3. Design service aspects	3.1. Location and features of plumbing are determined and documented 3.2. Location and features of air conditioning, if applicable, are determined and documented 3.3. Location and features of electricity outlets are determined and documented 3.4. Location and features of other service aspects, if applicable, are determined and documented 3.5. Implications of service designs are identified and addressed 3.6. Costs associated with making service changes are calculated 3.7. Environmental considerations and access implications for service ideas are identified and integrated into the design

ELEMENT	PERFORMANCE CRITERIA
4. Liaise with specialist professionals	4.1. <i>Specialist professionals</i> are sought out and contacted to assess viability of design 4.2. Costs and work requirements are confirmed with specialist professionals 4.3. Work schedule is developed and tested with industry professionals
5. Prepare design documentation	5.1. Design drawings are completed with layout and specifications for structural, non-structural and service information 5.2. Budget and project implementation schedule is developed 5.3. Design documentation is prepared for client 5.4. Design is presented to client and reviewed for further improvement

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- measurement
- observation
- researching
- ability to resource information
- accessing and applying the Building Code of Australia
- ability to resource information appropriate to interior construction
- documentation skills/ report writing
- mathematical skills for estimating quantities
- ability to establish drawing requirements
- ability to document construction details in a range of scales
- notation of materials, techniques and finishes
- apply safety procedures

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing structural and service aspects of an interior space
- organisational and site standards, requirements, policies and procedures
- the role of Australian Standards and the Building Code of Australia
- elements and principles of design
- characteristics of materials, products and defects
- procedures for documenting workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution techniques
- basic building and architectural terminology
- common structural and non-structural methods and technologies used in a residential or small to medium commercial building
- types of services and their structural implications
- materials and methods involved in interior construction
- local regulations/councils etc
- statutory planning regulations affecting interior design
- sub-contractor roles

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively assess structural and non-structural elements of a site to determine implications for interior design • Design structural aspects of interior space • Identify service aspects of interior space • Complete drawings and specifications for interior design incorporating structural elements and services • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures • Communicate effectively and work safely with others involved in the project
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to assessing viability of structures for domestic properties • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning

EVIDENCE GUIDE	
	<p>knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target

RANGE STATEMENT	
	market, budget, timeline, consultation requirements and colour requirements
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Structural aspects	<ul style="list-style-type: none"> may include but not be limited to walls, ceilings, flooring, columns, posts, poles, windows, door, beams, cables and trusses
Environmental considerations	<ul style="list-style-type: none"> may include but not be limited to design sustainability, how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from, energy consumption in achieving the material, greenhouse gases created, waste levels, resource utilisation and transport effects. Similarly what impact will be felt by reducing or stopping material from the source
Access implications	<ul style="list-style-type: none"> may include but not be limited to implications for people with disabilities and the aged
Specialist professionals	<ul style="list-style-type: none"> may include but not be limited to engineers, plumbers, electricians, communications consultants, licensed builders and architects

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research and evaluate a range of complex spaces	1.1. The spatial relationships of objects in a range of interior spaces are observed and evaluated 1.2. A range of existing <i>spatial typologies</i> are observed and compared 1.3. A range of existing <i>spatial arrangements and organising systems</i> are observed and evaluated
2. Manipulate 3-dimensional space and form applying design methodologies	2.1. The <i>elements and principles of design</i> are applied to organise elements in 3-D interior space to satisfy brief requirements 2.2. 3-D space is manipulated using colour, texture and light 2.3. Complex spatial arrangements are explored to satisfy brief requirements 2.4. Scale, volume and proportion are explored for 3-D space and form to satisfy brief requirements
3. Resolve interior design problems applying design methodologies	3.1. Interior space is resolved applying the elements and principles of design 3.2. Interior design elements are resolved applying the elements and principles of design 3.3. Design solution is evaluated and further refined to satisfy brief requirements 3.4. Interior design solution is <i>communicated</i> through a range of media 3.5. Feasibility of solution is explored and qualified 3.6. Design solution and processes used are reviewed to assess own skill and identify areas for improvement or modification

Required Skills and Knowledge

Required skills

- observing and comparing 3-D spaces
- understanding and applying the elements and principles of design when organising 3-D space
- creativity
- innovation
- research and critical evaluation of existing spaces
- presenting design ideas
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for applying creative methodologies
- organisational and site standards, requirements, policies and procedures for applying creative methodologies
- elements and principles of design
- interrelationship of forms in space
- concept of space
- uses of objects and forms
- interior elements
- space, volume and proportion and their application to interior design
- spatial concepts such as illusion, e.g. Trompe d'l oeil
- relationship of objects in space
- methods of interpreting space
- evidence of design process and progression of ideas
- environmental protection considerations for interior design
- established communication channels and protocols
- problem identification and resolution techniques
- design communication techniques

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Apply design elements and principles to complex 3-D form and interior space • Manipulate the elements and principles of design • Use conceptual models and other 3-D and spatial visualisation techniques • Observe and analyse the way complex spaces are configured and arranged and apply this to resolving interior design problems • Explore, evaluate and refine design solutions • Communicate design ideas
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to exploring and applying creative design methodologies to interior space • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and

EVIDENCE GUIDE	
	<p>application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment

	<i>LMFID4008A</i>	<i>Assess interior light and recommend light fittings</i>

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess project	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to researching and recommending lighting design are verified and complied with</p> <p>1.2. Project brief is reviewed, confirmed and clarified with client</p> <p>1.3. Parameters for the project are assessed and confirmed</p> <p>1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. Communication with others is established and maintained</p>
2. Assess current light sources	<p>2.1. Site analysis is conducted to assess the natural light and artificial light sources</p> <p>2.2. Project plans and drawings and site documents are analysed to determine current and potential influences on light source</p> <p>2.3. Factors for consideration are analysed with regards to their impact on lighting</p> <p>2.4. Environmental sustainability of design is assessed in terms of lighting</p> <p>2.5. Design is analysed to determine requirements for achieving desired lighting effects</p>
3. Design lighting for interior project	<p>3.1. Research is conducted to determine cost and energy efficient lighting options to meet the requirements of the integrated design solution</p> <p>3.2. Light fittings and light control devices and their locations are selected and specified on design documentation</p> <p>3.3. Structural design features are reviewed in terms of effect on lighting and specifications determined to support the overall design solution</p> <p>3.4. Non-structural design features are reviewed in terms of effect on lighting and potential improvements identified</p> <p>3.5. Special effects are selected and specified for design</p> <p>3.6. Electrician is consulted to confirm potential complications with changes to lighting design, estimate costings and determine wiring requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	to implement lighting schedule 3.7.Lighting design is assessed for conformance to industry standards and regulations
4. Draw and present lighting design	4.1.Structural and non-structural design features required to achieve lighting effects are documented on design drawings 4.2.Work and product schedules are developed 4.3.Costings are determined and documented 4.4.Lighting features are presented to client

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work briefs, basic plans and safety procedures
- communicating ideas and information
- accurately recording and maintaining information
- using computer operations for internet searches computer aided drafting (CAD) operations
- analysing performance characteristics
- comparing findings
- communicating with suppliers
- maintaining accurate records
- clarifying and checking taskrelated information
- carrying out work according to OHS practices
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative interior decoration and design processes
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- maintaining current knowledge of interior decoration and design techniques
- using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for assessing interior light and recommending light design
- organisational and site standards, requirements, policies and procedures
- Australian lighting Standards and drawing conventions
- research sources for lighting
- ergonomics, anthropometrics, proxemics and aesthetic values
- natural light characteristics and controls
- artificial light characteristics and controls
- structural influences on lighting
- design themes and design development
- sketching and drawing techniques
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Assess light for its environmental impact and ability to meet lighting design requirements • Provide the client with cost effective and efficient lighting solutions • Apply design elements and principles in recommending light design • Provide documented lighting layout and schedule • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for lighting design • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to designing interior lighting • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning

EVIDENCE GUIDE	
	<p>knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Lighting design

- may include but not be limited to selection of light fittings, determination of window positions and dimensions, uses of skylights, position of walls, balance of artificial and natural light sources and inclusion of light

RANGE STATEMENT	
	control devices
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, ching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Site analysis	<ul style="list-style-type: none"> may include but not be limited to a visit to the building (home, office or other) to achieve a feel for the intention of the project brief and how natural light may effect it, to assess the level of radiation from the sun into the space and the angles and obstructions caused by other buildings, vegetation or man made objects. It includes recording information and taking photos
Natural light	<ul style="list-style-type: none"> may include but not be limited to light emitted directly by the sun or reflected from it
Artificial light	<ul style="list-style-type: none"> may include but not be limited to lamps, ceiling lights, spotlights, dimmers, wall lights,

RANGE STATEMENT	
	LED, energy efficient globes
Factors for consideration	<ul style="list-style-type: none"> may include but not be limited to ultraviolet exposure, aspect and orientation, window treatments, light characteristics, colour, space layout and construction methods and materials
Light fittings	<ul style="list-style-type: none"> may include but not be limited to lamps, ceiling lights, wall lights, spot lights, flood lights
Light control devices	<ul style="list-style-type: none"> may include but not be limited to motorised or automated mechanisms linked to window treatments
Structural design features	<ul style="list-style-type: none"> may include but not be limited to placement and dimensions of walls, windows, doors, flooring and ceiling features, poles, posts and columns
Non-structural lighting design features	<ul style="list-style-type: none"> may include but not be limited to use of colour, fixtures, fittings, finishes, soft furnishings and furniture
Special effects	<ul style="list-style-type: none"> may include but not be limited to dimming, spotlight, flooding, brightness, creating space and creating focus

LMFID5007A Decorate for events

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to decorate for events including expos, design shows and other events in accordance with project briefs.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for competent workplace performance in interior decoration and design operations of all sizes. Decorating for events applies to a retail, consulting or design and decoration studio environment and involves application of skills and knowledge at a para-professional level. These skills and knowledge are to be used within the scope of the person's job and authority.</p> <p>This unit covers employability skills in teamwork and communication in order to work with others in the decoration process. Planning and organising and problem solving skills are required to apply decoration processes and initiative and enterprise are required to develop and sell decoration ideas. Self management and learning skills are applied to assess and reflect on own skills and identify areas for improvement.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to decorating for events are verified and complied with</p> <p>1.2. Project brief is reviewed, confirmed and clarified with client</p> <p>1.3. Key requirements and parameters for the event are assessed and confirmed and constraints determined</p> <p>1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. Communication with event organisers is established and maintained</p>
2. Analyse event information	<p>2.1. Site analysis is conducted to assess the requirements of the space requiring work</p> <p>2.2. Marketing strategy for the event is analysed and themes and concepts explored and evaluated in accordance with event objectives</p> <p>2.3. Lifestyle requirements and key characteristics of the target market are assessed and confirmed with event organisers</p> <p>2.4. Restrictions and timelines are ascertained from the event organisers</p> <p>2.5. Intended function of the event display is ascertained taking into account movement of people around displays and other displays</p> <p>2.6. Environmental considerations are analysed in respect to the space</p> <p>2.7. Cultural considerations are evaluated in respect to the space</p> <p>2.8. Ergonomic, anthropometric and proxemic principles are assessed in respect to the space and the intended products</p>
3. Develop decoration ideas	<p>3.1. Products, materials and finishes are explored in accordance with the marketing strategy and discussed with event organisers</p> <p>3.2. Product quantities and qualities are calculated in accordance with event budget</p> <p>3.3. Performance and characteristics of products are assessed and reviewed in accordance with event requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. <i>Costs</i> associated with purchasing and obtaining the products are analysed and evaluated</p> <p>3.5. <i>Colour</i> options are explored and discussed for the event</p> <p>3.6. <i>Sketches and drawings</i> are completed and positioning of products and <i>accessories</i> identified</p>
4. Complete decoration proposal	<p>4.1. <i>Supplies</i> necessary to complete the project are sourced and costed</p> <p>4.2. Suitable <i>contractors</i> are sourced and <i>quotes</i> obtained</p> <p>4.3. Specifications for materials and processes are developed</p> <p>4.4. Work plan is developed and evaluated</p> <p>4.5. Costings and timelines are compiled and developed into a full project proposal</p> <p>4.6. Proposal is presented to client</p> <p>4.7. Client feedback and response is analysed to determine success in achieving client satisfaction</p> <p>4.8. Own performance in the design process is examined to identify strengths and weaknesses</p> <p>4.9. Areas for improvement are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating decoration concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- drawing using manual and computer based techniques
- sequencing operations
- determining specifications
- computer aided design techniques
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for decorating for events
- organisational and site standards, requirements, policies and procedures
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs used to support proposal development
- event display techniques
- design themes and design development
- colours, furnishings and decorations
- sketching and drawing techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution techniques

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively develop decoration proposal for one event to provide cost effective options that meet event objectives • Effectively apply design elements and principles in decorating for events • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for decorating for events • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to decorating for events • specifications and work
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Clients	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public

RANGE STATEMENT	
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Events	<ul style="list-style-type: none"> may include but not be limited to expos, design shows, private displays, trade shows, magazine spreads, newspaper articles, advertising, for local, national and international events
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual, social and cultural differences, control of tone of voice and body language
Site analysis	<ul style="list-style-type: none"> may include but not be limited to a visit to the event location to achieve a feel for the intention of the project brief and how services may be affected by it, recording information and taking photos
Marketing strategy	<ul style="list-style-type: none"> may include but not be limited to the overall marketing objectives and the strategies and programmes of action designed to achieve those objectives
Themes	<ul style="list-style-type: none"> may include but not be limited to variations of colour ways (based on directions media), furnishing trends and decoration trends
Concepts	<ul style="list-style-type: none"> may include but not be limited to ideas generated to respond to the project brief and client requirements through both ideation drawings or sketching and written explanation
Lifestyle requirements	<ul style="list-style-type: none"> may include but not be limited to influences such as religious, climatic, societal, lifestyle, living conditions, infrastructure, status and habitude
Restrictions	<ul style="list-style-type: none"> may include but not be limited to laws, regulations or policies which may affect a project or those working

RANGE STATEMENT	
	on it, such as local government planning approval, work site entry legislation, licensing or heritage laws
Timelines	<ul style="list-style-type: none"> may include but not be limited to the agreed project time span set and agreed for the project
Environmental considerations	<ul style="list-style-type: none"> may include but not be limited to how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from, energy consumption in achieving the material, greenhouse gases created, waste levels, resource utilisation and transport effects. Similarly what impact will be felt by reducing or stopping material from the source
Cultural considerations	<ul style="list-style-type: none"> may include but not be limited to demography, geography (local, regional, national), religious, climatic, societal, cultural, lifestyle, attitudinal, gratification, honour, living conditions, infrastructure, status and habitude
Ergonomics	<ul style="list-style-type: none"> may include but not be limited to the study of the efficiency of persons in their working environment
Anthropometrics	<ul style="list-style-type: none"> may include but not be limited to the scientific study of the measurements of the human body
Proxemics	<ul style="list-style-type: none"> may include but not be limited to the study of socially conditioned spatial factors in ordinary human relations
Products	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built-in cabinetry or fittings, light fittings, lamps and picture framing
Material	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Quality	<ul style="list-style-type: none"> may include but not be limited to an inspection system for ensuring that pre-determined quality standards are being met, highlighting non-conformances requiring intervention
Performance and characteristics	<ul style="list-style-type: none"> may include but not be limited to assessment of

RANGE STATEMENT	
	products to determine if they meet the requirements of the intended end use application and how well they do it, the durability and composition of the product
Costs	<ul style="list-style-type: none"> may include but not be limited to the cost of products and materials together with the cost of obtaining them either locally, interstate or overseas
Colours	<ul style="list-style-type: none"> may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, contrast, harmony, effects on space, formulas and colour wheels
Sketches and drawings	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand, drafted technical drawings or drawings produced on computer using CAD software packages. These usually contain project specifications
Accessories	<ul style="list-style-type: none"> may include but not be limited to trinkets, ceramics, trays, vases, carvings, baskets, pots, plants, candles, clocks, silverware, mirrors, frames, screens, floral displays, haberdashery, glassware, fireplace items, gifts, hand crafts, water features, photographs, pottery, personal items, statues, book ends, bowls and bottles
Supplies	<ul style="list-style-type: none"> may include but not be limited to paints, furnishings, decorations and other internal fit-out products
Contractors	<ul style="list-style-type: none"> may include builders, painters, tilers, carpet layers, sanders, cabinetmakers, curtain makers, picture framers, electricians, plumbers and plasterers
Quoting	<ul style="list-style-type: none"> may include but not be limited to a price for a project taking account of the sizes associated with the project, the cost of materials, labour and overheads

Co-requisite units

Co-requisite units		

LMFID5008A Design for people with disabilities and the elderly

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit specifies the outcomes required to design for people with disabilities and the elderly in residential environments including kitchens, bathrooms, bedrooms, lounge rooms, dining rooms, family rooms and multi-use rooms, for the solution of interior decoration and design projects and in accordance with project briefs.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for competent workplace performance in interior decoration and design operations of all sizes. Designing for people with disabilities and the elderly in residential environments applies to a retail, consulting or design and decoration studio environment and involves application of skills and knowledge at a para-professional level. These skills and knowledge are to be used within the scope of the person's job and authority.</p> <p>This unit covers employability skills in teamwork and communication in order to work with others in the design process. Planning and organising and problem skills are required to apply design processes and initiative and enterprise are required to develop to design ideas. Self management and learning skills are applied to assess and reflect on own design skills and identify areas for improvement.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	1.1. Applicable OHS, legislative and organisational requirements relevant to designing for residential spaces are verified and complied with 1.2. Project brief is reviewed, confirmed and clarified with client 1.3. Parameters for the project are assessed and confirmed 1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.5. Communication with others is established and maintained 1.6. Relevant research is conducted to gain all information which may be used to inform the design process 1.7. All required information is accessed and interpreted to inform the design process
2. Obtain client information	2.1. Site analysis of the residential environment is conducted to assess work requirements 2.2. Nature of the disability or age reducing senses are assessed 2.3. Clients' health professionals are liaised with to ascertain any further requirements 2.4. Themes and concepts are presented and discussed with the client in accordance with their capacity 2.5. Products, materials and finishes are proposed and discussed with the client 2.6. Colour options are proposed and discussed with the client 2.7. Restrictions and timelines are ascertained from the client 2.8. Lifestyle requirements are assessed and confirmed with the client 2.9. Product quantities and qualities are calculated in accordance with client budget information
3. Design space	3.1. Intended function of the domestic space is ascertained from the client taking into account the position of doors and windows and any physical requirements 3.2. Performance and characteristics of products are

