directly related to the current version of the relevant endorsed unit of competency); reliable (shows that the candidate consistently meets the endorsed unit of competency); current (reflects the candidate's current capacity to perform the aspect of the work covered by the endorsed unit of competency); and
- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).
- **Credit Transfer**

Credit transfer is a process which provides learners with agreed and consistent credit outcomes based on equivalences in content between matched qualifications.

This process involves education institutions:

- mapping, comparing and evaluating the extent to which the defined learning outcomes and assessment requirements of the individual components of one qualification are equivalent to the learning outcomes and assessment requirements of the individual components of another qualification
- making an educational judgment of the credit outcomes to be assigned between the matched components of the two qualifications
- setting out the agreed credit outcomes in a documented arrangement or agreement, and
- publicising the arrangement/agreement and credit available.

Combination of Pathways

Credit may be awarded on the basis of a combination of credit transfer plus an individual RPL assessment for additional learning. Once credit has been awarded on the basis of RPL, subsequent credit transfer based on these learning outcomes should not include revisiting the RPL assessment but should be based on credit transfer or articulation or other arrangements between providers.

Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

Assessor Requirements

This section identifies the specific requirements on the vocational competence and experience for assessors, to ensure that they meet the needs of industry and their obligations under AQTF, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

Assessor Competencies

The AQTF specifies mandatory competency requirements for assessors. For information, Element 1.4 from the AQTF 2007 *Essential Standards for Registration* follows:

1.4	Training and assessment is delivered by trainers and assessors who:
a)	have the necessary training and assessment competencies as determined by the National Quality Council or its successors, and
b)	have the relevant vocational competencies at least to the level being delivered or assessed, and
c)	can demonstrate current industry skills directly relevant to the training/assessment being undertaken, and
d)	continue developing their Vocational Education and Training (VET) knowledge and skills as well as their industry currency and trainer/assessor competence. *See AQTF 2010 <i>Users Guide to the Essential Standards for Registration</i> , Appendix 2

Designing Assessment Tools

This section provides an overview on the use and development of assessment tools.

Use of Assessment Tools

Assessment tools provide a means of collecting the evidence that assessors use in making judgments about whether candidates have achieved competency.

There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

Using Prepared Assessment Tools

If using prepared assessment tools, assessors should ensure these relate to the current version of the relevant unit of competency. The current unit of competency can be checked on the National Register < www.ntis.gov.au >.

Developing Assessment Tools

When developing assessment tools, assessors must ensure that they:

- are benchmarked against the relevant unit or units of competency
- are reviewed as part of the continuous improvement of assessment strategies as required under Standard 1 of the AQTF 2007
- meet the assessment requirements expressed in Standard 1 of the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

A key reference for assessors developing assessment tools is TAE10 Training and Education Training Package.

Language, Literacy and Numeracy

The design of assessment tools must reflect the language, literacy and numeracy competencies required for the performance of a task in the workplace and not exceed these expectations.

Conducting Assessment

This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

Mandatory Assessment Requirements

Assessments must meet the criteria set out in the 2010 *Essential Standards for Initial and Continuing Registration*. For information, the mandatory assessment requirements from Standard 1 from the AQTF 2010 *Essential Standards for Initial and Continuing Registration* are as follows:

1.5		Assessment, including Recognition of Prior Learning:
	a)	meets the requirements of the relevant Training Package or accredited course,
	b)	is conducted in accordance with the principles of assessment and the rules of evidence, and
	c)	meets workplace and, where relevant, regulatory requirements.
	d)	is systematically validated.

Assessment of Employability Skills

Employability Skills are integral to workplace competency. As such they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way, as represented diagrammatically below.

Employability Skills are embedded and explicit within each unit of competency, and an Employability Skills Summary is available for each qualification. Training providers must use Employability Skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant Employability Skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the application of Employability Skills at that qualification outcome
- designing training and assessment to address Employability Skills requirements.

Employability Skills in the Furnishing Training Package context

For more information on Employability Skills in **Manufacturing Skills Australia** Training Packages go to the Manufacturing Skills Australia website at www.mskills.com.au.

The National Quality Council has endorsed a model for assessing and reporting Employability Skills, which contains further suggestions about good practice strategies in teaching, assessing, learning and reporting Employability Skills. The model is available from <<http://www.training.com.au/>>.

The endorsed approach includes learners downloading qualification specific Employability Skills Summaries for Training Package qualifications from an online repository at <<http://employabilityskills.training.com.au>>

For more information on Employability Skills in Manufacturing Industry Skills Council Training

Packages go to the Manufacturing Industry Skills Council website at <http://www.mskills.com.au>.

Employability Skills are reported on each qualification using the following statement on the qualification testamur: "A summary of the Employability Skills developed through this qualification can be downloaded from <http://employabilityskills.training.com.au> "

Access and Equity

An individual's access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia's VET clients and Australia's current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia's economic development and social and cultural life.

Reasonable adjustments

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability.

Under the *Disability Standards for Education 2005*, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While "reasonable adjustment" and "unjustifiable hardship" are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student's disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.

An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship. The Training Package Guidelines provides more information on reasonable adjustment, including examples of adjustments. *Go to* <http://www.deewr.gov.au/tpdh/Pages/home.aspx>.

Assessment in the Furnishing Industry

The furnishing industry places premium on skills and knowledge that can be demonstrated in a real workplace environment. While assessment of some of the Units of Competency in the Furnishing Training Package can be carried out in a simulated work environment, the industry strongly recommends that assessment is conducted in the workplace, wherever possible.

Assessment of competency requires the collection of evidence and this should be conducted over a period of time. This assessment approach may include demonstration at the workplace and/or a simulated work environment to ensure that the demonstration of competency is valid and reliable. The individual being assessed needs to be aware that the collection of evidence is ongoing and needs to be part of the planning, conduct and review of the assessment process.

Supporting Integrated Training Delivery and Assessment

As a general principle, the furnishing industry supports the integration of Units of Competency for assessment, where practical, as this reflects real work practices.

An integrated approach to assessment brings together a number of Units of Competency, which reflect actual workplace requirements. For example, an employee working in a furnishing factory would complete a number of interrelated production and occupational, health and safety tasks together, not simply one individual task at a time. An integrated assessment activity would be designed to collect evidence for a number of units together rather than designing one assessment activity for each individual element of performance criteria.

Where both training and assessment are required, the industry supports an approach which provides for off-the-job training combined with assessment of the application of skills and knowledge in a real work situation.

The Furnishing Training Package defines on-the-job assessment as that assessment which occurs in the workplace as part of the normal operation of the business.

The Furnishing Training Package defines off-the-job assessment as that which occurs away from the normal operation of the business including, for example, assessment which may occur in the workplace but not under normal industry working conditions. The industry considers it important that candidates should have the opportunity to develop competency in structured learning programs which includes assessing in the workplace whenever possible. It would be expected that where an integrated competency assessment approach is implemented that several integrated competency assessments would be necessary to cover the breadth and complexity of the qualification, at Certificate II and above.

The context of the assessment, the role of the candidate and the complexity of the task will influence how many Units of Competency will be integrated.

Further Sources of Information

The section provides a listing of useful contacts and resources to assist assessors in planning, designing, conducting and reviewing of assessments against this Training Package.

Assessment Resources

Registered training organisations (RTOs) are at the forefront of vocational education and training (VET) in Australia. They translate the needs of industry into relevant, quality, client-focussed training and assessment.

RTOs should strive for innovation in VET teaching and learning practices and develop highly flexible approaches to assessment which take cognisance of specific needs of learners, in order to improve delivery and outcomes of training.

Resources can be purchased or accessed from: TVET Australia provides an integrated service to enable users of the national training system to identify and acquire training materials, identify copyright requirements and enter licenses for use of that material consistent with the scope and direction of the NQC. <http://www.productservices.tvetaustralia.com.au/>

Competency Standards

What is competency?

The broad concept of industry competency concerns the ability to perform particular tasks and duties to the standard of performance expected in the workplace. Competency requires the application of specified skills, knowledge and attitudes relevant to effective participation in an industry, industry sector or enterprise.

Competency covers all aspects of workplace performance and involves performing individual tasks; managing a range of different tasks; responding to contingencies or breakdowns; and, dealing with the responsibilities of the workplace, including working with others. Workplace competency requires the ability to apply relevant skills, knowledge and attitudes consistently over time and in the required workplace situations and environments. In line with this concept of competency Training Packages focus on what is expected of a competent individual in the workplace as an outcome of learning, rather than focussing on the learning process itself.

Competency standards in Training Packages are determined by industry to meet identified industry skill needs. Competency standards are made up of a number of units of competency each of which describes a key function or role in a particular job function or occupation. Each unit of competency within a Training Package is linked to one or more AQF qualifications.

Contextualisation of Units of Competency by RTOs

Registered Training Organisation (RTOs) may contextualise units of competency to reflect local outcomes required. Contextualisation could involve additions or amendments to the unit of competency to suit particular delivery methods, learner profiles, specific enterprise equipment requirements, or to otherwise meet local needs. However, the integrity of the overall intended outcome of the unit of competency must be maintained.

Any contextualisation of units of competency in this endorsed Training Package must be within the bounds of the following advice. In contextualising units of competency, RTOs:

- must not remove or add to the number and content of elements and performance criteria
- may add specific industry terminology to performance criteria where this does not distort or narrow the competency outcomes
- may make amendments and additions to the range statement as long as such changes do not diminish the breadth of application of the competency and reduce its portability, and/or
- may add detail to the evidence guide in areas such as the critical aspects of evidence or resources and infrastructure required where these expand the breadth of the competency but do not limit its use.

Components of Units of Competency

The components of units of competency are summarised below, in the order in which they appear in each unit of competency.

Unit Title

The unit title is a succinct statement of the outcome of the unit of competency. Each unit of competency title is unique, both within and across Training Packages.

Unit Descriptor

The unit descriptor broadly communicates the content of the unit of competency and the skill area it addresses. Where units of competency have been contextualised from units of competency from other endorsed Training Packages, summary information is provided. There may also be a brief second paragraph that describes its relationship with other units of competency, and any licensing requirements.

Employability Skills statement

A standard Employability Skills statement appears in each unit of competency. This statement directs trainers and assessors to consider the information contained in the Employability Skills Summary in which the unit of competency is packaged.

Prerequisite Units (optional)

If there are any units of competency that must be completed before the unit, these will be listed.

Application of the Unit

This sub-section fleshes out the unit of competency's scope, purpose and operation in different contexts, for example, by showing how it applies in the workplace.

Competency Field (Optional)

The competency field either reflects the way the units of competency are categorised in the Training Package or denotes the industry sector, specialisation or function. It is an optional component of the unit of competency.

Sector (optional)

The industry sector is a further categorisation of the competency field and identifies the next classification, for example an elective or supervision field.

Elements of Competency

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

Performance Criteria

The performance criteria specify the required performance in relevant tasks, roles, skills and in the applied knowledge that enables competent performance. They are usually written in passive voice. Critical terms or phrases may be written in bold italics and then defined in range statement, in the order of their appearance in the performance criteria.

Required Skills and Knowledge

The essential skills and knowledge are either identified separately or combined. Knowledge identifies what a person needs to know to perform the work in an informed and effective manner. Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Range Statement

The range statement provides a context for the unit of competency, describing essential operating conditions that may be present with training and assessment, depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. As applicable, the meanings of key terms used in the performance criteria will also be explained in the range statement.

Evidence Guide

The evidence guide is critical in assessment as it provides information to the Registered Training Organisation (RTO) and assessor about how the described competency may be demonstrated. The evidence guide does this by providing a range of evidence for the assessor to make determinations, and by providing the assessment context. The evidence guide describes:

- conditions under which competency must be assessed including variables such as the assessment environment or necessary equipment
- relationships with the assessment of any other units of competency
- suitable methodologies for conducting assessment including the potential for workplace simulation
- resource implications, for example access to particular equipment, infrastructure or situations
- how consistency in performance can be assessed over time, various contexts and with a range of evidence, and expectations at the AQF qualification level involved.

Employability Skills in units of competency

The detail and application of Employability Skills facets will vary according to the job-role requirements of each industry. In developing Training Packages, industry stakeholders are consulted to identify appropriate facets of Employability Skills which are incorporated into the relevant units of competency and qualifications.

Employability Skills are not a discrete requirement contained in units of competency (as was the case with Key Competencies). Employability Skills are specifically expressed in the context of the work outcomes described in units of competency and will appear in elements, performance criteria, range statements and evidence guides. As a result, users of Training Packages are required to review the entire unit of competency in order to accurately determine Employability Skills requirements.

How Employability Skills relate to the Key Competencies

The eight nationally agreed Employability Skills now replace the seven Key Competencies in Training Packages. Trainers and assessors who have used Training Packages prior to the introduction of Employability Skills may find the following comparison useful.

Employability Skills	Mayer Key Competencies
Communication	Communicating ideas and information
Teamwork	Working with others and in teams
Problem solving	Solving problems Using mathematical ideas and techniques
Initiative and enterprise	
Planning and organising	Collecting, analysing and organising information Planning and organising activities
Self-management	
Learning	
Technology	Using technology

When analysing the above table it is important to consider the relationship and natural overlap of Employability Skills. For example, using technology may involve communication skills and combine the understanding of mathematical concepts.

Explicitly embedding Employability Skills in units of competency

This Training Package seeks to ensure that industry-endorsed Employability Skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability Skills must be both explicit and embedded within units of competency. This means that Employability Skills will be:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Packages users to identify accurately the performance requirements of each unit with regards to Employability Skills.

This Training Package also seeks to ensure that Employability Skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

The following table contains examples of embedded Employability Skills for each component of a unit of competency. Please note that in the examples below the bracketed skills are provided only for clarification and will not be present in units of competency within this Training Package.

Example Employability Skills unit

Unit component	Example of embedded Employability Skill
Unit Title	Design residential interiors (Initiative and enterprise, problem solving, planning and organising, self management).
Unit Descriptor	This unit describes the knowledge and skills required to apply researched information to formulate creative and complex design solutions to a range of residential interior design situations satisfying the physiological, psychological, social, cultural and environmental requirements of the brief. (Initiative and enterprise, problem solving, self management, planning and organising, communication).
Element	Design the space (Technology, planning and organising, communication, problem solving).
Performance Criteria	Ideas are translated into 3-D space satisfying functional criteria. (Problem solving, technology, initiative and enterprise, planning and organising).
Range Statement	Resources may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS) journals (directions magazines), artistic equipment and products, and

	model making equipment. (Technology, learning, self management).
Required Skills and Knowledge	Applying principles and elements of design. (Initiative and enterprise, problem solving, learning, planning and organising).
Evidence Guide	Effectively design for at least two residential interiors to provide the client with creative solutions that satisfy the design brief. (Initiative and enterprise, communication, problem solving, planning and organising).

Competency Standards - Industry Contextualisation

Units of competency may, and in some cases should, be contextualised to the sub-sector and type of work environment involved. Contextualisation which:

- replaces general directions with enterprise specific needs
- replaces generic equipment/process names with enterprise specific names
- replaces general processes/specifications with enterprise specific needs

is allowed and encouraged, provided the contextualised unit is of similar level and rigour to the original unit of competency.

Note that contextualising cannot be used to generate an additional competency which is closely related to an existing competency. Contextualisation can only be used to generate an alternative competency for qualifications purposes.

Contextualisation may only be done if it does not significantly change the level and rigour or change the application of the unit of competency. Contextualisation may be done within the required knowledge, range of variables and the evidence guide. Lists in these sections should be regarded as indicative lists unless otherwise stated.

Note also that contextualisation of the elements or performance criteria is not permitted. As a minimum, the contextualised unit of competency should:

- be of similar level and rigour
- be of a similar breadth, complexity and size
- be relevant to the industry sector and the enterprise
- not reduce the health, safety or environmental requirements
- retain the original unit code and title.

New units

Where there is no suitable equivalent unit of competency in any endorsed Training Package that can be used or contextualised to the enterprise's requirements, new units of competency may be developed and submitted to DEEWR via Manufacturing Skills Australia (MSA) for endorsement and inclusion in the Training Package. Any proposed new units of competency will be treated as a 'Category 2' change under the DEEWR continuous improvement guidelines and must be endorsed by the National Quality Council for listing on the National Training Information Service.

Importing units from other Training Packages

Units of competency may be imported from another endorsed Training Package to customise a qualification. These imported units of competency may be used to replace the maximum number of imported units that are identified in the packaging rules. The use of imported units of competency is allowed if:

- they are from an endorsed Training Package and are packaged at the same AQF certificate level (the original unit title and code number must be retained)
- they are appropriate to the needs of the enterprise
- any prerequisites and co-requisites specified in the original unit and any specific assessment requirements in the host Training Package are also observed.

Exporting units to other Training Packages

Manufacturing Skills Australia encourages other industries and ISCs to access the units of competency in this Training Package which might be appropriate to their needs. These units of competency may be used provided:

- the original unit code and title are retained
- they are only contextualised to the extent permitted above

- any specified prerequisites and co-requisites and any specific assessment requirements in the host Training Package are observed.

Manufacturing Skills Australia is advised of the specific competencies to be used to facilitate ongoing communication in the event of an update.

Appendix A: Version 1

Project team

Sue Woodward	General Manager: Light Manufacturing Training Australia
Jack Cunningham	Project Coordinator: Light Manufacturing Training Australia
Mike Quade	Senior Project Officer: Australian National Training Authority

Cover Photography	Paul Perillo Photography

Special thanks to the furnishing company managers and staff who generously contributed their valuable time to the production of the photography reproduced on the covers of each volume of this Furnishing Training Package.

Steering Committee and Consultation Groups

Acknowledgements

The development of the Furnishing Training Package involved extensive consultation processes. In addition to people directly involved in the formal development processes, many more were invited to participate in review and feedback processes.

Manufacturing Skills Australia and the members of the project National Steering Committee wish to recognise the invaluable assistance offered by the members of the National Technical Advisory Groups and others in the following lists who involved themselves in development and feedback activities.

Manufacturing Skills Australia also wishes to acknowledge the contribution made by the Executive Officers and staff of the national ITAB Network.

Project management

The project was managed by Manufacturing Skills Australia and overseen by two Technical Advisory Groups made up of major stakeholders and technical experts. The TAG terms of reference were to:

- oversee and advise on consultation processes
- provide advice on underpinning knowledge and technical content
- act as a technical advisory group in the development of new units of competency
- assist with the resolution of any issues.

The TAG members are listed below.

Furniture Design and Technology

----------------	-----	-----	--------------------

Consultation and validation processes

Consultations were undertaken nationally, involving face to face meetings, targeted email distribution of drafts to stakeholders (including industry associations, unions, RTOs, State/Territory ITBs, STAs and individual enterprises) and wider distribution via the MSA website and the MSkills email update. Individual consultations were also conducted to confirm content and approach.

Many people made time in their busy schedule to participate in this project. Without their expertise and input, the project would not have been able to achieve its objectives and this is gratefully acknowledged.

Furniture Design and Technology – consultation list

Development of the Furniture Design and Technology qualifications and associated units of competency involved substantial industry and RTO contributions. This included input from the following people.

Bryon Stanley	RMIT School of Design, Vic
Henry Johnson	Forestworks, Vic
Alexandra Mannell	Holmesglen Training & Development, Vic
Philip Ashley	Furnishing Industry Training Centre, Holmesglen TAFE Vic
Greg Miller Allan Trevaskis	Forest Heritage Centre, Australian School of Fine Wood, Dwellingup, WA
Gordon Amman	North Coast Institute, Coffs Harbour, NSW
Martin Tomasini	North Coast Institute, Coffs Harbour, NSW
Tom Harrington	Sturt School for Wood, NSW
Simon Archer	Australian School of Fine Furniture. Launceston, Tas
Ian Wykes	Hunter TAFE, NSW
Mark Kelly	FIAA, FISDAC, Vic
Patricia Hughes	Candlewood Furniture, Vic
Rex Carr	Wentworth Furniture

Chris Francis	Francis Furniture, NSW
Evan Dunstone	Dunstone Design, ACT
Dan White	Axiom, Tasmania
Noel Tomes	Noel Tomes Design, NT
Scott Mitchell	Scott Mitchell Design, ACT
Pam Erasmus	Aust School of Fine Furniture, Tas

Interior Design and Decoration – consultation list

Development of the Interior Design and Decoration qualifications and associated units of competency involved substantial contributions from a range of people. Enrolments in this area are predominantly full time students who are school leavers or people undergoing career change. As such, consultation involved strong input from RTOs. This included input from the following people.

Todd Packer	TAFE NSW School of Design
Tracey Sernack-Chee Quee	TAFE NSW
Kathy Marshall	Lidcombe campus
Annalise Morrow	TAFE NSW
Debra Horgan	TAFE SA
Susan Hodge	TAFE SA
Anne Gilleade	TAFE SA
Victoria Versteeg	RMIT - School of Design (TAFE) Design & Social

	Context Portfolio

Aaron Applefield	Bretts Architectural Centre fittings and fixtures
Raymond Bartell	Andersens Carpets Rothwell Store –Owner
Cate Williams	A Better Image Upholstery, Window Treatments and Interior Decoration)

Appendix D: Version 4

Project background

The development of new components for the kitchen and bathroom sector was identified as an industry Training Package requirement within MSA's Continuous Improvement Plan for 2008-2009.

The Kitchens and Bathrooms Project commenced in March 2008 and aimed to identify and target the skill needs of this industry sector through an extension of coverage of the Furnishing Training Package LMF02. It was initiated in response to both industry requests and MSA response to the growth of this sector in Australia. MSA appointed Richard Jenkins & Associates as the consultant for the project.

The project required an examination of the currently endorsed Certificate II in Furniture Making and Certificate III in Furniture Making (Cabinet Making) to determine to what extent these qualifications accommodated the needs of the kitchen and bathroom sector and what new developments were necessary. The project found that these two qualifications had a predominantly free standing furniture focus and yet (especially in the case of the Certificate III in Furniture Making), the majority of students according to RTO consultations were coming from the kitchen and bathroom installation and renovation sector.

It should be noted that as the focus of this project was on developing qualifications and units of competency for the kitchen and bathroom industry, there was only minimal consultation with the free standing furniture sector. The consultations that did occur focused on reassuring furniture industry and RTO representatives that the needs of furniture manufacturing would continue to be met by MSA and that a review of their needs would occur in the MSA Furniture Training Package Redevelopment Project which was scheduled to commence in 2009. The final outcomes of the Kitchen and Bathroom project have maintained the currently endorsed qualification packaging requirements and options and units of competency for free standing furniture users.

Project management

The project was overseen by an MSA Board Sub-committee made up of major stakeholders and technical experts. The terms of reference were to:

- oversee and advise on consultation processes
- provide advice on underpinning knowledge and technical content
- act as a technical advisory group in the development of new units of competency
- assist with the resolution of any issues.

The individuals and enterprises/organisations represented on the MSA Board Sub-committee are set out in the following table:

Name	Enterprise/Organisation
David Hoare	(Chair)
Alex Milne	Kitchen and Bathroom Design Institute of Australia
Martin Lewis	Furnishing Industry Association of Australia Ltd
Michael O'Connor	CFMEU

Richard Brooks	Cabinetmakers Association of Victoria
Laurie Kruize	HIA Training Manager National Office
Erik Salonen	Manufacturing Skills Queensland

Consultation and validation processes

This project was conducted in two stages. An initial investigation stage was conducted to examine current research and Training Package components, conduct interviews with industry organisations including relevant employer organisations and unions, major companies, RTOs, and State Training Authorities, and develop and validate a project methodology and key recommendations. This was followed by an implementation stage involving widespread consultation and industry visits, development and validation of two drafts and preparation of a final draft for endorsement.

Consultations were undertaken nationally and involved face to face meetings and targeted email distribution of drafts to industry associations, unions, RTOs, State/Territory ITABs, STAs and individual enterprises. Wider distribution was achieved via the MSA website and their regular email newsletter.

Following each period of public comment, amendments were made and drafts circulated for acceptance. Final drafts were developed and circulated to the Kitchens and Bathrooms MSA Board Sub-Committee members for comment and acceptance.

The following people were involved in the development process and the value of their expertise and input is gratefully acknowledged.

Name	Organisation
Sharmily Mukherjee	ForestWorks (NSW)
Eric Salonen and Richard Lindner	Manufacturing Skills QLD

Hopkins HIA Adelaide (representing SA)	

The final drafts of the new units and qualifications for materials submitted for endorsement were validated and signed off by all major stakeholders (both industry and RTOs) with no outstanding or unresolved issues. Validation and acceptance of final drafts was undertaken by email.

Clear and full support for endorsement of the additional components for the LMF02 Training Package has been provided by all stakeholders.

Appendix E: Version 5

Project background

The new components presented for endorsement have been developed and validated extensively with industry and RTO representatives. While there was early and significant support for the units, longer consultations were needed to develop a qualification packaging arrangement that reflected the variety of design tasks undertaken by kitchen and bathroom designers. The consultation process included cabinet makers, kitchen and bathroom manufacturers, installers, designers, unions, licensing bodies, RTOs and industry associations from around Australia.

Project management

The project was overseen by a MSA Board Sub-Committee made up of major stakeholders and technical experts. The terms of reference were to:

- oversee and advise on consultation processes
- provide advice on underpinning knowledge and technical content
- act as a technical advisory group in the development of new units of competency
- assist with the resolution of any issues.

The individuals and enterprises/organisations represented on the MSA Board Sub-Committee are set out in the following table:

Name	Enterprise/Organisation
David Hoare	(Chair)
Alex Milne	Kitchen and Bathroom Design Institute of Australia
Martin Lewis	Furnishing Industry Association of Australia Ltd
Michael O'Connor	CFMEU
Richard Brooks	Cabinetmakers Association of Victoria
Laurie Kruize	HIA Training Manager National Office
Erik Salonen	Manufacturing Skills Queensland

Consultation and validation processes

This project was conducted in two stages. The first stage was conducted as part of the MSA Kitchens and Bathrooms project and included initial investigations to examine current research and Training Package components, conduct of interviews with industry organisations including relevant employer organisations and unions, major companies, RTOs, and State and Territory Training Authorities (STAs), and development and validation of units of competency. This was followed by a second stage involving further consultations to finalise qualification packaging. This stage involved additional industry visits, a survey development of two draft proposals and preparation of a final draft of a Certificate IV qualification for endorsement.

All consultations were undertaken nationally and involved face to face meetings and targeted email distribution of drafts to industry associations, unions, RTOs, State/Territory ITABs, STAs and individual enterprises. Wider distribution was achieved via the MSA website and their regular email newsletter.

Following each period of public comment, amendments were made and drafts circulated for acceptance. Final drafts were developed and circulated to the Kitchens and Bathrooms MSA Board Sub-Committee members for comment and acceptance.

The following people were involved in the development process and the value of their expertise and input is gratefully acknowledged.

LMF10108 Certificate I in Furnishing

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform basic furnishing industry tasks used in a range of industry job roles involving given routines and procedures and limited accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF10108 Certificate I in Furnishing reflects vocational outcomes for those performing operational duties in a furnishing enterprise supporting others.

Application

This qualification is typically used to develop skills and knowledge in basic furnishing techniques that may include a variety of employment-related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. It may also include participation in a team or work group.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include a Certificate II or III Furnishing qualification.

Exemptions applying to Certificate I

The furnishing industry recognises the needs of participants with special training and employment needs, and wishes to support State and Territory equity objectives of facilitating meaningful and recognised vocational training. A special training and employment needs exemption within Certificate I requirements may be granted to those participants by RTOs. This exemption is in respect of core unit *MSAPMOPS101A Make measurements*. The total requirement of six units must still be satisfied by the substitution of a unit from the sector specialist unit inventory.

At the discretion of RTOs, for those already in the picture framing workforce but not yet having qualifications, *LMFPF1001B Frame a simple artwork*, may be replaced for Certificate I purposes by another sector specialist unit.

If Certificate I is being applied in an Interior Design and Decoration context, please note *LMFID1001A Plan the decoration of a simple space* cannot be used as a credit unit for future training.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following Table contains a summary of the employability skills as identified by the furnishing industries for this qualification. This Table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • discuss production requirements with a supervisor • use production information such as patterns or specifications to guide work • follow work instructions • ask questions and listen to gain information about processes to be used
Teamwork	<ul style="list-style-type: none"> • work cooperatively with others • use skills of others to assist work activity • observe demonstrations of others
Problem-solving	<ul style="list-style-type: none"> • identify problems with production activities • report hazards • determine requirements in own work to meet quality standards • seek skills and knowledge of supervisors to solve problems
Initiative and enterprise	<ul style="list-style-type: none"> • identify and recommend improvements to own work processes • seek skill development support • monitor and adjust activity in response to progress and outcomes
Planning and organising	<ul style="list-style-type: none"> • recognise hazards and follow appropriate hazard control measures • follow production sequences for a given process or product • identify production and resource requirements • coordinate activity to meet timetables • identify and use relevant personal protective equipment
Self-management	<ul style="list-style-type: none"> • keep the work area clean and tidy at all times • monitor own work to ensure quality standards are achieved • understand own work activities and ask questions if required • apply safety procedures, including the use of protective equipment • follow operation instructions for machines and equipment
Learning	<ul style="list-style-type: none"> • ask questions to expand own understanding of work processes or requirements • demonstrate listening skills

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> identify own skill requirements and seek skill development access operator manuals to assist own learning
Technology	<ul style="list-style-type: none"> operate machinery, tools and equipment safely and according to operating standards

Packaging Rules**Packaging Rules**

To be awarded the LMF10108 Certificate I in Furnishing, competency must be achieved in **seven (7)** units of competency.

- four (4)** core units of competency
- three (3)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units. No LMF unit aligned initially at Certificate I has prerequisite requirements.

CORE UNITS

Complete all **four (4)** units from this list:

Unit code	Unit title	Prerequisites
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **three (3)** elective units from Groups A, B or C as specified below.

Group A

Select **one (1)** specialist unit from Group A.

Unit code	Unit title	Prerequisites
LMFBA1001A	Construct a basic roll up	

Unit code	Unit title	Prerequisites
	blind	
LMFFF1001B	Complete a basic furniture finishing product	
LMFFL1001A	Complete simple floor covering installation	
LMFFM1001B	Construct a basic timber furnishing product	
LMFFM1002B	Operate basic woodworking machines	
LMFGG1001B	Complete a basic glass and glazing project	
LMFID1001A	Plan the decoration of a simple space	
LMFMB1001B	Construct a basic mattress and base product	
LMFPF1001B	Frame a simple artwork	
LMFSF1001B	Produce basic soft furnishing accessories	
LMFUP1001B	Complete a basic upholstery project	

Group B

Select a minimum of **one (1)** elective unit from the specialist sector units listed below from the same industry sector as the unit chosen from Group A.

Furniture Finishing

Unit code	Unit title	Prerequisites
LMFFF2001B	Use furniture finishing sector hand and power tools	
LMFFF2002B	Dismantle/re-assemble furniture	

Unit code	Unit title	Prerequisites
LMFFF2003B	Remove surface coatings	
LMFFF2004B	Prepare surfaces for finishing	
LMFFF2005B	Maintain spray equipment and booth	
LMFFF2006B	Apply surface coatings by spray gun	
LMFFF2007B	Apply stains, fillers and bleach	
LMFFF2008B	Apply surface coatings by hand	

Furniture Making

Unit code	Unit title	Prerequisites
LMFFM2001B	Use furniture making sector hand and power tools	
LMFFM2002B	Assemble furnishing components	
LMFFM2003B	Select and apply hardware	
LMFFM2004B	Apply sheet laminates by hand	
LMFFM2005B	Join solid timber	
LMFFM2006B	Hand make timber joints	
LMFFM2007B	Follow plans to assemble production furniture	

Unit code	Unit title	Prerequisites
LMFFM2008B	Bend and form cane	
LMFFM2009B	Construct cane furniture	
LMFFM2010B	Set up, operate and maintain basic static machines	
LMFFM2011B	Apply manufactured board conversion techniques	
LMFFM2012B	Set up, operate and maintain pressure and clamping machines	

Coopering (note that an LMFFM unit listed above may be chosen for this sector)

Unit code	Unit title	Prerequisites
LMFCP2001A	Use coopering sector hand and power tools	
LMFCP2002A	Produce barrels using non-fired processes	

Glass and Glazing

Unit code	Unit title	Prerequisites
LMFGG2001B	Use glass and glazing sector hand and power tools	
HLTFA301B	Apply First Aid	
LMFGG2003B	Operate glass freefall rack and	

Unit code	Unit title	Prerequisites
	Table	
LMFGG2004B	Process thin glass by hand	
LMFGG2005B	Move glass sheets by hand	
LMFGG2006B	Move single glass sheets by mechanical means	
LMFGG2007B	Process glass by basic machines	
LMFGG2008B	Glaze/re-glaze residential windows and doors	
LMFGG2009B	Fabricate and assemble metal frames	
LMFGG2010B	Fabricate and install insect and security screens	

Mattress and Base Making

Unit code	Unit title	Prerequisites
LMFMB2001B	Use mattress and base sector hand and power tools	
LMFMB2002B	Prepare and assemble base unit	
LMFMB2003B	Assemble mattress components	
LMFMB2004B	Cut mattress and base fabrics	

Picture Framing

Unit code	Unit title	Prerequisites
LMFPPF2001B	Use picture framing sector hand and power tools	
LMFPPF2002B	Cut mouldings to length	
LMFPPF2003B	Join mouldings	
LMFPPF2004B	Mount artwork	
LMFPPF2005B	Cut mat boards	
LMFPPF2006B	Cut and handle glazing materials for framing	
LMFPPF2007B	Assemble artwork package (basic)	
LMFPPF2008B	Recognise and repair finishes of framing materials	

Soft Furnishings

Unit code	Unit title	Prerequisites
LMFSF2001B	Cut single layer fabrics	
LMFSF2002B	Machine sew materials	
LMFSF2003B	Machine sew using specific techniques	
LMFSF2004B	Hand sew soft furnishings	
LMFSF2005B	Operate a steam press	
LMFSF2006B	Calculate fabric	

Unit code	Unit title	Prerequisites
	quantities for window coverings	
LMFSF2007B	Construct unlined curtains/drapes	
LMFSF2008B	Construct lined curtains/drapes	
LMFSF2009B	Construct padded pelmets	
LMFSF2010B	Make up tracks for window coverings	
LMFSF2011B	Fit and adjust curtain hardware	
LMFSF2012B	Fit and adjust interior blinds	
LMFSF2013B	Dress windows	
LMFSF2014B	Use soft furnishing sector hand and power tools	

Upholstery

Unit code	Unit title	Prerequisites
LMFUP2001B	Use upholstery sector hand and power tools	
LMFUP2002B	Fit upholstery components	
LMFUP2003B	Apply contemporary foundations to upholstered furniture	
LMFUP2004B	Machine sew upholstery final cover materials	

Unit code	Unit title	Prerequisites
	(basic)	
LMFUP2005B	Develop cutting plan and cut single layer upholstery fabric	
LMFUP2006B	Dismantle/re-assemble furniture for upholstering	

Flooring Technology

Unit code	Unit title	Prerequisites
LMFFL2001A	Use flooring technology sector hand and power tools	
LMFFL2002A	Receive and prepare floor covering materials for installation	
LMFFL2003A	Select, operate and maintain floor covering cutting machine	
LMFFL2004A	Moisture test timber and concrete	
LMFFL2101A	Remove existing floor coverings	
LMFFL2102A	Prepare, select and apply smoothing and patching compounds	
LMFFL2103A	Select and apply appropriate compounds and additives	

Unit code	Unit title	Prerequisites
LMFFL2104A	Prepare concrete sub-floors using wet cleaning methods	
LMFFL2105A	Select, prepare and apply moisture barriers and damp proof membranes to concrete sub-floors	
LMFFL2106A	Prepare walls for covering	
LMFFL2107A	Select, operate and maintain grinding equipment	
LMFFL2108A	Select, operate and maintain shot blasting equipment	
LMFFL2109A	Select, operate and maintain demolition equipment	
LMFFL2110A	Select, operate and maintain scarifying equipment	
LMFFL2111A	Coarse sand timber flooring	
LMFFL2112A	Install hard underlays	
LMFFL2201A	Install carpet cushion/underlays and gripper accessories	
LMFFL2202A	Install unpatterned tufted and bonded carpet floor coverings	
LMFFL2203A	Install carpet tiles using standard	

Unit code	Unit title	Prerequisites
	installation procedures	
LMFFL2204A	Install unpatterned tufted and bonded carpet floor coverings to stairs	
LMFFL2301A	Install lay flat vinyl floor coverings	
LMFFL2302A	Install resilient tiles using standard installation procedures	
LMFFL2501A	Install laminate and engineered timber flooring	
LMFFL2502A	Install impact and sound absorption underlay	
LMFFL2503A	Nail strip timber flooring	
LMFFL2504A	Install expansion joints	
LMFFL2505A	Install mouldings and edge trims to timber flooring	

Blinds and Awnings

Unit code	Unit title	Prerequisites
LMFBA2001A	Use blinds and awnings sector hand and power tools	
LMFBA2002A	Set up, operate and maintain blinds and	

Unit code	Unit title	Prerequisites
	awnings sector static machines	
LMFBA2004A	Select and apply blinds and awnings sector hardware and fixings	
LMFBA2005A	Construct roll up and pull down style blinds and awnings	
LMFBA2006A	Construct vertical style blinds	
LMFBA2007A	Construct textiles for canopy-style awnings	
LMFBA2008A	Construct plastic and timber Venetian-style blinds	
LMFBA2009A	Construct aluminium Venetian-style blinds	
LMFBA2010A	Construct metal louvre and canopy hooded style awnings	
LMFBA2011A	Construct aluminium roll up style awnings	

Interior Design & Decoration

Unit code	Unit title	Prerequisites
BSBDES201A	Follow a design process	
BSBDES202A	Evaluate the nature of	

Unit code	Unit title	Prerequisites
	design in a specific industry context	
BSBDES301A	Explore the use of colour	

Group C

A maximum of **one (1)** relevant unit may be chosen from Group C.

Unit code	Unit title	Prerequisites
MSAENV272B	Participate in environmentally sustainable work practices	
<p>One unit may be chosen from units not selected in Group B, units available in this Training Package or from other endorsed Training Packages and accredited courses. The units must be aligned at Certificate I or II level.</p> <p>If a Competitive Manufacturing units is chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.</p>		

A unit selected from another Training Package or accredited course via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

LMF20202 Certificate II in Furniture Finishing

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform a range of finishing techniques for furniture and covers basic dismantling and assembly of furniture items involving known routines and procedures and some accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF20202 Certificate II in Furniture Finishing reflects vocational outcomes for those performing furniture component dismantling and assembly for surface finishing in furniture manufacturing enterprises.

Application

This qualification is typically used to develop skills and knowledge in the finishing of furniture surfaces where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of options to be applied. It could include collaboration with others through members of a group or team.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF30302 Certificate III in Furniture Making and relevant manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • complete written documentation • use communication technologies efficiently • demonstrate effective and appropriate communication and interpersonal skills • interpret and apply workplace procedures and instructions • share workplace information • communicate information about problems with work • read and understand job specifications • communicate information relating to OHS
Teamwork	<ul style="list-style-type: none"> • work independently and as part of a team • provide support to others in the work area • identify performance required to meet customer needs in own work and/or team • identify own role and responsibility within a team
Problem-solving	<ul style="list-style-type: none"> • identify and report any workplace hazards • identify production problems and make contributions to their solution • apply knowledge of materials, product purpose and processes to operations • check machine performance and identify signs of faulty operations • use material and process knowledge to solve problems • monitor workplace activities and identify and report faults or problems • recognise hazards and follow appropriate hazard control measures
Initiative and enterprise	<ul style="list-style-type: none"> • provide feedback on procedures and processes • gather and interpret information • ask questions regarding requirements and expectations • make suggestions for continuous improvement • inspect quality of production on an ongoing basis • record basic information on the quality and other indicators of production performance
Planning and organising	<ul style="list-style-type: none"> • plan work activities • monitor production and work load priorities • select appropriate tools

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • identify requirements for materials, quality and production • direct items to the correct area for further processing • identify and use relevant personal protective equipment • organise work area to maintain housekeeping standards
Self-management	<ul style="list-style-type: none"> • plan to meet own work requirements • keep the work area clean and tidy at all times • conduct regular housekeeping activities • interpret data and information as required by own job • monitor own work • understand own work activities • identify personal responsibilities • accept responsibility for quality of own work • follow OHS practices during the production and manufacturing of products
Learning	<ul style="list-style-type: none"> • assess own competencies in meeting job requirements • listen to feedback and advice of supervisors • identify own skill requirements and seek skill development if required • attend training or skill development activities • ask questions to expand own knowledge
Technology	<ul style="list-style-type: none"> • use appropriate tools, machines and equipment safely and effectively • use machinery to meet productivity requirements • perform minor maintenance on machinery in accordance with workplace practice • use manual handling technologies in the workplace • set up and adjust tools and equipment

Packaging Rules

Packaging Rules

To be awarded the LMF20202 Certificate II in Furniture Finishing, competency must be achieved in **thirteen (13)** units of competency.

- **eight (8)** core units of competency
- **five (5)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **eight (8)** units from this list.

Unit code	Unit title	Prerequisites
LMFFF2001B	Use furniture finishing sector hand and power tools	
LMFFF2003B	Remove surface coatings	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	
TLID307E	Handle dangerous goods/hazardous substances	

ELECTIVE UNITS

Select **five (5)** units from Groups A and B as specified below.

Group A

Select a minimum of **three (3)** units from Group A.

Unit code	Unit title	Prerequisites
LMFFF2002B	Dismantle/reassemble	

Unit code	Unit title	Prerequisites
	furniture	
LMFFF2004B	Prepare surfaces for finishing	
LMFFF2005B	Maintain spray equipment and booth	
LMFFF2006B	Apply surface coatings by spray gun	
LMFFF2007B	Apply stains, fillers and bleach	
LMFFF2008B	Apply surface coatings by hand	

Group B

A maximum of **two (2)** relevant units may be chosen from other units not selected in Group A, or units available in this Training Package, other endorsed Training Packages and accredited courses. The units must be aligned at Certificate II or III level.

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF20309 Certificate II in Furniture Making

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform the manufacture of free-standing furniture or built-in cabinets, and provide on-site assistance in the installation of furniture or cabinets involving known routines and procedures and some accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF20309 Certificate II in Furniture Making reflects vocational outcomes for those performing assistant cabinet maker, assistant installer of built-in cabinets, and production operator within a cabinet making enterprise. Cabinets include free-standing and built-in furniture.

Application

This qualification is typically used to develop skills and knowledge in non trade work involved in the manufacture of furniture or fitted cabinets such as those used in kitchens and bathrooms. Skills are also included that cover assisting in the installation or renovation of kitchens and bathrooms and other fitted cabinets. This qualification does not cover shopfitting.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF30302 Certificate III in Furniture Making , LMF32109 Certificate III in Cabinet Making and relevant competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Packaging Rules

Packaging Rules

To be awarded the LMF20309 Certificate II in Furniture Making, competency must be achieved in **thirteen (13)** units of competency.

- **five (5)** core units of competency
- **eight (8)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **five (5)** units from this list.

Unit code	Unit title	Prerequisites
LMFFM2001B	Use furniture making sector hand and power tools	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **eight (8)** unit from Groups A, B or C as specified below.

Group A

Select at least **one (1)** unit from Group A.

Unit code	Unit title	Prerequisites
CPCCOHS1001A	Work safely in the construction industry	
MSAPMOHS200A	Work safely	

NB Unit CPCCOHS1001A *Work safely in the construction industry* above is necessary to achieve a National Construction Safety Card required for all on-site work access.

Group B

Select a minimum of **four (4)** units from Group B with a maximum of **two (2)** units coded MSACM.

Unit code	Unit title	Prerequisites
LMFFF2004B	Prepare surfaces for finishing	
LMFFF2006B	Apply surface coatings by spray gun	
LMFFM2002B	Assemble furnishing components	
LMFFM2003B	Select and apply hardware	
LMFFM2004B	Apply sheet laminates by hand	
LMFFM2005B	Join solid timber	
LMFFM2006B	Hand make timber joints	
LMFFM2007B	Follow plans to assemble production furniture	
LMFFM2008B	Bend and form cane	
LMFFM2009B	Construct cane furniture	
LMFFM2010B	Set up, operate and maintain basic static machines	
LMFFM2011B	Apply manufactured board conversion techniques	

Unit code	Unit title	Prerequisites
LMFFM2012B	Set up, operate and maintain pressure and clamping machines	
LMFKB2001A	Prepare for cabinet installation	
LMFKB2002A	Provide assistance in cabinet installation	
MEM16008A	Interact with computing technology	
MSACMC210A	Manage the impact of change on own work	
MSACMS200A	Apply competitive manufacturing practices	
MSACMS201A	Sustain process improvements	
MSACMT220A	Apply quick changeover procedures	
MSACMT221A	Apply Just in Time (JIT) procedures	
MSACMT230A	Apply cost factors to work practices	
MSACMT240A	Apply 5S procedures in a manufacturing environment	
MSACMT250A	Monitor process	

Unit code	Unit title	Prerequisites
	capability	
MSACMT251A	Apply quality standards	
MSACMT260A	Use planning software systems in manufacturing	
MSACMT261A	Use SCADA systems in manufacturing	
MSACMT270A	Use sustainable energy practices	
MSACMT271A	Use sustainable environmental practices	
MSACMT280A	Undertake root cause analysis	
MSACMT281A	Contribute to the application of a proactive maintenance strategy	
MSAPMSUP201A	Receive or despatch goods	
MSAPMSUP240A	Undertake minor maintenance	
MSAPMSUP273A	Handle goods	

Group C

Up to **three (3)** relevant units may be chosen from other or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 3 units) or Certificate III level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF20402 Certificate II in Glass and Glazing

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform basic glass and glazing job roles such as safely processing and moving thin glass and may include assembly/repair of stained glass and lead lighting involving known routines and procedures and some accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF20402 Certificate II in Glass and Glazing reflects vocational outcomes for those performing operational glass and glazing functions.

Application

This qualification is typically used to develop skills and knowledge in glass and glazing operations where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of options to be applied. It could include collaboration with others through members of a group or team.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing with units included in this qualification or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF30602 Certificate III in Glass and Glazing and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Packaging Rules

Packaging Rules

To be awarded the LMF20402 Certificate II in Glass and Glazing, competency must be achieved in **thirteen (13)** units of competency.

- five (5)** core units of competency
- eight (8)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Select all **five (5)** units from this list:

Unit code	Unit title	Prerequisites
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **eight (8)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **five (5)** units from Group A

Unit code	Unit title	Prerequisites
HLTFA301B	Apply First Aid	
LMFGG2001B	Use glass and glazing sector hand and power tools	
LMFGG2003B	Operate glass freefall rack and Table	
LMFGG2004B	Process thin glass by hand	
LMFGG2005B	Move glass sheets by hand	
LMFGG2007B	Process glass by basic machines	
LMFGG2008B	Glaze/reglaze residential windows and doors	

Group B

Select a maximum of **three (3)** units from Groups B and C

Unit code	Unit title	Prerequisites
LMFGG2006B	Move single glass sheets by mechanical means	
LMFGG2009B	Fabricate and assemble metal frames	
LMFGG2010B	Fabricate and install insect and security screens	

Group C

Up to **three (3)** relevant units may be chosen from other units not already selected from Groups A and B or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 3 units) or Certificate III level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF20502 Certificate II in Mattress and Base Making

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform basic tasks in the mattress and base making sector involving known routines and procedures and some accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF20502 Certificate II in Mattress and Base Making reflects vocational outcomes for those performing job roles in mattress and bed base making enterprises.

Application

This qualification is typically used to develop skills and knowledge in mattress and base making involving a range of varied activities or knowledge applications where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of options to be applied. It could include collaboration with others through members of a group or team.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF30702 Certificate III in Mattress and Base Making and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Packaging Rules

Packaging Rules

To be awarded the LMF20502 Certificate II in Mattress and Base Making, competency must be achieved in **thirteen (13)** units of competency:

- seven (7)** core units of competency
- six (6)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **seven (7)** units from this list.

Unit code	Unit title	Prerequisites
LMFMB2001B	Use mattress and base sector hand and power tools	
LMFMB2003B	Assemble mattress components	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **six (6)** units from Groups A and B as specified below:

Group A

Select a minimum of **one (1)** unit from Group A

Unit code	Unit title	Prerequisites
LMFMB2002B	Prepare and assemble base unit	
LMFMB2004B	Cut mattress and base fabrics	

Group B

Select up to **five (5)** relevant units from the unit not selected in Group A, or units available in this Training Package or other endorsed Training Packages and accredited courses. Units must be aligned at Certificate II or III level.

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF20602 Certificate II in Picture Framing

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform basis tasks in the picture framing sector that could include mounting artwork and glazing frames involving known routines and procedures and some accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF20602 Certificate II in Picture Framing reflects vocational outcomes for those performing picture framing job roles.

Application

This qualification is typically used to develop picture framing skills and knowledge and perform varied activities or knowledge applications where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of options to be applied. It can involve collaboration with others through membership of a group or team.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF30802 Certificate III in Picture Framing and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

CORE UNITS

Complete all **six (6)** units from this list.

Unit code	Unit title	Prerequisites
LMFSF2014B	Use soft furnishing sector hand and power tools	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **seven (7)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **two (2)** units from Group A.

Unit code	Unit title	Prerequisites
LMFSF2002B	Machine sew materials	
LMFSF2003B	Machine sew using specific techniques	
LMFSF2010B	Make up tracks for window coverings	
LMFSF2011B	Fit and adjust curtain hardware	

Group B

Select at least **one (1)** unit from Group B.

Unit code	Unit title	Prerequisites
LMFSF2001B	Cut single layer fabrics	
LMFSF2004B	Hand sew soft furnishings	
LMFSF2005B	Operate a steam press	
LMFSF2006B	Calculate fabric quantities for window coverings	
LMFSF2007B	Construct unlined curtains/drapes	
LMFSF2008B	Construct lined curtains/drapes	
LMFSF2009B	Construct padded pelmets	
LMFSF2012B	Fit and adjust interior blinds	
LMFSF2013B	Dress windows	

Group C

Up to **four (4)** relevant units may be chosen from other units not already selected from Groups A and B, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level or Certificate III level (maximum of 2 Certificate III aligned units).

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF20802 Certificate II in Upholstery

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform basic tasks in the upholstery sector involving known routines and procedures and some accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF20802 Certificate II in Upholstery reflects vocational outcomes for those in upholstery job roles that may include dismantling and assembly of upholstery components and sewing and fitting of upholstery fabrics.

Application

This qualification is typically used to develop skills and knowledge in upholstery applications where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of options to be applied. It can involve collaboration with others through members of a group or team.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing or achieved equivalent industry experience.

Packaging Rules

Packaging Rules

To be awarded the LMF20802 Certificate II in Upholstery, competency must be achieved in **fourteen (14)** units of competency:

- seven (7)** core units of competency
- seven (7)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **seven (7)** units from this list.

Unit code	Unit title	Prerequisites
LMFUP2001B	Use upholstery sector hand and power tools	
LMFUP2006B	Dismantle/reassemble furniture for upholstery	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMPSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **seven (7)** units from Group A and Group B as specified below.

Group A

Select a minimum of **three (3)** units from Group A

Unit code	Unit title	Prerequisites
LMFUP2002B	Fit upholstery components	
LMFUP2003B	Apply contemporary foundations to upholstered furniture	
LMFUP2004B	Machine sew upholstery final cover materials (basic)	

Unit code	Unit title	Prerequisites
LMFUP2005B	Develop cutting plan and cut single layer upholstery fabric	

Group B

Up to **four (4)** relevant units may be chosen from a unit not already selected in Group B, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level or Certificate III level (maximum 2 Certificate III aligned units).

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF20908 Certificate II in Flooring Technology

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform basic flooring preparation and installation tasks such as timber, carpet and vinyl floor coverings that involve known routines and procedures and some accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF20908 Certificate II in Flooring Technology reflects vocational outcomes for those performing job roles involving handling flooring materials, preparing surfaces and installing a range of floorings.

Application

This qualification is typically used to develop skills and knowledge in preparation of flooring surfaces and installing flooring materials where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of options to be applied. It can involve collaboration with others through members of a group or team.

Packaging Rules

Packaging Rules

To be awarded the LMF20908 Certificate II in Flooring Technology, competency must be achieved in **fourteen (14)** units of competency.

- six (6)** core units of competency
- eight (8)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **six (6)** units from this list.

Unit code	Unit title	Prerequisites
LMFFL2001A	Use flooring technology sector hand and power tools	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **eight (8)** units from Groups A and B as specified below.

Group A

Select a minimum of **four (4)** units from Group A.

Unit code	Unit title	Prerequisites
LMFFL2002A	Receive and prepare floor covering materials for installation	
LMFFL2003A	Select, operate and maintain floor covering cutting machine	
LMFFL2004A	Moisture test timber and	

Unit code	Unit title	Prerequisites
	concrete floors	
LMFFL2101A	Remove existing floor coverings	
LMFFL2102A	Prepare, select and apply smoothing and patching compounds	
LMFFL2103A	Select and apply appropriate compounds and additives	
LMFFL2104A	Prepare concrete sub-floors using wet cleaning methods	
LMFFL2105A	Select, prepare and apply moisture barriers and damp proof membranes to concrete sub-floors	
LMFFL2106A	Prepare walls for covering	
LMFFL2107A	Select, operate and maintain grinding equipment	
LMFFL2108A	Select, operate and maintain shot blasting equipment	
LMFFL2109A	Select, operate and maintain demolition equipment	
LMFFL2110A	Select, operate and maintain scarifying equipment	

Unit code	Unit title	Prerequisites
LMFFL2111A	Coarse sand timber flooring	
LMFFL2112A	Install hard underlays	
LMFFL2201A	Install carpet cushion/underlays and gripper accessories	
LMFFL2202A	Install unpatterned tufted and bonded carpet floor coverings	
LMFFL2203A	Install carpet tiles using standard installation procedures	
LMFFL2204A	Install unpatterned tufted and bonded carpet floor coverings to stairs	
LMFFL2301A	Install lay flat vinyl floor coverings	
LMFFL2302A	Install resilient tiles using standard installation procedures	
LMFFL2501A	Install laminate and engineered timber flooring	
LMFFL2502A	Install impact and sound absorption underlay	
LMFFL2503A	Nail strip timber flooring	
LMFFL2504A	Install expansion	

Unit code	Unit title	Prerequisites
	joints	
LMFFL2505A	Install mouldings and edge trims to timber flooring	
LMFFL3101A	Inspect sub-floors	
LMFFL3102A	Prepare, select and apply screed to concrete sub-floors	

Group B

Up to **three (3)** relevant units may be chosen from units not already selected in Group A, or units in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level of Certificate III level (a maximum of 2 Certificate III units)

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF21008 Certificate II in Blinds and Awnings

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform basic tasks in blind and awning manufacture involving known routines and procedures and some accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF21008 Certificate II in Blinds and Awnings reflects vocational outcomes for those performing job roles in construction of a range of blinds and awnings using textiles, timber, plastic, steel and aluminium.

Application

This qualification is typically used to develop skills and knowledge in blind and awning manufacturing processes where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of options to be applied. It could include collaboration with others through members of a group or team.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF31808 Certificate III in Blinds and Awnings and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • complete written documentation • use communication technologies efficiently • demonstrate effective and appropriate communication and interpersonal skills • interpret and apply workplace procedures and instructions • share workplace information • communicate information about problems with work • read and understand job specifications • communicate information relating to OHS
Teamwork	<ul style="list-style-type: none"> • work independently and as part of a team • provide support to others in the work area • identify performance required to meet customer needs in own work and/or team • identify own role and responsibility within a team
Problem-solving	<ul style="list-style-type: none"> • identify and report any workplace hazards • identify production problems and make contributions to their solution • apply knowledge of materials, product purpose and processes to operations • check machine performance and identify signs of faulty operations • use material and process knowledge to solve problems • monitor workplace activities and identify and report faults or problems • recognise hazards and follow appropriate hazard control measures
Initiative and enterprise	<ul style="list-style-type: none"> • provide feedback on procedures and processes • gather and interpret information • ask questions regarding requirements and expectations • make suggestions for continuous improvement • inspect quality of production on an ongoing basis • record basic information on the quality and other indicators of production performance
Planning and organising	<ul style="list-style-type: none"> • plan work activities • monitor production and work load priorities • select appropriate tools • identify requirements for materials, quality and production • direct items to the correct area for further processing • identify and use relevant personal protective equipment

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> organise work area to maintain housekeeping standards
Self-management	<ul style="list-style-type: none"> plan to meet own work requirements keep the work area clean and tidy at all times conduct regular housekeeping activities interpret data and information as required by own job monitor own work understand own work activities identify personal responsibilities accept responsibility for quality of own work follow OHS practices during production and manufacturing processes
Learning	<ul style="list-style-type: none"> assess own competencies in meeting job requirements listen to feedback and advice of supervisors identify own skill requirements and seek skill development if required attend training or skill development activities ask questions to expand own knowledge
Technology	<ul style="list-style-type: none"> use appropriate tools, machines and equipment safely and effectively use machinery to meet productivity requirements perform minor maintenance on machinery in accordance with workplace practice use manual handling technologies in the workplace set up and adjust tools and equipment

Packaging Rules

Packaging Rules

To be awarded the LMF21008 Certificate II in Blinds and Awnings, competency must be achieved in **fourteen (14)** units of competency.

- six (6)** core units of competency
- eight (8)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **six (6)** units from this list.

Unit code	Unit title	Prerequisites
LMFBA2001A	Use blinds and awnings sector hand and power tools	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **eight (8)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **four (4)** units from Group A

Unit code	Unit title	Prerequisites
LMFBA2004A	Select and apply blinds and awnings sector hardware and fixings	
LMFBA2005A	Construct roll up and pull down style blinds and awnings	
LMFGN3001B	Read and interpret	

Unit code	Unit title	Prerequisites
	work documents	
LMFSF2001B	Cut single layer fabrics	
LMFSF2002B	Machine sew materials	

Group B

Select at least **one (1)** and up to **three (3)** units from Group B

Unit code	Unit title	Prerequisites
BSBADM311A	Maintain business resources	
BSBCUS201A	Deliver a service to customers	
BSBCUS301A	Deliver and monitor a service to customers	
BSBINN201A	Contribute to workplace innovation	
BSBITU101A	Operate a personal computer	
BSBITU306A	Design and produce business documents	
LMFBA2002A	Set up, operate and maintain blinds and awnings sector static machines	
LMFBA2006A	Construct vertical-style blinds	

Unit code	Unit title	Prerequisites
LMFBA2007A	Construct textiles for canopy-style awnings	
LMFBA2008A	Construct plastic and timber Venetian-style blinds	
LMFBA2009A	Construct aluminium Venetian-style blinds	
LMFBA2010A	Construct metal louvre and canopy hooded style awnings	
LMFBA2011A	Construct aluminium roll up style awnings	
LMFGN2002B	Move and store materials and products	
LMTTF2014A	Weld plastic materials	
TLIA1107C	Package goods	

Group C

Up to **three (3)** relevant units may be chosen from other units not already selected from Groups A and B, or units available in this Training Package or other endorsed Training Packages and accredited courses. The units must be aligned at Certificate II or Certificate III level (a maximum of 1 from Certificate III)

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF21108 Certificate II in Security Screens and Grills

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform basic tasks in the manufacture of security screens and grills involving known routines and procedures and some accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF21108 Certificate II in Security Screens and Grills reflects vocational outcomes for those performing job roles in security screen and grill manufacture and installation and can include basic glazing tasks.

Application

This qualification is typically used to develop skills and knowledge in security screen and grill manufacturing and installation processes where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of options to be applied. It could include collaboration with others through members of a group or team.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF31608 Certificate III in Security Screens and Grills and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • collect, organise and understand information related to work orders, basic plans and safety procedures • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
Teamwork	<ul style="list-style-type: none"> • work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
Problem-solving	<ul style="list-style-type: none"> • use checking and inspection techniques to ensure security screens and grills comply with specifications and that instances of non-compliance are remedied
Initiative and enterprise	<ul style="list-style-type: none"> • recognise and respond to circumstances outside instructions or personal competence
Planning and organising	<ul style="list-style-type: none"> • plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage during the production cycle • use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
Self-management	<ul style="list-style-type: none"> • clarify and confirm <i>specified</i> work instructions • plan own work within given task parameters • apply systematic and effective time management • accept responsibility for given tasks • set, monitor and satisfy personal work goals
Learning	<ul style="list-style-type: none"> • satisfy the competency requirements for the job • maintain current knowledge of tools and production materials • maintain current knowledge of production techniques and processes • seek learning opportunities
Technology	<ul style="list-style-type: none"> • use the workplace technology related to the specified work including hand and power tools, calculators and measuring devices

n

Packaging Rules

Packaging Rules

To be awarded the LMF21108 Certificate II in Security Screens and Grills, competency must be achieved in **thirteen (13)** units of competency.

- **eight (8)** core units of competency
- **five (5)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **eight (8)** units from this list.

Unit code	Unit title	Prerequisites
LMFGN2002B	Move and store materials and products	
LMFSS2001A	Use security screens and grills hand and power tools	
LMFSS2002A	Rectify faults in product	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **five (5)** units from Groups A or B as specified below.

Group A

Select a minimum of **one (1)** unit from Group A.

Unit code	Unit title	Prerequisites
HLTFA301B	Apply First Aid	
LMFFM2010B	Set up, operate and maintain basic static machines	
LMFGG2001B	Use glass and glazing hand and power tools	
LMFGG2008B	Glaze/re-glaze residential windows and doors	
LMFSS2003A	Prepare product for Australian Standards testing	
LMFSS2004A	Undertake surface preparation	

Group B

Up to **four (4)** units may be chosen from units not already selected from Group A, or units available in this Training Package or other endorsed Training Packages and accredited courses. The units must be aligned at Certificate II or Certificate III level (a maximum of 1 from Certificate III)

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF21208 Certificate II in Stained Glass and Lead Lighting

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform basic stained glass and lead light manufacturing tasks.

Job roles/employment outcomes

The LMF21208 Certificate II in Stained Glass and Lead Lighting reflects vocational outcomes for those performing stained glass and lead lighting operations

Application

This qualification is typically used to develop skills and knowledge in stained glass and lead lighting and glass and glazing operations where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of options to be applied. It could include collaboration with others through members of a group or team.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing with units included in this qualification or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF31708 Certificate III In Stained Glass and Lead Lighting and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Select **five (5)** units from Groups A and B as specified below.

Group A

Select a minimum of **five (5)** units from Groups A and B.

Unit code	Unit title	Prerequisites
CUVCOR07B	Use drawing techniques to represent the object or idea	
CUVVSP14B	Apply techniques to produce drawings	
LMFFM3033B	Construct jigs and fixtures	
LMFGG2004B	Process thin glass by hand	
LMFGG2007B	Process glass by basic machines	
LMFGG3013B	Construct and repair leadlight and stained glass panels	
LMFGN2002B	Move and store materials and products	
LMFSL2001A	Assemble lead light and stained glass components	
MEM05003B	Perform soft soldering	
TLID307E	Handle dangerous goods/hazardous substances	

Group B

Up to **three (3)** relevant units may be chosen from other units not already selected from Group A or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 3 units) or Certificate III level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group A must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF21308 Certificate II in Coopering

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform basic coopering tasks involving known routines and procedures and some accountability for the quality of outcomes.

Job roles/employment outcomes

The LMF21308 Certificate II in Coopering reflects vocational outcomes for those performing timber barrel construction with metal fixings and can include basic welding techniques.

Application

This qualification is typically used to develop skills and knowledge in barrel construction where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of options to be applied. It could include collaboration with others through members of a group or team.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing or achieved equivalent industry experience.

Packaging Rules

To be awarded the LMF21308 Certificate II in Coopering, competency must be achieved in **thirteen (13)** units of competency.

- **six (6)** core units of competency
- **seven (7)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **six (6)** units from this list.

Unit code	Unit title	Prerequisites
LMFCP2001A	Use coopering sector hand and power tools	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **seven (7)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **two (2)** units from Group A

Unit code	Unit title	Prerequisites
LMFCP2002A	Produce barrels using non-fired	

Unit code	Unit title	Prerequisites
	processes	
LMFFM2006B	Hand make timber joints	
LMFFM2010B	Set up, operate and maintain basic static machines	

Group B

Select a minimum of **two (2)** units from Group B

Unit code	Unit title	Prerequisites
LMFFF2004B	Prepare surfaces for finishing	
LMFFM2002B	Assemble furnishing components	
LMFFM2003B	Select and apply hardware	
LMFFM2005B	Join solid timber	
LMFFM2007B	Follow plans to assemble production furniture	
LMFFM2012B	Set up, operate and maintain pressure and clamping machines	
LMFGG2002B	Apply First Aid	
LMFGN2002B	Move and store materials and products	

Unit code	Unit title	Prerequisites
MEM05007C	Perform manual heating and thermal cutting	
MEM05012C	Perform routine manual metal arc welding	
MEM05050B	Perform routine gas metal arc welding	
MEM06001B	Perform hand forging	
MEM18001C	Use hand tools	
TLID207C	Shift a load using manually operated equipment	
TLID307E	Handle dangerous goods/hazardous substances	

Group C

Up to **three (3)** relevant units may be chosen from units not already selected from Groups A and B, or units available in this Training Package or other endorsed Training Packages and accredited courses aligned at Certificate II level.

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF30202 Certificate III in Furniture Finishing

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform a wide range of tasks associated with the preparation of surfaces and applying stains, coatings and finishes to furniture in manufacture or repair.

Job roles/employment outcomes

The LMF30202 Certificate III in Furniture Finishing reflects vocational outcomes for those performing furniture finishing job roles in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in furniture finishing and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF20202 Certificate II in Furniture Finishing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF40202 Certificate IV in Furnishing Technology or similar qualifications plus relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • complete written documents, forms and timesheets • use communication technologies efficiently • communicate production abnormalities • demonstrate effective and appropriate communication and interpersonal skills when dealing with people from a range of backgrounds • read, interpret and communicate production schedules • communicate with all team members
Teamwork	<ul style="list-style-type: none"> • work cooperatively with people of different ages, gender, race or religion • liaise with and provide support to other team members • work as part of a team • keep team members informed of changes to work practices • identify team performance required to meet customer needs • provide leadership to others in the team • encourage the sharing of information between team members • plan and support team activities
Problem-solving	<ul style="list-style-type: none"> • identify and report problems and make contributions to their solution • investigate problem causes • implement changes • examine tools for damage, missing components or other defects • identify and promptly address problems or issues • assess quality of work pieces • determine effective work practices • provide problem solving support to team members • problem solve machine operational and maintenance requirements
Initiative and enterprise	<ul style="list-style-type: none"> • seek and provide feedback on procedures • gather and analyse information • record information on the quality and other indicators of production performance • adjust and implement production schedules changes • provide leadership • identify and implement process improvements • coordinate work activities and manufacturing processes • monitor workplace performance • use analytical and decision making skills

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Planning and organising	<ul style="list-style-type: none"> • identify hazards and implement appropriate hazard control measures • organise self and others to meet production schedules • identify and rectify stock shortages in advance • sequence work to maximise safety and productivity • select and use appropriate tools and equipment • determine materials, quality and production requirements • apply time management skills to ensure work flow
Self-management	<ul style="list-style-type: none"> • interpret and apply relevant acts and regulations • keep the work area clean and tidy at all times • conduct regular housekeeping activities • understand own work activities • manage own time and establish own work schedule • develop and implement workplace procedures and instructions • locate, interpret and apply information relevant to own work • monitor and evaluate own work quality • accept responsibility for quality of work
Learning	<ul style="list-style-type: none"> • develop learning activities as appropriate • assess competencies in meeting job requirements • identify own training needs and seek skill development if required • listen to feedback from others • identify sources of information to expand knowledge and understanding • identify and address skill development needs of others in the team
Technology	<ul style="list-style-type: none"> • use software applications effectively • properly start up, operate and shut down computers • work with technology safely and according to workplace standards • establish procedures • carry out pre-operational checks on equipment and machines • operate equipment and machines safely, efficiently and to productivity requirements • monitor and adjust machine functions • perform machine maintenance as determined by workplace procedures • clean and check equipment and machines

Packaging Rules

Packaging Rules

To be awarded the LMF30202 Certificate III in Furniture Finishing, competency must be achieved in **twenty-three (23)** units of competency.

- **ten (10)** core units of competency
- **thirteen (13)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **ten (10)** units from this list.

Unit code	Unit title	Prerequisites
LMFFF2001B	Use furniture finishing sector hand and power tools	
LMFFF2002B	Dismantle/reassemble furniture	
LMFGN3001B	Read and interpret work documents	
LMFGN3002B	Estimate and cost job	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	
TLID307E	Handle dangerous goods/hazardous substances	

ELECTIVE UNITS

Select **thirteen (13)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **eight (8)** units from Group A.

Unit code	Unit title	Prerequisites
LMFFF2003B	Remove surface coatings	
LMFFF2004B	Prepare surfaces for finishing	
LMFFF2005B	Maintain spray equipment and booth	
LMFFF2006B	Apply surface coatings by spray gun	
LMFFF2007B	Apply stains, fillers and bleach	
LMFFF3001B	Match and make up colours	
LMFFF3003B	Apply plural component coatings	
LMFFF3004B	Apply soft rubber techniques	
LMFFF3006B	Repair and touch up surfaces	

Group B

Select at least **one (1)** unit from Group B.

Unit code	Unit title	Prerequisites
-----------	------------	---------------

Unit code	Unit title	Prerequisites
LMFFF2008B	Apply surface coatings by hand	
LMFFF3002B	Set up, operate and maintain mechanical coatings systems	
LMFFF3005B	Enhance finishes	
LMFFF3007B	Apply graining and decorative finishes	
LMFFF3008B	Apply traditional French polishing techniques	
LMFFF3009B	Set up, operate and maintain CNC coating systems	

Group C

Up to **four (4)** relevant units may be chosen from units not already selected from Groups A and B, or units available in this Training Package or other endorsed Training Packages and accredited courses. Units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 4 units) or Certificate IV level (maximum 1 unit)

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF30302 Certificate III in Furniture Making

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform a wide range of tasks in furniture making including interpretation of specifications drawings, use of specialised machines and hand techniques.

Job roles/employment outcomes

The LMF30302 Certificate III in Furniture Making reflects vocational outcomes for those performing furniture manufacture in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in furniture making techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF20309 Certificate II in Furniture Making or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF40202 Certificate IV in Furnishing Technology or similar qualifications plus relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • complete written documents, forms and timesheets • use communication technologies efficiently • communicate production abnormalities • demonstrate effective and appropriate communication and interpersonal skills when dealing with people from a range of backgrounds • read, interpret and communicate production schedules • communicate with all team members
Teamwork	<ul style="list-style-type: none"> • work cooperatively with people of different ages, gender, race or religion • liaise with and provide support to other team members • work as part of a team • keep team members informed of changes to work practices • identify team performance required to meet customer needs • provide leadership to others in the team • encourage the sharing of information between team members • plan and support team activities
Problem-solving	<ul style="list-style-type: none"> • identify and report problems and make contributions to their solution • investigate problem causes • implement changes • examine tools for damage, missing components or other defects • identify and promptly address problems or issues • assess quality of work pieces • determine effective work practices • provide problem solving support to team members • problem solve machine operational and maintenance requirements
Initiative and enterprise	<ul style="list-style-type: none"> • seek and provide feedback on procedures • gather and analyse information • record information on the quality and other indicators of production performance • adjust and implement production schedules changes • provide leadership • identify and implement process improvements • coordinate work activities and manufacturing processes • monitor workplace performance • use analytical and decision making skills

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Planning and organising	<ul style="list-style-type: none"> • identify hazards and implement appropriate hazard control measures • organise self and others to meet production schedules • identify and rectify stock shortages in advance • sequence work to maximise safety and productivity • select and use appropriate tools and equipment • determine materials, quality and production requirements • apply time management skills to ensure work flow
Self-management	<ul style="list-style-type: none"> • interpret and apply relevant acts and regulations • keep the work area clean and tidy at all times • conduct regular housekeeping activities • understand own work activities • manage own time and establish own work schedule • develop and implement workplace procedures and instructions • locate, interpret and apply information relevant to own work • monitor and evaluate own work quality • accept responsibility for quality of work
Learning	<ul style="list-style-type: none"> • develop learning activities as appropriate • assess competencies in meeting job requirements • identify own training needs and seek skill development if required • listen to feedback from others • identify sources of information to expand knowledge and understanding • identify and address skill development needs of others in the team
Technology	<ul style="list-style-type: none"> • use software applications effectively • properly start up, operate and shut down computers • work with technology safely and according to workplace standards • establish procedures • carry out pre-operational checks on equipment and machines • operate equipment and machines safely, efficiently and to productivity requirements • monitor and adjust machine functions • perform machine maintenance as determined by workplace procedures • clean and check equipment and machines

Packaging Rules

Packaging Rules

To be awarded the LMF30302 Certificate III in Furniture Making, competency must be achieved in **twenty-eight (28)** units of competency.

- **fifteen (15)** core units of competency
- **thirteen (13)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **fifteen (15)** units from this list.

Unit code	Unit title	Prerequisites
LMFFF2004B	Prepare surfaces for finishing	
LMFFM2001B	Use furniture making sector hand and power tools	
LMFFM2002B	Assemble furnishing components	
LMFFM2006B	Hand make timber joints	
LMFFM2010B	Set up, operate and maintain basic static machines	
LMFFM2011B	Apply manufactured board conversion techniques	
LMFFM3011B	Produce manual and computer-aided production drawings	
LMFGN3001B	Read and interpret work documents	

Unit code	Unit title	Prerequisites
LMFGN3002B	Estimate and cost job	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	
TLID307E	Handle dangerous goods/hazardous substances	

ELECTIVE UNITS

Select **thirteen (13)** units from Groups A or B as specified below.

Group A

Select a minimum of **seven (7)** units from Group A.

Unit code	Unit title	Prerequisites
LMFFM2003B	Select and apply hardware	
LMFFM2004B	Apply sheet laminates by hand	
LMFFM2005B	Join solid timber	
LMFFM2007B	Follow plans to assemble production furniture	

Unit code	Unit title	Prerequisites
LMFFM2008B	Bend and form cane	
LMFFM2009B	Construct cane furniture	
LMFFM2012B	Set up, operate and maintain pressure and clamping machines	
LMFFM3001B	Construct chair and couch frames	
LMFFM3002B	Construct furniture using leg and rail method	
LMFFM3003B	Produce angled and curved furniture using manufactured board	
LMFFM3004B	Produce angled and curved furniture using solid timber	
LMFFM3005B	Fabricate custom furniture	
LMFFM3006B	Install furnishing products	
LMFFM3007B	Prepare and apply decorative surfaces for furniture	
LMFFM3010B	Select timbers for furniture production	
LMFFM3012B	Prepare cutting list from plans and job specifications	

Unit code	Unit title	Prerequisites
LMFFM3013B	Measure and draw site layout for manufactured furniture products	
LMFFM3020B	Set up, operate and maintain sawing machines	
LMFFM3021B	Set up, operate and maintain drilling machines	
LMFFM3022B	Set up, operate and maintain joining machines	
LMFFM3023B	Set up, operate and maintain planing and finishing machines	
LMFFM3024B	Set up, operate and maintain multi-head planing and moulding machines	
LMFFM3025B	Set up, operate and maintain routing and shaping machines	
LMFFM3026B	Set up, operate and maintain mechanical wood turning lathes	
LMFFM3027B	Set up, operate and maintain automated edge banding machines	
LMFFM3028B	Fabricate synthetic solid surface products	

Unit code	Unit title	Prerequisites
LMFFM3030B	Set up, operate and maintain CNC sizing machines	
LMFFM3031B	Set up, operate and maintain CNC machining and processing centres	
LMFFM3032B	Produce and maintain cutting tools	
LMFFM3033B	Construct jigs and fixtures	

Group B

Up to **six (6)** relevant units may be chosen from units not already selected from Group A, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 6 units) or Certificate IV level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF30502 Certificate III in Furniture Making (Wood Machining)

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform wood machining for the manufacture of furniture utilising a range of specialist machinery and including preparing and working from drawings and cutting lists.

Job roles/employment outcomes

The LMF30502 Certificate III in Furniture Making (Wood Machining) reflects vocational outcomes for those performing wood machining for furniture making processes in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in wood machining and furniture making techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF20309 Certificate II in Furniture Making or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF40202 Certificate IV in Furnishing Technology or similar qualifications plus relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Packaging Rules

Packaging Rules

To be awarded the LMF30502 Certificate III in Furniture Making (Wood Machining), competency must be achieved in **twenty-seven (27)** units of competency.

- **seventeen (17)** core units of competency
- **ten (10)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **seventeen (17)** units from this list.

Unit code	Unit title	Prerequisites
LMFFF2004B	Prepare surfaces for finishing	
LMFFM2001B	Use furniture making sector hand and power tools	
LMFFM2002B	Assemble furnishing components	
LMFFM2006B	Hand make timber joints	
LMFFM2010B	Set up, operate and maintain basic static machines	
LMFFM2011B	Apply manufactured board conversion techniques	
LMFFM3011B	Produce manual and computer-aided production drawings	
LMFFM3012B	Prepare cutting list from plans and job	

Unit code	Unit title	Prerequisites
	specifications	
LMFFM3033B	Construct jigs and fixtures	
LMFGN3001B	Read and interpret work documents	
LMFGN3002B	Estimate and cost job	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	
TLID307E	Handle dangerous goods/hazardous substances	

ELECTIVE UNITS

Select **ten (10)** units from Groups A, B or C as specified below.

Group A

Select a minimum of **four (4)** units from Group A.