ELEMENT	PERFORMANCE CRITERIA
	<p>assessed and reviewed in accordance with client requirements</p> <p>3.3. Existing conditions of the domestic space are analysed for current or previous usage and any special requirements for access or egress</p> <p>3.4. Environmental considerations are analysed in respect of the space</p> <p>3.5. Cultural considerations are evaluated in respect of the space</p> <p>3.6. Ergonomic, anthropometric and proxemic principles are assessed in respect of the space, the intended products and client special requirements</p> <p>3.7. Costs associated with purchasing and obtaining the products are analysed and reported</p> <p>3.8. Sketches and drawings are completed and prepared for use by contractors and for positioning of products and accessories</p>
4. Plan space	<p>4.1. Supplies necessary to complete the project are sourced and costed</p> <p>4.2. Suitable contractors are sourced and quotes obtained</p> <p>4.3. Specifications for materials and processes are developed</p> <p>4.4. Work plan is developed and evaluated</p> <p>4.5. Costings and timelines are compiled and developed into a full project proposal</p> <p>4.6. Proposal terms and conditions are negotiated with the client</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- translating needs into design solutions
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- drawing using manual and computer based techniques
- sequencing operations
- meeting specifications
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for people with disabilities and the elderly
- organisational and site standards, requirements, policies and procedures for designing for people with disabilities and the elderly
- Australian Standards and the Building Code of Australia
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- colours, furnishings and decorations
- disabilities and age considerations
- sketching and drawing
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively design for at least two spaces to cater for people with disabilities or the elderly to provide the client with cost effective options which inform the project brief development • Effectively apply design elements and principles in designing for people with disabilities and the elderly • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing for people with disabilities and the elderly • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to designing for people with disabilities and the elderly in domestic environments • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of

EVIDENCE GUIDE	
	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target

RANGE STATEMENT	
	market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Site analysis	<ul style="list-style-type: none"> may include but not be limited to a visit to the domestic building (house or other) to achieve a feel for the intention of the project brief and how services may be affected by it, recording information and taking photos
Disabilities	<ul style="list-style-type: none"> may include but not be limited to physical disabilities which have rendered a person to a wheelchair or walking frame, dementia or other intellectual disabilities
Reducing senses	<ul style="list-style-type: none"> may include but not be limited to senses reduced by the cause of age such as reduced eyesight, loss of colour recognition, perception of space, reduced strength and capacity to move around easily, reduced sense of touch to tactile surfaces and reduced capacity to hear
Themes	<ul style="list-style-type: none"> may include but not be limited to variations of colour ways (based on directions media),

RANGE STATEMENT	
	furnishing trends and decoration trends
Concepts	<ul style="list-style-type: none"> may include but not be limited to ideas generated to respond to the project brief and client requirements through both ideation drawings or sketching and written explanation
Products	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built-in cabinetry or fittings, light fittings, lamps and picture framing
Material	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Colours	<ul style="list-style-type: none"> may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, contrast, harmony, effects on space, formulas and colour wheels
Restrictions	<ul style="list-style-type: none"> may include but not be limited to laws, regulations or policies which may affect a project or those working on it, such as local government planning approval, work site entry legislation, licensing, heritage laws or health care requirements

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse project requirements	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to researching and recommending <i>colour and applied finishes</i> are verified and complied with</p> <p>1.2. <i>Project brief</i> is reviewed and analysed to determine desired effects for interior space</p> <p>1.3. <i>Aesthetic</i> requirements of the space are assessed</p> <p>1.4. <i>Tactile</i> requirements of the desired effect in relation to the design are analysed</p> <p>1.5. Client requirements and desired effects are reviewed, confirmed and clarified</p>
2. Research colour and applied finishes	<p>2.1. Social, psychological, <i>cultural</i> and <i>historical</i> relationships of colour are researched in relation to their interior decoration uses and applications</p> <p>2.2. Colour <i>trends</i> are researched to ascertain the latest colour fashions and influences</p> <p>2.3. New technologies are researched and reported</p> <p>2.4. <i>Application methods</i> and available expertise for the desired effect are assessed</p> <p>2.5. Application processes and techniques, and available expertise for the desired effect are assessed</p> <p>2.6. <i>Costs</i> of materials and application methods are assessed and compared</p> <p>2.7. <i>Environmental impact</i> of materials and application methods are assessed</p> <p>2.8. <i>Longevity and restorability</i> of materials and application methods are researched</p> <p>2.9. <i>Hazards</i> associated with the use and application of materials are researched</p> <p>2.10. Quality of materials and application methods are assessed</p> <p>2.11. <i>Sources</i> or suppliers of coloured <i>products</i> or <i>finishes</i> are found and recorded</p>
3. Recommend colour and applied finishes	<p>3.1. Research information is <i>critically analysed</i> in the context of the design brief requirements</p> <p>3.2. Effects are examined in terms of <i>elements</i> and <i>principles of design</i> to determine fit for client requirements</p> <p>3.3. Experimentation with colour and applied finishes is undertaken to refine and test material and application</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>methods</p> <p>3.4. Colour products and finishes are selected according to the style, size, lighting and intended use of the space</p> <p>3.5. Paint finishes are selected to suit surface types, location and spaces</p> <p>3.6. Application methods are selected and specified to meet client requirements</p> <p>3.7. Presentation of research information is made, highlighting the findings and rationale for the materials and application methods chosen</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work briefs, basic plans and safety procedures
- communicating ideas and information
- accurately recording and maintaining information
- using computer operations for internet access and searches
- analysing performance characteristics
- comparing findings
- communicating with suppliers
- maintaining accurate records
- clarifying and checking task-related information
- carrying out work according to OHS practices
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative interior decoration and design processes
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- maintaining current knowledge of interior decoration and design techniques
- using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to researching and recommending materials and application methods
- organisational and site standards, requirements, policies and procedures for researching and recommending materials and application methods
- elements and principles of design
- aesthetic values
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- research techniques
- effects of finishes and finishing techniques
- colour theory
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively research and select colour and applied finishes to arrive at a solution which meets client requirements for a minimum of two projects • Visually present scheme to illustrate how ideas meet overall design requirements • Effectively apply design elements and principles to the research and selection of colour and applied finishes • Effectively research and select colour and applied finishes in accordance with the concepts and design brief • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching and recommending colour and applied finishes • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to researching and recommending finishes • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and

EVIDENCE GUIDE	
	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <ul style="list-style-type: none"> • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Colour and applied finishes

- may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, traditional finishes, plastic coatings, UV protected coatings, liquid coatings, synthetic coatings, synthetics, paper, glass, vinyls,

RANGE STATEMENT	
	textiles, laminates, plastics, stainless steel, metals, veneers, ceramics and stone based products, application techniques and new and emerging technologies
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Aesthetics	<ul style="list-style-type: none"> may include but not be limited to the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Tactile	<ul style="list-style-type: none"> may include but not be limited to that perceived by the sense of touch and producing the effect of three-dimensional depth
Cultural	<ul style="list-style-type: none"> may include but not be limited to demography, geography (local, regional, national), religious, climatic, societal, cultural, lifestyle, attitudinal, gratification, honour, living conditions, infrastructure, status and habitude
Historical	<ul style="list-style-type: none"> may include but not be limited to colour study of early civilisation, Berlin & Kay, Aristotle, Newton, Hippocrates, Leonardo Da Vinci, the Renaissance, Goethe's theory of colours, Chevreul, Bauhaus School
Trends	<ul style="list-style-type: none"> may include but not be limited to new directions resulting from events that are at times subtle and others significant. Colour trends develop the same way. Colour experts gather information from around the world and study changing events and ideas to produce a comprehensive colour story, in the same way that designers seek unique styles and incorporate current philosophies into their work
Application methods	<ul style="list-style-type: none"> may include but not be limited to spraying, painting, applicators, gluing, vacuum wrapping, rubbing and bonding
Costs	<ul style="list-style-type: none"> may include but not be limited to the cost of

RANGE STATEMENT	
	products and materials together with the cost of obtaining them either locally, interstate or overseas
Environmental impact	<ul style="list-style-type: none"> may include but not be limited to how the making and use of finishes and materials effects the environment and how its continued use will effect those around you, energy consumption in applying the material, greenhouse gases created, waste levels and resource utilisation. Similarly what impact will be felt by reducing or stopping use of the finish or materials
Longevity and restorability	<ul style="list-style-type: none"> may include but not be limited to an analysis of how long the finish or material is expected to last, while maintaining quality of aesthetic value and how readily the finish or material can be upgraded, repaired or replaced
Hazards	<ul style="list-style-type: none"> may include but not be limited to toxins and gases released by some finishes, glues and materials which may be harmful to people if not used correctly
Sources	<ul style="list-style-type: none"> may include but not be limited to paint shops, suppliers, wholesalers, retailers, manufacturers and designers
Products	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built-in cabinetry or fittings, light fittings, lamps, picture framing, tapware, laundry fittings, bathroom fittings, toilet fittings and kitchen fittings
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Critical analysis	<ul style="list-style-type: none"> may include but not be limited to comparing, contrasting, reflecting, critiquing, considering merit, discussion and debate
Elements of design	<ul style="list-style-type: none"> may include but not be limited to line, shape, form (geometric or organic), texture, and colour
Principles of design	<ul style="list-style-type: none"> may include but not be limited to balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity,

LMFID5010A Provide interior styling service

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the knowledge and skills required to provide design styling services for a range of interior spaces.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required to determine client styling requirements and select, source and place objects and accessories for visual effect in an interior space. Styling may be for residential, retail, or commercial environments and may be for permanent or temporary application.</p> <p>This unit covers employability skills in teamwork and communication in order to work with others in the styling process. Planning and organising and problem solving skills are required to apply styling processes and initiative and enterprise are required to develop to styling ideas. Self management and learning skills are applied to assess and reflect on own styling skills and identify areas for improvement.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm services with client	1.1. The range of services offered as interior <i>stylist</i> are discussed with <i>client</i> 1.2. Services typically provided to client target market are discussed with client 1.3. <i>Suppliers</i> appropriate to client target market are identified and ability to manage supply for the project discussed with client 1.4. Styling service to be provided is negotiated and confirmed with t client
2. Determine client style requirements	2.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to styling a space are verified and complied with 2.2. <i>Project brief</i> is reviewed, confirmed and clarified with client 2.3. Parameters for the project are assessed and confirmed 2.4. <i>Communication</i> with others is established and maintained 2.5. Styling requirements are identified and confirmed with client
3. Develop style design	3.1. Space dimensions are measured and needs of the space assessed 3.2. <i>Sketches and drawings</i> are prepared to illustrate the space 3.3. Plan <i>layout</i> is prepared taking into account <i>artistic relevance</i> and <i>colour</i> balance 3.4. <i>Entertainment values</i> and the effect on end users are analysed 3.5. <i>Cultural</i> and <i>historical considerations</i> are evaluated in respect of the space style 3.6. Styling requirements for the space are determined in order to create a specific style 3.7. <i>Products, finishes and accessories</i> necessary to complete the project are selected and costed 3.8. <i>Materials</i> and processes are specified 3.9. <i>Costings</i> and <i>timelines</i> are compiled and developed 3.10. Detailed budget is prepared to meet styling requirements
4. Create visual impact	4.1. Products, finishes and accessories are sourced and

ELEMENT	PERFORMANCE CRITERIA
by styling a space	organised to meet brief requirements 4.2. Visual impact is created by strategically placing objects into the space, taking into consideration design elements and principles 4.3. Installation of products, finishes and accessories is monitored to ensure the essence of the image or style is maintained 4.4. Arrangement is resolved to meet client needs and project brief

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- determining requirements of the 'unseen client'
- sourcing accessories including furniture, cushions, throws, rugs, vases, flowers, object d'art, pictures, wall hangings, kitchen implements, crockery, cutlery etc
- styling and accessorising interior/exterior spaces
- preparing specification 'shopping list' and costings
- building relationships with clients and suppliers
- creating visual impact or a experience within a space
- working with other types of stylists
- creating theatre or stage setting for a product
- developing a schedule of services
- styling for magazines
- working to a budget
- borrowing/renting accessories
- display units, project homes and marketing suites
- bulk buying
- applying principles and elements of design
- communicating style concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- sequencing operations
- meeting specifications
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for styling a space
- organisational and site standards, requirements, policies and procedures for styling a space
- elements and principles of design
- client target markets including real estate agents, home owners or vendors, magazines and television, project marketers, display units, project homes, retail outlets/window displays

REQUIRED SKILLS AND KNOWLEDGE

- client lifestyle issues, personal taste, budget, clients' background, intentions and future plans, current fashions/trends
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- colours, furnishings and decorations
- sketching and drawing
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively style a space with the products, finishes and accessories to style concepts as part of the final solution to the project brief • Effectively apply design elements and principles to style a space • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for styling a space • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to providing interior styling services • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Stylists	<ul style="list-style-type: none"> • may include but not be limited to interior decorators or designers providing services to create visual effects in interior spaces • roles of a stylist include visual merchandiser in a retail or commercial environment, home stylist, magazine/TV stylist, stylist for trade show displays, display units, car showrooms etc
Client	<ul style="list-style-type: none"> • may include but not be limited to real estate agents wanting properties prepared for sale, events coordinators requiring themed or decorated venues and retailers preparing shop themes or displays • may also include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Suppliers	<ul style="list-style-type: none"> • may include but not be limited to suppliers of furniture, furnishings, accessories and fittings
OHS requirements	<ul style="list-style-type: none"> • are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> • are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant

RANGE STATEMENT	
	industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones for the project, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline and consultation requirements
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Sketches and drawings	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand, drafted technical drawings or drawings produced on computer using computer aided drafting (CAD) software packages. These usually contain project specifications
Layout	<ul style="list-style-type: none"> may include but not be limited to the plan of how a room will be designed and decorated showing the placement of products
Artistic relevance	<ul style="list-style-type: none"> may include but not be limited to the connection between creativity and the design theme
Colour	<ul style="list-style-type: none"> may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, contrast, harmony,

RANGE STATEMENT	
	effects on space, formulas and colour wheels
Entertainment values	<ul style="list-style-type: none"> may include but not be limited to comical, informative, meditative, sales focused or visually pleasing
Cultural considerations	<ul style="list-style-type: none"> may include but not be limited to demography, geography (local, regional, national), religious, climatic, societal, cultural, lifestyle, attitudinal, gratification, honour, living conditions, infrastructure, status and habitude
Historical considerations	<ul style="list-style-type: none"> may include but not be limited to influences from styles, periods and movements over the past centuries and how this research may inform current projects
Products	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built-in cabinetry or fittings, light fittings, lamps, picture framing, tapware, laundry fittings, bathroom fittings, toilet fittings and kitchen fittings
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Accessories	<ul style="list-style-type: none"> may include but not be limited to trinkets, ceramics, trays, vases, carvings, baskets, pots, plants, candles, clocks, silverware, mirrors, frames, screens, floral displays, haberdashery, glassware, fireplace items, gifts, hand crafts, water features, photographs, pottery, personal items, statues, book ends, bowls and bottles
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Costings	<ul style="list-style-type: none"> may include but not be limited to the cost of products and materials used during completion of the project, labour and overhead expenses
Timelines	<ul style="list-style-type: none"> may include but not be limited to the agreed project time span set and agreed for the project

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess project requirements	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to researching and recommending decorative solutions are verified and complied with</p> <p>1.2. <i>Project brief</i> is reviewed, confirmed and clarified with <i>client</i></p> <p>1.3. <i>Parameters</i> for the project are assessed and confirmed</p> <p>1.4. <i>Resources</i> are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. <i>Communication</i> with others is established and maintained</p> <p>1.6. Intended applications and effects for the windows, furniture and soft furnishings are identified</p>
2. Determine decorative treatments for windows and openings	<p>2.1. <i>Window treatments</i>, their application and fixing technologies are <i>researched</i> to determine suitability for client requirements</p> <p>2.2. New technologies in window treatments are researched and relevance for decorative projects identified</p> <p>2.3. The types of openings and their requirements are identified and a range of possible creative solutions determined</p> <p>2.4. Window or opening is measured and details recorded accurately for a range of window treatments</p> <p>2.5. Fabric requirements are calculated and manufacturing requirements determined for a range of window treatments taking into consideration <i>pattern repeats</i></p>
3. Specify furniture transformation	<p>3.1. Methods of transforming a range of furniture and furnishings are researched</p> <p>3.2. Design considerations are investigated and assessed against the project brief</p> <p>3.3. Fabrics and materials are selected for furniture</p> <p>3.4. Furniture transformation ideas are documented and specified</p> <p>3.5. Cost estimates are calculated and assessed against project budget</p>

ELEMENT	PERFORMANCE CRITERIA
4. Specify soft floor coverings	<p>4.1. Range of <i>floor coverings</i> available for application are identified and analysed to determine most suitable fit</p> <p>4.2. New technologies in flooring are researched and relevance for decorative project identified</p> <p>4.3. The features, limitations and <i>environmental impact</i> of selected floor covering is assessed against performance requirements and environmental standards</p> <p>4.4. Floor area is measured and specifications recorded for flooring solution</p> <p>4.5. Costs are calculated and assessed against project budget</p>
5. Specify soft furnishings	<p>5.1. <i>Soft furnishings</i> are selected to meet the requirements of the brief and the overall design scheme</p> <p>5.2. Specifications are documented to record colour, sizing, style and fabric details</p> <p>5.3. Arrangement of soft furnishings is documented in design schedules</p> <p>5.4. Costs of soft furnishings are calculated and assessed against project budget</p>
6. Document and present decorative recommendations	<p>6.1. Innovative design solution to brief is presented taking into consideration parameters of design brief</p> <p>6.2. Fabrics, furnishings and fixing technologies are selected taking into consideration parameters of project brief</p> <p>6.3. Specifications are documented for all treatment recommendations</p> <p>6.4. Schedule is presented that includes both high and low costings to support design solution</p> <p>6.5. Solution to brief is visualised graphically and in 3-D form</p> <p>6.6. Sample board is created to enhance and support the design intention</p> <p>6.7. Feedback and follow up is instigated and maintained with the client</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work briefs, basic plans and safety procedures
- communicating ideas and information
- accurately recording and maintaining information
- using computer operations for internet access and searches
- analysing performance characteristics
- comparing findings
- developing visual communication tools
- maintaining accurate records
- clarifying and checking task-related information
- carrying out work according to OHS practices
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative interior decoration and design processes
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- maintaining current knowledge of interior decoration and design techniques
- using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for researching and recommending decorative treatments
- organisational and site standards, requirements, policies and procedures for researching and recommending decorative treatments
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- soft material types and textiles
- design themes and design development
- colours, furnishings and decoration options
- sketching and drawing techniques
- procedures for the recording, reporting and maintenance of workplace records and