Unit code	Unit title	Prerequisites
LMFFM3020B	Set up, operate and maintain sawing machines	
LMFFM3021B	Set up, operate and maintain	

Unit code	Unit title	Prerequisites
	drilling machines	
LMFFM3022B	Set up, operate and maintain joining machines	
LMFFM3023B	Set up, operate and maintain planing and finishing machines	
LMFFM3025B	Set up, operate and maintain routing and shaping machines	

Group B

Select up to **six (6)** units from Groups B and C

Unit code	Unit title	Prerequisites
LMFFM2003B	Select and apply hardware	
LMFFM2004B	Apply sheet laminates by hand	
LMFFM2005B	Join solid timber

LMFFM3003B	Produce angled and curved furniture using manufactured board	
LMFFM3004B	Produce angled and curved furniture using solid timber	
LMFFM3005B	Fabricate custom furniture	
LMFFM3006B	Install furnishing products	
LMFFM3007B	Prepare and apply decorative surfaces for furniture	
LMFFM3010B	Select timbers for furniture production	
LMFFM3013B	Measure and draw site layout for manufactured furniture products	
LMFFM3024B	Set up, operate and maintain multi-head planing and moulding machines	
LMFFM3026B	Set up, operate	

Unit code	Unit title	Prerequisites
	and maintain mechanical wood turning lathes	
LMFFM3027B	Set up, operate and maintain automated edge banding machines	
LMFFM3028B	Fabricate synthetic solid surface products	
LMFFM3030B	Set up, operate and maintain CNC sizing machines	
LMFFM3031B	Set up, operate and maintain CNC machining and processing centres	
LMFFM3032B	Produce and maintain cutting tools	

Group C

Up to **five (5)** relevant units may be chosen from units not already selected from Group A and B, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 6 units) or Certificate IV level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF30602 Certificate III in Glass and Glazing

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform a range of glass and glazing job roles including safely processing, moving and installing various types of glass and handling glass materials and components.

Job roles/employment outcomes

The LMF30602 Certificate III in Glass and Glazing reflects vocational outcomes for those performing glass and glazing functions in residential and commercial operations and could include manufacturing, processing and installation. Job roles would be in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in a full range of glass and glazing techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF20402 Certificate II in Glass and Glazing with units included in this qualification or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include Furnishing Certificate IV or Diploma and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

Depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Licensing of glazing work applies in Queensland, NSW and South Australia. Local regulations should be checked for details.

Pathways Information

Packaging Rules

Packaging Rules

To be awarded the LMF30602 Certificate III in Glass and Glazing, competency must be achieved in **twenty-four (24)** units of competency.

- **fourteen (14)** core units of competency
- **ten (10)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Select all **fourteen (14)** units from this list:

Unit code	Unit title	Prerequisites
LMFGG2001B	Use glass and glazing sector hand and power tools	
LMFGG2002B	Apply First Aid	
LMFGG2003B	Operate glass freefall rack and Table	
LMFGG2004B	Process thin glass by hand	
LMFGG2005B	Move glass sheets by hand	
LMFGG2007B	Process glass by basic machines	
LMFGG2008B	Glaze/reglaze residential windows and doors	
LMFGG3002B	Assess glass and glazing requirements	
LMFGG3004B	Process thick glass by hand	
MSAENV272B	Participate in environmentally sustainable work	

Unit code	Unit title	Prerequisites
	practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select a maximum of **ten (10)** elective units from Groups A and B as specified below.

Group A

A minimum of **six (6)** units must be chosen from Group A

Unit code	Unit title	Prerequisites
LMFGG2006B	Move single glass sheets by mechanical means	
LMFGG2009B	Fabricate and assemble metal frames	
LMFGG2010B	Fabricate and install insect and security screens	
LMFGG3001B	Store and handle glass	
LMFGG3003B	Move block/bulk glass sheet by mechanical means	
LMFGG3005B	Process glass by semi-automatic and automatic machines	
LMFGG3006B	Apply film to glass	
LMFGG3007B	Form glass	
LMFGG3008B	Apply patterns and designs	

Unit code	Unit title	Prerequisites
	to glass	
LMFGG3009B	Set up and operate glass laminating equipment	
LMFGG3010B	Set up and operate glass toughening equipment	
LMFGG3011B	Set up and operate glass silvering equipment	
LMFGG3012B	Set up and operate insulated glass unit manufacturing equipment	
LMFGG3013B	Construct and repair leadlight panels	
LMFGG3014B	Prepare and install mirrors	
LMFGG3015B	Fabricate and install shower screens and wardrobe doors	
LMFGG3016B	Fabricate and install residential windows and doors	
LMFGG3017B	Fabricate and install commercial glazing	
LMFGG3018B	Prepare and install architectural engineered glazing	
LMFGG3019B	Conduct commercial and structural glazing	

Group B

Up to a maximum of **four (4)** electives may be chosen from those not already selected from Group A, other units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 4 units) or Certificate IV level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF30702 Certificate III in Mattress and Base Making

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform mattress and base manufacture and assembly including job costing.

Job roles/employment outcomes

The LMF30702 Certificate III in Mattress and Base Making reflects vocational outcomes for those performing mattress and base making processes in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in mattress and base making techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. TLID307E	Handle dangerous goods/hazardous substances	

ELECTIVE UNITS

Select **eight (8)** units from Groups A and B as specified below.

Group A

Select a minimum of **three (3)** units from Group A.

Unit code	Unit title	Prerequisites
LMFMB3001B	Assemble springs for mattresses	
LMFMB3002B	Make springs for mattresses and bases	
LMFMB3003B	Set up, operate and maintain a tape edging machine	
LMFMB3004B	Set up, operate and maintain a quilting machine	

Group B

Up to **five (5)** relevant units may be chosen from units not already selected from Group A, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 5 units) or Certificate IV level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF30802 Certificate III in Picture Framing

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to prepare design requirements for framing and use mouldings and mat to frame pictures and artwork, including use of glass and glazing materials where required.

Job roles/employment outcomes

The LMF30802 Certificate III in Picture Framing reflects vocational outcomes for those performing picture framing in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in picture framing techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF20602 Certificate II in Picture Framing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include Certificate IV and Diploma qualifications in the Furnishing Training Package and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • complete written documents, forms and timesheets • use communication technologies efficiently • communicate production abnormalities • demonstrate effective and appropriate communication and interpersonal skills when dealing with people from a range of backgrounds • read, interpret and communicate production schedules • communicate with all team members
Teamwork	<ul style="list-style-type: none"> • work cooperatively with people of different ages, gender, race or religion • liaise with and provide support to other team members • work as part of a team • keep team members informed of changes to work practices • identify team performance required to meet customer needs • provide leadership to others in the team • encourage the sharing of information between team members • plan and support team activities
Problem-solving	<ul style="list-style-type: none"> • identify and report problems and make contributions to their solution • investigate problem causes • implement changes • examine tools for damage, missing components or other defects • identify and promptly address problems or issues • assess quality of work pieces • determine effective work practices • provide problem solving support to team members • problem solve machine operational and maintenance requirements
Initiative and enterprise	<ul style="list-style-type: none"> • seek and provide feedback on procedures • gather and analyse information • record information on the quality and other indicators of production performance • adjust and implement production schedules changes • provide leadership • identify and implement process improvements • coordinate work activities and manufacturing processes • monitor workplace performance • use analytical and decision making skills

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Planning and organising	<ul style="list-style-type: none"> • identify hazards and implement appropriate hazard control measures • organise self and others to meet production schedules • identify and rectify stock shortages in advance • sequence work to maximise safety and productivity • select and use appropriate tools and equipment • determine materials, quality and production requirements • apply time management skills to ensure work flow
Self-management	<ul style="list-style-type: none"> • interpret and apply relevant acts and regulations • keep the work area clean and tidy at all times • conduct regular housekeeping activities • understand own work activities • manage own time and establish own work schedule • develop and implement workplace procedures and instructions • locate, interpret and apply information relevant to own work • monitor and evaluate own work quality • accept responsibility for quality of work
Learning	<ul style="list-style-type: none"> • develop learning activities as appropriate • assess competencies in meeting job requirements • identify own training needs and seek skill development if required • listen to feedback from others • identify sources of information to expand knowledge and understanding • identify and address skill development needs of others in the team
Technology	<ul style="list-style-type: none"> • use software applications effectively • properly start up, operate and shut down computers • work with technology safely and according to workplace standards • establish procedures • carry out pre-operational checks on equipment and machines • operate equipment and machines safely, efficiently and to productivity requirements • monitor and adjust machine functions • perform machine maintenance as determined by workplace procedures • clean and check equipment and machines

Packaging Rules

Packaging Rules

To be awarded the LMF30802 Certificate III in Picture Framing, competency must be achieved in **twenty-one (21)** units of competency.

- **fourteen (14)** core units of competency
- **seven (7)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **fourteen (14)** units from this list.

Unit code	Unit title	Prerequisites
LMFPPF2001B	Use picture framing sector hand and power tools	
LMFPPF2002B	Cut mouldings to length	
LMFPPF2003B	Join mouldings	
LMFPPF2004B	Mount artwork	
LMFPPF2005B	Cut mat boards	
LMFPPF2006B	Cut and handle glazing materials for framing	
LMFPPF3001B	De-frame artwork	
LMFPPF3005B	Recognise and handle artwork for framing	
LMFPPF3006B	Prepare design requirements for framing	
MSAENV272B	Participate in environmentally sustainable work	

Unit code	Unit title	Prerequisites
	practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **seven (7)** units from Groups A and B as specified below.

Group A

Select a minimum of **three (3)** units from Group A

Unit code	Unit title	Prerequisites
LMFPPF2007B	Assemble artwork package (basic)	
LMFPPF2008B	Recognise and repair finishes of framing materials	
LMFPPF3002B	Decorate mat boards	
LMFPPF3003B	Set up and operate CNC machines	
LMFPPF3004B	Prepare textiles for framing	
LMFPPF3007B	Apply frame finishes	
LMFPPF3008B	Assemble artwork package (complex)	
LMFPPF3009B	Install artwork	

Group B

Up to **four (4)** relevant units may be chosen from units not already selected from Group A, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 4 units) or Certificate IV level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF30902 Certificate III in Soft Furnishing

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform soft furnishing sewing, selection, manufacture and installation of curtains and drapes and/or blinds with required fittings and may include manufacture of bedspreads, linen and soft furnishing accessories.

Job roles/employment outcomes

The LMF30902 Certificate III in Soft Furnishing reflects vocational outcomes for those performing reflects vocational outcomes for those performing soft furnishing manufacture and installation processes in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in soft furnishing making and installing techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF20702 Certificate II in Soft Furnishing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF40202 Certificate IV in Furnishing Technology, LMF40408 Certificate IV in Interior Decoration or similar qualifications plus relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Packaging Rules

Packaging Rules

To be awarded the LMF30902 Certificate III in Soft Furnishing, competency must be achieved in **twenty (20)** units of competency.

- **six (6)** core units of competency
- **fourteen (14)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **six (6)** units from this list.

Unit code	Unit title	Prerequisites
LMFSF2014B	Use soft furnishing sector hand and power tools	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **fourteen (14)** units from Groups A, B, C and D as specified below.

Group A

Select a maximum of **four (4)** units from **either** Group A or Group B.

Unit code	Unit title	Prerequisites
-----------	------------	---------------

Unit code	Unit title	Prerequisites
LMFSF2001B	Cut single layer fabrics	
LMFSF2002B	Machine sew materials	
LMFSF2003B	Machine sew using specific techniques	
LMFSF2007B	Construct unlined curtains/drapes	
LMFSF2008B	Construct lined curtains/drapes	

Group B

Unit code	Unit title	Prerequisites
LMFSF2010B	Make up tracks for window coverings	
LMFSF2011B	Fit and adjust curtain hardware	
LMFSF2012B	Fit and adjust interior blinds	
LMFSF2013B	Dress windows	
LMFSF3014B	Provide technical advice to customers	

Group C

Select a minimum of **five (5)** units from Group C.

Unit code	Unit title	Prerequisites
LMFSF2004B	Hand sew soft furnishings	

Unit code	Unit title	Prerequisites
LMFSF2005B	Operate a steam press	
LMFSF2006B	Calculate fabric quantities for window coverings	
LMFSF2009B	Construct padded pelmets	
LMFSF3001B	Operate drop cutting machines	
LMFSF3002B	Use automated curtain pleating equipment	
LMFSF3003B	Follow patterns to produce window toppings	
LMFSF3004B	Construct Roman-style blinds	
LMFSF3005B	Construct Austrian/festoon-style blinds	
LMFSF3006B	Chemically join textiles	
LMFSF3007B	Lay out patterns and cut fabrics	
LMFSF3008B	Measure up and calculate fabric quantities for window coverings	
LMFSF3009B	Manufacture bedspreads	
LMFSF3010B	Manufacture bed linen and table cloths	

Unit code	Unit title	Prerequisites
LMFSF3011B	Advise customers on interior decoration	
LMFSF3012B	Install motorised curtains and blinds	
LMFSF3013B	Follow patterns to produce soft furnishing accessories	

Group D

Up to **five (5)** relevant units may be chosen from units not already selected from Groups A, B or C, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 5 units) or Certificate IV level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group D must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF31002 Certificate III in Upholstery

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform upholstery including dismantling and reassembling furniture and selecting, cutting, sewing and fitting fabric and leather upholstery materials.

Job roles/employment outcomes

The LMF31002 Certificate III in Upholstery reflects vocational outcomes for those performing upholstery job roles including dismantling/reassembling furniture in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in upholstery techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Packaging Rules

Packaging Rules

To be awarded the Certificate III in Upholstery, competency must be achieved in **twenty-five (25)** units of competency.

- **sixteen (16)** core units of competency
- **nine (9)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **sixteen (16)** units from this list.

Unit code	Unit title	Prerequisites
LMFGN3001B	Read and interpret work documents	
LMFGN3002B	Estimate and cost job	
LMFUP2001B	Use upholstery sector hand and power tools	
LMFUP2002B	Fit upholstery components	
LMFUP2004B	Machine sew upholstery final cover materials (basic)	
LMFUP2005B	Develop cutting plan and cut single layer upholstery fabric	
LMFUP2006B	Dismantle/reassemble furniture for upholstering	
LMFUP3002B	Fit and apply final cover materials to furniture using basic techniques	
LMFUP3010B	Cut, sew and fit skirts to upholstered furniture	
LMFUP3011B	Cut, sew and fit or fill	

Unit code	Unit title	Prerequisites
	cushions	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	
TLID307E	Handle dangerous goods/hazardous substances	

ELECTIVE UNITS

Select **nine (9)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **three (3)** units from Group A

Unit code	Unit title	Prerequisites
LMFUP2003B	Apply contemporary foundations to upholstered furniture	
LMFUP3001B	Apply traditional foundations to upholstered furniture	
LMFUP3006B	Fit and apply leather to furniture	
LMFUP3008B	Apply finishing	

Unit code	Unit title	Prerequisites
	techniques to upholstered furniture	

Group B

Select a maximum of **six (6)** units from Groups B and C.

Unit code	Unit title	Prerequisites
LMFUP3003B	Fit and apply final cover materials to furniture using decorative techniques	
LMFUP3004B	Lay out patterns and cut leather	
LMFUP3005B	Machine sew upholstery final cover materials (complex)	
LMFUP3007B	Manufacture and fit loose covers	
LMFUP3009B	Develop cutting plan and cut multiple layer upholstery fabric	
LMFUP3012B	Apply marine sewing and installation techniques	
LMFUP3013B	Cut and sew canvas and acrylics	
LMFUP3014B	Set up, operate and maintain CNC cutting machines	

Group C

Up to **six (6)** relevant units may be chosen from units not already selected from Groups A or B, or a maximum of **five (5)** from units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 4 units) or Certificate IV level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF31102 Certificate III in Production Upholstery

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform production upholstery including dismantling and reassembling furniture and selecting, cutting, sewing and fitting fabric and leather upholstery materials and producing loose covers.

Job roles/employment outcomes

The LMF31102 Certificate III in Production Upholstery reflects vocational outcomes for those performing upholstery job roles including dismantling/reassembling furniture in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF31208 Certificate III in Flooring Technology

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform flooring technology tasks including preparing flooring surfaces and handling, installing and finishing carpet, resilient, vinyl and timber flooring materials.

Job roles/employment outcomes

The LMF31208 Certificate III in Flooring Technology reflects vocational outcomes for those performing flooring job roles including safe handling of materials in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in flooring techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • complete written documents, forms and timesheets • use communication technologies efficiently • communicate production abnormalities • demonstrate effective and appropriate communication and interpersonal skills when dealing with people from a range of backgrounds • read, interpret and communicate production schedules • communicate with all team members
Teamwork	<ul style="list-style-type: none"> • work cooperatively with people of different ages, gender, race or religion • liaise with and provide support to other team members • work as part of a team • keep team members informed of changes to work practices • identify team performance required to meet customer needs • provide leadership to others in the team • encourage the sharing of information between team members • plan and support team activities
Problem-solving	<ul style="list-style-type: none"> • identify and report problems and make contributions to their solution • investigate problem causes • implement changes • examine tools for damage, missing components or other defects • identify and promptly address problems or issues • assess quality of work pieces • determine effective work practices • provide problem solving support to team members • problem solve machine operational and maintenance requirements
Initiative and enterprise	<ul style="list-style-type: none"> • seek and provide feedback on procedures • gather and analyse information • record information on the quality and other indicators of production performance • adjust and implement production schedules changes • provide leadership • identify and implement process improvements • coordinate work activities and manufacturing processes • monitor workplace performance • use analytical and decision making skills

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Planning and organising	<ul style="list-style-type: none"> • identify hazards and implement appropriate hazard control measures • organise self and others to meet production schedules • identify and rectify stock shortages in advance • sequence work to maximise safety and productivity • select and use appropriate tools and equipment • determine materials, quality and production requirements • apply time management skills to ensure work flow
Self-management	<ul style="list-style-type: none"> • interpret and apply relevant acts and regulations • keep the work area clean and tidy at all times • conduct regular housekeeping activities • understand own work activities • manage own time and establish own work schedule • develop and implement workplace procedures and instructions • locate, interpret and apply information relevant to own work • monitor and evaluate own work quality • accept responsibility for quality of work
Learning	<ul style="list-style-type: none"> • develop learning activities as appropriate • assess competencies in meeting job requirements • identify own training needs and seek skill development if required • listen to feedback from others • identify sources of information to expand knowledge and understanding • identify and address skill development needs of others in the team
Technology	<ul style="list-style-type: none"> • use software applications effectively • properly start up, operate and shut down computers • work with technology safely and according to workplace standards • establish procedures • carry out pre-operational checks on equipment and machines • operate equipment and machines safely, efficiently and to productivity requirements • monitor and adjust machine functions • perform machine maintenance as determined by workplace procedures • clean and check equipment and machines

Packaging Rules

Packaging Rules

To be awarded the LMF31208 Certificate III in Flooring Technology, competency must be achieved in **twenty-five (25)** units of competency.

- **eleven (11)** core units of competency
- **fourteen (14)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **eleven (11)** units from this list.

Unit code	Unit title	Prerequisites
LMFFL2001A	Use flooring technology sector hand and power tools	
LMFFL2002A	Receive and prepare floor covering materials for installation	
LMFFL3001B	Plan and cost flooring technology work	
LMFFL3002A	Establish and maintain a safe flooring technology work environment	
LMFGN3001B	Read and interpret work documents	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make	

Unit code	Unit title	Prerequisites
	measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	
TLID307E	Handle dangerous goods/hazardous substances	

ELECTIVE UNITS

Select **fourteen (14)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **nine (9)** units from Groups A and B with at least **four (4)** units being coded LMFFL3****

Unit code	Unit title	Prerequisites
Carpets		
LMFFL3201A	Install carpet tiles using custom designs	
LMFFL3202A	Install adhesive fixed carpet floor coverings	
LMFFL3203A	Install commercial carpet floor coverings	
LMFFL3204A	Install patterned carpet floor coverings	
LMFFL3205A	Install custom design carpet and decorative finishes	

Unit code	Unit title	Prerequisites
LMFFL3206A	Install synthetic textile floor coverings to sports facilities	
LMFFL3207A	Install carpet floor coverings to custom design stairs	
Resilient		
LMFFL3301A	Install linoleum floor coverings	
LMFFL3302A	Install commercial vinyl floor coverings	
LMFFL3303A	Install resilient floor coverings using custom designs and decorative finishes	
LMFFL3304A	Install resilient tiles using custom design and decorative finishes	
LMFFL3305A	Install rubber floor coverings	
LMFFL3306A	Install resilient sheet to walls	
LMFFL3307A	Install resilient sheet to bench and countertops	
LMFFL3308A	Install anti-static resilient floor coverings	
LMFFL3309A	Install conductive resilient floor	

Unit code	Unit title	Prerequisites
	coverings	
LMFFL3310A	Cut and install resilient floor coverings to stairs	
Coatings		
LMFFF3001B	Match and make up colours	
LMFFL3401A	Mix and apply epoxy and seamless floor coverings	
LMFFL3402A	Apply solvent based coatings to timber floors	
LMFFL3403A	Apply water based coatings to timber floors	
LMFFL3404A	Apply oil based coatings to timber floors	
LMFFL3405A	Apply composite based coatings	
LMFFL3406A	Apply emulsion wax coatings	
LMFFL3407A	Apply stains and fillers	
Timber		
LMFFL3501A	Adapt and apply custom designs to timber flooring	
LMFFL3502A	Cut and install timber flooring to stairs	

Unit code	Unit title	Prerequisites
LMFFL3503A	Install direct stick timber flooring	
LMFFL3504A	Detect defective timber flooring	
LMFFL3505A	Install block parquetry flooring	
LMFFL3506A	Install cork tiles	
LMFFL3507A	Install patterned parquetry	
LMFFL3508A	Install sheet mosaic parquetry	
LMFFL3509A	Install sprung timber flooring	
LMFFL3510A	Install strip timber flooring onto battens	
LMFFL3511A	Install strip flooring onto plywood	
LMFFL3512A	Repair timber flooring	
LMFFL3513A	Maintain timber, laminate and engineered flooring	
Sanding and Polishing		
LMFFL3601A	Fine sand timber flooring	
LMFFL3602A	Edge sand timber flooring	
LMFFL3603A	Sand cork flooring	

Unit code	Unit title	Prerequisites
LMFFL3604A	Sand and fill parquetry flooring	
LMFFL3605A	Apply finishes to cork flooring	

Group B

Unit code	Unit title	Prerequisites
LMFFL2003A	Select, operate and maintain floor covering cutting machine	
LMFFL2004A	Moisture test timber and concrete floors	
LMFFL2101A	Remove existing floor coverings	
LMFFL2102A	Prepare, select and apply smoothing and patching compounds	
LMFFL2103A	Select and apply appropriate compounds and additives	
LMFFL2106A	Prepare walls for covering	
LMFFL2111A	Coarse sand timber flooring	
LMFFL2112A	Install hard underlays	
LMFFL2201A	Install carpet cushion/underlays and gripper accessories	

Unit code	Unit title	Prerequisites
LMFFL2202A	Install unpatterned tufted and bonded carpet floor coverings	
LMFFL2203A	Install carpet tiles using standard installation procedures	
LMFFL2204A	Install unpatterned tufted and bonded carpet floor coverings to stairs	
LMFFL2301A	Install lay flat vinyl floor coverings	
LMFFL2302A	Install resilient tiles using standard installation procedures	
LMFFL2501A	Install laminate and engineered timber flooring	
LMFFL2502A	Install impact and sound absorption underlay	
LMFFL2503A	Nail strip timber flooring	
LMFFL2504A	Install expansion joints	
LMFFL2505A	Install mouldings and edge trims to timber floors	
LMFFL3101A	Inspect sub-floors	

Group C

Up to **five (5)** relevant units may be chosen from units not already selected from Groups A or B, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 2 units), Certificate III level (maximum 4 units) or Certificate IV level (maximum 2 units).

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF31308 Certificate III in Coopering

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform coopering using a variety of specialist machines to work timber and utilising basic welding techniques in the barrel making process.

Job roles/employment outcomes

The LMF31308 Certificate III in Coopering reflects vocational outcomes for those performing coopering job roles in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in coppering techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF21308 Certificate II in Coopering or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include other furnishing qualifications at Certificate IV and Diploma level and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • collect, organise and understand information related to work orders, basic plans and safety procedures • collect, organise and understand detailed technical information related to the materials and the products used in and related to coopering operations • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems • maintain records related to product and materials quality
Teamwork	<ul style="list-style-type: none"> • work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
Problem-solving	<ul style="list-style-type: none"> • use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use • use checking and inspection techniques to ensure barrels comply with specifications and that instances of non-compliance are remedied • identify, anticipate and respond to faults in timber and/or seasoning processes • identify, anticipate and respond to the problems related to timber and material properties • identify and analyse faults in barrels • select and apply the most appropriate barrel maintenance and repair techniques • use sensory evaluation techniques to identify basic wine faults • identify, anticipate and respond to the impact of the barrel properties on the product (wine and spirits)
Initiative and enterprise	<ul style="list-style-type: none"> • recognise and respond to circumstances outside instructions or personal competence
Planning and organising	<ul style="list-style-type: none"> • plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage during the production cycle • use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
Self-management	<ul style="list-style-type: none"> • clarify and confirm specified work instructions • plan work within given task parameters • apply systematic and effective time management

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • accept responsibility for given tasks • set, monitor and satisfy personal work goals
Learning	<ul style="list-style-type: none"> • satisfy the competency requirements for the job • maintain current knowledge of coopering tools and barrel production materials • maintain current knowledge of coopering processes and techniques • seek learning opportunities
Technology	<ul style="list-style-type: none"> • use the workplace technology related to the selection, preparation and use of coopering products and materials including hand and power tools, calculators, measuring devices and technical support systems

Packaging Rules

Packaging Rules

To be awarded the LMF31308 Certificate III in Coopering, competency must be achieved in **twenty-five (25)** units of competency.

- **fifteen (15)** core units of competency
- **ten (10)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **fifteen (15)** units from this list.

Unit code	Unit title	Prerequisites
LMFCP2001A	Use coopering sector hand and power tools	
LMFCP2002A	Produce barrels using non-fired processes	
LMFCP3001A	Apply product knowledge to production	

Unit code	Unit title	Prerequisites
	operations	
LMFCP3002A	Select and season timbers for furniture production	
LMFCP3003A	Produce barrels using fired processes	
LMFFM2006B	Hand make timber joints	
LMFGG2002B	Apply First Aid	
LMFGN2002B	Move and store materials and products	
LMFGN3001B	Read and interpret work documents	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	
TLID307E	Handle dangerous goods/hazardous substances	

ELECTIVE UNITS

Select **ten (10)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **four (4)** units from Group A

Unit code	Unit title	Unit code
LMFFM2010B	Set up, operate and maintain basic static machines	
LMFFM2012B	Set up, operate and maintain pressure and clamping machines	
LMFFM3020B	Set up, operate and maintain sawing machines	
LMFFM3022B	Set up, operate and maintain joining machines	
LMFFM3033B	Construct jigs and fixtures	

Group B

Select up to **six (6)** units form Groups B and C

Unit code	Unit title	Prerequisites
LMFCP3004A	Maintain and repair barrels	
LMFFF2004B	Prepare surfaces for finishing	
LMFFM2002B	Assemble furnishing components	
LMFFM2003B	Select and apply hardware	
LMFFM2005B	Join solid timber	
LMFFM2007B	Follow plans to assemble production furniture	
LMFFM3023B	Set up, operate	

Unit code	Unit title	Prerequisites
	and maintain planing and finishing machines	
LMFFM3024B	Set up, operate and maintain multi-head planing and moulding machines	
LMFFM3025B	Set up, operate and maintain routing and shaping machines	
LMFFM3032B	Produce and maintain cutting tools	
LMFGN3002B	Estimate and cost job	
MEM05007C	Perform manual heating and thermal cutting	
MEM05012C	Perform routine manual metal arc welding	
MEM05050B	Perform routine gas metal arc welding	
MEM06001B	Perform hand forging	
MEM18001C	Use hand tools	

Group C

Up to **five (5)** relevant units may be chosen from units not already selected from Groups A or B, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 5 units) or Certificate IV level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF31408 Certificate III in Musical Instrument Making and Repair

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to manufacture and repair a wide range of musical instruments.

Job roles/employment outcomes

The LMF31408 Certificate III in Musical Instrument Making and Repair reflects vocational outcomes for those performing the manufacture and repair of musical instruments in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in making and repairing musical instruments and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF10108 Certificate I in Furnishing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF40308 Certificate IV in Musical Instrument Making and Repair and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Packaging Rules**Packaging Rules**

To be awarded the LMF31408 Certificate III in Musical Instrument Making and Repair, competency must be achieved in **twenty-five (25)** units of competency.

- **nine (9)** core units of competency
- **sixteen (16)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **nine (9)** units from this list.

Unit code	Unit title	Prerequisites
LMFFF2001B	Use furniture finishing sector hand and power tools	
LMFFM3033B	Construct jigs and fixtures	
LMFGN3001B	Read and interpret work documents	
LMFMI3001A	Assemble instrument components	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	

Unit code	Unit title	Prerequisites
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **sixteen (16)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **one (1)** unit from Group A

Unit code	Unit title	Prerequisites
LMFMI3003A	Manufacture acoustic guitars	
LMFMI3004A	Manufacture brass instruments	
LMFMI3005A	Manufacture electric guitars	
LMFMI3006A	Manufacture percussion instruments	
LMFMI3007A	Manufacture special stringed instruments	
LMFMI3008A	Manufacture stringed instruments	

Group B

Select a minimum of **nine (9)** units from Group B

Unit code	Unit title	Prerequisites
-----------	------------	---------------

Unit code	Unit title	Prerequisites
CUVCOR07B	Use drawing techniques to represent the object or idea	
CUVCOR08B	Produce drawings to represent and communicate the concept	
CUVDES01A	Apply colour theory in response to a brief	
CUVVSP01B	Produce calligraphy	
CUVVSP14B	Apply techniques to produce drawings	
CUVVSP15B	Produce drawings	
LMFFF2007B	Apply stains, fillers and bleach	
LMFFF2008B	Apply surface coatings by hand	
LMFFF3003B	Apply plural component coatings	
LMFFF3004B	Apply soft rubber techniques	
LMFFF3005B	Enhance finishes	
LMFFM2010B	Set up, operate and maintain basic static machines	
LMFFM3011B	Produce manual and computer-aided production	

Unit code	Unit title	Prerequisites
	drawings	
LMFGN2002B	Move and store materials and products	
LMFGN3002B	Estimate and cost job	
LMFMI3002A	Construct and apply decorative treatments and finishes to musical instruments	
LMFMI3009A	Repair brass instruments	
LMFMI3010A	Repair percussion instruments	
LMFMI3011A	Repair woodwind instruments	
MEM05003B	Soft soldering	
TLID207C	Shift a load using manually operated equipment	
TLID307E	Handle dangerous goods/hazardous substances	

Group C

Up to **six (6)** relevant units may be chosen from units not already selected from Groups A or B, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 2 units), Certificate III level (maximum 6 units) or Certificate IV level (maximum 2 units).

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF31508 Certificate III in Piano Technology

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to repair, rebuild, re-pin, restring and tune upright and grand pianos.

Job roles/employment outcomes

The LMF31508 Certificate III in Piano Technology reflects vocational outcomes for those performing piano repair and tuning job roles in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in piano repair and tuning techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed a relevant Certificate II Furnishing qualification such as LMF20202 Certificate II in Furniture Finishing or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include relevant Furnishing Certificate IV and Diploma qualifications and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • read and understand documentation • ask questions to gain information • communicate ideas and information to enable confirmation of work requirements, plans and specifications, coordination of work with other workers and customer, and report of work outcomes and problems • provide written and verbal information to customers regarding the tuning and/or repair • apply effective listening techniques • collect, organize and understand information related to piano tuning and repair work orders, work plans and safety procedures • complete standardized workplace information • use communication technologies efficiently • complete written documents, job cards, forms, timesheets and quotations • greet customer in an appropriate manner, use appropriate questioning and listening techniques and provide feedback to customer to satisfy customer needs and requirements
Teamwork	<ul style="list-style-type: none"> • work with others and in a team to assess tuning and repair requirements • develop positive workplace relationships • work with others and in a team to repair pianos • work as part of a team • share information with others relating to tuning and repair • work collaboratively with others to complete tasks in a timely manner • identify team performance required to meet customer needs
Problem-solving	<ul style="list-style-type: none"> • identify and report tuning and repair problems and make contribution to their solution • apply knowledge of tuning and repair processes to problem solving • use pre-checking and inspection techniques to anticipate problems and identify tools or equipment faults and take appropriate action • assess and evaluate skill requirements of self and others to perform tasks • identify and select practical solutions to problems using analytical skills • identify, diagnose and rectify faults • use problem solving techniques

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> • rectify problems and faults • re-interpret customers' statements of problems into solution • resolve conflict through negotiation to ensure customer is happy with sound of piano
Initiative and enterprise	<ul style="list-style-type: none"> • participate in activities to initiate new ideas and suggest improvements to work practices • participate in establishing new ideas and work specifications for tuning pianos and repairing faults • show independence and initiative in making decisions • discuss initiative with colleagues to generate a range of options • assess and take appropriate action to minimize risks • manage innovation and change • determine opportunities to improve processes • collect and monitor information to identify trends that may require remedial action
Planning and organising	<ul style="list-style-type: none"> • plan and organize activities to avoid any backtracking, workflow interruptions, rework or wastage, including preparation and layout of the worksite and selection of tools and equipment • collect and organize information for the purpose of: <ul style="list-style-type: none"> • planning tasks and identifying task outcomes • planning use of resources • assessing and prioritizing tasks • managing time and resources • plan work requirements for self and others to meet tuning and repair schedules • sequence work to maximize safety and productivity • participate in continuous improvement processes
Self-management	<ul style="list-style-type: none"> • manage own time to complete tuning and repair against set deadlines, especially where piano is required for performances • use feedback from customer to improve work performance in tuning • take responsibility and display confidence in own ideas • prioritise own work to meet customer's requirements regarding completion time • manage own work performance to: <ul style="list-style-type: none"> • follow OHS and workplace practices • plan and organize work schedules and routines • maintain required production output • assess quality of own work

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • assess own skills and knowledge
Learning	<ul style="list-style-type: none"> • adapt to new skill requirements • research and apply new ideas and techniques • locate, interpret and apply information on piano technology and the use and maintenance of hand and power tools • apply mathematical applications for estimation and measurement • modify activities to cater for variations in workplace contexts and environment when tuning and repairing pianos • invest time and effort into learning new skills and techniques • be open to learning and accommodate change • apply reflective skills
Technology	<ul style="list-style-type: none"> • use workplace technology related to piano technology, including specified tools, equipment, calculators and measuring devices for piano tuning and repair • use hand and power tools to tune and repair pianos • use equipment to maintain and repair hand tools, power tools and holding and supporting equipment • use calculators and measuring devices to take measurements and estimate material requirements • use IT to organize, report and record information • use technology relevant to tuning/repairing pianos • use communication technologies in the workplace

Packaging Rules

Packaging Rules

To be awarded the LMF31508 Certificate III in Piano Technology, competency must be achieved in **twenty-five (25)** units of competency.

- **five (5)** core units of competency
- **twenty (20)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **five (5)** units from this list.

Unit code	Unit title	Prerequisites
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **twenty (20)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **twelve (12)** units from Group A

Unit code	Unit title	Prerequisites
LMFPT3001A	Develop knowledge of piano industry	
LMFPT3002A	Select materials for piano actions and key repairs	
LMFPT3003A	Repair upright and grand piano actions, keys and pedals	
LMFPT3004A	Rebuild upright and grand piano actions, keys and pedals	
LMFPT3005A	Re-string and re-pin a piano	

Unit code	Unit title	Prerequisites
LMFPT3006A	Regulate actions, keys and pedals of upright pianos	
LMFPT3007A	Regulate actions, keys and pedals of Grand Pianos	
LMFPT3008A	Understand piano tuning theory and basic acoustics	
LMFPT3009A	Develop control of tuning hammers	
LMFPT3010A	Pitch raise	
LMFPT3011A	Tune unisons aurally to a beatless condition	
LMFPT3012A	Tune octaves aurally to appropriate stretch	
LMFPT3013A	Tune a temperament octave to produce an equally tempered scale	
LMFPT3014A	Tune a piano aurally and/or electronically within time and accuracy constraints	
LMFPT3015A	Voice a piano	
LMFPT3016A	Provide advice to customers on piano tuning and repairs	

Group B

Select up to **eight (8)** units from Groups B and C

Unit code	Unit title	Prerequisites
LMFFF2008B	Apply surface coatings by hand	
LMFFF3006B	Repair and touch up surfaces	
LMFFF3008B	Apply traditional French polishing techniques	
LMFFM2002B	Assemble furnishing components	
LMFFM2006B	Hand make timber joints	
LMFFM2010B	Set up/operate and maintain basic static machines	
LMFGN2002B	Move and store materials and products	
LMFGN3001B	Read and interpret work documents	
LMFGN3002B	Estimate and cost job	
MCMT230A	Apply cost factors to work practices	
MCMT231A	Interpret product cost in terms of customer requirements	
TDTD297B	Shift a load using manually-operated equipment	
TLID307E	Handle dangerous and hazardous	

Unit code	Unit title	Prerequisites
	goods	

Group C

Up to **five (5)** relevant units may be chosen from units not already selected from Groups A or B, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 5 units) or Certificate IV level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF31608 Certificate III in Security Screens and Grills

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform design, manufacture and repair of security screens and grills.

Job roles/employment outcomes

The LMF31608 Certificate III in Security Screens and Grills reflects vocational outcomes for those performing security screen and grill job roles in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in security screen and grill manufacture and installation techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems.

Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF21108 Certificate II in Security Screens and Grills or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include relevant Furnishing Certificate IV and Diploma qualifications and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • collect, organise and understand information related to work orders, basic plans and safety procedures • collect, organise and understand detailed technical information related to the materials and the products used in and related to cooperating operations • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems • maintain records related to product and materials quality
Teamwork	<ul style="list-style-type: none"> • work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
Problem-solving	<ul style="list-style-type: none"> • use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use • use checking and inspection techniques to ensure security screens and grills comply with specifications and that instances of non-compliance are remedied • identify, anticipate and respond to the problems related to material properties and installation position • identify and analyse faults in security screens and grills manufacture/assembly • select and apply the most appropriate maintenance and repair techniques
Initiative and enterprise	<ul style="list-style-type: none"> • recognise and respond to circumstances outside instructions or personal competence
Planning and organising	<ul style="list-style-type: none"> • plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage during the production cycle • use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
Self-management	<ul style="list-style-type: none"> • clarify and confirm specified work instructions • plan work within given task parameters • apply systematic and effective time management • accept responsibility for given tasks • set, monitor and satisfy personal work goals
Learning	<ul style="list-style-type: none"> • satisfy the competency requirements for the job • maintain current knowledge of cooperating tools and barrel

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> production materials maintain current knowledge of cooping processes and techniques seek learning opportunities
Technology	<ul style="list-style-type: none"> use the workplace technology related to the selection, preparation and installation of security screens and grills and materials including hand and power tools, calculators, measuring devices and technical support systems

Packaging Rules**Packaging Rules**

To be awarded the LMF31608 Certificate III in Security Screens and Grills, competency must be achieved in **twenty-seven (27)** units of competency.

- fifteen (15)** core units of competency
- twelve (12)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **fifteen (15)** units from this list.

Unit code	Unit title	Prerequisites
BSBFLM309C	Support continuous improvement systems and processes	
BSBINN201A	Contribute to workplace innovation	
BSBPRO301A	Recommend products and services	
BSBPRO401A	Develop product knowledge	
BSBRKG304B	Maintain business records	

Unit code	Unit title	Prerequisites
LMFGN2002B	Move and store materials and products	
LMFGN3001B	Read and interpret work documents	
LMFGN3002B	Estimate and cost job	
LMFSS2001A	Use security screens and grills hand and power tools	
LMFSS2002A	Rectify faults in product	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **twelve (12)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **one (1)** unit from Group A

Unit code	Unit title	Prerequisites
LMFSS3001A	Install and replace security screens and grills	
LMFSS3002A	Apply patterns and	

Unit code	Unit title	Prerequisites
	designs to security screens and grills	
LMFSS3003A	Resolve quality and compliance issues	

Group B

Select up to **eleven (11)** units from Groups B and C with a minimum of **one (1)** chosen from Group B

Unit code	Unit title	Prerequisites
LMFSS2003A	Prepare product for Australian Standards testing	
LMFSS2004A	Undertake surface preparation	
LMFGG2001B	Use glass and glazing hand and power tools	
LMFGG2002B	Apply First Aid	
LMFGG2008B	Glaze/re-glaze residential windows and doors	
LMFFM2010B	Set up, operate and maintain basic static machines	

Group C

Up to **ten (10)** relevant units may be chosen from units not already selected from Groups A or B, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate III level (maximum 10 units) or Certificate IV level (maximum 2 units).

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF31708 Certificate III in Stained Glass and Lead Lighting

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to construct and repair a range of stained glass and lead lighting components.

Job roles/employment outcomes

The LMF31708 Certificate III in Stained Glass and Lead Lighting reflects vocational outcomes for those performing stained glass and lead lighting manufacture, installation and repair job roles in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in installing and repairing stained glass and lead lighting and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit may be granted towards this qualification by those who have completed LMF21208 Certificate II in Stained Glass and Lead Lighting or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF50310 Diploma of Stained Glass and Lead Lighting and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Packaging Rules

Packaging Rules

To be awarded the LMF31708 Certificate III in Stained Glass and Lead Lighting, competency must be achieved in **twenty-five (25)** units of competency.

- **sixteen (16)** core units of competency
- **nine (9)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **sixteen (16)** units from this list.

Unit code	Unit title	Prerequisites
LMFFM3033B	Construct jigs and fixtures	
LMFGG2001B	Use glass and glazing hand and power tools	
LMFGG2002B	Apply First Aid	
LMFGG2005B	Move glass sheets by hand	
LMFGG2007B	Process glass by basic machines	
LMFGG3006B	Apply film to glass	
LMFGG3013B	Construct and repair	

Unit code	Unit title	Prerequisites
	leadlight and stained glass panels	
LMFGN3001B	Read and interpret work documents	
LMFSL2001A	Assemble lead light and stained glass components	
MEM05003B	Perform soft soldering	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS100A	Follow OHS procedures	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	
TLID307E	Handle dangerous goods/hazardous substances	

ELECTIVE UNITS

Select **nine (9)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **one (1)** unit from Group A.

Unit code	Unit title	Prerequisites
LMFSL3001A	Apply product and material	

Unit code	Unit title	Prerequisites
	knowledge to production operations	
LMFSL3002A	Paint glass	
LMFSL3003A	Fire glass	
LMFSL3004A	Protect stained glass and lead lighting	
LMFSL3005A	Fabricate and install residential lead light and stained glass windows and doors	
LMFSL3006A	Prepare and install architectural engineered stained glass and lead lighting	
LMFGG3004B	Process thick glass by hand	

Group B

Select a maximum of **eight (8)** units from Groups B and C.

Unit code	Unit title	Prerequisites
LMFFM3033B	Construct jigs and fixtures	
LMFGG2004B	Process thin glass by hand	
LMFGG2007B	Process glass by basic machines	
LMFGG3013B	Construct and repair leadlight	

Unit code	Unit title	Prerequisites
	and stained glass panels	
CUVCOR07B	Use drawing techniques to represent the object or idea	
LMFGG3001B	Store and handle glass	
LMFGG3007B	Form glass	
LMFGG3008B	Apply patterns and designs to glass	
LMFFM3011B	Produce manual and computer-aided production drawings	
LMFGN2002B	Move and store materials and products	
LMFGN3002B	Estimate and cost job	
CUVCOR08B	Produce drawings to represent and communicate the concept	
CUVVSP01B	Produce calligraphy	
CUVVSP14B	Apply techniques to produce drawings	
CUVVSP15B	Produce drawings	

Group C

Up to **seven (7)** relevant units may be chosen from units not already selected from Groups A and B, or units available in this Training Package or other endorsed Training Packages and accredited courses. Units must be aligned at Certificate II level (maximum 2 units), Certificate III level (maximum 7 units) or Certificate IV level (maximum 2 units)

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF31808 Certificate III in Blinds and Awnings

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to construct and install interior and exterior blinds and awnings using a range of materials, fixtures and fittings.

Job roles/employment outcomes

The LMF31808 Certificate III in Blinds and Awnings reflects vocational outcomes for those constructing and installing blinds and awnings in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in construction and installation of blind and awning techniques and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems.

Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others.

Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF21008 Certificate II in Blinds and Awnings or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include other Furnishing qualifications such as LMF40202 Certificate IV in Furnishing Technology, LMF40408 certificate IV in interior Decoration and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification such as electives in forklift operation and handling of dangerous goods. Local regulations should be checked for details.

Learning	<ul style="list-style-type: none"> • ask questions to expand own understanding of work processes or requirements • demonstrate listening skills • identify own skill requirements and seek skill development • identify and access industry product and trend information • access operator manuals to assist own learning
Technology	<ul style="list-style-type: none"> • operate equipment safely and according to operating standards • use information technologies

Packaging Rules

Packaging Rules

To be awarded the LMF31908 Certificate III in Interior Decoration (Retail Services), competency must be achieved in **thirteen (13)** units of competency.

- **four (4)** core units of competency
- **nine (9)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **four (4)** units from this list.

Unit code	Unit title	Prerequisites
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **nine (9)** units from Groups A and B as specified below.

Group A

Select a minimum of **six (6)** units from Group A

Unit code	Unit title	Prerequisites
BSBDES202A	Evaluate the nature of design in a specific industry	

Unit code	Unit title	Prerequisites
	context	
BSBDES301A	Explore the use of colour	
BSBDES305A	Source and apply information on the history and theory of design	
CUFDIG304A	Create visual design components	
CUVCRS03B	Produce computer-aided drawings	
LMFBA3009A	Provide advice to customers on blinds and awnings	
LMFGN3002B	Estimate and cost job	
LMFID3002A	Source and specify decoration products	
LMFID3005A	Style a retail display	
LMFSF2006B	Calculate fabric quantities for window coverings	
LMFSF3011B	Advise customers on interior decoration	
LMFSF3014B	Provide technical advice to customers	
MSAPMOPS101A	Make measurements	
SIRRRPK010A	Recommend home	

Unit code	Unit title	Prerequisites
	and home improvement products and services	
SIRXSLS004A	Build relationships with customers	

Group B

Up to **three (3)** relevant units may be chosen from units not already selected in Group A, or units available in this Training Package or in other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate III or Certificate IV level (maximum 1 Certificate IV unit).

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF32009 Certificate III in Kitchens and Bathrooms (Client Services)

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required by those working in the kitchen or bathroom industry providing limited technical advice to customers within a showroom or domestic environment. Advice will relate to a standardised range of kitchen or bathroom designs and fittings to meet client design requirements.

Job roles/employment outcomes

The LMF32009 Certificate III in Kitchens and Bathrooms (Client Services) reflects vocational outcomes for those working in a sales environment providing technical and design information and advice on kitchen, bathroom, laundry or related products and design packages. Job roles such as showroom sales assistants, customer liaison, and marketing officers work in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in sales and other customer liaison techniques with limited technical information on kitchen and bathroom products and services and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems. Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others. Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed a relevant Furnishing Certificate I or II qualification or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification include LMF40508 Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • establish communication with customer • use interpersonal communication skills • interpret product related information • follow work instructions • provide relevant information • complete workplace documentation
Teamwork	<ul style="list-style-type: none"> • work cooperatively with others • use skills of others to assist work activity • observe demonstrations of others • share workplace information
Problem-solving	<ul style="list-style-type: none"> • identify customer needs and problems • identify and address customer information needs • report hazards • determine requirements in own work to meet quality standards • seek skills and knowledge of supervisors to solve problems
Initiative and enterprise	<ul style="list-style-type: none"> • identify and recommend improvements to own work processes • seek skill development support • monitor and adjust work activities in response to outcomes • assist customers with product suggestions to achieve their design ideas
Planning and organising	<ul style="list-style-type: none"> • recognise hazards and follow hazard control measures • follow production sequences for a given process or product • identify customer service requirements • coordinate work activities to meet timelines
Self-management	<ul style="list-style-type: none"> • keep the work area clean and tidy at all times • monitor own work to ensure quality standards are achieved • understand own work activities and ask questions if required • apply safety procedures • follow operating instructions for equipment
Learning	<ul style="list-style-type: none"> • ask questions to expand own understanding of work processes or requirements • demonstrate listening skills • identify own skill requirements and seek skill development • identify and access industry product and trend information • access operator manuals to assist own learning
Technology	<ul style="list-style-type: none"> • operate equipment safely and according to operating standards • use information technologies

Packaging Rules

Packaging Rules

To be awarded the LMF32009 Certificate III in Kitchens and Bathrooms (Client Services), competency must be achieved in **thirteen (13)** units of competency.

- **eight (8)** core units of competency
- **five (5)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **eight (8)** units from this list.

Unit code	Unit title	Prerequisites
BSBCUS301A	Deliver and monitor a service to customers	
BSBDES202A	Evaluate the nature of design in a specific industry context	
LMFGN3001B	Read and interpret work documents	
LMFKB3001A	Identify processes in kitchen and bathroom projects	
LMFKB3007A	Provide advice on cabinet design features	
MEM16006A	Organise and communicate information	
MSAENV272B	Participate in environmentally	

Unit code	Unit title	Prerequisites
	sustainable work practices	
MSAPMOHS200A	Work safely	

ELECTIVE UNITS

Select **five (5)** units from Groups A and B as specified below.

Group A

Select a minimum of **two (2)** units from Group A

Unit code	Unit title	Prerequisites
BSBCCO304B	Provide sales solutions to customers	
BSBCMM301A	Process customer complaints	
BSBDES301A	Explore the use of colour	
BSBDES305A	Source and apply information on the history and theory of design	
BSBFIA301A	Maintain financial records	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
LMFFT4009A	Match furnishing styles/materials to customer requirements	

Unit code	Unit title	Prerequisites
LMFGN3002B	Estimate and cost job	
LMFID4009A	Research architectural styles and movements	
LMFKB3008A	Identify cabinet construction and installation methods	
MEM16008A	Interact with computing technology	
MSACMT251A	Apply quality standards	
MSACMT271A	Use sustainable environmental practices	
MSAPMSUP201A	Receive or despatch goods	
SIRRRPK010A	Recommend home and home improvement products and services	
SIRXINV002A	Maintain and order stock	
SIRXSLS004A	Build relationships with customers	

Group B

Up to **three (3)** relevant units may be chosen from units not already selected in Group A, or units available in this Training Package or in other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate III level or Certificate IV level (maximum 1 Certificate IV unit).

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF32109 Certificate III in Cabinet Making

Modification History

Not applicable.

Description

This qualification covers the skills and knowledge required to perform a range of skills associated with the manufacture and installation of free-standing or fitted cabinets. Two pathways identify the specialisation.

Job roles/employment outcomes

The LMF32109 Certificate III in Cabinet Making describes the trade level outcomes for those working in furniture making and those involved in the manufacture and installation of fitted furniture typically in a kitchen, bathroom and related context. Installation skills may be applied to new or renovation work. The work is in a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in trade level cabinet making work associated with free standing furniture manufacturing or the manufacture and installation of fitted furniture and would cover selecting, adapting and transferring this skill and knowledge to new environments and providing technical advice and some leadership in resolution of specific problems.

Application would be across a range of roles in a variety of contexts with some complexity in the extent and choice of options available and may involve some responsibility for others.

Participation in teams including group or team coordination may be required.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF20309 Certificate II in Furniture Making or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification include LMF40508 Certificate IV in Furniture Design and Technology and relevant supervisory, management or competitive manufacturing qualifications.

Additional qualification advice

There are two pathways offered within the Certificate III in Cabinet Making targeting the skill requirements of free-standing furniture makers and kitchen and bathroom cabinet makers and installers.

Qualification descriptors for this qualification will depend on the pathway selection. Those completing Pathway 1 will achieve a LMF32009 Certificate III in Cabinet Making (Furniture) and those completing Pathway 2 will achieve a LMF32009 Certificate III in Cabinet Making (Kitchens and Bathrooms).

The MSA31108 Certificate III in Competitive Manufacturing is available for employees at this level who already possess technical skills and who require additional manufacturing practice skills above those available in this qualification.

Licensing considerations

Depending on the State and Territory where work is undertaken licensing may relate to this qualification where the candidate is required to work on site assisting in kitchen and bathroom installation. The licensing requirement will usually involve construction induction training. Where licensing is required the unit *CPCCOHS1001A Work safely in the construction industry* should be selected. If no licensing requirement exists e.g. where all work will be off-site then the unit *MSAPMOHS200A Work safely* should be selected.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • complete written documents, forms and timesheets • use communication technologies efficiently • communicate production abnormalities • demonstrate effective and appropriate communication and interpersonal skills when dealing with people from a range of backgrounds • read, interpret and communicate production schedules • communicate with all team members
Teamwork	<ul style="list-style-type: none"> • work cooperatively with people of different ages, gender, race or religion • liaise with and provide support to other team members • work as part of a team • keep team members informed of changes to work practices • identify team performance required to meet customer needs • provide leadership to others in the team • encourage the sharing of information between team members • plan and support team activities
Problem-solving	<ul style="list-style-type: none"> • identify and report problems and make contributions to their solution • investigate problem causes • implement changes • examine tools for damage, missing components or other defects • identify and promptly address problems or issues • assess quality of work pieces • determine effective work practices • provide problem solving support to team members • problem solve machine operational and maintenance requirements
Initiative and enterprise	<ul style="list-style-type: none"> • seek and provide feedback on procedures • gather and analyse information • record information on the quality and other indicators of production performance • adjust and implement production schedules changes • provide leadership • identify and implement process improvements • coordinate work activities and manufacturing processes • monitor workplace performance • use analytical and decision making skills

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Planning and organising	<ul style="list-style-type: none"> • identify hazards and implement appropriate hazard control measures • organise self and others to meet production schedules • identify and rectify stock shortages in advance • sequence work to maximise safety and productivity • select and use appropriate tools and equipment • determine materials, quality and production requirements • apply time management skills to ensure work flow
Self-management	<ul style="list-style-type: none"> • interpret and apply relevant acts and regulations • keep the work area clean and tidy at all times • conduct regular housekeeping activities • understand own work activities • manage own time and establish own work schedule • develop and implement workplace procedures and instructions • locate, interpret and apply information relevant to own work • monitor and evaluate own work quality • accept responsibility for quality of work
Learning	<ul style="list-style-type: none"> • develop learning activities as appropriate • assess competencies in meeting job requirements • identify own training needs and seek skill development if required • listen to feedback from others • identify sources of information to expand knowledge and understanding • identify and address skill development needs of others in the team
Technology	<ul style="list-style-type: none"> • use software applications effectively • properly start up, operate and shut down computers • work with technology safely and according to workplace standards • establish procedures • carry out pre-operational checks on equipment and machines • operate equipment and machines safely, efficiently and to productivity requirements • monitor and adjust machine functions • perform machine maintenance as determined by workplace procedures • clean and check equipment and machines

Packaging Rules

Packaging Rules

To be awarded the Certificate III in Cabinet Making, competency must be achieved in **twenty eight (28)** units of competency.

- **six (6)** core units of competency
- **twenty-two (22)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **six (6)** units from this list.

Unit code	Unit title	Prerequisites
LMFFM2001B	Use furniture making hand and power tools	
LMFGN3001B	Read and interpret work documents	
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **twenty-two (22)** units from Groups A to F as specified below.

Group A

Select a minimum of **one (1)** unit from Group A

Unit code	Unit title	Prerequisites
CPCCOHS1001A	Work safely in the construction industry	
MSAPMOHS200A	Work safely	

Group B

Select a minimum of **eight (8)** units from Groups B and D for **Pathway 1 - Furniture**

Unit code	Unit title	Prerequisites
LMFFM2002B	Assemble furnishing components	
LMFFF2004B	Prepare surfaces for finishing	
LMFFM2005B	Join solid timber	
LMFFM2006B	Hand make timber joints	
LMFFM3002B	Construct furniture using leg and rail method	
LMFFM3005B	Fabricate custom furniture	
LMFFM3006B	Install furnishing products	

Group C

Select a minimum of **eight (8)** units from Group C and D for **Pathway 2 - Kitchens and Bathrooms**

Unit code	Unit title	Prerequisites
-----------	------------	---------------

Unit code	Unit title	Prerequisites
LMFKB2001A	Prepare for cabinet installation	
LMFKB3001A	Identify processes in kitchen and bathroom projects	
LMFKB3002A	Determine requirements for installation of cabinets	
LMFKB3003A	Check and measure fit of cabinets	
LMFKB3004A	Conduct on-site adjustments to cabinets and components	
LMFKB3005A	Fabricate cabinets for the built-in environment	
LMFKB3006A	Install fitted cabinets and components	

Group D

Unit code	Unit title	Prerequisites
BSBCUS301A	Deliver and monitor a service to customers	
LMFFM2003B	Select and apply hardware	
LMFFM2010B	Set up, operate and maintain basic static machines	
LMFFM2011B	Apply	

Unit code	Unit title	Prerequisites
	manufactured board conversion techniques	
LMFFM3012B	Prepare a cutting list from plans and specifications	
LMFFM3030B	Set up, operate and maintain CNC sizing machines	
LMFFM3031B	Set up, operate and maintain CNC machining and processing centres	
LMFGN3002B	Estimate and cost job	
MSACMT230A	Apply cost factors to work practices	

Group E

Select up to **thirteen (13)** units from Groups E and F as specified below

Unit code	Unit title	Prerequisites
CUVCRS03B	Produce computer-aided drawings	
LMFFF2006B	Apply surface coatings by spray gun	
LMFFM2012B	Set up, operate and maintain pressure and clamping machines	
LMFFM3001B	Construct chair and couch frames	

Unit code	Unit title	Prerequisites
LMFFM3003B	Produce angled and curved furniture using manufactured board	
LMFFM3004B	Produce angled and curved furniture using solid timber	
LMFFM3007B	Prepare and apply decorative surfaces for furniture	
LMFFM3010B	Select timbers for furniture production	
LMFFM3011B	Produce manual and computer-aided production drawings	
LMFFM3013B	Measure and draw site layout for manufactured furniture products	
LMFFM3020B	Set up, operate and maintain sawing machines	
LMFFM3021B	Set up, operate and maintain drilling machines	
LMFFM3022B	Set up, operate and maintain joining machines	
LMFFM3023B	Set up, operate and maintain planing and	

Unit code	Unit title	Prerequisites
	finishing machines	
LMFFM3024B	Set up, operate and maintain multi-head planing and moulding machines	
LMFFM3025B	Set up, operate and maintain routing and shaping machines	
LMFFM3026B	Set up, operate and maintain mechanical wood turning lathes	
LMFFM3027B	Set up, operate and maintain automated edge banding machines	
LMFFM3028B	Fabricate synthetic solid surface products	
LMFFM3032B	Produce and maintain cutting tools	
LMFFM3033B	Construct jigs and fixtures	
LMFFT4001B	Coordinate on-site installation of furnishing products	
LMFFT4007B	Sample, inspect and test products to specifications	
LMFFT4008B	Interpret and use workplace	

Unit code	Unit title	Prerequisites
	information	
LMFFT4009B	Match furnishing styles to customer requirements	
MSACMC210A	Manage the impact of change on own work	
MSACMS200A	Apply competitive manufacturing practices	
MSACMS201A	Sustain process improvements	
MSACMT220A	Apply quick changeover procedures	
MSACMT221A	Apply Just in Time (JIT) procedures	
MSACMT240A	Apply 5S procedures in a manufacturing environment	
MSACMT250A	Monitor process capability	
MSACMT251A	Apply quality standards	
MSACMT260A	Use planning software systems in manufacturing	
MSACMT261A	Use SCADA systems in manufacturing	
MSACMT270A	Use sustainable energy practices	

Unit code	Unit title	Prerequisites
MSACMT271A	Use sustainable environmental practices	
MSACMT280A	Undertake root cause analysis	
MSACMT281A	Contribute to the application of a proactive maintenance strategy	
MSAPMOPS363A	Organise on-site work	
MSAPMPER200B	Work in accordance with an issued permit	
MSAPMSUP390A	Use structured problem solving tools	
TLID307E	Handle dangerous goods/hazardous substances	

Group F

Up to **five (5)** relevant units may be chosen from units not already selected from Groups A to E, or units available in this Training Package or other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate II level (maximum 1 unit), Certificate III level (maximum 5 units) or Certificate IV level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group F must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF40202 Certificate IV in Furnishing Technology

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform purchasing, production and quality assurance functions in a furnishing enterprise. This is a senior technical qualification with scope for entry from both trade and non-trade backgrounds.

Job roles/employment outcomes

The LMF40202 Certificate IV in Furnishing Technology reflects vocational outcomes for those performing a broad range of skilled applications in furnishing including requirements to evaluate and analyse current practices, develop new criteria and procedures for performing current practices, and provision of some leadership and guidance to others in the application and planning of the skills.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in furnishing materials purchasing, production and quality assurance that cover a broad range of varied activities or applications in a wide variety of contexts, most of which are complex and non-routine. Leadership and guidance would be involved when organising self and others as well as contributing to technical solutions of a non-routine or contingency nature.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed relevant Furnishing Certificate III qualifications or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF50202 Diploma of Furnishing Technology and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • understand personal requirements of relevant industry and workplace standards, regulations and policies • complete standard documentation • use communication technologies efficiently • communicate technical issues and procedures • communicate to others regarding operational requirements • ensure records are accurate and legible • establish effective working relationships with colleagues • undertake interactive workplace communication • demonstrate effective and appropriate communication and interpersonal skills when dealing with people from a range of backgrounds • develop and communicate work instructions, specifications and procedures for production • communicate with customers to establish design and production requirements
Teamwork	<ul style="list-style-type: none"> • explain and implement work team reporting requirements • monitor work team tasks in accordance with regulatory and workplace requirements • provide leadership and encourage others in working cooperatively with people of different ages, gender, race or religion • undertake appropriate and effective communication with team members • liaise with and provide support to other team members • keep team members informed of changes to work practices • identify team performance required to meet customer needs • provide leadership to others in the team • encourage the sharing of information between team members • plan and support team activities
Problem-solving	<ul style="list-style-type: none"> • identify risks and implement risk control measures for machinery and equipment • identify and address machinery problems and faults • check performance of machinery • assess and evaluate skills requirements of self and others to perform tasks • deal with and promptly resolve issues • conduct tests, analyse results and use other problem solving techniques to determine design and production requirements • manage technical processes and provide problem solving

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<p>support to team members</p> <ul style="list-style-type: none"> • implement changes to procedures when required • examine tools and machinery for damage, missing components or other defects • analyse relevant workplace data to identify hazards, assess risks and evaluate the effectiveness of risk control measures
Initiative and enterprise	<ul style="list-style-type: none"> • seek and provide feedback on processes and procedures • collect and monitor information from a variety of sources including customers, suppliers, technical resources and regulatory authorities • identify non-conformances to standards and take appropriate action • rectify problems promptly and appropriately • monitor and adjust activity in response to variations caused by differences in material, equipment condition and customer requirements • identify and address existing and potential risks • monitor information and records to identify trends that may require remedial action • develop and promote continuous improvement • gather and analyse information on machinery or process problems • record information on the quality and other indicators of performance • adjust and implement production schedules changes
Planning and organising	<ul style="list-style-type: none"> • monitor quality outcomes • allocate tasks to operators • implement contingency plan promptly when incidents occur • identify training needs for the work team and seek training support • monitor equipment condition and performance • identify hazards and implement appropriate hazard control measures • organise self and others to meet production schedules • identify and rectify parts and other shortages in advance • sequence work to maximise safety and productivity • select and use appropriate hand and power tools • identify labour requirements to achieve efficient production and perform required services • determine materials, quality and production requirements • apply time management skills to ensure flow of operations

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Self-management	<ul style="list-style-type: none"> • monitor information in work area • monitor and keep work areas clean and tidy at all times • conduct regular housekeeping activities during shift • locate, interpret and apply relevant ohs, process and equipment information • monitor own work against quality standards • understand own work activities and responsibilities • identify and apply safety procedures, including the use of protective equipment • manage work load priorities • interpret and apply relevant acts and regulations • develop and implement workplace procedures and instructions • establish own work schedule • accept responsibility for quality of work
Learning	<ul style="list-style-type: none"> • recognise limits of own expertise • assess competencies in meeting job requirements • ask questions to expand own knowledge • identify own training needs and seek skill development if required • listen to feedback from others • identify sources of information to expand knowledge and understanding • identify and address skill development needs of others in the team
Technology	<ul style="list-style-type: none"> • use software applications effectively • properly start up, operate and shut down control equipment • work with technology safely and according to workplace standards • establish standard operating procedures • carry out pre-operational checks on equipment and machines • operate equipment and other machines safely, efficiently and to productivity requirements • perform machine maintenance and problem solving • clean and check equipment and machines

Packaging Rules**Packaging Rules**

To be awarded the LMF40202 Certificate IV in Furnishing Technology, competency must be achieved in **nineteen (19)** units of competency.

- **five (5)** core units of competency
- **fourteen (14)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **five (5)** units from this list.

Unit code	Unit title	Prerequisites
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS200A	Work safely	
MSAPMOPS101A	Make measurements	
MSAPMSUP102A	Communicate in the workplace	
MSAPMSUP106A	Work in a team	

ELECTIVE UNITS

Select **fourteen (14)** units from Groups A and B as specified below.

Group A

Select a minimum of **nine (9)** units from Group A.

Unit code	Unit title	Prerequisites
LMFAH4001A	Recommend security technology, hardware and services	

Unit code	Unit title	Prerequisites
LMFAH4002A	Prepare door hardware schedules	
LMFDN4001B	Produce drawings from design concepts	
LMFDN4002B	Produce line and component production drawings	
LMFDN4003B	Produce patterns and/or templates	
LMFDN4004B	Design, construct and test jigs	
LMFDN4005B	Work within a furniture design team	
LMFFT4001B	Coordinate on-site installation of furnishing products	
LMFFT4002B	Customise stock lines	
LMFFT4003B	Organise production processes	
LMFFT4004B	Establish and monitor production inventory requirements	
LMFFT4005B	Install and commission CNC software	
LMFFT4006B	Construct prototypes and samples	
LMFFT4007B	Sample, inspect and test products to	

Unit code	Unit title	Prerequisites
	specifications	
LMFFT4008B	Interpret and use workplace information	
LMFFT4009B	Match furnishing style/materials to customer requirements	
LMFFT4010B	Identify and calculate production costs	
LMFFT4011B	Purchase materials and consumables	
LMFFT4012B	Prepare a tender submission	
LMFPP4001B	Design and conduct ornamental frames	
LMFPP4002B	Determine and apply gilding techniques	
MSAENV472B	Implement and monitor environmentally sustainable work practices	

Group B

Up to **five (5)** relevant units can be chosen from other units not already selected from Group A, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate III level (maximum 1 unit), Certificate IV level or Diploma level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF40308 Certificate IV in Musical Instrument Making and Repair

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform manufacture and repair of a wide range of musical instruments, including design, materials selection/purchase and related business skills.

Job roles/employment outcomes

The LMF40308 Certificate IV in Musical Instrument Making and Repair reflects vocational outcomes for those performing a broad range of skilled applications in musical instrument making and repair including requirements to evaluate and analyse current practices, develop new criteria and procedures for performing current practices, and provision of some leadership and guidance to others in the application and planning of the skills

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in musical instrument making and repair techniques and processes that cover a broad range of varied activities or applications in a wide variety of contexts, most of which are complex and non-routine. Leadership and guidance would be involved when organising self and others as well as contributing to technical solutions of a non-routine or contingency nature.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF31408 Certificate III in Musical Instrument Making and Repair or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include relevant Furnishing Diploma qualifications and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

LMFMI4004A	Repair stringed instruments	

Group B

Select a minimum of **six (6)** units from Group B.

Unit code	Unit title	Prerequisites
LMFDN4001B	Produce drawings from design concepts	
LMFDN4002B	Produce line and component production drawings	
LMFDN4003B	Produce patterns	

Unit code	Unit title	Prerequisites
	and/or templates	
LMFDN5001B	Generate and transfer complex computer-aided drawings and specifications	
LMFFM4005A	Hand carve wood to custom design	
LMFFM4006A	Construct joints for custom furniture	
LMFFM4007A	Produce curved and shaped components for custom furniture	
LMFFM4008A	Produce timber veneered components for custom furniture	
LMFFT4009B	Match furnishing style/materials to customer requirements	
LMFFT4010B	Identify and calculate production costs	
LMFFT4011B	Purchase materials and consumables	
LMFFT4012B	Prepare a tender submission	
LMFFT5011B	Develop, trial and evaluate prototypes	
LMFPP4002B	Determine and apply gilding techniques	

Group C

Select a maximum of **three (3)** units from Group C

Unit code	Unit title	Prerequisites
BSBSMB401A	Establish legal and risk management requirements of small business	
BSBSMB402A	Plan small business finances	
BSBSMB403A	Market the small business	
BSBSMB404A	Undertake small business planning	
BSBSMB405A	Monitor and manage small business operations	
BSBSMB406A	Manage small business finances	
BSBSMB407A	Manage a small team	
CULMS010B	Contribute to the preservation of cultural material	
CUVCOR04B	Originate concept for own work and conduct critical discourse	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	

Unit code	Unit title	Prerequisites
CUVDSP07B	Research and apply techniques for graphic design	
CUVICS04B	Originate and develop a concept	
CUVVSP02B	Research and experiment with techniques to produce calligraphy	
MSAENV472B	Implement and monitor environmentally sustainable work practices	

Group D

Up to **four (4)** relevant units may be chosen from other units not already selected from Group A, B or C (noting maximum 3 from Group C), or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate III level (maximum 2 units), Certificate IV level or Diploma level (maximum 2 units).

Units selected from other Training Packages and accredited courses via Group D must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF40408 Certificate IV in Interior Decoration

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to provide advice and practical assistance on the finishing and furnishing of existing interior spaces to meet client requirements. Decoration at this level includes residential or commercial environments and involves working directly with the client or with associated professionals such as architects, builders, retailers, interior designers and suppliers required to implement a project.

Job roles/employment outcomes

The LMF40408 Certificate IV in Interior Decoration reflects vocational outcomes in retail, consulting and building businesses as interior decorators or colour consultants performing a broad range of skilled applications in furnishing including requirements to evaluate and analyse current practices, develop new criteria and procedures for performing current practices, and provision of some leadership and guidance to others in the application and planning of the skills.

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in a range of decoration advice and services including:

- research and analysis of the client's goals and requirements
- planning and arranging space
- interior styling
- specifying finishes and furnishings
- selection of colours
- specifications and purchasing.

The work would cover a broad range of varied activities or applications in a wide variety of contexts, most of which are complex and non-routine. Leadership and guidance would be involved when organising self and others as well as contributing to technical solutions of a non-routine or contingency nature.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF31908 Certificate III in Interior Decoration (Retail Services) or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF50408 Diploma of Interior Design and Decoration and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Entry Requirements

Not applicable.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • communicate effectively and efficiently with colleagues, suppliers and clients • interpret correspondence, verbal and written project briefs • interpret work instructions, technical and conceptual information • communicate research findings and creative ideas • visually communicate creative concepts and direction to colleagues, suppliers and clients • use digital forms of communication - emails, digital photo's and scanned document knowledge • produce drawings to communicate the concept • communicate verbally and in writing with contractors and suppliers on technical issues • confirm a brief with client • complete standard documentation • undertake measurements and calculations • undertake interactive workplace communication • present information
Teamwork	<ul style="list-style-type: none"> • share or discuss decoration concepts and ideas with others • work with a diverse range of cultures, trades and backgrounds • liaise and work with suppliers • collaborate on decoration solutions • work with trades and craftspeople to achieve successful project outcomes • work independently or as a team member • demonstrate and encourage others in working cooperatively with people of different ages, gender, race or religion • identify role of others in the decoration process • undertake appropriate and effective communication with others in the design process
Problem-solving	<ul style="list-style-type: none"> • interpret and resolve decoration briefs • analyse research findings • develop and resolve decoration ideas • overcome and find solutions to constraints in project briefs • recognise and address quality issues and problems relating to decoration and business activities • solve problems in relation to the realisation of design decoration outcomes within the client's budget • solve problems in relation to the realisation of design decoration outcomes that are environmentally, economically and socially

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> sustainable • assess and evaluate skill requirements of self and others to perform tasks • apply knowledge of fabrics and materials to solve decoration problems • assess quality of materials before using in decoration solutions
Initiative and enterprise	<ul style="list-style-type: none"> • explore the potential of factors constraining or impacting on decoration solutions • initiate a particular decoration direction • realise decoration solutions • explore decoration options • manage changes to decoration brief or solution • work autonomously with the confidence to recommend selections and review projects to continually learn and improve service • identify non-conformances to standards and take appropriate action • identify effective ways to achieve decoration outcomes • rectify problems promptly and appropriately
Planning and organising	<ul style="list-style-type: none"> • prepare for undertaking a decoration project • coordinate decoration activities with other project timelines such as construction • organise decoration materials and equipment • make, confirm and alter client and supplier appointments and presentations according to workplace schedules and personnel activities • prepare business correspondence, purchase orders and invoices in a timely manner • prepare effective and clear decoration specifications on time and to agreed industry standards • collect, analyse and organise client information to arrange projects professionally and on time
Self-management	<ul style="list-style-type: none"> • evaluate and monitor own work and the work of others • develop individual project plans • manage own time effectively • establish own work schedules and take responsibility for the deliverables associated with individual projects, team ventures and client proposals • manage own work • monitor information in work area • keep the work area clean and tidy at all times

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> locate, interpret and apply relevant information monitor own work against quality standards understand own work activities and responsibilities manage work load priorities
Learning	<ul style="list-style-type: none"> conduct ongoing professional research in decoration knowledge maintain professional decoration skills manage own learning and professional development activities accept and respond to feedback, and use feedback as an opportunity to improve professional knowledge and skills manage own self-directed learning to continually keep up to date with available products, services and current trends identify shortfalls in knowledge and undertake research or training to fill gaps maintain a knowledge of industry standards assess competencies in meeting job requirements ask questions to expand own knowledge experiment with decoration ideas and review outcomes
Technology	<ul style="list-style-type: none"> observe OHS principles when using technology research technological developments relevant to decoration work use computers and appropriate software to develop and realise a decoration solution use technology to organise and maintain client and business data work with technology safely and according to workplace standards

Packaging Rules

Packaging Rules

To be awarded the LMF40408 Certificate IV in Interior Decoration, competency must be achieved in **nineteen (19)** units of competency.

- eight (8)** core units of competency
- eleven (11)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **eight (8)** units from this list.

Unit code	Unit title	Prerequisites
BSBDES302A	Explore and apply the creative design process to 2D forms	
BSBDES303A	Explore and apply the creative design process to 3D forms	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
CUVCRS04B	Produce technical drawings	
LMFID4001A	Research, analyse and apply colour for interior spaces	
LMFID4002A	Decorate residential interiors	
LMFID4011A	Determine occupational health and safety implications of interior effects	
MSAENV272B	Participate in environmentally sustainable work practices	

ELECTIVE UNITS

Select **eleven (11)** units from Groups A and B as specified below.

Group A

Select a minimum of **seven (7)** units from Group A

Unit code	Unit title	Prerequisites
BSBCRT401A	Articulate, present and debate ideas	
BSBCRT402A	Collaborate in a creative process	
BSBDES301A	Explore the use of colour	
BSBDES305A	Source and apply information on the history and theory of design	
BSBDES401A	Generate design solutions	
BSBDES403A	Develop and extend design skills and practice	
BSBMGT402A	Implement operational plan	
BSBSMB405A	Monitor and manage small business operations	
BSBWOR204A	Use business technology	
CUFDIG303A	Produce and prepare photo images	
CUFDIG304A	Create visual design components	
CUVCOR08B	Produce drawings to represent and communicate the concept	

Unit code	Unit title	Prerequisites
CUVCRS03B	Produce computer-aided drawings	
CUVDSP11B	Research and apply techniques for illustrative work	
CUVDSP15B	Research and apply techniques for application to spatial design	
LMFFDT4012A	Produce ideation drawings	
LMFID3002A	Source and specify decoration products	
LMFID4003A	Prepare a materials board for client presentation	
LMFID4004A	Research and recommend furniture and accessories	
LMFID4005A	Research and recommend soft furnishings for interiors	
LMFID4006A	Research and recommend hard materials and finishes for interiors	
LMFID4007A	Identify materials, construction techniques and methods used in building interiors	

Unit code	Unit title	Prerequisites
LMFID4008A	Assess interior light and recommend light fittings	
LMFID4009A	Research architectural styles and movements	
LMFID4010A	Research interior decoration and design influences	
MEM16006A	Organise and communicate information	
MSAENV472B	Implement and monitor environmentally sustainable work practices	

Group B

Up to **four (4)** relevant units can be chosen from units not already selected from Group A, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate III level (maximum 1 unit), Certificate IV level (maximum 4 units) or Diploma level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF40508 Certificate IV in Furniture Design and Technology

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform design of furniture and the application of the design into a finished furniture product. This qualification is streamlined to reflect two primary occupational outcomes in the areas of:

1. Fine furniture making - with a focus on skills required to design and produce individual fine furniture for display or custom production.
2. Furniture design - with a focus on skills required to design furniture for volume production.

Job roles/employment outcomes

The LMF40508 Certificate IV in Furniture Design and Technology reflects vocational outcomes in fine furniture making or furniture design with a broad range of skilled applications including requirements to evaluate and analyse current practices, develop new criteria and procedures for performing current practices, and provision of some leadership and guidance to others in the application and planning of the skills

Application

This qualification is typically used to develop skills and a breadth, depth and complexity of knowledge in a range of furniture making and design. The work would cover a broad range of varied activities or applications in a wide variety of contexts, most of which are complex and non-routine. Leadership and guidance would be involved when organising self and others as well as contributing to technical solutions of a non-routine or contingency nature.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF30302 Certificate III in Furniture Making or other relevant qualifications or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF50202 Diploma of Furnishing Technology, LMF50508 Diploma of Furniture Design and Technology and relevant supervisory, management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the furniture design and technology industries for this qualification. This Table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • communicate effectively and efficiently with colleagues, suppliers and clients • interpret correspondence, verbal and written project briefs • interpret work instructions, technical and conceptual information • communicate research findings and creative ideas • visually communicate creative concepts and direction to colleagues, suppliers and clients • produce drawings to communicate the concept • communicate verbally and in writing on technical issues • confirm a brief with client • complete standard documentation • undertake measurements and calculations • undertake interactive workplace communication
Teamwork	<ul style="list-style-type: none"> • share or discuss concepts and ideas with others • work with a diverse range of cultures, trades and backgrounds • liaise and work with suppliers • collaborate with others • work with trades people to achieve successful project outcomes • work independently or as a team member • demonstrate and encourage others in working cooperatively with people of different ages, gender, race or religion • identify role of others in the design and manufacture processes • undertake appropriate and effective communication with others in the design or manufacture process
Problem solving	<ul style="list-style-type: none"> • analyse research findings • recognise and address quality issues and problems relating to furniture design • solve problems in relation to the realisation of design within the client's budget • solve problems in relation to the realisation of design • seek outcomes that are environmentally, economically and socially sustainable

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • assess and evaluate skill requirements of self and others to perform tasks • apply knowledge of materials to solve problems • assess quality of materials before using in furniture or design
Initiative and enterprise	<ul style="list-style-type: none"> • create or realise furniture designs • explore design and manufacture options • manage changes to brief or solution • identify non-conformances to standards and take appropriate action • rectify problems promptly and appropriately
Planning and organising	<ul style="list-style-type: none"> • prepare for undertaking a furniture design project • organise materials and equipment • prepare effective and clear specifications on time and to agreed industry standards • collect, analyse and organise information to arrange projects professionally and on time
Self management	<ul style="list-style-type: none"> • evaluate and monitor own work and the work of others • manage own time effectively • establish own work schedules and take responsibility for the deliverables associated with individual projects • manage own work • monitor information in work area • keep the work area clean and tidy at all times • locate, interpret and apply relevant information • monitor own work against quality standards • understand own work activities and responsibilities • manage work load priorities
Learning	<ul style="list-style-type: none"> • conduct ongoing professional research in furniture design and technology knowledge • manage own learning and professional development activities • accept and respond to feedback, and use feedback as an opportunity to improve professional knowledge and skills • manage own self-directed learning to continually keep up to date with available products, services and current trends • identify shortfalls in knowledge and undertake research or training to fill gaps • maintain a knowledge of industry standards • assess competencies in meeting job requirements • ask questions to expand own knowledge
Technology	<ul style="list-style-type: none"> • observe OHS principles when using technology • research technological developments relevant to work

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> work with technology safely and according to workplace standards

Packaging Rules**Packaging Rules**

To be awarded the LMF40508 Certificate IV in Furniture Design and Technology, competency must be achieved in **nineteen (19)** units of competency.

- six (6)** core units of competency
- thirteen (13)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **six (6)** units from this list.

Unit code	Unit title	Prerequisites
BSBDES401A	Generate design solutions	
LMFFDT4007A	Establish the design brief	
LMFFDT4012A	Produce ideation drawings	
LMFFDT4014A	Research and select furniture materials and technology	
LMFFDT4015A	Research furniture styles and movements	
MSAENV272B	Participate in environmentally sustainable work practices	

ELECTIVE UNITS

Select **thirteen (13)** units from Groups A, B, C and D as specified below.

Group A

Select **one (1)** unit from Group A

Unit code	Unit title	Prerequisites
Stream 1: Fine Furniture Making		
LMFFDT4006A	Establish and maintain a safe furniture making work environment	
Stream 2: Furniture Design		
LMFFDT4008A	Determine occupational health and safety implications of designs	

Group B

Select a minimum of **eight (8)** units from Groups B **OR** C with at least **five (5)** units in each Group being coded LMF*****

Unit code	Unit title	Prerequisites
BSBDES301A	Explore the use of colour	
BSBPMG510A	Manage projects	
BSBSMB403A	Market the small business	
BSBSMB404A	Undertake small business planning	
CUFDIG303A	Produce and prepare photo	

Unit code	Unit title	Prerequisites
	images	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
CUVCRS03B	Produce computer-aided drawings	
CUVCRS04B	Produce technical drawings	
LMFFDT4001A	Apply finishing techniques to custom furniture	
LMFFDT4002A	Assemble custom furniture	
LMFFDT4005A	Construct and evaluate furniture prototypes and samples	
LMFFDT4009A	Prepare and present furniture design information	
LMFFDT4010A	Produce and evaluate developmental furniture models to scale	
LMFFDT4011A	Set up, operate and maintain basic static woodworking machines	
LMFFDT4016A	Select, use and maintain hand	

Unit code	Unit title	Prerequisites
	tools for the creation of custom furniture	
LMFFDT4017A	Set up and operate a wood turning lathe to produce off-centre work	
LMFFDT4018A	Produce templates and jigs for custom made furniture	
LMFFM4005A	Hand carve wood to custom design	
LMFFM4006A	Construct joints for custom furniture	
LMFFM4007A	Produce curved and shaped components for custom furniture	
LMFFM4008A	Produce timber veneered components for custom furniture	
LMFFT4010B	Identify and calculate production costs	
LMFFT4011B	Purchase materials and consumables	

Group C

Select up to **four (4)** units from Group C

Unit code	Unit title	Prerequisites
-----------	------------	---------------

Unit code	Unit title	Prerequisites
BSBCRT401A	Articulate, present and debate ideas	
BSBCRT402A	Collaborate in a creative process	
BSBCRT403A	Explore the history and social impact of creativity	
BSBCRT501A	Originate and develop concepts	
BSBDES301A	Explore the use of colour	
BSBDES303A	Explore and apply the creative design process to 3D forms	
BSBDES305A	Source and apply information on the history and theory of design	
BSBDES403A	Develop and extend design skills and practice	
BSBPMG510A	Manage projects	
BSBSMB403A	Market the small business	
BSBSMB404A	Undertake small business planning	
BSBSMB407A	Manage a small team	
CUFDIG303A	Produce and prepare photo images	
CUFDIG304A	Create visual design components	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
CUVCRS03B	Produce computer-aided	

Unit code	Unit title	Prerequisites
	drawings	
CUVCRS04B	Produce technical drawings	
LMFFDT4003A	Assess and record the lifecycle of a product	
LMFFDT4004A	Assess environmental impact of a design	
LMFFDT4005A	Construct and evaluate furniture prototypes and samples	
LMFFDT4009A	Prepare and present furniture design information	
LMFFDT4013A	Research and select furniture finishes	
LMFFDT4010B	Identify and calculate production costs	
MEM15001B	Perform basic statistical quality control	
MEM16006B	Organise and communicate information	
MEM16007B	Work with others in a manufacturing, engineering or related environment	
MEM16008B	Interact with computing technology	
MEM16013A	Operate in a self-directed team	MEM16007B
MEM30001B	Use computer aided drafting systems to produce basic engineering drawings	MEM16006B MEM16008A
MEM30004A	Use CAD to create and display 3D models	MEM16008B

Unit code	Unit title	Prerequisites
MEM30024A	Participate in quality assurance techniques	MEM15001B
MSACMT230A	Apply cost factors to work practices	
MSACMT430A	Improve cost factors in work practices	
MSAENV472B	Implement and monitor environmentally sustainable work practices	

Group D

Up to **four (4)** relevant units can be chosen from units not already selected from Group A, B or C, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate III level (maximum 2 units), Certificate IV level (maximum 4 units) or Diploma level (maximum 2 units). Note that if any units chosen from Group C have prerequisite requirements, these must be counted in the total number of units.

Units selected from other Training Packages and accredited courses via Group D must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF40609 Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to design kitchens, bathrooms and interior spaces to meet client requirements.

Job roles/employment outcomes

The Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces targets those designing kitchens, bathrooms and other interior spaces that typically feature built-in cabinetry and furniture. Employment outcomes include small business operators in kitchen and bathroom design or product supply, and specialist design personnel.

Application

This qualification is typically used to develop specialist kitchen and bathroom design skills. However, units in the qualification also support the application of design skills to other interior spaces. It is suitable for those working in the kitchens and bathroom industries, or with furnishing, joinery or cabinet making skills, in order to prepare them for providing a design service in these industries.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit may be granted towards this qualification by those who have completed LMF30409 Certificate III in Cabinet Making, LMF32009 Certificate III in Kitchen and Bathrooms (Client Services), LMF31908 Certificate III in Interior Decoration (Retail Services), LMF40408 Certificate IV in Interior Decoration, or achieved equivalent industry experience, for example, in the areas of interior decoration and design, sales and marketing of kitchen or bathroom products and designs, or manufacture of cabinets and components.

Pathways from the qualification

Further training pathways from this qualification include LMF50408 Diploma of Interior Design and Decoration.

Licensing considerations

Depending on the state and territory where work is undertaken, licensing may relate to this qualification to enable the candidate to conduct work on-site or manage implementation of designs. At the minimum, licensing requirements will usually involve construction induction training covered by the unit CPCCOHS1001A Work safely in the construction industry. Local regulations should be checked for details.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces

The following table contains a summary of the employability skills as identified by the kitchen and bathroom industries for this qualification. This table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes described here are broad industry requirements that reflect skill requirements for this level.

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Communicate effectively and efficiently with colleagues, suppliers and clients • Interpret correspondence, verbal and written project briefs • Interpret work instructions, technical and conceptual information • Communicate research findings and creative ideas • Visually communicate creative concepts and direction to colleagues, suppliers and clients • Use digital forms of communication - emails, digital photos and scanned document knowledge • Produce drawings to communicate the concept • Communicate verbally and in writing with contractors and suppliers on technical issues • Confirm a brief with client • Complete standard documentation • Undertake measurements and calculations • Undertake interactive workplace communication • Present information
Teamwork	<ul style="list-style-type: none"> • Share or discuss decoration concepts and ideas with others • Work with a diverse range of cultures, trades and backgrounds • Liaise and work with suppliers • Collaborate on decoration solutions • Work with trades and craftspeople to achieve successful project outcomes • Work independently or as a team member • Demonstrate and encourage others in working cooperatively with people of different ages, gender, race or religion

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • Identify role of others in the decoration process • Undertake appropriate and effective communication with others in the design process
Problem solving	<ul style="list-style-type: none"> • Interpret and resolve kitchen and bathroom design briefs • Analyse research findings • Develop and resolve design ideas • Overcome and find solutions to constraints in project briefs • Recognise and address quality issues and problems relating to design and business activities • Solve problems in relation to the realisation of design outcomes within the client's budget • Solve problems in relation to the realisation of design outcomes that are environmentally, economically and socially sustainable • Assess and evaluate skills requirements of self and others to perform tasks • Apply knowledge of fabrics and materials to solve design problems • Assess quality of materials before using in design solutions
Initiative and enterprise	<ul style="list-style-type: none"> • Explore the potential of factors constraining or impacting on kitchen or bathroom design solutions • Initiate a particular kitchen or bathroom design direction • Realise kitchen or bathroom design solutions • Explore kitchen or bathroom design options • Manage changes to kitchen or bathroom design brief or solution • Work autonomously with the confidence to recommend selections and review projects to continually learn and improve service • Identify non-conformances to standards and take appropriate action • Identify effective ways to achieve kitchen or bathroom design outcomes • Rectify problems promptly and appropriately
Planning and organising	<ul style="list-style-type: none"> • Prepare for undertaking a kitchen or bathroom design project • Coordinate activities with other project timelines such as construction

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> • Organise design materials and equipment • Make, confirm and alter client and supplier appointments and presentations according to workplace schedules and personnel activities • Prepare business correspondence, purchase orders and invoices in a timely manner • Prepare effective and clear specifications on time and to agreed industry standards • Collect, analyse and organise client information to arrange projects professionally and on time
Self-management	<ul style="list-style-type: none"> • Evaluate and monitor own work and the work of others • Develop individual project plans • Manage own time effectively • Establish own work schedules and take responsibility for the deliverables associated with individual projects, team ventures and client proposals • Manage own work • Monitor information in work area • Keep the work area clean and tidy at all times • Locate, interpret and apply relevant information • Monitor own work against quality standards • Understand own work activities and responsibilities • Manage work load priorities
Learning	<ul style="list-style-type: none"> • Conduct ongoing professional research in kitchen or bathroom design knowledge • Maintain professional skills • Manage own learning and professional development activities • Accept and respond to feedback, and use feedback as an opportunity to improve professional knowledge and skills • Manage own self-directed learning to continually keep up to date with available products, services and current trends • Identify shortfalls in knowledge and undertake research or training to fill gaps • Maintain a knowledge of industry standards • Assess competencies in meeting job requirements • Ask questions to expand own knowledge • Experiment with ideas and review outcomes

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**Technology**

- Observe occupational health and safety (OHS) principles when using technology
- Research technological developments relevant to kitchen or bathroom design work
- Use computers and appropriate software to develop and realise a kitchen or bathroom design solution
- Use information technology (IT) to organise and maintain client and business data
- Work with technology safely and according to workplace standards

Packaging Rules**Packaging Rules**

To be awarded the Certificate IV in Design of Kitchens, Bathrooms and Interior Spaces, competency must be achieved in **twenty (20)** units of competency, made up of:

- **thirteen (13)** core units of competency
- **seven (7)** elective units of competency

Assessment must be conducted in accordance with the Assessment Guidelines. Units must be selected according to the rules described below

CORE UNITS

Select all **thirteen (13)** units from this list.

BSBDES401A	Generate design solutions
CPCCOHS1001A	Work safely in the construction industry
LMFDN4001B	Produce drawings from design concepts
LMFFM3013B	Measure and draw site layout for manufactured furniture products
LMFID4001A	Research, analyse and apply colour for interior spaces
LMFID4007A	Identify building materials, construction techniques and methods used in interiors

BSBDES401A	Generate design solutions
LMFID5005A	Explore and apply creative design principles to interior space
LMFKB3001A	Identify processes in kitchen and bathroom projects
LMFKB3008A	Identify cabinet construction and installation methods
LMFKB4003A	Identify and document services required to support fitted furniture designs
LMFKB4006A	Prepare quotation and contract documentation for design project
LMFKB4007A	Design ancillary residential cabinetry
MSAENV272B	Participate in environmentally sustainable work practices

ELECTIVE UNITS

Select **seven (7)** units of competency as below:

- a minimum of **two (2)** must be chosen from **either** Group A **OR** Group B specialisation units
- a maximum of **five (5)** may be selected from **Group A, B or C**

Group A - Kitchen Specialisation

LMFKB4001A	Determine spatial planning considerations for kitchen designs
LMFKB4002A	Research and recommend materials, components and finishes for kitchen designs

Group B - Bathroom Specialisation

LMFKB4004A	Determine spatial planning considerations for bathroom design
LMFKB4005A	Research and recommend materials, components and finishes for bathroom designs

Group C - General electives

LMFKB4008A	Determine layout for laundry components
LMFKB3002A	Determine requirements for installation of cabinets
LMFKB3003A	Check and measure fit of cabinets
LMFKB3007A	Provide advice on cabinet design features
LMFFDT4004A	Assess environmental impact of a design
LMFFM3011B	Produce manual and computer-aided production drawings
LMFFT4001B	Coordinate on-site installation of furnishing products
LMFFT4007B	Sample, inspect and test products to specifications
LMFFT4008B	Interpret and use workplace information
LMFFT4009B	Match furnishing style/materials to customer requirements
LMFID4008A	Assess interior light and recommend light fittings
LMFID4009A	Research architectural styles and movements
LMFID4011A	Determine occupational health and safety implications of interior effects
BSBCRT401A	Articulate, present and debate ideas
BSBCUS402A	Address customer needs
BSBDES301A	Explore the use of colour
BSBDES305A	Source and apply information on the history and theory of design
BSBMKG413A	Promote products and services
BSBSMB403A	Market the small business

LMFKB4008A	Determine layout for laundry components
BSBSMB405A	Monitor and manage small business operations
BSBSMB406A	Manage small business finances
BSBWOR204A	Use business technology
CUVDSP15B	Research and apply techniques for application to spatial design
MEM09002B	Interpret technical drawing
MEM16006A	Organise and communicate information
MSAENV472A	Implement and monitor environmentally sustainable work practices
MSAPMSUP390A	Use structured problem solving tools

LMF50202 Diploma of Furnishing Technology

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform furnishing design, manage production processes and business requirements in a furnishing manufacturing organisation.

Job roles/employment outcomes

The LMF50202 Diploma of Furnishing Technology reflects vocational outcomes for those performing furnishing design, production and management processes and procedures and involves self-directed application of knowledge and skills, with substantial depth in some areas where judgement is required in planning and selecting appropriate equipment, services and techniques for self and others.

Application

This qualification is typically used to develop a breadth, depth and complexity of skills and knowledge covering furnishing design and production planning plus initiation of alternative approaches to skills or knowledge application across a broad range of technical and/or management requirements, evaluation and co-ordination. Work would involve participation in development of strategic initiatives, as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams, including teams concerned with planning and evaluation functions and could involve group or team coordination.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF40202 Certificate IV in Furnishing Technology where competencies are common to this qualification or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF60102 Advanced Diploma of Furnishing Management or LMF60308 Advanced Diploma of Furniture Design and Technology and relevant management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • complete workplace documentation and records • use communication technologies efficiently • develop work instructions, specifications and procedures for production • demonstrate effective and appropriate communication and interpersonal skills when dealing with people from nesb • communicate with all team members • demonstrate effective and appropriate communication and interpersonal skills when dealing with clients • use most appropriate communication method given priority, cost and customer facilities • access, interpret and apply technical information • interpret and apply calculations and specifications • interpret production data
Teamwork	<ul style="list-style-type: none"> • work cooperatively with people of different ages, gender, race or religion • liaise with and provide support to other team members • work as part of a team • identify and manage performance required to meet customer needs in own work and team • manage technical processes and provide problem solving support to others
Problem-solving	<ul style="list-style-type: none"> • investigate problem causes • identify, rectify or report potential difficulties associated with manufacture of products or provision of services • identify and report environmental features, regulations, insurance requirements, legal requirements and other factors which may affect the product or service to be provided • use material and process knowledge to solve problems • identify hazards and implement control measures • determine production requirements • apply information on furniture construction and design to determine solutions to production or design problems • conduct tests and analyse results to determine and assess production requirements
Initiative and enterprise	<ul style="list-style-type: none"> • seek feedback on products, processes and procedures • gather and analyse information and apply to production processes • record information on the quality and other indicators of products

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> determine types and quantities of materials required for manufacture support achievement of efficient production processes determine and act on situations requiring further information or problem solving
Planning and organising	<ul style="list-style-type: none"> identify hazards and implement appropriate hazard control measures demonstrate time management skills source and prepare materials and resources for production identify and rectify stock shortages in advance sequence work to maximise safety and productivity interpret production requirements for furniture designs
Self-management	<ul style="list-style-type: none"> interpret and apply relevant acts and regulations keep the work area clean and tidy at all times monitor own work and work of team and identify and act on any quality issues understand own work activities manage own time to meet deadlines implement workplace procedures and instructions
Learning	<ul style="list-style-type: none"> implement learning activities as appropriate to ensure achievement of specified production requirements assess competencies in meeting job requirements be supportive, assertive and use interpersonal skills identify own training needs and seek skill development if required gather feedback to own work to assess effectiveness in meeting objectives and integrate information into own practice
Technology	<ul style="list-style-type: none"> ensure production equipment is operated and maintained according to workplace standards use computer software applications effectively work with technology safely and according to workplace standards help others use technology efficiently and safely use testing technology

Packaging Rules

Packaging Rules

To be awarded the LMF50202 Diploma of Furnishing Technology, competency must be achieved in **thirty (30)** units of competency.

- **three (3)** core units of competency
- **twenty-seven (27)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **three (3)** units from this list.

Unit code	Unit title	Prerequisites
MSAENV272B	Participate in environmentally sustainable work practices	
MSAPMOHS300A	Facilitate the implementation of OHS for a work group	
MSAPMSUP383A	Facilitate a team	

ELECTIVE UNITS

Select **twenty-seven (27)** units from Groups A, B and C as specified below.

Group A

Select a minimum of **twelve (12)** units from Group A

Unit code	Unit title	Prerequisites
LMFDN4001B	Produce drawings from design concepts	
LMFDN4002B	Produce line and component production drawings	

Unit code	Unit title	Prerequisites
LMFDN4003B	Produce patterns and/or templates	
LMFDN4004B	Design, construct and test jigs	
LMFDN4005B	Work within a furniture design team	
LMFFT4001B	Coordinate on-site installation of furnishing products	
LMFFT4002B	Customise stock lines	
LMFFT4003B	Organise production processes	
LMFFT4004B	Establish and monitor production inventory requirements	
LMFFT4005B	Install and commission CNC software	
LMFFT4006B	Construct prototypes and samples	
LMFFT4007B	Sample, inspect and test products to specifications	
LMFFT4008B	Interpret and use workplace information	
LMFFT4009B	Match furnishing style/materials to customer	

Unit code	Unit title	Prerequisites
	requirements	
LMFFT4010B	Identify and calculate production costs	
LMFFT4011B	Purchase materials and consumables	
LMFFT4012B	Prepare a tender submission	
LMFPP4001B	Design and conduct ornamental frames	
LMFPP4002B	Determine and apply gilding techniques	

Group B

Select a minimum of **nine (9)** units from Group B

Unit code	Unit title	Prerequisites
LMFDN5001B	Generate and transfer complex computer-aided drawings and specifications	
LMFDN5006B	Manage furniture design	
LMFFDT4015A	Research furniture styles and movements	
LMFFT5001B	Evaluate and select production materials and equipment	

Unit code	Unit title	Prerequisites
LMFFT5001B	Evaluate and select production materials and equipment	
LMFFT5002B	Establish and develop production processes and area layout	
LMFFT5003B	Manage installation and commissioning of equipment	
LMFFT5004B	Develop and document procedures and specifications	
LMFFT5005B	Organise enterprise maintenance programs	
LMFFT5006B	Plan production	
LMFFT5010B	Optimise CNC operations	
LMFFT5011B	Develop, trial and evaluate prototypes	
LMFFT5012B	Determine production feasibility of designs	
LMFFT5013B	Develop products and related processes	
LMFFT5014B	Establish and monitor business	

Unit code	Unit title	Prerequisites
	information systems	
LMFFT5015B	Establish and implement contracts for external goods or services	
LMFFT5016B	Establish customer contracts	
MSAENV472B	Implement and monitor environmentally sustainable work practices	

Group C

Up to **five (5)** relevant units can be chosen from other units not already selected from Groups A and B, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate IV level (maximum 1 unit), Diploma level or Advanced Diploma level (maximum 1 unit).

Units selected from other Training Packages and accredited courses via Group C must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF50308 Diploma of Stained Glass and Lead Lighting

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform advanced design manufacture, repair and installation of stained glass and lead lighting including heritage conservation.

Job roles/employment outcomes

The LMF50308 Diploma of Stained Glass and Lead Lighting reflects vocational outcomes for those performing design and manufacture of stained glass and lead lighting job roles including heritage conservation. Work involves self-directed application of knowledge and skills, with substantial depth in some areas where judgement is required in planning and selecting appropriate equipment, services and techniques for self and others.

Application

This qualification is typically used to develop advanced skills and knowledge in stained glass and lead lighting design and heritage conservation plus initiation of alternative approaches to skills or knowledge application across a broad range of technical and/or management requirements, evaluation and co-ordination. Work would involve participation in development of strategic initiatives, as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams, including teams concerned with planning and evaluation functions and could involve group or team coordination.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF30602 Certificate III in Glass and Glazing with relevant units included in this qualification or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include Furnishing Advanced Diploma and relevant management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • organise and understand information related to work orders, plans and safety procedures • organise and understand detailed technical information related to the materials and the products used in and related to stained glass and lead lighting • communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with other workers and customers, and the reporting of work outcomes and problems • maintain records related to product and materials quality
Teamwork	<ul style="list-style-type: none"> • work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
Problem-solving	<ul style="list-style-type: none"> • use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use • use checking and inspection techniques to ensure instruments comply with specifications and that instances of non-compliance are remedied • identify, anticipate and respond to faults in glass or other materials • identify, anticipate and respond to the problems related to glass and other material properties • identify and analyse faults in stained glass and lead lighting • select and apply the most appropriate stained glass and lead lighting maintenance and repair techniques • identify, anticipate and respond to the impact of the material properties on the product
Initiative and enterprise	<ul style="list-style-type: none"> • recognise and respond to circumstances outside instructions or personal competence
Planning and organising	<ul style="list-style-type: none"> • plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage during the production cycle • use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
Self-management	<ul style="list-style-type: none"> • clarify and confirm specified work instructions • plan work within task parameters • apply systematic and effective time management • accept responsibility for tasks

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • set, monitor and satisfy personal work goals
Learning	<ul style="list-style-type: none"> • satisfy the competency requirements for the job • maintain current knowledge of stained glass and lead lighting tools and production materials • maintain current knowledge of stained glass and lead lighting processes and techniques • seek learning opportunities
Technology	<ul style="list-style-type: none"> • use the workplace technology related to the selection, preparation and use of stained glass and lead lighting products and materials including hand and power tools, calculators, measuring devices and technical support systems

Packaging Rules

Packaging Rules

To be awarded the LMF50308 Diploma of Stained Glass and Lead Lighting, competency must be achieved in **twenty-five (25)** units of competency.

- **eleven (11)** core units of competency
- **fourteen (14)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **eleven (11)** units from this list.

Unit code	Unit title	Prerequisites
HLTFA301B	Apply First Aid	
LMFGG2001B	Use glass and glazing sector hand and power tools	
LMFGG3002B	Assess glass and glazing requirements	
LMFGG3001B	Move, store and handle glass	
LMFGG3013B	Construct and repair leadlight and stained glass panels	

Unit code	Unit title	Prerequisites
LMFSL2001A	Assemble lead light and stained glass components	
LMFSL3004A	Protect stained glass and lead lighting	
LMFSL3005A	Fabricate and install residential lead light and stained glass windows and doors	
LMFSL3006A	Prepare and install architectural engineered stained glass and lead lighting	
MEM05003B	Perform soft soldering	
MSAENV272B	Participate in environmentally sustainable work practices	

ELECTIVE UNITS

Select **fourteen (14)** units from Groups A, B, C and D as specified below with a minimum of **nine (9)** units selected from Groups A, B and C

Group A

A minimum of **one (1)** unit must be selected from this list:

Unit code	Unit title	Prerequisites
LMFSL5001A	Assess conservation requirements	
LMFSL5002A	Remove heritage lead light and stained glass	
LMFSL5003A	Conserve heritage lead light and stained glass	
LMFSL5004A	Install heritage lead light and stained glass	
LMFSL5005A	Apply innovation in contemporary lead light and	

Unit code	Unit title	Prerequisites
	stained glass	

Group B

A minimum of **four (4)** units must be selected from this list:

Unit code	Unit title	Prerequisites
CULMS010B	Contribute to the preservation of cultural material	
CUVCOR04B	Originate concept for own work and conduct critical discourse	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
CUVDSP07B	Research and apply techniques for graphic design	
CUVDSP15B	Research and apply techniques for application to spatial design	
CUVICS04B	Originate and develop a concept	
CUVVSP02B	Research and experiment with techniques to produce calligraphy	
LMFDN4001B	Produce drawings from design concepts	
LMFDN4002B	Produce line and component production drawings	
LMFDN4003B	Produce patterns and/or templates	

Unit code	Unit title	Prerequisites
LMFDN5001B	Generate and transfer complex computer-aided drawings and specifications	

Group C

A minimum of **four (4)** units must be selected from this list:

Unit code	Unit title	Prerequisites
BSBSMB401A	Establish legal and risk management requirements of small business	
BSBSMB402A	Plan small business finances	
BSBSMB403A	Market the small business	
BSBSMB404A	Undertake small business planning	
BSBSMB405A	Monitor and manage small business operations	
BSBSMB406A	Manage small business finances	
BSBSMB407A	Manage a small team	
MSAENV472B	Implement and monitor environmentally sustainable work practices	

Group D

Up to **five (5)** relevant units may be chosen from units in Groups A, B and C not already selected, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Diploma level or Certificate IV level (maximum 2 units) or Advanced Diploma level (maximum 3 units).

Units selected from other Training Packages and accredited courses via Group D must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF50408 Diploma of Interior Design and Decoration

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform design and decoration advice for building interiors. Design and decoration at this level covers the development of complete decorative schemes for the effective use of residential and commercial or institutional interior spaces, working with a client brief and within project parameters. It may also include specialist design areas such as facilities for people with disabilities and the aged.

Job roles/employment outcomes

The LMF50408 Diploma of Interior Design and Decoration reflects vocational outcomes include:

- self employment as an interior decorator, colour consultant or interior stylist
- in-house Interior designer or decorator for design and decoration consultancies, furniture, furnishings and fabric suppliers, furnishing departments of retail stores or shop fitters.

Work involves self-directed application of knowledge and skills, with substantial depth in some areas where judgement is required in planning and selecting appropriate equipment, services and techniques for self and others.

Application

This qualification is typically used to develop a breadth, depth and complexity of skills and knowledge covering furnishings, finishes and aesthetic presentation to meet the purpose, efficiency and comfort of the space and encourage the principles of environmental sustainability. It covers a detailed understanding of the application and effect of colour and pattern in interior space and the application of historic furnishing styles and their relationship to architectural periods and heritage projects.

This qualification covers the skills required to provide a full range of decoration services, consultation and design advice including:

- researching and analysing the client's goals and requirements
- planning, arranging and styling the space, and preparing detailed client presentations
- selecting and specifying colour schemes, furniture, fabrics and fixtures, including layouts and detailed specifications
- preparing design documentation for specialty floor coverings, fabrics and wall finishes
- working with builders, architects and service contractors to advise on changes to the interior structure
- producing documentation for shop fitters, cabinet makers, furniture suppliers and materials suppliers
- preparing documentation for power and communications locations, reflected ceiling plans and lighting designs that reflect an understanding of basic building protocols
- providing contract documentation for the pricing, procurement and installation of materials and furniture
- organising the purchasing of materials, accessories, artwork and furnishings
- contracting and supervision of the trades people required to implement a project.

Work would involve participation in development of strategic initiatives, as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams, including teams concerned with planning and evaluation functions and could involve group or team coordination.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF40408 Certificate IV in Interior Decoration or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF60208 Advanced Diploma of Interior Design and relevant management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • communicate effectively and efficiently with colleagues, suppliers, clients and others involved in the decoration or design project, using a variety of communication methods • interpret decoration or design briefs • interpret technical and conceptual information • conduct research to inform project outcomes • communicate and sell decoration or design ideas and concepts using a variety of presentation methods • produce detailed technical drawings to industry standard • complete documentation relating to the project • undertake measurements and calculations and document in specification schedule • interpret client needs and documentation including client briefs, quotations, fee schedules, proposal documents, product/finishes schedules and architectural drawings • negotiate a brief with the client • manage contracts
Teamwork	<ul style="list-style-type: none"> • collaborate on design and decoration concepts and ideas with others • demonstrate and encourage others in working cooperatively with people of different ages, gender, race or religion • undertake appropriate and effective communication with others in the design and decoration process • provide constructive and meaningful feedback on design and decoration work to colleagues • provide practical decoration or design and business support to managers and the design team • work within a multi-disciplined project team, construction team to meet time frames, budgets and expectations
Problem-solving	<ul style="list-style-type: none"> • interpret and resolve decoration or design briefs which meet client needs and are achieved within the parameters of the project • analyse and apply research findings into decoration or design solutions • develop and resolve ideas for complex decoration or design projects • recognise and address quality issues and problems relating to design and decoration and business activities • solve problems in relation to the realisation of desired decoration outcomes that are environmentally, economically

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none"> and socially sustainable • use expertise to provide problem solving advice to the design and decoration team • identify and address unexpected problems, hazards, time delays and structural implications as they arise • evaluate design solutions for best fit
Initiative and enterprise	<ul style="list-style-type: none"> • anticipate and address problems, hazards, time delays and structural implications • initiate a design and decoration direction and options for the project • provide leadership in design and decoration and manage changes to brief or solution • identify and address non-conformances • identify effective ways to achieve decoration outcomes • rectify problems promptly and appropriately • develop original design concepts • apply continual improvement processes to design and decoration service
Planning and organising	<ul style="list-style-type: none"> • develop project schedules on time, to agreed industry standards and in coordination with other project timelines • make, confirm and alter client and supplier appointments and presentations according to workplace schedules and personnel activities • prepare business correspondence, purchase orders and invoices in a timely manner • collect, analyse and organise client information to arrange projects professionally and on time • prepare project proposals with all information to enable clients to make efficient and informed choices • arrange and oversee trades people in the undertaking of work according to project requirements • plan work requirements for self and others as required • monitor quality outcomes
Self-management	<ul style="list-style-type: none"> • evaluate and monitor work outcomes against work schedule and quality standards • manage own time and work load priorities effectively • monitor information in work area • keep the work area clean and tidy at all times • locate, interpret and apply relevant information • take responsibility for project work
Learning	<ul style="list-style-type: none"> • conduct ongoing professional research in design and decoration

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<p>knowledge</p> <ul style="list-style-type: none"> • maintain professional skills and industry contacts • manage own learning and professional development activities • accept and respond to feedback, and use feedback as an opportunity to improve professional knowledge and skills • identify shortfalls in knowledge and undertake research or training to fill gaps • assess competencies in meeting job requirements • ask questions to expand own knowledge • experiment with design and decoration ideas and review outcomes
Technology	<ul style="list-style-type: none"> • observe OHS principles when using technology • research technological developments relevant to design and decoration work • use computers and appropriate software to develop and realise a decoration or design solution • use technology to organise and maintain client and business data • work with technology safely and according to workplace standards

Packaging Rules**Packaging Rules**

To be awarded the LMF50408 Diploma of Interior Design and Decoration, competency must be achieved in **twenty nine (29)** units of competency

- **ten (10)** core units of competency
- **nineteen (19)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **ten (10)** units from this list.

Unit code	Unit title	Prerequisites
BSBDES302A	Explore and apply the creative design	

Unit code	Unit title	Prerequisites
	process to 2D forms	
BSBDES303A	Explore and apply the creative design process to 3D forms	
BSBDES502A	Establish, negotiate and refine a design brief	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
CUVCRS04B	Produce technical drawings	
LMFID4001A	Research, analyse and apply colour for interior spaces	
LMFID4002A	Decorate residential interiors	
LMFID4011A	Determine occupational health and safety implications of interior effects	
LMFID5003A	Evaluate site for interior design brief	
MSAENV272B	Participate in environmentally sustainable work practices	

ELECTIVE UNITS

Select **nineteen (19)** units from Groups A, B, C and D as specified below.

Group A

Select **one (1)** unit from Group A

Unit code	Unit title	Prerequisites
LMFID5001A	Design residential interiors	
LMFID5002A	Develop a decoration proposal for a complex site	

Group B

Select a minimum of **five (5)** units from Group B

Unit code	Unit title	Prerequisites
CPCCB4037A	Prepare drawing for heritage works	
BSBCRT501A	Originate and develop concepts	
BSBDES304A	Source and apply design industry knowledge	
BSBPMG510A	Manage projects	
CUFANM303A	Create digital 3D models	
CUFDIG507A	Design digital simulations	
LMFFDT5002A	Apply resources sustainably	
LMFFDT5004A	Develop self as a furniture designer	

Unit code	Unit title	Prerequisites
LMFID5004A	Specify structural elements, systems and services for interior spaces	
LMFID5005A	Explore and apply creative design methodology to interior space	
LMFID5006A	Design interior lighting	
LMFID5007A	Decorate for events	
LMFID5008A	Design for people with disabilities and the elderly	
LMFID5009A	Research and recommend colour and applied finishes	
LMFID5010A	Provide interior styling service	
LMFID5011A	Specify soft furnishings for complete interior solution	
LMFID5012A	Research and recommend artwork	
LMFID5013A	Design for small to medium scale commercial or institutional interiors	
LMFID5014A	Use CAD	

Unit code	Unit title	Prerequisites
	applications to complete models and documentation for interior design projects	
LMFID5015A	Decorate interiors for restoration projects	
SIRRMER009A	Produce perspective drawings, plans and elevations	
SIRRMER020A	Create and implement exhibition space	

Group C

Select a minimum of **eight (8)** units from Group C

Unit code	Unit title	Prerequisites
BSBCRT401A	Articulate, present and debate ideas	
BSBCRT402A	Collaborate in a creative process	
BSBDES301A	Explore the use of colour	
BSBDES305A	Source and apply information on the history and theory of design	
BSBDES401A	Generate design solutions	

Unit code	Unit title	Prerequisites
BSBDES403A	Develop and extend design skills and practice	
BSBMGT402A	Implement operational plan	
BSBSMB405A	Monitor and manage small business operations	
BSBWOR204A	Use business technology	
CUFDIG303A	Produce and prepare photo images	
CUFDIG304A	Create visual design components	
CUVCOR08B	Produce drawings to represent and communicate the concept	
CUVCRS03B	Produce computer-aided drawings	
CUVDSP11B	Research and apply techniques for illustrative work	
CUVDSP15B	Research and apply techniques for application to spatial design	
LMFFDT4012A	Produce ideation drawings	
LMFFDT4015A	Research furniture styles and movements	

Unit code	Unit title	Prerequisites
LMFID3002A	Source and specify decoration products	
LMFID4003A	Prepare a materials board for client presentation	
LMFID4004A	Research and recommend furniture and accessories	
LMFID4005A	Research and recommend soft furnishings for interiors	
LMFID4006A	Research and recommend hard materials and finishes for interiors	
LMFID4007A	Identify materials, construction techniques and methods used in building interiors	
LMFID4008A	Assess interior light and recommend light fittings	
LMFID4009A	Research architectural styles and movements	
LMFID4010A	Research interior decoration and design influences	
MEM16006A	Organise and communicate information	

Unit code	Unit title	Prerequisites
MSAENV472B	Implement and monitor environmentally sustainable work practices	

Group D

Up to **five (5)** relevant units can be chosen from other units not already selected from Groups A, B and C, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate IV level (maximum 2 units), Diploma level or Advanced Diploma level (maximum 2 units).

Units selected from other Training Packages and accredited courses via Group D must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF50508 Diploma of Furniture Design and Technology

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required where the design of furniture and the application of the design into a finished furniture product is the central focus. This qualification is structured to reflect two primary occupational outcomes in the areas of fine furniture making - with a focus on skills required to design and produce individual fine furniture for display or custom production and furniture design - with a focus on skills required to design furniture for volume production.

Job roles/employment outcomes

The LMF50508 Diploma of Furniture Design and Technology reflects vocational outcomes for those performing design of furniture and has two streams that should be selected on the basis of required occupational outcome.

- Stream 1: Fine Furniture Making - units for this stream are included in Groups A and C
- Stream 2: Furniture Design - units for this stream are included in Groups A and D

The selection of units for each of each stream is determined by the packaging rules below. Work involves self-directed application of knowledge and skills, with substantial depth in some areas where judgement is required in planning and selecting appropriate equipment, services and techniques for self and others.

Application

This qualification is typically used to develop a breadth, depth and complexity of skills and knowledge covering furnishing design and technology plus initiation of alternative approaches to skills or knowledge application across a broad range of technical and/or management requirements, evaluation and co-ordination. Work would involve participation in development of strategic initiatives, as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams, including teams concerned with planning and evaluation functions and could involve group or team coordination.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed the LMF40508 Certificate IV in Furniture Design and Technology or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include LMF60308 Advanced Diploma of Furniture Design and Technology and relevant management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • communicate effectively and efficiently with colleagues, suppliers, clients and others involved in the design project, using a variety of communication methods • interpret design briefs • interpret technical and conceptual information • conduct research to inform project outcomes • communicate and sell design ideas and concepts using a variety of presentation methods • produce detailed technical drawings to industry standard • complete documentation relating to the project • undertake measurements and calculations and document in specification schedule • interpret client needs and documentation such as client briefs, quotations, fee schedules, proposal documents, product finishes, schedules and drawings • discuss design ideas
Teamwork	<ul style="list-style-type: none"> • collaborate on design concepts and ideas with others • demonstrate and encourage others in working cooperatively with people of different ages, gender, race or religion • undertake appropriate and effective communication with others in the design or manufacturing process • provide constructive and meaningful feedback on design work to colleagues • provide practical support to team members • work within a multi-disciplined project team
Problem-solving	<ul style="list-style-type: none"> • interpret and resolve design ideas • analyse and apply research findings into design solutions • recognise and address quality issues and problems relating to designs • solve problems in relation to the realisation of outcomes that are environmentally, economically and socially sustainable • use expertise to provide problem solving advice • identify and address unexpected problems, hazards, time delays and structural implications as they arise • evaluate design solutions for best fit
Initiative and enterprise	<ul style="list-style-type: none"> • anticipate and address problems, hazards, time delays and structural implications • initiate design direction and options • provide leadership in design and manage changes to brief or solution

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • identify and address non-conformances • identify effective ways to achieve outcomes • rectify problems promptly and appropriately • develop original design concepts
Planning and organising	<ul style="list-style-type: none"> • prepare business correspondence, purchase orders and invoices in a timely manner • collect, analyse and organise client information • prepare project proposals with all information to enable clients to make efficient and informed choices • arrange and oversee trades people in the undertaking of work according to project requirements • plan work requirements for self and others as required • monitor quality outcomes
Self-management	<ul style="list-style-type: none"> • evaluate and monitor work outcomes against work schedule and quality standards • manage own time and work load priorities effectively • monitor information in work area • keep the work area clean and tidy at all times • locate, interpret and apply relevant information • take responsibility for project work
Learning	<ul style="list-style-type: none"> • conduct ongoing professional research in design and technology knowledge • maintain professional skills and industry contacts • manage own learning and professional development activities • accept and respond to feedback, and use feedback as an opportunity to improve professional knowledge and skills • identify shortfalls in knowledge and undertake research or training to fill gaps • assess competencies in meeting job requirements • ask questions to expand own knowledge • experiment with design ideas and review outcomes
Technology	<ul style="list-style-type: none"> • observe OHS principles when using technology • research technological developments relevant to design and technology work • use computers and appropriate software to develop design solutions • use technology to organise and maintain client and business data • work with technology safely and according to workplace standards

Packaging Rules

Packaging Rules

To be awarded the LMF50508 Diploma of Furniture Design and Technology, competency must be achieved in **twenty-six (26)** units of competency.

- **eight (8)** core units of competency
- **eighteen (18)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **eight (8)** units from this list.

Unit code	Unit title	Prerequisites
BSBDES401A	Generate design solutions	
LMFFDT4007A	Establish design brief	
LMFFDT4012A	Produce ideation drawings	
LMFFDT4014A	Research and select furniture materials and technology	
LMFFDT4015A	Research furniture styles and movements	
LMFFDT5004A	Develop self as a furniture designer	
LMFFDT5013A	Evaluate furniture design proposals and concepts	
MSAENV272B	Participate in environmentally sustainable work	

Unit code	Unit title	Prerequisites
	practices	

ELECTIVE UNITS

Select **eighteen (18)** units from Groups A, B, C and D as specified below.

Group A

Select **one (1)** unit from Group A

Unit code	Unit title	Prerequisites
Stream 1: Fine Furniture Making		
LMFFDT4006A	Establish and maintain a safe furniture making work environment	
Stream 2: Furniture Design		
LMFFDT4008A	Determine occupational health and safety implications of designs	

Group B

Select a minimum of **four (4)** units from Group B, including at least **two (2)** units coded LMF*****

Unit code	Unit title	Prerequisites
BSBDES502A	Establish, negotiate and refine a design brief	
BSBMKG501B	Evaluate marketing opportunities	
CUFANM303A	Create digital 3D models	

Unit code	Unit title	Prerequisites
LMFDN5001B	Generate and transfer complex computer-aided drawings and specifications	
LMFDN5006A	Manage furniture design	
LMFFDT5001A	Apply ergonomics, anthropometrics and proxemic considerations to a product	
LMFFDT5002A	Apply resources sustainably	
LMFFDT5003A	Assess and resolve technical integrity of a design	
LMFFDT5005A	Construct custom furniture using advanced techniques	
LMFFDT5007A	Design a batch or limited production item of furniture	
LMFFDT5008A	Design a furniture product using high volume technology services (HVTS) in production	
LMFFDT5009A	Design a one-off item of furniture	
LMFFDT5010A	Research and recommend alternative manufacturing processes	
LMFFDT5011A	Research and recommend machine technology	
LMFFT5001B	Evaluate and select production materials and equipment for furniture production	
LMFFT5004B	Develop and document procedures and	

Unit code	Unit title	Prerequisites
	specifications	
LMFFT5011B	Develop, trial and evaluate prototypes	
LMFFT5012B	Determine production feasibility of designs	
MSACMT230A	Apply cost factors to work practices	
MSACMT450A	Undertake process capability improvements	MSACMT452A
MSACMT452A	Apply statistics to processes in manufacturing	
MSACMT631A	Undertake value analysis of product costs in terms of customer requirements	MSACMT230A

Group C

Select a minimum of **eight (8)** units from Group C **OR** Group D. A minimum of **five (5)** units in each group must be units coded LMF*****

Unit code	Unit title	Prerequisites
Stream 1: Fine Furniture Making		
BSBDES301A	Explore the use of colour	
BSBPMG510A	Manage projects	
BSBSMB403A	Market the small business	
BSBSMB404A	Undertake small business planning	
CUFDIG303A	Produce and prepare photo images	

Unit code	Unit title	Prerequisites
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
CUVCRS03B	Produce computer-aided drawings	
CUVCRS04B	Produce technical drawings	
LMFFDT4001A	Apply finishing techniques to custom furniture	
LMFFDT4002A	Assemble custom furniture	
LMFFDT4005A	Construct and evaluate furniture prototypes and samples	
LMFFDT4009A	Prepare and present furniture design information	
LMFFDT4010A	Produce and evaluate developmental furniture models to scale	
LMFFDT4011A	Set up, operate and maintain basic static woodworking machines	
LMFFDT4015A	Research furniture styles and movements	
LMFFDT4016A	Select, use and	

Unit code	Unit title	Prerequisites
	maintain hand tools for the creation of custom furniture	
LMFFDT4017A	Set up and operate a wood turning lathe to produce off-centre work	
LMFFDT4018A	Produce templates and jigs for custom made furniture	
LMFFM4005A	Hand carve wood to custom design	
LMFFM4006A	Construct joints for custom furniture	
LMFFM4007A	Produce curved and shaped components for custom furniture	
LMFFM4008A	Produce timber veneered components for custom furniture	
LMFFT4010B	Identify and calculate production costs	
LMFFT4011A	Purchase materials and consumables for furniture production	

Group D

Unit code	Unit title	Prerequisites
Stream 2: Furniture design		
BSBCRT401A	Articulate, present and debate ideas	

Unit code	Unit title	Prerequisites
BSBCRT402A	Collaborate in a creative process	
BSBCRT403A	Explore the history and social impact of creativity	
BSBCRT501A	Originate and develop concepts	
BSBDES301A	Explore the use of colour	
BSBDES303A	Explore and apply the creative design process to 3D forms	
BSBDES305A	Source and apply information on the history and theory of design	
BSBDES403A	Develop and extend design skills and practice	
BSBPMG510A	Manage projects	
BSBSMB403A	Market the small business	
BSBSMB404A	Undertake small business planning	
BSBSMB407A	Manage a small team	
CUFDIG303A	Produce and prepare photo images	
CUFDIG304A	Create visual design components	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
CUVCRS03B	Produce computer-aided drawings	
CUVCRS04B	Produce technical drawings	

Unit code	Unit title	Prerequisites
LMFFDT4003A	Assess and record the lifecycle of a product	
LMFFDT4004A	Assess environmental impact of a design	
LMFFDT4005A	Construct and evaluate furniture prototypes and samples	
LMFFDT4009A	Prepare and present furniture design information	
LMFFDT4013A	Research and select furniture finishes	
LMFFT4010B	Identify and calculate production costs	
MEM15001B	Perform basic statistical quality control	
MEM16006A	Organise and communicate information	
MEM16007A	Work with others in a manufacturing, engineering or related environment	
MEM16008A	Interact with computing technology	
MEM16013A	Operate in a self directed team	MEM16007A
MEM30001A	Use computer aided drafting systems to produce basic engineering drawings	MEM16006A MEM16008A
MEM30004A	Use CAD to create and display 3D models	MEM16008A MEM30001A
MEM30024A	Participate in quality assurance techniques	MEM15001B
MSACMT230A	Apply cost factors to work	

Unit code	Unit title	Prerequisites
	practices	
MSACMT430A	Improve cost factors in work practices	
MSAENV472B	Implement and monitor environmentally sustainable work practices	

Group E

Up to **five (5)** relevant units can be chosen from other units not already selected from Groups B, C and D, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Certificate IV level (maximum 2 units), Diploma level or Advanced Diploma level (maximum 2 units).

Units selected from other Training Packages and accredited courses via Group E must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF60102 Advanced Diploma of Furnishing Management

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to perform management functions in a range of in furnishing production, planning and quality control environments.

Job roles/employment outcomes

The LMF60102 Advanced Diploma of Furnishing Management reflects vocational outcomes for those performing furnishing management job roles using a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specified functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving outcomes is involved.

Application

This qualification is typically used to develop a breadth, depth and complexity of skills and knowledge in furnishing management involving analysis, diagnosis, design, planning, execution and evaluation across a broad range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.

Pathways into the qualification

Entry into this qualification should be through completion of the LMF50202 Diploma of Furnishing Technology or formal recognition of equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include relevant higher education programs in business, commerce or manufacturing technology and relevant management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • use information and communication technology to gather and interpret data related to the development of furnishing products and designs • research process and products using a range of information sources • develop design or production specifications in consultation with client or design team • make calculations to determine production specifications • communicate with clients, design team and commercial producers • complete documentation and maintain records • negotiate design and production with clients
Teamwork	<ul style="list-style-type: none"> • exchange information with clients and design team • provide support to production team • gather and provide feedback on design and production processes
Problem-solving	<ul style="list-style-type: none"> • analyse suitability of designs for commercial product development • analyse and apply design influences to determine trends and opportunities • create commercial furniture designs • evaluate information to guide commercial development and processes • make modifications to designs or techniques based on client requirements or resource issues • identify and address production problems
Initiative and enterprise	<ul style="list-style-type: none"> • develop new commercial textile designs • identify design opportunities • sell ideas to clients • determine promotional opportunities for work
Planning and organising	<ul style="list-style-type: none"> • plan processes to achieve desired outcomes within agreed time-frames • ensure work station and equipment are set up so that work requirements are met • manage design and production processes • produce commercial furniture design samples • develop and implement contingency plans when responding to incidents and problems
Self-management	<ul style="list-style-type: none"> • monitor own work against workplace, industry and quality

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	standards <ul style="list-style-type: none"> • adjust processes or techniques as required according to variations in requirements • implement and apply OHS practices in the workplace
Learning	<ul style="list-style-type: none"> • assess own skill requirements and seek further development if required • develop or adjust processes based on new information • maintain knowledge and skill in processes and industry
Technology	<ul style="list-style-type: none"> • use information and communication technology to acquire, manage and share data • use computer-aided design technology in the development of furniture designs • use furniture production machinery and equipment in the production of samples

Packaging Rules**Packaging Rules**

To be awarded the LMF60102 Advanced Diploma of Furnishing Management, competency must be achieved in **eight (8)** units of competency.

- **one (1)** core unit of competency
- **seven (7)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete the following unit

Unit code	Unit title	Prerequisites
LMFFT6001B	Research and evaluate materials, products and processes	

ELECTIVE UNITS

Select **seven (7)** units from Groups A and B as specified below.

Group A

Select a minimum of **four (4)** units from Group A

Unit code	Unit title	Prerequisites
BSBMGT616A	Develop and implement strategic plans	
BSBMGT617A	Develop and implement a business plan	
BSBMGT605B	Provide leadership across the organisation	
BSBINM601A	Manage knowledge and information	
BSBMGT608B	Manage innovation and continuous improvement	
BSBR501A	Manage risk	
MSAENV672B	Develop workplace policy and procedures for sustainability	

Group B

Up to **three (3)** relevant units may be chosen from furnishing technology specialist units available in the Diploma of Furnishing Technology not already achieved, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Advanced Diploma level.

Units selected from other Training Packages and accredited courses via Group B must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF60208 Advanced Diploma of Interior Design

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required for creative and technical solutions for built interior environments. Interior design at this level covers the planning and detailing of complex residential, commercial and institutional design projects with an emphasis on space creation, space planning and the factors that affect peoples' responses to living and working environments. It may also include specialist design areas such as facilities for people with disabilities, institutional design, exhibitions, the aged, and adaptive re-use projects.

Job roles/employment outcomes

The LMF60208 Advanced Diploma of Interior Design reflects vocational outcomes including interior designers for interior design and architectural practices, self employed design consultants, design project administrators and design managers. Work involves using a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specified functions. Accountability and responsibility for self and others in achieving outcomes is involved.

Application

This qualification is typically used to develop a breadth, depth and complexity of skills and knowledge for interior design processes which follow a systematic and coordinated methodology, including research, analysis and integration of knowledge into the creative process, and knowledge of the principles of interior design and building technologies. Designs must meet the purpose, efficiency, comfort, safety and aesthetic requirements of interior spaces, adhere to regulatory requirements and encourage the principles of environmental sustainability.

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed the LMF50408 Diploma of Interior Design and Decoration.

Pathways from the qualification

Further training pathways from this qualification may include relevant higher education programs and management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • communicate effectively and efficiently with colleagues, suppliers, clients and others involved in the design project, using a variety of communication methods • interpret and negotiate design briefs • analyse technical and conceptual information • conduct research to inform project outcomes • communicate and sell design ideas and concepts using a variety of presentation methods • produce detailed technical drawings to industry standard • complete documentation relating to the project • undertake measurements and calculations and document in specification schedule • interpret client needs and documentation including client briefs, quotations, fee schedules, proposal documents, product/finishes schedules and architectural drawings • interact with and negotiate with industry representatives
Teamwork	<ul style="list-style-type: none"> • provide leadership in developing design concepts and ideas for the design team • demonstrate and encourage others in working cooperatively with people of different ages, gender, race or religion • undertake appropriate and effective communication with others in the design process • provide others with constructive and meaningful feedback • lead a multi-disciplined project team to meet time frames, budgets and expectations
Problem-solving	<ul style="list-style-type: none"> • interpret and resolve design briefs which meet client needs and are achieved within the parameters of the project • analyse and apply research findings into design solutions • develop and resolve ideas for a range of design challenges • recognise and address quality issues and problems relating to design and business activities • solve problems in relation to the realisation of desired design outcomes that are environmentally, economically and socially sustainable • use expertise to provide problem solving advice • identify and address unexpected problems, hazards, time delays and structural implications as they arise • evaluate design solutions for best fit • evaluate information to guide design development and processes

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • assess commercial viability of designs
Initiative and enterprise	<ul style="list-style-type: none"> • anticipate and address problems, hazards, time delays and structural implications • initiate a design direction and options for the project • provide leadership in design and manage project changes • identify and address non-conformances • identify effective ways to achieve design outcomes • rectify problems promptly and appropriately • develop original design concepts • apply continual improvement processes to design service
Planning and organising	<ul style="list-style-type: none"> • develop project schedules on time, to agreed industry standards and in coordination with other project timelines • make, confirm and alter client and supplier appointments according to workplace schedules and personnel activities • prepare business correspondence, purchase orders and invoices in a timely manner • collect, analyse and organise client information to arrange projects professionally and on time • prepare project proposals with all information to enable clients to make efficient and informed choices • arrange and oversee trades people in the undertaking of work according to project requirements • plan work requirements for self and others as required • monitor quality outcomes
Self-management	<ul style="list-style-type: none"> • evaluate and monitor work outcomes against work schedule and quality standards • manage own time and work load priorities effectively • monitor information in work area • keep the work area clean and tidy at all times • locate, interpret and apply relevant information • provide leadership for project work
Learning	<ul style="list-style-type: none"> • conduct ongoing professional research in design knowledge • maintain professional skills and industry contacts • manage own learning and professional development activities • accept and respond to feedback, and use feedback as an opportunity to improve professional knowledge and skills • identify shortfalls in knowledge and undertake research or training to fill gaps • assess competencies in meeting job requirements • ask questions to expand own knowledge • experiment with design ideas and review outcomes

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Technology	<ul style="list-style-type: none"> • observe OHS principles when using technology • research technological developments relevant to design work • use computers and appropriate software to develop and realise a design solution • use technology to organise and maintain client and business data • work with technology safely and according to workplace standards
------------	--

Packaging Rules**Packaging Rules**

To be awarded the LMF60208 Advanced Diploma of Interior Design, competency must be achieved in **thirty-nine (39)** units of competency.

- **fourteen (14)** core units of competency
- **twenty-five (25)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **fourteen (14)** units from this list.

Unit code	Unit title	Prerequisites
BSBDES302A	Explore and apply the creative design process to 2D forms	
BSBDES303A	Explore and apply the creative design process to 3D forms	
BSBDES502A	Establish, negotiate and refine a design brief	

Unit code	Unit title	Prerequisites
BSBDES601A	Manage design realisation	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
CUVCRS04B	Produce technical drawings	
LMFID4001A	Research, analyse and apply colour for interior spaces	
LMFID4011A	Determine occupational health and safety implications of interior effects	
LMFID5001A	Design residential interiors	
LMFID5003A	Evaluate site for interior design brief	
LMFID5013A	Design for small to medium scale commercial or institutional interiors	
LMFID6001A	Resolve complex spatial problems through modelling	
LMFID6002A	Apply 3-D visualisation techniques to represent interior designs	

Unit code	Unit title	Prerequisites
MSAENV272B	Participate in environmentally sustainable work practices	

ELECTIVE UNITS

Select **twenty-five (25)** units from Groups A, B, C and D as specified below.

Group A

Select a minimum of **five (5)** units from Group A.

Unit code	Unit title	Prerequisites
BSBDES602A	Research global design trends	
CUFANM302A	Create 3D animations	
CUFANM502A	Create digital 3D environments	
LMFFDT6003A	Evaluate and participate in design industry networks	
LMFFDT6004A	Investigate legal requirements for design	
LMFID5002A	Develop a decoration proposal for a complex site	
LMFID6003A	Design for large scale commercial or institutional interiors	

Unit code	Unit title	Prerequisites
LMFID6004A	Design interiors for hospitality environments	
LMFID6005A	Design for retail interiors	
LMFID6006A	Design for conservation and restoration projects	
LMFID6007A	Select and instruct contractors and consultants	
LMFID6008A	Evaluate design project outcomes	
LMFID6009A	Produce digital presentations for commercial projects	LMFID5014A

Group B

Select a minimum of **six (6)** units from Group B.

Unit code	Unit title	Prerequisites
CPCBC4037A	Prepare drawing for heritage works	
BSBCRT501A	Originate and develop concepts	
BSBDES304A	Source and apply design industry knowledge	
BSBPMG510A	Manage projects	
CUFANM303A	Create digital 3D models	

Unit code	Unit title	Prerequisites
CUFDIG507A	Design digital simulations	
LMFFDT5002A	Apply resources sustainably	
LMFFDT5004A	Develop self as a furniture designer	
LMFID5004A	Specify structural elements, systems and services for interior spaces	LMFID5003A
LMFID5005A	Explore and apply creative design methodology to interior space	
LMFID5006A	Design interior lighting	LMFID4008A
LMFID5007A	Decorate for events	
LMFID5008A	Design for people with disabilities and the elderly	
LMFID5009A	Research and recommend colour and applied finishes	LMFID4001A
LMFID5010A	Provide interior styling service	
LMFID5011A	Specify soft furnishings for complete interior solution	
LMFID5012A	Research and recommend	

Unit code	Unit title	Prerequisites
	artwork	
LMFID5013A	Design for small to medium scale commercial or institutional interiors	
LMFID5014A	Use CAD applications to complete models and documentation for interior design projects	
LMFID5015A	Decorate interiors for restoration projects	
SIRRMER009A	Produce perspective drawings, plans and elevations	
SIRRMER020A	Create and implement exhibition space	

Group C

Select a minimum of **seven (7)** units from Group C.

Unit code	Unit title	Prerequisites
BSBCRT401A	Articulate, present and debate ideas	
BSBCRT402A	Collaborate in a creative process	
BSBDES301A	Explore the use of colour	

Unit code	Unit title	Prerequisites
BSBDES305A	Source and apply information on the history and theory of design	
BSBDES401A	Generate design solutions	
BSBDES403A	Develop and extend design skills and practice	
BSBMGT402A	Implement operational plan	
BSBSMB405A	Monitor and manage small business operations	
BSBWOR204A	Use business technology	
CUFDIG303A	Produce and prepare photo images	
CUFDIG304A	Create visual design components	
CUVCOR08B	Produce drawings to represent and communicate the concept	
CUVCRS03B	Produce computer-aided drawings	
CUVDSP11B	Research and apply techniques for illustrative work	
CUVDSP15B	Research and apply techniques for application to	

Unit code	Unit title	Prerequisites
	spatial design	
LMFFDT4012A	Produce ideation drawings	
LMFID3002A	Source and specify decoration products	
LMFID4003A	Prepare a materials board for client presentation	
LMFID4004A	Research and recommend furniture and accessories	
LMFID4005A	Research and recommend soft furnishings for interiors	
LMFID4006A	Research and recommend hard materials and finishes for interiors	
LMFID4007A	Identify materials, construction techniques and methods used in building interiors	
LMFID4008A	Assess interior light and recommend light fittings	
LMFID4009A	Research architectural styles and movements	
LMFID4010A	Research interior decoration and	

Unit code	Unit title	Prerequisites
	design influences	
MEM16006A	Organise and communicate information	
MSAENV672B	Develop workplace policy and procedures for sustainability	

Group D

Up to **seven (7)** relevant units can be chosen from other units not already selected from Groups A, B and C, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Diploma level (maximum 2 units) or Advanced Diploma level (maximum 3 units).

Units selected from other Training Packages and accredited courses via Group D must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMF60308 Advanced Diploma of Furniture Design and Technology

Modification History

Not applicable.

Description

This qualification describes the skills and knowledge required to design furniture and translate the design into a finished furniture product for either custom or volume production.

Job roles/employment outcomes

LMF60308 Advanced Diploma of Furniture Design and Technology is streamed to reflect two primary occupational outcomes in the areas of fine furniture making - with a focus on skills required to design and produce individual fine furniture for display or custom production or furniture design - with a focus on skills required to design furniture for volume production. Work involves using a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specified functions. Accountability and responsibility for self and others in achieving outcomes is involved.

Application

This qualification is typically used to develop a breadth, depth and complexity of skills and knowledge in furniture design and technology for:

1. Fine furniture making - with a focus on skills required to design and produce individual fine furniture for display or custom production.
2. Furniture design - with a focus on skills required to design furniture for volume production

Pathways into the qualification

This qualification may be accessed by direct entry. Credit can be granted towards this qualification by those who have completed LMF50508 Diploma of Furniture Design and Technology or achieved equivalent industry experience.

Pathways from the qualification

Further training pathways from this qualification may include relevant higher education programs and management or competitive manufacturing qualifications.

Licensing considerations

There are no specific licences that relate to this qualification. However, depending on the jurisdiction, licensing or regulatory requirements may apply to the use of some units in this qualification. Local regulations should be checked for details.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • communicate effectively and efficiently with colleagues, suppliers, clients and others involved in the design project, using a variety of communication methods • interpret and negotiate design briefs • analyse technical and conceptual information • conduct research to inform project outcomes • communicate and sell design ideas and concepts using a variety of presentation methods • produce detailed technical drawings to industry standard • complete documentation relating to the project • undertake measurements and calculations and document in specification schedule • interpret client needs and documentation including client briefs, quotations, fee schedules, proposal documents, product finishes, schedules and drawings • interact with and negotiate with industry representatives
Teamwork	<ul style="list-style-type: none"> • provide leadership in developing and realizing design concepts • demonstrate and encourage others in working cooperatively with people of different ages, gender, race or religion • undertake appropriate and effective communication with others in the design process • provide others with constructive and meaningful feedback
Problem-solving	<ul style="list-style-type: none"> • interpret and resolve design briefs which meet client needs and are achieved within the parameters of the project • analyse and apply research findings into design solutions • develop and resolve ideas for a range of design challenges • recognise and address quality issues and problems relating to design and business activities • solve problems in relation to the realisation of desired design outcomes that are environmentally, economically and socially sustainable • use expertise to provide problem solving advice • identify and address unexpected problems, hazards, time delays and structural implications as they arise • evaluate design solutions for best fit • evaluate information to guide design development and processes • assess commercial viability of designs
Initiative and enterprise	<ul style="list-style-type: none"> • anticipate and address problems, hazards, time delays and structural implications

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
	<ul style="list-style-type: none"> • initiate a design direction and options for the project • provide leadership in design and manage project changes • identify and address non-conformances • identify effective ways to achieve design outcomes • rectify problems promptly and appropriately • develop original design concepts • apply continual improvement processes to design service
Planning and organising	<ul style="list-style-type: none"> • develop project schedules on time, to agreed industry standards and in coordination with other project timelines • make, confirm and alter client and supplier appointments according to workplace schedules and personnel activities • collect, analyse and organise client information to arrange projects professionally and on time • prepare project proposals with all information to enable clients to make efficient and informed choices • plan work requirements for self and others as required • monitor quality outcomes
Self-management	<ul style="list-style-type: none"> • evaluate and monitor work outcomes against work schedule and quality standards • manage own time and work load priorities effectively • monitor information in work area • keep the work area clean and tidy at all times • locate, interpret and apply relevant information • provide leadership for project work
Learning	<ul style="list-style-type: none"> • conduct ongoing professional research in design and technology knowledge • maintain professional skills and industry contacts • manage own learning and professional development activities • accept and respond to feedback, and use feedback as an opportunity to improve professional knowledge and skills • identify shortfalls in knowledge and undertake research or training to fill gaps • assess competencies in meeting job requirements • ask questions to expand own knowledge • experiment with design and technology ideas and review outcomes
Technology	<ul style="list-style-type: none"> • observe OHS principles when using technology • research technological developments relevant to design work • use computers and appropriate software to develop and realise a design solution • use technology to organise and maintain client and business

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	data <ul style="list-style-type: none"> work with technology safely and according to workplace standards
--	---

Packaging Rules**Packaging Rules**

To be awarded the LMF60308 Advanced Diploma of Furniture Design and Technology, competency must be achieved in **thirty-six (36)** units of competency.

- nine (9)** core units of competency
- twenty-seven (27)** elective units of competency.

Note: Where prerequisite units apply, these have been listed, and must be considered in the total number of units.

CORE UNITS

Complete all **nine (9)** units from this list.

Unit code	Unit title	Prerequisites
BSBDES401A	Generate design solutions	
BSBDES601A	Manage design realisation	
LMFFDT4007A	Establish design brief	
LMFFDT4012A	Produce ideation drawings	
LMFFDT4014A	Research and select furniture materials and technology	
LMFFDT4015A	Research furniture styles and movements	

Unit code	Unit title	Prerequisites
LMFFDT5004A	Develop self as a furniture designer	
LMFFDT5013A	Evaluate furniture design proposals and concepts	
MSAENV272B	Participate in environmentally sustainable work practices	

ELECTIVE UNITS

Select **twenty-seven (27)** units from Groups A, B, C, D or E and F as specified below.

Group A

Select **one (1)** unit from Group A.

Unit code	Unit title	Prerequisites
LMFFDT4006A	Establish and maintain a safe furniture making work environment	
LMFFDT4008A	Determine occupational health and safety implications of designs	

Group B

Select a minimum of **six (6)** units from Group B including a minimum of **two (2)** units coded LMF*****.

Unit code	Unit title	Prerequisites
BSBADV512A	Create an advertising brief	

Unit code	Unit title	Prerequisites
BSBCRT601A	Research and apply concepts and theories of creativity	
BSBDES602A	Research global design trends	
BSBMGT605B	Provide leadership across the organisation	
BSBMGT616A	Contribute to the development and implementation of strategic plans	
BSBMGT617A	Develop and implement a business plan	
BSBMKG605B	Evaluate international marketing opportunities	
BSBMKG608A	Develop organisational marketing objectives	
BSBMKG609A	Develop a marketing plan	
BSBR501A	Manage risk	
LMFFDT6001A	Assess economic impact of a design	
LMFFDT6002A	Design for mass production	
LMFFDT6003A	Evaluate and participate in design industry networks	

Unit code	Unit title	Prerequisites
LMFFDT6004A	Investigate legal requirements for designs	
LMFFDT6005A	Work collaboratively on a design project	
LMFFDT6001B	Research and evaluate products, materials and processes	
MSACMC614A	Develop a communications strategy to support production	
MSACMS601A	Analyse and map a value chain	MSACMT631A
MSACMS602A	Manage a value chain	MSACMT601A MSACMT631A
MSACMS603A	Develop manufacturing related business plans	
MSACMT630A	Optimise cost of product	MSACMT631A
MSACMT631A	Undertake value analysis of product costs in terms of customer requirements	MSACMT230A
MSACMT650A	Determine and improve process capability	MSACMT452A
MSACMT661A	Determine and establish information collection	

Unit code	Unit title	Prerequisites
	requirements and processes	
MSACMT675A	Facilitate the development of a new product	MSACMT452A
MSAENV672B	Develop workplace policy and procedures for sustainability	
PSPPROC602A	Direct the management of contracts	

Group C

Select a minimum of **four (4)** units from Group C including a minimum of **two (2)** units coded LMF*****.

Unit code	Unit title	Prerequisites
BSBDES502A	Establish, negotiate and refine a design brief	
BSBMKG501A	Evaluate marketing opportunities	
CUFANM303A	Create digital 3D models	
LMFDN5001B	Generate and transfer complex computer-aided drawings and specifications	
LMFDN5006B	Manage furniture design	
LMFFDT5001A	Apply ergonomics, anthropometrics	

Unit code	Unit title	Prerequisites
	and proxemic considerations to a product	
LMFFDT5002A	Apply resources sustainably	
LMFFDT5003A	Assess and resolve technical integrity of a design	
LMFFDT5005A	Construct custom furniture using advanced techniques	
LMFFDT5007A	Design a batch or limited production item of furniture	
LMFFDT5008A	Design a furniture product using high volume technology services (HVTs) in production	
LMFFDT5009A	Design a one-off item of furniture	
LMFFDT5010A	Research and recommend alternative manufacturing processes	
LMFFDT5011A	Research and recommend machine technology	
LMFFT5001B	Evaluate and select production materials and equipment for furniture production	

Unit code	Unit title	Prerequisites
LMFFFT5004B	Develop and document procedures and specifications	
LMFFFT5011B	Develop, trial and evaluate prototypes	
LMFFFT5012B	Determine production feasibility of designs	
MSACMT450A	Undertake process capability improvements	MSACMT452A
MSACMT452A	Apply statistics to processes in manufacturing	
MSAENV672B	Develop workplace policy and procedures for sustainability	

Group D

Select a minimum of **nine (9)** units from Group D including a minimum of **five (5)** units coded LMF***** if *LMFFDT4006A Establish and maintain a safe furniture making work environment* is selected from Group A.

OR

Select a minimum of **nine (9)** units from Group E including a minimum of **five (5)** units coded LMF***** if *LMFFDT4008A Determine occupational health and safety implications of designs* is selected from Group A.

Unit code	Unit title	Prerequisites
Stream 1: Fine furniture making		
BSBDES301A	Explore the use of colour	

Unit code	Unit title	Prerequisites
BSBPMG510A	Manage projects	
BSBSMB403A	Market the small business	
BSBSMB404A	Undertake small business planning	
CUFDIG303A	Produce and prepare photo images	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
CUVCRS03B	Produce computer-aided drawings	
CUVCRS04B	Produce technical drawings	
LMFFDT4001A	Apply finishing techniques to custom furniture	
LMFFDT4002A	Assemble custom furniture	
LMFFDT4005A	Construct and evaluate furniture prototypes and samples	
LMFFDT4009A	Prepare and present furniture design information	
LMFFDT4010A	Produce and evaluate developmental furniture models	

Unit code	Unit title	Prerequisites
	to scale	
LMFFDT4011A	Set up, operate and maintain basic static woodworking machines	
LMFFDT4016A	Select, use and maintain hand tools for the creation of custom furniture	
LMFFDT4017A	Set up and operate a wood turning lathe to produce off-centre work	
LMFFDT4018A	Produce templates and jigs for custom made furniture	
LMFFM4005A	Hand carve wood to custom design	
LMFFM4006A	Construct joints for custom furniture	
LMFFM4007A	Produce curved and shaped components for custom furniture	
LMFFM4008A	Produce timber veneered components for custom furniture	
LMFFT4010B	Identify and calculate production costs	
LMFFT4011B	Purchase materials and	

Unit code	Unit title	Prerequisites
	consumables for furniture production	

Group E

Unit code	Unit title	Prerequisites
Stream 2: Furniture design		
BSBCRT401A	Articulate, present and debate ideas	
BSBCRT402A	Collaborate in a creative process	
BSBCRT403A	Explore the history and social impact of creativity	
BSBCRT501A	Originate and develop concepts	
BSBDES301A	Explore the use of colour	
BSBDES303A	Explore and apply the creative design process to 3-dimensional forms	
BSBDES305A	Source and apply information on the history and theory of design	
BSBDES403A	Develop and extend design skills and practice	
BSBPMG510A	Manage projects	
BSBSMB403A	Market the small	

Unit code	Unit title	Prerequisites
	business	
BSBSMB404A	Undertake small business planning	
BSBSMB407A	Manage a small team	
CUFDIG303A	Produce and prepare photo images	
CUFDIG304A	Create visual design components	
CUVCOR09B	Select and apply drawing techniques and media to represent and communicate the concept	
CUVCRS03B	Produce computer-aided drawings	
CUVCRS04B	Produce technical drawings	
LMFFDT4003A	Assess and record the lifecycle of a product	
LMFFDT4004A	Assess environmental impact of a design	
LMFFDT4005A	Construct and evaluate furniture prototypes and samples	
LMFFDT4009A	Prepare and present furniture design information	
LMFFDT4013A	Research and	

Unit code	Unit title	Prerequisites
	select furniture finishes	
LMFFT4010B	Identify and calculate production costs	
MEM15001B	Perform basic statistical quality control	
MEM16006A	Organise and communicate information	
MEM16007A	Work with others in a manufacturing, engineering or related environment	
MEM16008A	Interact with computing technology	
MEM16013A	Operate in a self directed team	MEM16007A
MEM30001A	Use computer aided drafting systems to produce basic engineering drawings	MEM16006A MEM16008A
MEM30004A	Use CAD to create and display 3D models	MEM16008A MEM30001A
MEM30024A	Participate in quality assurance techniques	MEM15001B
MSACMT430A	Improve cost factors in work practices	
MSACMT230A	Apply cost factors	

Unit code	Unit title	Prerequisites
	to work practices	

Group F

Up to **seven (7)** relevant units can be chosen from other units not already selected from Groups A, B, C and D, or units available in this Training Package, other endorsed Training Packages and accredited courses. Those units must be aligned at Diploma level (maximum 2 units) or Advanced Diploma level (maximum 5 units).

Units selected from other Training Packages and accredited courses via Group F must be relevant to the qualification outcome and not duplicate units available within this qualification.

If Competitive Manufacturing units are chosen (identified as MSACM in the code), these should only be selected on the basis of work requirements.