REQUIRED SKILLS AND KNOWLEDGE

information

- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution techniques

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively research and recommend decorative treatments for windows, soft furnishings and furniture to meet the design requirements of at least two project briefs • Effectively apply design elements and principles to recommended decorative solution • Visually present decorative solutions to illustrate how ideas meet overall design requirements • Correctly calculate quantities and costings required to achieve decorative solution • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching and recommending decorative treatments • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to researching and recommending soft furnishings • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

EVIDENCE GUIDE	
	<p>workplace relevant contexts) together with application of underpinning knowledge</p> <ul style="list-style-type: none"> • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target

RANGE STATEMENT	
	market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment, catalogues and magazines
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Window treatments	<ul style="list-style-type: none"> may include but not be limited to curtains, blinds and awnings
Research	<ul style="list-style-type: none"> may include but not be limited to internet, magazines, catalogues, retail or wholesale outlets, books, site visits
Pattern repeats	<ul style="list-style-type: none"> may include but not be limited to textiles or fabrics with a distinctive print and how often that pattern repeats within the applicable square metreage required for a project so as to meet conformity
Floor coverings	<ul style="list-style-type: none"> may include but not be limited to carpets and rugs
Environmental impact	<ul style="list-style-type: none"> may include but not be limited to how the sourcing and use of materials effects the environment and how its continued use will effect the area the material was sourced from, energy consumption in processing the

RANGE STATEMENT	
	material, greenhouse gases created, waste levels and resource utilisation. Similarly what impact will be felt by reducing or stopping use of the material
Soft furnishings	<ul style="list-style-type: none"> may include but not be limited to window treatments, blinds, awnings, trimmings, bedding treatments, lampshades, cushions, upholstery and accessories

LMFID5012A Research and recommend artwork

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to research and recommend artwork for various design and decoration solutions to client and project brief requirements.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for competent workplace performance in interior decoration and design operations of all sizes. Researching and recommending artwork applies to a retail, consulting or design and decoration studio environment and involves application of skills and knowledge at a supervisory equivalent level. These skills and knowledge are to be used within the scope of the person's job and authority.</p> <p>This unit requires employability skills in initiative and enterprise and problem solving in order to direct the research and recommending of artwork. Communication skills are used to access and interpret information using information technologies and complete artwork proposals. Self management and learning skills are applied in the review of information and art to ensure project needs are met.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for artwork research	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to researching and recommending artwork are verified and complied with</p> <p>1.2. <i>Project brief</i> is reviewed, confirmed and clarified with <i>client</i></p> <p>1.3. <i>Parameters</i> for the project are assessed and confirmed</p> <p>1.4. <i>Resources</i> are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. <i>Communication</i> with others is established and maintained</p>
2. Research artwork	<p>2.1. <i>Aesthetic</i> requirements of the <i>artwork</i> are assessed and compared with surrounding furniture and colours</p> <p>2.2. Intended application for the artwork is analysed and reviewed in accordance with the available space</p> <p>2.3. New artwork and artists are sourced, researched and reported</p> <p>2.4. <i>Framing</i> types and styles are researched and reported</p> <p>2.5. <i>Properties</i> of the <i>materials</i> used in the production of artwork are analysed and evaluated</p> <p>2.6. <i>Manufacturing processes</i>, art styles and available expertise for the desired artwork are assessed</p> <p>2.7. Costs and availability of artwork are assessed and compared</p> <p>2.8. <i>Environmental impact</i> of artwork materials used are assessed</p> <p>2.9. <i>Longevity and restorability</i> quality of artwork is researched</p> <p>2.10. Project is measured for artwork requirements, calculating quantities and requirements</p>
3. Recommend artwork	<p>3.1. Selected or <i>commissioned</i> artwork quantities and <i>qualities</i> are presented and promoted to the client</p> <p>3.2. <i>Performance and characteristics</i> of selected artwork are presented and promoted to the client</p> <p>3.3. <i>Costs</i> associated with purchasing and obtaining the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>artwork are provided in <i>quote</i> form to the client</p> <p>3.4. Presentation of research information is made, highlighting the findings and rationale for the artwork chosen</p> <p>3.5. Artwork is selected and positioned according to the client requirements, project brief and nature of the space</p> <p>3.6. Feedback and follow up is instigated and maintained with the client</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, organising and understanding information related to work briefs, basic plans and safety procedures
- communicating ideas and information
- accurately recording and maintaining information
- using computer operations for internet access and searches
- analysing performance characteristics
- comparing findings
- developing visual communication tools
- maintaining accurate records
- clarifying and checking task-related information
- carrying out work according to OHS practices
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to innovative interior decoration and design processes
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- maintaining current knowledge of interior decoration and design techniques
- using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for researching and recommending artwork
- organisational and site standards, requirements, policies and procedures for researching and recommending artwork
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- artwork types and styles
- design themes and design development
- colours, furnishings and decorations
- sketching and drawing
- procedures for the recording, reporting and maintenance of workplace records and

REQUIRED SKILLS AND KNOWLEDGE

information

- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively research and recommend artwork to assist with informing the design and decoration process and arrive at a solution which meets client requirements • Effectively apply design elements and principles to the research and recommendation of artwork • Effectively research and recommend artwork in accordance with the project brief • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for researching and recommending artwork • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to researching and recommending artwork • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of

EVIDENCE GUIDE	
	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none"> • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target

RANGE STATEMENT	
	market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Aesthetics	<ul style="list-style-type: none"> may include but not be limited to the consideration of appeal to a large number of people; products are pleasing to the eye of many who view it
Artwork	<ul style="list-style-type: none"> may include but not be limited to gothic, Byzantine, early renaissance, high renaissance, northern renaissance, mannerism, baroque, rococo, neoclassicism, academic, Japanese Ukiyo-e, romanticism, the Hudson river school, the pre-Raphaelite brotherhood, Victorian classicism, the arts and crafts movement, symbolism, realism, the Barbizon school, impressionism, post-impressionism, les Nabis, pointillism, fauvism, 19th century arts and crafts, art nouveau, the golden age of illustration, art deco, ashcan school, Camden town group, American scene, American regionalism, social realism, the Canadian group of seven, magic realism, contemporary

RANGE STATEMENT	
	realism, modernism, expressionism, die Brucke, der blaue reiter, die neue sachlichkeit, Bauhaus, cubism, dada, futurism, neo-plasticism, surrealism, precisionism, the Harlem renaissance, abstract expressionism, pop art, op art, arte Provera, photorealism, minimalism, the sensation show and folk art
Framing	<ul style="list-style-type: none"> may include but not be limited to mouldings of solid timber, composites, metal and alloy extrusion and synthetics
Properties	<ul style="list-style-type: none"> may include but not be limited to durability, level of fire retardancy, composition, textile use, material use, finishes, quality, environmental sustainability, flammability, maintenance requirements, wear and tear and production methods
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles (wool, cotton, polyester, silk, nylon and blends), fibreglass, foam, cardboard, paper products, paints, finishes or any other manipulable substance
Manufacturing process	<ul style="list-style-type: none"> may include but not be limited to the methods by which the product will be produced, these steps usually entail working from working drawings and specifications, producing components utilising machine operations, assembly of the components and finishing techniques
Environmental impact	<ul style="list-style-type: none"> may include but not be limited to how the sourcing and use of materials effects the environment and how its continued use will effect the area the material was sourced from, energy consumption in processing the material, greenhouse gases created, waste levels and resource utilisation. Similarly what impact will be felt by reducing or stopping use of the material
Longevity and restorability	<ul style="list-style-type: none"> may include but not be limited to an analysis of how long the material is expected to maintain its structure and colour, while maintaining quality of aesthetic value and how readily the material can be repaired or

RANGE STATEMENT	
	replaced
Commissioned	<ul style="list-style-type: none"> may include but not be limited to the contracting of an artist for the purposes of producing an art piece to specified requirements or a style
Qualities	<ul style="list-style-type: none"> may include but not be limited to an inspection system for ensuring that pre-determined quality standards are being met, highlighting non-conformances requiring intervention
Performance and characteristics	<ul style="list-style-type: none"> may include but not be limited to assessment of products to determine if they meet the requirements of the intended end use application and how well they do it, the durability and composition of the product
Costs	<ul style="list-style-type: none"> may include but not be limited to the cost of products and materials together with the cost of obtaining them either locally, interstate or overseas
Quote	<ul style="list-style-type: none"> may include but not be limited to a price for a project taking account of the sizes associated with the project, the cost of materials, labour and overheads

Co-requisite units		

LMFID5013A Design for small to medium scale commercial or institutional interiors

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the knowledge and skills required to apply researched information to formulate creative and complex design solutions to a range of small to medium scale commercial or institutional interior design situations satisfying the physiological, psychological, social, cultural and environmental requirements of the brief.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required to design spaces for small to medium commercial or institutional interiors.</p> <p>This unit covers employability skills in teamwork and communication in order to work with others in the design process. Planning and organising and problem solving skills are required to apply design processes and initiative and enterprise are required to develop design ideas. Self management and learning skills are applied to assess and reflect on own design skills and identify areas for improvement.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	1.1. Applicable OHS, legislative and organisational requirements relevant to designing for commercial or institutional spaces are verified and complied with 1.2. Project brief is reviewed, confirmed and clarified with client 1.3. Key requirements for the project are assessed and confirmed and constraints determined 1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.5. Communication with others is established and maintained 1.6. Relevant research is conducted to gain all information which may be used to inform the design process 1.7. All required information is accessed and interpreted to inform the design process
2. Conduct project research	2.1. Site analysis is conducted to assess the requirements of the spaces requiring work 2.2. Intended function of the space is ascertained from the client 2.3. Contextual information relating to the brief is researched and evaluated 2.4. Functional and planning issues are determined specific to the site and client requirements 2.5. Research material is organised and presented in the form of a design proposal 2.6. Project is planned to make effective use of time and available resources
3. Develop design concepts	3.1. Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief 3.2. Concepts are presented through sketches, mood boards, concept boards and concept models 3.3. Viability of concepts are assessed in conjunction with others 3.4. Environmental implications of the project are assessed and design concepts reviewed to ensure maximum energy efficiency is achieved in solution 3.5. Access issues relating the project are identified and

ELEMENT	PERFORMANCE CRITERIA
	addressed in design solution
4. Design the space	<p>4.1. Ideas are translated into 3-D space satisfying functional criteria</p> <p>4.2. Evidence of 3-D notions are explored through modelling</p> <p>4.3. Idea with the greatest potential for success is presented to promote the design's acceptance using both 2-D and 3-D representations</p> <p>4.4. Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined</p> <p>4.5. A materials palette is selected to enhance spatial ideas</p> <p>4.6. Design is modified in response to critical feedback without losing integrity of the design intention</p>
5. Revise and refine solution	<p>5.1. Ergonomic and anthropometric principles are assessed in respect to the space and the intended products</p> <p>5.2. Spatial planning is further revised and resolved in response to client feedback</p> <p>5.3. Materials, colours, finishes, fixtures and fittings are selected appropriate to the concept and brief parameters</p> <p>5.4. Feedback is received through consultation with the client and incorporated into design solution</p>
6. Prepare a fully rendered client presentation	<p>6.1. Resource requirements are identified for presentation</p> <p>6.2. Final design solution is communicated effectively and creatively using a range of techniques and media</p> <p>6.3. Documentation drawings and material selections are prepared that are consistent with, and that best communicate, the design intent</p> <p>6.4. Work is completed to plan and within brief constraints</p> <p>6.5. Client feedback and response is analysed to determine success in achieving client satisfaction</p> <p>6.6. Own performance in the design process is examined to identify strengths and weaknesses</p> <p>6.7. Areas for improvement are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- drawing using manual and computer based techniques
- sequencing operations
- meeting specifications
- computer aided design techniques
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for commercial or institutional space
- organisational and site standards, requirements, policies and procedures for designing for commercial or institutional space
- Australian Standards and the Building Code of Australia relating to commercial or institutional interior design
- environmental protection requirements relating to commercial or institutional interior design
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- colours, furnishings and decorations
- sketching and drawing to architectural drawing standards
- procedures for the recording, reporting and maintenance of workplace records and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine project requirements	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to designing with CAD applications are verified and complied with</p> <p>1.2. <i>Project brief</i> is reviewed and confirmed</p> <p>1.3. <i>Parameters</i> for the project are assessed and confirmed</p> <p>1.4. Design concepts and <i>details of design solution</i> are examined to determine drawing requirements</p> <p>1.5. Sketches, drawings and materials board are analysed</p> <p>1.6. Calculations and measurements are confirmed</p> <p>1.7. <i>Documentation requirements</i> for the design are clarified and confirmed</p> <p>1.8. Computing equipment and suitable software is selected and prepared for use</p> <p>1.9. Customised template created for individual workplace</p>
2. Use CAD applications to produce 3D model and documentation	<p>2.1. <i>Layering</i> strategy for project is designed, created and applied</p> <p>2.2. <i>Architectural library</i> is developed to acquire relevant design components</p> <p>2.3. Custom designed library parts are created</p> <p>2.4. Text, line, font and dimension styles are applied</p> <p>2.5. <i>Pan, zoom and orbit tools</i> are used to navigate in the 2-D and 3-D windows within the model</p> <p>2.6. Text and notations are added to the drawing in accordance with <i>drawing protocols</i></p> <p>2.7. Dimensions are added to the drawing in accordance with drawing protocols</p> <p>2.8. 3-D detailed suite of rooms, complete with fenestration and doors is produced on appropriate layers</p> <p>2.9. Advanced features of drawing tools are used to generate 3-D form</p>
3. Edit drawing components	<p>3.1. <i>Editing tools</i> are used to modify drawing elements and text</p> <p>3.2. Object properties are modified changed or transferred to a different layer</p>
4. Render surfaces	<p>4.1. Library is used to assign materials to surfaces and objects of the model</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. New material creations are explored</p> <p>4.3. Texture, transparency, luminescence and patterns are edited to achieve desired surface effects using shader settings</p> <p>4.4. Light fixtures are included in model and parameters adjusted to achieve desired effects</p>
<p>5. Create 3-D views of the model</p>	<p>5.1. Isometric, two and three point perspective views are created using a range of camera settings and rendering techniques</p> <p>5.2. Camera or target is repositioned to provide alternate views using a variety of camera techniques</p> <p>5.3. Effect of natural and artificial lighting are created in 3-D space to achieve photo realistic awareness of the 3-D model and the effect of light on surfaces</p> <p>5.4. Rendering time considerations are examined to achieve specific output</p>
<p>6. Plot and print for final presentations</p>	<p>6.1. Perspective views are saved and are appropriate for final media presentation</p> <p>6.2. Appropriate views are saved to meet requirements of brief</p> <p>6.3. Page layout is created for plotting and printing</p> <p>6.4. Page layout is prepared using saved views and documentation</p> <p>6.5. 2-D documentation is plotted with appropriate line weights</p> <p>6.6. Slide show presentation is prepared using saved views and documentation</p>
<p>7. Save and back up files</p>	<p>7.1. Folders and files are created to store drawing projects</p> <p>7.2. Drawings are saved and filed to allow easy access according to workplace documentation system</p> <p>7.3. Appropriate techniques for reducing file size are identified and compared</p> <p>7.4. Copies of files are backed up</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicating ideas and information to enable confirmation of work requirements and specifications
- reading and interpreting workplace documents
- using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- applying attention to detail
- applying design concepts to drawings
- efficiently and safely contributing to innovative interior decoration and design processes
- planning own work within the given task parameters
- accepting responsibility for given tasks
- maintaining current knowledge of tools and materials
- maintaining current knowledge of interior decoration and design techniques
- using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for using CAD applications
- organisational and site standards, requirements, policies and procedures for using CAD applications
- elements and principles of design
- types of CAD equipment and procedures for their safe use, operation and maintenance
- computer programs and CAD applications
- drafting and drawing codes and practices relevant to interior design
- 2-D and 3-D drawing techniques
- appropriate mathematical procedures for estimation and measurement
- documentation control procedures
- problem identification and resolution techniques

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively design and produce at least two 2-D CAD drawings and two 3-D CAD drawings that document the requirements of the design brief • Apply drafting and drawing protocols in accordance with Australian Standards and the Building Code of Australia • Effectively apply design elements and principles to designing with CAD applications • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures to design with CAD applications • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to designing with CAD applications • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of

EVIDENCE GUIDE	
	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones for the design project, organisational or personal profiles and aims, image requirements and

RANGE STATEMENT	
	function, target market, budget, timeline and consultation requirements
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Details of design solution	<ul style="list-style-type: none"> may include but not be limited to products, materials, fixtures and finishes, dimensions, features, openings, furnishings and accessories, colour, effects and lighting and electrical sources
Documentation requirements	<ul style="list-style-type: none"> may include but not be limited to site plans, floor plans, sections, elevations, projections, general notes, construction notes, area analysis, services, structures, location, neighbouring buildings and any other space or area addressed by interior designers
Layering	<ul style="list-style-type: none"> may include but not be limited to the use of different overlays to portray a range of applications including architectural, civil, electrical, fire protection, general, landscaping, mechanical, plumbing, equipment or furnishings, structural and telecommunications
Architectural library	<ul style="list-style-type: none"> may include but not be limited to a catalogued reference of interior decoration and design components which can be uploaded into a model
Pan, zoom and orbit tools	<ul style="list-style-type: none"> may include but not be limited to procedures for moving around the window and the ability to look closer or more broadly at certain components
Drawing protocols	<ul style="list-style-type: none"> may include but not be limited to commonly used symbols, lettering standards, standard units of measurement, paper size, scale, numbering, legends and abbreviations
Editing tools	<ul style="list-style-type: none"> may include but not be limited to tools which enable changing of components, sections, text or measurements on a model
Rendering time considerations	<ul style="list-style-type: none"> may include but not be limited to global settings, quality settings and impact on rendering times, and specific rendering quality issues

RANGE STATEMENT	
Appropriate views	<ul style="list-style-type: none"> may include but not be limited to sectional views, internal and external elevations, removal of wire frames and hidden lines, and use of desired output settings

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	1.1. Applicable OHS, legislative and organisational requirements relevant to decorating for residential spaces are verified and complied with 1.2. Project brief is reviewed, confirmed and clarified with client 1.3. Parameters for the project are assessed and confirmed 1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.5. Communication with others is established and maintained 1.6. Problems or underlying factors to be addressed by the project brief are verified
2. Conduct research on decoration requirements	2.1. Site analysis is conducted to assess the requirements of the spaces requiring decoration 2.2. Intended function of the space is ascertained from the client or project brief 2.3. Style, era, theme and feature of the site are identified 2.4. Issues relating to the conservation and heritage environment are identified and their implications for the project determined 2.5. Environmental issues are identified and analysed 2.6. Areas for research are identified to inform the decoration process 2.7. Collected information is documented
3. Generate decoration solution	3.1. Decoration concepts are generated and assessed against restoration requirements 3.2. Decoration treatments are selected according to the needs of the restoration style and era 3.3. Regulatory requirements relating to decoration are assessed to determine compliance 3.4. Environmental aspects of decoration solution are examined and areas for improved sustainability are identified and incorporated where possible 3.5. Conceptual approach is developed and clearly defined 3.6. Concept is presented to client using a range of concept presentation methods 3.7. Ideas are discussed with client and feedback received

ELEMENT	PERFORMANCE CRITERIA
	<p>and analysed</p> <p>3.8. Concept is modified according to feedback</p> <p>3.9. Agreement on the concept is gained from the client</p>
4. Prepare client presentation	<p>4.1. Preliminary <i>drawings</i> are developed with decoration treatment inclusions and positioning</p> <p>4.2. Final decoration solution is communicated effectively and creatively using a range of techniques and media</p> <p>4.3. Work is completed to plan and within restoration brief constraints</p> <p>4.4. Client feedback and response is analysed to determine success in achieving client satisfaction</p> <p>4.5. Own performance in the decoration process is examined to identify strengths and weaknesses</p> <p>4.6. Areas for improvement are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- preparing and presenting research information
- collecting, organising and understanding information
- communicating ideas and information
- presenting ideas visually
- accurately recording and maintaining information relating to the project
- working and communicating with others to gain information
- recognising and responding to circumstances outside instructions or personal competence
- efficiently and safely contributing to restoration process
- planning own work within the given task parameters
- maintaining current knowledge of tools and materials
- maintaining current knowledge of decoration techniques
- applying principles and elements of design
- communicating decoration concepts
- documenting and transferring information
- drawing using manual and computer based techniques
- sequencing operations
- meeting specifications
- carrying out work according to OHS practices in the workplace or realistically simulated workplace

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for decorating for restoration projects
- organisational and site standards, requirements, policies and procedures for decorating residential spaces
- Australian Standards and the Building Code of Australia
- the Burra Charter, the Australia ICOMOS charter for places of cultural significance, 1999
- environmental protection requirements
- features of architectural styles and eras
- problem identification and resolution
- elements and principles of design
- ergonomics, anthropometrics, proxemics and aesthetic values
- historical design styles and movements
- techniques for the preparation and presentation of research information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Adapt and develop concepts as a result of design research	1.1. Criteria are established that are most likely to facilitate the achievement of the conceptual vision 1.2. Consultation is conducted with colleagues to develop conceptual thinking approaches 1.3. A range of <i>spatial problems</i> are examined to determine suitable approaches 1.4. Relevant ideas and approaches are researched, adapted and incorporated from other practitioners
2. Visualise design concepts using a range of modelling techniques	2.1. Capabilities of a range of 2-D conceptual notions are extended through 3-D modelling 2.2. The conceptual vision is refined based on ongoing experimentation using sophisticated modelling techniques 2.3. A sophisticated concept model appropriate to the brief is presented to the client and feedback evaluated
3. Manage and organise resource requirements for new work	3.1. Materials, tools, equipment and computer aided design applications are researched for the achievement of different 3-D effects 3.2. Resource requirements that arise from the use of techniques and experimental approaches are determined and organised for new work 3.3. Critical path is determined, projecting completion dates of each stage of the project
4. Develop extend and resolve spatial ideas through modelling	4.1. Experimentation is undertaken with a range of modelling techniques to explore and develop complex 3-D notions 4.2. <i>Design elements and principles</i> are applied and manipulated to assist in design development 4.3. Scale, volume and proportion are explored and manipulated as part of a design development process 4.4. A range of models are developed by hand or using computer aided design applications to revise and refine spatial ideas
5. Present a fully resolved interior space using sophisticated modelling techniques	5.1. Modelling technique is selected to meet the established criteria 5.2. Appropriate scale is selected to meet brief criteria 5.3. Resolved spatial ideas are accurately represented to scale 5.4. Materials and textures are accurately represented to

ELEMENT	PERFORMANCE CRITERIA
	scale 5.5. Construction, detailing and finishes are resolved and demonstrated through sophisticated modelling 5.6. Detailed model is presented to client and feedback evaluated

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- establishing a personal work methodology
- visualising 2-D notions into 3-D space and form
- ability to manipulate a range of computer software programs
- critical evaluation skills
- group interaction and teamwork skills
- creativity
- innovation
- research skills
- independent thinking
- ability to assess suitable process
- ability to experiment in both the planning of projects and methods of execution
- presenting design ideas
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for modelling
- organisational and site standards, requirements, policies and procedures for modelling
- elements and principles of design
- spatial concepts
- concept modelling techniques
- mass modelling techniques
- detailed modelling techniques
- model making techniques
- 3-D visualisation techniques such as computer modelling
- white models
- maquettes
- scale
- proportion
- proportioning systems
- structures
- modular systems and repeats
- advanced 3-D geometry
- evidence of design process and progression of ideas
- environmental protection considerations for interior design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse project	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to producing visual representations are verified and complied with</p> <p>1.2. Project brief is reviewed, confirmed and clarified with client</p> <p>1.3. Parameters for the project are assessed and confirmed</p> <p>1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. Communication with relevant personnel is established and maintained as required</p>
2. Select rendering application	<p>2.1. Features of rendering software packages used in interior design and decoration visualisations are identified and uses determined</p> <p>2.2. Rendering requirements are determined from project documentation</p> <p>2.3. Rendering software with capability to achieve desired effects within the project time frame and budget is selected</p> <p>2.4. Equipment and media is assessed as suitable for software and the achievement of desired effects</p> <p>2.5. Planning tasks are undertaken to prepare for rendering</p>
3. Apply rendering functions	<p>3.1. Image resolutions are selected and applied to meet project requirements</p> <p>3.2. Image aspect ratio is selected and applied</p> <p>3.3. Pixel ratio is selected and applied</p> <p>3.4. Renderer attributes are adjusted to obtain desired visual effects</p>
4. Check render integrity and quality	<p>4.1. Render integrity is tested and refined</p> <p>4.2. Missing images and textures are identified and re-linked as required</p> <p>4.3. Render times for optimising process are tested</p> <p>4.4. Alpha channels and opacity matts are tested</p> <p>4.5. Render layers and passes are tested</p>
5. Optimise images for render processes	<p>5.1. All relevant pre-rendering optimisations tasks are completed</p> <p>5.2. Renderer attributes are adjusted and refined to</p>

ELEMENT	PERFORMANCE CRITERIA
	optimise render time 5.3. Appropriate <i>file output format</i> is selected 5.4. Appropriate file names and output destinations are selected
6. Render image	6.1. Final rendering processes are undertaken and completed 6.2. Files are stored and archived 6.3. Completed render is reviewed to ensure compliance with system and client requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- interpreting a design brief
- scheduling production components
- building models to scale
- creating effects such as lighting, shading, rendering and texturing using software programs
- using networks
- time management skills
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for rendering processes
- organisational and site standards, requirements, policies and procedures for rendering
- elements and principles of design
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- design themes and design development
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively design and apply rendering tasks • Use and refine render components for best performance • Store rendered components in a organised manner for further use • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to producing digital presentations for interior design projects • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application • Assessment may be applied under project related conditions (real or simulated) and require evidence of process

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target

RANGE STATEMENT	
	market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Relevant personnel	<ul style="list-style-type: none"> may include but not be limited to interior designer, modeller, texture, animator, programmer, technical director and systems support officer
Rendering software packages	<ul style="list-style-type: none"> may include but not be limited to AutoCAD, AutoCAD Revit 9, 3D Studio Max, Form Z, Animator Pro, Rhino, Photoshop, Illustrator and CorelDraw
Rendering	<ul style="list-style-type: none"> may include but not be limited to the pictorial representation of plans and elevations using colours, highlighting and shading to provide depth and photo-like drawings
Equipment and media	<ul style="list-style-type: none"> may include but not be limited to computer workstation, ergonomic furniture, 3-D animation software, rendering software, render network distribution software, hubs, switches, input device (e.g. stylist tablet, keyboard, mouse), output device (e.g.

RANGE STATEMENT	
	monitor, TV, printer, speakers) and render farm
Planning tasks	<ul style="list-style-type: none"> may include but not be limited to research, production planning, production management, team discussions, lighting, texturing, shading and networking
Pre-rendering optimisation tasks	<ul style="list-style-type: none"> may include but not be limited to selection of most appropriate renderer for specific outcome, assessing options with key personnel, deleting any unnecessary geometry and components, preparing renderer attributes, preparing layer or pass control, preparing opacity mattes and alpha channels, testing and diagnosing rendering issues, optimising and refining for best render performance, rendering and organisation of output
File output format	<ul style="list-style-type: none"> may include but not be limited to TIFF

Co-requisite units		

LMFID6003A Design for large scale commercial or institutional interiors

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the knowledge and skills required to apply researched information to formulate creative and complex design solutions to large scale commercial or institutional interior design situations satisfying the physiological, psychological, social, cultural, technical and environmental requirements of the brief.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required to design spaces for large scale, multiple use, multi-themed commercial or institutional spaces such as office buildings, hospitals, apartment buildings, public spaces and exhibition or conference centres.</p> <p>This unit covers employability skills in teamwork and communication in order to work with others in the design process. Planning and organising and problem solving skills are required to apply design processes and initiative and enterprise are required to develop design ideas. Computer aided design technologies will be used. Self management and learning skills are applied to assess and reflect on own design skills and identify areas for improvement.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to designing for large scale commercial or institutional spaces are verified and complied with</p> <p>1.2. Project brief is reviewed, confirmed and clarified with client</p> <p>1.3. Key requirements for the project are assessed and confirmed and constraints determined</p> <p>1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. Communication with others in the design project is established and maintained</p> <p>1.6. Relevant research is conducted to gain all information which may be used to inform the design process</p> <p>1.7. All required information is accessed and interpreted to inform the design process</p>
2. Conduct project research	<p>2.1. Site analysis is conducted to assess the requirements of the spaces requiring work</p> <p>2.2. Intended function of the space is ascertained from the client</p> <p>2.3. Contextual information relating to the brief is researched and evaluated</p> <p>2.4. Functional and planning issues are determined specific to the site and client requirements</p> <p>2.5. Issues relating to the commercial or institutional environment are identified and their implications for the design project determined</p> <p>2.6. Research material is organised and presented in the form of a design proposal</p> <p>2.7. Project is planned to make effective use of time and available resources</p>
3. Develop design concepts	<p>3.1. Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief</p> <p>3.2. Concepts are presented through sketches, mood boards, concept boards and concept models</p> <p>3.3. Viability of concepts are assessed in conjunction with others</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. <i>Environmental aspects</i> of the project are assessed and design concepts reviewed to ensure maximum energy efficiency achieved in solution</p> <p>3.5. Access issues relating the project are identified and addressed in design solution</p>
4. Design the space	<p>4.1. Ideas are translated into 3-D space satisfying functional criteria</p> <p>4.2. Evidence of 3-D notions are explored through modelling</p> <p>4.3. Idea with the greatest potential for success is presented to promote the design's acceptance using both 2-D and 3-D representations</p> <p>4.4. Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined</p> <p>4.5. A materials palette is selected to enhance spatial ideas</p> <p>4.6. Design is modified in response to critical feedback without losing integrity of the design intention</p>
5. Revise and refine solution	<p>5.1. Ergonomic and anthropometric principles are assessed in respect to the space and the intended products</p> <p>5.2. Spatial planning is further revised and resolved in response to client feedback</p> <p>5.3. <i>Materials, colours, finishes, fixtures and fittings</i> are selected appropriate to the concept and brief parameters</p> <p>5.4. Feedback is received through consultation with the client and incorporated into design solution</p>
6. Prepare a fully rendered client presentation	<p>6.1. Resource requirements are identified for presentation</p> <p>6.2. Final design solution is communicated effectively and creatively using a range of techniques and media</p> <p>6.3. Documentation <i>drawings</i> and material selections are prepared that are consistent with, and that best communicate, the design intent</p> <p>6.4. Work is completed to plan and within brief constraints</p> <p>6.5. Client feedback and response is analysed to determine success in achieving client satisfaction</p> <p>6.6. Own performance in the design process is examined to identify strengths and weaknesses</p> <p>6.7. Areas for improvement are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- drawing using manual and computer based techniques
- sequencing operations
- meeting specifications
- computer aided design techniques
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for commercial or institutional space
- organisational and site standards, requirements, policies and procedures for designing for commercial or institutional space
- Australian Standards and the Building Code of Australia
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- colours, furnishings and decorations
- sketching and drawing to architectural drawing standards
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively design for a multi-purpose large scale commercial or institutional space to provide the client with creative solutions that satisfy the design brief • Effectively apply design elements and principles in designing for large scale commercial or institutional space • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing for large scale commercial or institutional space • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to designing for large scale commercial or institutional interiors • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of

EVIDENCE GUIDE	
	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none"> • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Large scale commercial or institutional spaces

- may include but not be limited to multiple use, multi-themed commercial or institutional spaces such as office buildings, institutions, apartment buildings, public spaces, exhibitions spaces or conference centres

RANGE STATEMENT	
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Relevant research	<ul style="list-style-type: none"> may include but not be limited to similar products and typologies, materials, social and cultural influences, site analysis, site conditions, functional requirements and commercial or institutional application
Information	<ul style="list-style-type: none"> may include but not be limited to usage requirements, building and service plans, ergonomics, anthropometrics, proxemics, costs, product performance and characteristics, and existing conditions
Site analysis	<ul style="list-style-type: none"> may include but not be limited to a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site and recording information, taking measurements and taking photos
Issues relating to the commercial or institutional environment	<ul style="list-style-type: none"> may include but not be limited to building standards, safety standards, guidelines relating to the specific commercial or institutional use,

RANGE STATEMENT	
	size, access, flexibility of structural changes, decision making processes, electricity supply, services available, building conditions, other occupancy and lease conditions
Environmental aspects	<ul style="list-style-type: none"> may include but not be limited to how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from, energy consumption in achieving the material, green house gases created, waste levels, resource utilisation and transport effects. Similarly what impact will be felt by reducing or stopping material from the source
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Colours	<ul style="list-style-type: none"> may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, contrast, harmony, effects on space, formulas and colour wheels
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Fixtures and fittings	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built in cabinetry or fittings, light fittings, lamps and picture framing, office fittings, commercial or institutional applications may also include but not be limited to accessories such as trinkets, ceramics, trays, vases, carvings, baskets, pots, plants, candles, clocks, silverware, mirrors, frames, screens, floral displays, haberdashery, glassware, fireplace items, gifts, hand crafts, water features, photographs, pottery, personal items, statues, book ends, bowls and bottles

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	1.1. Applicable OHS, legislative and organisational requirements relevant to designing for hospitality environments are verified and complied with 1.2. Project brief is reviewed, confirmed and clarified with client 1.3. Key requirements for the project are assessed and confirmed and constraints determined 1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.5. Communication with others in the design project is established and maintained 1.6. Relevant research is conducted to gain all information which may be used to inform the design process 1.7. All required information is accessed and interpreted to inform the design process
2. Conduct project research	2.1. Site analysis is conducted to assess the requirements of the spaces requiring work 2.2. Intended function of the space is ascertained from the client 2.3. Contextual information relating to the brief is researched and evaluated 2.4. Functional and planning issues are determined specific to the site and client requirements 2.5. Issues relating to the hospitality environment are identified and their implications for the design project determined 2.6. Research material is organised and presented in the form of a design proposal 2.7. Project is planned to make effective use of time and available resources
3. Develop design concepts	3.1. Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief 3.2. Concepts are presented through sketches, mood boards, concept boards and concept models 3.3. Viability of concepts are assessed in conjunction with others 3.4. Environmental aspects of the project are assessed

ELEMENT	PERFORMANCE CRITERIA
	<p>and design concepts reviewed to ensure maximum energy efficiency is achieved in solution</p> <p>3.5. Access issues relating the project are identified and addressed in design solution</p>
4. Design the space	<p>4.1. Ideas are translated into 3-D space satisfying functional criteria</p> <p>4.2. Evidence of 3-D notions are explored through modelling</p> <p>4.3. Idea with the greatest potential for success is presented to promote the design's acceptance using both 2-D and 3-D representations</p> <p>4.4. Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined</p> <p>4.5. A materials palette is selected to enhance spatial ideas</p> <p>4.6. Spatial planning is further revised and resolved in response to client feedback</p> <p>5.3. <i>Materials, colours, finishes, fixtures and fittings</i> are selected appropriate to the concept and brief parameters</p> <p>5.4. Feedback is received through consultation with the client and incorporated into design solution</p>
6. Prepare a fully rendered client presentation	<p>6.1. Resource requirements are identified for presentation</p> <p>6.2. Final design solution is communicated effectively and creatively using a range of techniques and media</p> <p>6.3. Documentation <i>drawings</i> and material selections are prepared that are consistent with, and that best communicate, the design intent</p> <p>6.4. Work is completed to plan and within brief constraints</p> <p>6.5. Client feedback and response is analysed to determine success in achieving client satisfaction</p> <p>6.6. Own performance in the design process is examined to identify strengths and weaknesses</p> <p>6.7. Areas for improvement are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- drawing using manual and computer based techniques
- sequencing operations
- meeting specifications
- computer aided design techniques
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for hospitality spaces
- organisational and site standards, requirements, policies and procedures for designing for hospitality spaces
- Australian Standards and the Building Code of Australia
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- colours, furnishings and decorations
- sketching and drawing to architectural drawing standards
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- regulations, conditions and variables relating to the specific commercial context

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively design for a multi-purpose hospitality site to provide the client with creative solutions that satisfy the design brief • Effectively apply design elements and principles in designing for hospitality environments • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing for hospitality environments • Communicate effectively and work safely with others in the design process
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to designing for hospitality environments • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Hospitality environments

- may include but not be limited to multiple use, multi-themed commercial spaces such as hotels, bars, restaurants, kitchens, entertainment and function centres

RANGE STATEMENT	
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	1.1. Applicable OHS, legislative and organisational requirements relevant to designing for retail environments are verified and complied with 1.2. Project brief is reviewed, confirmed and clarified with client 1.3. Key requirements for the project are assessed and confirmed and constraints determined 1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness 1.5. Communication with others in the design project is established and maintained 1.6. Relevant research is conducted to gain all information which may be used to inform the design process 1.7. All required information is accessed and interpreted to inform the design process
2. Conduct project research	2.1. Site analysis is conducted to assess the requirements of the spaces requiring work 2.2. Intended function of the space is ascertained from the client 2.3. Contextual information relating to the brief is researched and evaluated 2.4. Functional and planning issues are determined specific to the site and client requirements 2.5. Issues relating to the retail environment are identified and their implications for the design project determined 2.6. Research material is organised and presented in the form of a design proposal 2.7. Project is planned to make effective use of time and available resources
3. Develop design concepts	3.1. Multiple ideas and concepts are generated in a creative and diverse manner that is sympathetic to the design brief 3.2. Concepts are presented through sketches, mood boards, concept boards and concept models 3.3. Viability of concepts are assessed in conjunction with others 3.4. Environmental aspects of the project are assessed