LMFAH4001A Recommend security technology, hardware and services

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the application of architectural hardware product and service knowledge to provide advice to customers/clients and other sales staff with regard to design, technical features and uses of architectural hardware products, ancillary products, prices and warranties.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to architectural hardware specifiers who provide advice to clients on product selection, price, services and warranties in regards to architectural hardware. The unit applies to clients requiring architectural hardware schedules and products for construction and renovation projects.</p> <p>This unit requires the ability to source relevant information, determine client requirements and use appropriate techniques to accurately identify architectural hardware requirements to meet client needs.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research architectural hardware product range	1.1. Job requirements are correctly identified according to relevant product information 1.2. Suitable architectural hardware products are identified by accessing relevant sources of information 1.3. Hardware components are identified to suit client specifications and applicable legislation, codes and national standards 1.4. Available product options and features are evaluated for suitability and value 1.5. Operation of architectural hardware products and equipment is safely and accurately demonstrated according to organisational requirements 1.6. Knowledge of measurement systems used in architectural hardware product range is demonstrated
2. Recommend door and window hardware products	2.1. Customer/client needs are accurately identified 2.2. Detailed manufacturer's product specifications are provided, when applicable, and explained to customer/client to assist buying decisions according to legislative requirements 2.3. Features and benefits of products are demonstrated to customer/client using appropriate interpersonal techniques
3. Identify hardware quantities	3.1. Quantities of architectural hardware products required are accurately determined from customer/client specifications 3.2. Measuring tools are accurately used to determine imperial or metric measures relevant to job requirements 3.3. Customer/client is provided with accurate quotation for quantities estimated
4. Advise on hardware product warranties	4.1. Comparisons between architectural hardware manufacturer's warranty terms are clearly explained to customer 4.2. Individual product warranty terms and conditions are confirmed from relevant sources of information and accurately conveyed to customer/client 4.3. Customer/client is provided with written information regarding individual product warranty terms and conditions, especially extended or promotional

ELEMENT	PERFORMANCE CRITERIA
	warranties, according to organisational requirements
5. Negotiate price and payment options	<p>5.1. Store recommended retail pricing for various brand options is accurately conveyed to customer/client according applicable legislation, codes and national standards</p> <p>5.2. Individual product prices are negotiated, where necessary, according to organisational requirements to achieve sales</p> <p>5.3. Store payment options are accurately conveyed to customer/client and a preferred option negotiated following organisational requirements</p>
6. Advise on and arrange product services and repairs	<p>6.1. Customer/client is questioned to determine nature of problem</p> <p>6.2. Customer/client needs are diagnosed by accessing manufacturer's information</p> <p>6.3. Solutions are offered according to nature of problem, available product information and organisational requirements</p> <p>6.4. Service/repair process is identified and accurately described to customer, as required, according to organisational requirements</p> <p>6.5. Price and timeline for basic service/repairs are identified and quoted to customer where applicable</p> <p>6.6. Customer/client details are identified and accurately transcribed to repair form, according to organisational requirements</p> <p>6.7. Item for repair is labelled and securely stored according to organisational requirements</p> <p>6.8. Customer/client is notified without undue delay on arrival/completion of service/repair</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying architectural hardware needs
- identifying suitable architectural hardware brands, prices and warranty conditions
- reading and interpreting plans, designs and specifications
- applying basic numeracy techniques
- applying safe and efficient work practices
- interpersonal communication skills
- relating to people from different social and cultural backgrounds
- dealing with customer/clients that are difficult or abusive
- dealing with customer/clients that have special needs
- presenting a professional image
- preparing documentation
- entering data using basic keyboarding skills

Required knowledge

Required knowledge includes:

- organisational policies and procedures, in relation to:
 - sales/customer services
 - methods of dealing with special needs/requests of customers
 - customer complaints
 - price negotiation
- available architectural hardware/keying system options and basic requirements for installation
- types and functions of architectural hardware/keying system
- building construction methods and types
- organisational and client confidentiality requirements
- basic problem-solving strategies
- operational principles of information technology
- principles of effective communication
- documentation requirements and processes

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to research and recommend architectural hardware and/or keying requirements, identify quantities, and advise on price, warranty and service and repair options, and include this information as required in the preparation of a brief for a client.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Critical aspects of assessment and evidence include:

- ability to match architectural hardware products to a client brief or specification
- ensuring selected architectural hardware products comply with relevant legislation, codes and standards
- explaining and demonstrating architectural hardware products to clients
- undertaking imperial and metric measurements of job requirements and matching to architectural hardware measuring systems
- estimating quantities of required architectural hardware products
- supplying accurate quotes for architectural hardware products and services
- negotiating prices
- advising on warranties, service and repair options for architectural hardware products and services
- arranging service and repairs.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the

EVIDENCE GUIDE	
	unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with assessing technical security requirements, or other units requiring the exercise of the skills and knowledge covered by this unit.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Job requirements

Job requirements may include:

- instructions from supervisor/management
- work schedules and completion dates
- specific client requirements
- site requirements
- security clearance and access requirements
- reporting and documentation requirements
- budget allocations
- associated legislation which may include Building Code of Australia (BCA) and Australian standards, such as:
 - AS 1428 (Set)-2010 Design for access and mobility set
 - AS 1905.1-2005 Components for the protection of openings in fire-resistant walls - Fire-resistant door sets
 - AS 4145.2-2008 Locksets and hardware for doors and windows - Mechanical locksets for doors and windows in buildings
 - AS 1670.1-2004 Fire detection, warning, control and intercom systems - System design, installation and commissioning - Fire
 - AS 1530.1-1994 Methods for fire tests on building materials, components and structures - Combustibility test for materials

Information

Information may include:

- value or importance of assets
- insurance policy agreements
- special rooms or areas requiring higher level of protection
- current/proposed operating environments
- assets and systems

RANGE STATEMENT	
	<ul style="list-style-type: none"> • activities and functions • existing security systems/equipment • existing management strategies • business and operational plans • incident history
Architectural hardware	<p>Architectural hardware may include:</p> <ul style="list-style-type: none"> • hinges • pivots • door track • locks • handles • door furniture • door closers • exit devices • sequence selectors • cylinders • keying and master keying • bolts • door stops • door seals • kick plates • door protection • sundry hardware • sanitary hardware • automatic operators • access control devices
Relevant sources of information	<p>Relevant sources of information may include:</p> <ul style="list-style-type: none"> • product catalogues • reference manuals • technical specifications • product instructions • drawings and illustrations • technical sales staff
Applicable legislation, codes and national standards	<p>Applicable legislation, codes and national standards may include:</p> <ul style="list-style-type: none"> • relevant commonwealth and state/territory legislation which affect organisational operation, such as: <ul style="list-style-type: none"> • occupational health and safety (OHS) and

RANGE STATEMENT	
	<p>environmental issues</p> <ul style="list-style-type: none"> • equal employment opportunity • industrial relations • anti-discrimination and diversity • licensing arrangements • Australian standards • quality assurance and certification requirements • relevant industry codes of practice • trade practices • award and enterprise agreements • privacy related legislation
Organisational requirements	<p>Organisational requirements may include:</p> <ul style="list-style-type: none"> • legal and organisational operational policies and procedures • operations manuals • induction and training materials • insurance policy agreements • client and organisational confidentiality requirements • organisational goals/objectives/plans/systems/processes • employer and employee rights and responsibilities • own role, responsibility and delegation • quality and continuous improvement processes and standards • client service standards • defined resource parameters • OHS policies/procedures/programs • emergency and evacuation procedures • duty of care, code of conduct, code of ethics, access and equity policy, principles and practice • records and information systems and processes • communication channels • reporting procedures
Customer/client	<p>Customer/client may include:</p> <ul style="list-style-type: none"> • owner

RANGE STATEMENT	
	<ul style="list-style-type: none"> • property/other agent • tenant • building supervisor • manager • project manager • government and legal instruments/agencies
Interpersonal techniques	<p>Interpersonal techniques may include:</p> <ul style="list-style-type: none"> • verbal or non-verbal language • two-way interaction • constructive feedback • active listening • questioning to clarify and confirm understanding • interpreting non-verbal and verbal messages • observation techniques • use of positive, confident and cooperative language • control of tone of voice and body language • use of language and concepts appropriate to cultural differences • use of clear presentations of options and consequences • demonstrating flexibility and willingness to compromise
Measuring tools	<p>Measuring tools may include:</p> <ul style="list-style-type: none"> • tape measures • callipers • vernier • steel rule

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain brief from clients	<p>1.1. Job requirements are reviewed and clarified with appropriate persons in accordance with organisational requirements</p> <p>1.2. Discussions with customer/client are conducted to establish and clarify scope of work</p> <p>1.3. Effective interpersonal techniques are applied when interacting with clients</p> <p>1.4. Specific site requirements are identified and details are correctly documented</p> <p>1.5. Architectural hardware requirements are discussed and applicable legislation, codes and national standards are clarified and agreed upon</p> <p>1.6. Brief documents and architectural plans are arranged in accordance with organisational requirements or company policies</p>
2. Gather, interpret and review information for preparation of hardware schedules	<p>2.1. Site restrictions, regulations and requirements are identified and complied with in accordance with applicable legislation, codes and national standards, and organisational requirements</p> <p>2.2. Information is gathered from identified sources and is relevant to assignment requirements in accordance with applicable legislation, codes and national standards, client and organisational requirements</p> <p>2.3. An assessment is carried out to identify door and frame types and locations to facilitate the accurate determination of architectural hardware requirements</p> <p>2.4. Clients activities and existing architectural hardware arrangements are reviewed to ensure uniformity throughout project</p> <p>2.5. Inconsistency and environmental factors affecting the architectural hardware of the site are identified and assessed in accordance with organisational policies and procedures</p>
3. Produce architectural door hardware schedules	<p>3.1. Information is recorded and documented in accordance with computer program and/or organisational template requirements</p> <p>3.2. Architectural hardware is integrated to reflect building security and electronic requirements</p> <p>3.3. An architectural hardware schedule is prepared in accordance with industry and organisational standards of style, format and accuracy</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Recommendations for architectural hardware and alternative options are made in accordance with organisational requirements</p> <p>3.5. Documentation is processed in accordance with applicable legislation, codes and national standards, assignment and organisational requirements</p> <p>3.6. A comprehensive assessment of client architectural hardware requirements is completed within designated timeframes and presented for review to appropriate person</p>
4. Prepare and review keying schedules	<p>4.1. Principles of master keying are applied in accordance with industry practice and organisational requirements</p> <p>4.2. Keying matrix is developed to client requirements, allowing for future system expansion and mechanical capabilities of system</p> <p>4.3. Client keying requirements are confirmed and clarified according to organisational procedures</p> <p>4.4. Appropriate levels of security/access are reviewed with respect to clients assets, activities and existing security arrangements</p> <p>4.5. Information is recorded and documented in accordance with computer program and/or organisational template requirements</p> <p>4.6. Clients requirements are matched to the mechanical possibilities and limitations of master key systems</p> <p>4.7. Options are identified and client is advised on options and alternatives</p> <p>4.8. Sources of assistance in assessing requirements for key systems and master key systems are identified and assistance is sought from appropriate person in accordance with organisational procedures</p>
5. Finalise documentation for submission to client	<p>5.1. Final architectural hardware and/or keying requirements are reviewed and confirmed with client in accordance with organisational requirements</p> <p>5.2. Documentation is accurately prepared and processed and stored in accordance with client, legislative and organisational requirements</p> <p>5.3. Architectural hardware and keying schedules and other documentation are prepared according to organisational procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying architectural hardware needs
- observing and assessing technical hardware and keying requirements
- reading and interpreting plans, designs and specifications
- applying basic numeracy techniques
- applying safe and efficient work practices
- communicating in a clear and concise manner
- relating to people from different social and cultural backgrounds
- presenting a professional image
- preparing schedules and other required documentation
- planning and sequencing work tasks
- entering data using basic keyboarding skills

Required knowledge

Required knowledge includes:

- risk assessment methods and procedures
- available architectural hardware/keying system options and basic requirements for installation
- types and functions of architectural hardware/keying system
- building construction methods and types
- organisational and client confidentiality requirements
- basic problem-solving strategies
- operational principles of information technology
- principles of effective communication
- documentation requirements and processes

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to examine and assess architectural hardware and/or keying requirements as required in preparation of a brief for client.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • identifying site requirements through inspection, discussion with clients and identification of relevant legislation, codes, and standards • accurately identifying door and frame locations, existing architectural hardware, current or future client use patterns and environmental considerations • ability to match architectural hardware products and systems to a client brief or specification and make recommendations, including alternative options • preparation of keying schedules that match to security, access, and current and future use requirements of client.
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts. It should also be understood that not always will a keying brief be necessary but should form part of the assessment process.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid,</p>

EVIDENCE GUIDE	
	<p>sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with assessing technical security requirements, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Job requirements

Job requirements may include:

- instructions from supervisor/management
- work schedules and completion dates
- specific client requirements
- site requirements
- security clearance and access requirements
- reporting and documentation requirements
- budget allocations
- associated legislation which may include Building Code of Australia (BCA) and Australian standards

Appropriate person

Appropriate person may include:

- client
- site managers
- project managers
- engineers and technicians
- technical experts
- line managers/supervisors
- colleagues
- regulatory personnel
- security consultants
- locksmiths
- architects and interior designers

Organisational requirements

Organisational requirements may include:

- legal and organisational operational policies and procedures
- operations manuals
- induction and training materials
- insurance policy agreements
- client and organisational confidentiality requirements

RANGE STATEMENT	
	<ul style="list-style-type: none"> • organisational goals/objectives/plans/systems/processes • employer and employee rights and responsibilities • own role, responsibility and delegation • quality and continuous improvement processes and standards • client service standards • defined resource parameters • occupational health and safety (OHS) policies/procedures/programs • emergency and evacuation procedures • duty of care, code of conduct, code of ethics, access and equity policy, principles and practice • records and information systems and processes • communication channels • reporting procedures
Customer/client	<p>Customer/client may include:</p> <ul style="list-style-type: none"> • owner • property/other agent • tenant • building supervisor • manager • project manager • architects • interior designers • government and legal instruments/agencies
Scope of work	<p>Scope of work may include:</p> <ul style="list-style-type: none"> • personal protection • access requirements • property or assets • conformance with insurance • legislative or other requirements
Interpersonal techniques	<p>Interpersonal techniques may include:</p> <ul style="list-style-type: none"> • verbal or non-verbal language • two-way interaction • constructive feedback • active listening

RANGE STATEMENT	
	<ul style="list-style-type: none"> • questioning to clarify and confirm understanding • interpreting non-verbal and verbal messages • observation techniques • use of positive, confident and cooperative language • control of tone of voice and body language • use of language and concepts appropriate to cultural differences • use of clear presentations of options and consequences • demonstrating flexibility and willingness to compromise
Specific site requirements	<p>Specific site requirements may relate to:</p> <ul style="list-style-type: none"> • access and egress points • time of access • access codes • keys • passes • security clearances • union requirements • OHS requirements • building codes and regulations • heritage listings • noise control
Architectural hardware	<p>Architectural hardware may include:</p> <ul style="list-style-type: none"> • hinges • pivots • door track • locks • handles • door furniture • door closers • exit devices • sequence selectors • cylinders • keying and master keying • bolts • door stops • door seals

RANGE STATEMENT	
	<ul style="list-style-type: none"> • kick plates • door protection • sundry hardware • sanitary hardware • automatic operators • access control devices • disabled access hardware
Applicable legislation, codes and national standards	<p>Applicable legislation, codes and national standards may include:</p> <ul style="list-style-type: none"> • relevant commonwealth and state/territory legislation which affect organisational operation, such as: <ul style="list-style-type: none"> • OHS • environmental issues • equal employment opportunity • industrial relations • anti-discrimination and diversity • licensing arrangements • Australian standards • quality assurance and certification requirements • relevant industry codes of practice • trade practices • award and enterprise agreements • privacy related legislation
Information	<p>Information may include:</p> <ul style="list-style-type: none"> • value or importance of assets • insurance policy agreements • special rooms or areas requiring higher level of protection • current/proposed operating environments • assets and systems • activities and functions • existing security systems/equipment • existing management strategies • business and operational plans • incident history
Assessment may involve	<p>Assessment may involve:</p>

RANGE STATEMENT	
	<ul style="list-style-type: none"> • discussions with client • visual inspections • review of client floor plans and supporting documentation • questioning policy/insurance companies/other bodies
Site assessment	<p>Site assessment may include:</p> <ul style="list-style-type: none"> • type and condition of building structures • identification of risk areas/weak points • site restrictions, regulations and requirements • access and egress patterns • floor plan • existing security equipment/systems
Door types	<p>Door types may include:</p> <ul style="list-style-type: none"> • solid core doors • hollow core doors • fire rated doors • acoustic doors • glazed doors • sliding doors • folding doors • frameless doors • glass doors • automatic doors • blast doors • ballistic doors • security screens • other door types
Frame types	<p>Frame types may include:</p> <ul style="list-style-type: none"> • steel frames • aluminium frames • timber frames • frameless doors • cavity frames • sliding frames • other frames
Environmental factors	<p>Environmental factors may include:</p> <ul style="list-style-type: none"> • physical environment (e.g. climate proximity to

RANGE STATEMENT	
	salt water, pools, chemical and dusty environments)
Computer program	Computer program may include: <ul style="list-style-type: none"> • general and propriety software programs
Organisational template	Organisational template may include: <ul style="list-style-type: none"> • enterprise specific schedules • documents or proformas used to document or record schedules or information
Documentation	Documentation may include: <ul style="list-style-type: none"> • checklists • reports • floor plans • client briefs • specifications • schedules • site survey
Key systems	Key systems may include: <ul style="list-style-type: none"> • key to differ (KD) • key to alike (KA) • master keyed (MK) • grand master key (GMK) • great grand master key (GGMK)
Master key systems	Master key systems is a generic term to describe a group of cylinders operated by more than one key, including: <ul style="list-style-type: none"> • restricted, semi-restricted and non-restricted system numbers • manufacturer restricted • factory restricted • locksmith restricted/managed • association restricted

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. OHS requirements , including personal protection needs , are observed throughout the work 1.2. Work orders are checked and confirmed with appropriate personnel 1.3. Tools and equipment suitable for construction are identified and checked for safe and effective operation 1.4. Materials are selected and checked 1.5. Hardware is selected according to work instructions
2. Complete construction	2.1. Allowances are calculated and recorded 2.2. Material is laid out and marked according to work instructions 2.3. Fabric is cut according to work order 2.4. Bottom and side hems are finished 2.5. Spline is selected, cut and attached to top of blind 2.6. Roller is cut to length and attached to spline 2.7. Control mechanism and pin end are attached 2.8. Lath and pull ring are attached 2.9. Child safety mechanisms are selected and attached
3. Apply quality checks	3.1. Finished blind is checked against work order 3.2. Finished blind is tested for correct operation 3.3. Parts of the work that do not comply with work order are repaired or re-worked
4. Finalise operation and maintain equipment	4.1. Completed work is cleaned, packaged and stored 4.2. Tools and equipment are cleaned, maintained and stored 4.3. Faulty tools and equipment are reported to supervisor 4.4. Work area is cleaned and waste is disposed of according to workplace practices 4.5. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with workplace supervisor to:
 - confirm work orders and instructions
 - report work outcomes
- work with others and in a team to construct a basic roll up blind
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- adapt to new situations
- collect and organise information
- plan tasks and identify task outcomes
- follow workplace induction principles
- adapt to new skill requirements
- use tools and equipment
- set up and start equipment

Required knowledge

- types, characteristics, uses and limitations of roll up blind materials
- identification of equipment, processes and procedures
- workflow in relation to constructing a basic roll up blind
- State/Territory OHS legislation, regulations, standards and codes of practice relevant to constructing a basic roll up blind
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- terms used to describe components of a roll up blind
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- mathematical techniques for estimation and measurement of materials

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete a basic roll up blind
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing a basic roll up blind
- Select and set up and maintain equipment in accordance with manufacturer instructions and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Cut fabrics accurately according to work orders
- Construct at least one basic roll up blind

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace and simulated workplace environments
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing a basic roll up blind
 - workplace practices including standard operating procedures and work instructions for constructing a basic roll up blind

Method of assessment

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills

Assessment methods should be by direct observation of

EVIDENCE GUIDE	
	<p>tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools	1.1. Types of <i>hand and power tools</i> and their functions are identified 1.2. Sources of <i>power supply</i> are recognised 1.3. <i>OHS, legislative requirements</i> and <i>workplace practices</i> for using hand and power tools are recognised and adhered to
2. Select hand tools	2.1. Appropriate <i>personal protective equipment</i> is selected, correctly fitted and used 2.2. Hand tools are selected consistent with the needs of the task 2.3. Tools are checked for safe operation and any faults are corrected or tagged and reported to <i>appropriate personnel</i> 2.4. <i>Equipment</i> is selected to hold or support material for hand tool operation
3. Use hand tools	3.1. <i>Material</i> is located and held in position for hand tool operation 3.2. Hand tools are held correctly for <i>safe operation</i> 3.3. Hand tools are used according to manufacturer's instructions and safe work practices 3.4. Hand tools are safely located when not in immediate use
4. Select power tools	4.1. Power tools are selected consistent with the needs of the task 4.2. Power tools are checked for serviceability and safe operation in accordance with OHS requirements 4.3. Power tool faults are corrected or tagged and reported to appropriate personnel 4.4. Equipment is selected to hold or support materials for power tool operation
5. Use power tools	5.1. Material is held in position for power tool operation 5.2. Power tools are set up for use according to manufacturer instructions and safe working practices 5.3. Power tools are held correctly for safe and efficient use 5.4. Power tools are used according to manufacturer instructions and safe work practices 5.5. Power tools are safely located when not in immediate use

ELEMENT	PERFORMANCE CRITERIA
6. Clean up work area and tools	6.1. Hand and power tools are cleaned after use 6.2. Operator maintenance is carried out following completion of task. 6.3. Hand and power tools are stored following completion of task 6.4. Equipment is cleaned, maintained and stored 6.5. Work area is cleared and <i>waste removed</i> 6.6. <i>Workplace documentation</i> is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with workplace/worksite supervisor to:
 - confirm work orders and instructions
 - identify problems
 - report outcomes of hand and power tool use and maintenance problems
- work with others and in a team to safely use hand and power tools
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- participate in establishing new ideas and work specifications for selecting and using hand and power tools
- plan and organise own work, including the preparation and layout of the work area and obtaining equipment and materials to avoid back tracking
- follow workplace induction principles
- adapt to new skill requirements
- use workplace technology related to selecting and using blinds and awnings sector hand and power tools

Required knowledge

- State/Territory OHS legislation, regulations, standards and codes of practice relevant to hand and power tool use
- workplace and worksite, requirements, policies and procedures for hand and power tool use
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and workplace/worksite protocols
- types of tools and equipment and procedures for their safe use, operation and maintenance
- procedures for the reporting, recording and maintenance of workplace records and information
- procedures for reporting and recording faulty hand and power tools

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Communicate and work with others in the work area
- Apply safe handling practices for equipment, products and materials
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Indicate compliance with organisational policies and procedures, including quality assurance requirements
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for use of hand and power tools
- Identify, select and safely use hand tools in the workplace/worksite
- Identify, select and safely use power tools in the workplace/worksite

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential required knowledge and skills, may be conducted in a workplace or simulated workplace environment
- The following resources should be made available:
 - workplace location or simulated workplace
 - hand tools as specified in the range statement
 - power tools as specified in the range statement
 - workplace practices including standard operating procedures and work instructions for using blinds and awnings sector hand and power tools

Method of assessment

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills

EVIDENCE GUIDE

Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Hand tools	<ul style="list-style-type: none"> includes calculators, pop rivet gun, screwdrivers, panel saws, hack saws, socket set, hand grinder, hammers, files, tin snips, spanners, level, square, measuring tape, hex keys, caulking gun, markers, tensioning devices, G clamps, tap and die sets, straight edges, string lines, scissors, eyelet punches, laser level, stud finder, pipe bender
Power tools	<ul style="list-style-type: none"> include bench grinders, hammer drills, cordless screwdriver/drill, air drills, jig saws, docking saws, circular saws, press-stud machine, hot knives, staple gun, hollow wall anchor gun, planer, mobile phone, torch, battery chargers
Power supply	<ul style="list-style-type: none"> include battery, mains electricity, pneumatic.
OHS requirements	<ul style="list-style-type: none"> includes Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> includes applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Workplace practices	<ul style="list-style-type: none"> include legal, organisational and site guidelines, policies and procedures relating to

RANGE STATEMENT	
	own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer instructions and specifications
Personal protective equipment	<ul style="list-style-type: none"> includes safety glasses/goggles, hearing protection, safety footwear, protective clothing and head wear, respiratory protection
Appropriate personnel	<ul style="list-style-type: none"> includes trainer, assessor, supervisor, team leader, maintenance officer or manager or any person responsible for your activities in the workplace/worksite
Equipment	<ul style="list-style-type: none"> includes clamps, jigs, braces, ladders
Material	<ul style="list-style-type: none"> includes textiles (canvas, acrylic, PVC, clear PVC, mesh, binding), metals (aluminium, steel), timber
Safe operation	<ul style="list-style-type: none"> safe work practices should be followed in accordance with industry and enterprise specific policies and procedures
Waste	<ul style="list-style-type: none"> includes textiles, metals, timber waste removal should be in accordance with enterprise policies and environmental legislation covering disposal of industrial waste.
Workplace documentation	<ul style="list-style-type: none"> includes time sheets, customer care cards, work orders, reports

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. OHS requirements, legislative requirements, workplace practices and personal protection needs are observed throughout the work 1.2. Work orders are checked and confirmed 1.3. Machines, cutting tools and templates are identified, selected and checked for safe operation 1.4. Material for machining is selected and inspected for quality 1.5. Procedures are determined for minimising waste 1.6. Procedures are identified for maximising energy efficiency while completing the job
2. Set up machines	2.1. Safety equipment, including emergency stops, gauges, guards and controls are checked 2.2. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions 2.3. Trial runs are conducted to check machine operation, accuracy and quality of finished work 2.4. Necessary adjustments are made to machine settings
3. Operate a machine	3.1. Pre start-up checks are carried out on equipment following workplace practices 3.2. Material is fed into machine in accordance with manufacturer instructions, safe handling procedures and workplace practices 3.3. Machine is operated in accordance with its designed capacity and purpose, tooling requirements and to manufacturers specifications 3.4. Machine operation is monitored to ensure product quality and output 3.5. Waste quantities are checked and minimised 3.6. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace practices 3.7. Machining process and equipment faults are recorded and reported to the appropriate personnel
4. Conduct operator maintenance	4.1. Equipment lock out procedures are followed in accordance with OHS legislation and workplace practices 4.2. Cutting tools are checked for blunt or damaged

ELEMENT	PERFORMANCE CRITERIA
	<p>condition following workplace practices</p> <p>4.3. Cutting tools are removed and replaced in accordance with manufacturer specifications</p> <p>4.4. Machining area is kept clear of dust, off-cuts and debris in accordance with OHS requirements</p>
<p>5. Clean up work area and maintain equipment</p>	<p>5.1. Material that can be re-used is collected and stored</p> <p>5.2. Waste and scrap are removed following workplace practices</p> <p>5.3. Equipment and work area are cleaned, maintained and stored following workplace practices</p> <p>5.4. Operator maintenance is completed in accordance with manufacturer specifications and workplace practices</p> <p>5.5. Unserviceable equipment is tagged and reported to appropriate personnel</p> <p>5.6. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with site supervisor to:
 - confirm work orders and instructions
 - identify problems
 - report outcomes of setting up, operating and maintaining static machines
- work with others and in a team to set up, operate and maintain static machines
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- identifying problems and equipment faults and demonstrate appropriate response procedures
- participate in establishing new ideas and work specifications for setting up, operating and maintaining static machines
- plan and organise own work, including the preparation and layout of the work area and obtaining equipment and materials to avoid backtracking
- accurately plan and organise work activities
- efficiently manage own responsibilities and timelines for completion of work
- follow workplace induction principles
- adapt to new skill requirements
- use workplace technology related to the production task, including specified tools, equipment, calculators and measuring devices
- use and maintain relevant tools, machinery and equipment
- efficiently and safely set up, operate and maintain static machines.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for using static machines
- organisational and workplace requirements, policies and procedures for using static machines
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of machines and equipment and procedures for their safe use, operation and maintenance
- set up and operation of static machines
- characteristics of materials processed using static machines
- cutting patterns and sequences

REQUIRED SKILLS AND KNOWLEDGE

- identification of cutting tool condition and fault reporting
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- procedures for reporting machinery faults and material defects
- mathematical procedures for estimation and measurement
- the range, characteristics, uses and limitations of blinds and awnings sector static machines
- general workplace quality standards and procedures
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Read and interpret work orders and job specifications to prepare for setting up and operating static machines • Apply safe handling requirements for equipment, machines, products and materials to: <ul style="list-style-type: none"> • minimise the risk of injury to self or others • prevent damage to goods, equipment and products • Communicate and work with others in the work area • Identify materials used in static machines • Select and set up static machines following manufacturer's instructions and workplace practices • Operate static machines following manufacturer's specifications and safe work practices including the use of safety equipment and personal protective equipment • Maintain static machines following manufacturer's specifications and workplace practices
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of required knowledge and skills, may be conducted in work place or simulated workplace environments • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to setting up, operating and maintaining static machines • specifications and work instructions • workplace practices including standard operating procedures and work instructions for setting up, operating and maintaining static machines.
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of</p>

EVIDENCE GUIDE	
	<p>required knowledge and skills</p> <p>Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> include Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> include applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Workplace practices	<ul style="list-style-type: none"> include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Personal protection needs	<ul style="list-style-type: none"> includes safety glasses/goggles, hearing protection, safety footwear, protective clothing, respiratory protection
Work orders	<ul style="list-style-type: none"> includes quotations for work, job cards, customer care cards, worksheets
Material	<ul style="list-style-type: none"> includes textiles, metal, timber

RANGE STATEMENT	
Machines	<ul style="list-style-type: none"> includes roller guillotines, lath cutter, Venetian punches, special crimping pliers, drill press, docking saw, sewing machines (plain foot zig zag machine, walker foot zig zag machine, chain stitch machine, tape binding machines, overlocker), computerised fabric cutters (aeronaught /pizza wheel, laser cutters, ultra sonic cutter), RF welder, pelmet blender, press stud machine, fabric slitters, computerised venetian machines (multi-stage punching, single-stage punching), fabric carousel, vertical blind cutters (manual, hydraulic, air, computerised), eyelet machine, tube bender
Templates	<ul style="list-style-type: none"> include folding creases, scallops, trims
Waste	<ul style="list-style-type: none"> includes textiles, metals, timber
Energy efficiency	<ul style="list-style-type: none"> includes using on/off/standby as required, ensuring machine is turned off at completion of work or shift
Safety equipment	<ul style="list-style-type: none"> include emergency stops, cut out switches and machine guards
Manufacturer's instructions	<ul style="list-style-type: none"> includes written instruction booklets, instructions on the equipment or instructions for correct use.
Trial run	<ul style="list-style-type: none"> includes dry runs of machine, test runs on materials to check settings
Machine operation	<ul style="list-style-type: none"> include settings, programming, manufacturer specifications for safe operation
Pre-start up checks	<ul style="list-style-type: none"> are conducted to ensure the equipment has been set-up correctly, cutting tools are installed accurately and machinery operating to optimum performance
Output	<ul style="list-style-type: none"> includes the speed or rate at which material is machined
Recorded and reported	<ul style="list-style-type: none"> includes the machining method, product type, size, inspection, grading and labelling outcomes, storage locations, quality outcomes, hazards, incidents or equipment malfunctions
Appropriate personnel	<ul style="list-style-type: none"> includes assessors, trainers, supervisors, suppliers, clients, colleagues and managers and any other person responsible for your

RANGE STATEMENT	
	work activities
Operator maintenance	<ul style="list-style-type: none"> is conducted to ensure machinery is in safe working order and to prevent unscheduled machinery downtime
Workplace documentation	<ul style="list-style-type: none"> includes time sheets, customer care cards, work orders, reports

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work	1.1. OHS requirements, legislative requirements and workplace practices 1.2. Personal protective equipment are observed throughout the work 1.3. Types of hardware and fixings are identified and selected for the work 1.4. Tools and equipment for application are identified and checked for safe operation
2. Apply and/or fit and finish	2.1. Hardware items are laid out ready for application 2.2. Hardware and fixings are applied as required according to work instructions and workplace practices 2.3. Work is checked against required quality standards
3. Finalise operation and maintain equipment	3.1. Work area is cleaned and waste removed 3.2. Waste and scrap materials are dealt with following workplace practices 3.3. Hand and power tools and equipment are cleaned, maintained and stored in accordance with workplace practices 3.4. Machinery is cleaned and left in safe mode 3.5. Faulty and/or defective equipment is tagged and reported to appropriate personnel 3.6. Unused hardware is collected and stored for reuse or disposal following workplace practices 3.7. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with site supervisor to:
 - confirm work orders and instructions
 - identify problems
 - report outcomes of selecting and applying hardware and fixings
- work with others and in a team to select and apply hardware and fixings
- use pre-checking and inspection techniques to anticipate production problems, avoid reworking and wastage
- participate in establishing new ideas and work specifications for selecting and applying hardware and fixings
- plan and organise activities, including the preparations and layout of the worksite and the obtaining of equipment and materials to avoid backtracking
- follow workplace induction principles
- accurately plan and organise own work activities
- adapt to new skill requirements
- use workplace technology related to selecting and applying hardware and fixings including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for selecting and applying hardware and fixings
- organisational and site standards, requirements, policies and procedures for applying hardware and fixings
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment used to apply hardware and fixings and procedures for their safe use, operation and maintenance
- characteristics of hardware and fixings and their use
- set up and operation of tools and equipment used for applying hardware and fixings
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Interpret work order, locate materials and use information to complete selecting and applying hardware and fixings • Apply safe handling practices and safe operating procedures for equipment, products and materials to: <ul style="list-style-type: none"> • minimise the risk of injury to self or others • prevent damage to goods, equipment and products • Identify materials and equipment used in applying hardware and fixings • Select, set up and maintain tools and equipment in accordance with manufacturer instructions and workplace practices • Communicate and work with others in the work area • Report process for materials faults, damaged products or equipment • Identify, select and apply hardware and fixings to at least 4 different styles of blinds and awnings
<p>Context of, and specific resources for assessment</p>	<p>The application of competency is to be assessed in the workplace or simulated workplace</p> <p>Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment of required knowledge and skills, may be conducted in a workplace or simulated workplace environment</p> <p>The following resources should be made available:</p> <p>workplace location or simulated workplace</p> <p>hardware, fixings and tools and equipment for the application of hardware and fixings for blinds and awnings construction and installation</p> <p>workplace practices including standard operating procedures and work instructions for selecting and applying hardware and fixings</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, legislative requirements , and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Work orders are checked and confirmed 1.4. Material and hardware is selected and checked against work orders 1.5. Material is checked for flaws
2. Join, lay out, mark and cut fabrics	2.1. Tools and equipment are selected and used according to manufacturer's instructions and workplace procedures 2.2. Allowances are calculated and recorded 2.3. Materials are joined to make required width 2.4. Cutting equipment is checked for safe operation 2.5. Materials are cut making allowances for hardware 2.6. Material is laid out flat and square and marked according to workplace practices 2.7. Decorative edges, gimps and fringes are selected, measured and cut according to work order 2.8. Measurements are checked against work order
3. Construct product	3.1. Material edges are is hemmed making allowances for hardware 3.2. Decorative edging, gimps and fringes are attached to bottom edge 3.3. Hardware is prepared according to work order 3.4. Hardware is fitted to skin 3.5. Product is constructed according to work instructions 3.6. Child safety mechanisms are selected and attached
4. Apply quality checks	4.1. Completed product is checked ensuring finished product matches work order 4.2. Finished product is tested for correct operation 4.3. Parts of the work that do not comply with work order are repaired or reworked
5. Complete work	5.1. Finished work is cleaned, protected and stored following workplace practices 5.2. Tools and equipment are cleaned, maintained and stored

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3. Faulty tools and equipment are reported to <i>appropriate personnel</i></p> <p>5.4. Work area is cleaned and <i>waste</i> is disposed of according to workplace practices</p> <p>5.5. <i>Workplace documentation</i> or reporting is completed</p>

Required Skills and Knowledge

Required skills

- communicate with site supervisor to:
 - confirm work orders and instructions
 - identify problems
- report outcomes of constructing textile roll up and pull down style awnings
- work with others and in a team to construct roll up and pull down style blinds and awnings
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- participate in establishing new ideas and work specifications for constructing roll up and pull down style blinds and awnings
- plan and organise own work, including preparation and layout of work area and obtaining equipment and materials to avoid backtracking
- follow workplace induction principles
- accurately plan and organise own work activities
- adapt to new skill requirements
- use workplace technology related to constructing roll up and pull down style blinds and awnings including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing roll up and pull down style blinds and awnings
- organisational and workplace standards, requirements, policies and procedures for constructing roll up and pull down style blinds and awnings
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established line of communication and protocols
- types of tools and equipment used to construct roll up or pull down style blinds and awnings and procedures for their safe use, operation and maintenance
- characteristics of textiles and hardware used in the construction of roll up and pull down style blinds and awnings
- set up and operation of sewing and welding equipment
- computer programs
- cutting patterns and sequences
- cutting tool condition including sharpness, straightness and suitability for task
- industry standard textile roll widths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and

Required skills
information
<ul style="list-style-type: none">• mathematical procedures for estimation and measurement of materials and hardware

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing roll up and pull down style blinds and awnings
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing roll up and pull down style blinds and awnings
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Cut textiles accurately according to work orders
- Construct a minimum of two roll up and two pull down style blinds or awnings. Task is to include identifying and selecting hardware, measuring and joining materials, fitting hardware, cleaning, packaging and storing completed products

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in a workplace and simulated workplace environment
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to construction of roll up and pull down blinds and awnings
 - workplace practices including standard operating procedures and work instructions for constructing roll up and pull down style blinds and awnings

EVIDENCE GUIDE

Method of assessment

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills

Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> include Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> include applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Workplace practices	<ul style="list-style-type: none"> include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer instructions and specifications
Personal protective equipment	<ul style="list-style-type: none"> includes safety glasses/goggles, hearing protection, safety footwear, protective clothing, respiratory protection
Work order	<ul style="list-style-type: none"> includes quotations for work, job cards, customer orders, worksheets
Material	<ul style="list-style-type: none"> includes canvas, acrylic, PVC, clear PVC, mesh, binding, woven fibreglass PVC

RANGE STATEMENT	
Hardware	<ul style="list-style-type: none"> includes rollers, battens, running assemblies, spring, rope edge, rivets, tek screws, screws, guide rails, head boxes
Tools and equipment	<ul style="list-style-type: none"> includes drill and bits, hack saw, aluminium bench saw, tape measure, pop rivet gun, tek gun, screwdriver (power, cordless and hand) cutting bench, shears, knives, cut off saws, sewing machines, needles, staple gun, double sided tape dispenser, file, mallet and hammer
Manufacturer instructions	<ul style="list-style-type: none"> may be written instruction booklets, instructions on the tools and equipment or instructions for correct use
Joined	<ul style="list-style-type: none"> may include sewing or welding processes
Allowances	<ul style="list-style-type: none"> measurements of textiles to be adjusted to allow for selected hardware, joins and hems
Marked	<ul style="list-style-type: none"> using suitable medium such as chalk, pen, pencil
Hemmed	<ul style="list-style-type: none"> using sewing or welding processes and making allowances for hardware
Work instructions	<ul style="list-style-type: none"> includes instructions for the construction of roll up and pull down style blinds and awnings
Child safety mechanisms	<ul style="list-style-type: none"> as required by legislation or code of practice
Tested	<ul style="list-style-type: none"> within limits of normal operation
Appropriate personnel	<ul style="list-style-type: none"> include assessor, trainer, supervisor, team leader, maintenance officer or manager, or any other person responsible for your work activity
Waste	<ul style="list-style-type: none"> may include textiles, metal, timber waste removal should be in accordance with enterprise policies and environmental legislation covering disposal of industrial waste
Workplace documentation	<ul style="list-style-type: none"> may include time sheets, customer care cards, work orders and reports

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, legislative requirements and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Work orders are checked and confirmed 1.4. Material is selected from stock and checked against work order 1.5. Tools and equipment are selected and checked for safe operation 1.6. Hardware is selected and checked against work order
2. Lay out, mark and cut materials	2.1. Correct side of materials and pattern direction are identified 2.2. Allowances are calculated and recorded 2.3. Material is laid out and marked 2.4. Cutting equipment is checked for safe operation 2.5. Material is cut following workplace practices
3. Construct blind	3.1. Headline and spline shaft is identified, selected and cut to manufacturer specifications 3.2. Hardware is selected for headrail and assembled to manufacturer specifications 3.3. Slats are finished according to workplace practices 3.4. Finishing hardware is attached according to work instructions 3.5. Child safety mechanisms are selected and attached
4. Apply quality checks	4.1. Finished blinds are checked ensuring finish and final length of blinds match work order 4.2. Finished blind is tested for correct operation 4.3. Parts of the work that do not comply with work order are repaired or re-worked
5. Complete work	5.1. Completed work is cleaned, protected and stored 5.2. Tools and equipment are cleaned, maintained and stored 5.3. Faulty tools and equipment are reported to appropriate personnel 5.4. Work area is cleaned and waste is disposed of according to workplace practices 5.5. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with site supervisor to:
 - confirm work orders and instructions
 - identify problems
- report outcomes of cutting fabric and constructing and finishing vertical style blinds
- work with others and in a team to construct vertical style blinds
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- participate in establishing new ideas and work specifications for constructing vertical style blinds
- plan and organise activities, including the preparations and layout of the worksite and the obtaining of equipment and materials to avoid backtracking
- follow workplace induction principles
- accurately plan and organise own work activities
- adapt to new skill requirements
- use workplace technology related to constructing vertical style blinds including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing vertical style blinds
- organisational and workplace standards, requirements, policies and procedures for constructing vertical style blinds
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment used to construct vertical style blinds and procedures for their safe use, operation and maintenance
- terms used to describe components of a vertical style blind
- characteristics of materials used in the construction of vertical blinds
- set up and operation of basic static machines
- computer programs
- cutting patterns and sequences
- cutting tool condition including sharpness, straightness and suitability for task
- industry standard fabric widths
- storage systems and labelling

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing vertical style blinds
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing vertical style blinds
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Follow operating procedures to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Maintain equipment to ensure production output and product quality
- Communicate effectively and work safely with others in the work area
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment
- Cut fabrics accurately according to work orders
- Construct a minimum of two vertical style blinds using two different tracking systems. Task is to include selecting components, making headbox, cutting and sewing/welding/gluing fabric and assembly

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace environment
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Assessment of required knowledge and skills, may be conducted in a work based or off-site context • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to constructing holland style blinds • standard operating procedures of the workplace • work practices including standard operating procedures and work instructions for constructing vertical style blinds
Method of assessment	<p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills</p> <p>Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> includes Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> includes applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Workplace practices	<ul style="list-style-type: none"> includes legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances and following manufacturer instructions
Personal protective equipment	<ul style="list-style-type: none"> includes safety glasses/goggles, hearing protection, safety footwear, protective clothing, respiratory protection
Work orders	<ul style="list-style-type: none"> may include customer order forms, job cards, quotations for work, worksheets
Material	<ul style="list-style-type: none"> may include polyester blend fabrics, timber, cord

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> includes spacing machine, cut off saw, link spacing tool, pliers, scissors, vane cutter
Hardware	<ul style="list-style-type: none"> includes chain, spline shaft, motor, head rail
Allowances	<ul style="list-style-type: none"> may be for hardware, joins, hems
Laid out	<ul style="list-style-type: none"> material should be laid out flat and square on a cutting table large enough to take full width of material
Marked	<ul style="list-style-type: none"> material may be marked using chalk, markers or pencil
Manufacturer specifications	<ul style="list-style-type: none"> may include written or verbal specifications
Finished	<ul style="list-style-type: none"> may include sewing, welding or gluing
Work instructions	<ul style="list-style-type: none"> includes instructions for the variations in construction of vertical style blinds
Finishing hardware	<ul style="list-style-type: none"> includes hangers, weights, chains
Child safety mechanisms	<ul style="list-style-type: none"> as required by legislation or code of practice
Tested	<ul style="list-style-type: none"> within limits of normal operation
Appropriate personnel	<ul style="list-style-type: none"> includes assessors, trainers, supervisor, team leader, maintenance officer or manager or any other person responsible for your work activity
Waste	<ul style="list-style-type: none"> include textiles, metal, timber, hardware waste removal should be in accordance with workplace practices and environmental legislation covering disposal of industrial waste
Workplace documentation	<ul style="list-style-type: none"> may include time sheets, customer care cards, work orders, reports

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work	1.1. OHS requirements, legislative requirements and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Work order is reviewed, confirmed and clarified with appropriate personnel 1.4. Frame is measured and quantities of materials calculated 1.5. Textiles are selected and checked for flaws according to workplace practices 1.6. Tools and equipment are selected and used according to workplace practices and manufacturer's instructions
2. Lay out, mark and cut textiles	2.1. Correct side of textile, naps, direction of patterns and pattern matches are identified 2.2. Textiles are laid over frame 2.3. Textiles are measured and marked to fit frame leaving joining allowances 2.4. Panels are marked and cut 2.5. Scallops are marked and cut 2.6. Textiles are cut 2.7. Measurements are checked against work order
3. Join textiles	3.1. Textiles are joined according to workplace practices 3.2. Textiles are laid over frame and perimeter pockets marked 3.3. Pockets are sewn 3.4. Scallop edging is attached
4. Construct awning	4.1. Method of fixing skin to frame is determined 4.2. Textile skin is constructed according to work instructions 4.3. Skin is attached to frame according to work instructions 4.4. Frame is braced
5. Apply quality checks	5.1. Completed awnings are checked ensuring finish and final size match work requirements 5.2. Parts of the work that do not comply with work order are repaired or reworked 5.3. Frame is checked for damage and repairs made if

ELEMENT	PERFORMANCE CRITERIA
	necessary according to workplace practices
6. Complete work	6.1. Finished work is cleaned, protected and stored following workplace practices 6.2. Tools and equipment are cleaned, maintained and stored 6.3. Faulty tools and equipment are reported to appropriate personnel 6.4. Work area is cleaned and <i>waste</i> is disposed of according to workplace practices 6.5. <i>Workplace documentation</i> is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with site supervisor to:
 - confirm work orders and instructions
 - identify problems
 - report outcomes of constructing textiles for canopy style awnings
- work with others and in a team to construct textiles for canopy style awnings
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- participate in establishing new ideas and work specifications for constructing textiles for canopy style awnings
- plan and organise own work including preparation and layout of work area and obtaining equipment and materials to avoid backtracking
- follow workplace induction principles
- accurately plan and organise own work activities
- adapt to new skill requirements
- use workplace technology related to construct textiles for canopy style awnings, including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing textiles for canopy style awnings
- organisational and workplace standards, requirements, policies and procedures for constructing canopy style awnings
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment used to construct textiles for canopy awnings and procedures for their safe use, operation and maintenance
- terms used to describe components of canopy style awnings
- characteristics of textiles used for canopy style awnings
- set up and operation of static machines
- cutting patterns and sequences
- cutting tool condition including sharpness, straightness and suitability for task
- industry standard cross sections and lengths for framing materials
- industry standard textile widths

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• storage systems and labelling• procedures for the recording, reporting and maintenance of workplace records and information• mathematical techniques for estimation and measurement of materials |
|--|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete construct textiles for canopy style awnings
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing canopy style awnings
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Construct a minimum of three different textile canopy style awnings. Task is to include measuring, cutting, joining and fixing the skin to the frame with a tight drum-like finish.

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace environment
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills, may be conducted in work based and off site contexts
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing textiles for canopy style awnings
 - workplace practices including standard operating procedures and work instructions for constructing textiles for canopy style awnings

Method of assessment

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills

EVIDENCE GUIDE

Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> includes Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> includes applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Workplace practices	<ul style="list-style-type: none"> include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer instructions and specifications
Personal protective equipment	<ul style="list-style-type: none"> includes safety glasses/goggles, hearing protection, safety footwear, protective clothing, respiratory protection
Work order	<ul style="list-style-type: none"> may include quotations for work, job cards, customer orders, worksheets specifications including design, size and colour

RANGE STATEMENT	
Appropriate personnel	<ul style="list-style-type: none"> may include supervisors, suppliers, clients, colleagues and managers or any person responsible for your work activity
Frame	<ul style="list-style-type: none"> shape will vary according to customer requirements, and may include dutch hoods (with end style variations), florentines and cupola
Materials	<ul style="list-style-type: none"> may include canvas, acrylic, PVC, clear mesh, hoop iron, pop rivets, rope edge, cara groove track
Tools and equipment	<ul style="list-style-type: none"> includes tape measure, scissors, sewing machine, welding equipment, marking pens, pop rivet guns
Manufacturer instructions	<ul style="list-style-type: none"> may be written instruction booklets, instructions on the tools and equipment or instructions for correct usage
Laid over	<ul style="list-style-type: none"> ensuring fabric is square and pulled tight over frame
Joining allowances	<ul style="list-style-type: none"> 12 mm or as specified by the textile manufacturer
Panels	<ul style="list-style-type: none"> number and shape will vary according to size and shape of canopy frame
Joined	<ul style="list-style-type: none"> may include sewing or welding
Method	<ul style="list-style-type: none"> may include screws, hoop iron and pop rivets, rope edge or cava groove track,
Work instructions	<ul style="list-style-type: none"> is to include instructions for the construction of textiles for canopy style awnings
Braced	<ul style="list-style-type: none"> for aluminium framed canopy style awnings
Waste	<ul style="list-style-type: none"> may include textiles, metal, timber waste removal should be in accordance with workplace practices and environmental legislation covering disposal of industrial waste
Workplace documentation	<ul style="list-style-type: none"> may include time sheets, customer care cards, work orders, reports

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, legislative requirements and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Work order is reviewed, confirmed and clarified with appropriate personnel 1.4. Materials, hardware and fixings are selected and checked against work orders
2. Measure, mark and cut slats	2.1. Slats are measured to length and marked 2.2. Slats are cut 2.3. Cord holes are punched in slats 2.4. Slats are finished as required according to work order
3. Assemble blind	3.1. Head rail components , bottom rails and tilt rod are selected and cut 3.2. Head rails are assembled according to manufacturer instructions or workplace practices 3.3. Correct spacing for slats is determined 3.4. Cords and ladder braids are selected and attached to head rail components 3.5. Hardware is attached according to work instructions 3.6. Slats are threaded through ladder tapes 3.7. Measuring tape is used to confirm final size and blind adjusted 3.8. Bottom rail is attached to blind 3.9. Cords are threaded through slats and attached 3.10. Child safety mechanisms are selected and attached
4. Apply quality checks	4.1. Finished blinds are checked ensuring length, width, slat size and colour match work order 4.2. Finished blind is tested for correct operation 4.3. Parts of the work that do not comply with work order are repaired or reworked
5. Complete work	5.1. Finished work is cleaned, protected and stored following workplace practices 5.2. Tools and equipment are cleaned, maintained and stored 5.3. Faulty tools and equipment are reported to

ELEMENT	PERFORMANCE CRITERIA
	appropriate personnel 5.4. Work area is cleaned and <i>waste</i> is disposed of according to workplace practices 5.5. <i>Workplace documentation</i> is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with site supervisor to:
 - confirm work orders and instructions
 - identify problems
 - report outcomes of constructing plastic and timber Venetian-style blinds
- work with others and in a team to construct plastic and timber Venetian-style blinds
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- participate in establishing new ideas and work specifications for constructing plastic and timber Venetian-style blinds
- plan and organise own work, including preparation and layout of work area and obtaining equipment and materials to avoid backtracking
- follow workplace induction principles
- accurately plan and organise own work activities
- adapt to new skill requirements
- use workplace technology related to constructing plastic and timber Venetian-style blinds, including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing plastic and timber Venetian-style blinds
- organisational and workplace standards, requirements, policies and procedures for constructing plastic and timber Venetian-style blinds
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment used to construct plastic and timber Venetian-style blinds and procedures for their safe use, operation and maintenance
- set up, operation and maintenance of static machines

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing plastic and timber Venetian-style blinds
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing plastic and timber Venetian-style blinds
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Construct a minimum of two plastic Venetian-style blinds and two timber Venetian-style blinds. Task is to include selecting materials and hardware, cutting slats, punching and finishing slats, assembling blind including head and bottom rail components and tilt mechanisms, cleaning, packaging and storing finished blinds

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace environment
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills, may be conducted in work based and off site contexts
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing plastic and timber style venetian blinds
 - workplace practices including standard operating procedures, spacing charts and work instructions for constructing plastic and timber style venetian blinds

EVIDENCE GUIDE

Method of assessment

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, legislative requirements and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Work orders are checked and confirmed 1.4. Tools and equipment are selected and checked for safe operation 1.5. Aluminium coil stock, hardware and fixings are selected and checked against work order
2. Assemble blind	2.1. Head and bottom rails are selected, measured and cut 2.2. Cords and ladder braids are selected, cut and attached to head rail 2.3. Hardware is attached to head and bottom rails 2.4. Venetian blind machine is set up according to manufacturer instructions 2.5. Headrail is attached to VVB machine 2.6. VVB machine is run to cut, punch and attach slats to head rail 2.7. Blind is placed on hoist and bottom rail installed 2.8. Ladders are crimped to final blind size 2.9. Finishing hardware is installed 2.10. Child safety mechanisms are selected and attached
3. Apply quality checks	3.1. Finished blinds are checked ensuring length and width match work order 3.2. Finished blind is tested for correct operation 3.3. Parts of the work that do not comply with work order are repaired or reworked
4. Complete work	4.1. Finished work is cleaned, protected and stored following workplace practices 4.2. Tools and equipment are cleaned, maintained and stored 4.3. Faulty tools and equipment are reported to appropriate personnel 4.4. Work area is cleaned and waste is disposed of according to workplace procedures 4.5. Workplace documentation or reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with site supervisor to:
 - confirm work orders and instructions
 - identify problems
 - report outcomes of constructing aluminium Venetian-style blinds
- work with others and in a team to construct aluminium Venetian-style blinds
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- participate in establishing new ideas and work specifications for constructing aluminium Venetian-style blinds
- plan and organise own work including preparation and layout of work area and obtaining equipment and materials to avoid backtracking
- follow workplace induction principles
- accurately plan and organise own work activities
- adapt to new skill requirements
- use workplace technology related to constructing aluminium Venetian-style blinds including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing aluminium Venetian-style blinds
- organisational and workplace standards, requirements, policies and procedures for constructing aluminium Venetian-style blinds
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment used to construct aluminium Venetian-style blinds and procedures for their safe use, operation and maintenance
- terms used to describe components of aluminium Venetian-style blinds
- characteristics of aluminium used for constructing Venetian-style blinds
- set up, operation and maintenance of static machines used in the construction of aluminium Venetian-style blinds
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- mathematical techniques for estimation and measurement of materials

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing aluminium Venetian-style blinds
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing aluminium Venetian-style blinds
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Set up, operate and maintain static machines used in the construction of aluminium Venetian-style blinds
- Construct a minimum of two aluminium Venetian-style blinds using two different head box assemblies. task to include selecting materials and hardware, setting up and operating Venetian blind machine, assembling blind, cleaning packaging and storing finished blind, cleaning work area and completing workplace documentation and reports.

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills, may be conducted in workplace and a simulated workplace environment
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing aluminium Venetian-style blinds
 - workplace practices including standard operating procedures and work instructions for constructing

EVIDENCE GUIDE	
	aluminium Venetian-style blinds
Method of assessment	<p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills</p> <p>Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> includes Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> includes applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Workplace practices	<ul style="list-style-type: none"> include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer's instructions and specifications
Personal protective equipment	<ul style="list-style-type: none"> includes safety glasses/goggles, hearing protection, safety footwear, protective clothing, respiratory protection
Work orders	<ul style="list-style-type: none"> includes customer order forms, job cards, quotations for work, worksheets specifications, including design, size, colour and quantity

RANGE STATEMENT	
Coil stock	<ul style="list-style-type: none"> • may be solid or perforated
Hardware and fixings	<ul style="list-style-type: none"> • head box components as specified by manufacturer, ladder braid, cord, head rails, rollers, cord locks, tile mechanisms, tilt rods, wands, acorns, trumpets
Tools and equipment	<ul style="list-style-type: none"> • include pliers, scissors, cord threading needle
Work instructions	<ul style="list-style-type: none"> • includes instructions for the machining of the coil stock and construction of the blind
Venetian blind machine	<ul style="list-style-type: none"> • machine that crowns, runs and punches the aluminium coilstock. It automatically feeds the slat through the string tapes at each individual level.
Manufacturer instructions	<ul style="list-style-type: none"> • may be written instruction booklets, instructions on the machine or verbal instructions on correct use

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work	1.1. OHS requirements, legislative requirements and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Work orders are checked and confirmed 1.4. Materials and hardware are selected and checked against work requirements. 1.5. Tools and equipment are selected and checked for safe operation
2. Cut stock and assemble awning	2.1. Metal stock is cut to manufacturer's recommendations 2.2. Metal is bent to form shape of awning 2.3. Awning is assembled to manufacturer specifications
3. Apply quality checks	3.1. Completed awnings are checked ensuring finished product matches work order 3.2. Completed awning is tested for correct operation 3.3. Parts of the work that do not comply with work order are repaired or reworked
4. Complete work	4.1. Finished work is cleaned, protected and stored following workplace practices 4.2. Tools and equipment are cleaned, maintained and stored 4.3. Faulty tools and equipment are reported to appropriate personnel 4.4. Work area is cleaned and waste is disposed of according to workplace practices 4.5. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with site supervisor to:
 - confirm work orders and instructions
 - identify problems
 - report outcomes of constructing metal louvre and canopy hooded style awnings
- work with others and in a team to construct metal louvre and canopy hooded style awnings
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- participate in establishing new ideas and work specifications for constructing metal louvre and canopy hooded style awnings
- plan and organise own work including preparation and layout of work area and obtaining equipment and materials to avoid backtracking
- follow workplace induction principles
- accurately plan and organise own work activities
- adapt to new skill requirements
- use workplace technology related to constructing metal louvre and canopy hooded style awnings including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing metal louvre and canopy hooded style awnings
- organisational and workplace standards, requirements, policies and procedures for constructing metal louvre and canopy hooded style awnings
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment used to construct metal louvre and canopy hooded style awnings and procedures for their safe use, operation and maintenance
- terms used to describe components of metal louvre and canopy hooded style awnings
- characteristics of metals used in the construction of metal louvre and canopy hooded style awnings
- set up, operation and maintenance of static machines used in the construction of metal louvre and canopy hooded style awnings

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• storage systems and labelling• procedures for the recording, reporting and maintenance of workplace records and information• mathematical techniques for estimation and measurement of materials |
|--|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing metal louvre and canopy hooded style awnings
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing metal louvre and canopy hooded style awnings
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Construct one metal louvred awnings and one metal canopy hooded awning. Task is to include selecting materials and hardware, machining material as required by manufacturer of metal stock, assembling awnings, cleaning, packaging and storing awnings, cleaning work area, maintaining and storing equipment and completing workplace documentation and reports.

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace or simulated workplace environment
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing metal louvre and canopy hooded style awnings
 - workplace practices including standard operating procedures and work instructions for constructing

EVIDENCE GUIDE	
	metal louvre and canopy hooded style awnings
Method of assessment	<p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills</p> <p>Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> include Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> include applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Workplace practices	<ul style="list-style-type: none"> include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer instructions and specifications
Personal protective equipment	<ul style="list-style-type: none"> includes safety glasses/goggles, hearing protection, safety footwear, protective clothing, respiratory protection
Work orders	<ul style="list-style-type: none"> include quotations for work, job cards, customer orders, worksheets specifications including design, size, colour and quantity

RANGE STATEMENT	
Material	<ul style="list-style-type: none"> may include aluminium, steel panels and stringers
Hardware	<ul style="list-style-type: none"> may include rivets, screws,
Tools and equipment	<ul style="list-style-type: none"> may include drills, pop rivet guns, screw guns, guillotine, panel saws, benders, shears
Manufacturer specifications	<ul style="list-style-type: none"> may include written or verbal specifications
Tested	<ul style="list-style-type: none"> within limits of normal operation
Appropriate personnel	<ul style="list-style-type: none"> includes assessor, trainer, supervisor, team leader, maintenance officer or manager or any other person responsible for your work activity
Waste	<ul style="list-style-type: none"> may include textiles, metal, timber
Workplace documentation	<ul style="list-style-type: none"> may include time sheets, customer care cards, work orders reports

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, legislative requirements and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Work orders are checked and confirmed 1.4. Tools and equipment are selected and checked for safe operation 1.5. Aluminium stock and hardware is selected and checked against work requirements.
2. Cut materials ready for assembly	2.1. Hoodbox, roller and bottom rail are cut 2.2. Spring is selected according to manufacturer specifications 2.3. Aluminium panels are cut 2.4. Measurements are checked against work order
3. Construct awning	3.1. Aluminium panels are joined to form awning skin 3.2. Roller and bottom rail are installed to skin 3.3. Spring and pin end are fitted to roller 3.4. End caps and pull ring are installed to bottom rail
4. Apply quality checks	4.1. Completed awnings are checked ensuring finished product matches work order 4.2. Finished blind is tested for correct operation 4.3. Parts of the work that do not comply with work order are repaired or reworked
5. Complete work	5.1. Arms and fittings are selected ready for installation 5.2. Finished work is cleaned, packaged with installation hardware and stored following workplace practices 5.3. Tools and equipment are cleaned, maintained and stored 5.4. Faulty tools and equipment are reported to appropriate personnel 5.5. Work area is cleaned and waste is disposed of according to workplace procedures 5.6. Workplace documentation or reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with site supervisor to:
 - confirm work orders and instructions
 - identify problems
 - report outcomes of constructing aluminium roll up style awnings
- work with others and in a team to construct aluminium roll up style awnings
- use pre-checking and inspection techniques to anticipate production problems, avoid reworking and wastage
- participate in establishing new ideas and work specifications for constructing aluminium roll up style awnings
- plan and organise own work, including preparation and layout of work area and obtaining equipment and materials to avoid backtracking
- follow workplace induction principles
- accurately plan and organise own work activities
- adapt to new skill requirements
- use workplace technology related to construct aluminium roll up style awnings, including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing aluminium roll up style awnings
- organisational and workplace standards, requirements, policies and procedures for constructing aluminium roll up style awnings
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment used to construct aluminium roll up style awnings and procedures for their safe use, operation and maintenance
- terms used to describe components of aluminium roll up style awnings
- characteristics of aluminium used in the construction of roll up style awnings
- set up, operation and maintenance of static machines used in the construction of aluminium roll up style awnings
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- mathematical techniques for estimation and measurement of materials

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing aluminium roll up style awnings
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing aluminium roll up style awnings
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Construct a minimum of two aluminium roll up style awnings. Task is to include selecting materials, cutting aluminium panels, preparing hardware, constructing awning skin, applying hardware, cleaning, packaging and storing completed awning, cleaning work area, maintaining and storing tools and equipment, completing workplace documentation

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace or simulated workplace environments
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing aluminium roll up style awnings
 - workplace practices including standard operating procedures and work instructions for constructing aluminium roll up style awnings

EVIDENCE GUIDE

Method of assessment

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills

Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> include Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> include applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Workplace practices	<ul style="list-style-type: none"> may include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer's instructions and specifications
Personal protective equipment	<ul style="list-style-type: none"> Personal protection needs may include safety glasses/goggles, hearing protection, safety footwear, protective clothing, respiratory protection
Work order	<ul style="list-style-type: none"> may include quotations for work, job cards, customer orders, worksheets specifications including design, size, colour

RANGE STATEMENT	
	and quantity
Hardware	<ul style="list-style-type: none"> may include screws, rivets, roller, bottom rail, hood box components, spring, pin end, pull ring, end caps, rivets
Tools and equipment	<ul style="list-style-type: none"> include guillotine, screw drivers, pop rivet gun,
Manufacturer instructions	<ul style="list-style-type: none"> may be written instruction booklets, instructions on the tools and equipment or instructions for correct usage
Joined	<ul style="list-style-type: none"> may include riveting or welding processes
Tested	<ul style="list-style-type: none"> within limits of correct operation
Appropriate personnel	<ul style="list-style-type: none"> includes assessor, trainer, supervisor, team leader, maintenance officer or manager or any other person responsible for your work activity
Waste	<ul style="list-style-type: none"> may include metal and hardware waste removal should be in accordance with workplace practices and environmental legislation covering disposal of industrial waste
Workplace documentation	<ul style="list-style-type: none"> may include time sheets, customer care cards, work orders

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify products, fittings and attachments to be used	1.1. Type of blind to be fitted and work order requirements are identified 1.2. Type of installation and access is identified from work order or site inspection 1.3. Mounting brackets, materials and tools are identified from work instructions and site inspection
2. Plan process for installing blinds	2.1. Customer is consulted to determine suitable day and time for installation 2.2. Equipment is identified to minimise risk of damage to customer's premises or injuries to self 2.3. Work sequence is planned in a logical order 2.4. Attachment process is planned to conform to quality requirements, maximise the appearance of the finished work and provide for the most economical use of materials and labour 2.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 2.6. Blind operating mechanism is set up and checked against manufacturer specifications and work instructions
3. Complete installation	3.1. Planned work sequence is followed 3.2. OHS requirements , including personal protection needs , are observed throughout the work 3.3. Blinds are fitted and tested for correct operation 3.4. Pellets, cord brackets and pulleys are fitted using appropriate hardware and adjusted to suit blind operation 3.5. Blind is checked for correct operation and adjusted or repaired if necessary 3.6. Customer is advised on correct operation of blind
4. Complete job and clean work area	4.1. Work site is cleaned and equipment is cleaned and stored according to workplace practices 4.2. Rubbish is cleared and waste collected for disposal or recycling as appropriate in accordance with workplace practices 4.3. Customer is presented with invoice, payment collected and receipt issued. 4.4. Workplace documentation is completed and filed

ELEMENT	PERFORMANCE CRITERIA
	according to workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- speak clearly and directly
- apply effective listening techniques
- ask questions to gain information
- complete standardised workplace documentation
- provide information to customers
- work with others and in a team to install interior blinds
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- test systems and make adjustments
- select appropriate solutions to problems
- adapt to new situations
- discuss initiatives with colleagues
- initiate solutions to problems
- plan and organise own work, including preparation and planning of work and obtaining equipment and materials to avoid backtracking
- manage own time and prioritise own work
- assess own skills and knowledge
- take responsibility
- apply quality practices
- adapt to new skill requirements
- apply reflective skills
- use workplace technology related to installing interior blinds including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for installing interior blinds
- organisational and workplace requirements, policies and procedures for installing interior blinds
- reading and interpreting workplace documents including work orders, work instructions and manufacturer specifications
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment used for installing interior blinds and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• types, uses, limitations and operating mechanisms of interior blinds• storage systems and labelling• procedures for the recording, reporting and maintenance of workplace records and information• mathematical techniques for estimation and measurement of materials• procedures for presentation of invoices, collection and receipting of payments |
|--|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in installing interior blinds
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in installing interior blinds
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Install a minimum of four different styles of interior blind in a range of on-site or simulated locations
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing interior blinds
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace and simulated workplace environments
- The following resources should be made available:
 - installation site or simulated installation site
 - materials and equipment relevant to installing interior blinds
 - workplace practices including standard operating procedures and work instructions for installing interior blinds

EVIDENCE GUIDE**Method of assessment**

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills

Assessment methods must be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real and simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Type of blind	<ul style="list-style-type: none"> includes, but is not limited to romans, hollands, plastic Venetians, timber Venetians, aluminium Venetians, verticals
Work order	<ul style="list-style-type: none"> may include, but is not limited to quotations for work, job cards, customer orders
Type of installation	<ul style="list-style-type: none"> may include installations into timber, plasterboard, masonry, bay windows, corners and doors
Access	<ul style="list-style-type: none"> restrictions on access may determine equipment used
Site inspection	<ul style="list-style-type: none"> should be conducted in consultation with customer
Materials	<ul style="list-style-type: none"> include screws, nails, bolts, masonry anchors,
Tools	<ul style="list-style-type: none"> may include screwdrivers, hammers, drills, ladders,

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify products, fittings and attachments to be used	1.1. Type of <i>blind</i> or <i>awning</i> to be installed is identified 1.2. Installation <i>hardware, tools and equipment</i> are identified from <i>work instructions</i> and <i>site inspection</i> 1.3. <i>Customer</i> is consulted to determine day and time for installation 1.4. <i>Local government regulations</i> regarding installation of exterior blinds and awnings are checked and adhered to
2. Plan installation process	2.1. <i>OHS requirements</i> and <i>personal protection needs</i> are observed throughout the work 2.2. <i>Work order</i> is read and interpreted 2.3. <i>Work sequence</i> is planned in a logical order to suit job 2.4. <i>Work site</i> is checked to determine access and special equipment requirements,
3. Install exterior blind or awning	3.1. Public and property is <i>protected</i> 3.2. Product to be installed is laid out and checked against work order 3.3. Fixing hardware is installed to <i>manufacturer specifications</i> 3.4. Blind or awning is installed to manufacturer's specifications
4. Complete the installation	4.1. Operation of product is <i>tested</i> and adjusted if necessary 4.2. Customer is shown correct use of product
5. Clean work area	5.1. Tools and equipment are cleaned and stored according to workplace practices 5.2. Work area is cleaned and left in a safe condition 5.3. <i>Waste</i> and scrap are removed and disposed of or recycled as appropriate following workplace procedures 5.4. Invoice is issued to customer and <i>payment</i> received and receipted 5.5. <i>Workplace documentation</i> is completed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- speak clearly and directly
- apply effective listening techniques
- ask questions to gain information
- complete standardised workplace documentation
- provide information to customers
- work with others and in a team to install exterior blinds and awnings
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- test systems and make adjustments
- select appropriate solutions to problems
- adapt to new situations
- discuss initiatives with colleagues
- initiate solutions to problems
- plan and organise own work, including preparation and planning of work and obtaining equipment and materials to avoid backtracking
- manage own time and prioritise own work
- assess own skills and knowledge
- take responsibility
- apply quality practices
- adapt to new skill requirements
- apply reflective skills
- use workplace technology related to installing exterior blinds and awnings, including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for installing interior blinds
- organisational and site standards, requirements, policies and procedures for installing interior blinds
- reading and interpreting workplace documents including work orders, work instructions and manufacturer specifications
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment used to install exterior blinds and awnings and procedures for their safe use, operation and maintenance
- types, uses, limitations and operating mechanisms of exterior blinds and awnings,

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <p>including special application brackets</p> <ul style="list-style-type: none">• storage systems and labelling• procedures for the recording, reporting and maintenance of workplace records and information• mathematical techniques for estimation and measurement of materials• procedures for presentation of invoices, collection and receipting of payments |
|---|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in installing interior blinds
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in installing interior blinds
- Select, set up and maintain equipment in accordance with manufacturer instructions and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing interior blinds
- Communicate effectively and work safely with others in the work area
- Install a minimum of four different styles of exterior blinds or awnings in a range of on-site or simulated locations

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace and simulated workplace environments
- The following resources should be made available:
 - installation site or simulated installation site
 - materials and equipment relevant to installing exterior blinds and awnings
 - workplace practices including standard operating procedures and work instructions for installing

EVIDENCE GUIDE	
	exterior blinds and awnings
Method of assessment	<p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real and simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Blind	<ul style="list-style-type: none"> may include roll up style exterior blinds and pull down style exterior blinds
Awning	<ul style="list-style-type: none"> includes metal louvre style awnings, textile canopy style awnings, metal hooded canopy style awnings, aluminium roll up style awnings, folding arm style awnings
Hardware	<ul style="list-style-type: none"> includes screws, masonry anchors, dyna bolts, nuts and bolts, mounting brackets, hex screws
Tools and equipment	<ul style="list-style-type: none"> include screwdrivers, drills, hex keys
Work instructions	<ul style="list-style-type: none"> includes instructions for the installation of different styles of exterior blinds and awnings
Site inspection	<ul style="list-style-type: none"> should be conducted in consultation with customer
Customer	<ul style="list-style-type: none"> may include home owners, real estate agents, tenants, body corporate representatives, business owners
Local government regulations	<ul style="list-style-type: none"> in relation to exterior blind and awning installation and installation sites
OHS requirements	<ul style="list-style-type: none"> includes Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Personal protection needs	<ul style="list-style-type: none"> includes safety glasses, hearing protection, safety boots, sunscreen, hats,
Work order	<ul style="list-style-type: none"> includes quotations for work, job cards, customer orders
Work sequence	<ul style="list-style-type: none"> should cover the steps for installation in a logical order to prevent back tracking

RANGE STATEMENT	
Work site	<ul style="list-style-type: none"> work site may include construction sites, single storey and multi-storey dwellings and commercial premises, newly completed buildings
Protected	<ul style="list-style-type: none"> includes drop sheets, barriers, cones, signs
Manufacturer specifications	<ul style="list-style-type: none"> may be written or verbal specifications
Tested	<ul style="list-style-type: none"> within limitations of normal operation
Waste	<ul style="list-style-type: none"> includes textiles, metals, hardware, timber, masonry, fibro cement, concrete, treated pine waste removal should be in accordance with workplace practices and environmental legislation covering disposal of industrial waste
Payment	<ul style="list-style-type: none"> may include cash, cheque, credit card depending on workplace procedures
Workplace documentation	<ul style="list-style-type: none"> may include time sheets, customer care cards, work orders

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify products, fittings and attachments to be used	1.1. Type of timber shutter to be installed is identified 1.2. Installation <i>hardware, tools and equipment</i> are identified from <i>work instructions</i> and <i>site inspection</i> 1.3. <i>Customer</i> is consulted to determine day and time for installation
2. Plan installation process	2.1. <i>OHS requirements</i> and <i>personal protection</i> needs are observed throughout the work 2.2. <i>Work order</i> is read and interpreted 2.3. <i>Work sequence</i> is planned in a logical order to suit job 2.4. <i>Work site</i> is checked to determine access, special equipment requirements 2.5. Product to be installed is laid out and checked against work order 2.6. Product to be installed is protected and transported to worksite without damage
3. Install timber shutters	3.1. Public and property is <i>protected</i> if necessary 3.2. Fixing hardware is installed to <i>manufacturer specifications</i> 3.3. Timber shutter is installed to manufacturer's specifications
4. Complete the installation	4.1. Operation of product is <i>tested</i> and adjusted if necessary 4.2. Customer is shown correct use of product
5. Clean work area	5.1. Tools and equipment are cleaned and stored according to workplace practices 5.2. Work area is cleaned and left in a safe condition 5.3. <i>Waste</i> and scrap are removed and disposed of or recycled as appropriate following workplace practices 5.4. Invoice is issued to customer and <i>payment</i> received and receipted 5.5. <i>Workplace documentation</i> is completed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- speak clearly and directly
- apply effective listening techniques
- ask questions to gain information
- complete standardised workplace documentation
- provide information to customers
- work with others and in a team to install interior blinds
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- test systems and make adjustments
- select appropriate solutions to problems
- adapt to new situations
- discuss initiatives with colleagues
- initiate solutions to problems
- plan and organise own work, including preparation and planning of work and obtaining equipment and materials to avoid backtracking
- manage own time and prioritise own work
- assess own skills and knowledge
- take responsibility
- apply quality practices
- adapt to new skill requirements
- apply reflective skills
- use workplace technology related to installing timber shutters including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for installing interior blinds
- organisational and workplace requirements, policies and procedures for installing timber shutters
- reading and interpreting workplace documents including work orders, work instructions and manufacturer specifications
- types of tools and equipment used to install timber shutters and procedures for their safe use, operation and maintenance
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• storage systems and labelling• types, uses and limitations of timber shutters• characteristics of timber and hardware used to construct and install timber shutters• procedures for the recording, reporting and maintenance of workplace records and information• mathematical techniques for estimation and measurement of materials• procedures for presentation of invoices, collection and receipting of payments |
|---|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in installing interior blinds
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in installing interior blinds
- Select, set up and maintain equipment in accordance with manufacturer instructions and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Install a minimum of four timber shutters in a range of on-site or simulated locations
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing interior blinds
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace or simulated workplace environments
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to installing timber shutters
 - workplace practices, including standard operating procedures and work instructions for installing timber shutters

EVIDENCE GUIDE**Method of assessment**

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills

Assessment methods must be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real and simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Hardware	<ul style="list-style-type: none"> may include screws, masonry anchors, dyna bolts, nuts and bolts, mounting brackets, hinges, filler strips, cover strips, track systems
Tools and equipment	<ul style="list-style-type: none"> may includes, screwdrivers, docking saws, ladders, tape measure, power drill, scissors, caulking gun
Work instructions	<ul style="list-style-type: none"> includes instructions for the installation of different styles of timber shutters for both internal and external applications

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, legislative requirements and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Work order requirements are checked and confirmed 1.4. Tools and equipment are selected and checked for safe operation 1.5. Material and hardware is selected and checked against work requirements. 1.6. Material is checked for flaws
2. Cut materials ready for assembly	2.1. Folding arms are selected following work order and workplace practices 2.2. Roller, front rail and square head rail are cut 2.3. Correct side of material and pattern direction is identified 2.4. Material for skin is laid out 2.5. Material is marked and cut 2.6. Material is joined to form awning skin 2.7. Measurements are checked against work order
3. Construct awning	3.1. Arm assembly is constructed following manufacturer instructions 3.2. Roller and front rail are attached to skin 3.3. Skin is fitted to arm assembly
4. Apply quality checks	4.1. Completed awnings are checked ensuring finished product matches work order 4.2. Completed awning is tested to ensure correct and safe operation 4.3. Parts of the work that do not comply with work order are repaired or re-worked
5. Complete work	5.1. Finished work is cleaned, packaged with installation hardware and stored following workplace practices 5.2. Tools and equipment are cleaned, maintained and stored 5.3. Faulty tools and equipment are reported to appropriate personnel 5.4. Work area is cleaned and waste is disposed of according to workplace procedures 5.5. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- ask questions to gain information
- complete standardised workplace documentation
- work with others and in a team to construct folding arm style awnings
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- test systems and make adjustments
- select appropriate solutions to problems
- adapt to new situations
- discuss initiatives with colleagues
- initiate solutions to problems
- plan and organise own work, including preparation and planning of work and obtaining equipment and materials to avoid backtracking
- manage own time and prioritise own work
- assess own skills and knowledge
- take responsibility
- apply quality practices
- adapt to new skill requirements
- apply reflective skills
- use workplace technology related to constructing folding arm style awnings including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing folding arm style awnings
- organisational and site standards, requirements, policies and procedures for constructing folding arm style awnings
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment and procedures for their safe use, operation and maintenance
- terms used to describe components of folding arm style awnings
- characteristics of materials used to construct folding arm style awnings
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing folding arm style awnings
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing folding arm style awnings
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Construct a minimum of two folding arm style awnings. Task is to include constructing the arm assembly, preparing skin, assembling awning, cleaning, packaging and storing completed awning, cleaning work area and completing workplace documentation

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace and simulated workplace environments
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing folding arm style awnings
 - workplace practices including standard operating procedures and work instructions for constructing folding arm style awnings

Method of assessment

Assessment methods must confirm consistency and

EVIDENCE GUIDE

	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills</p> <p>Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Workplace practices

- may include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer instructions and specifications

Personal protection needs

- includes safety glasses/goggles, hearing protection, safety footwear, protective clothing and head wear, respiratory protection

Work order

- includes quotations for work, job cards, customer orders
- specifications including design, size, colour

RANGE STATEMENT	
	and quantity
Tools and equipment	<ul style="list-style-type: none"> includes hex keys, drills (power or battery), drill bits, hammer, socket set

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, legislative requirements and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Tools and equipment are selected and checked for safe operation 1.4. Work order requirements are checked and confirmed
2. Fabricate framework	2.1. Material and hardware is selected and checked against work order 2.2. Frame is fabricated according to work instructions 2.3. Fixing points are incorporated into frame fabrication 2.4. Measurements are checked against work order
3. Assemble framework	3.1. Frame is assembled according to manufacturer instructions and workplace practices 3.2. Frame is braced 3.3. Frame is finished according to work order and workplace practices 3.4. Splines for attaching cloth are cut
4. Apply quality checks	4.1. Completed framework is checked ensuring finished product matches work order 4.2. Parts of the work that do not comply with work order are repaired.
5. Complete work	5.1. Finished work is cleaned, packaged and stored following workplace practices 5.2. Tools and equipment are cleaned, maintained and stored 5.3. Faulty tools and equipment are reported to appropriate personnel 5.4. Work area is cleaned and waste is disposed of according to workplace procedures 5.5. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- ask questions to gain information
- complete standardised workplace documentation
- work with others and in a team to construct framework for canopy-style awnings
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- test systems and make adjustments
- select appropriate solutions to problems
- adapt to new situations
- discuss initiatives with colleagues
- initiate solutions to problems
- plan and organise own work, including preparation and planning of work and obtaining equipment and materials to avoid backtracking
- manage own time and prioritise own work
- assess own skills and knowledge
- take responsibility
- apply quality practices
- adapt to new skill requirements
- apply reflective skills
- use workplace technology related to constructing framework for canopy style awnings, including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing metal awnings frames
- organisational and workplace standards, requirements, policies and procedures for constructing framework for canopy style awnings
- environmental protection requirements relating to the disposal of waste material
- established lines of communications and workplace protocols
- problem identification and resolution
- types of tools and equipment used in constructing framework for canopy style awnings and procedures for their safe use, operation and maintenance
- characteristics of aluminium and steel used in constructing framework for canopy style awnings
- computer programs
- cutting patterns and sequences

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• cutting tool condition including sharpness, straightness and suitability for task• industry standards for framing steel and aluminium• storage systems and labelling• procedures for the recording, reporting and maintenance of workplace records and information• mathematical procedures for estimation and measurement |

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing framework for canopy style awnings
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing framework for canopy style awnings
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Construct a minimum two frameworks for canopy style awning. Task is to include selecting tools, equipment and materials, fabricating and/or assembling to framework, finishing the framework, applying quality checks, packaging and storing framework, maintaining and storing tools and equipment, cleaning work area and completing workplace documentation.