ELEMENT	PERFORMANCE CRITERIA
	<p>and design concepts reviewed to ensure maximum energy efficiency is achieved in solution</p> <p>3.5. Access issues relating the project are identified and addressed in design solution</p>
4. Design the space	<p>4.1. Ideas are translated into 3-D space satisfying functional criteria</p> <p>4.2. Evidence of 3-D notions are explored through modelling</p> <p>4.3. Idea with the greatest potential for success is presented to promote the design's acceptance using both 2-D and 3-D representations</p> <p>4.4. Client feedback is sought, amendments are agreed to and recorded, and ideas are revised and refined</p> <p>4.5. A materials palette is selected to enhance spatial ideas</p> <p>4.6. Design is modified in response to critical feedback without losing integrity of the design intention</p>
5. Revise and refine solution	<p>5.1. Ergonomic and anthropometric principles are assessed in respect to the space and the intended products</p> <p>5.2. Spatial planning is further revised and resolved in response to client feedback</p> <p>5.3. <i>Materials, colours, finishes, fixtures and fittings</i> are selected appropriate to the concept and brief parameters</p> <p>5.4. Feedback is received through consultation with the client and incorporated into design solution</p>
6. Prepare a fully rendered client presentation	<p>6.1. Resource requirements are identified for presentation</p> <p>6.2. Final design solution is communicated effectively and creatively using a range of techniques and media</p> <p>6.3. Documentation <i>drawings</i> and material selections are prepared that are consistent with, and that best communicate, the design intent</p> <p>6.4. Work is completed to plan and within brief constraints</p> <p>6.5. Client feedback and response is analysed to determine success in achieving client satisfaction</p> <p>6.6. Own performance in the design process is examined to identify strengths and weaknesses</p> <p>6.7. Areas for improvement are identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- drawing using manual and computer based techniques
- sequencing operations
- meeting specifications
- computer aided design techniques
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for retail space
- organisational and site standards, requirements, policies and procedures for designing for retail space
- Australian Standards and the Building Code of Australia
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- colours, furnishings and decorations
- sketching and drawing to architectural drawing standards
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- regulations, conditions and variables relating to the specific retail context

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively design for a large retail site to provide the client with creative solutions that satisfy the design brief • Effectively apply design elements and principles in designing for retail environments • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for designing for retail environments • Communicate effectively and work safely with others in the design process
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to designing for retail interiors • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Retail environments	<ul style="list-style-type: none"> may include but not be limited to supermarkets, department stores and specialised chain stores
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and

RANGE STATEMENT	
	criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, retailers
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Relevant research	<ul style="list-style-type: none"> may include but not be limited to similar products and typologies, materials, social and cultural influences, site analysis, site conditions, functional requirements and commercial applications
Information	<ul style="list-style-type: none"> may include but not be limited to usage requirements, building and service plans, ergonomics, anthropometrics, proxemics, costs, product performance and characteristics and existing conditions
Site analysis	<ul style="list-style-type: none"> may include but not be limited to a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site and recording information, taking measurements and taking photos
Issues relating to the retail environment	<ul style="list-style-type: none"> may include but not be limited to building standards, safety standards, guidelines relating to the specific use such as guidelines for traffic flow, public use patterns, exit routes, size, access, flexibility of structural changes, decision making processes, electricity supply,

RANGE STATEMENT	
	services available, building conditions, other occupancy, lease conditions and spatial planning issues
Environmental aspects	<ul style="list-style-type: none"> may include but not be limited to how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from, energy consumption in achieving the material, greenhouse gases created, waste levels, resource utilisation and transport effects. Similarly what impact will be felt by reducing or stopping material from the source
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Colours	<ul style="list-style-type: none"> may include but not be limited to colour principles, psychology, fundamentals, coordination, perception, contrast, harmony, effects on space, formulas and colour wheels
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Fixtures and fittings	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built in cabinetry or fittings, light fittings, lamps and picture framing, office fittings, commercial applications may also include but not be limited to accessories such as trinkets, ceramics, trays, vases, carvings, baskets, pots, plants, candles, clocks, silverware, mirrors, frames, screens, floral displays, haberdashery, glassware, fireplace items, gifts, hand crafts, water features, photographs, pottery, personal items, statues, book ends, bowls and bottles
Drawings	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand, drafted technical drawings or drawings produced on computer using CAD software packages. These usually contain project specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- translating needs into design solutions
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- drawing using manual and computer based techniques
- sequencing operations
- meeting specifications
- clarifying and checking taskrelated information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for designing for conservation and restoration
- organisational and site standards, requirements, policies and procedures for designing for conservation and restoration
- Australian Standards and the Building Code of Australia
- heritage and conservations regulations and conditions
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- conservation and restoration design themes and design development
- conservation and restoration of furnishings, soft furnishings and decorations
- sketching and drawing
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols

	<p>application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Conservation and heritage projects

- may include but not be limited to interior spaces of historic or cultural significance requiring development or restoration in keeping with strict conditions and guidelines for the building

RANGE STATEMENT	
Project brief	<ul style="list-style-type: none"> may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Relevant research	<ul style="list-style-type: none"> may include but not be limited to similar products and typologies, materials, social and cultural influences, site analysis, site conditions, functional requirements, commercial application, heritage or conservation style, influences, conditions and heritage construction methods and materials
Information	<ul style="list-style-type: none"> may include but not be limited to usage requirements, building and service plans, ergonomics, anthropometrics, proxemics, costs, product performance and characteristics, existing conditions, new technologies and restoration techniques

RANGE STATEMENT	
Site analysis	<ul style="list-style-type: none"> may include but not be limited to a visit to the site to achieve a feel for the intention of the project brief and how services may be affected by it, identifying constraints of site and recording information, taking measurements and taking photos
Issues relating to the conservation and heritage environment	<ul style="list-style-type: none"> may include but not be limited to building standards, safety standards, guidelines relating to the specific commercial use, size, access, flexibility of structural changes, decision making processes, electricity supply, services available, building conditions, other occupancy, lease conditions, conservation orders and conditions, compatibility and matching of new and old materials and protection and conservation of features
Environmental aspects	<ul style="list-style-type: none"> may include but not be limited to how the use of raw materials effects the ecology and environment and how its continued use will effect the area it has been sourced from, energy consumption in achieving the material, greenhouse gases created, waste levels, resource utilisation and transport effects. Similarly what impact will be felt by reducing or stopping material from the source
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Colours	<ul style="list-style-type: none"> are to include but not be limited to colour principles, psychology, fundamentals, coordination, perception, contrast, harmony, effects on space, formulas and colour wheels
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Fixtures and fittings	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built in cabinetry or fittings, light fittings, lamps and picture framing may also include but not be limited to accessories such as trinkets, ceramics, trays,

RANGE STATEMENT	
	vases, carvings, baskets, pots, plants, candles, clocks, silverware, mirrors, frames, screens, floral displays, haberdashery, glassware, fireplace items, gifts, hand crafts, water features, photographs, pottery, personal items, statues, book ends, bowls and bottles
Drawings	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand, drafted technical drawings or drawings produced on computer using CAD software packages. These usually contain project specifications

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the project brief	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to selecting and instructing consultants and contractors are verified and complied with</p> <p>1.2. Project brief is reviewed, confirmed and clarified with client</p> <p>1.3. Key requirements for the project are assessed and confirmed and parameters determined</p> <p>1.4. Resources are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. Communication with others in the design project is established and maintained</p> <p>1.6. Relevant research is conducted to gain all information which may be used to inform the selection process</p> <p>1.7. All required information is accessed and interpreted to inform the selection process</p>
2. Select consultants and contractors	<p>2.1. Consultants are selected to assist with project design information</p> <p>2.2. Contractors are selected to undertake decorating, building or services work</p> <p>2.3. Consultants and contractors are contracted to undertake the negotiated work</p> <p>2.4. Insurances necessary in the engaging of contractors and consultants are obtained</p>
3. Instruct consultants and contractors	<p>3.1. Consultants and contractors are communicated with to specify the requirements of the project brief, costings, quotes and the schedule</p> <p>3.2. Timelines and restrictions are agreed with consultants and contractors</p> <p>3.3. Budget constraints for consultants and contractors are set and adhered to in accordance with the project schedule</p> <p>3.4. Design specifications and constraints for consultants and contractors are set and adhered to in accordance with the project brief</p> <p>3.5. OHS policies and procedures are transmitted to consultants and contractors and adhered to</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicating design concepts and project requirements
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- sequencing operations
- meeting specifications
- computer aided design techniques
- clarifying and checking taskrelated information
- carrying out work according to OHS practices
- undertaking project management techniques

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for selecting and instructing consultants and contractors
- organisational and site standards, requirements, policies and procedures for selecting and instructing consultants and contractors
- Australian Standards and the Building Code of Australia
- contract management
- contractor and consultant types and management
- types of equipment and procedures for their safe use, operation and maintenance
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution techniques
- project management techniques

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively select and instruct consultants and contractors to complete a project in accordance with the project brief and schedule • Effectively apply quality and authorised procedures in selecting and instructing consultants and contractors • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for selecting and instructing consultants and contractors • Communicate effectively and work safely with others in the design team
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to selecting and instructing consultants and contractors • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning

EVIDENCE GUIDE	
	<p>knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target

RANGE STATEMENT	
	market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Relevant research	<ul style="list-style-type: none"> may include but not be limited to internet searches, phone/personal liaison, interviews and applications
Information	<ul style="list-style-type: none"> may include but not be limited to contractor and consultant reputations and outcomes, contractor and consultant prices, required insurances, work schedules, budget and payments, required skills and available skills
Consultants	<ul style="list-style-type: none"> may include but not be limited to builders, architects, engineers, decorators and designers
Contractors	<ul style="list-style-type: none"> may include but not be limited to builders, painters, tilers, carpet layers, sanders, cabinet makers, curtain makers, picture framers, electricians, plumbers and plasterers
Contracts	<ul style="list-style-type: none"> may include but not be limited to methods of securing agreement between parties
Insurances	<ul style="list-style-type: none"> may include but not be limited to professional indemnity, public liability, income protection,

RANGE STATEMENT	
	third party, comprehensive, building and contents insurance, workers compensation and any other legally prescribed insurance
Engaging	<ul style="list-style-type: none"> may include but not be limited to hire or appointment of the contractors by direct engagement or for engagement by the client
Schedules	<ul style="list-style-type: none"> may include but not be limited to detailed descriptions of which materials, products, finishes and accessories will be selected and how they will be applied
Timelines	<ul style="list-style-type: none"> may include but not be limited to the agreed project time span set and agreed for the project
Restrictions	<ul style="list-style-type: none"> may include but not be limited to laws, regulations or policies which may affect a project or those working on it, such as local government planning approval, work site entry legislation, licensing or heritage laws
Budget	<ul style="list-style-type: none"> may include but not be limited to the amount of funds the client has available to complete the project
Specifications	<ul style="list-style-type: none"> may include but not be limited to the measurements, procedures by which a product is constructed and materials to be utilised

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify evaluation criteria	1.1. Project brief is analysed to determine key design requirements 1.2. Problems or underlying factors to be addressed by the project brief are verified 1.3. Communication requirements are identified for the project 1.4. Current industry design trends relating to project brief are researched and identified 1.5. Workplace and industry standards in relation to design presentation are researched and identified 1.6. Quality criteria that apply to design processes are researched and identified 1.7. Evaluation criteria are identified
2. Apply evaluation criteria	2.1. Drawings, mood boards and all associated documentation is examined to identify all features of the finished design 2.2. Finished design is evaluated against original design concept 2.3. The design and all specifications are evaluated against project brief to check consistency 2.4. The design is evaluated to identify how well elements and principles of design have been applied 2.5. The design is evaluated for consistency with current industry trends and influences 2.6. The design is evaluated to ensure client suitability including adherence to time and budget requirements 2.7. The design is evaluated for quality and innovative elements 2.8. Processes engaged to develop finished design are evaluated for effectiveness in achieving final outcomes
3. Suggest design improvements	3.1. Factors affecting the outcome of the project are examined and documented 3.2. Suggestions are made for adjustments to design to increase its ability to meet criteria 3.3. Technical design skills are used to reflect evaluation outcomes and communicate improvements 3.4. Potential design improvements are identified and tested for viability 3.5. Selection, adaptation and introduction of materials,

ELEMENT	PERFORMANCE CRITERIA
	<p>tools, technology and design processes are applied to design improvements</p> <p>3.6. Compliance with intellectual and copyright requirements is observed when incorporating ideas from others</p> <p>3.7. Evaluation report is compiled and produced</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- sequencing operations
- meeting specifications
- clarifying and checking task-related information
- carrying out work according to OHS practices
- analysing and comparing information
- making judgements about design qualities

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for evaluating design project outcomes
- organisational and site standards, requirements, policies and procedures for evaluating design project outcomes
- Australian Standards and the Building Code of Australia applying to interior design
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- characteristics of materials, products and defects
- design themes and design development
- colours, furnishings and decorations
- product, material and finish types and descriptions
- evaluation and reflective practice techniques
- sketching and drawing
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively evaluate three design project outcomes including one residential and one commercial design, against project brief and additional evaluation criteria listed in the range statement • Effectively apply design elements and principles in evaluating design project outcomes • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for evaluating design project outcomes • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to evaluating design project outcomes • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and

EVIDENCE GUIDE	
	<p>application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

LMFID6009A Produce digital presentations for commercial projects

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit specifies the outcomes required to prepare, produce and present commercial project digital presentations for the promotion and marketing of design services, for the solution of interior decoration and design projects and in accordance with project briefs.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit supports the attainment of skills and knowledge required for competent workplace performance in interior decoration and design operations of all sizes. Production of digital presentations for commercial projects applies to a retail, consulting or design and decoration studio environment and involves application of skills and knowledge at a managerial level. These skills and knowledge are to be used within the scope of the person's job and authority.</p> <p>This unit covers employability skills in communication, planning and organising and problem solving in order to determine presentation techniques and develop resources to promote design ideas. Technology is used to support presentation development. Self management and learning skills are applied to assess and reflect on own presentation skills and identify areas for improvement.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess project presentation requirements	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational requirements</i> relevant to producing digital presentations for commercial projects are verified and complied with</p> <p>1.2. <i>Project brief</i> is reviewed and clarified with <i>client</i> to determine presentation requirements</p> <p>1.3. <i>Parameters</i> for the project are assessed and confirmed</p> <p>1.4. <i>Resources</i> are selected appropriate to work requirements and checked for operational effectiveness</p> <p>1.5. <i>Communication</i> with others is established and maintained</p>
2. Prepare for digital presentation	<p>2.1. <i>Space</i> is measured to obtain all dimensions and <i>specifications</i></p> <p>2.2. Placement of <i>products</i> and <i>accessories</i> are examined and planned together with application of <i>finishes</i></p> <p>2.3. <i>Spatial organisation</i> of the area is assessed and planned in accordance with intended use</p> <p>2.4. Options for <i>digital presentation</i> solutions are explored</p> <p>2.5. Concept presentation is prepared and discussion of ideas and <i>themes</i> negotiated with client and other stakeholders</p>
3. Produce digital presentation	<p>3.1. Digital presentation options are assessed and compared</p> <p>3.2. <i>Project specific digital methodologies</i> are developed</p> <p>3.3. <i>Personal or business promotional strategies</i> are developed</p> <p>3.4. <i>Electronic business files and financial tools</i> are managed and used to assist in the development of the presentation</p> <p>3.5. Final digital presentation is produced and finalised in readiness for the client demonstration</p>
4. Present digital demonstration	<p>4.1. <i>Presentation methodology</i> is developed and prepared</p> <p>4.2. Digital strategies are presented to the client, selling the attributes of the design solution</p> <p>4.3. <i>Sketches, perspective drawings, axonometrics</i> and schedules are electronically presented to support the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>presentation</p> <p>4.4. <i>Materials</i> and product <i>schedules</i> are produced and included in the developed <i>design statement</i> and digital presentation</p> <p>4.5. <i>Floor plan</i> and <i>elevations</i> are produced to portray placement of products and specify finishes using <i>rendering</i> techniques and portrayed digitally</p> <p>4.6. Presentation of digital information is supported using <i>colour boards</i> and <i>working drawings</i></p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- applying principles and elements of design
- communicating design concepts
- documenting and transferring information
- reading, interpreting and following information on work specifications, standard operating procedures and work instructions, and other reference material
- maintaining accurate records
- communicating within the workplace
- drawing and developing presentation material using manual and computer based techniques
- sequencing operations
- meeting specifications
- clarifying and checking task related information
- carrying out work according to OHS practices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for producing digital presentations for commercial projects
- organisational and site standards, requirements, policies and procedures for producing digital presentations for commercial projects
- elements and principles of design
- creativity and artistic relevance
- ergonomics, anthropometrics, proxemics and aesthetic values
- types of equipment and procedures for their safe use, operation and maintenance
- characteristics of materials, products and defects
- computer programs
- design themes and design development
- colours, furnishings and decorations
- digital presentation development and use
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements
- established communication channels and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Effectively produce a digital presentation for a commercial property, planning at least two spaces, to digitally provide the client with cost effective options which inform the project brief development • Effectively apply design elements and principles in producing digital presentations for commercial projects • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for producing digital presentations for commercial projects • Communicate effectively and work safely with others in the work area
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to producing digital presentations for commercial projects • specifications and work instructions
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of

EVIDENCE GUIDE	
	<p>tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <ul style="list-style-type: none"> • Assessment may be applied under project related conditions (real or simulated) and require evidence of process • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances • Assessment may be in conjunction with assessment of other units of competency
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Project brief

- may include but not be limited to client needs and objectives, client aims and objectives and criteria for evaluation, milestones, organisational or personal profiles and aims, image requirements and function, target

RANGE STATEMENT	
	market, budget, timeline, consultation requirements and colour requirements
Client	<ul style="list-style-type: none"> may include but not be limited to suppliers, manufacturers, private clients, colleagues, retailers or the public
Parameters	<ul style="list-style-type: none"> may include but not be limited to scope of brief, approval to make changes (legislative and planning), effect or feel trying to be achieved, functionality (short and long term), budget restrictions and established timelines
Resources	<ul style="list-style-type: none"> may include but not be limited to computers, computer software, design software, computer aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment
Communication	<ul style="list-style-type: none"> may include but not be limited to verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language
Space	<ul style="list-style-type: none"> may include but not be limited to commercial spaces, rooms such as meeting rooms, offices, work areas, media rooms, entertainment areas, halls, foyers, lunch or break areas, workstations and ancillary areas
Specifications	<ul style="list-style-type: none"> may include but not be limited to the measurements, procedures by which a product is constructed and materials to be utilised
Products	<ul style="list-style-type: none"> may include but not be limited to furniture, soft furnishings, floor treatments, curtain treatments, built in cabinetry or fittings, light fittings, lamps, picture framing, tapware, kitchen fittings such as stoves, sinks, hotplates, extractors, scales, fridges, dishwashers, coffee machines, hand basins, shower parts, toilets, bidets, toilet fittings, bathroom fittings, connection points, switches, circuits, hot water systems, residual current detectors (safety switches), lights, fans, down

RANGE STATEMENT	
	lights, halogen lights, power outlets, powerboards, television points, phone points, internet connections, automated systems, standard wiring systems and personal computer integrated bases (data and power)
Accessories	<ul style="list-style-type: none"> may include but not be limited to trinkets, ceramics, trays, vases, carvings, baskets, pots, plants, candles, clocks, silverware, mirrors, frames, screens, floral displays, haberdashery, glassware, fireplace items, gifts, hand crafts, water features, photographs, pottery, office items, statues, book ends, bowls and bottles
Finishes	<ul style="list-style-type: none"> may include but not be limited to paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Spatial organisation	<ul style="list-style-type: none"> may include but not be limited to studying the positioning of elements, traffic flow and suitability of layout for the intended use of the area
Digital presentations	<ul style="list-style-type: none"> may include but not be limited to presentation boards, portfolios, photography, overhead projectors, data projectors, video and other forms of multimedia, it may also include PowerPoint presentations, CAD demonstrations, written presentations and other scenarios utilising different software applications
Themes	<ul style="list-style-type: none"> may include but not be limited to variations of colour ways (based on directions media), furnishing trends and decoration trends
Project specific digital methodologies	<ul style="list-style-type: none"> may include but not be limited to electronic walk throughs, product or technique slide shows, virtual galleries for the presentation of ideas and concepts and project specific details and specifications presented digitally
Personal or business promotional strategies	<ul style="list-style-type: none"> may include but not be limited to websites, blogs, virtual galleries, e-portfolios and other profile raising techniques
Electronic business files and financial tools	<ul style="list-style-type: none"> may include but not be limited to conventional computer based software (word processing, databases and spreadsheets), desktop publishing applications and electronic pricing

RANGE STATEMENT	
	and quoting systems
Presentation methodology	<ul style="list-style-type: none"> may include but not be limited to a strategic business case for selecting the digital strategy presented, a visual presentation and prepared script to accompany the presentation
Sketches	<ul style="list-style-type: none"> may include but not be limited to hand drawn images or ideation drawings completed freehand
Perspective	<ul style="list-style-type: none"> may include perspective drawing techniques including one, two and three point perspective to demonstrate eye lines and balance
Axonometrics	<ul style="list-style-type: none"> may include a method of drawing in which vertical lines are drawn to scale from an accurate plan which has usually been turned through 45°. Very useful for revealing the construction and the interiors of buildings. Axonometrics can appear somewhat distorted but measurements can be taken from them
Materials	<ul style="list-style-type: none"> may include but not be limited to solid timber (native and imported), manufactured timber products, plastic, metal, alloys, stones, glass, textiles, fibreglass, foam, cardboard, paper products or any other manipulable substance
Schedules	<ul style="list-style-type: none"> may include but not be limited to detailed descriptions of which materials, products, finishes and accessories will be selected and how they will be applied
Design statement	<ul style="list-style-type: none"> may include but not be limited to a statement which should demonstrate how good design has been taken into account in drawing up the development proposals. Its purpose is to improve the design of all new development. It should include a site analysis, set out the design principles and produce design solutions
Floor plan	<ul style="list-style-type: none"> may include but not be limited to a graphical representation in drawing form of the plans that represent how rooms or spaces are linked together in building plans
Elevations	<ul style="list-style-type: none"> may include but not be limited to the various views of a design including front view, rear view, side views, plan view and cut through views

RANGE STATEMENT	
Rendering	<ul style="list-style-type: none"> may include but not be limited to the pictorial representation of plans and elevations using colours, highlighting and shading to provide depth and photo-like drawings
Colour boards	<ul style="list-style-type: none"> may include but not be limited to a presentation on board displaying the colour usage and coordination with surface finishes, materials and textiles used throughout the project
Working drawings	<ul style="list-style-type: none"> may include but not be limited to drafted technical drawings or drawings produced on computer using CAD software packages. These usually contain project specifications

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Follow occupational health and safety (OHS) procedures for on-site work	1.1.OHS responsibilities for on-site work are identified 1.2.All legislative requirements are adhered to in work activity 1.3.Personal protective equipment (PPE) is used according to workplace practices
2. Prepare workplace	2.1. <i>Installation plan</i> is checked to identify requirements relevant to own work 2.2. <i>Tools and equipment</i> required for installation are located and checked for operational readiness 2.3.Area is cleared and prepared for operations 2.4.Power source is identified and accessed for power tools
3. Confirm cabinet readiness for assembly and installation	3.1. <i>Cabinet components</i> are identified and checked against delivery documentation and installation plan to confirm completeness 3.2.Cabinet components are transported from delivery vehicle to site in a manner that prevents injury to self and others or damage to cabinets 3.3.Cabinets and components are <i>assessed for quality</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Reading and applying work procedures and documents
- Housekeeping
- Using and applying workplace terminology
- Following safe work practices
- Using basic measurement equipment including rules, tape measures and levels
- Assembly skills
- Applying quality checks
- Recognising and responding to circumstances outside instructions or personal competence
- Using pre-checking and inspection techniques to ensure the tools and equipment are serviceable and ready to use

Required knowledge

- Safe work practices
- Documentation procedures
- Quality checking procedures
- Symbols and terminology on plans and drawings
- Features of cabinets and components

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<ul style="list-style-type: none"> • Assessment processes and techniques must be culturally appropriate and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Effectively and safely prepare on-site area for work operations • Efficiently and safely check and prepare required tools and equipment • Conduct quality checks on components • Complete workplace documentation
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to cabinet installation • specifications and work instructions
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application • Assessment may be applied under project related

EVIDENCE GUIDE

	<p>conditions (real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
--	---

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Installation plan	<p>Installation plan may include:</p> <ul style="list-style-type: none"> • drawings and specifications • component lists • cabinet layout and design information • installation instructions
Tools and equipment	<p>Tools and equipment may include:</p> <ul style="list-style-type: none"> • screws, nails, bolts and wall plugs • cabinets • components • glues and finishes • hand and power tools • measuring devices
Cabinet components	<p>Cabinet components may include:</p> <ul style="list-style-type: none"> • hinges, runners and latches • locks • handles • drawer runners and slides • legs, plinths and kickboards • door and drawer systems • cabinet sections
Quality assessment of components	<p>Quality assessment of components may include:</p> <ul style="list-style-type: none"> • checks for completeness, scratches, chips and markings, colour and texture variations

Co-requisite units

Co-requisite units		

LMFKB2002A Provide assistance in cabinet installation

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to assist in the on-site installation of cabinets for kitchens or bathrooms. Skills required include assembling cabinets, fitting components and fixing cabinets to wall and floor surfaces, and making a limited range of adjustments.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to a trade's assistant assisting in the installation of new or renovated kitchens and bathrooms.</p> <p>Cabinets can include flat pack, pre-cut, made to measure manufactured board or solid timber cabinets within a kitchen, bathroom or other domestic environment.</p> <p>All on-site installation work covered by this unit is undertaken under direction of a qualified tradesperson or supervisor.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lay out components and materials according to installation plan	1.1. Floor layout and individual cabinet construction requirements are determined from the installation plan or through checking with supervisor or tradesperson 1.2. Components are laid out to match sequence of assembly 1.3. Product codes and labels are checked for any special installation requirements
2. Assemble carcass	2.1. Joining methods are applied according to the installation plan or instructions from supervisor or tradesperson 2.2. Facings are completed 2.3. Carcass levels are checked 2.4. Components are attached 2.5. Minor adjustments are made according to instruction from supervisor or tradesperson 2.6. Carcasses are completed and checked for quality against instructions 2.7. Hand and power tools are used safely and according to operating instructions
3. Fix cabinets as specified by site supervisor or tradesperson	3.1. Cabinet fixing techniques are confirmed with supervisor or tradesperson according to site requirements 3.2. Cabinets are fixed to walls and floors according to the installation plan and instruction of supervisor or tradesperson 3.3. Components are fixed according to installation instructions
4. Finish work	4.1. Cabinets are cleaned and checked for quality 4.2. Site is cleaned and all tools put away 4.3. Project documentation is completed 4.4. Waste is disposed of according to environmental standards 4.5. Property is secured

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Safe use of hand and power tools listed in the range statement
- Reading and applying work procedures and documents
- Levelling and measurement
- Performing simple calculations
- Estimating approximate quantities
- Housekeeping
- Using and applying workplace terminology
- Following safe work practices
- Applying quality checks
- Sequencing operations
- Recognising and responding to circumstances outside instructions or personal competence
- Using pre-checking and inspection techniques to ensure the tools and equipment are serviceable and ready to use

Required knowledge

- Assembly processes for cabinets
- Safe work practices
- Documentation procedures
- Quality checking procedures
- Symbols and terminology on plans and drawings
- Features of cabinet components

Co-requisite units		

LMFKB3001A Identify processes in kitchen and bathroom projects

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge required to identify the processes used in new and renovated kitchen and bathroom projects. This includes key stages, service providers and quality elements that typically characterise a project concerned with the development of kitchens and bathrooms.
------------------------	--

Application of the Unit

Application of the unit	This unit applies to situations where a person must have the skill and knowledge to properly identify the stages and processes used in installing or renovating kitchen and bathrooms. Examples would be tradespeople engaged in kitchen and bathroom work, sales advisers and designers who advise clients in kitchen and bathroom projects.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify key stages of a kitchen and bathroom renovation project	1.1. Identify <i>processes engaged in a site assessment</i> for kitchen and bathroom renovation projects and determine relevance for work 1.2. Identify elements of a <i>project design brief for renovation work</i> 1.3. Identify <i>project plan requirements</i> 1.4. Identify contracting and legislative requirements for renovation work 1.5. Identify sequence of work for renovations
2. Identify key stages of a new kitchen and bathroom project	2.1. Identify the processes engaged in a site assessment for new kitchen and bathroom projects and determine relevance for work 2.2. Identify elements of a <i>project design brief for new work</i> 2.3. Identify project plan requirements 2.4. Identify contracting and legislative requirements for new work 2.5. Examine sequence for new work
3. Identify the services to be provided by other personnel and companies for kitchen and bathroom projects	3.1. Identify services to be provided by <i>tradespeople in kitchen projects</i> 3.2. Identify services to be provided by <i>tradespeople in bathroom projects</i> 3.3. Identify <i>other services</i> involved in kitchen and bathroom projects
4. Examine quality elements for kitchen and bathroom projects	4.1. Identify <i>key information resources</i> for kitchen and bathroom projects 4.2. Identify <i>manufacturing processes</i> used for cabinet construction and explain features and benefits of techniques 4.3. Identify sources for supply of materials, fixtures and fittings 4.4. Identify market standards for <i>finish quality</i> and relate to own work environment and requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Language literacy and numeracy to the level of interpreting workplace documents and technical information
- Using and applying workplace terminology
- Sequencing information
- Assessing quality standards

Required knowledge

- Roles of trades in the kitchen and bathroom industry
- Roles of other service providers to the kitchen and bathroom industries
- Planning processes relevant to the kitchen and bathroom industries
- Processes used for the construction of cabinets
- Features of cabinets and components used in kitchen and bathroom projects
- Supply chains for kitchen and bathroom components and materials
- Market and industry standards
- Qualities of renovation and new work projects

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<ul style="list-style-type: none"> Assessment processes and techniques must be culturally appropriate and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> Identify the key trades in the kitchen and bathroom industries and the services available Identify the sequence of operations and key considerations in new and renovation kitchen and bathroom project work Identify processes involved in kitchen and bathroom projects Determine market perceptions of quality in project outcomes
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> The application of competency is to be assessed in the workplace or realistically simulated workplace Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context Assessment is to comply with relevant regulatory or Australian Standards requirements The following resources should be made available: <ul style="list-style-type: none"> workplace location or simulated workplace information resources on kitchen and bathroom projects
<p>Method of assessment</p>	<ul style="list-style-type: none"> Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Processes engaged in a site assessment

Processes engaged in a site assessment may include:

- assessing structural aspects including flooring, walls, ceiling, roof construction, other structural features, windows, doors, and so on which may impact on design or installation work
- identifying architectural styles or features
- determining material use including use of asbestos
- gaining access
- services such as ventilation, plumbing, drainage, power and lighting
- waterproofing
- demolition requirements
- assessing building information, plans, drawings and materials data
- assessing levels and squareness of walls and floors
- conducting measurements

Project design brief for renovation work

Project design brief for renovation work may include:

- client needs and objectives
- client aims and objectives and criteria for evaluation
- milestones
- functional requirements
- budget, timeline, consultation requirements
- colour requirements

Project plan requirements

Project plan requirements may include:

- sequence of operations
- budget

RANGE STATEMENT	
	<ul style="list-style-type: none"> • timelines • allocation and delivery of resources • contingencies
Project design brief for new work	<p>Project design brief for new work may include:</p> <ul style="list-style-type: none"> • client or developer needs and objectives • criteria for evaluation • milestones • functional requirements • target market • budget, timeline, consultation requirements
Tradespeople in kitchen projects	<p>Tradespeople in kitchen projects may include:</p> <ul style="list-style-type: none"> • plumbers • tilers • cabinet makers • flooring specialists • builders • electricians
Tradespeople in bathroom projects	<p>Tradespeople in bathroom projects may include:</p> <ul style="list-style-type: none"> • builders • plumbers • tilers • waterproofing specialists • glaziers • electricians
Other services	<p>Other services may include:</p> <ul style="list-style-type: none"> • designers • architects • material and component suppliers • contractors • colour consultants • stone workers
Key information resources	<p>Key information resources may include:</p> <ul style="list-style-type: none"> • trade magazines • brochures • building organisations • design organisations • internet

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access the site	1.1. Review project brief and plans to guide <i>site assessment</i> 1.2. Arrange site access with client 1.3. Determine required access for materials and equipment 1.4. Follow on site occupational health and safety (OHS) procedures 1.5. Evaluate other work procedures being undertaken at the site for impact on installation work
2. Identify construction features that impact on cabinet installation	2.1. Identify <i>wall construction</i> and features and determine implications for cabinet installation 2.2. Identify <i>flooring construction</i> and features and determine implications for cabinet installation 2.3. <i>Other structural features</i> are analysed to determine implications for cabinet installation
3. Examine location of services	3.1. Identify and assess plumbing, water and drainage features that may impact on installation 3.2. Determine impact of <i>features of electrical service</i> on installation 3.3. Assess <i>other services</i> to determine impact on installation 3.4. Assess development plans to identify required changes or additional implications for installation
4. Identify installation requirements of appliances	4.1. Examine appliances to confirm location and placement in cabinets 4.2. Identify installation requirements for appliances from manuals and determine implications for cabinet installation
5. Determine implications for layout or design	5.1. Assess services and appliances to identify any compliance issues for layout or design 5.2. Use development plan and site assessment to determine implications for design and cabinet construction 5.3. Determine sequence for cabinet installation according to site findings
6. Document installation requirements	6.1. Document findings from site assessment to inform adjustments that are required to the design layout and cabinet construction 6.2. Record <i>information</i> using industry standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Language and literacy to the level of interpreting workplace documents, user manuals and required technical information
- Numeracy skills to the level of conducting accurate measurements and estimating quantities
- Using and applying workplace terminology
- Sequencing information
- Assessing quality standards
- Levelling
- Observation
- Accessing and applying the Building Code of Australia
- Ability to resource information appropriate to cabinet construction
- Documentation skills
- Applying safety procedures

Required knowledge

- Roles of trades in the kitchen and bathroom industry
- Planning processes
- Processes used for the construction of cabinets
- Features of cabinets and components used in kitchen and bathroom projects
- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for assessing a site
- Organisational and site standards, requirements, policies and procedures for assessing a site
- The role of Australian Standards and the Building Code of Australia
- Characteristics of materials, products and defects
- Procedures for documenting workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Problem identification and resolution techniques
- Basic building and architectural terminology
- Common structural and non-structural components of a residential building
- Materials and methods involved in interior refurbishment
- Local regulations/councils etc
- Construction techniques/ technologies
- Statutory planning regulations affecting kitchens and bathrooms

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<ul style="list-style-type: none"> Assessment processes and techniques must be culturally appropriate and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> Conduct a site assessment and identify all issues that will impact on the installation of cabinets Identify limitations of cabinet construction and implications for design Identify compliance issues for work Complete detailed documentation to inform installation Take accurate measurements
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> The application of competency is to be assessed in the workplace or realistically simulated workplace Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context Assessment is to comply with relevant regulatory or Australian Standards requirements The following resources should be made available: <ul style="list-style-type: none"> workplace location or simulated workplace tools required for site assessment plans, drawings and manuals relating to project
<p>Method of assessment</p>	<ul style="list-style-type: none"> Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application

EVIDENCE GUIDE

- Assessment may be applied under project related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Site assessment

Site assessment may include:

- assessing structural aspects including flooring, walls, ceiling, roof construction, other structural features, windows, doors etc which may impact on design or installation work
- determining material use including use of asbestos
- access
- services such as ventilation, plumbing, drainage, power and lighting
- waterproofing
- demolition requirements
- assessing building information, plans, drawings and materials data
- assessing levels and squareness of walls and floors
- conducting measurements

Wall construction

Wall construction may include:

- solid masonry
- stud frame
- load bearing members
- non-load bearing members
- bracing
- squareness
- level
- skirting boards

Flooring construction

Flooring construction may include:

- concrete slab
- timber
- steel
- under floor access
- squareness

RANGE STATEMENT	
	<ul style="list-style-type: none"> • levels • skirting boards
Other structural features	<p>Other structural features may include:</p> <ul style="list-style-type: none"> • beams • columns • structural damage • finish • ledges
Features of electrical service	<p>Features of electrical service may include:</p> <ul style="list-style-type: none"> • position and number of power outlets • adequacy of supply • data and communications cabling • location near other services
Other services	<p>Other services may include:</p> <ul style="list-style-type: none"> • gas, data, communications, plumbing, air extraction and conditioning and vents
Information	<p>Information may include:</p> <ul style="list-style-type: none"> • measurements • quotes • specifications • design adjustments

Co-requisite units

Co-requisite units		

LMFKB3004A Conduct on-site adjustments to cabinets and components

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills and knowledge to examine required cabinet adjustments, select appropriate techniques and make adjustments to pre-made cabinets in order to achieve accurate fit at site of installation. It includes conducting measurements to check accuracy of adjustments made.
------------------------	---