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace or simulated workplace environments
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing framework for canopy style awnings
 - workplace practices including standard operating procedures and work instructions for constructing

EVIDENCE GUIDE	
	canopy style awnings
Method of assessment	<p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills</p> <p>Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> include Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may the use of personal protective equipment, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> include applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Workplace practices	<ul style="list-style-type: none"> include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer instructions and specifications
Personal protective equipment	<ul style="list-style-type: none"> includes safety glasses/goggles, hearing protection, safety footwear, protective clothing and head wear, respiratory protection
Tools and equipment	<ul style="list-style-type: none"> include calculators, pop rivet gun, screwdrivers, hack saws, socket set, hand grinder, hammers, files, tin snips, spanners, level, square, measuring tape, hex keys, tap

RANGE STATEMENT	
	and die sets, straight edges, pipe bender, bench grinders, hammer drills, cordless screwdriver/drill, air drills, jig saws, circular saws
Work order	<ul style="list-style-type: none"> includes quotations for work, job cards, customer orders specifications including design, size, colour and quantity
Manufacturer instructions	<ul style="list-style-type: none"> may be written instruction booklets, instructions on the tools or equipment or instructions for correct use
Material	<ul style="list-style-type: none"> may be aluminium or steel
Hardware	<ul style="list-style-type: none"> includes nuts and bolts
Work instructions	<ul style="list-style-type: none"> includes instructions for constructing steel frames and aluminium frames
Measurements	<ul style="list-style-type: none"> includes final size of frame, gauge of fabricating metal
Finished	<ul style="list-style-type: none"> may be aluminium, powder coated, hot dipped galvanised, painted
Appropriate personnel	<ul style="list-style-type: none"> includes assessor, trainer, supervisor, team leader, maintenance officer or manager or any other person responsible for your work activity
Waste	<ul style="list-style-type: none"> includes metals (aluminium, steel) hardware waste removal should be in accordance with workplace practices and environmental legislation covering disposal of industrial waste
Workplace documentation	<ul style="list-style-type: none"> may include time sheets, customer care cards, work orders, reports

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, legislative requirements and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and checked 1.3. Work order requirements are checked and confirmed 1.4. Tools and equipment are selected and checked for safe operation 1.5. Fabric is selected from stock and checked against work order 1.6. Fabric is checked for flaws 1.7. Hardware is selected and checked against work order
2. Lay out, mark and cut fabrics	2.1. Correct side of fabric, naps, direction of pattern and pattern matches are identified 2.2. Allowances are calculated and recorded 2.3. Fabric is laid out 2.4. Fabric is marked 2.5. Fabric is cut following workplace practices
3. Construct blind	3.1. Fabric is joined or trimmed to required width 3.2. Pleats are formed in fabric according to workplace practices 3.3. Cord holes are punched in fabric 3.4. Bottom of blind is finished according to work order 3.5. Head and bottom rail are cut to required length 3.6. Blind is assembled according to work instructions 3.7. Cords are cut and attached following work instructions 3.8. Child safety mechanisms are selected and attached
4. Apply quality checks	4.1. Finished blinds are checked that end finishing and final length of finished blinds match work requirements 4.2. Finished blind is tested for correct operation 4.3. Parts of the work that do not comply with work order are repaired or re-worked
5. Complete work	5.1. Finished work is cleaned, protected and stored following workplace practices 5.2. Tools and equipment are cleaned, maintained and

ELEMENT	PERFORMANCE CRITERIA
	<p>stored</p> <p>5.3. Faulty tools and equipment are reported to <i>appropriate personnel</i></p> <p>5.4. Work area is cleaned and <i>waste</i> is disposed of according to workplace practices</p> <p>5.5. <i>Workplace documentation</i> is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- ask questions to gain information
- complete standardised workplace documentation
- work with others and in a team to construct folding arm style awnings
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- test systems and make adjustments
- select appropriate solutions to problems
- adapt to new situations
- discuss initiatives with colleagues
- initiate solutions to problems
- plan and organise own work, including preparation and planning of work and obtaining equipment and materials to avoid backtracking
- manage own time and prioritise own work
- assess own skills and knowledge
- take responsibility
- apply quality practices
- adapt to new skill requirements
- apply reflective skills
- use workplace technology related to constructing pleated style blinds including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing pleated style blinds
- organisational and workplace standards, requirements, policies and procedures for constructing pleated style blinds
- environmental protection requirements relating to the disposal of waste material
- established communication channels and workplace/worksites protocols
- problem identification and resolution
- types of tools and equipment used in the construction of pleated style blinds and procedures for their safe use, operation and maintenance
- characteristics of fabrics used to construct pleated style blinds
- cutting patterns and sequences
- cutting tool condition including sharpness, straightness and suitability for task
- industry standards for fabric widths

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• terms used to describe components of pleated style blinds• storage systems and labelling• procedures for the recording, reporting and maintenance of workplace records and information• appropriate mathematical procedures for estimation and measurement |
|---|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing pleated blinds
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing pleated blinds
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Cut fabrics accurately according to work order
- Construct a minimum of two pleated blinds

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace or simulated workplace environments
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing pleated blinds
 - workplace practices including standard operating procedures and work instructions for constructing pleated blinds

Method of assessment

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills

EVIDENCE GUIDE

Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> include Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> include applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Workplace practices	<ul style="list-style-type: none"> may include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer instructions and specifications
Personal protection needs	<ul style="list-style-type: none"> includes safety glasses/goggles, hearing protection, safety footwear, protective clothing and head wear, respiratory protection
Work order	<ul style="list-style-type: none"> includes quotations for work, job cards, customer orders specifications including design, size, colour

RANGE STATEMENT	
	and quantity
Tools and equipment	<ul style="list-style-type: none"> includes cutting bench, shears, knives, cut off saws, sewing machines, needles, welding equipment, glue guns, heat set machines,
Fabric	<ul style="list-style-type: none"> includes polyester blends, metalized, dim out, flame retardant, solar protected
Hardware	<ul style="list-style-type: none"> includes guide wires, operation mechanisms (crank and motor), cord, trumpets, remote control
Allowances	<ul style="list-style-type: none"> may be for hardware, joins, hems
Laid out	<ul style="list-style-type: none"> fabric should be laid out flat and square on a cutting bench large enough to take the full width of the fabric
Marked	<ul style="list-style-type: none"> fabric may be marked using chalk, markers or pencil
Joined	<ul style="list-style-type: none"> may include sew, weld or glue
Work instructions	<ul style="list-style-type: none"> includes instructions for the construction of pleated style blinds
Child safety mechanisms	<ul style="list-style-type: none"> as required by legislation or code of practice
Tested	<ul style="list-style-type: none"> within limits of normal operation
Appropriate personnel	<ul style="list-style-type: none"> includes assessors, trainer, supervisor, team leader, maintenance officer or manager, or any other person responsible for your work activity
Waste	<ul style="list-style-type: none"> may include textiles, hardware waste removal should be in accordance with workplace practices and environmental legislation covering disposal of industrial waste
Workplace documentation	<ul style="list-style-type: none"> may include time sheets, customer care cards, work orders, reports

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, legislative requirements , and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Style of blind is identified from work order 1.4. Tools and equipment are selected and checked for safe operation 1.5. Materials are selected from stock and checked against work requirements 1.6. Materials are checked for flaws
2. Lay out, mark and cut materials	2.1.1. Material is laid out and marked 2.1.2. Material is cut
3. Construct blind	3.1. Wood is woven to form skin of blind 3.2. Head and bottom rails are attached to blind 3.3. Cords are attached to blind 3.4. Blind is finished according to work instructions 3.5. Child safety mechanisms are selected and attached
4. Apply quality checks	4.1. Finished blinds are checked ensuring end finishing and final length of finished blinds match work requirements 4.2. Finished blind is tested for correct operation 4.3. Parts of the work that do not comply with work order are repaired or re-worked
5. Complete work	5.1. Finished work is protected and stored following workplace practices 5.2. Tools and equipment are cleaned, maintained and stored 5.3. Faulty tools and equipment are reported to appropriate personnel 5.4. Work area is cleaned and waste is disposed of according to workplace procedures 5.5. Workplace documentation or reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- ask questions to gain information
- complete standardised workplace documentation
- work with others and in a team to construct folding arm style awnings
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- test systems and make adjustments
- select appropriate solutions to problems
- adapt to new situations
- discuss initiatives with colleagues
- initiate solutions to problems
- plan and organise own work, including preparation and planning of work and obtaining equipment and materials to avoid backtracking
- manage own time and prioritise own work
- assess own skills and knowledge
- take responsibility
- apply quality practices
- adapt to new skill requirements
- apply reflective skills
- use workplace technology related to constructing folding arm style awnings, including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing wood weave blinds
- organisational and workplace standards, requirements, policies and procedures for constructing wood weave blinds
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types of tools and equipment used to construct wood weave blinds and procedures for their safe use, operation and maintenance
- terms used to describe components of wood weave style blinds
- characteristics of timber used in wood weave style blinds
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing wood weave style blinds
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing wood weave style blinds
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Cut wood accurately according to work order
- Construct a minimum of two wood weave style blinds; one roman style, one roll up style

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace or simulated workplace environments
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing wood weave blinds
 - workplace practices including standard operating procedures and work instructions for constructing wood weave blinds

Method of assessment

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of

EVIDENCE GUIDE

required knowledge and skills

Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> include Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> include applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Workplace practices	<ul style="list-style-type: none"> may include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer instructions and specifications

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work	1.1. OHS requirements, legislative requirements and workplace practices are observed throughout the work 1.2. Personal protective equipment is selected and used 1.3. Type of pelmet to be constructed is identified from work order 1.4. Tools and equipment are selected and checked for safe operation 1.5. Materials and hardware are identified and selected 1.6. Work sequence is planned to conform with quality requirements, minimise time and economically use materials
2. Prepare pelmet components	2.1. Components are measured and cut to specification 2.2. Components are laid out ready for assembly
3. Assemble pelmet components	3.1. Components are assembled according to work instructions 3.2. Problems occurring during work operations are identified and reported following workplace practices
4. Complete work	4.1. Completed work is cleaned, packaged and stored according to workplace practices 4.2. Tools and equipment are cleaned, maintained and stored 4.3. Faulty tools and equipment are tagged and reported to appropriate personnel 4.4. Work area is cleaned and waste is disposed of according to workplace practices 4.5. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- ask questions to gain information
- complete standardised workplace documentation
- work with others and in a team to construct folding arm style awnings
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- test systems and make adjustments
- select appropriate solutions to problems
- adapt to new situations
- discuss initiatives with colleagues
- initiate solutions to problems
- plan and organise own work, including preparation and planning of work and obtaining equipment and materials to avoid backtracking
- manage own time and prioritise own work
- assess own skills and knowledge
- take responsibility
- apply quality practices
- adapt to new skill requirements
- apply reflective skills
- use workplace technology related to constructing pelmets, including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for constructing pelmets
- organisational and site standards, requirements, policies and procedures for constructing pelmets
- environmental protection requirements relating to the disposal of waste material
- established communication channels and workplace/worksites protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
- computer programs
- cutting patterns and sequences
- cutting tool condition assessment
- terms used to describe components of pelmets

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks in constructing pelmets
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Identify materials and equipment used in constructing pelmets
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Communicate and work with others in the work area
- Report process for materials faults, damaged products or equipment
- Cut component materials according to work orders to within +/- 1 mm
- Construct a minimum of four pelmets suitable for four different style of internal blinds

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of required knowledge and skills may be conducted in workplace or simulated workplace environments
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing pelmets
 - workplace practices including standard operating procedures and work instructions for constructing pelmets

Method of assessment

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of

EVIDENCE GUIDE

required knowledge and skills

Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> include Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> include applicable legislation from all levels of government that affect organisational operation. Requirements may include award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Workplace practices	<ul style="list-style-type: none"> may include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines), tolerances, following manufacturer instructions and specifications
Personal protection needs	<ul style="list-style-type: none"> includes safety glasses/goggles, hearing protection, safety footwear, protective clothing and head wear, respiratory protection
Work order	<ul style="list-style-type: none"> includes quotations for work, job cards, customer orders specifications, including design, size, colour and quantity

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop and maintain knowledge of products and services	1.1. A comprehensive knowledge and understanding of industry <i>products</i> and <i>services</i> is actively and regularly researched from <i>authoritative sources</i> 1.2. <i>Characteristics of products</i> and services are identified and understood using available product and service <i>documentation</i> . 1.3. <i>Sample</i> materials, products and <i>visual aids</i> are collected and organised for easy use
2. Prepare for work	2.1. A range of materials and products are selected to match <i>customer requirements</i> and suitability for purpose 2.2. An appointment is arranged with the customer and an appropriate schedule is agreed
3. Confirm customer requirements	3.1. Questioning and <i>active listening</i> techniques are used to clarify customer requirements 3.2. Customer requirements are identified professionally, courteously and with tact 3.3. <i>Assumptions</i> are documented in accordance with workplace practices 3.4. Customer requirements are <i>fed back</i> accurately in language that can be understood by the customer and workplace staff 3.5. Customer requirements are <i>documented</i> in accordance with workplace practices
4. Provide advice on blinds and awnings	4.1. Viable options for colour, material and style that are relevant to the customer's requirements are presented 4.2. Options for colour, materials and style are explained to, and discussed with the customer to facilitate customer understanding of available products and services 4.3. Material samples and visual aids are made available to the customer to facilitate customer understanding of available products and services 4.4. Benefits and approximate costs of each option are explained to the customer to facilitate informed decision making
5. Agree selection with customer	5.1. Customer selection including agreed delivery timeframe is determined 5.2. Customer <i>commitment</i> to agreed selection is gained in accordance with workplace practices

ELEMENT	PERFORMANCE CRITERIA
	5.3. Documentation is completed following workplace practices including specification sheets for products selected (colour, style, etc) and drawings 5.4. Customer is informed of <i>rights and obligations</i> regarding product or service
6. Finalise process	6.1. Sample products are returned to storage as required 6.2. <i>Documentation</i> is submitted to <i>appropriate personnel</i> in accordance with workplace practices 6.3. Contact is maintained with customer throughout the manufacturing and installation process

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- speak clearly and directly
- apply effective listening techniques
- ask questions to gain information
- complete standardised workplace information
- share information
- meet the needs of customers
- provide information to customers
- write workplace documentation
- present information
- work as part of a team
- share information
- apply a range of strategies to solve problems
- monitor and evaluate solutions
- identify and define problems
- develop practical solutions to problems
- select appropriate solutions to problems
- apply analysis skills
- show independence and initiative
- adapt to new situations
- initiate solutions to problems
- discuss initiatives with colleagues
- generate a range of options
- assess risks and take appropriate action
- manage innovation and change
- determine opportunities to improve processes
- take initiative and make decisions
- collect and organise information
- plan tasks and identify task outcomes
- plan use of resources
- assess and prioritise tasks
- manage time and resources
- participate in continuous improvement processes
- allocate people and other resources to tasks
- collect and analyse information

REQUIRED SKILLS AND KNOWLEDGE

- establish clear goals and deliverables
- amend own work practices
- clarify objectives
- manage workplace information
- select and sequence information
- manage own time and prioritise own work
- assess own skills and knowledge
- use feedback to improve performance
- take responsibility
- apply knowledge and confidence in own ideas
- apply quality practices
- work safely
- adapt to new skill requirements
- be open to new ideas and techniques
- invest time and effort into learning new skills
- be open to learning and accommodate change
- apply reflective skills
- use equipment and tools
- use technology relevant to the job
- use basic IT skills
- use IT to organise information

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to blinds and awnings manufacturing and installation
- organisational and site standards, requirements, policies and procedures for providing advice to customers
- interpretation of plans and worksheets
- colour coordination and matching
- fabric and material types and their application
- suitable applications of the various styles of blinds and awnings
- organisation's products and services
- principles and techniques of public relations and product promotion
- strategies for planning and monitoring activities
- consultation methods, techniques and protocols
- terms used to describe components of blinds and awnings
- procedures for the recording, reporting and maintenance of workplace records and information
- mathematical techniques for estimation and measurement of materials

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Identify products and materials used in blinds and awnings manufacturing • Conducting meetings and presentations • Assessing and reporting on customer satisfaction • Analysing sales and product development data • Completing workplace documentation • Advise customer on at least three occasions involving material, style and colour selection
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of required knowledge and skills may be conducted in workplace or simulated workplace environment • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to providing advice to customers • workplace practices including standard documentation and procedures relevant to providing advice to customers
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills</p> <p>Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Products	<ul style="list-style-type: none"> includes blinds and/or awnings
Services	<ul style="list-style-type: none"> includes preparation, manufacturing and installation
Authoritative sources	<ul style="list-style-type: none"> includes manufacturers, industry resource groups, industry advocacy groups
Characteristics of products	<ul style="list-style-type: none"> includes characteristics of fabrics, materials, fixings
Documentation	<ul style="list-style-type: none"> includes product information sheets, specifications
Sample	<ul style="list-style-type: none"> may include fabric off-cuts, photographs, drawings, sketches
Visual aids	<ul style="list-style-type: none"> include photographs, brochures, computer presentations
Customer requirements	<ul style="list-style-type: none"> may include sun protection, darkening effects, privacy, insulation, decoration, noise reduction, weather protection, presenting a professional image, advertising and branding, light dispersment
Active listening	<ul style="list-style-type: none"> includes maintaining eye contact, asking questions to clarify meaning,
Assumptions	<ul style="list-style-type: none"> includes site access, removal and disposal of existing blinds, awnings or fixtures
Feed back	<ul style="list-style-type: none"> includes verbal or written feed back
Documented	<ul style="list-style-type: none"> includes quotation for work, sketches, drawings
Commitment	<ul style="list-style-type: none"> includes signing work order or contract, collecting and receipting deposits
Rights and obligations	<ul style="list-style-type: none"> includes cooling off periods, providing access to property, availability at arranged time, payment terms and conditions
Documentation	<ul style="list-style-type: none"> includes work orders, customer care cards

LMFBA4001A Assess suitability of blinds or awnings

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to assess the suitability of blinds and awnings in a range of environments taking into account building structure, natural environmental constraints, regulations and legislation.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to the skills and knowledge required to assess the suitability of blinds and awnings for a range of environments. The unit applies in a workplace and on-site environment and may be conducted in small to large scale enterprises. Applications involve responsibility for, and limited organisation of, others.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop and maintain knowledge of products	1.1. Identify and describe the characteristics of blind and awnings <i>products and components</i> 1.2. Sample materials, products and visual aids are collected and organised for use in presentations 1.3. Identify and describe <i>building styles</i> 1.4. Identify and describe <i>building codes, regulations and legislation</i>
2. Assess suitability of customer requirements for situation	2.1. Questioning and active listening techniques are used to identify and clarify customer needs and requirements 2.2. Location for product is inspected observing <i>OHS requirements</i> 2.3. <i>Restrictions and limitations</i> of building and natural environment are assessed 2.4. Restrictions and limitations of blinds and awnings are assessed
3. Provide advice to customer following assessment	3.1. Characteristics of products are explained using sample materials, visual aids and product specifications 3.2. Building covenant and other regulations and legislative requirements are presented to customer 3.3. Range of styles and materials are presented to the customer for evaluation 3.4. Customer queries are answered and examples used to illustrate answers
4. Finalise process	4.1. Sample products are returned to storage 4.2. Reports are prepared for the purpose of estimating and costing 4.3. Relevant information is presented to customer

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- greet customer in an appropriate manner, use appropriate questioning techniques and provide feedback to customer to satisfy customer needs and requirements
- work with others and in a team to assess suitability of blinds and awnings for situations
- develop positive workplace relationships
- apply a range of strategies to solve problems
- monitor and evaluate solutions
- identify, diagnose and rectify faults
- resolve conflict through negotiation
- identify and select practical solutions to problems using analytical skills
- show independence and initiative in making decisions
- discuss initiatives with colleagues to generate a range of options
- assess and take appropriate action to minimise risks
- manage innovation and change
- determine opportunities to improve processes
- collect and organise information for the purpose of:
 - planning tasks
 - planning use of resources
 - assessing and prioritising tasks
 - managing time and resources
- participate in continuous improvement processes
- collect and analyse information
- amend own work practices
- clarify objectives
- manage workplace information
- manage own time
- use feedback to improve performance
- take responsibility and display confidence in own ideas
- apply quality practices
- adapt to new skill requirements
- research and apply new ideas and techniques
- apply reflective skills
- use technology relevant to job
- use IT to organise information

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for assessing suitability of blinds and awnings for situations
- organisational and site standards, requirements, policies and procedures for assessing suitability of blinds and awnings for situations
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- established lines of communication and protocols
- types of tools and equipment used for assessing suitability of blinds and awnings for situations and procedures for their safe use, operation and maintenance
- terms used to describe components of blinds and awnings
- characteristics of materials used in the construction and installation of blinds and awnings
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- mathematical techniques for estimation and measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Locate, interpret and apply information relevant to assessing suitability of blinds and awnings to a range of situations • Apply safe handling practices and safe operating procedures for equipment, products and materials to: <ul style="list-style-type: none"> • minimise the risk of injury to self or others • prevent damage to goods, equipment and products • Communicate and work with others in the work area
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of required knowledge and skills may be conducted in a workplace or simulated workplace environment • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to assessing suitability of blinds and awnings for situations
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge and skills</p> <p>Assessment methods should be by direct observation of tasks and include questioning on required knowledge and skills to ensure its correct interpretation and application</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Products and components	<ul style="list-style-type: none"> includes Holland-style blinds, Roman-style blinds, vertical-style blinds, timber, plastic and aluminium Venetian-style blinds, pleated-style blinds, wood weave-style blinds, canopy-style awnings, metal louvre-style awnings, aluminium roll up-style awnings, folding arm-style awnings, hardware and fixings
Building styles	<ul style="list-style-type: none"> includes heritage, period, single and multi-storey
Building codes	<ul style="list-style-type: none"> include codes related to wind loads, fire attenuation and set backs
Regulations	<ul style="list-style-type: none"> include council, heritage trusts
Legislation	<ul style="list-style-type: none"> include applicable legislation from all levels of government. Requirements may include Australian Standards, OHS, the environment, relevant industry codes of practice, duty of care and heritage.
OHS requirements	<ul style="list-style-type: none"> includes Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include the use of personal protective equipment, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Restrictions and limitations	<ul style="list-style-type: none"> building <ul style="list-style-type: none"> materials, height, architectural integrity, access natural environment <ul style="list-style-type: none"> overhang, space, height weather <ul style="list-style-type: none"> wind rating, rainfall, directional perspective (ie north, south, east, west facing)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools	1.1. Applicable OHS, legislative and organisational requirements relevant to cooeping operations are verified and complied with 1.2. Types of hand and power tools and their functions are identified 1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.4. Sources of power supply are recognised
2. Select hand tools	2.1. Hand tools selected are consistent with needs of the job 2.2. Selected hand tools are checked for serviceability and safety and any faults rectified or reported 2.3. Equipment is selected to hold or support material for hand tools application where applicable
3. Use hand tools	3.1. Material is located and held in position for hand tool application 3.2. Hand tools are safely and effectively used according to their intended use 3.3. Hand tools are safely located when not in immediate use
4. Select power tools	4.1. Power tools are selected consistent with needs of the job in accordance with conventional work practice 4.2. Power tools are visually checked for serviceability/safety in accordance with OHS requirements and any faults rectified or reported 4.3. Equipment is selected to hold or support materials for power tool application as applicable
5. Use power tools	5.1. Material is located and held in position for power tool application as applicable 5.2. Power tools are safely and effectively used in application processes 5.3. Power tools are safely located when not in use
6. Clean work areas and maintain tools	6.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures 6.2. Waste and scrap is removed following workplace procedures 6.3. Tools used are cleaned, inspected for serviceable condition and stored appropriately in accordance with

ELEMENT	PERFORMANCE CRITERIA
	workplace procedures 6.4. Equipment and work area clean-up is maintained in accordance with workplace procedures 6.5. <i>Records and reports</i> are completed to workplace requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of coopering techniques
- seek learning opportunities
- use the workplace technology related to the selection, preparation and operator maintenance of coopering hand and power tools, including calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for coopering operation
- basic barrel construction terminology and techniques
- basic barrel repair terminology and techniques
- coopering tools, their characteristics, uses, limitations and operator maintenance requirements
- coopering hand tool application techniques
- coopering power tool set-up and application techniques

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• cooperating components standard shapes and forms• environmental protection requirements relating to the disposal of waste material• established communication channels and protocols• problem identification and resolution• procedures for the recording, reporting and maintenance of workplace records and information• appropriate mathematical procedures for estimation and measurement |

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Read and interpret a work/job specification • Select and use the hand tools specified in the range statement • Select and use the power tools specified in the range statement • Carry out operator maintenance on hand and power tools, including the grinding of: <ul style="list-style-type: none"> • shaves • specialised hand tools • drill bits • Store tools correctly • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for coopering operations • Communicate effectively and work safely with others in the work area
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • specifications and work instructions • the full range of routinely used coopering hand tools • the full range of routinely used coopering power tools
<p>Method of assessment</p>	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and</p>

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Tools and equipment

- hand tools for coopering are to include, but not be limited to hand plane, chisels, hand saws, spokeshave, hammer, mallet, auger, croze, driver, knives (belly, crum, heading, hollow), cooper's hammer, maul, bradawl,

RANGE STATEMENT	
	<p>adze(s), shaves (hoop, inside, heading), swift, marking-out tools, files, rasps, scraper, screwdrivers and hand drill</p> <ul style="list-style-type: none"> power tools for coopering are to include, but not be limited to bench grinder, presses (hoops), head making machine, drop saw, circular power saw, planer, double sided planer, drill, jig saw, CNC router, laser cutter, trimmer, biscuit machine, brad/nail and staple gun, and sanders (long belt, disk and machine)
Waste	<ul style="list-style-type: none"> may include but not be limited to off-cuts, shavings and sawdust
Records and reports	<ul style="list-style-type: none"> may include but not be limited to the machining method, product type, size, inspection, grading and labelling outcomes, storage locations, quality outcomes, hazards, incidents or equipment malfunctions

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for production	1.1. Applicable OH&S , legislative and organisational requirements relevant to cooperating operations are verified and complied with 1.2. Work order is reviewed, confirmed and clarified with appropriate personnel 1.3. Barrel production sequence is planned 1.4. Procedures are determined for checking quality at each stage of the process 1.5. Suitable work area is selected for the task 1.6. Tools and equipment suitable for the work are selected and checked for safe operation
2. Select and prepare components	2.1. Materials , hardware, fittings and attachments are collected 2.2. Fixing and joining devices are selected in line with work instructions and type of materials to be joined 2.3. Jigs are selected and checked for suitability of purpose 2.4. Components , including staves and heads are machined and prepared to specification
3. Assemble components	3.1. Components are laid out and joined using jigs, appropriate fastenings and clamping devices 3.2. Hand and/or power tools, equipment are used as required 3.3. Assembled components are checked for compliance with specifications 3.4. Components are prepared, assembled, fitted and checked as per specification
4. Finish the product	4.1. Product is lined in accordance with specification 4.2. Product is tested for leakage and faults are repaired 4.3. Decorative features or fittings are fitted and secured to specification 4.4. Product is sanded and prepared for coating 4.5. Product is coated in accordance with specification and intended commercial application
5. Clean work area/s and maintain equipment	5.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures 5.2. Finished products are organised and stored in holding area 5.3. Waste and scrap is removed following workplace

ELEMENT	PERFORMANCE CRITERIA
	<p>procedures</p> <p>5.4. Tools and equipment used is cleaned; inspected for serviceable condition and stored appropriately in accordance with workplace procedures</p> <p>5.5. Equipment and work area clean-up is maintained in accordance with workplace procedures</p> <p>5.6. Records and reports are completed to workplace requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- use checking and inspection techniques to ensure barrels comply with specifications and that instances of non-compliance are remedied
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage during the production cycle
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and barrel production materials
- maintain current knowledge of barrel production techniques
- seek learning opportunities
- use the workplace technology related to the production of barrels including hand and power tools, calculators and measuring devices

Required knowledge

- State or Territory OH&S legislation, regulations, standards and codes of practice relevant to the full range of processes for coopering operation
- basic barrel construction terminology and techniques
- basic barrel repair terminology and techniques
- organisational and site standards, requirements, policies and procedures for coopering
- types of coopering tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of timber, timber products and defects

REQUIRED SKILLS AND KNOWLEDGE

- coopering components standard shapes and forms
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- set up and operation of machining equipment
- cutting patterns and sequences
- cutting tool condition assessment
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Read and interpret a work/job specification • Complete a minimum of two non-fired and fully finished barrel or equivalent products to specification • Effectively conduct operator maintenance on tools and equipment • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for coopering operations • Communicate effectively and work safely with others in the work area
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to producing a coopering product • specifications and work instructions
<p>Method of assessment</p>	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related</p>

EVIDENCE GUIDE

	<p>conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

<p>Legislative requirements</p>	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OH&S, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
<p>Organisational requirements</p>	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OH&S, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
<p>Work order</p>	<ul style="list-style-type: none"> is used to determine job requirements including design, tolerances, process, materials, finish and quantity
<p>Appropriate personnel</p>	<ul style="list-style-type: none"> may include but not be limited to supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Barrel	<ul style="list-style-type: none"> at this level may refer to the traditional barrel or equivalent products such as vats, casks, tubs, bars or baths
Production sequence	<ul style="list-style-type: none"> includes docking and grading staves, dressing staves, jointing staves, rising or assembling barrel, bending the barrel, crozing, making heads, cutting the head, fitting the head, finishing the barrel, fitting final hoops and testing
Tools and equipment	<ul style="list-style-type: none"> hand tools for coopering are to include, but not be limited to hand plane, chisels, hand saws, spokeshave, hammer, mallet, auger, croze, driver, knives (belly, crum, heading, hollow), cooper's hammer, maul, adze(s), hollowing knives, shaves (hoop, inside, heading), swift, marking-out tools, files, rasps, scraper, screwdrivers and hand drill power tools for coopering are to include, but not be limited to bench grinder, drop saw, circular power saw, planer, drill, jig saw, router, trimmer, biscuit machine, brad/nail and staple gun, and sanders
Materials	<ul style="list-style-type: none"> may include solid timber, caulking cotton, wedges, workhole pegs, tooth picks and metal wedges
Jigs	<ul style="list-style-type: none"> may include but not be limited to shaped templates for routing
Coopering Components	<ul style="list-style-type: none"> are to include heads, staves and hoops and may include decorative features or fittings in steel, stainless steel or copper
Checking	<ul style="list-style-type: none"> is to cover: <ul style="list-style-type: none"> fit correct number and fitting of staves hoop and hardware, fittings and attachments, and conformity to work instruction and quality requirements
Lining	<ul style="list-style-type: none"> may include plastics, foil and sealing coating
Testing	<ul style="list-style-type: none"> is to include standard hot water leakage testing
Repair of leakage faults	<ul style="list-style-type: none"> may include plugging, caulking or re-machining

RANGE STATEMENT	
Decorative features or fittings	<ul style="list-style-type: none"> may include final hoops and taps which may be steel, stainless steel or copper
Coating	<ul style="list-style-type: none"> may include paint, lacquer, polyurethane and varnish
Storage	<ul style="list-style-type: none"> must ensure that there is no obstruction of traffic, components and products are not damaged in storage and products are accessible for further distribution/despatch
Waste	<ul style="list-style-type: none"> may include but not be limited to off-cuts, shavings and sawdust
Records and reports	<ul style="list-style-type: none"> may include but not be limited to the machining method, product type, size, inspection, grading and labelling outcomes, storage locations, quality outcomes, hazards, incidents or equipment malfunctions

Competency field

Competency field	
-------------------------	--

Co-requisite units

Co-requisite units	

LMFCP3001A Apply product and material knowledge to coopering operations

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the competency required to apply product and material knowledge to coopering operations by identifying and responding to timber properties, applying sensory evaluation techniques to wine products, identifying basic wine faults and responding to the impact of barrel properties on wine products.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in coopering operations. Apply product and material knowledge to coopering operations to a factory or on-site environment and involves the application of skills and knowledge at a tradesperson level. These skills and knowledge are to be used within the scope of the individual's job and authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and respond to timber and material properties	1.1. Applicable OH&S , legislative and organisational requirements relevant to coopering operations are verified and complied with 1.2. The types of timber and inherent characteristics are analysed to select the optimum timber for the product 1.3. The characteristics and properties of oak are identified and considered 1.4. The properties and impacts of metals are identified and considered
2. Apply sensory evaluation techniques to wine products	2.1. Correct tasting procedures using sight, smell and taste are followed 2.2. The four key taste sensations of the tongue are identified 2.3. Characteristics of the key wine styles and grape varieties with regards to sight, smell and taste are explained 2.4. Wine is identified according to style and grape variety 2.5. The quality and characteristics of the wine style are evaluated ensuring conditions for evaluation are as favourable as possible
3. Identify basic wine faults	3.1. Basic wine faults are recognised and reported 3.2. The cork is inspected and faults identified
4. Respond to the impact of the barrel properties on wine product	4.1. The cause and effects on the product of controlled oxidation is considered and responded to 4.2. The cause and effects on the product of barrel maturation is considered and responded to 4.3. The cause and effect of the fermentation in barrel is considered and responded to 4.4. The impacts of toasting on the barrel and the product are responded to as a factor in the toasting operation 4.5. The impact of seasoning on the barrel timber components and the product are considered as a factor in determination of seasoning requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand detailed technical information related to the materials and the products used in and related to coopering operations
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain records related to product and materials quality
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- use sensory evaluation techniques to identify basic wine faults
- identify, anticipate and respond to the problems related to timber and material properties
- identify, anticipate and respond to the impact of the barrel properties on the product (wine and spirits)
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of coopering techniques
- seek learning opportunities
- use the workplace technology related to the selection, preparation and application of products and materials

Required knowledge

- State or Territory OH&S legislation, regulations, standards and codes of practice relevant to the full range of processes for coopering operation
- barrel construction terminology and techniques
- barrel repair terminology and techniques
- grape and wine types, characteristics, production methods and faults
- organisational and site standards, requirements, policies and procedures for

REQUIRED SKILLS AND KNOWLEDGE

coopering

- types of timbers used in the coopering industry, their characteristics, properties, uses and limitations
- types and sources of oak and the advantage/disadvantages of each
- the effects of the structure of timber including:
 - parts of the tree
 - tree cell structure
 - optimum stave production techniques
- types of seasoning and the impacts of techniques, including combination techniques, on the cell structure
- the effects of the barrel properties on the wine product
- the effects of the barrel properties on other products including spirits
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Read and interpret a work/job specification • Identify a range of timber types, including oak, and detail their uses and limitations • Identify and explain the properties of American and French oak • Identify and describe the characteristics of four main wine types through sensory evaluation (wine tasting) • Explain the likely effects of controlled oxidation, barrel maturation and in barrel fermentation on products • Identify the likely impact of various levels of toasting on products • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for coopering operations • Communicate effectively and work safely with others in the work area
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • examples of timber • samples of oak • a range of wine types • a range of toasting specifications
<p>Method of assessment</p>	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package Assessment methods must confirm consistency and</p>

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>OH&S requirements</p>	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
<p>Legislative requirements</p>	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OH&S, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
<p>Organisational requirements</p>	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OH&S, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
<p>Timber</p>	<ul style="list-style-type: none"> used in the broader cooping operations may include French/American/Australian oak, red gum, maple spruce, jarrah, birch, cyprus, elm and fir

RANGE STATEMENT	
Oak properties	<ul style="list-style-type: none"> are to include types and sources, composition, medullary rays, tyloses
Metals	<ul style="list-style-type: none"> used in coopering may include steel, stainless steel, copper and other alloys
Key wine taste sensations	<ul style="list-style-type: none"> include acidity, sweetness, weight or body and length
Key wine styles	<ul style="list-style-type: none"> include white, rose, red, fortified, sparkling, still, light-bodied, full-bodied, dessert, dry and medium
Grape varieties	<ul style="list-style-type: none"> include Shiraz, Cabernet Sauvignon, Merlot, Grenache, Pinot Noir, Chardonnay, Riesling and Semillon. Wines should be single varietals or a blend of two varieties
Wine characteristics	<ul style="list-style-type: none"> include clarity, colour type and intensity, alcohol (light, medium, high) intensity and character of aroma and flavour, sweetness, acidity, body, weight, mouth feel, tannin, balance and length
Wine faults	<ul style="list-style-type: none"> may include deposits, haze, tartrates, oxidation, cork taint, excessive sulphur
Controlled oxidation	<ul style="list-style-type: none"> may contribute to softening of tannins, increase colour and wine stability and production of various aroma compounds by oxidative processes
Barrel maturation	<ul style="list-style-type: none"> may contribute to extraction of flavours from the oak which enhance the complexity and intensity of the wine flavour
Fermentation in barrel	<ul style="list-style-type: none"> may influence flavour extraction
Toasting impact	<ul style="list-style-type: none"> includes the effects of increased agents such as guaiacol, vanilla and syringaldehyde and others on the taste and aroma of the wine
Seasoning impact	<ul style="list-style-type: none"> includes the effects on the levels of extractable oak constituents, particularly oak lactones

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine timber requirements	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to cooperating operations are verified and complied with</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. Structural requirements for <i>timbers</i> are determined from analysis of intended use and commercial requirements</p> <p>1.4. <i>Timber</i> is selected from pallet or storage and assessed for general suitability in accordance with selection criteria</p>
2. Evaluate the selected timber	<p>2.1. <i>Moisture content</i> of selected timber is determined to ensure compliance with production requirements</p> <p>2.2. <i>Density</i> and working properties of timber are determined to ensure compliance with production requirements</p> <p>2.3. Any <i>faults or features</i> in the timber are identified and strategies are identified to overcome/minimise their effects</p> <p>2.4. Timber selected for immediate use is transferred to appropriate holding area</p>
3. Season timber	<p>3.1. The outcomes of the timber evaluation are analysed to determine the seasoning requirement</p> <p>3.2. The optimal drying pattern, mixing <i>artificial</i> and natural drying techniques, is selected</p> <p>3.3. Artificial drying process is planned and details are confirmed before commencing</p> <p>3.4. Artificial drying equipment is operated to manufacturer's specifications and recommended process</p> <p>3.5. The artificial drying operation is carried out, with regular monitoring of moisture levels and targeted outcomes</p> <p>3.6. Timber is transferred to the natural drying site and <i>stored</i> to optimise drying potential</p> <p>3.7. Timber is monitored for moisture content and condition</p> <p>3.8. Site timber <i>records</i> are maintained and processed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand timber technology information related to coopering products
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to timber seasoning
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in timber and/or seasoning processes
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate seasoning criteria and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of coopering techniques
- seek learning opportunities
- use workplace technology related to the selection and seasoning of timber, including calculators, measuring devices and drying systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for coopering operation
- barrel construction terminology and techniques
- barrel repair terminology and techniques
- organisational and site standards, requirements, policies and procedures for coopering
- types of timbers used in the coopering industry, their characteristics, uses and limitations

REQUIRED SKILLS AND KNOWLEDGE

- types and sources of oak and the advantage/disadvantages of each
- the effects of the structure of timber, including:
 - parts of the tree
 - tree cell structure
 - optimum stave production techniques
- types of seasoning and the impacts of techniques, including combination techniques, on the cell structure
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- set up and operation of artificial drying equipment/systems
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a work/job specification
- Select and evaluate a range of timber for coopering including the determination of moisture content and density
- Correctly identify the causes of a range of faults or features in timber
- Season timber using a combination of artificial and natural drying processes
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for coopering operations
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the selection and seasoning of timber
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for production	1.1. Applicable OHS, legislative and organisational requirements relevant to coopering operations are verified and complied with 1.2. Work order is reviewed, confirmed and clarified with appropriate personnel 1.3. Barrel production sequence is planned 1.4. Procedures are determined for checking quality at each stage of the process 1.5. Suitable work area is selected for the task 1.6. Tools and equipment suitable for the work are selected and checked for safe operation
2. Select and prepare components	2.1. Materials , hardware, fittings and attachments are collected 2.2. Fixing and joining devices are selected in line with work instructions and type of materials to be joined 2.3. Jigs are selected and checked for suitability of purpose 2.4. Components , including staves and heads are machined and prepared to specification
3. Pre-assemble barrel components	3.1. Components are laid out inspected and selected for use and joined using jigs 3.2. Heads are joined and clamped 3.3. Staves are fitted and hooped 3.4. Hand and/or power tools, equipment are used as required 3.5. Assembled components are checked for compliance with specifications
4. Fire the barrel	4.1. Barrel's intended use and related technical instructions are analysed to determine the toasting technique and timing 4.2. Barrel interior is toasted to specification 4.3. Tensioning processes are applied 4.4. Hoops are fitted 4.5. Crozing is completed to specification 4.6. Heads are cut, bevelled to size and fitted
5. Finish the product	5.1. Barrel is finished using belt, disk or machine sander and hand tools 5.2. Final hoops and decorative features or fittings are

ELEMENT	PERFORMANCE CRITERIA
	<p>fitted and secured to specification</p> <p>5.3. Barrel is <i>tested</i> for leakage and faults are <i>repaired</i></p>
<p>6. Clean work area/s and maintain equipment</p>	<p>6.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures</p> <p>6.2. Finished products are organised and <i>stored</i> in holding area</p> <p>6.3. <i>Waste</i> and scrap is removed following workplace procedures</p> <p>6.4. Tools and equipment used is cleaned; inspected for serviceable condition and stored appropriately in accordance with workplace procedures</p> <p>6.5. Equipment and work area clean-up is maintained in accordance with workplace procedures</p> <p>6.6. <i>Records and reports</i> are completed to workplace requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to barrel production (fired process), work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use checking and inspection techniques to ensure barrels comply with specifications and that instances of non-compliance are remedied
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage during the production cycle
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and fired process barrel production materials
- maintain current knowledge of fired process barrel production coopering techniques
- seek learning opportunities
- use the workplace technology related to the production of barrels, including hand and power tools, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for coopering operation
- barrel construction terminology and techniques
- barrel firing/toasting techniques
- barrel repair terminology and techniques
- the impact of firing on barrel content characteristics
- organisational and site standards, requirements, policies and procedures for coopering

REQUIRED SKILLS AND KNOWLEDGE

- types of coopering tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of timber, timber products and defects
- coopering components standard shapes and forms
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- set up and operation of machining equipment
- cutting patterns and sequences
- cutting tool condition assessment
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information

appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a work/job specification
- Complete a fired and fully finished barrel or equivalent product to specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for coopering operations
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to producing a fired coopering product
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions (real or simulated) and require evidence of

EVIDENCE GUIDE

	<p>process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
--	--

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Work order	<ul style="list-style-type: none"> is used to determine job requirements, including design, tolerances, process, materials, finish and quantity
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Barrel	<ul style="list-style-type: none"> • may be referred to as barrels or casks
Production sequence	<ul style="list-style-type: none"> • includes docking and grading staves, dressing staves, jointing staves, using or assembling barrel, bending the barrel, firing, trussing and toasting, crozing, making heads, cutting the head, fitting the head, finishing the barrel, fitting final hoops and testing
Tools and equipment	<ul style="list-style-type: none"> • hand tools for coopering are to include, but not be limited to hand plane, chisels, hand saws, spokeshave, hammer, mallet, auger, croze, driver, knives (draw, belly, crum, heading, hollow), cooper's hammer, maul, bradawl, adze(s), hollowing knives, shaves (hoop, inside, heading), swift, marking-out tools, files, rasps, scraper, screwdrivers and hand drill • power tools for coopering are to include, but not be limited to bench grinder, presses (hoops), head making machine, drop saw, circular power saw, planer, double sided planer, drill, jig saw, CNC router, laser cutter, trimmer, brad/nail and staple gun, and sanders (long belt, disk and machine)
Materials	<ul style="list-style-type: none"> • are oak and may include oak and other suitable timbers, caulking cotton, wedges, workhole pegs and tooth picks
Jigs	<ul style="list-style-type: none"> • may include but not be limited to shaped templates for routing
Coopering Components	<ul style="list-style-type: none"> • are to include heads, staves and hoops and may include decorative features or fittings in steel, stainless steel or copper
Checking	<ul style="list-style-type: none"> • is to cover: <ul style="list-style-type: none"> • fit • correct number and fitting of staves • hoop and hardware, fittings and attachments, and • conformity to work instruction and quality requirements
Decorative features or fittings	<ul style="list-style-type: none"> • may include final hoops and taps which may be steel, stainless steel or copper
Testing	<ul style="list-style-type: none"> • is to include standard hot water leakage testing

RANGE STATEMENT	
Repair of leakage faults	<ul style="list-style-type: none"> may include plugging, caulking or re-machining
Storage	<ul style="list-style-type: none"> must ensure that there is no obstruction of traffic, components and products are not damaged in storage and products are accessible for further distribution/despatch
Waste	<ul style="list-style-type: none"> may include but not be limited to off-cuts, shavings and sawdust
Records and reports	<ul style="list-style-type: none"> may include but not be limited to the machining method, product type, size, inspection, grading and labelling outcomes, storage locations, quality outcomes, hazards, incidents or equipment malfunctions

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required for the maintenance and repair of barrels, and includes the preparation, inspection, disassembly, cleaning, repair and restoration of barrels.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance of advanced coopering operations. This unit may apply to a factory or an on-site environment and involves application of skills and knowledge at a trade skills level. These skills and knowledge are to be used within the scope of the individual's job and authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm maintenance requirements	1.1. Applicable OHS, legislative and organisational requirements relevant to cooping operations are verified and complied with 1.2. Work order is reviewed, confirmed and clarified with appropriate personnel 1.3. Barrel is disassembled as necessary to provide inspection access 1.4. Barrel is cleaned of build-up materials or other matter which may inhibit inspection 1.5. Barrel is tested, inspected and evaluated for faults 1.6. Further maintenance and repair requirements are identified and/or confirmed
2. Prepare for maintenance and repair	2.1. Maintenance and repair requirements are analysed and procedures are determined for checking quality at each stage of the process 2.2. Tools, equipment, materials and components required for the maintenance and repair are selected, sourced and prepared for use 2.3. Disassembly required for maintenance and repair is completed 2.4. Barrel and components are cleaned internally and externally
3. Complete maintenance and repair activities	3.1. Faulty parts and components are replaced 3.2. Leakage faults are repaired by the appropriate means 3.3. Barrel is re-assembled and refired 3.4. Barrel is tested and inspected to confirm the effectiveness of repairs 3.5. Cleaning and sterilisation processes relevant to the work circumstances are selected and applied 3.6. Barrel is finished, fully restored and prepared for use
4. Clean work area/s and maintain equipment	4.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures 4.2. Waste and scrap is removed following workplace procedures 4.3. Tools and equipment used is cleaned; inspected for serviceable condition and stored appropriately in accordance with workplace procedures 4.4. Equipment and work area clean-up is maintained in

ELEMENT	PERFORMANCE CRITERIA
	accordance with workplace procedures 4.5. <i>Records and reports</i> are completed to workplace requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use
- identify and analyse faults in barrels
- select and apply the most appropriate barrel maintenance and repair techniques
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of coopering techniques
- seek learning opportunities
- use workplace technology related to the maintenance and repair of barrels, including hand and power tools, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for coopering operation
- barrel construction terminology and techniques
- barrel firing/toasting techniques
- barrel repair terminology and techniques
- the impact of firing on wine characteristics
- organisational and site standards, requirements, policies and procedures for

REQUIRED SKILLS AND KNOWLEDGE

coopering

- types of coopering tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of timber, timber products and defects
- coopering components standard shapes and forms
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- set up and operation of machining equipment
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information

appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Read and interpret a work/job specification • Clean a barrel using both hand and machine methods • Repair a leakage fault • Replace a range of faulty component parts • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for cooperating operations • Communicate effectively and work safely with others in the work area
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to the maintenance and repair of barrels • specifications and work instructions
<p>Method of assessment</p>	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of</p>

EVIDENCE GUIDE

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Work order

- is used to determine job requirements including design, tolerances, process, materials, finish and quantity

Appropriate personnel

- may include but not be limited to supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Barrel	<ul style="list-style-type: none"> at this level may refer to the traditional barrel or equivalent products such as vats, casks, tubs, bars or baths
Barrel cleaning	<ul style="list-style-type: none"> is to include both hand and machine shaving of build-up and the application of authorised cleaning materials
Faults and blemishes	<ul style="list-style-type: none"> material faults include knots, sapwood, splits and shakes, rot and decay, insect infestation, mineral streak or brown stripe, broken chime, split staves, acetic or volatile barrel, mouldy barrel and water contamination manufacturing faults include head joint, stave and chime leakage wear, tear and deterioration faults include handling damage, discolouration, broken staves, buckled heads, burst heads, build up of fermentation products and contamination
Maintenance and repair requirements	<ul style="list-style-type: none"> are to include component repair and replacement, detailed cleaning and sterilisation, and testing
Tools and equipment	<ul style="list-style-type: none"> hand tools for coopering are to include, but not be limited to hand plane, chisels, hand saws, spokeshave, hammer, mallet, auger, croze, driver, knives (belly, crum, heading, hollow), cooper's hammer, maul, bradawl, adze(s), hollowing knives, shaves (hoop, inside, heading), swift, marking-out tools, files, rasps, scraper, screwdrivers and hand drill power tools for coopering are to include, but not be limited to bench grinder, presses (hoops), head making machine, drop saw, circular power saw, planer, double sided planer, drill, jig saw, CNC router, laser cutter, trimmer, biscuit machine, brad/nail and staple gun, and sanders (long belt, disk and machine)
Materials	<ul style="list-style-type: none"> are oak and may include caulking cotton, wedges, workhole pegs, tooth picks and metal wedges
Coopering Components	<ul style="list-style-type: none"> are to include heads, staves, hoops, flags or reeds, shives, wooden plugs, silicone plugs, mechanical seals, hoop nails and may include decorative features or fittings in steel, stainless steel or copper

RANGE STATEMENT	
Repair of leakage faults	<ul style="list-style-type: none"> may include plugging, caulking or re-machining
Testing	<ul style="list-style-type: none"> is to include standard hot water leakage testing
Waste	<ul style="list-style-type: none"> may include but not be limited to off-cuts, shavings and sawdust
Records and reports	<ul style="list-style-type: none"> may include but not be limited to the machining method, product type, size, inspection, grading and labelling outcomes, storage locations, quality outcomes, hazards, incidents or equipment malfunctions

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the task	1.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.2. Purpose and operational characteristics of object to be drawn are identified 1.3. Production materials and method are identified
2. Establish design requirements and limitations	2.1. Type of drawing to be completed is identified 2.2. Design concept requirements are established and documented identifying dimensions, angles, shapes and finished size 2.3. Ergonomic requirements for the objects are identified, clarified and addressed throughout the work processes 2.4. Drawing conventions and specifications to be noted on the drawing are identified 2.5. Appropriate medium for drawings is identified and selected
3. Quantify and draft initial drawing	3.1. Dimensions are plotted from prototype sketch and documented specifications 3.2. Dimensional points are connected to match appropriate drawing view 3.3. Any production notes or special requirements are noted 3.4. Drawing conventions and specifications are noted on the documentation
4. Complete drawing	4.1. Angles, shapes and dimensions are checked against specifications and concept prototype drawing 4.2. Adjustments are made to the drawing within scope of authority 4.3. Drawing is checked for compliance with workplace documentation requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- research, collect, organise and understand information related to the design concept, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the conceptual requirements, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment, systems and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and dimensions, create accurate and scaled drawings, and estimate material requirements
- create and apply systematic problem solving techniques to anticipate drawing problems, avoid re-working and wastage
- use the workplace technology related to the drawing, including drafting tools and equipment, calculators and measuring devices and computing/computer-aided systems

Required knowledge

- manual and computer-aided drawing processes and techniques
- ergonomic principles for furniture design and manufacture
- presentation standards
- enterprise or equivalent operating procedures, including procedures for preparing drawings and presenting information
- relevant regulatory requirements, recognised standards and codes, and industry practices

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Locate, interpret and apply relevant information • Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment • Identify requirements of task and organise work to achieve goals and results • Interpret specifications and measurements in two and three-dimensional form • Satisfy ergonomic criteria during the drawing process • Present relevant information within the production drawing using both manual and computer-aided processes and techniques • Suggest improvements to drawing activities and where authorised, negotiate changes • Modify activities to cater for variations in workplace cultures and environment
<p>Resource implications</p>	<p>Design concept, specifications, dimensions and drawing equipment.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.</p>	
Unit scope	<ul style="list-style-type: none"> • The drawings to be produced are intended for use in a furnishing industry production or manufacturing environment • Drawings are to be produced using both manual and computer-aided processes • Drawings are to be both two and three-dimensional
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem solving skills in the completion of drawings
Workplace environment	<ul style="list-style-type: none"> • The work may be conducted in any of the enterprises of the sectors that form part of the furnishing industry • Work is generally performed with little external assistance and with minimal supervision or direction • Drawing is to be undertaken in accordance with established industry and/or enterprise practices and procedures • Customers may be internal or external
Tools and equipment are to include:	<ul style="list-style-type: none"> • drafting table • drawing aids • computing equipment and work station and special lighting conditions
Materials are to include:	<ul style="list-style-type: none"> • drawing and computing consumables
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and</p>

RANGE STATEMENT	
	practices
Information and procedures	<ul style="list-style-type: none"> • Work procedures/instructions • Designer's concept and specifications/instructions • Legislation/regulations/codes relevant to the work undertaken • Furniture design principles and criteria, including ergonomic requirements • Quality and Australian standards and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for and dimension the task	1.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.2. Customer orders are interpreted to establish required sizes of finished products 1.3. Size requirements are checked in relation to the production process and finishing capacity of the workplace
2. Plan process	2.1. Material for pattern or template is identified for approximate size and characteristics 2.2. Required instruments and equipment are identified, located and assembled 2.3. Drawings and related specifications are interpreted 2.4. Procedures for using pattern development instruments and tools are checked and equipment is prepared for use
3. Plot dimensions	3.1. Equipment and tools are used following normal workplace procedures 3.2. Each dimension is measured, exploded and plotted maintaining appropriate angles, arcs and curves 3.3. Visual inspection and measurements are used to compare pattern dimensions and shapes with drawings and specifications
4. Complete pattern or template	4.1. Pattern or template is completed ensuring that the pattern indicates completion date and original drawing details 4.2. Required workplace approval of pattern or template is obtained 4.3. Plans are marked with notations for workplace requirements, including authorship, process or customer requirements, authorisation and any review dates 4.4. Plans are copied and filed as required according to workplace policies and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- research, collect, organise and understand information related to pattern and template production, including the relevant technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment, systems and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and dimensions, create accurate patterns and templates and estimate material requirements
- create and apply systematic problem solving techniques to anticipate pattern and template production problems, avoid re-working and avoid wastage
- use the workplace technology related to pattern and template production, including production tools and equipment, calculators and measuring devices and computing/computer-aided systems

Required knowledge

- company operating procedures, including procedures for pattern and/or template production
- types, characteristics uses and limitations of pattern/template materials
- operation requirements of equipment and work systems in own work area
- competency requirements of the work activities
- relevant regulatory requirements, recognised standards and codes, and industry practices

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Locate, interpret and apply relevant information • Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment • Interpret drawings and extrapolate to physical dimensions • Select appropriate mediums and materials • Produce a minimum of three patterns or templates making use of: <ul style="list-style-type: none"> • manufactured board • solid timber • composite material • Suggest improvements to pattern and template production and where authorised, negotiate changes • Modify activities to cater for variations in workplace cultures and environment
<p>Resource implications</p>	<p>Drawings, job specifications, tools and equipment, information on production/fabrication process, production materials and relevant computer equipment and software.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant equipment, simulated work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers the work involved in producing patterns and/or templates of products from drawings • Patterns and/or templates are to be produced by hand, by using appropriate tools and equipment and by computer assisted production
Unit context	<ul style="list-style-type: none"> • OHS legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem solving skills in the production of patterns or templates
Workplace environment	<ul style="list-style-type: none"> • Work may be conducted in any of the enterprises of the sectors which form part of the furnishing industry • Work is generally performed with little external assistance and with minimal supervision or direction • The development of patterns and/or templates is undertaken in accordance with established enterprise procedures and practices • Customers may be internal or external
Tools and equipment are to include:	<ul style="list-style-type: none"> • computer numeric controlled machines • static woodworking machines and relevant hand tools
Materials are to include:	<ul style="list-style-type: none"> • manufactured board • solid timbers and composite materials
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices</p>
Information and procedures	<ul style="list-style-type: none"> • Work organisation procedures and practices relating to the production of patterns and/or templates • Designer/drawer specifications and instructions

RANGE STATEMENT

	<ul style="list-style-type: none">• Legislation/regulations/codes relevant to the work undertaken• Furniture production techniques and criteria, including ergonomic requirements• Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify production requirements	<p>1.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.2. The item to be produced is identified from a work order</p> <p>1.3. Production requirements are identified from specifications, an existing item or from drawings, patterns and/or templates</p>
2. Design jig	<p>2.1. Design of proposed jig or fixture is produced</p> <p>2.2. Production process incorporating jig is planned</p> <p>2.3. Materials to be used to construct jig are selected</p>
3. Construct jig	<p>3.1. Appropriate tools and equipment are selected</p> <p>3.2. Jig is constructed as per design and within tolerances</p>
4. Test jig	<p>4.1. Jig is used to produce prototype to ascertain its adherence to set tolerances and to assess its match to original design</p> <p>4.2. Jig is adjusted as required to meet the requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to jig and fixture design, construction and testing, including the relevant technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment, systems and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and dimensions, create accurate and scaled designs, and estimate material requirements
- create and apply systematic problem-solving techniques to anticipate jig and fixture design, construction and testing problems, avoid re-working and wastage
- use the workplace technology related to the jig and fixture design, construction and testing, including tools and equipment, calculators and measuring devices and computing/computer-aided systems

Required knowledge

- machine technical specifications, including the acceptable criteria for related jigs
- impact of design changes on jig construction
- characteristics, uses and limitations of materials used for jig/fixture construction
- jig and fixture design, construction and testing techniques

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Interpret work order and locate and apply relevant information • Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment • Follow work instructions, operating procedures and practices to: <ul style="list-style-type: none"> • prevent damage to materials, equipment or products • maintain the required production output and quality • identify and apply all OHS requirements • Produce a minimum of two jigs required to create complex fine furnishing items, including a moving jig • Produce a fixture in accordance with acceptable industry tolerances • Modify activities to cater for variations in workplace contexts and environment • Work effectively with others
<p>Resource implications</p>	<p>Access to item specifications, design support facilities, jig construction materials, machinery, equipment and hand tools appropriate to the jigs to be produced.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and/or samples of work and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit applies to the design, construction and testing of jigs required for manufacture, assembly, construction and testing of furnishing items • The employee requires only general supervision in the execution of duties and has discretion in selecting techniques, processes and procedures in the production process
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem solving skills in the completion of this competency
Workplace environment	<ul style="list-style-type: none"> • Competency may be demonstrated in workplaces which are involved in or provide support for the manufacture and restoration of a wide range of furniture and furnishing items and components • Work is generally performed individually, but may be in a team environment • Customers or suppliers may be internal or external
Tools may include, but are not limited to:	<ul style="list-style-type: none"> • routers • spindle moulders • panel saws • copy shapers and radial arm saws
Materials are to include:	<ul style="list-style-type: none"> • solid timbers and manufactured board and may include composites
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and</p>

RANGE STATEMENT	
	practices
Information and procedures	<ul style="list-style-type: none"> • An enterprise work order which may be raised in response to a customer order, a modification to an item of production, or a new product line of the enterprise • Product drawings, prototype, design brief, patterns, specifications and/or specifications • Machine manufacturer specifications and operational procedures • Workplace instructions, including, job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communicating • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret design brief	1.1. Design parameters are clarified, in consultation with designer, sales team, management and/or client where required 1.2. A strategy plan and/or critical path plan is developed when required 1.3. Constraints are identified and taken into account when clarifying the brief
2. Research relevant information	2.1. Trends in materials are researched for performance, aesthetics, care/maintenance requirements and suitability to project or design 2.2. Trends and new technology are researched, where appropriate 2.3. Client priorities are clarified, including cost, performance, aesthetics and availability 2.4. Technical requirements associated with production are assessed, within specified guidelines 2.5. Any additional expertise required for the project is identified
3. Contribute to design concepts	3.1. Preliminary concepts are worked out in conjunction with others to identify possibilities 3.2. Design concept is developed through predetermined criteria such as ergonomics, materials, colour, properties and end application 3.3. Ideas are contributed and discussed with team members 3.4. Relevant support materials and explanations are developed and refined in conjunction with members of the design team
4. Contribute to the presentation of design/product	4.1. Roles of self and others for the presentation meeting are determined 4.2. Presentation of design or product is carried out in a manner which promotes the design's acceptance/approval
5. Maintain records	5.1. Records are maintained and reports prepared, where necessary, in accordance with enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- research, collect, organise and understand information related to the design, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work with other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the obtaining of systems and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and calculations required to support the design activity
- create and apply systematic problem solving techniques to anticipate problems, avoid re-working and wastage
- use the workplace technology related to design, including drafting tools and equipment, calculators and measuring devices and computing/computer-aided systems

Required knowledge

- company operating procedures, including procedures for developing design concepts
- design core and professional practices
- ergonomic principles for furniture design and manufacture
- operation requirements of equipment and work systems in own work area
- competency requirements of the work activities
- OHS requirements

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Identify requirements of task and organise work to achieve goals and results • Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment • Research information and share it with others in the team • Contribute to the design of products through discussion • Encourage excellence in performance of team/group members • Suggest improvements to design activities and, where authorised, negotiate changes • Modify activities to cater for variations in workplace cultures and environment • Work effectively with others
<p>Resource implications</p>	<p>Design development team, design concepts and access to R&D agencies/capabilities.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency, or the potential for consistency, of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of work, portfolio evidence and questioning on underpinning knowledge.</p> <p>Assessment may be conducted over time and in conjunction with assessment of other units of competency.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a simulated workplace facility with relevant equipment, simulated work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers the work involved in contributing to the activities of a design team in developing concepts and for designing products in furniture sector enterprises. • The competencies may involve: <ul style="list-style-type: none"> • applications associated with an original design • adaptation of designs • interpretation of sketches
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate conceptual and analytical ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • The competencies can refer to enterprise and client initiated ideas or requests • The competency is applied under general guidance on progress and outcomes • Size and work organisation within the enterprise will also determine the range of interaction with other areas/personnel, eg: <ul style="list-style-type: none"> • pattern maker • sample hand/machinist • marketing/sales • management • customer
Information and procedures	<ul style="list-style-type: none"> • Product catalogues, style manuals or equivalent • Enterprise business plans and products

RANGE STATEMENT

	<ul style="list-style-type: none"> • Work specifications • Customer requirements • Design brief • Organisation work procedures • Legislation, regulations and industry codes of practice relevant to the product • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Create exploded assembly drawings	<p>1.1. Drawing preparations, including drawing name, labelling information, dimensions, specifications and information management requirements are obtained/completed</p> <p>1.2. Three-dimensional models are prepared for all components</p> <p>1.3. Perspective view of the model is created and confirmed</p> <p>1.4. Model is exploded so that all components are visible</p> <p>1.5. All individual components are labelled in accordance with enterprise requirements</p> <p>1.6. Quality checks are completed to ensure accuracy of outcomes</p> <p>1.7. Drawings are stored in accordance with enterprise requirements</p>
2. Create job sheets	<p>2.1. Preparations, including file storage, product coding, inventory information and drawing management requirements are identified and completed</p> <p>2.2. Job sheet template is set up in accordance with enterprise requirements and practices</p> <p>2.3. Necessary orthographic views are created and dimensioned</p> <p>2.4. Sequencing of machine operations and operator requirements are identified and listed</p> <p>2.5. Draft job sheets are prepared, reviewed, tested and amended to enterprise requirements</p> <p>2.6. Job sheets are stored in accordance with enterprise requirements</p>
3. Convert drawings for CNC applications	<p>3.1. Conversion requirements are identified and confirmed from the CNC machine specifications</p> <p>3.2. Layers and additional information required for final conversion are created</p> <p>3.3. Drawing entities are assigned to the relevant layers</p> <p>3.4. Conversion to the required file type is completed</p> <p>3.5. Converted file is stored in accordance with enterprise requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- research, collect, organise and understand information related to drawing and drafting, including the relevant technical, regulatory, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the requirements, coordination of work and the reporting of work outcomes and problems
- plan and organise activities to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and dimensions, create accurate and scaled drawings, and estimate material requirements
- create and apply systematic problem solving techniques to anticipate problems, avoid re-working and wastage
- use the workplace technology related to drawing and drafting, including calculators and measuring devices and computing/computer-aided systems

Required knowledge

- design core and professional practices
- ergonomic principles for furniture design and manufacture
- type, range, uses and limitations of contemporary computer-aided drafting software
- type, range, uses and limitations of contemporary cam applications
- the industry product range and detailed knowledge of furniture construction processes
- types of construction materials and their characteristics, uses and limitations
- materials, trims, accessories and their properties and characteristics
- enterprise information management systems and processes related to drawings
- relevant OHS legislation, regulatory requirements and codes of practice

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Critical aspects of evidence

- Locate, access and interpret all required information
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Create a minimum of two exploded assembly drawings, including:
 - preparation of three-dimensional models
 - creation of perspective views
 - exploding the models to expose all components
 - labelling of all components
 - management and storage of drawings
- Create a minimum of two confirmed job sheets which have the necessary orthographic views, and all required management and inventory information
- Convert a minimum of two drawings for CNC application, including the creation of layers, assignment of drawing entities and the protection and storage of converted files
- Work effectively with others

Resource implications

Access to real or appropriately simulated situations involving the application of drawing and drafting techniques and to the related computing, operational and inventory support systems

This includes real or simulated concepts, work areas, materials, equipment and information on work specifications, customer requirements, organisation procedures, relevant safety procedures and regulations and quality standards

Method of assessment

Assessment methods must confirm consistency, or the potential for consistency, of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of work and questioning on underpinning knowledge.

Assessment may be conducted over time and in conjunction with assessment of other units of competency.

EVIDENCE GUIDE	
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant task requirements, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.</p>	
Unit scope	<ul style="list-style-type: none"> • Work involves the identification, selection and use of computer-aided techniques and capabilities, including three-dimensional modelling, exploded assembly drawings and conversion of drawings for CNC applications • Activities may include: <ul style="list-style-type: none"> • researching software trends and developments • generating and presenting ideas • liaising with client and/or other functional areas • compiling information
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with statutory requirements, organisation insurance requirements, OHS legislation, environmental legislation, manual handling procedures and relevant health regulations • Work requires individuals to demonstrate conceptual, analytical and organisational ability, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • The competency can refer to enterprise and client initiated ideas or requests • The competency is applied under broad guidance within routine and non-routine situations
Information and procedures	<ul style="list-style-type: none"> • Customer requirements • Work specifications • Product catalogues and style manuals or equivalent • Inventory systems and records • Organisation work procedures and sequencing arrangements • Legislation/regulations/national and industry codes and practices relevant to the product • Quality and Australian standards and procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify design objectives and success factors	1.1. Information on design tasks is collected, analysed and maintained 1.2. Design workload is packaged into discrete, manageable design work units 1.3. Criteria for each design work unit are identified and key success factors and indicators are established
2. Plan the design activity	2.1. The scope of each design work unit is reviewed and personnel and material resource requirements identified 2.2. Design work units are programmed and scheduled in accordance with target achievement dates and resource constraints 2.3. The design work plan, including key success/performance indicators, is processed and approved/agreed in accordance with enterprise procedures
3. Implement the design work plan	3.1. Resources, including human, material and equipment/systems, are allocated to particular design work units and tasks 3.2. Designers are involved in finalising work preparations and processes, and in establishing key performance indicators 3.3. Coordination issues with supporting agencies and departments are resolved 3.4. Management responsibilities for removing inhibitors to achievements are satisfied 3.5. Progress reviews are carried out and support provided to the designers to maintain technical design standards and achievement targets 3.6. Design outcomes are prepared, finalised and certified as meeting the required specifications 3.7. Design outcomes are documented and processed for client acceptance
4. Monitor and respond to design performance	4.1. Performance targets are monitored to assess progress and to provide indicators as to target revision or other intervention response 4.2. Unsatisfactory performance is identified and prompt action is taken to rectify the situation 4.3. Mentoring/coaching is provided to support individuals/teams 4.4. Recommendations for variations to plans are negotiated

ELEMENT	PERFORMANCE CRITERIA
	and approved by the appropriate person/groups 4.5. Systems, procedures and records associated with documenting performance are managed in accordance with the enterprise requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- research, collect, organise and understand information related to design management, including the relevant legal, technical, regulatory, fiscal, cultural, environmental and safety requirements
- communicate ideas and information to enable clarification of the management requirements, coordination of work and the reporting of work outcomes and problems
- plan and organise activities to optimise the use of resources and avoid any back tracking, workflow interruptions or wastage
- work with others and foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly determine resource and cost requirements
- create and apply systematic problem solving techniques to anticipate problems, avoid reworking and avoid wastage
- use the workplace technology related to management, including computing/ computer-aided information management systems

Required knowledge

- intellectual property law provisions
- design and production issues:
 - fundamentals of the elements and principles of design
 - the industry, trends and knowledge of product design
 - product construction techniques and processes
 - detailed knowledge of a range of materials
 - research sources
 - materials, fibres, trims, accessories and their properties and characteristics
- management issues:
 - contemporary management and leadership practices
 - enterprise resource management policies and procedures/practices
 - enterprise fiscal management policies and procedures/practices
 - quality assurance for design processes
 - negotiation techniques
- workplace procedures and reporting process
- relevant OHS legislation, regulatory requirements and codes of practice

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Locate, access and interpret relevant information • Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment • Manage design within an enterprise, including: <ul style="list-style-type: none"> • identify design objectives and goals • plan design activities • implement the design work plan • monitor and respond to design performance • Communicate effectively with design team and customers • Maintain accurate records
<p>Resource implications</p>	<p>Access to real or appropriately simulated situations involving the management of design activities</p> <p>This includes real or simulated work areas, materials, equipment, and information on work specifications, customer requirements and quality standards, organisation procedures and relevant safety procedures and regulations</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency, or the potential for consistency, of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of work, evidence portfolios and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant workloads, staff, equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation

<p>Unit scope</p>	<ul style="list-style-type: none"> • The management of design involves clarification and confirmation of design objectives and goals, the resourcing and management of design activities and the processing of outcomes for acceptance by the client • Activities may include: <ul style="list-style-type: none"> • liaising with client and/or other functional areas • identifying constraints to the design or proposal requirements • compiling information • preparing/confirming proposal and terms/ conditions • Management involves planning, implementation and quality assurance and requires the application of human, material, systems and financial resources
<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with statutory requirements, organisation insurance requirements, OHS legislation, environmental legislation, manual handling procedures and relevant health regulations • Work requires individuals to demonstrate leadership and organisational abilities, sensitivity, judgement and problem solving skills
<p>Workplace environment</p>	<ul style="list-style-type: none"> • The competency can refer to enterprise and client design ideas or requests • The competency is used independently within routine and non-routine situations
<p>Information and procedures</p>	<ul style="list-style-type: none"> • Design workload requirements and specifications • Enterprise, corporate and business plans • Enterprise and design organisation budget and resourcing policy • Summaries of materials, labour and overhead costs • Organisation work procedures • Legislation, regulations and industry codes of practice

Unit Descriptor

Unit descriptor	This unit covers the competency required to apply finishing techniques to custom furniture.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required to research, select and apply appropriate finishes for custom furniture. The competency applies to a work room and on site environment and involves application of skills and knowledge at a highly skilled craftsman or artisan level. These skills and knowledge are to be used within the scope of the individual's job and authority.</p> <p>This unit requires employability skills in initiative and enterprise and problem solving in order to select suitable finishes. Communication skills are used to access and interpret information. Technology is used to access information and apply finishes.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to finishing custom furniture are verified and complied with</p> <p>1.2. Instructions, plans and design briefs are read and interpreted to identify processes and materials to complete work tasks.</p> <p>1.3. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Quality checking procedures are developed and documented for each step in the finishing process</p>
2. Select appropriate finish technology	<p>2.1. Design brief and furniture material, style and purpose are appraised to identify finishing technique options</p> <p>2.2. Using samples of the type of material surface and specified finish, various finishing options are evaluated and the preferred option is selected</p> <p>2.3. Specifications for type of finishing material to be applied are identified to determine means of application</p> <p>2.4. Method of applying finishes to surfaces is identified and evaluated</p> <p>2.5. Sample of material is tested with selected finishing technique to ensure appropriateness</p>
3. Finish furniture surface	<p>3.1. Furniture surface is prepared in accordance with the finishing specification</p> <p>3.2. Imperfections, pores, nail or screw holes on the surface are rectified</p> <p>3.3. Finishing processes and materials are applied in accordance with the agreed specifications</p> <p>3.4. Surface is polished or buffed depending on the shine required</p> <p>3.5. Work is checked against required quality standards</p> <p>3.6. Any non-conformity with the required quality standards is rectified</p>
4. Complete housekeeping	<p>4.1. Unused materials are stored or recycled as required</p> <p>4.2. Tools and equipment are cleaned and stored appropriately</p> <p>4.3. Faulty and defective equipment is tagged and reported in accordance with workplace practices</p> <p>4.4. Work area is cleaned and rubbish disposed of appropriately</p> <p>4.5. Workplace documentation and/or reports are completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and finishing procedures
- communicate ideas and information to enable confirmation of finishing requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate finishing problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- innovate and modify existing finishing techniques to suit the aesthetic and functional requirements of the product
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of installation techniques
- seek learning opportunities
- use the workplace technology related to finishing operations, including tools, equipment, calculators and measuring devices
- evaluate finishing materials to confirm compatibility and feasibility of material usage.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the application of finishes
- organisational and site standards, requirements, policies and procedures for the selection and use of finishing materials
- finishing techniques
- characteristics, properties and selection criteria of finishing materials
- finishing characteristics and properties of timber being used

REQUIRED SKILLS AND KNOWLEDGE

- matching requirements of adhesives and fasteners to timbers/materials used
- types of tools and equipment and procedures for their safe use, operation and maintenance
- work flow in relation to the furniture items being made or repaired
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for finishing the surface of timber furniture
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Finish a minimum of four different pieces of furniture using different finish technologies on each as specified in the Range Statement in accordance with industry standards
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - four realistic and differing finishing tasks
 - materials and equipment relevant to applying finishing techniques to custom furniture
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of

EVIDENCE GUIDE

	<p>performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <ul style="list-style-type: none">• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency where finishing is involved
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling, including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Finishing custom furniture	<ul style="list-style-type: none"> refers to the preparation technique used on the furniture surface, the processes of selection, evaluation and application of any materials to the surface, the process of polishing and other final finishing processes
Instructions	<ul style="list-style-type: none"> workplace procedures relating to the use and operation of tools and equipment production planning figures workplace instructions, including job sheets, plans, specifications, drawings and designs workplace procedures relating to reporting and communications manufacturer instructions for the use of equipment and materials

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> may include power and hand sanders, brushes, steel wool, scrapers, rags, rubbing pads, brushes, spray guns, rottenstone, pumice and other polishing and rubbing compounds
Materials	<ul style="list-style-type: none"> may include timber (both indigenous and overseas), adhesives and fasteners, shellac, lacquer, polyurethane, oil finishes, stains, oxides, bleaching compounds, ammonia and filling compounds
Furniture surface preparation	<ul style="list-style-type: none"> may be by sanding by hand or power sander, scraping, planing or other smoothing technique is to take account of the fact that the colour of the wood may be changed by staining, bleaching, painting, ammonia fuming and/or a number of other techniques
Surface may be filled	<ul style="list-style-type: none"> using wood putty, wood plugs or other fillers
Finishing processes and materials	<ul style="list-style-type: none"> may include waxing, shellacking, nitrocellulose lacquering, conversion lacquering, linseed oiling, tung oiling, alkyd varnishing, polyurethane varnishing, water-based polyurethane and/or oil-varnish mixes, depending on the finish required, the furniture's use and the timber type used.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work	<p>1.1. Applicable <i>legislative</i>, <i>OHS</i> and <i>organisational</i> requirements relevant to assembling <i>custom furniture</i> are verified and complied with</p> <p>1.2. <i>Instructions</i>, plans or design briefs and critical production specifications are read and interpreted to identify processes and materials to complete work tasks.</p> <p>1.3. Assembly sequence is planned and materials/component layout is confirmed</p> <p>1.4. <i>Tools</i>, <i>equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.5. Adhesives, trims and accessories are identified, evaluated against the production specification and selected for use</p> <p>1.6. Quality checking procedures are developed and documented for each step in the assembly process</p>
2. Assemble custom furniture	<p>2.1. Components, materials and tools are laid out in accordance with the assembly plan</p> <p>2.2. Components are checked against specification prior to assembly and out of specification items are rejected</p> <p>2.3. Components are assembled and checked against specification for accuracy, fit, twist and distortion</p> <p>2.4. Doors, drawers and shelves are assembled and fitted</p> <p>2.5. Hardware and decorative accessories are applied to specification</p> <p>2.6. Product quality is prepared for final finish including the removal of bruises, scratches, dents and marks</p> <p>2.7. Product quality is checked against plans at identified checkpoints</p>
3. Complete housekeeping	<p>3.1. Unused materials are stored or recycled as required</p> <p>3.2. Tools and equipment are cleaned and stored appropriately</p> <p>3.3. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices</p> <p>3.4. Work area is cleaned and rubbish disposed of appropriately</p> <p>3.5. Workplace documentation and/or reports are completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate custom furniture assembly problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of installation techniques
- seek learning opportunities
- use the limited workplace technology related to assembling custom furniture, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to assembly of custom furniture
- organisational and site standards, requirements, policies and procedures for the assembly of custom furniture
- techniques for the assembly, fixing and finishing of custom furniture components
- characteristics and properties of materials used in furniture components
- types, characteristics, uses, limitations and safety requirements of tools and equipment used in assembly operations
- types, characteristics, uses, limitations and safety requirements of adhesives and fasteners used in custom furniture assembly

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for assembling custom furniture
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Assemble and prepare for finishing a minimum of three different and significant custom furniture products
- Utilise at least three different adhesive types
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - realistic assembly requirement involving three significant products
 - materials and equipment relevant to assembling custom furniture
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other related units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Custom furniture	<ul style="list-style-type: none"> is defined as one-off manufacture in response to specific customer requirements. It does not include variations or modification to a production line item may include, but is not limited to wall units, vanity units, kitchen cabinets, side-boards/buffets, drawer units, display cabinets, counters, tables, beds
Instructions	<ul style="list-style-type: none"> workplace procedures relating to the use and operation of tools and equipment workplace instructions, including job sheets, plans, specifications, drawings and designs for custom furniture item workplace procedures relating to reporting and communications manufacturer instructions for the use of equipment and materials

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> may include but is not limited to clamps, winding sticks, measuring tapes or rules, hammers, mallets, squares and presses
Materials	<ul style="list-style-type: none"> may include timber (both indigenous and overseas), adhesives, screws, nails, dowels, metal fasteners, knockdown fittings, glass, decorative finishes and abrasive paper

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess raw sources of material	1.1. Applicable OHS, legislative and organisational requirements relevant to recording the lifecycle of a product are verified and complied with 1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel 1.3. Communication with others is established and maintained in accordance with OHS requirements 1.4. Most suitable materials to fulfil the brief are assessed to meet the requirements 1.5. Materials are assessed from their source taking account of where they derived from and their processing techniques 1.6. Materials are assessed for their ecological and environmental impact 1.7. Materials are assessed for their availability and supply 1.8. Information on raw materials is recorded for future use
2. Assess the design process	2.1. Problem or underlying factors being addressed by the design brief are verified and documented 2.2. User needs and desires are assessed and documented 2.3. Elements of design are assessed for the intended outcome and documented 2.4. Principles of design are assessed for the intended outcome and documented 2.5. Requirements of the brief are prioritised and assessed for conflicts 2.6. Activities to be undertaken to complete concepts, sketches, drawings and models are documented and prioritised 2.7. Final documentation outlining the full analysis of the design brief is compiled and produced as a report
3. Assess the production process	3.1. Production timeline is assessed 3.2. Supply of raw materials for production is analysed 3.3. Available personnel with suitable skills are assessed for proficiency to complete production 3.4. Manufacturing process is assessed for equipment and assembly methods 3.5. Component production is mapped

ELEMENT	PERFORMANCE CRITERIA
	<p>3.6. <i>Finishing</i> requirements are assessed</p> <p>3.7. Final completion of product is assessed and quality checking arrangements put in place</p> <p>3.8. Action plan for production is completed</p>
4. Assess the product life	<p>4.1. <i>Packaging and despatch</i> procedures are assessed and verified</p> <p>4.2. Destination of the final product is verified and documented</p> <p>4.3. Use of the product is assessed and potential life of the product estimated</p> <p>4.4. <i>Product lifecycle</i> process is reviewed using all of the assessed data</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- accurately recording and maintaining information relating to the furniture making and design functions
- maintain current knowledge of techniques and materials used in furniture production
- seek learning opportunities.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for assessing and recording furniture details
- organisational and site standards, requirements, policies and procedures for assessing and recording furniture details
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- ergonomics and aesthetic values
- characteristics of materials, products and defects
- computer programs

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively record the lifecycle of a product from its raw source to its end use, work through the design process assessing the requirements and recording the intended outcomes • Effectively apply design elements and principles to a product lifecycle • Effectively produce a report on the intended outcomes of a product lifecycle analysis • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for recording the lifecycle of a product • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to recording the lifecycle of a product • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of

EVIDENCE GUIDE	
	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures • requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation • requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> • is to include the aims, objectives, milestones for the design project, the point of reference for everyone, elements and principles of design and may include organisational or personal profiles, aims, target audience,

RANGE STATEMENT	
	budget, timeline, consultation requirements, colour requirements, image requirements and function
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Material	<ul style="list-style-type: none"> may include but not be limited to native timber (native and imported), man-made timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Sources	<ul style="list-style-type: none"> may include but not be limited to the origin of the raw material including, the type and location wood was derived from, how and where it was processed, growth impact and available seasoning lead time, the mining source of metal or alloys and how these were processed, the formulas for the composition of plastics, the origin of textiles and how these were milled
Ecological and environmental impact	<ul style="list-style-type: none"> may include but not be limited to how the use of raw materials effects the ecology and environment and how its continued use will affect the area it has been sourced from, similarly what impact will be felt by reducing or stopping material from the source
Documentation	<ul style="list-style-type: none"> may include but not be limited to working notes, hand written records, typed information and reports
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture, colour and function
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony,

RANGE STATEMENT	
	contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship, emphasis, proximity, alignment, space, anthropometry, ergonomics, arrangement, workload, materials handling capacity, skills, control, equipment capabilities, aesthetic relations, tension and development methods
Concepts	<ul style="list-style-type: none"> are to include ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation
Sketches	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand
Working drawings	<ul style="list-style-type: none"> may include but not be limited to drafted technical drawings or drawings produced on computer using computer aided drafting software packages. These usually contain project specifications
Model	<ul style="list-style-type: none"> may include any three dimensional product which is made to full size or replicated through maquette. This is usually produced without normal manufacturing techniques, mainly to provide for the analysis of proportion, balance and aesthetic value
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Equipment	<ul style="list-style-type: none"> may include but not be limited to hand tools, static machinery, portable power tools and computer numerically controlled equipment is to include procedures for lock out protecting operators and co-workers from accidental injury by isolating the machine from the power source
Assembly methods	<ul style="list-style-type: none"> may include but not be limited to nailing, gluing, screwing, welding, pressing, sewing, bonding, jointing or connecting various materials

RANGE STATEMENT	
Components	<ul style="list-style-type: none"> may include but not be limited to the parts which make up the whole of a product. Each component is often requires some level of machining to result in the desire part
Finishing	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils and plastic coatings
Packaging and despatch	<ul style="list-style-type: none"> may include but not be limited to wrapping in fabric, plastic wrapping, shrink wrapping, boxing, foam shells and despatch by truck, trailer, train, plane or ship
Product lifecycle	<ul style="list-style-type: none"> is the evolution of a product from its raw source, through its inception, development, manufacture, completion and time as a completed product until potential renewal

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the Evidence Guide.
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess raw sources of material	1.1. Applicable OHS, legislative and organisational requirements relevant to assessing the environmental impact of a design are verified and complied with 1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel 1.3. Communication with others to complete assessment is established and maintained 1.4. Materials are assessed from their source taking account of where they derived from, their processing techniques and energy used to obtain them 1.5. Materials are assessed for their ecological and environmental impact 1.6. Materials are assessed for their availability and sustainability
2. Assess the environmental impact of the design	2.1. User needs and desires are assessed and documented 2.2. Material choice and use as stated in the specifications is audited and assessed 2.3. Product lifecycle analysis is evaluated and longevity determined 2.4. Intended manufacturing processes including assembly and finishing are assessed for their impact on the environment 2.5. Final documentation outlining the full analysis of the designs impact on the environment is compiled and produced as a report
3. Assess the manufacturing process	3.1. Production timeline is assessed and energy use measured 3.2. Supply of raw materials for production is analysed and wastage estimated 3.3. Manufacturing process is assessed for equipment and assembly method energy usage and waste 3.4. Component production is analysed to measure energy use and waste 3.5. Finishing requirements are assessed for toxic waste levels and energy usage 3.6. Packaging, despatch and transport arrangements are analysed to measure energy usage 3.7. Final documentation outlining the full analysis of the manufacturing impact on the environment is compiled and produced as a report
4. Assess product	4.1. Ability for all components of product to be recycled are

ELEMENT	PERFORMANCE CRITERIA
potential for recycling	assessed 4.2. Non-recyclable components are identified and potential alternatives determined 4.3. Impact of non-recyclable components on environment is assessed 4.4. Recycling potential of the product is reported in documentation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to environmental impact of materials, processes and products
- communicate ideas, information and research findings
- prepare evaluation documentation
- apply analysis techniques to determine environmental issues
- recognise and respond to circumstances outside instructions or personal competence
- plan activities covering the choice of evaluation method, the preparation and layout of the information
- plan assessment within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of materials and processes used in product production
- maintain current knowledge of environmental standards
- seek learning opportunities
- use the workplace technology related to electronic communication and documenting and presenting information.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to assessing the environmental impact of a design
- organisational and site standards, requirements, policies and procedures for assessing the environmental impact of a design
- elements and principles of design
- ergonomics and aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products, sources and defects
- energy consumption
- forest management and sustainability
- green house emissions
- resource utilisation
- waste and waste management
- computer programs
- product assembly techniques and equipment capabilities
- sketching and drawing
- procedures for the recording, reporting and maintenance of workplace records and

REQUIRED SKILLS AND KNOWLEDGE

information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively assess the environmental impact of a design from its raw source through manufacture to its end use and disposal and recording of the impact study outcomes
- Effectively measure the impact of design upon the environment
- Effectively produce a report on the impact study outcomes of a product
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for assessing the environmental impact of a design
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to assessing the environmental impact of a design
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions

EVIDENCE GUIDE	
	<p>(real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> is to include the aims, objectives, milestones for the design project, the point of reference for everyone, elements and principles of design and may include organisational or personal profiles, aims, target audience, budget, timeline, consultation requirements, colour requirements, image requirements and function
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of

RANGE STATEMENT	
	voice and body language
Material	<ul style="list-style-type: none"> may include but not be limited to native timber (native and imported), man-made timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Sources	<ul style="list-style-type: none"> may include but not be limited to the origin of the raw material including, the type and location wood was derived from, how and where it was processed, graph impact growth and available seasoning lead time, the mining source of metal or alloys and how these were processed, the formulas for the composition of plastics, the origin of textiles and how these were milled
Energy	<ul style="list-style-type: none"> is to include the measure of energy output in correlation to the cost to the environment in terms of electricity, gas or fossil fuel usage
Ecological and environmental impact	<ul style="list-style-type: none"> are to include but not be limited to how the use of raw materials effects the ecology and environment and how its continued use will affect the area it has been sourced from, energy consumption in achieving the material, green house gases created, waste levels, resource utilisation and transport effects. Similarly what impact will be felt by reducing or stopping material from the source
Sustainability	<ul style="list-style-type: none"> is to include the amount of resource widely available based on demand and its capacity to renew or be renewed.
Documentation	<ul style="list-style-type: none"> may include but not be limited to working notes, hand written records, typed information and reports
Product lifecycle	<ul style="list-style-type: none"> is the evolution of a product from its raw source, through its inception, development, manufacture, completion and time as a completed product until potential renewal
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Assembly methods	<ul style="list-style-type: none"> may include but not be limited to nailing, gluing, screwing, welding, pressing, sewing, bonding, jointing or connecting various materials
Finishing	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils and plastic coatings
Wastage	<ul style="list-style-type: none"> may include wasting of valuable raw materials, wastage of energy to obtain the raw materials, wastage during the manufacturing process and how waste is or isn't managed

RANGE STATEMENT	
	after it is produced
Equipment	<ul style="list-style-type: none"> may include but not be limited to hand tools, static machinery, portable power tools and computer numerically controlled equipment is to include procedures for lock out protecting operators and co-workers from accidental injury by isolating the machine from the power source
Components	<ul style="list-style-type: none"> may include but not be limited to the parts which make up the whole of a product. Each component is often requires some level of machining to result in the desire part
Packaging and despatch	<ul style="list-style-type: none"> may include but not be limited to wrapping in fabric, plastic wrapping, shrink wrapping, boxing, foam shells and despatch by mobile means
Transport	<ul style="list-style-type: none"> may include movement by truck, trailer, train, plane or ship

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for production	1.1. Applicable OHS, legislative and organisational requirements relevant to constructing prototypes and samples are verified and complied with 1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel 1.3. Type and quantity of material to be used is acquired from the storage location 1.4. Equipment is selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturers recommendation 1.5. Communication with others is established and maintained in accordance with OHS requirements
2. Construct prototype or sample	2.1. Manufacturing process is planned and organised 2.2. Material is allocated in accordance with the manufacturing plan and safe working procedures 2.3. Components are selected 2.4. Assembly methods are researched and planned 2.5. Components are assembled in accordance with the sketches and freehand development drawings 2.6. Prototype or sample is finished according to draft specifications
3. Evaluate prototype or sample	3.1. Prototype or sample is evaluated for functionality and aesthetic appeal 3.2. Prototype or sample is assessed for their elements of design 3.3. Prototype or sample is assessed for their principles of design 3.4. Prototype is analysed against design brief requirements 3.5. Prototype is reviewed with client or test client 3.6. Modifications to the prototype or sample are explored to satisfy the requirements of the design brief 3.7. Prototype or sample production process faults are recorded and reported to the appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate custom furniture jointing problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of tools and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of jointing tools and materials
- maintain current knowledge of precision timber jointing techniques
- seek learning opportunities
- use the workplace technology related to the selection, preparation, operation and maintenance of hand and power tools including calculators and measuring devices
- apply knowledge of timber technology to optimise the selection and use of timber varieties.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for the construction of prototypes and samples
- organisational and site standards, requirements, policies and procedures for constructing prototypes and samples
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- ergonomics and aesthetic values

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- computer programs
- product assembly techniques
- sketching and drawing
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively construct a prototype or sample in accordance with the design brief and concept sketches and drawings
- Effectively apply design elements and principles to develop a prototype
- Effectively produce a prototype in accordance with a the design brief
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for constructing a prototype or sample
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to constructing a prototype or sample
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions

EVIDENCE GUIDE	
	<p>(real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and interpret operational and environmental information	1.1. Applicable legislative, OHS and organisational requirements relevant to the establishment and maintenance of a safe work environment are verified and complied with 1.2. Instructions and plans are read and interpreted to identify the process which will be undertaken to complete work tasks 1.3. Tools and equipment to be used are identified and their operating characteristics and safety requirements are analysed 1.4. The furnishing materials to be used are identified and their characteristics analysed
2. Identify hazards	2.1. Work area conditions are analysed to identify and recognise potential hazards 2.2. Relevant safety systems information is accessed and analysed to eliminate situations covered by existing and adequate procedures 2.3. The type and scope of unresolved hazards and their likely impact are recognised
3. Assess risk	3.1. Likelihood of the event happening is considered and determined 3.2. Consequence if the event should occur is evaluated and determined 3.3. Risk level (likelihood and consequence combined) is considered and determined
4. Identify and decide on risk treatment	4.1. Range of treatments which may eliminate or minimise the risk are identified 4.2. All possible options for resolution of the problem and dealing with the risk are identified and considered 4.3. Feasible options are subject to detailed analysis including the identification of resource requirements 4.4. Most appropriate treatment for dealing with the situation is selected
5. Implement the risk treatment	5.1. The course of action and treatment is planned and prepared in detail 5.2. Resources required for the treatment are acquired or obtained 5.3. Safety information and procedures are accessed and applied throughout the operations 5.4. The treatment is implemented 5.5. Information on the treatment and implementation is

ELEMENT	PERFORMANCE CRITERIA
	communicated to the relevant people

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of safety and risk management requirements and specifications, coordination of the required work with site supervisor, other workers and customers, and the reporting of safety outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise safety management
- use pre-checking and inspection techniques to anticipate possible hazards
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of treatment equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements for the management of workplace safety
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of workplace safety standards and instructions
- seek learning opportunities
- use the workplace technology related to the risk management including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to risk management in a furnishing technology work environment
- organisational and site standards, requirements, policies and procedures for furnishing technology
- types of tools and equipment, their operating characteristics and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- common furnishing technology related hazards and the range of commonly applied treatments
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for risk management in a furnishing technology work environment
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
- To complete a minimum of one formal risk assessment of a significant work site including the determination and implementation of required treatments
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to establishing and maintaining a safe furnishing technology work environment
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace

EVIDENCE GUIDE	
	<p>relevant contexts) together with application of underpinning knowledge</p> <ul style="list-style-type: none"> • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation • requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures • requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling, including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Instructions	<ul style="list-style-type: none"> • workplace procedures relating to the use and operation of tools and equipment • workplace instructions, including job sheets, plans, drawings and designs • workplace procedures relating to reporting and communications • manufacturer instructions for the use of equipment and materials
Tools and equipment	<ul style="list-style-type: none"> • hand tools are to include, but not be limited to, hand planes, chisels, hand saws, spokeshave, hammer, mallet, marking-out tools, files, rasps, scraper, screwdrivers and hand drill • power tools are to include, but not be limited to, drop saw, circular power saw, planer, drill, jig saw, router, trimmer,

RANGE STATEMENT	
	biscuit machine, brad/nail and staple gun and sanders
Materials	<ul style="list-style-type: none"> are to include but are not limited to adhesives, nails, and staples
Adhesives	<ul style="list-style-type: none"> may include solvent and water-based contact, construction adhesive, latex/resin/acrylic
Hazards	<ul style="list-style-type: none"> and risks may include dust inhalation, power sources and leads, flying debris, fume inhalation, trips, falls, lack of control during pouring, machine safety, vibration (direct and indirect consequences)
Treatments	<ul style="list-style-type: none"> may include the following: <ul style="list-style-type: none"> dust and fumes extraction systems isolation through testing, distance, barriers, entry limits, signage power source protection such as earth leakage, coded leads debris protections such as machine guards, skirts, distance, access controls pour protection through area sealing and plugs

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect information for the design brief	1.1. Applicable OHS, legislative and organisational requirements relevant to developing a design brief are verified and complied with 1.2. Client requirements and desires for final product are obtained reviewed, confirmed and clarified 1.3. Communication with others is established and maintained 1.4. Problems or underlying factors to be addressed by the design brief are verified 1.5. Requirements for the design brief are prioritised
2. Conduct research for the design	2.1. Areas for research are identified 2.2. Impacts of cultural, social and economic issues and influences and trends are identified and analysed 2.3. Ergonomic and anthropometric issues and influences are identified and analysed 2.4. Environmental issues are identified and analysed 2.5. Other relevant information is assessed and used to guide research 2.6. Design influences are prioritised for relevancy to design brief 2.7. Collected information is documented
3. Analyse and confirm design brief	3.1. Design requirements are translated in a manner which is clear and concise 3.2. Factors affecting the outcome of the project are documented 3.3. Criteria for assessing and evaluating design concepts are determined 3.4. Final design brief outlining all the requirements is compiled, produced and refined with the client

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential knowledge and skills and their level, required for this unit.

Required skills

- preparing and presenting research information
- collecting, organising and understanding information
- communicating ideas and information
- presenting ideas visually
- accurately recording and maintaining information relating to the design
- working and communicating with others to gain information
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative design process
- clarifying and confirming work instructions
- planning own work within the given task parameters
- maintaining current knowledge of tools and materials
- maintaining current knowledge of design techniques.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to developing a design brief
- organisational and site standards, requirements, policies and procedures for developing a design brief
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- ergonomic, anthropometric, social and cultural issues relating to design
- design processes
- research techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- historical design styles and movements
- current ethical issues in society affecting designs
- current market segments
- aesthetic aspect of elements and principles in 3-D design
- materials and finishes
- construction technologies
- techniques for the preparation and presentation of research information.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively establish requirements for the creative direction of a design brief
- Collect and analyse the implications of information relating to the design brief
- Effectively establish criteria for the intended solutions to meet the requirements of the design brief
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for developing a design brief
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to developing a design brief
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions

EVIDENCE GUIDE	
	<p>(real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Final product	<ul style="list-style-type: none"> may include but not be limited to items which are functional, applied, commercial or artistic, interior designs, furniture designs and interior decoration plans
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Design brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation,

RANGE STATEMENT	
	milestones for the design project, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline and consultation requirements
Areas for research	<ul style="list-style-type: none"> may include but not be limited to similar products and typologies, materials, social and cultural influences, site analysis, site conditions, functional requirements, target market characteristics and needs, relevant standards and regulations applying to product design
Environmental issues	<ul style="list-style-type: none"> may include but not be limited to use of renewable resources, energy efficiency, conservation of resources, recycling, waste/by-products/emissions and environmental consciousness/green design
Information	<ul style="list-style-type: none"> may include but not be limited to industry codes and symbols, Australian and international standards and regulations, historical literature on design styles and movement, ethical reference material, supplier's material data sheets, ergonomic, anthropometric statistical information, market research documents, photographic reference material, site plans and drawings
Documentation	<ul style="list-style-type: none"> may include but not be limited to working notes, hand written records, typed information and reports, diagrams, sketches, tables, matrixes, images and visual essays
Concepts	<ul style="list-style-type: none"> are to include ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation
Sketches	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify principles of OHS	1.1. <i>Duty of care</i> and <i>responsibilities</i> of individuals and organisations are defined 1.2. Concepts of <i>hierarchy of control</i> are identified and related to the workplace 1.3. Codes of practice relating to specific workplace risks are identified 1.4. Importance of a <i>systematic approach</i> to OHS is understood 1.5. Applicable <i>legislative, OHS</i> and <i>organisational requirements</i> relevant to furniture designs are identified 1.6. The furnishing <i>materials</i> to be used and their key characteristics are identified
2. Assess OHS implications for furniture manufacturing	2.1. <i>Hazards associated with materials</i> used in the manufacture of furniture are identified 2.2. <i>Hazards associated with production</i> of furniture are identified 2.3. Safety measures implemented to control hazards to manufacturers are identified and implications for furniture designs evaluated 2.4. Information resources on safety aspects of materials and technology used in the production of furniture are identified and accessed
3. Assess OHS implications for customers	3.1. <i>Range of customers</i> for furniture products are identified and <i>potential hazards for users</i> determined 3.2. Potential hazards associated with components and accessories are identified 3.3. Safety measures implemented to control hazards to users are identified and implications for furniture designs evaluated 3.4. Information resources on safety aspects of furniture design are identified and accessed
4. Assess risk	4.1. Likelihood of hazards causing harm is considered and determined 4.2. Consequence if the event should occur is evaluated and determined 4.3. Risk level (likelihood and consequence combined) is considered and determined
5. Apply risk control measures to furniture design	5.1. Designs are evaluated for OHS implications 5.2. Range of treatments which may eliminate or minimise risks are identified 5.3. Feasible options are subject to detailed analysis including

ELEMENT	PERFORMANCE CRITERIA
	the identification of resource requirements 5.4. Most appropriate <i>treatment</i> for addressing risk is selected and applied to design

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of safety and risk management requirements and specifications, coordination of the required work with site supervisor, other workers and customers, and the reporting of safety outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise safety management
- use pre-checking and inspection techniques to anticipate possible hazards
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of treatment equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements for the management of workplace safety
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of workplace safety standards and instructions
- seek learning opportunities
- use the workplace technology related to the risk management, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to risk management in a furnishing technology work environment
- organisational and site standards, requirements, policies and procedures for furnishing technology
- types of tools and equipment, their operating characteristics and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- common furnishing technology related hazards and the range of commonly applied treatments
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for risk management in a furniture design work environment
- Locate and apply safety information
- Assess safety aspects of furniture designs for a range of customers
- Address risks and hazards in furniture designs
- To complete a minimum of three risk assessments of furniture designs including the determination of required treatments
- Work effectively with others

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to establishing and maintaining a safe furnishing technology work environment
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Duty of care	<ul style="list-style-type: none"> • duty of care requires everything 'reasonably practicable' to be done to protect the health and safety of others at the workplace. This duty is placed on: <ul style="list-style-type: none"> • all employers • their employees • any others who have an influence on the hazards in a workplace
Responsibilities	<ul style="list-style-type: none"> • include complying, as far possible, with all activities carried out in accordance with the standard • reporting anything that might affect compliance with the standard
Hierarchy of control	<ul style="list-style-type: none"> • refers to the range of feasible options for managing the risk to health and safety. The hierarchy normally ranges over the following controls: <ul style="list-style-type: none"> • elimination of the hazard • its substitution with a less harmful version • its redesign • engineering controls • isolation of the hazard from people at the workplace • safe work practices • redesigning work systems • the use of personal protective equipment by people at the workplace
Systematic approach	<ul style="list-style-type: none"> • includes hazard identification, risk assessment, risk control and review
Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety

RANGE STATEMENT	
	<p>policies and procedures</p> <ul style="list-style-type: none"> requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Materials	<ul style="list-style-type: none"> include all materials associated with the furniture product including fabrics, finishes, wood, metal, plastic, paint, foam, oils, animal skin may also include but not be limited to adhesives, nails, and staples
Hazards associated with materials	<ul style="list-style-type: none"> may include but not be limited to chemical properties such as toxicity, fumes, combustibility, physical properties such as strength, weakness, splintering, breakage, weight, and components such as adhesives, nails, and staples
Hazards associated with production	<ul style="list-style-type: none"> may include but not be limited to manual handling, finishing and production processes, use of tools and machinery, dust inhalation, power sources and leads, flying debris, fume inhalation, trips, falls, lack of control during pouring, machine safety and vibration (direct and indirect consequences)
Range of customers	<ul style="list-style-type: none"> may include but not be limited to aged and the elderly, people with disabilities, children and adults
Potential hazards for users	<ul style="list-style-type: none"> may include but not be limited to allergies to materials, injury from materials or components, injury due to design faults, lack of stability, breakage and difficult to handle or install
Treatments	<ul style="list-style-type: none"> may include but not be limited to use of production safety strategies such as dust and fumes extraction systems, materials testing, power source protection, personal protective equipment, use of tested materials and accessories, and use of specialised safety features and components

Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for presentation of design information	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to producing design development sketches and drawings are verified and complied with</p> <p>1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel</p> <p>1.3. Type and quantity of concepts to be presented are assessed from the design brief</p> <p>1.4. Presentation equipment is selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturers recommendation</p> <p>1.5. Communication with others is established and maintained in accordance with OHS requirements</p>
2. Present design information	<p>2.1. Concept sketches are presented as solutions to the design brief and for the audience</p> <p>2.2. Sketches are represented as ideation drawings and presented using presentation boards and portfolios</p> <p>2.3. Freehand development drawings are incorporated into the presentation to represent the construction and joints</p> <p>2.4. Working drawings are presented to represent final measurements and specifications</p> <p>2.5. Concepts and their elements of design are promoted, explained and evaluated for the audience</p> <p>2.6. Concepts and their principles of design are promoted, explained and evaluated for the audience</p> <p>2.7. Presentation of design information is made using multimedia and computer based strategies</p>
3. Present manufacturing information	<p>3.1. Maquettes of concepts are presented for discussion and viewing</p> <p>3.2. Prototypes or samples are presented for viewing and aesthetic value</p> <p>3.3. Sample joints or joining techniques are presented to support the design theory</p> <p>3.4. Alternative manufacturing techniques are presented and promoted</p> <p>3.5. Material options are presented and promoted</p> <p>3.6. Assembly and finishing techniques and processes are presented and promoted</p> <p>3.7. Concept manufacturing process is evaluated and presented using multimedia and computer based strategies</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- draw designs
- make presentations
- source information
- collect, organise and understand information related to design requirements
- maintain accurate records
- communicate ideas and information
- sequence operations
- carry out work according to OHS practices
- use presentation tools.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to preparing and presenting design information
- organisational and site standards, requirements, policies and procedures for preparing and presenting design information
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- ergonomics and aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- computer programs
- presentation techniques and equipment
- product assembly techniques
- sketching and drawing
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively prepare and present design information to a prospective client interested in buying a design for manufacturing purposes
- Effectively apply design elements and principles to the presentation of design information
- Effectively prepare and present design information in accordance with the concepts and design brief
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for preparing and presenting design information
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to preparing and presenting design information
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions

EVIDENCE GUIDE	
	<p>(real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> is to include the aims, objectives, milestones for the design project, the point of reference for everyone, elements and principles of design and may include organisational or personal profiles, aims, target audience, budget, timeline, consultation requirements, colour requirements, image requirements and function
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Concepts	<ul style="list-style-type: none"> are to include ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation
Presentation equipment	<ul style="list-style-type: none"> may include but not be limited to presentation boards, portfolios, photography, overhead projectors, data projectors,

RANGE STATEMENT	
	video and other forms of multi media
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Sketches	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand
Audience	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Ideation drawings	<ul style="list-style-type: none"> are to include freehand drawings which represent a product as a story and methodology to the design brief solution. These are often drawn as thumbnail sketches.
Freehand development drawings	<ul style="list-style-type: none"> may include isometric, oblique, perspective, orthographic or elevation drawings which explode the parts of the concept sketches and include rough sizes, scale, tones and values
Working drawings	<ul style="list-style-type: none"> may include but not be limited to drafted technical drawings or drawings produced on computer using computer aided drafting (CAD) software packages. These usually contain project specifications.
Specifications	<ul style="list-style-type: none"> are to include the measurements, procedures by which a product is constructed and materials to be utilised
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture, colour and function
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship, emphasis, proximity, alignment, space, anthropometry, ergonomics, arrangement, workload, materials handling capacity, skills, control, equipment capabilities, aesthetic relations, tension and development methods
Multimedia	<ul style="list-style-type: none"> see presentation equipment
Computer based strategies	<ul style="list-style-type: none"> may include but not be limited to power point presentations, CAD demonstrations, written presentations and other scenarios utilising different software applications
Maquette	<ul style="list-style-type: none"> is to include a miniature version of the intended final product to establish if the elements and principles of design have been achieved. These are usually produced from cardboard or scrap timber

RANGE STATEMENT	
Prototype or sample	<ul style="list-style-type: none"> is usually a full size replica of the intended product outcome based on concept sketches and freehand development drawings, these are usually produced from stiff cardboard, scrap timber or possibly even moulding clay
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Material	<ul style="list-style-type: none"> may include but not be limited to native timber (native and imported), man-made timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Assembly process	<ul style="list-style-type: none"> may include but not be limited to nailing, gluing, screwing, welding, pressing, sewing, bonding, jointing or connecting various materials
Finishing	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils and plastic coatings

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for production	1.1. Applicable OHS, legislative and organisational requirements relevant to producing developmental models to scale are verified and complied with 1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel 1.3. Type and quantity of material to be used is acquired from the storage location 1.4. Equipment is selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturers recommendation 1.5. Communication with others is established and maintained in accordance with OHS requirements
2. Interpret design development sketches and drawings	2.1. Sketches and drawings are assessed for their elements of design 2.2. Sketches and drawings are assessed for their principles of design 2.3. Sample maquette is produced in accordance with the concept sketches and drawings 2.4. Concept is modified for its aesthetic value in keeping with the intended function 2.5. Working drawings are assessed for their specification requirements 2.6. Concept is planned for model manufacture taking into account available equipment and resources
3. Produce scale model	3.1. Manufacturing process is planned and organised 3.2. Material is processed in accordance with the manufacturing plan and safe working procedures 3.3. Components are produced and prepared for assembly 3.4. Components are assembled in accordance with the working drawings 3.5. Scale model is finished according to specifications
4. Evaluate scale model	4.1. Design and production process faults are recorded and reported to the appropriate personnel 4.2. Scale model is evaluated for functionality and aesthetic appeal 4.3. Scale model is evaluated against design brief requirements 4.4. Scale model is reviewed with client or test client 4.5. Modifications to the scale model are explored to satisfy the requirements of the design brief

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate custom furniture assembly problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of installation techniques
- seek learning opportunities
- use the limited workplace technology related to producing models, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for producing developmental models to scale
- organisational and site standards, requirements, policies and procedures for producing developmental models to scale
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- ergonomics and aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics of materials, products and defects
- set up and operation of equipment
- computer programs
- product assembly techniques
- sketching and drawing
- scale drawings and scale to human figure
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively produce developmental models to scale work through sketch development and the design process to produce a final scale model
- Effectively apply design elements and principles to design a scale model
- Effectively produce a scale model in accordance with the scale development sketches and drawings
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for producing developmental models to scale
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to producing developmental models to scale
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions

EVIDENCE GUIDE	
	<p>(real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones for the design project, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline and consultation requirements
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Material	<ul style="list-style-type: none"> may include but not be limited to native timber (native and imported), man-made timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Storage locations	<ul style="list-style-type: none"> may include but not be limited to storage racks, storage bays, bins, stacks, pallet boxes, modularised storage components,

RANGE STATEMENT	
	temporary stacking bays (stand, frame or ground) and may be divided into standard product classification, product designation, size, dimension, stack number, weight, grade, shelf life or stock rotation position
Equipment	<ul style="list-style-type: none"> • may include but not be limited to static machinery, portable power tools and computer numerically controlled equipment • may also include procedures for lock out protecting operators and co-workers from accidental injury by isolating the machine from the power source
Communication	<ul style="list-style-type: none"> • may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Sketches	<ul style="list-style-type: none"> • may include but not be limited to hand drawn images or ideation drawings completed freehand
Elements of design	<ul style="list-style-type: none"> • may include but not be limited to line, shape, form (geometric or organic), texture, colour, and function
Principles of design	<ul style="list-style-type: none"> • may include but not be limited to balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship, emphasis, proximity, alignment, space, anthropometry, ergonomics, arrangement, workload, materials handling capacity, skills, control, equipment capabilities, aesthetic relations, tension and development methods
Maquette	<ul style="list-style-type: none"> • is to include a miniature version of the intended final product to establish if the elements and principles of design have been achieved. These are usually produced from cardboard or scrap timber
Concepts	<ul style="list-style-type: none"> • are to include ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation
Aesthetics	<ul style="list-style-type: none"> • are to include the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Working drawings	<ul style="list-style-type: none"> • may include but not be limited to drafted technical drawings or drawings produced on computer using computer aided drafting software packages. These usually contain project specifications
Manufacturing process	<ul style="list-style-type: none"> • may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing

RANGE STATEMENT	
	components utilising machine operations, assembly of the components and finishing techniques
Components	<ul style="list-style-type: none"> may include but not be limited to the parts which make up the whole of a product. Each component is often requires some level of machining to result in the desire part
Scale model	<ul style="list-style-type: none"> is to include a model replica of the intended final outcome product produced to a suitable scale to distinguish its features, for example 1:5 or 1:10. The model may be made from similar material as the intended final solution or in some cases made from modelling clay
Specifications	<ul style="list-style-type: none"> are to include the measurements, procedures by which a product is constructed and materials to be utilised
Functionality	<ul style="list-style-type: none"> is to include the purpose intended for the product in relationship to the design brief
Records and reports	<ul style="list-style-type: none"> may include but not be limited to the design and production method, product type, size, inspection and labelling outcomes, storage locations, quality outcomes, hazards, incidents or equipment malfunctions

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Determine set up and operating requirements of woodworking machines</p>	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to the selection and use of static woodworking machines are verified and complied with</p> <p>1.2. Set up requirements for static woodworking machines are identified according to furniture design and safety requirements</p> <p>1.3. Operating requirements to achieve design outcomes are identified and safety requirements determined</p>
<p>2. Set up and operate static woodworking machines</p>	<p>2.1. Selected machines are checked for serviceability, precision settings, maintenance compliance and safety</p> <p>2.2. Work specifications and instructions are interpreted and machines are set up to perform operations</p> <p>2.3. Machines are operated according to manufacturer's operating procedures to achieve required work outcome</p> <p>2.4. Work is monitored to ensure quality standards are met</p> <p>2.5. Safety procedures are followed</p>
<p>3. Maintain static woodworking machines</p>	<p>3.1. Machines are assessed for performance compliance</p> <p>3.2. Faults or non compliances are identified and rectified, replaced or reported according to workplace procedures</p> <p>3.3. Problem solving techniques are applied to identify and address operational problems</p> <p>3.4. Routine maintenance is conducted to ensure optimal performance of machines</p> <p>3.5. Work area is maintained to housekeeping standards</p> <p>3.6. All machines are cleaned, maintained and stored in accordance with manufacturer specification</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- interpret and apply technical and quality information in the identification, selection and maintenance of static woodworking machines
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques which relate to the use of machines to avoid re-work and wastage
- identify the most appropriate tool, the setting specifications and the methods for maintaining the high precision needs throughout the work sequence
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of machines and materials
- seek learning opportunities
- use the limited workplace technology related to the selection and use of static woodworking machines.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to use of static woodworking machines
- organisational and site standards, requirements, policies and procedures for use of static woodworking machines
- types, characteristics, uses, limitations and maintenance requirements of the range of static woodworking machines used in furniture production
- manufacturing specifications for static woodworking machines

REQUIRED SKILLS AND KNOWLEDGE

- processes for evaluating the quality of static woodworking machines in terms of specifications, safety, maintainability and commercial reputation
- established communication channels and protocols
- problem identification and resolution
- workplace safety requirements and OHS legislation
- work flow within the workplace.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the use of static woodworking machines
- Interpret design requirements and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Locate and apply relevant information related to static woodworking machines
- Set up, operate and maintain static woodworking machines listed in the range statement
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - range of quality hand tools and support documentation
 - a legitimate specialist hand tool requirement
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

EVIDENCE GUIDE

	<ul style="list-style-type: none">• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other hand tools related units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Static woodworking machines	<ul style="list-style-type: none"> include table saw, thicknesser, jointer and band saw
Instructions	<ul style="list-style-type: none"> may include but not be limited to workplace procedures relating to the use and operation of tools and equipment, production planning figures, workplace instructions, including job sheets, plans, specifications, drawings and designs, workplace procedures relating to reporting and communications, and manufacturer instructions for the use of equipment and materials
Problem solving techniques	<ul style="list-style-type: none"> may include but not be limited to root cause analysis, consultation with colleagues, designers, manufacturers, technicians and maintenance personnel, resetting of machine and routine maintenance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for production of ideation drawings	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to producing ideation drawings are verified and complied with</p> <p>1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel</p> <p>1.3. Type and quantity of ideation drawings to be produced are assessed from the design brief</p> <p>1.4. Drawing equipment is selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturers recommendation</p> <p>1.5. Communication with others is established and maintained in accordance with OHS requirements</p>
2. Produce ideation drawings	<p>2.1. Multiple concept drawings are produced in keeping with the design brief</p> <p>2.2. Images are represented as thumbnails exploring design ideas and to provide a sense of feeling for the product and materials used</p> <p>2.3. Human figures are included in the drawings to provide a sense of balance</p> <p>2.4. Scale ideation drawings are produced to roughly represent the detail of joints, sections or product details</p> <p>2.5. Specifications are added to the ideation drawings as reference points for working drawings</p> <p>2.6. Ideation drawings are assessed for their elements of design</p> <p>2.7. Ideation drawings are assessed for their principles of design</p> <p>2.8. Ideation drawings are modified according to the design assessment and design brief requirements</p> <p>2.9. Ideation drawing faults are recorded and reported to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- draw designs
- make presentations
- source information
- collect, organise and understand information related to design requirements
- maintain accurate records
- communicate ideas and information
- sequence operations
- carry out work according to ohs practices
- maintain current knowledge of interior decoration and design techniques.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for producing ideation drawings
- organisational and site standards, requirements, policies and procedures for producing ideation drawings
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- ergonomics and aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- setup and operation of equipment
- computer programs
- product assembly techniques
- sketching and drawing
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures
- requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation
- requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Design brief

- is to include the aims, objectives, milestones for the design project, the point of reference for everyone, elements and principles of design and may include organisational or personal profiles, aims, target audience,

RANGE STATEMENT	
	budget, timeline, consultation requirements, colour requirements, image requirements and function
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Ideation drawings	<ul style="list-style-type: none"> are to include freehand drawings which represent a product as a story and methodology to the design brief solution. These are often drawn as thumbnail sketches
Drawing equipment	<ul style="list-style-type: none"> may include but not be limited to drawing tables, colouring pencils, pens, pastels, paints, pencils, pens, technical drawing pens, computers and computer aided drafting (CAD) software packages
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Concepts	<ul style="list-style-type: none"> are to include ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation
Thumbnails	<ul style="list-style-type: none"> are to include a series of quick line drawings which explore and demonstrate the design ideas in basic terms, these are completed in freehand and can also be used to provide detail of parts in rough scale
Specifications	<ul style="list-style-type: none"> are to include the measurements, procedures by which a product is constructed and materials to be utilised
Working drawings	<ul style="list-style-type: none"> may include but not be limited to drafted technical drawings or drawings produced on computer using CAD software packages. These usually contain project specifications
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture, colour, and function
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony,

RANGE STATEMENT	
	contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship, emphasis, proximity, alignment, space, anthropometry, ergonomics, arrangement, workload, materials handling capacity, skills, control, equipment capabilities, aesthetic relations, tension and development methods
Records and reports	<ul style="list-style-type: none"> may include but not be limited to the sketching and drawing method, product type, size, inspection and labelling outcomes, storage locations, quality outcomes, hazards, incidents or equipment malfunctions

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to research and select finishes for various furniture design solutions.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for competent workplace performance in furnishing operations of all sizes. The research and recommendation of finishes applies to an industry workplace or design studio environment and involves application of skills and knowledge at a supervisory equivalent level. These skills and knowledge are to be used within the scope of the individual's job and authority.</p> <p>This unit requires employability skills in initiative and enterprise and problem solving in order to select suitable finishes. Communication skills are used to access and interpret information.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for finish research	1.1. Applicable OHS, legislative and organisational requirements relevant to researching and recommending finishes are verified and complied with 1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel 1.3. Communication with others is established and maintained in accordance with OHS requirements 1.4. Client requirements and desires are reviewed, confirmed and clarified
2. Research finishes	2.1. Aesthetic requirements of the finish are assessed 2.2. New finish technologies are researched and reported 2.3. Tactile requirements of the finish in relation to the design is researched 2.4. Application methods and available expertise for the desired finish are assessed 2.5. Costs of finishes are assessed and compared 2.6. Environmental impact of finishes are assessed 2.7. Longevity and restorability of finishes are researched 2.8. Hazards associated with the use and application of finishes are researched 2.9. Quality of finishes are assessed and reported
3. Select finishes	3.1. Research information is critically analysed in the context of the design brief requirements 3.2. Finishes and their elements of design are promoted, research explained and evaluated for the client 3.3. Finishes and their principles of design are promoted, research explained and evaluated for the client 3.4. Presentation of research information is made, highlighting the findings and rationale for the finishes chosen

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and finishing procedures
- communicate ideas and information to enable confirmation of finishing requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate finishing problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- innovate and modify existing finishing techniques to suit the aesthetic and functional requirements of the product
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of finishing techniques
- seek learning opportunities
- use the workplace technology related to selecting finishes including tools, equipment, calculators and measuring devices
- evaluate finishing materials to confirm compatibility and feasibility of material usage.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to selecting finishes
- organisational and site standards, requirements, policies and procedures for the selection of finishing materials
- finishing techniques

REQUIRED SKILLS AND KNOWLEDGE

- characteristics, properties and selection criteria of finishing materials
- finishing characteristics and properties of timber being used
- matching requirements of adhesives and fasteners to timbers/materials
- types of tools and equipment and procedures for their safe use, operation and maintenance
- work flow in relation to the furniture items being made or repaired
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively research and select finishes to assist with informing the design process and arrive at a solution which meets client requirements • Effectively apply design elements and principles to the research and selection of finishes • Effectively research and select finishes in accordance with the concepts and design brief • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching and recommending finishes • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to researching and recommending finishes • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of

EVIDENCE GUIDE	
	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for material research	1.1. Applicable OHS, legislative and organisational requirements relevant to researching and recommending materials are verified and complied with 1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel 1.3. Communication with others is established and maintained in accordance with OHS requirements 1.4. Client requirements and desires are reviewed, confirmed and clarified
2. Research materials	2.1. Aesthetic requirements of the material are assessed 2.2. New material technologies are researched and reported 2.3. Tactile requirements of the material in relation to the design is researched 2.4. Manufacturing processes and available expertise for the desired material are assessed 2.5. Costs of materials are assessed and compared 2.6. Environmental impact of materials are assessed 2.7. Longevity and restorability of materials are researched 2.8. Hazards associated with the use and application of materials, including handling, are researched 2.9. Quality of materials are assessed and reported
3. Select materials	3.1. Research information is critically analysed in the context of the design brief requirements 3.2. Materials and their elements of design are promoted, research explained and evaluated for the client 3.3. Materials and their principles of design are promoted, research explained and evaluated for the client 3.4. Presentation of research information is made, highlighting the findings and rationale for the materials chosen
4. Research furniture making technology	4.1. Information sources on traditional, new and emerging technologies used in the production of furniture are identified and assessed for usefulness 4.2. Traditional furniture making technologies are identified and their application analysed to determine advantages and disadvantages 4.3. New and emerging technologies are identified and analysed for relevance in furniture designs 4.4. Environmental and safety aspects of technologies are identified and implications for use assessed

ELEMENT	PERFORMANCE CRITERIA
	4.5. Information is collected and stored for future use
5. Select technology for furniture	5.1. Research information is critically analysed in the context of the design brief requirements 5.2. The relevance of technology to specific design solutions is determined and technology selected 5.3. Presentation of research information is made, highlighting the findings and rationale for the technology chosen

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential knowledge and skills and their level, required for this unit.

Required skills

- collect, organise and understand information related to work briefs, basic plans and safety procedures
- communicate ideas and information
- accurately record and maintain information
- use computer operations for internet access and searches
- analyse performance characteristics
- compare findings
- communicate with suppliers
- maintain accurate records
- clarify and check task-related information
- carry out work according to OHS practices
- recognise and respond to circumstances outside instructions or personal competence
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- maintain current knowledge of furniture design and production techniques
- use the workplace technology related to the use of tools including calculators, measuring and recording devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to researching and recommending materials
- organisational and site standards, requirements, policies and procedures for researching and recommending materials
- elements and principles of design
- aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- research techniques
- material types and manufacturing processes
- technologies used in furniture production
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively research and select materials and technology to assist with informing the design process and arrive at a solution which meets client requirements
- Effectively apply design elements and principles to the research and selection of materials and technology
- Effectively research and select materials and technology in accordance with the concepts and design brief
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching and recommending materials and technology
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to researching and recommending materials
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions

EVIDENCE GUIDE	
	<p>(real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language

RANGE STATEMENT	
Clients	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Aesthetics	<ul style="list-style-type: none"> are to include the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Material	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, reconstituted products, composite materials, plastic, metal, alloys, stone based products, glass, textiles, fibreglass, foam, synthetics, cardboard, paper products or any other manipulable substance
Tactile	<ul style="list-style-type: none"> is to include that perceived by the sense of touch and producing the effect of three dimensional depth
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Environmental impact	<ul style="list-style-type: none"> is to include but not be limited to how the sourcing and use of materials effects the environment and how its continued use will effect the area the material was sourced from, energy consumption in processing the material, greenhouse gases created, waste levels and resource utilisation. Similarly what impact will be felt by reducing or stopping use of the material
Longevity and restorability	<ul style="list-style-type: none"> are to include an analysis of how long the material is expected to maintain its structure and colour, while maintaining quality of aesthetic value and how readily the material can be repaired or replaced
Hazards	<ul style="list-style-type: none"> may include but not be limited to overweight loads, bowing or cupping material causing collapse, materials handling incidents, splinters, chips or fragments being lodged in the hands or eyes
Critical analysis	<ul style="list-style-type: none"> may include but not be limited to comparing, contrasting, reflecting, critiquing, considering merit, discussion and debate
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture, colour, and function
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship, emphasis, proximity, alignment, space, anthropometry, ergonomics, arrangement, workload, materials handling capacity, skills, control, equipment capabilities, aesthetic relations, tension and development methods

RANGE STATEMENT

Technology	<ul style="list-style-type: none"> may include but not be limited to manufacturing processes including volume and custom production processes, computer aided drafting (CAD) software programs and digital design tools, machinery, tools, techniques, laser cutting, water jet cutting, CNC router cutting, foundries and casting, and soft furnishing technology

Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan research	1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to researching furniture styles and movements are verified and complied with 1.2. <i>Design brief</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i> 1.3. Relevant <i>research sources of information</i> on furniture <i>styles and movements</i> are located 1.4. Formal and informal <i>research techniques</i> are selected to access the information 1.5. Scope of research is determined
2. Conduct research and document findings	2.1. Research is conducted using a range of research techniques 2.2. <i>Geographical research</i> is conducted to detect influences 2.3. Cultural, economic and environmental influences on furniture styles and movements are identified 2.4. Features of furniture are identified 2.5. Significant trends, designers and techniques and their influences on styles and movements are identified 2.6. Research information is applied to current furniture design trends, philosophy and surrounding buildings 2.7. Information is <i>documented</i> to develop reference materials to inform design projects 2.8. Research materials and results of the research are organised and compiled into easy to access <i>facilities</i> for further reference
3. Maintain currency with furniture styles and movements	3.1. Research sources and compiled information are regularly checked for usefulness in informing design projects 3.2. Opportunities to update and expand research of styles and movements are scheduled 3.3. Findings from research are regularly incorporated into design outcomes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential knowledge and skills and their level, required for this unit.

Required skills

- conduct research
- read and interpret information
- maintain accurate records
- communicate within the workplace
- carry out work according to OHS practices
- conduct internet searches
- assess the value of information
- sketch and record information visually.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to researching styles and movements
- organisational and site standards, requirements, policies and procedures for researching styles and movements
- elements and principles of design
- ergonomics and aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- computer programs
- research techniques
- presentation techniques and equipment
- product assembly techniques
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively research furniture styles and movements to assist with informing current design practices, challenging and adapting influences into current designs
- Effectively apply design elements and principles to the research of styles and movements
- Effectively research styles and movements in accordance with the concepts and design brief
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching styles and movements
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to researching styles and movements
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project related conditions

EVIDENCE GUIDE	
	<p>(real or simulated) and require evidence of process.</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.• Assessment may be in conjunction with assessment of other units of competency.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones for the design project, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline and consultation requirements
Research sources	<ul style="list-style-type: none"> may include but not be limited to scientific texts, historical texts and journals, oral histories, journals, periodicals, images, objects, films, videos, micra fish, internet, technical information, stories, libraries, museums, universities and collection catalogues
Information	<ul style="list-style-type: none"> may include but not be limited to philosophy, world histories, cultural issues, spiritual issues, religious issues, histories of furniture design, linguistics, aesthetics, politics, gender and identity issues, land and place, signs and symbols, criticism,

RANGE STATEMENT	
	new technologies and light
Styles and movements	<ul style="list-style-type: none"> • may include but not be limited to furniture designers and key figures, such as Frank Lloyd Wright, Charles Eames and Antonio Gaudi • may include but not be limited to schools and movements, such as Bauhaus in Germany, Federal style in the United States, and Art Nouveau in Europe • may include but not be limited to periods and styles, such as the neo-classical Adams style, the simple lines of Art Deco, and the asymmetrical style of Rococo • may include but not be limited to decorative details, such as rosettes, foots, hinges, and mouldings
Research techniques	<ul style="list-style-type: none"> • may include but not be limited to internet searches, interview, discussion, books, journals, film, documentaries and first hand review
Geographical research	<ul style="list-style-type: none"> • may include but not be limited to international, national, regional and local influences
Facilities	<ul style="list-style-type: none"> • may include but not be limited to files, computer files, indices, databases, charts and diagrams
Documented	<ul style="list-style-type: none"> • may include but not be limited to freehand drawings, sketches, ideation drawings, working drawings, computer generated documentation, pictures, illustrations, photos, multimedia presentations, materials or theme boards, specifications and measurements

Co-requisite units		

LMFFDT4016A Select, use and maintain hand tools for the creation of custom furniture

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the competency to select and use hand tools in applications relating to the custom furniture making sector of the furnishing industry. It also includes the manufacture of specialist hand tools to support unique functions.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of furniture maker operations. The competency applies to a work room and on site environment and involves application of skills and knowledge at the highly skilled craftsman or artisan level. These skills and knowledge are to be used within the scope of the individual's job and authority.</p> <p>This unit requires employability skills in planning and organising, technology use and problem solving in order to correctly select hand tools for specific woodwork operations. Communication skills are used to access and interpret work requirements and self management is applied to ensure ongoing performance of tools is maintained.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand tools	1.1. Applicable <i>legislative, OHS</i> and <i>organisational requirements</i> relevant to the selection and use of hand tools are verified and complied with 1.2. Type and range of hand tools, their functions, manufacturing specifications and quality reputations are identified and researched
2. Select hand tools	2.1. <i>Hand tools</i> most appropriate for the job are selected 2.2. Selected hand tools are checked for serviceability, precision settings, maintenance compliance and safety 2.3. <i>Faults</i> are rectified or passed to qualified persons for rectification 2.4. Equipment is selected to hold or support material for hand tools application where applicable
3. Manufacture specialist hand tools	3.1. The need for specialist hand tools is established after full research and discounting of existing capabilities and availabilities 3.2. The design of the specialist tool is completed and verified 3.3. The material for the specialist tool is selected after full consideration of the functions and the material options 3.4. The specialist tool is manufactured to specification 3.5. The specialist tool is tested and modified to satisfy the function 3.6. Design specifications are documented and retained in the enterprise filing systems
4. Use hand tools	4.1. Hand tools are safely located when not in immediate use 4.2. Material is located and held in position for hand tool application 4.3. Hand tools safety requirements are complied with throughout the operation 4.4. The full capability of the hand tool is professionally applied and adjusted to achieve the required specificity of outcome 4.5. Mid-operation maintenance is carried out to ensure continuing achievement of specified outcomes
5. Clean up work area and tools	5.1. All tools are cleaned, maintained and stored in accordance with manufacturers' specification 5.2. Equipment is cleaned, maintained and stored 5.3. Work area is cleared and waste removed 5.4. Workplace documentation and/or reports are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- interpret and apply technical and quality information in the identification, selection and maintenance of commercially superior hand tools
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques which relate to the use of hand tools to avoid re-work and wastage
- identify the most appropriate tool, the setting specifications and the methods for maintaining the high precision needs throughout the work sequence
- recognise and respond to circumstances outside instructions or personal competence
- design and manufacture specialist hand tools required for unique but repetitive tasks/functions
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- seek learning opportunities
- use the limited workplace technology related to the selection and high precision use of hand tools.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to use of hand tools
- organisational and site standards, requirements, policies and procedures for use of hand tools
- types, characteristics, uses, limitations and maintenance requirements of the range of hand tools used in furniture production

REQUIRED SKILLS AND KNOWLEDGE

- manufacturing specifications for hand tools
- processes for evaluating the quality of hand tools in terms of specifications, safety, maintainability and commercial reputation
- established communication channels and protocols
- techniques for the design of specialised hand tools and the manufacturer of one-off tools
- problem identification and resolution
- workplace safety requirements and OHS legislation
- work flow within the workplace

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the use of hand tools
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Locate and apply relevant information related to hand tools
- Adopt and carry out correct procedures prior to and during use of the range of hand tools stipulated in the Range Statement
- Design and manufacture one specialist hand tool for a specified production function
- Tune and sharpen:
 - chisels
 - hard planes
 - spokeshaves
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • range of quality hand tools and support documentation • a legitimate specialist hand tool requirement • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other hand tools related units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Instructions	<ul style="list-style-type: none"> may include but not be limited to workplace procedures relating to the use and operation of tools and equipment, production planning figures, workplace instructions including job sheets, plans, specifications, drawings and designs, workplace procedures relating to reporting and communications, and manufacturer instructions for the use of equipment and materials
Hand tools	<ul style="list-style-type: none"> may include, but not be limited to hand planes, chisels, hand saws, spokeshave, hammer, mallet, marking-out tools, files, rasps, scraper, screwdrivers, hand drill, straight edges, knives, clamps, steel/bronze wool, sand paper, brushes, stone, whetstone and grinder
Fault reporting	<ul style="list-style-type: none"> may be verbal or written

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational requirements</i> and instructions relevant to <i>lathe</i> operations are verified and complied with</p> <p>1.2. <i>Work instructions</i> are used to determine job requirements including design, quality, materials, equipment and quantity</p> <p>1.3. Material for turning is selected and inspected for safety</p> <p>1.4. The wood lathe, holding devices, tools and gauges are identified and checked for safe and efficient operations</p> <p>1.5. <i>Procedures</i> are determined for minimising waste</p> <p>1.6. Procedures are identified for maximising energy efficiency while completing the job</p>
2. Set up machines with holding devices	<p>2.1. Lathe speed is selected in accordance with job requirements, safety considerations and manufacturers' recommendations</p> <p>2.2. <i>Holding devices</i> are mounted in accordance with job requirements and safety considerations</p> <p>2.3. Necessary gauges and tools are selected for job</p>
3. Operate lathe	<p>3.1. Lathe start up instructions are carried out in accordance with manufacturer instructions</p> <p>3.2. Material is mounted in lathe in accordance with manufacture instructions, safe handling procedures and standard workplace operating procedures</p> <p>3.3. Lathe is operated in accordance with its designed capacity, purpose and to manufacturers' recommendations</p> <p>3.4. Lathe operation is monitored to ensure produce quality and output</p> <p>3.5. Waste quantities are checked and minimised</p> <p>3.6. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures</p> <p>3.7. Problems with the required work and/or operation of the machine are identified and reported to the appropriate person</p>
4. Clean up work area and maintain equipment	<p>4.1. Materials that can be reused are collected and stored</p> <p>4.2. Waste and scraps are removed following workplace procedures</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	4.5. Operator maintenance is completed in accordance with manufacturer specifications and workplace

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- interpret and apply technical and quality information in the identification, selection and maintenance of wood turning tools
- interpret, apply and elaborate on specifications for wood turning products
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques which relate to hand carving to avoid re-work and wastage
- identify the most appropriate tool, the specifications and the methods for maintaining the high precision needs throughout the wood turning sequence
- recognise and respond to circumstances outside instructions or previously recognised personal competence
- adapt designs to incorporate the impact of wood carving operations on the intended materials
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of wood turning tools and materials
- maintain current knowledge of equipment installation techniques
- seek learning opportunities
- use the limited workplace technology related to the selection and high precision use of wood turning tools and equipment.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to wood turning
- terminology covering wood turning operations and materials

REQUIRED SKILLS AND KNOWLEDGE

- types, characteristics, used and limitations of timber species for wood turning
- techniques for the design and documentation of specifications for wood turned products
- organisational and site standards, requirements, policies and procedures for turning of wood
- types, characteristics, uses, limitations and maintenance requirements of the range of tools used in wood turning
- processes for evaluating the quality of wood turning tools in terms of specifications, safety, maintainability and commercial reputation
- the range of commonly used wood turning techniques
- established communication channels and protocols
- problem identification and resolution
- workplace safety requirements and OHS legislation
- work flow within the workplace.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the use of hand tools
- Interpret product design and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Identify, set up and maintain holding devices, safe speed selection and balance limitations to complete the following:
 - freehand turn articles between centres that have multiple axis
 - complete a minimum of eight hand turned articles to detail between centres
 - manufacture templates and gauges
 - scroll cut material prior to turning
 - complete a minimum of four hand turned articles to detail with grain at 90(to the axis of the lathe
- Work effectively with others
- Modify activities to cater for variations

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • eight significant wood turning requirements including design brief or specification • a range of optional timbers • range of quality wood turning tools • materials for the preparation of the product for finishing
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other related units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to producing templates and jigs for custom made furniture</p> <p>1.2. Instructions, plans or design briefs are read and interpreted to identify processes and materials required to complete work tasks</p> <p>1.3. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Sequence of work is planned and documented, including the starting point, to ensure efficiency and quality outcomes</p> <p>1.5. Quality checking procedures are developed and documented for each step in the process</p>
2. Plan for the production of templates or patterns	<p>2.1. Size requirements are checked in relation to the production process and finishing capacity of the workplace</p> <p>2.2. Material for pattern or template is identified for approximate size and characteristics</p> <p>2.3. Procedures for using pattern development instruments and tools are checked and equipment is prepared for use</p> <p>2.4. Each dimension is measured, exploded and plotted maintaining appropriate angles, arcs and curves</p> <p>2.5. Visual inspection and measurements are used to compare pattern dimensions and shapes with drawings and specifications</p>
3. Complete templates or patterns	<p>3.1. Equipment and tools are used following normal workplace procedures</p> <p>3.2. Pattern or template is completed ensuring that the pattern indicates completion date and original drawing details</p> <p>3.3. Required workplace approval of pattern or template is obtained</p> <p>3.4. Plans are marked with notations for workplace requirements, including authorship, process or customer requirements, authorisation and any review dates</p> <p>3.5. Plans are copied and filed as required according to workplace policies and procedures</p>
4. Design and construct jig for custom furniture	<p>4.1. Design of proposed jig or fixture is produced</p> <p>4.2. Production process incorporating jig is planned</p> <p>4.3. Tools and equipment are used following normal workplace procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	4.4. Jig is constructed as per design and within tolerances 4.5. Jig is used to produce prototype to ascertain its adherence to set tolerances and to assess its match to original design 4.6. Jig is adjusted as required to meet requirements for custom made furniture design
5. Complete housekeeping	5.1. Unused materials are stored or recycled as required 5.2. Tools and equipment are cleaned, maintained and stored appropriately 5.3. Faulty or defective equipment is tagged and reported in accordance with workplace practices 5.4. Work area is cleaned and rubbish disposed of appropriately 5.5. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate production problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- seek learning opportunities
- use workplace technology related to the production of templates, patterns and jigs, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the production of templates and jigs
- organisational and site standards, requirements, policies and procedures for the production of templates and jigs
- types, characteristics, uses and limitations of templates and jigs
- techniques for the manufacture and application of templates and jigs
- the interpretation of plan representation of furniture design
- the preparation of drawings/set outs
- types, characteristics, uses and limitations of tools and equipment and procedures for their safe use, operation and maintenance
- work flow in relation to furniture production

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for producing templates and jigs
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Prepare a minimum of two templates and two jigs for custom furniture
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - realistic task for the preparation/production of a veneer
 - realistic tasks related to the application of veneers
 - materials and equipment relevant to the production and application of veneers
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other related units of competency

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling, including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Instructions	<ul style="list-style-type: none"> may include but not be limited to workplace instructions including job sheets, plans, specifications, drawings and designs, workplace procedures relating to reporting and communications, and manufacturer instructions for the use of equipment and materials
Tools and equipment	<ul style="list-style-type: none"> may include but not be limited to computer numeric controlled machines, static woodworking machines and relevant hand tools, routers , spindle moulders, panel saws, copy shapers and radial arm saws
Materials	<ul style="list-style-type: none"> may include but not be limited to manufactured board, solid timbers and composite materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for application	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to applying ergonomics, anthropometrics and proxemic considerations to a product are verified and complied with</p> <p>1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel</p> <p>1.3. Client requirements and desires are reviewed, confirmed and clarified</p> <p>1.4. Communication with others is established and maintained</p> <p>1.5. Problems or underlying factors to be addressed by the design brief are verified</p> <p>1.6. Elements of design are diagnosed for the intended design brief</p> <p>1.7. Principles of design are diagnosed for the intended design brief</p>
2. Apply ergonomics, anthropometrics and proxemics	<p>2.1. Concepts for the proposed solution to the design brief are reviewed for ergonomic, anthropometric and proxemic considerations</p> <p>2.2. Human body functions are assessed in the context of solutions for possible problems in supporting bodies of all shapes and sizes</p> <p>2.3. Ergonomic factors of a design are interrogated and refined</p> <p>2.4. Anthropometric factors of a design are interrogated and refined</p> <p>2.5. Proxemic considerations of a design are interrogated and reviewed</p> <p>2.6. Sample maquette and prototype are reviewed in accordance with ergonomics, anthropometrics and proxemics</p> <p>2.7. Different solutions to satisfy the requirements of the design brief are explored and reviewed</p> <p>2.8. Final working drawings in full scale are developed to test the ergonomic values of a design</p> <p>2.9. Specifications are reviewed and compiled in readiness for production</p> <p>2.10. Concept is planned for manufacture taking into account available equipment, resources, production sequences, schedules and timelines</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level, required for this unit.

Required skills

- collect, organise and understand information related to furniture design
- communicate ideas and information
- prepare documentation
- work with others and in a team to evaluate design features
- recognise and respond to circumstances outside instructions or personal competence
- use mathematical ideas and techniques to correctly complete assess designs
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of ergonomics, anthropometrics and proxemic considerations
- maintain current knowledge of assessment methods
- seek learning opportunities
- use the workplace technology related to the electronic communication with colleagues and clients as well as documenting and presenting information.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for applying ergonomics, anthropometrics and proxemic considerations to a product
- organisational and site standards, requirements, policies and procedures for applying ergonomics, anthropometrics and proxemic considerations to a product
- elements and principles of design
- ergonomics, anthropometrics, proxemics and aesthetic values
- human body functions
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- computer programs
- product machining, assembly and finishing techniques
- sketching and drawing
- storage systems and labelling
- Australian Standards for product design
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements

REQUIRED KNOWLEDGE AND SKILLS

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively work through the application of ergonomics, anthropometrics and proxemic considerations to enhance a product for a design brief
- Effectively apply design elements and principles to the application of ergonomics, anthropometrics and proxemic considerations to a product
- Effectively applying ergonomics, anthropometrics and proxemic considerations to a product in accordance with a design brief
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for applying ergonomics, anthropometrics and proxemic considerations to a product
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to applying ergonomics, anthropometrics and proxemic considerations to a product
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks

EVIDENCE GUIDE	
	<p>and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones for the design project, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline and consultation requirements
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to

RANGE STATEMENT	
	individual social and cultural differences, control of tone of voice and body language
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture, colour, and function
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship, emphasis, proximity, alignment, space, anthropometry, ergonomics, arrangement, workload, materials handling capacity, skills, control, equipment capabilities, aesthetic relations, tension and development methods
Concepts	<ul style="list-style-type: none"> are to include ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation
Ergonomics	<ul style="list-style-type: none"> are to include the study of the efficiency of persons in their working environment
Anthropometrics	<ul style="list-style-type: none"> are to include the scientific study of the measurements of the human body
Proxemics	<ul style="list-style-type: none"> are to include the study of socially conditioned spatial factors in ordinary human relations
Maquette	<ul style="list-style-type: none"> is to include a miniature version of the intended final product to establish if the elements and principles of design have been achieved. These are usually produced from cardboard or scrap timber
Prototype	<ul style="list-style-type: none"> is usually a full size replica of the intended product outcome based on concept sketches and free hand development drawings, these are usually produced from stiff cardboard, scrap timber or possibly even moulding clay
Working drawings	<ul style="list-style-type: none"> may include but not be limited to drafted technical drawings or drawings produced on computer using computer aided drafting software packages. These usually contain project specifications
Specifications	<ul style="list-style-type: none"> are to include the measurements, procedures by which a product is constructed and materials to be utilised
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess raw sources of material	1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements relevant</i> to applying resources sustainably are verified and complied with 1.2. <i>Design brief</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i> 1.3. <i>Communication</i> with others is established and maintained in accordance with OHS requirements 1.4. <i>Materials</i> are assessed from their <i>source</i> taking account of where it derived from and its abundance 1.5. Materials are assessed for their <i>ecological and environmental impact</i> 1.6. Materials are assessed for their availability and <i>sustainability</i>
2. Assess the sustainability of a design	2.1. User needs and desires are assessed and documented 2.2. Material choice and use as stated in the specifications is audited and assessed 2.3. <i>Product lifecycle</i> analysis is evaluated 2.4. Intended <i>manufacturing processes</i> including <i>assembly</i> and <i>finishing</i> are assessed for their impact on the environment 2.5. Final <i>documentation</i> outlining the full analysis of the designs impact on the environment is compiled and produced as a report
3. Apply resources sustainably	3.1. <i>Alternative solutions</i> to a specified material are explored and reported 3.2. <i>Recycled materials</i> are considered and analysed as possible solutions to the material requirements for a design brief 3.3. <i>Waste products</i> are used in the production of models, maquettes and prototypes 3.4. <i>Sustainable materials</i> are detected and used in preference to materials in short supply 3.5. Thinner grades of material, veneers or <i>man-made materials</i> are evaluated as options for material use 3.6. Government legislation on resource sustainability is researched and adhered to

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- accurately recording and maintaining information relating to the furniture making and design functions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use
- accurately recording and maintaining information relating to the design of products
- recognise and respond to circumstances outside instructions or personal competence
- efficiently and safely contribute to innovative design process
- plan and organise activities, including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- learning of thinking, problem solving and conceptual techniques
- maintain current knowledge of tools and materials
- maintain current knowledge of furniture making and designing techniques
- seek learning opportunities
- use the workplace technology related to the use of tools, including calculators, measuring and recording devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to applying resources sustainably
- organisational and site standards, requirements, policies and procedures for applying resources sustainably
- material sustainability

REQUIRED KNOWLEDGE AND SKILLS

- elements and principles of design
- ergonomics and aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products, sources and defects
- forest management and sustainability
- resource utilisation
- waste and waste management
- computer programs
- product assembly techniques and equipment capabilities
- sketching and drawing
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively apply resources sustainably in the design and development of products in accordance with the elements and principles of design
- Effectively measure the impact of design upon the environment
- Effectively produce a report on the impact study outcomes of a sustainable resources
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for applying resources sustainably
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to applying resources sustainably
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions

EVIDENCE GUIDE	
	<p>(real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for assessment	1.1. Applicable OHS, legislative and organisational requirements relevant to assessing and resolving technical integrity of a design are verified and complied with 1.2. Design brief is reviewed, confirmed and clarified with appropriate personnel 1.3. Communication with others is established and maintained 1.4. Problems or underlying factors being addressed by the design brief are verified 1.5. Client requirements and desires are reviewed, confirmed and clarified 1.6. Elements of design are assessed for the intended outcome 1.7. Principles of design are assessed for the intended outcome
2. Assess technical integrity	2.1. Requirements of the brief are prioritised and assessed for conflicts 2.2. Integrity of a design is tested for structural and ergonomic compliance 2.3. Mechanical strength and stress points of a design are evaluated and reported 2.4. Success and failure points of a design are analysed and reviewed 2.5. Distinctive and strong points of a design are highlighted and recorded 2.6. Level of innovation and technical merit of a design is assessed and recorded
3. Resolve technical integrity	3.1. Most suitable materials, equipment and manufacturing processes to resolve the technical faults of a brief are assessed to comply with the requirements 3.2. Alternative design solutions for a technical failure are researched and instigated 3.3. Restoration of existing designs are considered and acted upon for viable cases 3.4. Final documentation outlining the full analysis of the design brief is compiled and produced as a report

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- accurately recording and maintaining information relating to the furniture making and design functions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use
- recognise and respond to circumstances outside instructions or personal competence
- efficiently and safely contribute to innovative design process
- plan and organise activities, including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- learning of thinking, problem solving and conceptual techniques
- maintain current knowledge of tools and materials
- maintain current knowledge of furniture making and designing techniques
- seek learning opportunities
- use the workplace technology related to the use of tools, including calculators, measuring and recording devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to assessing and resolving technical integrity of a design
- organisational and site standards, requirements, policies and procedures for assessing and resolving technical integrity of a design
- environmental protection requirements
- established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

- problem identification and resolution
- elements and principles of design
- technical integrity of design
- ergonomics and aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- product assembly techniques and equipment capabilities
- sketching and drawing
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively assess and resolve technical integrity of a design, work through the design process assessing the requirements and recording the intended resolution
- Effectively apply design elements and principles to assess and resolve technical integrity of a design
- Effectively produce a report on the intended resolution as a result of assessing and resolving technical integrity of a design
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for assessing and resolving technical integrity of a design
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to assessing and resolving technical integrity of a design
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> may include but not be limited to the aims, objectives, milestones for the design project, the point of reference for everyone, elements and principles of design and may include organisational or personal profiles, aims, target audience, budget, timeline, consultation requirements, colour requirements, image requirements and function
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of

RANGE STATEMENT	
	voice and body language
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture, colour, and function
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship, emphasis, proximity, alignment, space, anthropometry, ergonomics, arrangement, workload, materials handling capacity, skills, control, equipment capabilities, aesthetic relations, tension and development methods
Conflicts	<ul style="list-style-type: none"> may include but not be limited to technical aspects of a design which appear or act in different manner to the intent of the product design
Integrity	<ul style="list-style-type: none"> may include but not be limited to the intended structural qualities and construction methods of a designed product
Structural	<ul style="list-style-type: none"> may include but not be limited to construction methods for all or parts of a designed product which are not intended to fail under regular and continual use
Ergonomics	<ul style="list-style-type: none"> is to include the study of the efficiency of persons in their working environment
Mechanical strength	<ul style="list-style-type: none"> is to include the strength of parts or joints under the pressure of operation in general usage situations
Material	<ul style="list-style-type: none"> may include but not be limited to native timber (native and imported), man-made timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Equipment	<ul style="list-style-type: none"> may include but not be limited to hand tools, static machinery, portable power tools and computer numerically controlled equipment may also include procedures for lock out protecting operators and co-workers from accidental injury by isolating the machine from the power source
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Critically analyse and evaluate products and images for visual aesthetics	1.1. Qualities of three dimensional <i>principles and elements of design</i> are identified and reviewed from reference material 1.2. Products and images are evaluated for three dimensional elements and principles and recorded in accordance with enterprise practice 1.3. Cultural and psychological factors of visual appeal are identified from reference documents and recorded in accordance with <i>enterprise practice and requirements</i> 1.4. Products and images are assessed for cultural and psychological factors influencing their aesthetic appeal
2. Use a visual language in own work	2.1. Own work is documented and collated 2.2. Works are analysed for contemporary visual aesthetic design elements and principles 2.3. <i>Visual language</i> is developed within own work 2.4. Visual language in own work is recognised and recorded in accordance with enterprise practice
3. Critically analyse social and ethical issues in contemporary society affecting furniture design	3.1. Details of <i>social and ethical issues</i> in contemporary society which may impact on the furniture are identified and documented in accordance with enterprise practice 3.2. Issues are analysed against the practice of furniture design and conclusions are recorded in accordance with enterprise practice 3.3. Conclusions are used to influence new design developments
4. Recognise historical context of furniture products	4.1. Details of furniture from <i>historical periods</i> are identified from reference materials and existing examples and recorded in accordance with enterprise practice 4.2. Historical design elements and details are identified in own design proposals and product 4.3. Contemporary design elements are assessed against details of historical periods and recorded in accordance with enterprise practice
5. Critically analyse and recognise the impact of art and design movements on the development of products	5.1. Dominant ideas and details of <i>art and design</i> movements are identified from reference material or product examples 5.2. Product proposals are assessed for visual attributes and results are recorded in accordance with enterprise practice 5.3. Design attributes are compared with the dominant ideas and details of art and design movements and results recorded in accordance with enterprise practice.

ELEMENT	PERFORMANCE CRITERIA
6. Identify technical skills needs to improve own practice of designing products	<p>6.1. Details of current design skills are identified and documented</p> <p>6.2. Needs analysis for improvement of own design practice is undertaken</p> <p>6.3. Details of technical skills required to improve are documented</p> <p>6.4. Training opportunities for required technical skills are identified and documented</p>
7. Establish networks with other furniture designers, makers and other design professionals	<p>7.1. Career relationships with other design professionals are mapped</p> <p>7.2. New areas of network possibilities are identified and documented</p> <p>7.3. New network contacts are established with other furniture design professionals</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to visual appeal of a product
- communicate ideas, information with other furniture designers
- prepare folio of work produced
- work with others to create networks with furniture design professionals
- identification of skills needs and prepare a plan to develop skills required
- recognise and respond to circumstances outside instructions or personal competence
- adopt a proactive relationship with other furniture designers
- develop new networks
- plan activities covering the choice of research methods, the preparation and layout of the folio of own work
- use analytical methods to compare own work to social norms
- clarify and confirm skills needs
- plan reflection within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal development goals
- satisfy the competency requirements for the job
- maintain current knowledge of art and design
- maintain current knowledge of ethical and social issues
- seek learning opportunities
- networking skills
- use the workplace technology related to the research and documentation of historical information
- use electronic communication methods to develop networks.

Required knowledge

- art and design movements
- elements and principles of design
- furniture historical periods
- cultural factors on aesthetic appeal
- psychological factors on aesthetic appeal
- critical analysis techniques
- contemporary techniques and technologies for preparation and presentation of design information
- established communication channels and protocols
- needs identification.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Report on design principles and elements for at least three other furniture designer's product
- Produce a documented folio of own work
- Identify visual language in own work and further develop this through subsequent projects
- Document ethical issues in design, manufacture and society in accordance with enterprise practice
- Identify and document art and design movements elements and historical context in own product
- Identify and document personal skills needs, including:
 - conduct and document a needs analysis on required design skills
 - prepare and produce a training plan and career map
 - establish and maintain networks with other design professionals
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - a realistic furniture makers product
 - specific information covering aesthetic appeal
 - historical context, art and design movements
 - details of enterprise practice

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • technical skills needs of contemporary furniture makers
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with other related units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Principles and elements of design	<ul style="list-style-type: none"> may include but not be limited to point, line, plane, volume, shape, form, tone, colour, surface, texture, scale, size, vertex, edge, face, position, direction, space, balance, movement, proportion, rhythm, repetition, pattern, relief, mass and movement
Enterprise requirements	<ul style="list-style-type: none"> may include but not be limited to legal, enterprise, guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Visual language	<ul style="list-style-type: none"> may include but not limited to the visual traits in work and proposals which communicate clearly information needed
Social and ethical issues	<ul style="list-style-type: none"> may include but not be limited to issues relating to social justice, environmental sustainability, biodiversity, cultural heritage and social responsibility of furniture makers
Historical periods	<ul style="list-style-type: none"> may include but not be limited to historical periods of furniture styles from Egyptian to deconstructivism may also include but not limited to design schools and groups from the 20th and 21st centuries
Art and design movements	<ul style="list-style-type: none"> may include but not be limited to historical art and design movements, schools and groups from Egyptian to deconstructivism, and European design schools and groups

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to constructing custom furniture are verified and complied with</p> <p>1.2. Instructions, plans and design documents are read and interpreted to identify furniture construction and finishing requirements</p> <p>1.3. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Product purpose, context, furniture style and construction materials are identified</p> <p>1.5. Work sequence covering each step in the construction process including sub-assemblies, is planned and documented to enterprise requirements</p> <p>1.6. Quality checking procedures are developed and documented for each step in the construction process</p>
2. Curve and shape components	<p>2.1. Techniques for bending, forming and shaping components are identified, evaluated and confirmed as being appropriate for the construction requirement</p> <p>2.2. Component specifications are set out according to work instructions and materials marked according to industry practices</p> <p>2.3. Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications</p> <p>2.4. Materials are bent, formed and shaped in accordance with the production plan and workplace procedures</p> <p>2.5. Components are checked against specified tolerances, fit and accuracy</p>
3. Veneer components	<p>3.1. Suitable veneer material is identified, evaluated and selected</p> <p>3.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications</p> <p>3.3. Veneer components and materials are measured, marked and cut to size</p> <p>3.4. Veneers are prepared for application and laid out</p> <p>3.5. Suitable joining processes to backing and adjacent veneers are selected and prepared</p> <p>3.6. Adhesives are applied according to workplace procedures and/or manufacturer instructions</p> <p>3.7. Rough veneering components are produced in accordance</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>with the production plan and workplace procedures, including the use of protective equipment</p> <p>3.8. Final trim and finishing are completed to specifications</p> <p>3.9. Work is checked against required quality standards</p> <p>3.10. Any non-conformity with the required quality standard is rectified</p>
4. Make joints	<p>4.1. Joints are identified and type of joint to be used is selected and adapted/ designed as necessary</p> <p>4.2. Tools, adhesives and fasteners are selected to match the joint type</p> <p>4.3. Cutting and joining lines are marked out to suit joint type</p> <p>4.4. Measurements and calculations are checked for accuracy to ensure quality outcomes</p> <p>4.5. Material features are identified and optimal usage criteria are observed</p> <p>4.6. Material is cut to specification, inspected and prepared for joining</p> <p>4.7. Material is joined in accordance with the job specifications</p> <p>4.8. Fasteners and adhesives are used to make joints firm where required</p> <p>4.9. Finished joint is checked against quality requirements</p>
5. Construct sub-assemblies	<p>5.1. Components, materials, including adhesives, trims and accessories, and tools are laid out in accordance with the assembly plan</p> <p>5.2. Components are checked against specification prior to assembly and out of specification items are rejected</p> <p>5.3. Sub-assemblies are assembled using appropriate tools, jigs and fixtures and checked against specification for accuracy, fit, twist and distortion</p> <p>5.4. Sub-assembly quality is checked against plans at identified checkpoints</p>
6. Assemble custom furniture	<p>6.1. Components, sub-assemblies and materials, including adhesives, trims and accessories, and tools are laid out in accordance with the assembly plan</p> <p>6.2. Components and sub-assemblies are checked against specification prior to assembly and out of specification items are rejected</p> <p>6.3. Components are assembled, fitted using appropriate tools, jigs and fixtures and checked against specification for accuracy, fit, twist and distortion</p> <p>6.4. Hardware and decorative accessories are applied to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>specification</p> <p>6.5. Product is prepared for final finish including the removal of bruises, scratches, dents and marks</p> <p>6.6. Product quality is checked against plans at identified checkpoints</p>
7. Finish furniture surface	<p>7.1. Using samples of the type of material surface and specified finish, various finishing options are evaluated and the preferred option is selected</p> <p>7.2. Sample of material is tested with selected finishing technique to ensure appropriateness</p> <p>7.3. Furniture surface is prepared in accordance with the finishing specification</p> <p>7.4. Imperfections, pores or nail or screw holes on the surface are rectified</p> <p>7.5. Finishing processes and materials are applied in accordance with the agreed specifications</p> <p>7.6. Surface is polished or buffed depending on the shine required</p> <p>7.7. Work is checked against required quality standards</p> <p>7.8. Any non-conformity with the required quality standards is rectified</p>
8. Complete housekeeping	<p>8.1. Unused materials are stored or recycled as required</p> <p>8.2. Tools and equipment are cleaned and stored appropriately</p> <p>8.3. Faulty or defective equipment is tagged and reported in accordance with workplace practices</p> <p>8.4. Work area is cleaned and rubbish disposed of appropriately</p> <p>8.5. Workplace documentation and/or reports are completed, including time log for operations for costing and business improvement activities</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate custom furniture construction problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- create innovative designs which satisfy the agreed parameters and consider but are not limited by other historical or contemporary influences
- adapt traditional and innovative construction techniques to address unique construction circumstances
- identify new enterprise opportunities when developing product proposals
- adopt a proactive relationship with the clients and other furniture makers
- develop industry networks
- plan and organise activities including the preparation and layout of the worksite and the obtaining of tools and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for planned tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of furniture construction techniques and materials
- explore and develop solutions beyond the currently recognised boundaries
- involve others in the learning process
- use the workplace technology related to the selection, preparation, operation and maintenance of hand and power tools, including calculators and measuring devices
- apply knowledge of timber technology to optimise the selection and use of timber varieties and related construction materials.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to

REQUIRED SKILLS AND KNOWLEDGE

- moisture suppressants and barrier systems
- organisational, workshop and site standards, requirements, policies and procedures for the construction of custom furniture
- types of tools and equipment used in construction and procedures for their safe use, operation and maintenance
- work flow techniques appropriate for the management of the construction work/project
- the presentation and interpretation of plan representation of a furniture design
- techniques for timber bending, forming and shaping
- techniques for the preparation of drawings/set-outs/rods and geometrical concepts
- types, characteristics, uses and limitations of materials
- techniques for the manufacture and application of veneers
- techniques for assembly, fixing and finishing of custom furniture components
- types, characteristics, uses, limitations and safety requirements of adhesives, fasteners and hardware used in custom furniture assembly
- matching requirements of adhesives and fasteners to timbers/materials used
- finishing techniques
- characteristics, properties and selection criteria of finishing materials
- finishing characteristics and properties of timber being used
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for preparing and presenting design information
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Complete all aspects of the construction and finishing of two furniture items requiring advanced construction techniques
- The furniture item must satisfy high quality custom made furniture standards and expectations in terms of innovation, complexity, tolerance and fit of components and quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - an agreed unique and innovative furniture construction requirement/project for one item
 - access to appropriate materials, tools and equipment

EVIDENCE GUIDE	
	<p>relevant to the planning and application of construction and finishing techniques</p> <ul style="list-style-type: none"> • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other relevant and contributory units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling, including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Instructions	<ul style="list-style-type: none"> may include but not be limited to workplace procedures relating to the use and operation of tools and equipment, production planning figures, workplace instructions including job sheets, set-outs, plans, specifications, drawings and designs, workplace procedures relating to reporting and communications, and manufacturer instructions for the use of equipment and materials
Shaping, bending and forming techniques	<ul style="list-style-type: none"> may include but not be limited to steam/heat bending, curving, pressure bending and shaping by hand or static machine
Shaped components	<ul style="list-style-type: none"> include timber shaped by hand or static machine tools

RANGE STATEMENT	
Cutting and shaping tools and equipment	<ul style="list-style-type: none"> may include but not be limited to measuring tapes for rules, hammers, mallets, squares, bevels, chisels, planes, hand saws, power saws, power drills/screwdrivers, pneumatic tools, clamps, screwdrivers, pincers, rasps, surface planers, panel planers, belt sanders, horizontal borers, vertical drill presses, table saws, dove-tailers, pedestal grinders, wood turning lathes, veneer guillotines and presses
Materials	<ul style="list-style-type: none"> may include but not be limited to timber, glass, metal, manufactured board, furniture hardware, adhesives, screws, nails, dowels, decorative finishes and finishing material
Veneering tools and equipment	<ul style="list-style-type: none"> may include but not be limited to knives, chisels, measuring tapes or rules, mallets, squares, levels, planes, bandsaws, power saws, pneumatic tools, vacuum bags and presses, clamps, moulds, jigs and fixture, rollers, laminate trimmers, cutters and hand routers, sand paper, wire wool and sanding block
Veneered components	<ul style="list-style-type: none"> refers to the thin slices of wood, usually thinner than 3 mm (1/8"), which is usually glued onto a substrate
Veneer materials	<ul style="list-style-type: none"> may include but not be limited to timber, manufactured board, laminates, timber strips, adhesives, cleaning materials and tapes
Joints for custom furniture	<ul style="list-style-type: none"> may include but not be limited to variations of dowel, mortise and tenon, dovetail, lap joint, biscuit joint, finger joint, housing joint, mitre or bridle joints
Jointing tools and equipment	<ul style="list-style-type: none"> may include but not be limited to chisels, mallets, mortise gauges, vernier callipers, vices, dovetail saws, tenon saws, coping saws, planes, files, hand drills, power drills, dowel jigs, power routers, jigs and fixtures may also include portable biscuit machines and power saws
Jointing materials	<ul style="list-style-type: none"> may include but not be limited to timber (both indigenous and overseas), adhesives and fasteners
Sub-assembly	<ul style="list-style-type: none"> are part-constructions of the main assembly needed to allow for gluing and clamping of internal and intricate parts of the furniture item
Assembly materials	<ul style="list-style-type: none"> may include but not be limited to timber (both indigenous and overseas), adhesives, screws, dowels, furniture hardware, glass and decorative finishes
Assembly tools and equipment	<ul style="list-style-type: none"> may include but not be limited to measuring tapes or rules, hammers, mallets, squares, clamps and presses
Furniture surface preparation	<ul style="list-style-type: none"> may include but not be limited to sanding by hand or power sander, scraping, planing or other smoothing technique

RANGE STATEMENT	
	<ul style="list-style-type: none"> is to take account of the fact that the wood's colour may be changed by staining, bleaching, painting, ammonia fuming and/or a number of other techniques
Surface may be filled	<ul style="list-style-type: none"> using, wood plugs or other fillers
Finishing processes and materials	<ul style="list-style-type: none"> may include but not be limited to waxing, shellacking, nitrocellulose lacquering, conversion lacquering, linseed oiling, tung oiling, alkyd varnishing, polyurethane varnishing, water-based polyurethane and/or oil-varnish mixes, depending on the finish required, the furniture's use and the material type used

Co-requisite units	

LMFFDT5007A Design a batch or limited production item of furniture

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcome required to identify the qualities of a batched or limited production furniture item and the design of a contemporary furniture product for a client or retail outlet that requires batch or limited production methodology.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of furniture maker operations. The competency applies to a custom furniture business and/or a design support environment and involves application of skills and knowledge at a Diploma level. These skills and knowledge are to be used within the scope of the individual's job and authority.</p> <p>This unit covers employability skills in teamwork and communication in order to work with others in the design process. Planning and organising and problem solving skills are required to apply design processes and initiative and enterprise are required to develop design ideas. Self management and learning skills are applied to assess and reflect on own design skills and identify areas for improvement.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and analyse qualities and properties of batched or limited production furniture items	1.1. Applicable <i>legislative, OHS</i> and <i>enterprise requirements</i> relevant to the design of batch or limited production items of furniture are verified and complied with 1.2. Details of the qualities and properties of <i>batch produced furniture</i> making methods are identified 1.3. Features of limited production methods are identified 1.4. Resource and equipment implications for batch and limited production methods are assessed
2. Research product needs	2.1. All external parameters affecting the design of the contemporary furniture product are obtained from the client or from information sources 2.2. Client or market needs for contemporary product are obtained and recorded 2.3. <i>Inspirational information</i> is collected from relevant sources 2.4. <i>Visual needs of the product</i> are identified and documented 2.5. <i>Ethical considerations</i> are obtained, reviewed and documented 2.6. Product needs are prioritized and recorded in accordance with enterprise practice
3. Prepare the design brief	3.1. Product needs and external parameters and factors are reviewed and clarified with the client or retail customers. 3.2. Report on product needs is produced including design opportunities 3.3. Feedback from the client or customers is gained and recorded 3.4. Details of changes are negotiated with client or customers and recorded 3.5. Outcomes of design process are clarified and agreed to with client 3.6. Design brief is prepared and documented including budget, time lines, production needs and methods
4. Generated ideas in response to design brief	4.1. All relevant information on product and client needs are analysed and integrated into generation of ideas using <i>lateral thinking methods</i> 4.2. Ideas are visually presented 4.3. Ideas are matured through review and reworking 4.4. New ideas are generated from initial ideas

ELEMENT	PERFORMANCE CRITERIA
	4.5. Final ideas are visually presented
5. Evaluate and develop design proposals	5.1. Each design idea is evaluated against design brief and requirements for batch or limited production manufacture 5.2. Design proposals are scored against weighted assessment criteria and results recorded 5.3. Feasible high scoring design proposals are selected for further development 5.4. Design proposals are completed in response to evaluation feedback
6. Present product proposals to client	6.1. Product proposals are prepared for presentation to client 6.2. Presentation arrangements are made, checked and confirmed 6.3. Design proposals are presented to the client 6.4. Client feedback is gained, analysed and confirmed 6.5. Design proposals are completed with consideration to client feedback
7. Produce final product proposal information ready for making	7.1. Construction details are finalised and documented 7.2. Visual aspects of product proposal are documented 7.3. Part details are documented 7.4. Manufacturing methods are documented 7.5. Details are recorded in accordance with enterprise practice

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to the needs for a furnishing product
- communicate ideas, information and advice to client to enable confirmation of design requirements, plans and specifications
- prepare design proposals
- listen to client or customer needs
- work with others and in a team understand product needs and produce design proposals
- reviewing information provided and creatively generate proposals for a furnishing product
- apply research, analytical and mathematical skills to the identification and selection of materials and the selection of appropriate production and construction techniques for the product
- plan activities covering the choice of design method, the preparation and layout of the product proposals
- use mathematical ideas and techniques to correctly complete technical details of the proposed designs
- create innovative designs which satisfy the agreed parameters and consider but are not limited by other historical or contemporary influences
- recognise and respond to circumstances outside instructions or personal competence
- adopt a proactive relationship with the client
- identify new enterprise opportunities when developing product proposals
- clarify and confirm work instructions
- plan design work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal design work goals
- satisfy the competency requirements for the job
- maintain current knowledge of batch and limited production methods
- maintain current knowledge of design methods
- seek learning opportunities
- use the workplace technology related to the production of technical information for production details
- use of workplace electronic media to communicate with client, suppliers and subcontractors.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the design of furniture maker product
- ideas generation and conceptual development techniques
- historical furniture styles and movements

REQUIRED SKILLS AND KNOWLEDGE

- contemporary furniture styles and movements
- design methodology
- current ethical issues in society affecting furniture makers
- ergonomic and anthropometric standards
- environmental issues in making a furnishing product
- visual aesthetics of furnishing products
- current market segment products
- batch production techniques for product types
- production methodologies of furniture makers
- physical needs of product type
- materials used to produce furnishing products
- materials and finishes
- making techniques for product types
- costing techniques including overhead components
- options and technologies for presenting visual information
- established communication channels and protocols
- problem identification and resolution methods
- document control methods.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing and production of a contemporary furniture product.
- Identify the limitations and opportunities of batch and limited production design work for contemporary furniture products
- Develop and present final proposals for batch and limited production furniture items to meet design brief
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - a realistic product need
 - specific information covering client needs,
 - batch production capabilities
 - details of the product requirements and options

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to

EVIDENCE GUIDE	
	<p>ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with other related units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect enterprise operation requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, enterprise safety policies and procedures.
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, enterprise, guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Batch produced furniture	<ul style="list-style-type: none"> may include but not limited to contemporary furniture products that are made in multiples but are not mass produced. Characteristics include details and fittings being produced with jigs and fixtures to allow for further batches to be made
Inspirational information	<ul style="list-style-type: none"> may include but not be limited to catalogues, brochures, magazines, existing products, reference books and other existing enterprise design information may also include but not limited to transferable technological ideas or concepts, natural or man-made structures and objects
Visual needs of the product	<ul style="list-style-type: none"> may include but not be limited to point, line, plane, volume, shape, form, tone, colour, surface, texture, scale, size, vertex, edge, face, position, direction, space, balance, movement, proportion, rhythm, repetition, pattern, relief, mass and movement

RANGE STATEMENT	
Ethical considerations	<ul style="list-style-type: none"> may include but not be limited to issues relating to social justice, environmental sustainability, biodiversity, cultural heritage and social responsibility of furniture makers
Lateral thinking methods	<ul style="list-style-type: none"> may include but not be limited to suspending belief, looks for gaps of need, alternatives, daydreaming, creative leaping, filaments, brainstorming, six thinking hats and asking questions of norms and beliefs outcomes of lateral thinking has no range by definition as it cannot be predefined and not judged in the process of generation

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing and production of a furniture product
- Identify the features of HVTS and required specifications when incorporating in the design of a furniture product
- Document and communicate three product proposals including: customer requirements, aesthetics, materials and construction, costing calculations for products, materials and finishes, and HVTS components
- Document product needs analysis
- Evaluate product proposals
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - a realistic product need
 - specific information product type needs,
 - specifications and client instructions
 - details of the product requirements and options

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with other related units of competency

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to the needs for a furnishing product
- communicate ideas, information and advice to client to enable confirmation of design requirements, plans and specifications
- prepare design proposals
- listen to clients needs
- work with others and in a team understand product needs and produce design proposals
- reviewing information provided and creatively generate proposals for a furnishing product
- apply research, analytical and mathematical skills to the identification and selection of materials and the selection of the appropriate production and construction techniques for the product
- create innovative designs which satisfy the agreed parameters and consider but are not limited by other historical or contemporary influences
- recognise and respond to circumstances outside instructions or personal competence
- adopt a proactive relationship with the client
- identify new enterprise opportunities when developing product proposals
- plan activities covering the choice of design method, the preparation and layout of the product proposals
- use mathematical ideas and techniques to correctly complete technical details of the proposed designs
- clarify and confirm work instructions
- plan design work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal design work goals
- satisfy the competency requirements for the job
- maintain current knowledge of making methods
- maintain current knowledge of design methods
- seek learning opportunities
- use the workplace technology related to the production of technical information for production details
- use of workplace electronic media to communicate with client, suppliers and subcontractors.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the design of furniture maker product
- ideas generation and conceptual development techniques
- historical furniture styles and movements

REQUIRED SKILLS AND KNOWLEDGE

- contemporary furniture styles and movements
- design methodology
- current ethical issues in society affecting furniture makers
- ergonomic and anthropometric standards
- environmental issues in making a furnishing product
- visual aesthetics of furnishing products
- current market segment products
- production methodologies of furniture makers
- physical needs of product type
- materials used to produce furnishing products
- materials and finishes
- making techniques for product types
- costing techniques, including overhead components
- options and technologies for presenting visual information
- established communication channels and protocols
- problem identification and resolution methods
- document control methods.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing and production of a furniture product.
- Identify the limitations and opportunities of one-off design for furniture product
- Produce and communicate three product proposals, including: customer requirements, aesthetics, materials and construction, costing calculations for products, materials and finishes
- Document product needs analysis
- Document visual references, physical constraints
- Document evaluation of initial product proposals
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - a realistic product need
 - specific information covering client needs,
 - manufacturing capabilities
 - details of the product requirements and options

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning

EVIDENCE GUIDE

	<p>knowledge</p> <ul style="list-style-type: none">• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with other related units of competency

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for alternative manufacturing research	1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to researching and recommending alternative manufacturing processes are verified and complied with 1.2. <i>Design brief</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i> 1.3. <i>Communication</i> with others is established and maintained 1.4. <i>Client</i> requirements and desires are reviewed, confirmed and clarified
2. Research alternative manufacturing processes	2.1. <i>Aesthetic</i> requirements of <i>alternative manufacturing processes</i> are assessed 2.2. New manufacturing processes are researched and reported 2.3. Costs of alternative manufacturing processes are assessed and compared 2.4. <i>Environmental impact</i> of alternative manufacturing processes are assessed 2.5. <i>Hazards</i> associated with alternative manufacturing processes are researched 2.6. Quality of alternative manufacturing processes are assessed and reported
3. Recommend alternative manufacturing processes	3.1. Research information is <i>critically analysed</i> in the context of the design brief requirements 3.2. Alternative manufacturing processes and their <i>elements of design</i> are promoted, research explained and evaluated for the client 3.3. Alternative manufacturing processes and their <i>principles of design</i> are promoted, research explained and evaluated for the client 3.4. Presentation of research information is made, highlighting the findings and rationale for the alternative manufacturing processes chosen

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- accurately recording and maintaining information relating to the furniture making and design functions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use
- recognise and respond to circumstances outside instructions or personal competence
- efficiently and safely contribute to innovative design process
- plan and organise activities, including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- learning of thinking, problem solving and conceptual techniques
- maintain current knowledge of tools and materials
- maintain current knowledge of furniture making and designing techniques
- seek learning opportunities
- use the workplace technology related to the use of tools, including calculators, measuring and recording devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to researching and recommending alternative manufacturing processes
- organisational and site standards, requirements, policies and procedures for researching and recommending alternative manufacturing processes
- environmental protection requirements
- established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

- problem identification and resolution
- elements and principles of design
- aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- research techniques
- alternative manufacturing processes
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively research and recommend at least three alternative manufacturing processes to assist with informing the design process and arrive at a solution which meets client requirements
- Effectively apply design elements and principles to the research and recommendation of alternative manufacturing processes
- Effectively research and recommend alternative manufacturing processes in accordance with the concepts and design brief
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching and recommending alternative manufacturing processes
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to researching and recommending alternative manufacturing processes
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures • requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation • requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> • may include but not be limited to the aims, objectives, milestones for the design project, the point of reference for everyone, elements and principles of design and may include organisational or personal profiles, aims, target audience, budget, timeline, consultation requirements, colour requirements, image requirements and function

RANGE STATEMENT	
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Clients	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Aesthetics	<ul style="list-style-type: none"> are to include the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Alternative manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the various methods by which the product can be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Environmental impact	<ul style="list-style-type: none"> is to include but not be limited to how the use of alternative manufacturing processes effects the environment and how continued use will affect the surrounding environment, energy consumption, greenhouse gases created, waste levels and resource utilisation. Similarly what impact will be felt by reducing or stopping use of the alternative manufacturing processes
Hazards	<ul style="list-style-type: none"> may include but not be limited to high speed machinery, open cutting blades, threat from electric shock, materials handling incidents, toxic substances and gases
Critical analysis	<ul style="list-style-type: none"> may include but not be limited to comparing, contrasting, reflecting, critiquing, considering merit, discussion and debate
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture, colour, and function
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship,

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish evaluation criteria for design	<p>1.1. Applicable legislative, OHS and enterprise requirements relevant to the evaluation of design proposals and concepts are verified and complied with</p> <p>1.2. Original design brief is analysed to establish criteria to use in assessing design proposals and concepts</p> <p>1.3. Enterprise business objectives are reviewed to identify criteria to use in assessing designs</p> <p>1.4. Enterprise production capacity is identified and strengths and limitations incorporated into evaluation criteria</p> <p>1.5. Current industry design trends are researched and identified</p> <p>1.6. Workplace and industry standards in relation to design presentation are researched and identified</p> <p>1.7. Quality criteria that apply to design processes are researched and identified</p> <p>1.8. Criteria for assessment are identified and clarified with client and colleagues</p> <p>1.9. The weighting of each criteria for assessment is confirmed</p> <p>1.10. Details are recorded in accordance with enterprise practice</p>
2. Evaluate design	<p>2.1. Design is assessed to evaluate if it fits the intention of the design brief</p> <p>2.2. Form, function and style of the design are assessed and evaluated</p> <p>2.3. Environmental impact of the design is assessed and evaluated</p> <p>2.4. Cultural relevance of the design is analysed and evaluated</p> <p>2.5. Economic significance of the design is assessed and evaluated</p> <p>2.6. Design methodology is reviewed for adherence to the elements and principles of design</p> <p>2.7. Material choice appropriateness is analysed and evaluated</p> <p>2.8. Technical integrity of the design is assessed and evaluated</p> <p>2.9. The design is evaluated for consistency with current</p>

ELEMENT	PERFORMANCE CRITERIA
	industry trends and influences
3. Evaluate design concepts for construction and production suitability	<p>3.1. Details of enterprise and related construction constraints are assessed</p> <p>3.2. Details of enterprise and subcontractor production constraints are identified and reviewed</p> <p>3.3. Production ability of the design is analysed and evaluated</p> <p>3.4. Equipment selection is assessed and evaluated</p> <p>3.5. Manufacturing process, assembly and finishing techniques selected for the design are reviewed and evaluated</p> <p>3.6. Design is evaluated against construction and production constraints</p> <p>3.7. Changes to design are recommended and recorded in accordance with enterprise practice</p>
4. Determine and report on design suitability	<p>4.1. Design is evaluated against each criteria</p> <p>4.2. Weighted assessment is used to make comparisons and rank components of design</p> <p>4.3. Recommendations are made for improvements to design in order to further address criteria</p> <p>4.4. Design suitability in meeting criteria is determined and documented with recommendations for improvements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to design a furnishing products
- communicate ideas, information and advice to client to enable confirmation of design selection, plans and specifications
- prepare evaluation documentation
- work with others and in a team to evaluate design proposals
- work with clients to review designs
- apply listening and analysis techniques to anticipate production and construction problems and plan around them
- recognise and respond to circumstances outside instructions or personal competence
- adopt a proactive relationship with the clients to recognise issues and create alternatives
- plan activities covering the choice of evaluation method, the preparation and layout of the design information
- use mathematical ideas and techniques to correctly complete evaluation models
- clarify and confirm evaluation instructions
- plan evaluation within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of production methods
- maintain current knowledge of evaluation methods
- seek learning opportunities
- use the workplace technology related to the electronic communication with colleagues and clients as well as documenting and presenting information.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the design and construction of furnishing products
- design methodology
- furniture styles and movements
- visual aesthetics of furnishing products
- environmental and ethical issues in making a furnishing product
- materials used to produce furnishing products
- production methodologies of furniture makers
- assessment and evaluation techniques

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for planning of evaluation of design proposals • Use of calculators, computer programs and other aids in the calculation of proposal rankings • Documentation of evaluation criteria clearly from original design brief • Assessment and documentation of evaluation of product proposals or concepts to move forward in the design process • Recommendations for design improvements for concepts, construction, production and final design presented • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • realistic product proposals • specific information covering materials, constructions and production methods • design brief and client instructions • details of the product requirements
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment

EVIDENCE GUIDE	
	<p>guidelines of the Furnishing Industry Training Package</p> <ul style="list-style-type: none"> • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with other related units of competency e.g. LMFFM4021A Research product needs, LMFFM4022A Create ideas in response to a brief and inspirational information
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect enterprise operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care, heritage, copyright, design right and patent law
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, enterprise safety policies and procedures
Enterprise requirements	<ul style="list-style-type: none"> may include but not be limited to legal, enterprise, guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones for the design project, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline and consultation requirements
Form	<ul style="list-style-type: none"> may include but not be limited to proportion and aesthetics
Function	<ul style="list-style-type: none"> may include but not be limited to ergonomics and practicality

RANGE STATEMENT	
Style	<ul style="list-style-type: none"> may include but not be limited to traditional, contemporary, modern, functional, commercial and artistic
Environmental impact	<ul style="list-style-type: none"> may include but not be limited to how the use of raw materials effects the ecology and environment and how its continued use will affect the area it has been sourced from, energy consumption in achieving the material, greenhouse gases created, waste levels, resource utilisation and transport effects. Similarly what impact will be felt by reducing or stopping material from the source
Cultural relevance	<ul style="list-style-type: none"> may include but not be limited to demography, geography (local, regional, national), religious, climatic, societal, lifestyle, attitudinal, gratification, honour, living conditions, infrastructure, status and habitude
Economic significance	<ul style="list-style-type: none"> may include but not be limited to the potential financial return which the product could return, including sales volume and profitability
Design methodology	<ul style="list-style-type: none"> is to include but not be limited to the approach taken in addressing the design brief
Material	<ul style="list-style-type: none"> may include but not be limited to native timber (native and imported), man-made timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Technical integrity	<ul style="list-style-type: none"> is to include but not be limited to the intended structural qualities and construction methods of a designed product
Construction constraints	<ul style="list-style-type: none"> are the types of construction methods of joining parts and sub-assemblies together to make the structure and form of the product produced within the enterprise. These will depend on the skills and knowledge of the makers within the enterprise
Production constraints	<ul style="list-style-type: none"> are the methods of producing the individual parts and sub-assemblies of a product. These are dependent on the enterprise's machinery and skills and knowledge of their operators

RANGE STATEMENT	
Production ability	<ul style="list-style-type: none"> is to include but not be limited to how readily a design can be produced, the cost in producing it, the availability of equipment and skilled personnel
Equipment	<ul style="list-style-type: none"> may include but not be limited to hand tools, static machinery, portable power tools and computer numerically controlled equipment may also include procedures for lock out protecting operators and co-workers from accidental injury by isolating the machine from the power source
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Finishing	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils and plastic coatings
Weighted assessment	<ul style="list-style-type: none"> must be developed from original criteria to rank the proposals allowing for the weighting of each criteria

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research economic factors	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to assessing the economic impact of a design are verified and complied with</p> <p>1.2. <i>Design brief</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. <i>Communication</i> with others is established and maintained in accordance with OHS requirements</p> <p>1.4. <i>Market research fundamentals</i> are considered and analysed</p> <p>1.5. Potential <i>sales volume</i> of designed products are analysed and evaluated</p> <p>1.6. <i>Niche markets</i> are discovered and analysed for <i>cost benefit analysis</i></p>
2. Assess the economic impact of the design	<p>2.1. Production costs of a design are assessed and evaluated</p> <p>2.2. <i>Longitudinal studies</i> of a design are undertaken to explore potential success factors</p> <p>2.3. Scale of production is estimated taking into account market analysis</p> <p>2.4. <i>Profit margins</i> are analysed based on expected turnover, full costing of product, <i>price point</i> in the market and demand for the product</p> <p>2.5. Competition in the market place with similar design solutions or products in that market segment are analysed and strategies reviewed</p> <p>2.6. Availability of <i>resources</i> is assessed to ascertain what impact this will have on economic viability</p> <p>2.7. <i>Product lifecycle</i> analysis is evaluated for economic significance</p> <p>2.8. Long term <i>economic impact</i> on the business, staff and associated suppliers is analysed and strategised</p> <p>2.9. Intended <i>manufacturing processes</i> including <i>assembly</i> and <i>finishing</i> are assessed for their economic impact</p> <p>2.10. Final documentation outlining the full analysis of the designs economic impact is compiled and produced as a report</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- interpret costing and financial documentation
- access industry standards
- analyse business information
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to assessing the economic impact of a design
- organisational and site standards, requirements, policies and procedures for assessing the economic impact of a design
- economic conditions and markets nationally and internationally
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products, sources and defects
- computer programs
- product assembly techniques and equipment capabilities
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively assess the economic impact of a design from inception through manufacture including marketing, sales volume and competition impact and recording of the impact study outcomes
- Effectively research, contrast and compare a range of economic factors upon a design
- Effectively produce a report on the economic impact study outcomes of a product
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for assessing the economic impact of a design
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to assessing the economic impact of a design
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures • requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation • requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> • may include but not be limited to the aims, objectives, milestones for the design project, the point of reference for everyone, elements and principles of design and may include organisational or personal profiles, aims, target audience, budget, timeline, consultation requirements, colour requirements, image requirements and function

RANGE STATEMENT	
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Market research fundamentals	<ul style="list-style-type: none"> is to include research undertaken to assess the size and nature of a market
Sales volume	<ul style="list-style-type: none"> is to include the amount sold within a specified time period, it is often expressed in monetary terms but can also be expressed in terms of the total amount of stock or products sold
Niche markets	<ul style="list-style-type: none"> is to include a very specific market segment within a broader segment of the market. It involves the provision of specialist products where relatively few or no competitors exist
Cost benefit analysis	<ul style="list-style-type: none"> is to include the assignment of monetary value to the costs and benefits (social, environmental and monetary) associated with a project for the purpose of selecting and evaluating project investment opportunities
Longitudinal studies	<ul style="list-style-type: none"> is to include a statistical study that produces data gathered over a period of time
Profit margins	<ul style="list-style-type: none"> is to include the amount by which income exceeds expenditure, it includes the sale price minus the cost of production, distribution and marketing
Price point	<ul style="list-style-type: none"> is to include the cost for sale placed on a product which caters to a market segment based on production costs, overheads and profit margins in relation to demand, supply and volume of sales
Resources	<ul style="list-style-type: none"> may include but not be limited to materials, personnel, equipment and systems
Product lifecycle	<ul style="list-style-type: none"> is the evolution of a product from its raw source, through its inception, development, manufacture, completion and time as a completed product until potential renewal
Economic impact	<ul style="list-style-type: none"> is to include the study of consumption, distribution

RANGE STATEMENT	
	and production on society in relation to a product
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Assembly methods	<ul style="list-style-type: none"> may include but not be limited to nailing, gluing, screwing, welding, pressing, sewing, bonding, jointing or connecting various materials
Finishing	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils and plastic coatings

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for design	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to designing for limited production are verified and complied with</p> <p>1.2. <i>Design brief</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. <i>Client</i> requirements and desires are reviewed, confirmed and clarified</p> <p>1.4. <i>Communication</i> with others is established and maintained in accordance with OHS requirements</p> <p>1.5. Problems or underlying factors to be addressed by the design brief are verified</p> <p>1.6. <i>Elements of design</i> are diagnosed for the intended design brief</p> <p>1.7. <i>Principles of design</i> are diagnosed for the intended design brief</p> <p>1.8. Volumes of mass production runs are set, costed and relevance to the market evaluated</p>
2. Design for mass production	<p>2.1. <i>Concepts</i> for the proposed solution to the design brief are reviewed in accordance with mass production requirements</p> <p>2.2. Different <i>solutions</i> to satisfy the requirements of the design brief are presented and reviewed</p> <p>2.3. Sample <i>maquette</i> and <i>prototype</i> are reviewed in accordance with the concept sketches</p> <p>2.4. Final <i>working drawings</i> and <i>specifications</i> are reviewed and compiled in readiness for mass production</p> <p>2.5. Concept is designed for mass manufacture taking into account available equipment and resources</p> <p>2.6. <i>Equipment</i> capabilities are reviewed and assessed and design brief modified in accordance with available or <i>obtainable</i> equipment</p> <p>2.7. Personnel <i>capabilities</i> are reviewed and assessed and design brief modified in accordance with assessed and available skills</p> <p>2.8. <i>Material</i> or resource <i>supply chain</i> to the company is assessed, stock sizes set and design brief modified or altered to cater for availability of resources</p> <p>2.9. <i>Outsourcing</i> opportunities are assessed and reviewed in accordance with <i>cost benefit analysis</i></p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.10. <i>Workflow methods</i> are reviewed and the design brief or workflow methods amended to cater for limited production</p> <p>2.11. Opportunities for innovation in mass production procedures are researched and implemented</p>
3. Implement design	<p>3.1. <i>Manufacturing process</i> is planned and organised taking into account available equipment and resources</p> <p>3.2. Material is processed in accordance with the manufacturing plan and safe working procedures</p> <p>3.3. <i>Jigs</i> are produced to assist with the manufacture of <i>components</i></p> <p>3.4. Components are produced and prepared for <i>assembly</i></p> <p>3.5. Components are assembled in accordance with the working drawings</p> <p>3.6. <i>Final product</i> is <i>finished</i> according to specifications</p> <p>3.7. Final product is evaluated for <i>functionality</i> and <i>aesthetic</i> appeal</p> <p>3.8. Mass production methodology is reviewed</p> <p>3.9. Production run is <i>packaged and despatched</i> to <i>transport</i> methods</p> <p>3.10. Mass production anomalies are <i>recorded and reported</i> to the appropriate personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to the needs for a furnishing product
- communicate ideas, information and advice to client to enable confirmation of design requirements, plans and specifications
- prepare design proposals
- listen to client or customer needs
- work with others and in a team understand product needs and produce design proposals
- reviewing information provided and creatively generate proposals for a furnishing product
- apply research, analytical and mathematical skills to the identification and selection of materials and the selection of appropriate production and construction techniques for the product
- plan activities covering the choice of design method, the preparation and layout of the product proposals
- use mathematical ideas and techniques to correctly complete technical details of the proposed designs
- create innovative designs which satisfy the agreed parameters and consider but are not limited by other historical or contemporary influences
- recognise and respond to circumstances outside instructions or personal competence
- adopt a proactive relationship with the client
- identify new enterprise opportunities when developing product proposals
- clarify and confirm work instructions
- plan design work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal design work goals
- satisfy the competency requirements for the job
- maintain current knowledge of batch and limited production methods
- maintain current knowledge of design methods
- seek learning opportunities
- use the workplace technology related to the production of technical information for production details
- use of workplace electronic media to communicate with client, suppliers and subcontractors.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to designing for mass production
- organisational and site standards, requirements, policies and procedures for designing for mass production

REQUIRED SKILLS AND KNOWLEDGE

- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- ergonomics and aesthetic values
- supply chain management
- outsourcing arrangements
- cost benefit analysis methods
- company resource audit techniques
- design and manufacture for mass production
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- computer programs
- product machining, assembly and finishing techniques
- sketching and drawing
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively work through the design taking into account the requirements of mass production to fulfil the design brief and oversee a mass production run
- Effectively apply design elements and principles to designing for mass production
- Effectively design for mass production in accordance with a design brief
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing for mass production
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to designing for mass production
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions

EVIDENCE GUIDE	
	<p>(real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures • requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation • requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Design brief	<ul style="list-style-type: none"> • may include but not be limited to the aims, objectives, milestones for the design project, the point of reference for everyone, elements and principles of design and may include organisational or personal profiles, aims, target audience, budget, timeline, consultation requirements, colour requirements, image requirements and function

RANGE STATEMENT	
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to trainers, supervisors, suppliers, clients, colleagues and managers
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture, colour, and function
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship, emphasis, proximity, alignment, space, anthropometry, ergonomics, arrangement, workload, materials handling capacity, skills, control, equipment capabilities, aesthetic relations, tension and development methods
Concepts	<ul style="list-style-type: none"> are to include ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation
Solutions	<ul style="list-style-type: none"> may include but not be limited to a range of concepts, sketches, drawings, maquettes, models and prototypes
Maquette	<ul style="list-style-type: none"> is to include a miniature version of the intended final product to establish if the elements and principles of design have been achieved. These are usually produced from cardboard or scrap timber.
Prototype	<ul style="list-style-type: none"> is usually a full size replica of the intended product outcome based on concept sketches and free hand development drawings, these are usually produced from stiff cardboard, scrap timber or possibly even moulding clay
Working drawings	<ul style="list-style-type: none"> may include but not be limited to drafted technical drawings or drawings produced on computer using computer aided drafting software packages. These usually contain project specifications

RANGE STATEMENT	
Specifications	<ul style="list-style-type: none"> are to include the measurements, procedures by which a product is constructed and materials to be utilised
Equipment	<ul style="list-style-type: none"> may include but not be limited to static machinery, portable power tools and computer numerically controlled equipment may also include procedures for lock out protecting operators and co-workers from accidental injury by isolating the machine from the power source
Obtainability	<ul style="list-style-type: none"> is to include the assessment of additional equipment requirements in regard to availability based on limited production requirements
Capabilities	<ul style="list-style-type: none"> are to include but not be limited to the available equipment and personnel skills available within an organisation and the flexibility of these
Material	<ul style="list-style-type: none"> may include but not be limited to native timber (native and imported), man-made timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Supply chain	<ul style="list-style-type: none"> may include but not be limited to the network and integration of suppliers, wholesalers and distributors who supply resources to the company in a timely and cost effective manner
Outsourcing	<ul style="list-style-type: none"> is to include the transfer of the provision of services previously carried out by in-house personnel to an external organisation, usually under a contract with agreed standards, costs and conditions
Cost benefit analysis	<ul style="list-style-type: none"> is to include the assignment of monetary value to the costs and benefits (social, environmental and monetary) associated with a project for the purpose of selecting and evaluating project investment opportunities
Workflow methods	<ul style="list-style-type: none"> is to include the arrangement of workspace, equipment and personnel so that work is carried out in the most efficient way
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques

RANGE STATEMENT	
Jigs	<ul style="list-style-type: none"> may include but not be limited to templates, patterns or frames for the manufacturing ease of components in production runs, these may assist machining or assembly
Components	<ul style="list-style-type: none"> may include but not be limited to the parts which make up the whole of a product. Each component is often requires some level of machining to result in the desire part
Assembly process	<ul style="list-style-type: none"> may include but not be limited to nailing, gluing, screwing, welding, pressing, sewing, bonding, jointing or connecting various materials
Final product	<ul style="list-style-type: none"> may include but not be limited to items which are functional, applied, commercial or artistic
Finishing	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils and plastic coatings
Functionality	<ul style="list-style-type: none"> is to include the purpose intended for the product in relationship to the design brief
Aesthetics	<ul style="list-style-type: none"> are to include the consideration of appeal to a large number of people; products are pleasing to the eye of many who view them
Packaging and despatch	<ul style="list-style-type: none"> may include but not be limited to wrapping in fabric, plastic wrapping, shrink wrapping, boxing, foam shells and despatch by truck, trailer, train, plane or ship
Transport	<ul style="list-style-type: none"> may include but not be limited to movement by truck, trailer, train, plane or ship
Records and reports	<ul style="list-style-type: none"> may include but not be limited to the design and production method, product type, size, inspection and labelling outcomes, storage locations, quality outcomes, hazards, incidents or equipment malfunctions

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate networks	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to evaluating and participating in design industry networks are verified and complied with</p> <p>1.2. <i>Networking</i> opportunities are assessed and scheduled for attendance</p> <p>1.3. Networking opportunities are prioritised in order of benefit and importance</p> <p>1.4. <i>Peak bodies</i> or associations and links to international agencies are assessed for networking opportunities</p>
2. Participate in networks	<p>2.1. Chosen networks are identified and joined</p> <p>2.2. <i>Communication</i> with others is established and maintained in accordance with OHS requirements</p> <p>2.3. Chosen networks are attended</p> <p>2.4. Design shows are attended and networking opportunities instigated</p> <p>2.5. <i>Business opportunities</i> with others in networks are pursued</p> <p>2.6. Shared business interests or ideas are sought and followed up on</p> <p>2.7. <i>International networking opportunities</i> are pursued</p> <p>2.8. Networks are followed up with and regularly attended</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- use appropriate industry terminology and language to convey meaning
- maintain a network of relevant industry participants
- work effectively with others both within and outside of the workplace
- conduct quality checks on own work
- identify communication goals
- use communication tools such as computers, internet, email, databases
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to evaluating and participating in design industry networks
- organisational and site standards, requirements, policies and procedures for evaluating and participating in design industry networks
- networking and networking opportunities
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- ergonomics and aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- product assembly techniques and equipment capabilities
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively evaluate and participate in design industry networks, establish and maintain important contacts
- Effectively apply design elements and principles to involvement in design industry networks
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for evaluating and participating in design industry networks
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to evaluating and participating in design industry networks
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the

EVIDENCE GUIDE	
	particular circumstance, but is able to be transferred to other circumstances <ul style="list-style-type: none">• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures • requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation • requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Networking	<ul style="list-style-type: none"> • may include but not be limited to building up and maintaining relationships with people whose interests are similar or whose friendship could bring advantages such as job or business opportunities • may also include but not be limited to design agencies, furnishing industry alliances, associations, peak bodies, government functions, exhibitions, showcases, industry events, functions, information

RANGE STATEMENT	
	networks and design hubs
Peak bodies or associations	<ul style="list-style-type: none"> may include but not be limited to design agencies and furnishing industry bodies
Communication	<ul style="list-style-type: none"> may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Business opportunities	<ul style="list-style-type: none"> may include but not be limited to joint ventures, shared or loaned equipment, combined purchasing arrangements, design or manufacturing hub arrangements, design critiquing opportunities, new ideas, improving ideas and new contracts
International networking opportunities	<ul style="list-style-type: none"> may include but not be limited to overseas business opportunities or international showcases, investor or contract opportunities

2. Comply with legal requirements	<p>2.1. <i>Business registration</i> and <i>government procedures</i> are adhered to</p> <p>2.2. Suitable <i>employment conditions</i> including industrial relations are abided by</p> <p>2.3. <i>Contracts and invoices</i> used comply with legal requirements</p> <p>2.4. <i>Operational codes of practice</i> are researched and applied to day to day procedures</p> <p>2.5. Essential <i>insurances</i> are obtained and are regularly updated</p> <p>2.6. <i>Procurement rights</i> are adhered to and applied for own products</p> <p>2.7. OHS regulations are stringently applied and followed</p> <p>2.8. <i>Import and export regulations</i> are adhered to</p> <p>2.9. <i>Risk management</i> policies are applied, updated and maintained</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This section describes the skills and knowledge required for this unit.

Required skills

- interpret legal documentation
- access industry standards
- analyse legal information
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to investigating legal requirements for design
- organisational and site standards, requirements, policies and procedures for investigating legal requirements for design
- business and operational legal requirements
- computer programs
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively investigate legal requirements for design and for the protection and efficient operation of the enterprise, ensuring all relevant legal requirements are in place
- Effectively produce a report on the legal requirements for a design business
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for investigating legal requirements for design
- Communicate effectively and work safely with others in the work area

Context of and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to investigating legal requirements for design
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for project collaboration	1.1. Applicable OHS, legislative and organisational requirements relevant to collaborating on a design project are verified and complied with 1.2. Project requirements are agreed with client , confirmed and clarified 1.3. Communication with others is established and maintained with all involved in the design process 1.4. Potential collaborators are scrutinised and confirmed based on displayed expertise potential 1.5. End users and other interested parties are involved in the collaboration
2. Work collaboratively on projects	2.1. Methods of collaboration are negotiated and followed 2.2. Project objectives are researched, a design brief developed and instigated 2.3. Ideas for concept development are shared and worked through 2.4. Concepts are critiqued and final outcomes agreed upon in accordance with the elements of design and principles of design 2.5. Management systems are set in place, plan developed and quality control measures adopted for the project 2.6. Type and quantity of material to be used is debated, agreed and obtained 2.7. Equipment requirements are debated and selected appropriate to project requirements 2.8. Project manufacturing procedures are debated and final manufacturing processes agreed including assembly techniques and finishing methods 2.9. Distribution channels, marketing and despatch strategies are debated and instigated 2.10. Final presentation of the project is made displaying respect for all collaborators
3. Evaluate design collaboration project	3.1. Quality systems are evaluated for effectiveness of outcomes 3.2. Client satisfaction with the project outcome is measured 3.3. Observations from collaborators on improvement of the process is collected

ELEMENT	PERFORMANCE CRITERIA
	3.4. Collaborators are assessed and reviewed for their effectiveness in the process 3.5. Systems are analysed for improvement opportunities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- plan processes
- encourage interchange of ideas
- facilitate collaborative development of design concepts
- evaluate design process
- communicate effectively within the workplace, including liaising with other departments
- determine report requirements and present information in appropriate formats
- maintain accurate records
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for working collaboratively on a design project
- organisational and site standards, requirements, policies and procedures for working collaboratively on a design project
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- ergonomics and aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- computer programs
- product machining, assembly and finishing techniques
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the relevant Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Effectively work collaboratively on a design project in accordance with client requirements, setting a project plan and design brief
- Effectively apply design elements and principles to working collaboratively on a design project
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for working collaboratively on a design project
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to working collaboratively on a design project
 - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application
- Assessment may be applied under project related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that

EVIDENCE GUIDE	
	<p>competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <ul style="list-style-type: none">• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures • requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation • requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Client	<ul style="list-style-type: none"> • may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Communication	<ul style="list-style-type: none"> • may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and

RANGE STATEMENT	
	cultural differences, control of tone of voice and body language.
Collaboration	<ul style="list-style-type: none"> • may include but not be limited to a group of people working together to achieve an outcome • may include but not be limited to designers, senior management, tradespeople, consumers, sales staff, distributors and clients
Design brief	<ul style="list-style-type: none"> • may include but not be limited to the aims, objectives, milestones for the design project, the point of reference for everyone, elements and principles of design • may also include organisational or personal profiles, aims, target audience, budget, timeline, consultation requirements, colour requirements, image requirements and function
Concepts	<ul style="list-style-type: none"> • are to include ideas generated to respond to the design brief through both ideation drawings or sketching and written explanation
Critique	<ul style="list-style-type: none"> • is to include the process of undertaking a critical analysis of a product, the design process used, the manufacturing methodology and final outcomes
Elements of design	<ul style="list-style-type: none"> • may include but not be limited to line, shape, form (geometric or organic), texture, colour, and function
Principles of design	<ul style="list-style-type: none"> • may include but not be limited to balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, dominant, sub dominant or subordinate relationship, emphasis, proximity, alignment, space, anthropometry, ergonomics, arrangement, workload, materials handling capacity, skills, control, equipment capabilities, aesthetic relations, tension and development methods
Management systems	<ul style="list-style-type: none"> • may include but not be limited to the project plan and attributes within it to fulfil the design brief and intended outcomes of the project. This may include personnel management, quality mechanisms, project stages, resource management, process management, problem solving mechanisms and performance targets
Quality control	<ul style="list-style-type: none"> • is to include an inspection system for ensuring that pre-determined quality standards are being met, highlighting non-conformances requiring intervention
Material	<ul style="list-style-type: none"> • may include but not be limited to native timber (native and imported), man-made timber products,

RANGE STATEMENT	
	plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Equipment	<ul style="list-style-type: none"> • may include but not be limited to static machinery, portable power tools and computer numerically controlled equipment • may also include procedures for lock out protecting operators and co-workers from accidental injury by isolating the machine from the power source
Manufacturing process	<ul style="list-style-type: none"> • may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Assembly process	<ul style="list-style-type: none"> • may include but not be limited to nailing, gluing, screwing, welding, pressing, sewing, bonding, jointing or connecting various materials
Finishing	<ul style="list-style-type: none"> • may include but not be limited to paints, waxes, lacquers, stains, pigments, oils and plastic coatings
Distribution channels	<ul style="list-style-type: none"> • may include but not be limited to self promotion and distribution, organisation through agents representing you, via hired distribution organisations, joint ventures or establishment of own distribution network
Market research fundamentals	<ul style="list-style-type: none"> • is to include research undertaken to assess the size and nature of a market
Despatch	<ul style="list-style-type: none"> • may include but not be limited to wrapping in fabric, plastic wrapping, shrink wrapping, boxing, foam shells and despatch by truck, trailer, train, plane or ship

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work	1.1. Work requirements are correctly identified from drawings/ specifications/instructions 1.2. Quality assurance requirements are recognised and adhered to in accordance with enterprise operation 1.3. OHS requirements, including personal protection needs, are observed throughout the work 1.4. Tools, equipment and materials selected are consistent with job requirements and work instructions, checked for safety and serviceability and any faults reported to supervisor
2. Prepare surface and materials for finishing process	2.1. Surfaces are checked for contamination and correct preparation according to workplace procedures and standards 2.2. Products with surface or other faults are identified and faults are reported or repaired according to workplace procedures and standards 2.3. Techniques for application of materials for finishing process are identified and used according to workplace procedures 2.4. Materials suitable for basic surface finishing are prepared
3. Colour is applied to timber surface	3.1. Stain is applied to timber surfaces in accordance with manufacturers' specifications and workplace procedures and standards 3.2. Stained surface is sealed with polish using mop brush, blender or swooge 3.3. Sealed surface is lightly sanded to make smooth 3.4. Wood filler or sanding sealer are applied in accordance with manufacturers' specifications and workplace procedures and standards 3.5. Filled-in surface is sealed with oil varnish in accordance with manufacturers' specifications and workplace procedures and standards 3.6. Sealed surface is lightly sanded to make smooth.
4. Finishing material is applied to surface	4.1. Finishing material is applied in accordance with manufacturers' specifications until required build is achieved 4.2. Finishing material is cut back to remove surface defects and/or foreign material in accordance with workplace procedures and standards

ELEMENT	PERFORMANCE CRITERIA
	4.3. Surface is burnished with fine steel wool and lubricating oil to achieve even sheen
5. Clean up	5.1. Workplace is cleared of debris and unused materials 5.2. Wood filler and lubricating oil rags are disposed of safely having regard for spontaneous combustion 5.3. Tools and equipment are cleaned, maintained and stored

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to materials, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate coating problems, avoid re-working and avoid wastage
- use limited workplace technology related to coating

Required knowledge

- characteristics, limitations and uses of coating materials required for the project
- coating application equipment, techniques and safe working procedures
- basic repair techniques to defects in timber surfaces
- safe handling of materials associated with applying coatings

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Critical Aspects of Evidence	<ul style="list-style-type: none"> • Manufacturer specifications and operational procedures • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication
Resource Implications	Safe work area, coating materials, timber components/furnishings requiring finishing and cleaning materials.
Method of Assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</p>
Context of Assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individual to demonstrate some discretion, judgement and problem solving skills in the accurate application of polish
A basic project may include:	<ul style="list-style-type: none"> • the coating of tables (occasional • coffee) • chairs or stools and other furnishing items
Stains may include but are not limited to:	<ul style="list-style-type: none"> • water stain • pigment oil stain • lacquer-based wiping stain
Wood grain filler may include but is not limited to:	<ul style="list-style-type: none"> • oil-based filler • polyurethane (plastic) filler • water-based filler
Finishing materials may include but are not limited to:	<ul style="list-style-type: none"> • oil varnish • marine varnish • lacquer and sanding sealer
Lubricating oil may include but is not limited to:	<ul style="list-style-type: none"> • linseed oil • paraffin oil • 'teak' oil
Surface faults may include:	<ul style="list-style-type: none"> • machine marks • bruising • pencil marks • grease • cross-sanding marks

RANGE STATEMENT	
	<ul style="list-style-type: none"> • scratches • glue marks • dirt marks • insect and termite holes • holes • knots • and blisters
Tools and equipment may include:	<ul style="list-style-type: none"> • filler blades • brushes • spray equipment • sandpapers • skinning in • bodying up and spiriting out rubbers • mop brush • blender • swooge and scrapers
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Manufacturer specifications and operational procedures • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools and basic static machines	1.1.Types of hand and power tools and basic static machines and their functions are identified 1.2.OHS requirements, including personal protection needs, are observed throughout the work 1.3.Sources of power supply recognised
2. Select hand tools	2.1.Hand tools selected are consistent with needs of the job 2.2.Selected hand tools are checked for serviceability and safety and any faults reported to supervisor 2.3.Equipment is selected to hold or support material for hand tool application where applicable
3. Use hand tools	3.1.Material is located and held in position for hand tool application 3.2.Hand tools are safely and effectively used according to their intended use 3.3.Hand tools are safely located when not in immediate use
4. Select power tools/basic static machines	4.1.Power tools/basic static machines are selected consistent with needs of the job in accordance with conventional work practice 4.2.Power tools/basic static machines are visually checked for serviceability/safety in accordance with OHS requirements and any faults reported to supervisor 4.3.Equipment is selected to hold or support materials for application as applicable
5. Use power tools/basic static machines	5.1.Material is located and held in position for power tool and/or machining applications as applicable 5.2.Power tools/basic static machines are safely and effectively used in application processes 5.3.Power tools are safely located when not in use
6. Clean up work area and tools	6.1.All tools are cleaned, maintained and stored 6.2.Equipment is cleaned, maintained and stored 6.3.Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools/basic static machines, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite to avoid any back tracking, workflow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use workplace technology related to the operation and maintenance of hand and power tools/basic static machines
- work with others and in a team by recognising dependencies and using cooperative approaches

Required knowledge

- types, characteristics, uses, limitations and maintenance requirements of hand tools commonly used in furniture finishing operations
- types, characteristics, uses, limitations and maintenance requirements of power tools and basic static machines commonly used in furniture finishing operations
- OHS requirements and legislation
- workflow within the workplace

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate and apply relevant information related to sector hand and power tools/basic static machines
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Adopt and carry out correct procedures prior to and during use of hand, power tools and basic static machines as listed in the Range Statement
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Furniture polishing sector hand and power tools/basic static machines and materials used in the finishing of furniture.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and should be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate skill, accuracy and dexterity in the application of tools to work tasks

Hand tools for furniture polishing are to include:

- cabinet scraper
- chisel
- hammer
- nail punch
- cork sanding block
- putty knife
- paint scraper
- paint brush
- blender
- mop brush
- swooge
- pencil brush
- file
- oil stone

Hand tools for furniture polishing may also include:

- polish rubbers
- clamps
- screwdrivers
- rubber mallet
- spokeshave
- pliers
- pincers

RANGE STATEMENT	
	<ul style="list-style-type: none"> spanners
Power tools for furniture polishing are to include:	<ul style="list-style-type: none"> orbital sander steam iron spray gun compressor
Fixed/static machinery for furniture polishing are to include:	<ul style="list-style-type: none"> belt/stroke sander compressor
Fault reporting	Reporting of faults in the operation of hand and power tools/basic static machines may be verbal or written
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> Workplace procedures relating to the use of tools and equipment Work instructions, including job sheets, plans, drawings and designs Workplace procedures relating to reporting and communication Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Item to be dismantled is inspected and components identified 1.2. OHS requirements, including personal protection needs, are observed throughout the work 1.3. Work required, including the process/order for dismantling according to the workplace procedures, is identified 1.4. Tools and equipment are selected and checked for safe and effective operation for the task
2. Dismantle furniture/ furnishing item	2.1. Items to be dismantled are identified 2.2. Items are dismantled to the extent required in the work instructions using appropriate tools and procedures 2.3. Fasteners and attachments are removed, tagged and stored 2.4. Component parts are separated, tagged and stored following workplace procedures 2.5. Component parts dispatched to the next process according to workplace procedures
3. Dismantle furniture/ furnishing item	3.1. Items to be re-assembled are identified 3.2. Items are re-assembled to the extent required in the work instructions using appropriate tools and procedures 3.3. Fasteners and attachments selected and used according to workplace procedures 3.4. Fasteners and attachments selected and used according to workplace procedures 3.5. Assembled item dispatched to the next process according to workplace procedures
4. Clean work area maintain equipment and complete operations	4.1. Equipment used is cleaned, inspected for serviceable condition and stored according to workplace procedures 4.2. Equipment faults are identified, tagged and reported to appropriate personnel 4.3. Work area is cleaned and returned to operational condition

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, furniture construction methods, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate dismantling/reassembly problems, avoid re-working and avoid wastage
- use the workplace technology related to dismantling/re-assembly, including tools, equipment, materials and measuring devices

Required knowledge

- the types and characteristics of materials used in furniture/furnishings construction
- construction techniques and processes
- identification of equipment, processes and procedures
- workflow in relation to dismantling and re-assembling furniture/furnishings

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical Aspects of Evidence</p>	<ul style="list-style-type: none"> • Locate, interpret and apply relevant information • Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment • Identify materials used in the construction of the item being dismantled/re-assembled • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • minimise the risk of injury to self or others • prevent damage to goods or equipment • maintain required work output and quality • Dismantle and re-assemble at least three different items, including: <ul style="list-style-type: none"> • one assembled with knockdown fittings, and • one with glued joints • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
<p>Resource Implications</p>	<p>Furniture/furnishings for dismantling/re-assembling, work instructions, tools and equipment.</p>
<p>Method of Assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may, where appropriate, be in conjunction with assessment of other units of competency.</p>
<p>Contexts of Assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for surface coating removal	1.1. Materials safety data sheets and/or product application and safety information are read and used to inform work practices 1.2. OHS requirements, including ventilation requirements and personal protection needs, are observed throughout the work 1.3. Surface coating is tested to identify the type of material and methods required remove the coating 1.4. Tools, equipment and materials suitable for the removal tasks are selected and checked for safe operation/application 1.5. Accessories and consumables are identified for the removal tasks
2. Remove surface coatings	2.1. Sequence of work is identified, maximising potential of any chemical for the removal operation 2.2. Equipment, chemicals and abrasives are used within manufacturer specifications and workplace procedures 2.3. Surface coating is removed according to workplace procedures and specifications 2.4. Surfaces are inspected to ensure removal of surface coating is to workplace standard 2.5. Defects found after removal of surface coating are dealt with and/or reported in accordance with workplace procedures
3. Clean work area and maintain equipment	3.1. Item is stored and labelled ready for next process 3.2. Equipment is cleaned and inspected for serviceable condition and stored appropriately 3.3. Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 3.4. Chemicals and other materials are stored or disposed of correctly according to regulations 3.5. Work area is cleaned ready for next process or task

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hardware identification and selection, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate removal problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the selection and application, including hardware options, tools, equipment and measuring devices

Required knowledge

- workflow in relation to the removal of surface coatings
- the types, properties and characteristics of coatings
- coating removal techniques, materials, applications and limitations
- material safety management systems

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Remove surface coating from timber and metal surfaces, and apply appropriate techniques to remove coatings from flat, vertical, carved and curved surfaces, using a minimum of four different removal techniques and materials
- Work effectively with others
- Modify activities to cater for variations in workplace contexts

Resource Implications

Range of surfaces to be removed, removal methods, tools, equipment and consumables.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the removal of surface coatings

Coated surfaces may include but are not limited to:

- solid timber
- manufactured board
- metal

Tools and equipment may include, but are not limited to:

- liquid containers
- brushes
- scrapers
- scrubbing brush
- steel wool
- sanding blocks
- heat guns
- high pressure water cleaners
- dipping tanks
- stainless steel stripping bench
- iron
- plane
- chisels
- power sanders
- air compressor and hoses

Materials to be used may include but are not limited to:

- caustic soda
- thinners

RANGE STATEMENT	
	<ul style="list-style-type: none"> • turpentine • methylated spirits • gun wash • gel stripper • putties • hot water • glues • abrasive paper
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for surface preparation	1.1.Characteristics of the surface and the required surface coating materials are identified 1.2.OHS requirements, including personal protection needs, are observed throughout the work 1.3.Tools and equipment required, related engineering controls identified and set up 1.4.Sources of contamination in work area are identified and excluded 1.5.Workplace procedures for surface preparation are identified and followed according to the surface and surface coating materials being used
2. Prepare surfaces	2.1.Surfaces are prepared according to workplace procedures and specification 2.2.Surface preparation is checked for conformity with workplace specifications throughout the process 2.3.Rectification of surface preparation faults are made as required 2.4.Products are inspected and approved for suitability for further processing 2.5.Defects are rectified and/or reported in accordance with workplace procedures
3. Clean work area and maintain equipment	3.1.Prepared products are packed, stored and labelled ready for next process 3.2.Equipment used is cleaned and inspected for serviceable condition and stored appropriately 3.3.Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 3.4.Chemicals used are stored or disposed of correctly according to regulations 3.5.Work area is cleaned ready for next process or task

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, hazardous substances and materials and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate surface preparation problems, avoid re-working and wastage
- use the workplace technology related to the preparation of surfaces, including manual and pressure tools, equipment and measuring devices

Required knowledge

- the types, properties and characteristics of coatings
- surface preparation techniques and equipment/ materials
- hazardous substances and materials used in surface preparation
- workflow in relation to the application and removal of surface coatings

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare surfaces on a minimum of four occasions, including:
 - horizontal surface
 - vertical surface
 - internal surface
 - curved surface (moulding)
- Surfaces are to include:
 - solid hardwood
 - solid softwood
 - veneered board
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Range of surfaces to be prepared, preparation tools, equipment and consumables.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other relevant units of competency.

EVIDENCE GUIDE	
Context of Assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the preparation of surfaces

Surfaces

- Surfaces to be prepared may include but are not limited to:
- solid timber
 - manufactured board
 - metal

Tools and equipment are to include:

- measuring tapes and rulers
- squares
- hammer
- nail punch
- liquid containers
- brushes
- cabinet scrapers
- file
- oil stone
- steel wool/scourers
- sanding blocks
- steam iron
- chisels
- power sanders
- air compressor and hoses
- fixed belt/stroke sander

RANGE STATEMENT**Tools and equipment may also include:**

- plane
- spanners
- screwdrivers
- clamps
- drill
- mallet
- vice
- saw

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including timings, equipment to be maintained and materials 1.2. OHS requirements, including ventilation and personal protection needs, are observed throughout the work 1.3. Tools, equipment and accessories are identified and checked for safe and effective operation 1.4. Work area is cleared of unwanted stock, products and materials 1.5. Equipment is isolated from power sources and made safe in accordance with site procedures
2. Maintain the equipment	2.1. Equipment is dismantled in accordance with manufacturers' specifications and site procedures 2.2. Components are laid out in a logical reassembly sequence 2.3. Components are cleaned and serviced using authorised materials and tools/equipment 2.4. Components are inspected and faulty items repaired, replaced or referred for further maintenance action 2.5. Equipment is reassembled and operations are tested 2.6. Equipment maintenance is reported/recorded in accordance with site procedures
3. Maintain booths	3.1. Combustion and ignition sources are neutralised throughout the work sequence 3.2. Ventilation and other services are inspected for operation, cleaned out and, where appropriate, replenished, replaced or referred for further maintenance action 3.3. Surfaces and floors are cleaned and restored in accordance with site and industry standards 3.4. Materials and consumable stores are cleaned and restored in accordance with site, industry and regulatory standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to spray systems and equipment, maintenance materials, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly estimate material requirements
- use pre-checking and inspection techniques to anticipate maintenance problems, avoid reworking and avoid wastage
- use the limited workplace technology related to maintenance, including machines, tools, equipment, and measuring devices

Required knowledge

- identification of spray system equipment, processes and procedures
- the types, characteristics and maintenance requirements for spray booth services, including at a minimum ventilation, lighting, water and electrical reticulation
- characteristics of the coatings and base materials in terms of toxicity, reactivity and flammability
- types, characteristics, uses and limitations of cleaning solvents and agents
- effects of the fumes, heat and other radiations on surface coatings
- material safety management systems

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply information relevant to the spray equipment and booth services
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required standards and quality
- Disassemble, maintain and reassemble at least two different spray systems
- Maintain a booth and booth services on at least two occasions
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment.

Resource Implications

Spray systems and equipment, spray booth, cleaning and maintenance materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Spray equipment may include:	<ul style="list-style-type: none"> • computerised spray system • electrostatic spray gun • powder coating spray gun • air compressor and hoses and dryers
Booths	<p>Booths is a generic term for areas specifically used for the hand or mechanical application of coatings/paint. They may range from a dry filter bath to a purpose-designed, positive-pressure, down-draft water booth</p>
Booth services may include:	<ul style="list-style-type: none"> • lighting • ventilation • electricity supply • water supply • paint lines • consumables storage areas
Tools and equipment may include:	<ul style="list-style-type: none"> • liquid containers • feeding systems • spray guns • scrapers (non-ferrous) screwdrivers • shifting spanner • spanners
Materials to be used may include are not limited to:	<ul style="list-style-type: none"> • water • solvents • other cleaning compounds and chemicals

RANGE STATEMENT	
	<ul style="list-style-type: none"> • rags • steel wool • brushes • hoses • brooms • squeegees
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to tools and equipment • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1.Characteristics of the surface and the required surface coating are identified from work orders or instructions</p> <p>1.2.Processing and application techniques, time and safety requirements are identified and used for work planning</p> <p>1.3.OHS requirements, including ventilation requirements and personal protection needs, are observed throughout the work</p> <p>1.4.Tools, equipment and accessories are identified and checked for safe and effective operation for the surface coating task</p> <p>1.5.Stains, lacquers, polish, enamels, acrylics, one-pot polyurethane and water-based coatings are identified and prepared as required for the surface coating tasks</p>
2. Check and prepare for spraying	<p>2.1.Products with surface or other faults are identified and faults reported or repaired as appropriate</p> <p>2.2.Other products and equipment in the workplace are protected from overspray</p> <p>2.3.Trial applications of surface materials are made to check condition of spray system, spray patterns, equipment operation, materials viscosity and specified surface finish</p> <p>2.4.Unserviceable components are cleaned or replaced and spray system reassembled</p> <p>2.5.Spray pattern faults are identified and rectified in accordance with workplace procedures.</p> <p>2.6.Material faults are identified and workplace procedures for rectification are followed</p>
3. Apply surface coating	<p>3.1.Surfaces are kept free of contamination</p> <p>3.2.Surface coatings are applied according to workplace procedures</p> <p>3.3.Surface build and coverage is checked against workplace requirements for even spread and thickness</p> <p>3.4.Rectification of surface faults are made in accordance with workplace procedures</p> <p>3.5.Products are inspected and approved for suitability for further processing</p>
4. Clean work area and	4.1.Equipment is cleaned and inspected for serviceable

ELEMENT	PERFORMANCE CRITERIA
maintain equipment	condition and stored appropriately 4.2. Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 4.3. Work area, including spray booth is cleaned and returned to approved condition 4.4. Workplace records are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to spray equipment and painting materials, work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate coating problems, avoid re-working and wastage
- use the workplace technology related to spraying operations including tools, equipment and measuring devices

Required knowledge

- identification of spray equipment, processes and procedures
- characteristics of the coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and recoatability
- effects of the fumes, heat and other radiations on surface coatings
- the methods to prevent contamination of surfaces during and after surface coating
- workflow in relation to spraying operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply information relevant to the materials being applied and the application equipment
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Select and apply surface coatings, including the adjustment of spray equipment to effect required spray pattern for a minimum of three different surface types and shapes
- Maintain spray equipment and work area, including spray booth
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Spray equipment, spray booth, coatings and cleaning products.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the application of surface coatings
Spray guns are to include:	<ul style="list-style-type: none"> • conventional air spray guns and airless spray guns and may include: HVLP and air-assisted airless spray gun
Coatings are to include:	<ul style="list-style-type: none"> • pre-catalysed lacquer • acid catalysed lacquer and may include: nitro-cellulose lacquer • one-pot polyurethane and water-based coatings
Tools and equipment may include but are not limited to:	<ul style="list-style-type: none"> • pressure feed systems • spray booth • liquid containers • air compressor and hoses • air regulator • positive pressure air-wash masks • canister-type face masks • screwdrivers • shifting spanner and spanners
Material to be applied may include but are not limited to:	<ul style="list-style-type: none"> • stains • lacquers • acrylics • one-pot polyurethane and water-based coatings

RANGE STATEMENT	
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Workplace information, including materials application and safety information, material safety data sheets, is used to inform work practices 1.2. Characteristics of the surface and the required surface treatment are identified from work orders or instructions 1.3. Processing and application techniques, time and safety requirements are identified and used for work planning 1.4. OHS requirements, including ventilation requirements and personal protection needs, are observed throughout the work 1.5. Tools, equipment and accessories are identified and checked for safe and effective operation for the staining, filling or bleaching task
2. Prepare for application of materials	2.1. Surfaces are checked for contamination and correct preparation according to workplace procedures and standards 2.2. Products with surface or other faults are identified and faults repaired as appropriate 2.3. Materials required to stain and fill in are identified and prepared for the task 2.4. Trial applications of stains and or fillers are made to check equipment operation, materials consistency, viscosity and specified colour 2.5. Faults and or inconsistencies in colour are identified and workplace procedures for rectification and adjustment are followed 2.6. Materials required for bleaching are identified and labelled to prevent cross-contamination of bulk material during application
3. Apply finishing materials	3.1. Techniques for application of stain, filler or bleach are identified 3.2. Materials are applied according to job instructions, material manufacturers' specifications and workplace procedures 3.3. Bleached items are appropriately stored for drying 3.4. Finished products are inspected and approved for suitability for further processing 3.5. Products which do not meet quality specifications are restrained, filled, bleached or tagged for further

ELEMENT	PERFORMANCE CRITERIA
	investigation.
4. Clean work area and maintain equipment	<p>4.1. Equipment used is cleaned and inspected for serviceable condition and stored appropriately</p> <p>4.2. Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed</p> <p>4.3. Bleaching materials are disposed of in accordance with environmental concerns and workplace procedures. Unused material must not be returned to bulk stock</p> <p>4.4. Work area is cleaned and returned to approved condition, all areas used for bleaching are washed down with water</p> <p>4.5. Workplace records are completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to coating materials, cleaning materials, work orders and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of coating equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate coating problems, avoid reworking and avoid wastage
- use the limited workplace technology related to coating, including tools, equipment and measuring devices

Required knowledge

- identification of application techniques
- characteristics of stains, fillers and bleaches in terms of toxicity, reactivity, flammability, viscosity.
- the methods to prevent contamination of surfaces during and after processing
- workflow in relation to the application stains, fillers and bleach

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	
Context of, and specific resources for assessment	
Method of assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • Workplace health and safety requirements include OHS legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the application of stains, fillers and bleach
Stains are to include:	<ul style="list-style-type: none"> • lacquer-based wiping stain and spirit-based and may include: water and oil-based
Fillers are to include:	<ul style="list-style-type: none"> • oil-based • water-based and plastic (one-pot) filler
Bleach is to include:	<ul style="list-style-type: none"> • two-solution bleach and may include oxalic acid bleach
Surfaces	Surfaces include solid timber and manufactured board
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • liquid containers • rubber gloves • face masks • spray booths • spray guns • compressor • air lines • brushes • sanding block
Materials to be applied may include but are not limited to:	<ul style="list-style-type: none"> • stains • fillers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • bleaches • water • abrasive papers • cotton rags and hessian
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

4. Clean work area and maintain equipment	<p>4.1. Equipment used is cleaned and inspected for serviceable condition and stored appropriately</p> <p>4.2. Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3. Work area is cleaned and returned to approved condition 4.4. Workplace records are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to coating materials, cleaning materials, work orders and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of coating equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate paint requirements and other material requirements
- use pre-checking and inspection techniques to anticipate coating problems, avoid reworking and avoid wastage
- use the limited workplace technology related to coating, including tools, equipment and measuring devices

Required knowledge

- identification of hand application techniques
- characteristics of coatings, waxes and oils in terms of toxicity, reactivity, flammability, required viscosity.
- the methods to prevent contamination of surfaces during and after finishing
- workflow in relation to the application of finishing material

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare for and apply coatings by hand on a minimum of five occasions covering:
 - the three surface types
 - the four coatings detailed in the Range Statement
- Maintain application equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Hand finishing application equipment, coating materials, waxes and oils and surfaces to be coated.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous substance and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the application of surface coatings
Coatings are to include:	<ul style="list-style-type: none"> • one-pot polyurethane • enamel • acrylic and polish
Application methods are to include:	<ul style="list-style-type: none"> • brush and swooge
Surfaces may include but are not limited to:	<ul style="list-style-type: none"> • solid timber • manufactured board • metal
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • sanders • pneumatic or low-voltage electric buff • rubber sanding block • brushes and swooges
Materials may include but are not limited to:	<ul style="list-style-type: none"> • water • detergent • wax • oil • enamel • acrylic • one-pot polyurethane • polish

RANGE STATEMENT	
	<ul style="list-style-type: none"> • methylated spirits • turpentine • terebine • abrasive papers • cotton rags • steel wool
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work	1.1. Work instructions are used to determine job requirements, including design, colour, finish process and quality 1.2. OHS requirements, including personal protection needs, are observed throughout the work 1.3. Colour matching aids and colouring materials are accessed and readied for use 1.4. Types of colouring materials are identified and prepared for colouring task 1.5. Tools, equipment and accessories are identified and checked for safe and effective operation
2. Match colours	2.1. Surfaces are cleaned and prepared to enable accurate colour matching 2.2. Characteristics of the surface and the impact of these on colouring are taken into account 2.3. Techniques for colour application are identified and selected according to workplace practices 2.4. Properties of colouring agents are assessed in relation to the specific circumstances 2.5. Colour matching techniques are applied to identify most likely fits in terms of product, colour and application techniques 2.6. Colour matching outcomes are confirmed through trials of proposed products, colours and application techniques 2.7. Colour matching formulae are recorded to enterprise or industry standards
3. Make up colours	3.1. Product quantities are identified from client demand or accurate assessment of coating/colouring requirement 3.2. Colouring additives are calculated from manufacturer specifications 3.3. Colouring additives are accurately measured and blended with the base product
4. Apply colours	4.1. Colour solution is applied in accordance with selected application techniques and workplace procedures 4.2. Colour application is constantly checked against sample colour 4.3. Surface is inspected for faults in applied colour film

ELEMENT	PERFORMANCE CRITERIA
	and defects are rectified 4.4. Coloured or matched up surface is sealed with finishing material in accordance with job specification and workplace procedures
5. Clean up	5.1. Colouring materials are stored and labelled ready for next process 5.2. Waste and unwanted material is disposed of safely and in accordance with relevant environmental regulations 5.3. Unused materials are sealed and stored 5.4. Tools and equipment are cleaned, maintained and stored

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to colour matching processes, products and techniques, work orders, plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, calculate colouring ratios and estimate material requirements
- use pre-checking and inspection techniques to anticipate colour matching problems, avoid re-working and wastage
- use the limited workplace technology related to colour matching aids, tools, equipment, calculators and measuring devices

Required knowledge

- the types, characteristics and degradation patterns of coatings and stains
- the properties of coated and stained surface materials and the impact of these on colouring
- the types, characteristics, uses and limitations of colouring agents
- the types, uses and limitations of matching aids
- product catalogues and other information systems
- material safety management systems and related safety requirements

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply information relevant to the colour matching equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Accurately colour match using pigments and/or stains on a minimum of five occasions
- Record colour formulae for production situations
- Work effectively with others

Resource Implications

Safe work area, sample colouring requirements, colouring agents, base coating products, mixing and testing equipment and cleaning equipment and materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the accurate matching of colours
Tools and equipment may include:	<ul style="list-style-type: none"> • mixing pots • brushes • spray equipment and mechanical mixer/vibrator • colour rubber • colour wad
Materials may include:	<ul style="list-style-type: none"> • spirit-based stains • pigments • lacquers • oil varnish • two-part polyurethane • methylated spirits • lacquer thinners • mineral turpentine and polish
Colouring agents may include:	<ul style="list-style-type: none"> • pigments • dyes • stains • universal tinters and toning lacquer
Properties of colouring agents may include but not be limited	<ul style="list-style-type: none"> • colour • specific gravity

RANGE STATEMENT	
to:	<ul style="list-style-type: none"> • staining power • refractive power • texture • durability • opacity • spreading power • toxicity and oil absorptive power

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1.Characteristics of the surface and the required surface coating are identified from work orders or instructions 1.2.Processing and application techniques, time and safety requirements are identified and used for work planning 1.3.OHS requirements, including ventilation requirements and personal protection needs, are observed throughout the work 1.4.Tools, equipment and accessories are identified and checked for safe and effective operation for the surface coating task 1.5.Coating materials are identified and prepared
2. Check and prepare for spraying	2.1.Products with surface or other faults are identified and faults reported or repaired as appropriate 2.2.Other products and equipment in the workplace are protected from overspray 2.3.Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish 2.4.Machine faults are identified and rectified or reported 2.5.Material faults are identified and workplace procedures for rectification are followed
3. Apply surface coating	3.1.Surfaces are kept free of contamination 3.2.Surface coatings are applied according to workplace procedures 3.3.Surface coating viscosity and coverage is monitored and checked against workplace requirements for even spread and thickness 3.4.Rectification of surface faults is made as required 3.5.Products are inspected and approved for suitability for further processing 3.6.Defects are dealt with and/or reported in accordance with workplace procedures
4. Clean work area and maintain equipment	4.1.Equipment is cleaned and inspected for serviceable condition and stored appropriately 4.2.Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 4.3.Work area, including spray booth is cleaned and

ELEMENT	PERFORMANCE CRITERIA
	<p>returned to approved condition</p> <p>4.4. Workplace records are completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to coating system and machines, coating materials, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the notification of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate paint requirements and other material requirements
- use pre-checking and inspection techniques to anticipate coating problems, avoid re-working and avoid wastage
- use workplace technology related to mechanical coating systems, including machines, tools, equipment and measuring devices

Required knowledge

- identification of mechanical spray system equipment, processes and procedures
- characteristics of the coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and re-coatability
- effects of the fumes, heat and other radiations on surface coatings
- the methods to prevent contamination of surfaces during and after surface coating
- workflow in relation to spraying operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply information relevant to the materials being applied and the application equipment
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Select and apply surface coatings, including the adjustment of spray equipment to effect required coating using a minimum of two different mechanical systems:
 - curtain coater
 - electrostatic
 - tumbler
 - dipping
 - roller coater (UV)
 - automatic (robotic) spray equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Mechanical spray systems and equipment, spray booth, coatings and cleaning products.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

EVIDENCE GUIDE	
Context of Assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the application of surface coatings
<p>Surface coating operations</p>	<p>This unit covers work involved in the application of surface coatings by mechanical methods other than by conventional hand-held spray gun or airless spray gun</p> <p>Surface coatings are to include: a minimum of two of those required for curtain coating, UV coating, tumbling, dipping and electrostatic powder coating tasks</p>
<p>Tools and equipment are to include:</p>	<ul style="list-style-type: none"> • computerised spray system • electrostatic spray gun • baking oven • barrel tumbler • spray booth • liquid containers • air compressor and hoses • screwdrivers • shifting spanner and spanners • ford cup
<p>Materials to be applied may include but are not limited to:</p>	<ul style="list-style-type: none"> • stains • lacquers • wax

RANGE STATEMENT	
	<ul style="list-style-type: none"> • oil • two-pack polyurethane • three-pack polyester • enamels • acrylics • powder coating
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Workplace information, including materials application and safety information, material safety data sheets, is used to inform work practices</p> <p>1.2. Characteristics of the surface and the required surface treatment are identified from work orders or instructions</p> <p>1.3. Processing and application techniques, time and safety requirements are identified and used for work planning</p> <p>1.4. OHS requirements, including ventilation requirements and personal protection needs, are observed throughout the work</p> <p>1.5. Tools, equipment and accessories are identified and checked for safe and effective application of polyurethane, polyester and acid catalysed coatings</p>
2. Prepare for application of materials	<p>2.1. Surfaces are checked for contamination and correct preparation according to workplace procedures and standards</p> <p>2.2. Products with surface or other faults are identified and faults repaired as appropriate</p> <p>2.3. Materials required are identified and prepared for the task</p> <p>2.4. Spray booths and work documentation are inspected to ensure nitro-cellulose lacquer has not been sprayed in the same booth as that used for the application of two/three part polyurethane/polyester coatings</p> <p>2.5. Nitro-cellulose overspray is cleaned off booth surfaces if necessary before application of two/three-part polyurethane/polyester</p> <p>2.6. Trial applications of two-part polyurethane/polyester and acid catalysed coatings are made to check equipment operation, materials consistency and viscosity</p> <p>2.7. Faults and/or inconsistencies in applied coating are identified and workplace procedures for rectification and adjustment are followed</p>
3. Apply finishing materials	<p>3.1. Techniques for application of plural component coatings are identified and selected</p> <p>3.2. Materials are applied according to job instructions, material manufacturer specifications and workplace procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3.Finished products are inspected and approved for suitability for further processing 3.4.Products which do not meet quality specifications are rectified or tagged for further investigation
4. Clean work area and maintain equipment	4.1.Equipment used is cleaned and inspected for serviceable condition and stored appropriately 4.2.Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 4.3.Work area is cleaned and returned to approved condition 4.4.Workplace records are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to coating materials, cleaning materials, work orders and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of coating equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate paint requirements and other material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid re-working and wastage
- use the limited workplace technology related to coating, including tools, equipment and measuring devices

Required knowledge

- identification of application techniques
- characteristics of acid catalysed, polyurethane and polyester coatings
- the methods to prevent contamination of surfaces during and after coating
- workflow in relation to the application of polyurethane and polyester

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply plural component coatings on at least three occasions, including:
 - one acid catalysed
 - one two-pot polyurethane
 - applications, including flat, vertical and internal surfaces
- Maintain application equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Spray application equipment, acid catalysed, polyurethane and polyester coatings.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> OHS requirements may include legislation, building codes, material safety management systems, hazardous substance and dangerous goods codes and local safe operating procedures Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements Work requires individuals to demonstrate discretion, judgement and problem solving skills in the installation of surface coatings
Plural component coatings are to include:	<ul style="list-style-type: none"> acid catalysed and two-pot polyurethane and may include: polyester and metallic finishes
Application techniques and processes are to include:	<ul style="list-style-type: none"> brushing and spraying
Surfaces may include but are not limited to:	<ul style="list-style-type: none"> solid timber manufactured board metal
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> liquid containers rubber gloves positive pressure air wash face masks positive pressure water wash spray booths protective clothing spray guns compressor air lines brushes sanding block orbital sanders
Materials to be applied may	<ul style="list-style-type: none"> two-part polyurethane

RANGE STATEMENT	
include but are not limited to:	<ul style="list-style-type: none"> • two/three part polyester • acid catalysed lacquer • solvents

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Workplace information, including materials application and safety information, material safety data sheets, is used to inform work practices</p> <p>1.2. Characteristics of the surface and the required surface finish are identified from work orders or instructions</p> <p>1.3. Processing and application techniques, time and safety requirements are identified and used for work planning</p> <p>1.4. OHS requirements, including ventilation requirements and personal protection needs, are observed throughout the work</p> <p>1.5. Tools, equipment and accessories are identified and checked for safe and effective operation for the surface finishing task</p>
2. Prepare for application of materials	<p>2.1. Surfaces are checked for contamination and correct preparation according to workplace procedures and standards</p> <p>2.2. Products with surface or other faults are identified and faults repaired as appropriate</p> <p>2.3. Finishing materials required are identified and prepared for the task</p> <p>2.4. Trial applications of surface materials are made to check rubber operation, materials consistency and specified surface finish</p> <p>2.5. Faults are identified and workplace procedures for rectification are followed</p>
3. Apply soft varnish/rubber	<p>3.1. Surface is lightly sanded and checked for defects which are rectified in accordance with workplace procedures</p> <p>3.2. Rubber is suitably charged</p> <p>3.3. Surface is soft-rubbered/varnish rubbered using correct amount of pressure and suitable rubber movements</p> <p>3.4. Surface is inspected and any defects repaired/rectified</p>
4. Clean work area and maintain equipment	<p>4.1. Equipment used is cleaned and inspected for serviceable condition and stored appropriately</p> <p>4.2. Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3. Work area is cleaned and returned to approved condition 4.4. Workplace records are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to soft rubber coating materials, cleaning materials, work orders and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of coating equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate paint requirements and other material requirements
- use pre-checking and inspection techniques to anticipate soft rubber coating problems, avoid re-working and avoid wastage
- use the limited workplace technology related to soft rubber coating, including tools, equipment and measuring devices

Required knowledge

- soft rubber applications, limitations and techniques
- characteristics of coatings in terms of toxicity, reactivity, flammability, required viscosity
- the methods to prevent contamination of surfaces during and after finishing
- workflow in relation to the application of finishing material

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Accurately apply soft/varnish rubber techniques on a minimum of two occasions which must cover a chair or equivalent, and a large flat surface
- Maintain application equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Soft rubber materials, coating materials, other consumables and surfaces to be coated.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to coating materials, cleaning materials, work orders and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of coating equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate paint and other material requirements
- use pre-checking and inspection techniques to anticipate coating problems, avoid re-working and wastage
- use the limited workplace technology related to coating, including tools, equipment and measuring devices

Required knowledge

- identification of hand application techniques
- the functions and safety requirements of hand and power tools, particularly in wet working environments
- characteristics of compounds, waxes and oils in terms of toxicity, reactivity, flammability, required viscosity
- the methods to prevent contamination of surfaces during and after finishing
- workflow in relation to the application of finishing material

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- On two occasions, one including a curved surface, enhance existing finishes by:
 - cutting down
 - pulling in
 - compounding and buffing
- On two occasions wax and oil to achieve a satin finish
- Maintain application equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Hand finishing application equipment, compounds, waxes and oils and finishes requiring enhancement.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Workplace information, including materials application and safety information, material safety data sheets, is used to inform work practices</p> <p>1.2. Characteristics of the surface and the required surface coating are identified from work orders or instructions</p> <p>1.3. Processing and application techniques, time and safety requirements are identified and used for work planning</p> <p>1.4. OHS requirements, including ventilation requirements and personal protection needs, are observed throughout the work</p> <p>1.5. Tools, equipment and accessories are identified and checked for safe and effective operation for the surface coating task</p>
2. Repair surfaces	<p>2.1. Surfaces are checked for contamination and correct preparation according to workplace procedures and standards</p> <p>2.2. Products with surface or other faults are identified and assessed</p> <p>2.3. Materials required for repair are selected and prepared</p> <p>2.4. Repairs are completed to manufacturers' standards and/or industry practices</p>
3. Prepare for application of materials	<p>3.1. Techniques for hand application of materials are identified and selected</p> <p>3.2. Coating materials required are identified and prepared for the surface coating task</p> <p>3.3. Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish</p> <p>3.4. Faults are identified and workplace procedures for rectification are followed</p>
4. Apply surface coating	<p>4.1. Surface coatings are applied according to job instructions, material manufacturers' specifications and workplace procedures</p> <p>4.2. Coated products are inspected and approved for suitability for further processing</p> <p>4.3. Products which do not meet quality specifications are recoated or tagged for further investigation</p>

ELEMENT	PERFORMANCE CRITERIA
5. Clean work area and maintain equipment	5.1. Equipment used is cleaned and inspected for serviceable condition and stored appropriately 5.2. Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 5.3. Work area, including painting locations, is cleaned and returned to approved condition 5.4. Workplace records are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to coating materials, cleaning materials, work orders and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the worksite and the obtaining of coating equipment and materials to avoid any back tracking, work flow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate paint requirements and estimate material requirements
- use pre-checking and inspection techniques to anticipate coating problems, avoid re-working and wastage
- use the limited workplace technology related to coating including tools, equipment and measuring devices

Required knowledge

- repair and touch up techniques
- decontamination materials, techniques and safety requirements
- identification of application techniques
- characteristics of coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and re-coatability
- the methods to prevent contamination of surfaces during and after surface coating
- workflow in relation to the application of surface coatings

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Repair and finish a minimum of four damaged surfaces, including:
 - a strip off and re-finish
 - two touch ups involving different repair techniques
- with only one being a metal surface
- Maintain application equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Surface coating application equipment, coatings, other consumables, and materials to be repaired.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the application of surface coatings

Techniques are to include:

- decontamination and repair
- stripping
- wash off
- stoppings
- (epoxy
- button lac
- water putty
- wax)
- plugs and refinishing

Surface faults may include:

- machine marks
- bruising
- pencil marks
- grease
- cross-sanding marks
- scratches
- glue marks
- dirt marks
- insect and termite holes
- holes
- knots
- blisters

RANGE STATEMENT	
	<ul style="list-style-type: none"> • rubber marks • burns or tears • ropiness and foreign matter in the polish
Surfaces may include but are not limited to:	<ul style="list-style-type: none"> • solid timber • manufactured board • metal
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • brushes • rollers • soup rubbers • paint trays • power agitators • sanders • liquid containers • scrapers • quirk sticks • sandpapers • cotton rags • hessian • steel wool • sandpaper • abrasive papers
Materials to be applied may include but are not limited to:	<ul style="list-style-type: none"> • lacquers • paints • acrylics • enamels • one-pot polyurethane • methylated spirits • pigments • spirit colours
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Workplace information, including materials application and safety information, material safety data sheets, is used to inform work practices</p> <p>1.2. Characteristics of the surface and the required surface treatment are identified from work orders or instructions</p> <p>1.3. Processing and application techniques, time and safety requirements are identified and used for work planning</p> <p>1.4. OHS requirements, including ventilation requirements and personal protection needs, are observed throughout the work</p> <p>1.5. Tools, equipment and accessories are identified and checked for safe and effective operation for the task</p>
2. Prepare for application of materials	<p>2.1. Surfaces are checked for contamination and correct preparation according to workplace procedures and standards</p> <p>2.2. Products with surface or other faults are identified and faults repaired as appropriate</p> <p>2.3. Materials required to complete the task are identified and prepared.</p> <p>2.4. Trial applications of material are made to check equipment operation, materials consistency, viscosity and sample match.</p> <p>2.5. Faults and or inconsistencies in colour and surface appearance are identified and workplace procedures for rectification and adjustment are followed</p>
3. Apply finishing materials	<p>3.1. Techniques for application of graining solution and other finishes are identified.</p> <p>3.2. Materials are applied according to job instructions, material manufacturer specifications and workplace procedures</p> <p>3.3. Finished products are inspected and approved for suitability for further processing</p> <p>3.4. Products which do not meet quality specifications are rectified or tagged for further investigation</p>
4. Clean work area and maintain equipment	<p>4.1. Equipment used is cleaned and inspected for serviceable condition and stored appropriately</p> <p>4.2. Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Work area is cleaned and returned to approved condition, all areas used for bleaching are washed down with water.</p> <p>4.4. Workplace records are completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to coating materials, cleaning materials, work orders and safety procedures
- communicate ideas and information to convince customers of the appropriateness of particular products to their needs
- plan and organise activities including the preparation and layout of the worksite and the obtaining of coating equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate paint requirements and other material requirements
- use pre-checking and inspection techniques to anticipate coating problems, avoid re-working and wastage
- use the limited workplace technology related to coating, including tools, equipment and measuring devices

Required knowledge

- identification of application techniques
- characteristics of graining and coating materials in terms of toxicity, reactivity, flammability, viscosity
- the methods to prevent contamination of surfaces during and after processing
- workflow in relation to the application stains, fillers and bleaches

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Apply graining solution to imitate a minimum of two different timber species
- Apply graining solution to imitate a minimum of two different timber species
- Apply material to imitate a marble finish and one other finish type
- Maintain application equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Hand application equipment, graining solution and coating materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work	1.1. Work requirements are correctly identified from drawings/specifications/instructions 1.2. Quality assurance requirements are recognised and adhered to in accordance with company's operation 1.3. OHS requirements, including personal protection needs, are observed throughout the work 1.4. Tools and equipment selected are consistent with job requirements and work instructions, checked for safety and serviceability and any faults reported to supervisor 1.5. Skinning in, bodying up and spiriting out/stiffening up rubbers are prepared consistent with the requirements of the work
2. Prepare for application of polish	2.1. Surfaces are checked for contamination and correct preparation according to workplace procedures and standards 2.2. Products with surface or other faults are identified and faults are reported or repaired 2.3. Techniques for hand application of polish using traditional methods are identified and used according to workplace procedures 2.4. Materials and equipment suitable for skinning in, bodying up and spiriting out/stiffening up operations are prepared 2.5. Surfaces are stained, filled in and then sealed with polish using a mop brush, blender or swooge
3. Skin in job surface	3.1. Surface is lightly sanded and checked for defects which are rectified in accordance with workplace procedures 3.2. Skinning in rubber is suitably charged with polish having regard for job colour and clarity 3.3. Surface is skinned in, covering small areas at a time, using correct amount of pressure and suitable rubber movements 3.4. Pumice powder is applied as necessary in accordance with workplace procedures 3.5. Skinned in surface is inspected and any defects are repaired using suitable materials
4. Body up a skinned in surface	4.1. Polish, lubricating oil and pumice powder is used to body up the skinned in surface, using correct amount

ELEMENT	PERFORMANCE CRITERIA
	<p>of pressure and suitable rubber movements</p> <p>4.2. Rubber and job surface are continuously monitored to evaluate their condition</p> <p>4.3. Body up rubber is recharged and lubricating oil and pumice are applied as necessary to ensure surface faults and blemishes do not develop</p> <p>4.4. Bodied up surface is full and flat with an even sheen and shows no blemishes</p>
5. Spirit off/stiffen up surface	<p>5.1. Surface is stiffened up/spirited off using correctly charged rubber, correct amount of pressure and suitable rubber movements</p> <p>5.2. Stiffened up/spirited off surface is free of oil, full, flat with an even sheen and shows no blemishes or rubber marks</p>
6. Clean up	<p>6.1. Workplace is cleared of debris and unused materials</p> <p>6.2. Rubbers are stored separately in airtight glass or plastic containers in accordance with workplace procedures</p> <p>6.3. Tools and equipment are cleaned, maintained and stored</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to French polishing techniques and materials, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate French polishing problems, avoid re-working and wastage
- use the workplace technology related to French polishing, including tools, equipment and measuring devices

Required knowledge

- workplace and equipment safety requirements, including relevant regulations, codes and standards
- construction techniques of rubbers
- safe handling of materials associated with traditional French polishing, including:
 - lac
 - polishes
 - paraffin and linseed oils
 - methylated spirits
- shellac mixing procedures
- repair techniques to defects in timber surfaces and polish film
- appropriate rubber charging and movements for each stage of French polishing
- storage requirements for lac products and rubbers

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply information relevant to French polishing
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Accurately apply traditional French polishing techniques on a minimum of two occasions which must include and cover flat and curved surfaces and an enclosed panel
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Safe work area, French polishing materials, timber components/furnishings requiring polish and cleaning materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the process of French polishing
Polishes may include, but are not limited to:	<ul style="list-style-type: none"> • shellac • button lac • de-waxed lac • de-waxed/de-coloured lac • white or bleached lac.
Surfaces are to include:	<ul style="list-style-type: none"> • solid timber or veneered manufactured board
Lubricating oils may include:	<ul style="list-style-type: none"> • paraffin and linseed
Surface faults may include:	<ul style="list-style-type: none"> • machine marks • bruising • pencil marks • grease • cross-sanding marks • scratches • glue marks • dirt marks • insect and termite holes • holes • knots

RANGE STATEMENT	
	<ul style="list-style-type: none"> • blisters • rubber marks • burns or tears • ropiness and foreign matter in the polish.
Tools and equipment may include:	<ul style="list-style-type: none"> • filler blades • brushes • abrasive papers • skinning in • bodying up and spiriting out rubbers • mop brush • blender • swooge and scrapers
Personal protective equipment includes:	<ul style="list-style-type: none"> • that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Manufacturer specifications and operational procedures • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1.Characteristics of the surface and the required surface coating are identified from work orders or instructions 1.2.Processing and application techniques, time and safety requirements are identified and used for work planning 1.3.OHS requirements, including ventilation requirements and personal protection needs, are observed throughout the work 1.4.Tools, equipment and accessories are identified and checked for safe and effective operation for the surface coating task 1.5.Coating materials are identified and prepared
2. Check and prepare for spraying	2.1.Products with surface or other faults are identified and faults reported or repaired as appropriate 2.2.Other products and equipment in the workplace are protected from overspray 2.3.Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish 2.4.Machine faults are identified and rectified or reported 2.5.Material faults are identified and workplace procedures for rectification are followed
3. Apply surface coating	3.1.Surfaces are kept free of contamination 3.2.Surface coatings are applied according to workplace procedures 3.3.Surface coating viscosity and coverage is monitored and checked against workplace requirements for even spread and thickness 3.4.Rectification of surface faults are made as required 3.5.Products are inspected and approved for suitability for further processing 3.6.Defects are dealt with and/or reported in accordance with workplace procedures
4. Clean work area and maintain equipment	4.1.Equipment is cleaned and inspected for serviceable condition and stored appropriately 4.2.Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 4.3.Work area, including spray booth is cleaned and

ELEMENT	PERFORMANCE CRITERIA
	<p>returned to approved condition</p> <p>4.4. Workplace records are completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to coating system, coating materials, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate paint requirements and other material requirements
- use pre-checking and inspection techniques to anticipate coating problems, avoid reworking and avoid wastage
- use the workplace technology related to CNC coating systems, including machines, tools, equipment and measuring devices

Required knowledge

- identification of CNC coating system equipment, processes and procedures
- characteristics of the coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and re-coatability
- effects of the fumes, heat and other radiations on surface coatings
- the methods to prevent contamination of surfaces during and after surface coating
- workflow in relation to spraying operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply information relevant to the materials being applied and the application equipment
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Select and apply surface coatings, including the adjustment of system controls to effect required coating using a minimum of two different CNC systems
- Maintain equipment and work area, including spray booth
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

CNC coating systems and equipment, spray booth, coatings and cleaning products.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate organisational abilities, judgement and problem solving skills in the application of surface coatings
Surface coating operations	<ul style="list-style-type: none"> • This unit covers work involved in the application of surface coatings by CNC coating systems • Surface coatings are to include: a minimum of two of those required for curtain coating, UV coating, tumbling, dipping and electrostatic powder coating tasks
Tools and equipment may include:	<ul style="list-style-type: none"> • computerised spray system • electrostatic spray guns • baking ovens • barrel tumblers • spray booths • liquid containers • compressor and hoses • screwdrivers • shifting spanner and spanners • ford cup
Materials to be applied may include but are not limited to:	<ul style="list-style-type: none"> • stains • lacquers • wax • oil

RANGE STATEMENT	
	<ul style="list-style-type: none"> • two-pack polyurethane • three-pack polyester • enamels • acrylics • powder coating
Personal protective equipment includes:	<ul style="list-style-type: none"> • that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lay out materials	1.1.Plans and/or drawings are read and interpreted 1.2.Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3.Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 1.4.Suitable adhesives, trims and accessories are selected if required 1.5.Materials are laid out to meet specification requirements and minimise waste and joins
2. Prepare materials for installation	2.1.Sequence of work is planned to ensure lay out and fixing is in logical order 2.2.Underlay is cut to specification 2.3.Materials are cut to shape, length and size for final laying 2.4.Adhesives and edge strips are prepared for use as required
3. Lay flooring	3.1.Instructions and sequence for laying and fixing are followed 3.2.Appropriate underlay is laid according to manufacturers' recommendations 3.3.Materials for fixing are organised and used in accordance with relevant safety management requirements 3.4.Fixing methods and equipment are used following manufacturers' recommendations 3.5.Finished job is inspected and any imperfections are rectified following workplace procedures
4. Complete housekeeping	4.1.Unused materials are stored or recycled as required 4.2.Tools and equipment are cleaned and stored appropriately 4.3.Work area is cleaned and rubbish disposed of appropriately 4.4.Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate flooring requirements and other material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the installation including tools, equipment, calculators and measuring devices

Required knowledge

- the type, characteristics, uses and limitations of flooring materials
- the types and uses of installation tools and equipment
- the type, characteristics, uses and limitations of fixing methods and adhesives
- the type, characteristics, uses and limitations of underlays
- workplace safety system requirements related to flooring installation
- workflow in relation to flooring installation operations

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Interpret work order and locate and apply relevant information • Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment • Apply ventilation standards • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • minimise the risk of injury to self and others • prevent damage to goods, equipment and products • maintain required production output and product quality • To complete a minimum of one simple floor covering installation, which may be either timber, carpet or resilient, or • Participate as a member of a supervised work team in the completion of an installation in a domestic or commercial setting • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
<p>Resource implications</p>	<p>Timber, carpet or resilient flooring materials; timber, carpet or resilient flooring tools and equipment, installation materials; and area requiring flooring.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant timber, carpet or resilient flooring installation equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Simple floor covering installation	This unit is to be satisfied by completing a simple floor covering project to satisfy an established design or participation as a member of a work team in the completion of a supervised installation in a domestic or commercial setting
Timber flooring may include:	<ul style="list-style-type: none"> • floating floor • strip timber flooring (non-structural) • parquetry and cork tiles
Carpet flooring may include:	<ul style="list-style-type: none"> • tufted carpet • woven carpet • needle punch carpet and fusion bonded carpe
Resilient flooring may include:	<ul style="list-style-type: none"> • homogenous/heterogeneous backed PVC • linoleum sheet • rubber sheet and composition vinyl
Unit context	<ul style="list-style-type: none"> • This unit is established for VET in Schools or equivalent program where the level of supervision is likely to be more direct than under normal working conditions • OH&S requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in installing floor coverings • Simple floor covering contexts include those where: <ul style="list-style-type: none"> • sub-floor preparations are not required or have been completed • the area to be covered is rectangular or square

RANGE STATEMENT	
	<ul style="list-style-type: none"> • no pattern, border design or colour matching is required
Tools and equipment for timber floor covering installation may include:	<ul style="list-style-type: none"> • drop saw • jig saw • hand saw • undercut saw • plunge saw • nail gun • straight edge • cramps • clamps • hammer • bar scribe • tape measure and utility knife
Tools and equipment for carpet floor covering installation may include:	<ul style="list-style-type: none"> • carpet knee kicker • power stretcher • carpet wall trimmer • trolley • hammer • trimming knife • spiked carpet roller • weight or seam roller • awl • carpet spreader • carpet shears • napping shears and tape measure
Tools and equipment for resilient floor covering installation may include:	<ul style="list-style-type: none"> • utility knife • straight edge • square • chalk and chalk-line • tape measure • hacksaw • serrated trowel • hammer • scribing bar • divider • roller • gas bottle and gun • rubber mallet • paint brush and bucket

RANGE STATEMENT	
	<ul style="list-style-type: none"> • spatula knife • trolley and wall trimmer
Materials may include but are not limited to:	<ul style="list-style-type: none"> • flooring materials • underlay • edge strips • reducing strips • tapes • adhesives • adhesive tapes • skirting • domestic carpet gripper strips • heat seam tape • hessian tape and thread
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturers' instructions for the use of equipment and materials

LMFFL2001A Use flooring technology sector hand and power tools

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the competency to use hand and power tools in applications relating to the flooring and finishing sector of the furnishing industry.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to a work room and on site environment and involves application of skills and knowledge at a production and trade worker level. These skills and knowledge are to be used at the production and trade worker levels.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools	1.1. Applicable OHS, legislative and organisational requirements relevant to the use of flooring sector hand and power tools. are verified and complied with 1.2. Types of hand and power tools and their functions are identified from relevant information sources 1.3. Sources of power supply are recognised
2. Select hand tools	2.1. Hand tools are selected consistent with the needs of the job 2.2. Tools are checked for serviceability and safety and any faults are corrected or processed for repair 2.3. Equipment is selected to hold or support material for hand tool application where applicable
3. Use hand tools	3.1. Material is located and held in position for hand tool application 3.2. Hand tools are safely and effectively used according to their intended use 3.3. Hand tools are safely located when not in immediate use
4. Select power tools	4.1. Appropriate personal protective equipment is selected, correctly fitted and used 4.2. Power tools are selected consistent with the needs of the job in accordance with conventional work practice 4.3. Power tools are visually checked for serviceability/safety in accordance with OHS requirements and any faults are sent for repair 4.4. Equipment is selected to hold or support materials for power tool application where applicable
5. Use power tools	5.1. Material is located and held in position for power tool application where applicable 5.2. Power tools are safely and effectively used in application processes 5.3. Power tools are safely located when not in use
6. Clean up work area and tools	6.1. All tools are cleaned, maintained and stored 6.2. Equipment is cleaned, maintained and stored 6.3. Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of faults and problems
- collect and understand information related to the use and maintenance of hand and power tools
- work with others and in a team by recognizing dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate flooring sector hand and power tool malfunctions or misuse to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organize activities, including the preparation and layout of the worksite and the obtaining of tools
- use mathematical ideas and techniques to correctly complete measurements and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use workplace technology related to the use and operator maintenance of hand and power tools and associated materials

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to preparing and presenting design information relevant to the use of hand and power tools
- organisational and site standards, requirements, policies and procedures for preparing and presenting design information for the use of hand and power tools
- types of hand and power tools and procedures for their safe use, operation and maintenance
- function, purpose and operator maintenance requirements of hand tools used in the furnishing technology workplace
- function, purpose and operator maintenance requirements of power tools used in

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Apply safe handling practices for equipment, products and materials
- Adopt and carry out correct procedures prior to and during use of the hand and power tools prescribed above in the Range Statement
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Apply sector hand and power tools correctly and safely
- Complete operator maintenance on sector hand and power tools
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - a range of hand and power tools relevant to the sector(s)
 - access to manufacturer/user instructions and/or manuals
- Assessment may be in conjunction with any other technical unit requiring the use of hand and power tools

EVIDENCE GUIDE**Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Flooring (preparation) sector hand and power tools

- are to include angle grinder, scrapers, skutch hammers and chisels, bolsters, hand brushes and brooms, vacuum cleaners, hand trowels, smoothing trowels, spikey roller, spike shoes, carborundum stone, spatulas, gauging tools,

RANGE STATEMENT	
	screed bar, laser levels, string lines, drills, mixing paddles, batching buckets, moisture meters and material pumps
Flooring (carpet) sector hand and power tools	<ul style="list-style-type: none"> are to include utility knife, carpet knee kicker, power stretcher, carpet wall trimmer, carpet stair tool, trolley, hammer, trimming knife, heat seam iron, spiked carpet roller, weight or seam roller, awl, carpet spreader, carpet shears, napping shears, loop pile cutter, moulding lifter and sewing needle
Flooring (resilient) sector hand and power tools	<ul style="list-style-type: none"> are to include utility knife, straight edge, square, chalk and chalk-line, tape measure, hacksaw, serrated trowel, hammer, edge trimmer, recess scribe and pre-formed linoleum recess scribes, scribing bar, grooving tool, straight edge, divider, roller, gas bottle and gun, rubber mallet, paint brush and bucket, spatula knife, trolley, liquid seam sealer, seam sealer applicator, wall trimmer, hot air welding gun, furling iron and trolley
Flooring (timber) sector hand and power tools	<ul style="list-style-type: none"> are to include hammer, compressor, staple gun, bar scribe, utility knife, straight edge, drill, hand saw, chisels, drop saw, nail gun, secret nails, planer, circular saw and combination saw
Relevant information sources	<ul style="list-style-type: none"> Hand and power tool manufacturer specifications and operational procedures Workplace procedures relating to OHS, tool handling and operation, reporting and communication Work instructions, including job sheets, plans, drawings and designs
Sources of power supply	<ul style="list-style-type: none"> may be single or three phase
Fault reporting	In the operation of hand and power tools fault reporting may be verbal or written
Personal protective equipment	<ul style="list-style-type: none"> is to include that prescribed under legislation, regulation and enterprise policies and practices

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify preparation requirements	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to receiving, preparing, packaging, protecting, transporting, loading and storage of floor coverings are verified and complied with</p> <p>1.2. <i>Floor Covering materials</i> to be prepared are identified against work orders</p> <p>1.3. <i>Instructions</i>, work plans and product information are read and interpreted to identify the preparation process required to complete work tasks</p> <p>1.4. Details of the site conditions, including safety and security requirements, are confirmed from reports or physical inspection</p> <p>1.5. Delivery point, access and storage on site are identified and methods for loading/hoisting floor coverings are determined</p> <p>1.6. Size, shape and special packaging requirements are determined for transportation to site</p> <p>1.7. <i>Tools, equipment</i> and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p>
2. Receive flooring materials	<p>2.1. Flooring materials are received and segregated into products</p> <p>2.2. Received materials are checked against delivery documentation for type and quantity</p> <p>2.3. Received materials are inspected for defects and damage and unacceptable items rejected or segregated</p> <p>2.4. Receipt documentation is completed to enterprise procedures</p>
3. Prepare and package floor coverings	<p>3.1. Types and quantities of materials required for the work plan are confirmed</p> <p>3.2. Floor coverings are laid out, measured and cut to required size</p> <p>3.3. Floor coverings and accessory products are packaged ready for transport to site taking into account <i>potential damage factors</i></p>
4. Load floor coverings on to the worksite	<p>4.1. Roles and related responsibilities for the successful completion of the loading and lifting activity are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>identified and applied</p> <p>4.2. Time requirements to complete the loading/lifting of floor coverings are estimated</p> <p>4.3. <i>Materials handling equipment</i> appropriate to the task is selected, accessed and used in accordance with regulatory and/or site requirements</p> <p>4.4. Labour requirements to support the floor covering loading/lifting requirements are confirmed and accessed</p> <p>4.5. Movement activities are completed as an individual or working directly with others as required by the work tasks</p>
5. Store floor coverings and accessories on site	<p>5.1. Condition of floor coverings, and accessory products is observed on arrival on site and any damaged product is identified and separated for further action</p> <p>5.2. Floor coverings and accessory products are stored on site observing any requirements for protection from potential damage factors</p> <p>5.3. Product and site <i>acclimatisation</i> requirements are identified and satisfied</p> <p>5.4. Materials are stacked appropriately for weight loading, size and crush-ability of floor coverings or accessory products</p> <p>5.5. Products are located to enable ready access when required on site</p> <p>5.6. Work is undertaken in accordance with workplace procedures</p>
6. Complete housekeeping	<p>6.1. Packing materials are stored or recycled as required</p> <p>6.2. Tools and equipment are cleaned and stored appropriately</p> <p>6.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>6.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems preparing, moving and storing materials to avoid re-working and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - floor covering materials preparation requirements and techniques
- seek learning opportunities
- use the limited workplace technology related to the moving and storing of materials including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to handling, transporting and storage of flooring materials
- potential damage factors
- organisational and site standards, requirements, policies and procedures for handling, transporting and storage of flooring materials
- characteristics of materials, products and common defects
- workflow in relation to use of goods and materials in store
- requirements for minimising damage to and maintaining contaminant free

REQUIRED SKILLS AND KNOWLEDGE

- unfinished materials goods and completed products
- potential hazards including fire and explosion risk, security issues and operator safety around products to be stored
- types of tools and equipment and procedures for their safe use, operation and maintenance
- set up and operation of loading/lifting equipment
- appropriate controls and safety equipment to manage risk
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- requirements of working with others in a team
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for receiving, preparing, moving and storing flooring materials
- Locate, interpret and apply information relevant to the requirements of the floor coverings to be prepared and stored
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to materials and equipment
 - maintain required production output and product quality
- Prepare, package, protect, transport and load floor coverings and plan layout of storage areas taking into account potential damage factors
- Establish and maintain storage areas for floor covering materials
- Use a range of non-regulated materials handling devices
- Modify activities to cater for variations in workplace contexts and environment
- Work effectively with others

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • a realistic requirement to receive, prepare, package, move and store floor coverings and associated materials • workplace location or simulated workplace • materials and equipment relevant to the preparation of floor coverings • a range of non-regulated materials handling devices • material specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Floor covering materials

- may include underlays, carpets, resilient, timber and cork products and non-perishable inventory required to support installation operations

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer instructions for the use of equipment and materials
Tools and equipment	<ul style="list-style-type: none"> • may include but are not limited to pre-fabricated and fixed shelving, open and enclosed pallets, shipping containers, non-motorised lifting and movement aids and other material handling equipment
Potential damage factors	<ul style="list-style-type: none"> • may include humidity, moisture, temperature, weather effects, handling, crushing, scratching and contamination
Materials handling equipment	<ul style="list-style-type: none"> • covered by this unit is restricted to non-regulated machines and appliances
Acclimatisation	<ul style="list-style-type: none"> • onsite is required to ensure that material being installed is installed whilst at the same temperature and humidity as the area being covered so that the fitted material does not subsequently shrink or stretch from its fitted form

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the use of cutting equipment, are verified and complied with 1.2. <i>Types of cutting equipment</i> and their functions are identified from <i>relevant information sources</i> 1.3. <i>Sources of power supply</i> are recognised
2. Start-up checks on cutting equipment are conducted	2.1. Cutting equipment and <i>attachments</i> are selected consistent with the needs of the job 2.2. Cutting equipment is checked for serviceability and safety and any <i>faults</i> are correct or processed for repair
3. Prepare to cut floor coverings	3.1. Appropriate <i>personal protective equipment</i> is selected, correctly fitted and used 3.2. Load the roll of floor covering on to the cutting machine 3.3. Preparing to measure the floor covering 3.4. Programming the counter to make the cut.
4. Cut floor coverings	4.1. <i>Work sequence</i> and starting point are selected 4.2. Rolling up the floor coverings 4.3. Cutting the floor coverings 4.4. Wrapping the floor coverings 4.5. Remove roll of floor coverings from the cutting machine
5. Clean up work area and tools	5.1. All tools are cleaned, maintained and stored 5.2. Equipment is cleaned, maintained and stored 5.3. Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of faults and problems
- collect and understand information related to the use and maintenance of floor covering cutting equipment
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems when operating and maintaining floor covering cutting machines to avoid rework and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organize activities including the preparation and layout of the worksite and the obtaining of tools
- use mathematical ideas and techniques to correctly complete measurements and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- Seek learning opportunities
- Use workplace technology related to the use and operator maintenance of floor covering cutting machines and associated materials

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the use of floor covering cutting equipment
- Standards including AS/NZS 2455 and AS 1884 (1985)
- organisational and site standards, requirements, policies and procedures for the use of floor covering cutting equipment
- types of floor covering cutting machines and procedures for their safe use, operation and maintenance
- floor covering cutting machine attachments, their uses, limitations and maintenance requirements
- environmental protection requirements

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for operating and maintaining floor covering cutting equipment
- Apply safe handling practices for equipment, products and materials
- Adopt and carry out correct procedures prior to and during use of the cutting equipment prescribed above in the Range Statement
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Cut resilient and carpet floor coverings using 'cut and roll' floor covering cutting machines to manufacturer specification and enterprise requirements.
- Complete operator maintenance on floor covering cutting equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - access to a floor covering cutting machine
 - access to manufacturer/user instructions and/or

EVIDENCE GUIDE	
	<p>manuals</p> <ul style="list-style-type: none"> • floor covering material required to be cut
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other related units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Types of cutting equipment	<ul style="list-style-type: none"> are to include 'cut and roll' floor covering cutting machines
Relevant information sources	<ul style="list-style-type: none"> Cutting machine manufacturer specifications and operational procedures Workplace procedures relating to ohs, tool

RANGE STATEMENT	
	handling and operation, reporting and communication <ul style="list-style-type: none"> • Work instructions, including job sheets, plans, drawings and designs
Sources of power supply	<ul style="list-style-type: none"> • electric and pneumatic
Attachments	<ul style="list-style-type: none"> • may include computer-aided software
Fault reporting	<ul style="list-style-type: none"> • in the operation of cutting equipment may be verbal or written
Personal protective equipment	<ul style="list-style-type: none"> • is to include that prescribed under legislation, regulation and enterprise policies and practices
Work sequence	<ul style="list-style-type: none"> • is likely to include start up procedures, • is likely to cover inspect, select equipment and accessories, clean sub-floor, smoothing, cleaning and rework
Standards	<ul style="list-style-type: none"> • AS/NZS 2455 and AS 1884 (1985)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to moisture testing timber and concrete are verified and complied with</p> <p>1.2. Customer enquiry and <i>relevant information</i> is consulted to determine the type of proposed flooring operation and other work requirements</p> <p>1.3. Moisture content requirements for the proposed flooring are determined from manufacturer or workplace information</p> <p>1.4. <i>Tools, equipment</i> and required <i>materials</i> are obtained and prepared for the work</p>
2. Conduct moisture testing on timber flooring and components	<p>2.1. The type of floor construction materials and the building floor structure and substructure are identified</p> <p>2.2. <i>Timber flooring is visually inspected</i> to identify irregularities in moisture content.</p> <p>2.3. Ventilation flow is confirmed and irregularities noted</p> <p>2.4. Floor joists, bearers and stumps are visually checked for moisture content irregularities</p> <p>2.5. Moisture testing of timber flooring, floor joists, bearers and stumps EMC is completed in accordance with the approved process and standard</p>
3. Conduct moisture testing on concrete floors	<p>3.1. The type of floor construction materials and the building floor structure and substructure are identified</p> <p>3.2. <i>Concrete floor is visually inspected</i> to identify irregularities in moisture content.</p> <p>3.3. Moisture testing is completed in accordance with the approved process and Australian standard</p>
4. Notify findings of moisture tests	<p>4.1. <i>Notification</i> of the findings of the moisture tests is completed in accordance with the current and relevant Australian standards</p> <p>4.2. Copies of the notification are sent to appropriate personnel and suitably filed following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Collect, organise and understand information related to work orders, plans and safety procedures
- Communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of moisture testing outcomes and problems
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- Use pre-checking and inspection techniques to anticipate moisture testing problems to avoid re-work and wastage
- Diagnose and identify the causes and consequences of moisture irregularities
- Recognise and respond to circumstances outside instructions or personal competence
- Plan and organise activities, including the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- Clarify and confirm work instructions
- Plan work within given task parameters
- Accept responsibility for given tasks
- Set, monitor and satisfy personal work goals
- Satisfy the competency requirements for the job
- Maintain current knowledge of:
 - moisture testing equipment and processes
 - timber and concrete materials
- seek learning opportunities
- use the workplace technology related to the moisture testing of timber and concrete including tools, equipment, calculators and measuring devices.

Required knowledge

- workplace safety system requirements related to moisture testing timber and concrete
- type, characteristics and moisture content of:
 - timber sub-floor structures
 - concrete sub-floor structures
- types and uses of moisture testing equipment and procedures for their safe use, operation and maintenance
- requirements for moisture content of selected timber flooring components

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• characteristics and requirements of sub-floor moisture testing work flow in relation to moisture testing processes and procedures |
|---|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for sub-floor inspection
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Complete a minimum of:
 - one electrical resistance moisture test on timber flooring, floor joists, bearers and stumps including written notification of the test results
 - one hygrometer moisture test on, concrete flooring including written notification of test results
 - one capacitance moisture test on, concrete flooring including written notification of test results
 - one calcium chloride test on, concrete flooring including written notification of test results
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • testing equipment, tools and materials relevant to moisture testing • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other related units of competency, e.g. Plan and cost flooring technology work</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to floor covering removal are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Sequence of work is planned to ensure removal of floor coverings is in logical order</p> <p>1.5. Material and equipment are prepared and positioned for use</p>
2. Remove floor coverings	<p>2.1. Starting point is selected to ensure entry and exit access throughout the operation</p> <p>2.2. First section of <i>floor covering</i> is removed</p> <p>2.3. Removed floor coverings are securely packaged in manageable bundles for removal from the area</p> <p>2.4. Remaining floor covering is progressively removed</p> <p>2.5. Exposed floor is checked, and any protruding nails, carpet grippers, adhesives, levelling compounds and remnants of floor covering are removed</p>
3. Complete housekeeping	<p>3.1. Unused materials are stored or recycled as required</p> <p>3.2. Tools and equipment are cleaned and stored appropriately</p> <p>3.3. Removed floor coverings are <i>disposed of safely</i></p> <p>3.4. Work area is cleaned and rubbish disposed of appropriately</p> <p>3.5. Workplace documentation/reporting is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- anticipate floor covering removal problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organize activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the removal of floor coverings including tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to removing floor coverings
- organisational and site standards, requirements, policies and procedures for removing existing floor coverings
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• characteristics of materials, products and defects• set up and operation of equipment• procedures for the recording, reporting and maintenance of workplace records and information• characteristics and techniques of fixing floor coverings• the correct use of equipment, processes and procedures to remove floor coverings• workplace safety system requirements related to removing floor coverings• work flow in relation to removing floor coverings |

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the removal of floor coverings
- Interpret work order and locate relevant information
- Identify safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Remove at least one of each of the following floor coverings:
 - carpet with soft underlay and gripper strips
 - parquetry with hard underlay
 - resilient floor covering installed on concrete
 - carpet, resilient and cork tile
 - adhesive bonded carpet
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - specifications and work instructions
 - materials and equipment relevant to removing existing floor coverings

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

EVIDENCE GUIDE

workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> • may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting

RANGE STATEMENT	
	and communication <ul style="list-style-type: none"> • Manufacturer instructions for the use of equipment and materials
Tools and Equipment	Tools and equipment are to include hammer, moulding lifter, scraper, utility knife, vacuum cleaner, vinyl tile lifter, floor stripper, adhesive tape, twine, rubbish bags
Floor Coverings	Floor coverings to be removed may include but are not limited to carpet and carpet tiles, hard and soft underlay, resilient sheet and tiles, parquetry, strip timber, floating floor and cork tiles
Disposed of safely	Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organization insurance requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to selecting and applying smoothing and patching compounds for sub-floor preparation are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. Floors are inspected to ensure that they are dry, smooth, plane, sound and clean in accordance with ASNZS 2455.1 (1995) and AS 1884 (1995) and the extent of preparation is confirmed</p> <p>1.4. Trial applications of surface materials are made to determine the suitability of the primer to the sub-floor, and the appropriateness of the smoothing compound to smoothing requirements and compatibility to the primer and sub-floor application</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.6. Material safety data sheets, or equivalent, are read and applied during the work</p> <p>1.7. Materials and equipment are prepared and positioned for use</p> <p>1.8. Surfaces are cleaned in accordance with manufacturers recommendations</p>
2. Apply levelling compounds and primers	<p>2.1. Surface coating is applied with the depth and coverage in accordance with manufacturer specifications and job requirements</p> <p>2.2. Levelled floor is checked and cleared for further processing</p>
3. Apply levelling compounds and primers to timber sub-floors	<p>3.1. Surfaces are checked for contamination, moisture content and suitable preparation</p> <p>3.2. Material safety data sheets, or equivalent, are read and applied during the work</p> <p>3.3. A mixing station is established where materials and equipment are prepared and positioned for use</p> <p>3.4. Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish</p> <p>3.5. Levelled floor is checked and cleared for further processing</p>

ELEMENT	PERFORMANCE CRITERIA
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriate 4.4. Workplace documentation and/or reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate concrete sub-floor preparation problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - sub-floor patching and smoothing techniques
- seek learning opportunities
- use the limited workplace technology related to the preparation of a concrete and timber sub-floor including tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to floor patching and smoothing techniques
- organisation and site standards, requirements, policies and procedures for applying smoothing and patching compounds
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

maintenance

- characteristics of materials, products and defects
- set up and operation of equipment
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- characteristics and requirements of concrete and timber sub-floor preparation
- type, characteristics, uses and limitations of smoothing compounds and primers
- workplace safety system requirements related to the application of smoothing compounds and primers

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- To complete to Australian Standards a minimum of two sub-floor preparations which are to include:
 - a patch and repair
 - a level pour
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to sub-floor smoothing and patching activities
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

Unit Descriptor

Unit descriptor	This unit covers the competency to select and apply appropriate compounds and additives to sub-floors in preparation for the installation of floor coverings.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of sub-floor preparation operations. The competency applies to an on-site environment and involves application of skills and knowledge at a sub-trade and trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the subfloor properties	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the use of <i>appropriate compounds and additives</i> , are verified and complied with 1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks 1.3. Appropriate <i>personal protective equipment</i> is selected, correctly fitted and used 1.4. The type of floor/wall construction and the building floor/wall structure and sub-structure are identified 1.5. Datum lines are run and checked to confirm dimensions 1.6. Timber and/or concrete flooring inspections are completed to identify irregularities 1.7. Wall inspections are completed to identify irregularities
2. Select appropriate compounds and additives	2.1. Types of floor and wall preparation compounds and additives and their functions are identified from relevant information sources 2.2. Sub-floors/walls are checked for contamination, moisture content, plane, smooth and suitable preparation 2.3. Suitable compounds and additives are selected consistent with the needs of the job
3. Prepare compounds and additives	3.1. <i>Tools, equipment and materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 3.2. Selected compounds and additives for application are organised and prepared in accordance with relevant safety management requirements 3.3. The method of application is selected 3.4. Sequence of work is planned to ensure the application of appropriate compounds and additives is in logical order
4. Apply compounds and additives	4.1. Working lines are established and starting point is selected 4.2. Mixing station is established and selected compounds and additives are mixed to manufacturer instructions

ELEMENT	PERFORMANCE CRITERIA
	4.3. Selected compounds and additives are applied to the sub-floor surface following manufacturer instructions 4.4. Sub-floors are inspected and reworked as required
5. Clean up work area and tools	5.1. All tools are cleaned, maintained and stored 5.2. Equipment is cleaned, maintained and stored 5.3. Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and avoid wastage of selected compounds and additives
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate compound and additives requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - types and applications of compounds and additives
- seek learning opportunities
- use the limited workplace technology related to the application of compounds and additives including tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to appropriate compounds and additives
- organisation and site standards, requirements, policies and procedures for applying appropriate compounds and additives
- characteristics and requirements of concrete and timber sub-floor preparation
- characteristics and requirements of concrete and fibre board wall preparation
- types, characteristics, uses and limitations of compounds and additives
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

maintenance

- set up and operation of equipment
- workplace safety system requirements related to the application of appropriate compounds and additives
- appropriate mathematical procedures for estimation and measurement
- problem identification and resolution techniques
- environmental protection requirements
- established communication channels and protocols
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to the building structures and to equipment
 - select the correct compound or additive for the job
 - identify and respond to product incompatibilities
- Complete a minimum of three applications where appropriate compounds and additives are selected, prepared and applied to substrates in preparation for finish coverings
- Modify activities to cater for variations in workplace context and environment
- Work effectively with others

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - realistic application requirements
 - workplace location or simulated workplace
 - materials and equipment relevant to the application of compounds and additives
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment

EVIDENCE GUIDE

guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Appropriate compounds and additives

- may include preparation primers, self-smoothing/levelling cements, pumpable cement base floor leveller, two part, chemically cured epoxy coating for porous concrete floors, rapid setting and drying repair

RANGE STATEMENT	
	mortar, latex powder and emulsion based sub-floor smoothing compounds, synthetic resin dispersion and high polymer cement based finishes
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer instructions for the use of equipment and materials
Personal protective equipment	<ul style="list-style-type: none"> • is to include that prescribed under legislation, regulation and enterprise policies and practices
Tools and equipment	<ul style="list-style-type: none"> • may include utility knife, straight edge, square, tape measure, spirit level, screed bar, gauging tool, finishing trowel, corner trowel, spatula, rollers, brushes, measuring buckets, batching buckets, mixing drill, mixing paddle and trolley
Materials	<ul style="list-style-type: none"> • are to include but are not limited to sanding paper, grinding discs, carborundum brick, smoothing and repairing compounds and primers

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify wet cleaning operations	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the application of wet cleaning <i>methods</i> , are verified and complied with 1.2. Types of <i>wet cleaning equipment</i> and their functions are identified from <i>relevant information sources</i> 1.3. <i>Sources of power supply</i> are recognised
2. Select wet cleaning method	2.1. Wet cleaning method, equipment and <i>attachments</i> are selected consistent with the needs of the job 2.2. Wet cleaning equipment is checked for serviceability and safety and any <i>faults</i> are corrected or processed for repair 2.3. Sequence of work is planned to ensure efficiency and quality of sub-floor cleaning
3. Prepare sub-floor for cleaning	3.1. Appropriate <i>personal protective equipment</i> is selected, correctly fitted and used 3.2. <i>Fittings and fixtures</i> are removed from the sub-floor 3.3. Sub-floor is cleared of loose debris and dirt and cleaned 3.4. A safe flooring technology work environment is established and maintained
4. Clean the floor	4.1. The start point is established and work plan implemented 4.2. Perimeter is cleaned using appropriate method and equipments. 4.3. Main area is cleaned to the required <i>standard</i> using the most appropriate available equipment in accordance with the manufacturer specification 4.4. Floor area is inspected and reworked as required
5. Clean up work area and tools	5.1. All tools are cleaned, maintained and stored 5.2. Equipment is cleaned, maintained and stored 5.3. Work area is cleared and waste removed 5.4. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of faults and problems
- collect and understand information related to the use of wet cleaning methods and the maintenance of high and low water pressure equipment
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems associated with wet cleaning to avoid rework and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organize activities including the preparation and layout of the worksite and the obtaining of tools
- use mathematical ideas and techniques to correctly complete measurements and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use workplace technology related to the use of wet cleaning methods and operator maintenance of equipment and associated materials

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the use of wet cleaning methods
- Standards including AS/NZS 2455 and AS 1884 (1985)
- organisational and site standards, requirements, policies and procedures for the use of wet cleaning methods
- types and characteristics of high and low water pressure including requirements for their safe use, operation and maintenance
- high and low water pressure equipment attachments, their uses, limitations and maintenance requirements
- environmental protection requirements

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for operating and maintaining wet cleaning equipment
- Apply safe handling practices for equipment, products and materials
- Adopt and carry out correct procedures prior to and during the application of each of the following wet cleaning methods:
 - high and low water pressure cleaning
 - detergent cleaning
 - acid etching
- Apply ventilation standards
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, tools, equipment or products
 - minimise the risk of injury to self or others
- Complete operator maintenance on wet cleaning high and low water pressure equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - a realistic cleaning requirement
 - workplace location or simulated workplace
 - access to high and low pressure wet cleaning

EVIDENCE GUIDE	
	<p>equipment.</p> <ul style="list-style-type: none"> access to manufacturer/user instructions and/or manuals
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other related units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but are not limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Wet cleaning methods	<ul style="list-style-type: none"> may include high and low pressure water-hosing, detergent cleaning and acid etching
Types of wet cleaning equipment	<ul style="list-style-type: none"> may include but are not limited to low pressure sprayer, booster pump, air

RANGE STATEMENT	
	compressor, hand held lance, plastic sprinkling can, mop, stiff broom, floor scrubber, disc machine equipment with abrasive bristle brushes, power washer, suitable nozzle tips, pressure rated hoses, wet/dry vacuum, squeegee, runoff protection.
Relevant information sources	<ul style="list-style-type: none"> • Manufacturer specifications and operational procedures for wet cleaning high and low water pressure, detergent cleaning and acid etching equipment • Workplace procedures relating to ohs, tool handling and operation, reporting and communication • Work instructions, including job sheets, plans, drawings and designs

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to moisture barriers and damp proof membranes are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. Sub-floors are inspected in accordance with AS/NZS 2455.1 (1995) and AS 1884 (1995) and the treatment system is identified</p> <p>1.4. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.5. Material safety data sheets, or equivalent, are read and applied during work</p> <p>1.6. Materials and equipment are prepared and positioned for use</p> <p>1.7. Surfaces are cleaned in accordance with manufacturer recommendations</p>
2. Apply moisture suppressant	<p>2.1. Surface coating is applied with the depth and coverage in accordance with manufacturer specifications and job requirements</p> <p>2.2. Sub-floor is checked and cleared for further processing</p>
3. Apply moisture barrier	<p>3.1. Establish whether the moisture is hydrostatic pressure, capillary moisture, or new concrete with high moisture content</p> <p>3.2. Establish whether moisture content is reducing, is construction moisture or is result of damaged membrane or capillary action</p> <p>3.3. Strengthen all corners, cracks and other penetrations</p> <p>3.4. Layer barrier material in accordance with manufacturer instructions</p> <p>3.5. Apply second coating as required</p> <p>3.6. Sub-floor is checked and cleared for further processing</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate concrete sub-floor preparation problems, avoid re-working and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the selection, preparation and application of moisture barriers and damp proof membranes to concrete sub-floors including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to moisture suppressants and barrier systems
- organisational and site standards, requirements, policies and procedures for moisture suppressant and barrier systems
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

REQUIRED SKILLS AND KNOWLEDGE

- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and establish safe practices and procedures for preparing and applying moisture barriers
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Complete a minimum of two moisture suppressant/barrier preparations which are to include:
 - a hydrostatic and a capillary moisture problem to Australian standards
 - modify activities to cater for variations in workplace context and environment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to moisture suppressant/barrier activities
 - specifications and work instructions

EVIDENCE GUIDE

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Instructions

- Workplace procedures relating to the use and operation of tools and equipment
- Workplace instructions, including job sheets, plans, drawings and designs
- Workplace procedures relating to reporting

RANGE STATEMENT	
	and communication <ul style="list-style-type: none"> • Manufacturer instructions for the use of equipment and materials
Treatment system	<ul style="list-style-type: none"> • may be one of two moisture treatments, a Construction Moisture Suppressant System or a Moisture Barrier. The Moisture Suppressant System is designed for new concrete with low moisture content or capillary moisture. The Moisture Barrier is designed for concrete with hydrostatic pressure, capillary moisture or new concrete with a high moisture content

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Applicable legislative, OHS and organisational requirements relevant to wall preparation for coverings on wall substrate are verified and complied with</p> <p>1.2. Instructions and/or plans are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. The condition of the walls are assessed to prepare walls to a smooth flat surface, the extent of preparation required is confirmed</p> <p>1.4. Suitable primers smoothing and repairing compounds are selected</p> <p>1.5. Surfaces are checked for contamination, moisture content, plane, smooth, square internal and external corners and suitable preparation</p> <p>1.6. Material safety data sheets, or equivalent, are read and applied during the work</p> <p>1.7. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.8. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Apply levelling compounds and primers	<p>2.1. A mixing station is established where materials and equipment are prepared and positioned for use</p> <p>2.2. Trial applications of surface materials are made to check equipment operation, materials consistency and specified surface finish</p> <p>2.3. Surface coating is applied with the depth and coverage in accordance with manufacturer specifications and job requirements</p> <p>2.4. Internal and external corners are checked for square, wall surfaces are checked for plane and smooth and cleared for further processing</p> <p>2.5. Completed work is checked for flaws in installation and materials and faults rectified</p>
3. Complete housekeeping	<p>3.1. Unused materials are stored or recycled as required</p> <p>3.2. Tools and equipment are cleaned and stored appropriately</p> <p>3.3. Work area is cleaned and rubbish disposed of appropriate</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Workplace documentation and/or reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate wall substrate preparation problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - wall substrate patching and smoothing techniques
- seek learning opportunities
- use the limited workplace technology related to the preparation of a substrate including tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to patching and smoothing techniques
- organisation and site standards, requirements, policies and procedures for applying smoothing and patching compounds
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

maintenance

- characteristics of materials, products and defects
- set up and operation of equipment
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- characteristics and requirements of substrate preparation
- type, characteristics, uses and limitations of smoothing compounds and primers
- workplace safety system requirements related to the application of smoothing compounds and primers

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Complete to Australian standards a minimum of two wall preparations which are to include:
 - a patch and repair to a wall including internal and external corners
 - a skim coat to walls including internal and external corners
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to substrate smoothing and patching activities
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

EVIDENCE GUIDE

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Wall preparation	<ul style="list-style-type: none"> is to include the application of primers, repairing and smoothing cement based compounds
Substrate	<ul style="list-style-type: none"> may include concrete, cement rendered, fibrous cement board, MDF/HDF hard

RANGE STATEMENT	
	underlay, ply sheeting or hardboard
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer instructions for the use of equipment and materials
Tools and equipment	<ul style="list-style-type: none"> • are to include utility knife, straight edge, square, tape measure, spirit level, screed bar, finishing trowel, corner trowel, spatula, rollers, brushes, measuring buckets, batching buckets, angle grinder and trolley
Materials	<ul style="list-style-type: none"> • are to include but are not limited to sanding paper, grinding discs, carborundum brick, smoothing and repairing compounds and primers

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify grinding equipment	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the use of grinding equipment, are verified and complied with 1.2. <i>Types of grinding equipment</i> and their functions are identified from <i>relevant information sources</i> 1.3. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks 1.4. <i>Sources of power supply</i> are recognised
2. Select grinding equipment	2.1. Grinding equipment and <i>attachments</i> are selected consistent with the needs of the job 2.2. Grinding equipment is checked for serviceability and safety and any <i>faults</i> are correct or processed for repair
3. Clean and prepare sub-floor	3.1. Appropriate <i>personal protective equipment</i> is selected, correctly fitted and used 3.2. <i>Fittings and fixtures</i> are removed from the sub-floor 3.3. Sub-floor is cleared of loose debris and dirt and cleaned
4. Smooth the floor	4.1. <i>Work sequence</i> and starting point are selected 4.2. Perimeter is smoothed using light equipment and appropriate cutter 4.3. Main area is smoothed to the required <i>standard</i> using the most appropriate available equipment in accordance with the manufacturer specification 4.4. Floor area is cleaned, inspected and reworked as required
5. Clean up work area and tools	5.1. All tools are cleaned, maintained and stored 5.2. Equipment is cleaned, maintained and stored 5.3. Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of faults and problems
- collect and understand information related to the use and maintenance of grinding equipment
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate grinding problems to avoid rework and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organize activities including the preparation and layout of the worksite and the obtaining of tools
- use mathematical ideas and techniques to correctly complete measurements and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use workplace technology related to the use and operator maintenance of grinders and associated materials

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the use of grinding equipment
- Standards including AS/NZS 2455 and AS 1884 (1985)
- organisational and site standards, requirements, policies and procedures for the use of grinding equipment
- types of grinders and procedures for their safe use, operation and maintenance
- grinder attachments, their uses, limitations and maintenance requirements
- environmental protection requirements
- established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

problem identification and resolution

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for operating and maintaining grinding equipment
- Apply safe handling practices for equipment, products and materials
- Adopt and carry out correct procedures prior to and during use of the grinding equipment prescribed above in the Range Statement
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Smooth a concrete sub-floor using single headed, double headed and planetary action grinders correctly and safely to the relevant Australian Standard
- Complete operator maintenance on grinding equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - access to single, double and planetary action grinders

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • access to manufacturer/user instructions and/or manuals • a realistic smoothing requirement
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other related units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify shot blasting equipment	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the use of shot blasting equipment, are verified and complied with 1.2. <i>Types of shot blasting equipment</i> and their functions are identified from relevant information sources 1.3. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks 1.4. <i>Sources of power supply</i> are recognised
2. Shot blasting equipment	2.1. Shot blasting equipment and shot size are selected consistent with the needs of the job 2.2. Shot blasting equipment is checked for serviceability and safety and any <i>faults</i> are correct or processed for repair
3. Clean and prepare sub-floor	3.1. Appropriate <i>personal protective equipment</i> is selected, correctly fitted and used 3.2. <i>Fittings and fixtures</i> are removed from the sub-floor 3.3. Sub-floor is cleared of loose debris and dirt and cleaned
4. Shot blast the floor	4.1. <i>Work sequence</i> and starting point are selected 4.2. Perimeter is shot blasted using light equipment and appropriate cutter 4.3. Main area is shot blasted to the required <i>standard</i> using the most appropriate available equipment in accordance with the manufacturer specification 4.4. Floor area is cleaned, inspected and re-worked as required
5. Clean up work area and tools	5.1. All tools are cleaned, maintained and stored 5.2. Equipment is cleaned, maintained and stored 5.3. Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of faults and problems
- collect and understand information related to the use and maintenance of shot blasting equipment
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate shot blasting problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organize activities, including the preparation and layout of the worksite and the obtaining of tools
- use mathematical ideas and techniques to correctly complete measurements and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use workplace technology related to the use and operator maintenance of shot blasters and associated materials

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to shot blasting
- Standards including AS/NZS 2455 and AS 1884 (1985)
- organisational and site standards, requirements, policies and procedures for the use of shot blasting equipment
- types of shot blasters and procedures for their safe use, operation and maintenance
- shot blaster attachments, their uses, limitations and maintenance requirements
- characteristics, uses and limitations of the available shot sizes
- environmental protection requirements
- established communication channels and protocols

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for operating and maintaining shot blasting equipment
- Apply safe handling practices for equipment, products and materials
- Adopt and carry out correct procedures prior to and during use of the shot blasting equipment prescribed above in the Range Statement
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Shot blast a minimum of two concrete sub-floors to the relevant Australian Standard
- Complete operator maintenance on shot blasting equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - access to shot blasting equipment and shot
 - access to manufacturer/user instructions and/or manuals

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • a reasonable shot blasting requirement
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other related units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling, including lifting and carrying

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify demolition equipment	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the use of demolition equipment, are verified and complied with 1.2. <i>Types of demolition equipment</i> and their functions are identified from relevant information sources 1.3. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks 1.4. <i>Sources of power supply</i> are recognised
2. Demolition equipment	2.1. Demolition equipment and <i>attachments</i> are selected consistent with the needs of the job 2.2. Demolition equipment is checked for serviceability and safety and any <i>faults</i> are correct or processed for repair
3. Clean and prepare sub-floor	3.1. Appropriate <i>personal protective equipment</i> is selected, correctly fitted and used 3.2. <i>Fittings and fixtures</i> are removed from the sub-floor 3.3. Sub-floor is cleared of loose debris and dirt and cleaned
4. Remove floor portions	4.1. <i>Work sequence</i> and starting point are selected 4.2. Perimeter of floor portion is identified and marked 4.3. Depth of removal requirement is confirmed 4.4. Floor portion is removed in the most efficient manner 4.5. Floor area is cleaned, inspected and reworked as required
5. Clean up work area and tools	5.1. All tools are cleaned, maintained and stored 5.2. Equipment is cleaned, maintained and stored 5.3. Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of faults and problems
- collect and understand information related to the use and maintenance of demolition equipment
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate demolition problems to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organize activities including the preparation and layout of the worksite and the obtaining of tools
- use mathematical ideas and techniques to correctly complete measurements and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use workplace technology related to the use and operator maintenance of demolition equipment and associated materials

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the use of demolition equipment
- organisational and site standards, requirements, policies and procedures for the use of demolition equipment
- types of demolition equipment, their uses, limitations and maintenance requirements and procedures for their safe use, operation and maintenance
- demolition equipment attachments, their uses, limitations and maintenance requirements
- environmental protection requirements
- established communication channels and protocols

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for operating and maintaining demolition equipment
- Apply safe handling practices for equipment, products and materials
- Adopt and carry out correct procedures prior to and during use of the demolition equipment prescribed above in the Range Statement
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Use each of the equipments listed in the Range Statement
- Remove a minimum of two significant floor sections in accordance with job requirements and industry standard
- Complete operator maintenance on demolition equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • access to appropriate demolition equipment • access to manufacturer/user instructions and/or manuals • a realistic demolition requirement
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other related units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Types of demolition equipment	<ul style="list-style-type: none"> is to include jack hammers, scrabblers, percussion drills
Instructions	<ul style="list-style-type: none"> Demolition equipment manufacturer specifications and operational procedures Workplace procedures relating to OHS, tool

RANGE STATEMENT	
	handling and operation, reporting and communication <ul style="list-style-type: none"> • Work instructions, including job sheets, plans, drawings and designs
Sources of power supply	<ul style="list-style-type: none"> • may include pneumatic, electric or gas
Attachments	<ul style="list-style-type: none"> • are to include cutting heads, chisel points, spade tips, spikes and may include vacuum systems
Fault reporting	<ul style="list-style-type: none"> • in the operation of demolition equipment may be verbal or written
Personal protective equipment	<ul style="list-style-type: none"> • is to include that prescribed under legislation, regulation and enterprise policies and practices
Fittings and fixtures	<ul style="list-style-type: none"> • include nails, door stops, gripper strips, metal mouldings and debris
Work sequence	<ul style="list-style-type: none"> • is likely to cover inspect, select equipment and accessories, clean sub-floor, demolition task, cleaning and re-work

LMFFL2110A Select, operate and maintain scarifying equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the competency to use scarifying equipment in applications relating to floor preparation.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of sub-floor preparation operations. The competency applies to an on site environment and involves application of skills and knowledge at a sub-trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify scarifying equipment	1.1. Applicable OHS, legislative and organisational requirements relevant to the use of scarifying equipment, are verified and complied with 1.2. <i>Types of scarifying equipment</i> and their functions are identified from relevant information sources 1.3. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks 1.4. Sources of power supply are recognised
2. Scarifying equipment	2.1. Scarifying equipment and shot size are selected consistent with the needs of the job 2.2. Scarifying equipment is checked for serviceability and safety and any <i>faults</i> are correct or processed for repair
3. Clean and prepare sub-floor	3.1. Appropriate <i>personal protective equipment</i> is selected, correctly fitted and used 3.2. <i>Fittings and fixtures</i> are removed from the sub-floor 3.3. Sub-floor is cleared of loose debris and dirt and cleaned
4. Scarify the floor	4.1. <i>Work sequence</i> and starting point are selected 4.2. Perimeter is prepared using an angle grinder 4.3. Main area is scarified using the most appropriate available equipment in accordance with AS/NZS 2455 and AS 1884 (1985) or subsequent replacement standards 4.4. Floor area is cleaned, inspected and reworked as required
5. Clean up work area and tools	5.1. All tools are cleaned, maintained and stored 5.2. Equipment is cleaned, maintained and stored 5.3. Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of faults and problems
- collect and understand information related to the use and maintenance of scarifying equipment
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate scarifying problems to avoid rework and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of tools
- use mathematical ideas and techniques to correctly complete measurements and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use workplace technology related to the use and operator maintenance of scarifying equipment and associated materials

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the use of scarifying equipment
- organisational and site standards, requirements, policies and procedures for preparing and presenting design information for the use of hand and power tools
- types of scarifier attachments, their uses, capabilities and maintenance requirements
- characteristics, uses and limitations of the available shot sizes
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for operating and maintaining scarifying equipment
- Apply safe handling practices for equipment, products and materials
- Adopt and carry out correct procedures prior to and during use of the scarifying equipment prescribed above in the Range Statement
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
 - minimise the risk of injury to self and others
- Scarify a concrete sub-floor of a minimum of 10 sgm to industry standards
- Smooth a concrete sub-floor using single headed, double headed and planetary action grinders correctly and safely to the relevant Australian Standard
- Complete operator maintenance on scarifying equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace.
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • access to scarifying equipment and attachments • access to manufacturer/user instructions and/or manuals
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Types of scarifying equipment	<ul style="list-style-type: none"> Types of scarifying equipment share technology and differ only in size and capacity
Instructions	<ul style="list-style-type: none"> Scarifying equipment manufacturer specifications and operational procedures Workplace procedures relating to OHS, tool

RANGE STATEMENT	
	handling and operation, reporting and communication <ul style="list-style-type: none"> • Work instructions, including job sheets, plans, drawings and designs
Sources of power supply	<ul style="list-style-type: none"> • may be electric, gas or petrol
Attachments	<ul style="list-style-type: none"> • Attachments are to include cutting heads and may include vacuum systems
Fault reporting	<ul style="list-style-type: none"> • Reporting of faults in the operation of hand and power tools may be verbal or written
Personal protective equipment	<ul style="list-style-type: none"> • Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices
Fittings and fixtures	<ul style="list-style-type: none"> • Fittings and fixtures include nails, door stops, gripper strips, metal mouldings and debris
Work sequence	<ul style="list-style-type: none"> • Work sequence in the competency is likely to cover inspect, select equipment and accessories, clean sub-floor, preparation of perimeter and scarifying, cleaning and rework

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the work	<p>1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to <i>coarse sanding of timber flooring</i> are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify process required to complete work tasks</p> <p>1.3. Timber flooring is checked for contamination and moisture content</p> <p>1.4. Timber flooring condition is assessed and the extent of floor preparation required to meet job specifications is confirmed</p> <p>1.5. Timber flooring is inspected for suitability for sanding operations and any pre-sanding tasks are completed</p> <p>1.6. <i>Mechanical fixings</i> are removed avoiding damage to equipment and surfaces</p> <p>1.7. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.8. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation</p>
2. Conduct coarse sanding operations	<p>2.1. <i>Coarse sanding equipment</i> is set up in accordance with manufacturer instructions and operating procedures</p> <p>2.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>2.3. Equipment settings and adjustments are made and checked</p> <p>2.4. Trial runs are conducted to check machine operations and quality of finished work</p> <p>2.5. Sanding belts or papers are attached, routinely checked and changed as required</p> <p>2.6. Sanding is completed systematically and effectively within the minimum required timeframe</p> <p>2.7. Routine lubrication and adjustments to the equipment are completed as required</p> <p>2.8. Timber flooring is cleared and checked for further processing</p>
3. Edge sanding operations	<p>3.1. Edge sanding equipment is set up in accordance with manufacturer instructions and operating procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. Emergency stops, gauges, guards and controls are identified and checked</p> <p>3.3. Equipment settings and adjustments are made and checked</p> <p>3.4. Sanding papers are selected</p> <p>3.5. Trial runs are conducted to check machine operations and quality of finished work</p> <p>3.6. Sanding papers are attached, routinely checked and changed as required</p> <p>3.7. Edge sanding is completed systematically and effectively within the minimum required timeframe</p> <p>3.8. Routine lubrication and adjustments to the equipment are completed as required</p> <p>3.9. Finished timber flooring is cleaned, inspected and any imperfections are rectified following workplace procedures</p>
4. Complete housekeeping	<p>4.1. Unused materials are stored or recycled as required</p> <p>4.2. Tools and equipment are cleaned and stored appropriately</p> <p>4.3. Work area is cleaned and rubbish disposed of appropriately</p> <p>4.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems to coarse sanding of timber floors to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- Seek learning opportunities
- Use the limited workplace technology related to the coarse sanding of timber floors including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to coarse sand timber flooring
- organisational and site standards, requirements, policies and procedures for coarse sanding of timber flooring
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

- maintenance
- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- characteristics and requirements of timber flooring coarse sanding
- type, characteristics, uses and limitations of coarse sanding timber flooring
- types and uses of relevant tools and equipment used to conduct coarse sanding operations
- workplace safety system requirements related to coarse sanding timber flooring

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for coarse sanding timber floors • Interpret work order and locate relevant information • Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • prevent damage to goods, equipment and products • maintain required production output and product quality • minimise the risk of injury to self and others • Complete a minimum of two timber flooring preparations requiring coarse sanding • Work effectively with others • Modify activities to cater for variations in workplace context and environment

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the installation of <i>hard underlays</i> , are verified and complied with 1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks 1.3. Sub-floor condition is assessed for the type of underlay/floor covering to be installed 1.4. Underlay material suitable to the final surface to be laid is selected 1.5. Suitable <i>adhesives</i> and fastenings are selected 1.6. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 1.7. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2. Set out materials	2.1. Hard underlay to be installed is checked against order 2.2. Hard underlay is acclimatised according to manufacturer recommendations 2.3. Working lines and starting point are established 2.4. Materials are laid out to meet specification requirements and to minimise waste 2.5. Material is marked and cut to specification with minimum waste 2.6. Hard underlay is accurately and clearly marked for cutting 2.7. Hard underlay is cut to required shape with minimum waste of materials
3. Lay underlay	3.1. Instructions and sequence for laying and fixing are followed 3.2. Materials for fixing are organised and used in accordance with relevant safety management requirements 3.3. Fixing methods and equipment are used following manufacturer instructions 3.4. Completed installation is checked for flaws in installation and materials and faults rectified
4. Complete	4.1. Unused materials are stored or recycled as required

ELEMENT	PERFORMANCE CRITERIA
housekeeping	4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation or reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate problems installing hard underlays to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the installation of hard underlays, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installing hard underlays
- organisational and site standards, requirements, policies and procedures for installing hard underlays
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

maintenance

- characteristics of materials, products and defects
- set up and operation of equipment
- products assembly techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- type, characteristics, uses and limitations of:
 - hard underlays
 - hard underlay installation adhesives
- types and uses of hard underlays, tools and equipment
- workplace safety system requirements related to the installation of hard underlay
- characteristics and requirements of sub-floor preparation
- work flow in relation to the floor covering operations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for installing hard underlays
- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- To complete a minimum of:
 - one installation using hardboard
 - one installation using fibrous cement board
 - one installation using MDF/HDF board
 - one installation using ply flooring/construction flooring
 - one installation floating sub-strate underlay
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • materials and equipment relevant to installing hard underlays • specifications and work instructions
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination, control of hazardous materials and substances, manual handling including lifting and carrying

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Hard underlay

- is a rigid material installed as a base under a floor covering. It may include, but is not limited to the following materials:
 - hardboard
 - fibrous cement board

RANGE STATEMENT	
	<ul style="list-style-type: none"> • MDF/HDF hard underlay • ply flooring (construction sheet flooring) • floating sub-strate flooring

Unit Descriptor

Unit descriptor	This unit covers the competency to prepare, lay out, cut, lay and fix carpet cushion/underlays, and carpet gripper accessories prior to laying carpet floor coverings using the carpet gripper system.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in the wide variety of flooring technology operations. The competency applies to an on site environment and involves application of skills and knowledge at a sub-trade worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	1.1. Applicable <i>legislative, OHS</i> and <i>organisational</i> requirements relevant to the preparation for the installation of carpets are verified and complied with 1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks 1.3. Sub-floor condition is assessed for the type of <i>carpet cushion/ underlay</i> /floor covering to be installed 1.4. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 1.5. Suitable <i>adhesives, fixing trims</i> and accessories are selected 1.6. Materials are laid out to meet specification requirements and to minimise waste 1.7. Sequence of work is planned, including the starting point, to ensure efficiency and quality of installation
2. Set out materials	2.1. Carpet cushion/underlay and gripper accessories to be installed is checked against order 2.2. Carpet cushion/underlays are acclimatised according to manufacturer recommendations 2.3. <i>Carpet grippers</i> are fitted in accordance with specifications, plan and/or enterprise procedures 2.4. <i>Metal mouldings</i> are fitted in accordance with specifications, plan and/or enterprise procedures
3. Lay floor covering	3.1. Instructions and sequence for laying and fixing are followed 3.2. Underlay is cut to required shape with minimum waste of materials 3.3. Materials for fixing are organised and used in accordance with relevant safety management requirements 3.4. Underlay is fixed using methods and equipment which follow manufacturer instructions
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of appropriately 4.4. Workplace documentation and/or reports are

	completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to anticipate installation problems with carpet cushion/underlays, gripper strips and metal mouldings to avoid re-work and wastage
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- clarify and confirm work instructions
- plan work within given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of:
 - tools and materials
 - installation techniques
- seek learning opportunities
- use the limited workplace technology related to the preparation of carpet cushion/underlay, gripper strips and metal mouldings, including tools, equipment, calculators and measuring devices.

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to installation of carpet cushion/underlays and gripper accessories
- organisational and site standards, requirements, policies and procedures for carpet cushion/underlays, gripper strips and metal mouldings
- environmental protection requirements
- established communication channels and protocols

REQUIRED SKILLS AND KNOWLEDGE

- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