Application of the Unit

Application of the unit	This unit applies to work conducted by installers of cabinets in residential situations and is based on measurements taken at the site of installation. Cabinets may be custom made or mass manufactured and include complete components such as doors, shelves and drawers.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine required adjustment techniques	1.1. Obtain access to site according to project guidelines and occupational health and safety (OHS) procedures 1.2. Examine measurements and required adjustments 1.3. Apply <i>problem solving skills</i> to select techniques to conduct adjustments with minimal disruption to cabinet construction 1.4. Check cabinet design to ensure design and industry standards will be maintained with completion of cabinet adjustments
2. Make adjustments	2.1. Inspect and confirm cabinet markings to ensure accurate adjustments 2.2. Conduct <i>adjustments</i> using appropriate techniques and tools 2.3. Clean area and dispose of rubbish according to environmental standards
3. Confirm accurate fit	3.1. Conduct measurements to ensure cabinet readiness for installation 3.2. Measure edges and lines to ensure fit is straight and flush 3.3. Check doors, drawers, runners, handles and latches for correct alignment 3.4. Check tolerances to ensure standards are achieved 3.5. Complete <i>workplace documentation</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Language and literacy to the level of interpreting workplace documents and technical information
- Numeracy skills to the level of conducting accurate measurements and interpreting drawings
- Using measurement tools
- Using hand and power tools
- Levelling
- Observation
- Documentation skills
- Checking quality outcomes
- Applying safety procedures

Required knowledge

- Processes used for the construction and modification of cabinets
- Features of cabinets and components
- State or Territory OHS legislation, regulations, standards and codes of practice relevant to on-site work
- Characteristics of materials, products and defects
- Procedures for documenting workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Problem identification and resolution techniques

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<ul style="list-style-type: none"> Assessment processes and techniques must be culturally appropriate and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Problem solving skills

Problem solving skills may include but are not limited to:

- re-examining plans and drawings
- comparing measurements
- determining root cause
- applying product knowledge to situation
- discussing issue with colleagues
- comparing alternative techniques
- assessing pros and cons of options
- applying principles of construction to situation
- identifying associated hazards

Adjustments

Adjustments may include but are not limited to:

- planing
- sanding
- drilling
- screwing
- aligning
- gluing
- fixing

Workplace documentation

Workplace documentation may include but not limited to:

- design drawings and plans
- order forms
- quality documentation
- job forms
- specifications

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan cabinet construction	1.1. Complete or interpret drawings, specifications and customer instructions including design, tolerances, process, materials, finish and quantity 1.2. Identify and select <i>construction techniques</i> to be used in cabinet manufacture 1.3. Identify industry standards for cabinet construction 1.4. Plan construction and assembly sequence 1.5. Develop a cutting list 1.6. Identify <i>tools, machines and equipment</i> suitable for construction and check for safe and effective operation 1.7. Determine procedures for checking quality at each stage of the process 1.8. Clear work area and prepare for production
2. Select and prepare materials for cabinet construction	2.1. Identify features, benefits and limitations of <i>materials</i> used for cabinet construction 2.2. Identify <i>surface treatments</i> used for cabinets in a <i>range of applications</i> 2.3. Identify industry standards for materials used in cabinets 2.4. Select materials to meet the customer requirements 2.5. Prepare materials for use
3. Select and prepare cabinet components	3.1. Identify features, benefits and limitations of <i>components</i> used for cabinets in a range of applications 3.2. Identify industry standards for components used for cabinets 3.3. Select components to meet the customer requirements 3.4. Prepare components for use
4. Construct cabinets	4.1. Observe workplace health and safety requirements, including personal protection needs, throughout the work 4.2. Use tools, machines and equipment in accordance with safety requirements and manufacturers' specifications 4.3. Cut and form materials in accordance with the plan 4.4. Manufacture cabinets and check against set-outs for tolerances, fit and accuracy

ELEMENT	PERFORMANCE CRITERIA
	4.5. Check product against plans at identified checkpoints
5. Assemble cabinets	5.1. Assemble cabinets using components identified in construction plan 5.2. Attach components and check against set-outs for accuracy, fit, twist and distortion 5.3. Assemble and fit doors, drawers and shelves 5.4. Prepare product for final finish, including the removal of bruises, scratches, dents and marks 5.5. Clean work area and dispose of rubbish according to environmental standards 5.6. Complete workplace documentation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Language and literacy to the level of interpreting workplace documents and technical information
- Numeracy skills to the level of conducting accurate measurements and interpreting drawings
- Selecting and applying cabinet components
- Using measurement tools
- Using hand and power tools
- Applying construction and assembly techniques
- Preparing cutting list
- Checking quality outcomes
- Applying safety procedures

Required knowledge

- Processes used for the construction of cabinets
- Features of cabinets and components used in kitchen and bathroom and other residential projects
- State or Territory occupational health and safety (OHS) legislation, regulations, standards and codes of practice relevant to work
- Characteristics of materials, products and defects
- Procedures for documenting workplace records and information
- Appropriate mathematical procedures for measurement
- Problem identification and resolution techniques

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Construction techniques

Construction techniques may include:

- use of CNC or static machinery
- computer-aided manufacturing

Tools, machines and equipment

Tools, machines and equipment may include:

- CNC equipment
- static machines
- hand and power tools
- measuring devices

Materials

Materials may include:

- glass
- particleboard
- fibre board
- solid timber
- veneer
- vinyl
- laminates
- adhesives
- tops
- edges

Surface treatments

Surface treatments may include:

- lacquers, polishes and oils
- laminates
- paints

A range of applications

A range of applications must include:

- Kitchens or bathrooms
- Other domestic settings such as laundries

Components

Components may include:

- baskets
- rollers

RANGE STATEMENT

	<ul style="list-style-type: none"> • hinges • dowel • pins • cams • metal frames • connectors • patented devices • handles

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm customer requirements	1.1. Obtain and document <i>customer requirements</i> for cabinet design features 1.2. Identify <i>design requirements</i> for cabinet with the customer 1.3. Locate and obtain plans, drawings and any design details relevant to the customer enquiry 1.4. Confirm services available and appropriate to the customer's needs with the customer
2. Provide technical information on design options	2.1. Explain cabinet design options to the customer noting specific features and benefits of the layout and inclusions 2.2. Access and research <i>technical information</i> on all cabinet designs available to ensure advice to customers is informed 2.3. Provide design brochures, drawings and other advisory materials to the customer 2.4. Explain construction, installation and ordering details of the designs to the customer
3. Provide technical information on cabinet components	3.1. Access and research technical and product information on all cabinet fixtures, fittings and finishes to ensure advice to customers is informed 3.2. Locate and provide brochures, drawings and information on cabinet components and products to the customer as required 3.3. Communicate features, benefits and limitations of available components that are suitable to the <i>context</i> required by the customer 3.4. Discuss application methods, manufacturing processes and environmental impact of cabinet components with the customer as required
4. Suggest best design package to meet customer needs	4.1. Apply <i>elements and principles of design</i> to examine the appropriateness of cabinet products for customer requirements 4.2. Discuss options with the customer to ascertain responses and preferences 4.3. Provide advice on best option to meet customer requirements 4.4. Confirm preferences with the customer 4.5. Determine required quantities based on manufacturer specifications, plans and customer

ELEMENT	PERFORMANCE CRITERIA
	needs 4.6. Calculate costs according to work policy and procedures
5. Complete cabinet design documentation	5.1. Record customer details and check for accuracy 5.2. Document details of design, fixtures, fittings and finishes for customer according to workplace practice 5.3. Document any special requirements or conditions 5.4. Place formal order and provide documentation to the customer

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Language and literacy to the level of interpreting workplace documents and product information
- Numeracy skills to the level of estimating approximate quantities and calculating costs
- Using and applying workplace terminology
- Following safe work practices
- Applying quality practices
- Communication skills
- Sales skills
- Recognising and responding to circumstances outside instructions or personal competence
- Interpreting customer information
- Providing information and advice relevant to customer requirements
- Documentation
- Using computer operations for internet access and searches
- Analysing performance characteristics

Required knowledge

- Construction processes for cabinet designs
- Safe work practices
- Documentation procedures
- Quality checking procedures
- Symbols and terminology on plans and drawings
- Features of cabinet components
- Principles and elements of design
- Characteristics of materials, products and defects
- Effects of finishes and finishing techniques
- Appropriate mathematical procedures for estimation and measurement

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Customer requirements

Customer requirements may include:

- client aims and objectives and criteria for evaluation
- function
- budget
- timelines
- consultation requirements
- brand preferences

Design requirements

Design requirements may include:

- storage
- appliances
- colour
- materials
- finish
- vanity, toilet, shower and bath requirements
- components such as hinges, runners, handles, latches, taps, splashbacks and bench tops
- components such as taps, spas, basins and bath
- doors, drawers and cabinet styles
- dimensions
- usage patterns
- quality

Technical information

Technical information may include:

- cabinet standards for application in kitchens, bathrooms and other domestic settings
- product codes
- dimensions
- characteristics and qualities
- environmental specifications
- installation requirements
- ergonomic specifications

RANGE STATEMENT	
	<ul style="list-style-type: none"> • quality • operation • warranties • available colour range • price • construction of products • care and maintenance requirements • stain and dirt resistance • product performance • colour fastness, colour fading properties • availability
Context	Context must include: <ul style="list-style-type: none"> • kitchen or bathroom and other domestic settings
Elements and principles of design	Elements and principles of design may include: <ul style="list-style-type: none"> • line, shape, form, texture and colour • balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, emphasis, proximity, alignment, space, ergonomics, arrangement, aesthetic relations, tension and development methods

---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify common production processes for the manufacture of cabinets	1.1. Identify range of cabinets on the market and describe quality features 1.2. Identify industry standards for cabinets 1.3. Describe computer numerical control (CNC) processes 1.4. Describe computer aided manufacture (CAM) processes 1.5. Describe custom manufacture principles and processes 1.6. Identify common techniques used for joining, assembling and finishing cabinets
2. Identify features and limitations of construction methods	2.1. Identify features and limitations of mass manufactured cabinets 2.2. Identify features and limitations of custom made cabinets 2.3. Identify range of variations able to be achieved with cabinet construction methods
3. Identify installation methods used	3.1. Identify <i>methods used to install cabinets</i> 3.2. Explain importance of <i>site analysis</i> and identify common impacts on designs 3.3. Identify <i>expertise and skills engaged in installation</i> 3.4. Identify <i>other considerations in cabinet installation</i>
4. Determine implications for kitchen and bathroom design	4.1. Identify <i>implications of appliances</i> on cabinet construction and installation 4.2. Identify <i>implications of services</i> on cabinet construction and installation 4.3. Identify implications of cabinet construction methods and installation requirements for designs
5. Identify sourcing requirements for cabinets	5.1. Access and apply information sources on suppliers for cabinets and components 5.2. Determine <i>requirements for ordering cabinets</i> and components 5.3. Determine supplier timelines and delivery requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Language and numeracy skills to the level of interpreting workplace documents and information
- Applying safety procedures
- Research skills
- Comparing findings
- Assessing implications

Required knowledge

- Processes used for the construction and installation of cabinets
- Features of cabinets and components used in kitchen and bathroom projects
- State or Territory occupational health and safety (OHS) legislation, regulations, standards and codes of practice relevant to kitchen and bathroom cabinets and components
- Characteristics of materials, products and defects
- Information resources

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<ul style="list-style-type: none"> Assessment processes and techniques must be culturally appropriate and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> Access and interpret product information Determine limitations and benefits of different methods used in the construction and installation of cabinets Identify implications for design Identify requirements for sourcing and ordering cabinets and components
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> The application of competency is to be assessed in the workplace or realistically simulated workplace Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context Assessment is to comply with relevant regulatory or Australian Standards requirements The following resources should be made available: <ul style="list-style-type: none"> workplace location or simulated workplace work related information resources
<p>Method of assessment</p>	<ul style="list-style-type: none"> Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application Assessment may be applied under project related conditions (real or simulated) and require evidence of

EVIDENCE GUIDE

	<p>process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine kitchen work and traffic flow patterns	1.1. Key work zones for kitchens are identified and prime activities and associated appliances determined 1.2. Traffic flow patterns and considerations for kitchen space are identified 1.3. Work triangle concepts are identified and applied to modern kitchen design
2. Examine layout options	2.1. Location of services is identified and implications for relocation determined 2.2. Range of layout options and work and traffic flow implications are examined 2.3. Suitability of layout options for kitchen space are analysed and limitations and benefits determined
3. Determine storage options	3.1. Storage requirements of kitchen work zones are identified 3.2. Storage options are examined for suitability to kitchen spaces and implications for design determined 3.3. Dimensions and space requirements of standard storage options are identified for design
4. Assess kitchen ergonomic considerations	4.1. Basic principles of ergonomics are used to determine space planning implications 4.2. Requirements for working height are identified 4.3. Manual handling considerations for kitchen design are identified 4.4. Storage principles are considered to determine implications for design 4.5. Special considerations for children, older people and/or disabled people are taken into account where applicable
5. Examine requirements for kitchen appliances	5.1. Key appliances used in kitchens are identified and standard dimensions, clearances and required services determined 5.2. Manufacturer guidelines and statutory regulations regarding the placement and installation of appliances are identified and implications for design examined 5.3. Work space implications for appliances are analysed and implications for design determined

ELEMENT	PERFORMANCE CRITERIA
6. Determine planning considerations for services	<p>6.1. Regulations regarding the location of power outlets and lighting, and electrical work undertaken are identified</p> <p>6.2. Regulations regarding the location of plumbing outlets and plumbing work undertaken are identified</p> <p>6.3. Regulations regarding the location of gas outlets and gas plumbing work undertaken are identified</p> <p>6.4. Implications of service requirements on kitchen design are determined</p> <p>6.5. <i>Lighting sources</i> are examined and requirements for kitchen design determined</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Accessing and interpreting workplace information
- Applying safety procedures
- Research skills
- Assessing implications
- Translating information to space planning

Required knowledge

- Features of kitchen components
- State or territory occupational health and safety (OHS) legislation, regulations, standards and codes of practice relevant to kitchen designs
- Characteristics of storage, appliance, lighting and service options
- Information resources

Evidence Guide

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Key work zones for kitchens

Key work zones for kitchens may include:

- food storage zone
- food preparation zone
- clean up zone
- bench top clearances
- landing space

Considerations

Considerations may include:

- floor clearances
- traffic clearances
- space requirements for reaching, bending and crouching
- eating space requirements
- additional space requirements for areas such as computers, entertaining and laundry
- number and types of users of kitchen

Range of layout options

Range of options may include:

- single wall set out
- galley
- L-shape
- U-shape
- island

Storage requirements

Storage requirements may include:

- food storage - perishable and non-perishable
- food preparation - utensils, appliances, cookware, condiments, ovenware and cookbooks
- clean up - garbage bin, storage containers, cleaning items and products
- additional storage - crockery, glassware, serving platters and small appliances

RANGE STATEMENT	
Storage options	<p>Storage options may include:</p> <ul style="list-style-type: none"> • cupboards and drawers • wire shelving • baskets • mobile storage unit • railing • shelves • pantry • swing out cupboards • extension worktops • base cupboards • overhead cupboards
Basic principles of ergonomics	<p>Basic principles of ergonomics may include:</p> <ul style="list-style-type: none"> • clearance - minimum spatial tolerances for access • reach - maximum spatial tolerances and workspace envelope
Storage principles	<p>Storage principles may include:</p> <ul style="list-style-type: none"> • importance of items • frequency of use • function • sequence of use
Key appliances	<p>Key appliances may include:</p> <ul style="list-style-type: none"> • cook top • oven • freestanding stove • microwave and convection oven • exhaust system • refrigerator • coffee machine • sink • dishwasher
Lighting sources	<p>Lighting sources may include:</p> <ul style="list-style-type: none"> • incandescent • fluorescent • halogen or dichroic • natural light

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify requirements of kitchen design brief	1.1. Design brief is reviewed to determine required outcomes for kitchen design 1.2. Parameters for the project are assessed and confirmed 1.3. Resources are selected appropriate to work requirements and checked for operational effectiveness
2. Identify types and features of kitchen materials, components and finishes	2.1. Materials used in <i>kitchen applications</i> are examined and suitability to meet design brief determined 2.2. Components used in kitchen applications are examined and suitability to meet design brief determined 2.3. Finishes used in kitchen applications are examined and suitability to meet design brief determined 2.4. New material technologies are researched and suitability to meet design brief determined
3. Identify suitable options to meet design brief	3.1. Materials, components and finishes that meet client brief requirements are identified 3.2. Options are selected for further analysis and design development
4. Evaluate the functional and aesthetic characteristics of selection	4.1. Elements and principles of design are used to examine the appropriateness of materials, components and finishes for client brief requirements 4.2. Application methods and available expertise for the desired effect are assessed 4.3. Costs of materials, components and finishes are assessed and compared 4.4. Environmental and sustainability considerations for materials, components and finishes are examined 4.5. Aesthetic qualities are assessed with regard to desired effect 4.6. Longevity and restorability of materials, components and finishes are researched 4.7. Hazards associated with the use and application of materials, components and finishes are researched 4.8. Quality of materials, components and finishes are assessed
5. Select and	5.1. Materials, components and finishes are selected to

ELEMENT	PERFORMANCE CRITERIA
recommend materials, components and finishes	meet client brief requirements 5.2. Presentation of research information is made, highlighting the findings and rationale for selection 5.3. A range of <i>presentation strategies</i> is included in presentation
6. Document recommendations	6.1. Specifications of selection are documented 6.2. Samples are stored for further use 6.3. Selection is integrated into design drawings and plans

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Accessing and interpreting workplace information
- Applying safety procedures
- Applying research techniques
- Collecting, organising and understanding information related to work briefs, basic plans and safety procedures
- Communicating ideas and information
- Accurately recording and maintaining information
- Using computer operations for internet access and searches
- Analysing performance characteristics
- Comparing findings
- Communicating with suppliers
- Maintaining accurate records
- Clarifying and checking task-related information
- Carrying out work according to occupational health and safety (OHS) practices
- Recognising and responding to circumstances outside instructions or personal competence
- Using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- Maintaining current knowledge of materials and components used in kitchens
- Using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- Features of kitchen materials and components
- State or territory OHS legislation, regulations, standards and codes of practice relevant to kitchen designs
- Information resources
- Elements and principles of design
- Research techniques
- Effects of finishes and finishing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Problem identification and resolution techniques

Evidence Guide

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Design brief

Design brief may include:

- client needs and objectives
- milestones
- functional requirements
- budget, timelines and consultation requirements
- colour requirements

Parameters

Parameters may include:

- budget range
- colour range
- timelines
- space dimensions
- structural characteristics
- services

Resources

Resources may include:

- computers, computer software, design software, computer-aided drafting (CAD) software, colour boards, storyboards, swatches, Pantone Matching System (PMS), journals (directions magazines), artistic equipment and products and model making equipment

Materials

Materials may include:

- particleboard
- high moisture resistant particleboard
- plywood
- high pressure laminate
- low pressure laminate
- vinyl/foil wrap
- resin-based solid surfaces
- solid stone
- reconstituted stone
- timber

RANGE STATEMENT	
	<ul style="list-style-type: none"> • timber veneer • paint • glass • stainless steel • tiles
Kitchen applications	<p>Kitchen applications may include:</p> <ul style="list-style-type: none"> • bench tops • splashbacks • drawers • cabinets • kickboards/plinths/legs • floors • walls • shelving
Components	<p>Components may include:</p> <ul style="list-style-type: none"> • taps • handles • runners • hinges • rails • sinks • baskets
Finishes	<p>Finishes may include:</p> <ul style="list-style-type: none"> • edging and edge profiles • paints, waxes, lacquers, stains, pigments, oils, plastic coatings, veneers, ceramics, stone, glass, textiles and other textures
Elements and principles of design	<p>Elements and principles of design may include:</p> <ul style="list-style-type: none"> • line, shape, form, texture and colour • balance, proportion (symmetry, asymmetry), harmony, contrast, pattern, movement, rhythm, unity, style, focus, scale, emphasis, proximity, alignment, space, ergonomics, arrangement, aesthetic relations, tension and development methods
Hazards	<p>Hazards may include:</p> <ul style="list-style-type: none"> • toxins and gases released by some finishes • glues and materials which may be harmful to

RANGE STATEMENT	
	people if not used correctly
Presentation strategies	Presentation strategies may include: <ul style="list-style-type: none"> • materials and concept boards • swatches and samples • quotes • drawings • models • plans

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Identify and document available services</p>	<p>1.1. Access is arranged with client</p> <p>1.2. On-site occupational health and safety (OHS) procedures are followed</p> <p>1.3. Plumbing, water outlets and drainage features are located and documented on site diagrams or plans</p> <p>1.4. Electrical and data outlets are located and documented on site diagrams or plans</p> <p>1.5. Location and type of lighting sources are located and documented on site diagrams or plans</p> <p>1.6. Type and capacity of services are identified and details documented</p> <p>1.7. Measurements are taken to inform layout documentation</p> <p>1.8. Industry symbols and protocols are used to document information about services</p>
<p>2. Examine implications of services on design</p>	<p>2.1. Design brief, drawings and plans are examined to determine intentions or options for services</p> <p>2.2. Details obtained from site are assessed against design information</p> <p>2.3. Appliances identified in the design brief are identified and implications on services examined</p> <p>2.4. Compliance issues relating to the location of services are identified</p> <p>2.5. Implications of current services on design are determined</p>
<p>3. Determine and document lighting and electrical system layout</p>	<p>3.1. Requirements of the lighting and electrical system layout are ascertained from the design brief</p> <p>3.2. Lighting is assessed for effect and suitability to functional and ambience requirements</p> <p>3.3. Performance and characteristics required of electrical products are assessed and reviewed</p> <p>3.4. Environmental considerations are analysed in respect of the lighting and electrical system layout</p> <p>3.5. Ergonomic, anthropometric and proxemic principles are assessed in respect of the lighting and electrical system layout and the intended products</p> <p>3.6. Costs associated with purchasing and obtaining the products are analysed and documented</p> <p>3.7. Electrical contractors are consulted as required to</p>

ELEMENT	PERFORMANCE CRITERIA
	confirm implications on design 3.8. Lighting and electrical system layout is determined to meet the design brief
4. Determine and document plumbing system layout	4.1. Requirements of the plumbing system are ascertained from the design brief 4.2. Performance and characteristics required of <i>plumbing products</i> are assessed and reviewed 4.3. Gas requirements are determined and included in system layout 4.4. Environmental considerations are analysed in respect of the plumbing system layout 4.5. Ergonomic, anthropometric and proxemic principles are assessed in respect of the plumbing system layout and the intended products 4.6. Costs associated with purchasing and obtaining the products are analysed and documented 4.7. Plumbing contractors are consulted as required to confirm implications on design 4.8. Plumbing layout is determined to meet the design brief
5. Complete layout documentation	5.1. <i>Sketches and drawings</i> are completed to identify the layout of electrical and lighting system and products 5.2. Sketches and drawings are completed to identify the layout of plumbing system and products 5.3. Sketches and drawings are completed to industry standards 5.4. Specifications are documented according to industry standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Accessing and interpreting workplace information
- Interpreting and applying workplace terminology and documentation protocols
- Measuring
- Accessing information on electrical, lighting and plumbing systems
- Interpreting user manuals
- Documentation skills
- Mathematical skills for estimating quantities
- Applying safety procedures
- Completing sketches and drawings
- Accessing contractors

Required knowledge

- Ergonomic, anthropometric and proxemic principles
- Industry symbols and protocols
- Planning processes
- State or territory OHS legislation, regulations, standards and codes of practice relevant to the full range of determining layout for kitchen and bathroom services
- Procedures for documenting workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Basic building and architectural terminology
- Range of kitchen products and service requirements
- Range of bathroom products and service requirements
- Statutory planning regulations affecting services in kitchens and bathrooms

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Identify available services and determine issues that will impact on design • Determine layout of services required to meet design brief • Complete industry standard drawings to identify the layout of services to meet design requirements
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • tools and equipment to determine and document layout requirements • plans, drawings and manuals relating to project
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application • Assessment may be applied under project related

EVIDENCE GUIDE	
	<p>conditions (real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Lighting sources	<p>Lighting sources may include:</p> <ul style="list-style-type: none"> • incandescent • fluorescent • halogen or dichroic • natural light
Type and capacity of services	<p>Type and capacity of services may include:</p> <ul style="list-style-type: none"> • number of outlets, controls and switches • capacity to service kitchen appliances and products • capacity to service bathroom appliances and products • capacity of household electrical load • adequacy of lighting
Implications of current services on design	<p>Implications of current services on design may include:</p> <ul style="list-style-type: none"> • requirements for relocation • relative costs associated with relocation • requirements for capacity increase • relative costs associated with increasing capacity • changes required for fixtures and fittings
Performance and characteristics	<p>Performance and characteristics may include:</p> <ul style="list-style-type: none"> • assessment of products to determine if they meet the requirements of the intended end use application and how well they do it • the durability and composition of the product
Electrical products	<p>Electrical products may include:</p> <ul style="list-style-type: none"> • refrigerator • stove • appliances

RANGE STATEMENT	
	<ul style="list-style-type: none"> • air conditioners • ventilation systems • hot water systems
Environmental considerations	<p>Environmental considerations may include:</p> <ul style="list-style-type: none"> • how the use of raw materials effects the ecology and environment and how its continued use will affect the area it has been sourced from • energy consumption in achieving the material • greenhouse gases created • waste levels • resource utilisation and transport effects • what impact will be felt by reducing or stopping material from the source
Costs	<p>Costs may include:</p> <ul style="list-style-type: none"> • the cost of contractors, products and materials together with the cost of obtaining them either locally, interstate or overseas
Plumbing products	<p>Plumbing products may include:</p> <ul style="list-style-type: none"> • water filters • tap ware and sinks • drainage • dishwasher • shower recesses • baths and spas • toilet and bidet • washing machines
Sketches and drawings	<p>Sketches and drawings may include:</p> <ul style="list-style-type: none"> • hand drawn images or ideation drawings completed freehand • drafted technical drawings • drawings produced on computer using computer-aided drafting (CAD) software packages

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine bathroom usage and traffic flow patterns	1.1. Key use zones for bathrooms are identified and prime activities and associated appliances, fixtures and fittings determined 1.2. Traffic flow patterns and considerations for space are identified
2. Examine layout options	2.1. Location of services is identified and implications for relocation determined 2.2. Range of layout options and traffic flow implications are examined 2.3. Suitability of layout options for space is analysed and limitations and benefits determined
3. Determine storage options	3.1. Storage requirements of bathrooms are identified 3.2. Storage options are examined for suitability to bathroom spaces and implications for design determined 3.3. Dimensions and space requirements of standard storage options are identified for design
4. Assess bathroom ergonomic considerations	4.1. Basic principles of ergonomics are examined and used to determine space planning implications 4.2. Requirements for working height are identified 4.3. Manual handling considerations for design are identified 4.4. Storage principles are considered to determine implications for design 4.5. Special considerations for children, older people and/or disabled people are taken into account where applicable
5. Examine requirements for bathroom appliances, fixtures and fittings	5.1. Key appliances, fixtures and fittings used in bathrooms are identified and standard dimensions, clearances and required services determined 5.2. Manufacturer guidelines and statutory regulations regarding the placement and installation of appliances, fixtures and fittings are identified and implications for design examined 5.3. Space implications for appliances, fixtures and fittings are analysed and implications for design determined
6. Determine planning considerations for	6.1. Regulations regarding the location of power outlets and lighting, and electrical work undertaken are

ELEMENT	PERFORMANCE CRITERIA
services	identified 6.2.Regulations regarding the location of plumbing outlets and plumbing work undertaken are identified 6.3.Regulations regarding the location of gas outlets and gas plumbing work undertaken are identified 6.4.Implications of service requirements on bathroom design are determined 6.5. <i>Lighting sources</i> are examined and requirements for bathroom design determined

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Accessing and interpreting workplace information
- Applying safety procedures
- Research skills
- Assessing implications
- Translating information to space planning

Required knowledge

- Features of bathroom components
- State or territory occupational health and safety (OHS) legislation, regulations, standards and codes of practice relevant to bathroom and laundry designs
- Characteristics of storage, appliance, fittings and fixtures, lighting and service options
- Information resources

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Access and interpret bathroom design information • Determine limitations and benefits of different spatial planning options used in bathroom design • Identify ergonomic considerations for bathroom designs • Identify regulatory considerations for bathroom designs • Determine the implications of appliances, fixtures, fittings, storage options and usage patterns on bathroom designs
<p>Context of and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • work related information resources
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and

EVIDENCE GUIDE

	<p>application</p> <ul style="list-style-type: none">• Assessment may be applied under project related conditions (real or simulated) and require evidence of process• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
--	---

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Key use zones for bathrooms

Key use zones for bathrooms may include:

- cleaning
- showering
- bathing
- washing
- drying
- ironing
- toiletry
- dressing
- laundry
- storage

Considerations

Considerations may include:

- floor clearances
- traffic clearances
- space requirements for reaching, bending and crouching
- additional space requirements for areas such as dressing areas, make up areas and ironing

Range of layout options

Range of layout options relates to:

- placement of showers, baths, spas, shower screens, toilets, bidets, basins, vanities and washing areas

Storage requirements

Storage requirements may include:

- linen
- cleaning materials
- make up and personal items
- jewellery
- toiletries

Storage options

Storage options may include:

- cupboards and drawers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • wire shelving • baskets • mobile storage unit • railing • shelves • pantry • swing out cupboards • extension worktops • base cupboards • overhead cupboards • fold out ironing boards
Basic principles of ergonomics	<p>Basic principles of ergonomics may include</p> <ul style="list-style-type: none"> • clearance - minimum spatial tolerances for access • reach - maximum spatial tolerances
Storage principles	<p>Storage principles may include:</p> <ul style="list-style-type: none"> • importance of items • frequency of use • function • sequence of use
Key appliances, fixtures and fittings	<p>Key appliances, fixtures and fittings may include:</p> <ul style="list-style-type: none"> • shower, shower screen and shower head • toilet and bidet • bath and spa • washing basket • washing machine, dryer and iron • vanities, taps and sinks • cabinets • towel racks
Lighting sources	<p>Lighting sources may include:</p> <ul style="list-style-type: none"> • incandescent • fluorescent • halogen or dichroic • natural light

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify requirements of bathroom design brief	<p>1.1. Design brief is reviewed to determine required outcomes for bathroom design</p> <p>1.2. Parameters for the project are assessed and confirmed</p> <p>1.3. Resources are selected appropriate to work requirements and checked for operational effectiveness</p>
2. Identify types and features of bathroom materials, components and finishes	<p>2.1. Materials used in bathroom applications are examined and suitability to meet design brief determined</p> <p>2.2. Components used in bathrooms are examined and suitability to meet design brief determined</p> <p>2.3. Finishes used in bathroom applications are examined and suitability to meet design brief determined</p> <p>2.4. New material technologies are researched and suitability to meet design brief determined</p>
3. Identify suitable options to meet design brief	<p>3.1. Materials, components and finishes that meet client brief requirements are identified</p> <p>3.2. Options are selected for further analysis and design development</p>
4. Evaluate the functional and aesthetic characteristics of selection	<p>4.1. Elements and principles of design are used to examine the appropriateness of materials, components and finishes for client brief requirements</p> <p>4.2. Application methods and available expertise for the desired effect are assessed</p> <p>4.3. Costs of materials, components and finishes are assessed and compared</p> <p>4.4. Environmental and sustainability considerations for materials, components and finishes are examined</p> <p>4.5. Waterproof quality of bathroom materials, components and finishes are examined</p> <p>4.6. Aesthetic qualities are assessed with regard to desired effect</p> <p>4.7. Longevity and restorability of materials, components and finishes are researched</p> <p>4.8. Hazards associated with the use and application of materials, components and finishes are researched</p> <p>4.9. Quality of materials, components and finishes are</p>

ELEMENT	PERFORMANCE CRITERIA
	assessed
5. Select and recommend materials, components and finishes	5.1. Materials, components and finishes are selected to meet client brief requirements 5.2. Presentation of research information is made, highlighting the findings and rationale for selection 5.3. A range of <i>presentation strategies</i> is included in presentation
6. Document recommendations	6.1. Specifications of selection are documented 6.2. Samples are stored for further use 6.3. Selection is integrated into design drawings and plans

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Accessing and interpreting workplace information
- Applying safety procedures
- Applying research techniques
- Collecting, organising and understanding information related to work briefs, basic plans and safety procedures
- Communicating ideas and information
- Accurately recording and maintaining information
- Using computer operations for internet access and searches
- Analysing performance characteristics
- Comparing findings
- Communicating with suppliers
- Maintaining accurate records
- Clarifying and checking task-related information
- Carrying out work according to occupational health and safety (OHS) practices
- Recognising and responding to circumstances outside instructions or personal competence
- Using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- Maintaining current knowledge of materials and components used in bathrooms
- Using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- Features of bathroom materials and components
- State or territory OHS legislation, regulations, standards and codes of practice relevant to bathrooms designs
- Information resources
- Elements and principles of design
- Research techniques
- Effects of finishes and finishing techniques
- Procedures for the recording, reporting and maintenance of workplace records and information
- Appropriate mathematical procedures for estimation and measurement
- Environmental protection requirements
- Established communication channels and protocols
- Problem identification and resolution techniques

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify costs involved in producing design	1.1. <i>Design brief</i> is reviewed to confirm required outcomes and inclusions and any other client requirements 1.2. Measurements and quantities are confirmed 1.3. Specification schedule is developed to itemise all inclusions 1.4. <i>Labour resources</i> and suppliers are identified and role in design implementation confirmed
2. Calculate project costs	2.1. Costs of materials, components and finishes are calculated 2.2. Labour costs, including design fees are calculated 2.3. <i>Overheads and hidden costs</i> are calculated 2.4. Costs of required plant and equipment are calculated 2.5. Supplier prices are compared to ensure most cost effective solutions 2.6. Options for reducing costs are identified
3. Prepare and present cost quotation	3.1. Costs are itemised and detailed on documentation according to industry standards 3.2. <i>Additional information</i> and samples are prepared as required to support quotation 3.3. Quote is presented to the client and details and costing options discussed to confirm all items documented 3.4. Quote is modified and finalised according to client response 3.5. Client agreement to the quote is obtained and documented
4. Prepare and present contract documentation	4.1. Inclusions, costs and parameters of the design are noted in the <i>contract documents</i> 4.2. Contract is prepared according to industry standards and presented and explained to client

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Accessing and reading workplace information including diagrams, drawings and design plans
- Applying safety procedures
- Applying research techniques
- Collecting, organising and understanding information related to design projects, costing schedules and contract preparation
- Communicating and negotiating ideas and information
- Accurately recording and maintaining information
- Using computer operations for internet access and searches
- Performing costing calculations
- Communicating with suppliers
- Clarifying and checking design-related information
- Carrying out work according to occupational health and safety (OHS) practices
- Using mathematical ideas and techniques to correctly complete measurements, calculate area and volume, and estimate other material requirements
- Maintaining current knowledge of materials and components used in design projects
- Using the workplace technology related to the use of tools including calculators, measuring and recording devices

Required knowledge

- State or territory OHS legislation, regulations, standards and codes of practice relevant to design contracts
- Information resources
- Research techniques
- Market rate for design fees, labour costs and material costs
- Appropriate mathematical procedures for estimation, costing and measurement
- Established communication channels and protocols
- Problem identification and resolution techniques
- Types of labour available

Evidence Guide

EVIDENCE GUIDE

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Design brief

Design brief may include:

- client needs and objectives
- milestones
- functional requirements
- budget, timelines and consultation requirements
- colour requirements
- specific inclusions

Labour resources

Labour resources may include:

- trades people
- contract services
- labourers

Overheads and hidden costs

Overheads and hidden costs may include:

- costs of providing service
- business overheads
- transport and delivery
- sales and marketing costs
- time delays or other timing factors
- demolition and rubbish removal costs
- supplier cost increases

Additional information

Additional information may include

- fliers and promotional information
- product samples
- drawings and plans
- product codes
- insurance information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine design requirements	1.1. <i>Client requirements</i> for <i>ancillary cabinetry</i> are identified and verified with the client 1.2. <i>Design parameters</i> are determined 1.3. Site measurements are taken and recorded 1.4. Design requirements and client information are documented
2. Develop design options	2.1. <i>Drawings</i> are completed to visually represent cabinet design ideas 2.2. Cabinet design ideas and <i>options</i> are discussed with client 2.3. Client preferences are determined and design option selected with the client
3. Develop design proposal	3.1. Measurements and dimensions are documented 3.2. <i>Structural features</i> and <i>components</i> are identified 3.3. <i>Construction and installation requirements</i> are determined 3.4. Labour requirements are determined 3.5. Costs involved to implement design are calculated 3.6. Design proposal is developed and specifications documented 3.7. <i>Design documentation</i> and quote is provided for client consideration

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Accessing and interpreting workplace information
- Applying safety procedures
- Conducting measurements and calculations
- Completing drawings
- Interpreting client requirements

Required knowledge

- Processes used for the construction and installation of cabinets
- Features and limitations of cabinets and components
- State or territory occupational health and safety (OHS) legislation, regulations, standards and codes of practice relevant to cabinets and components
- Information resources
- Costing techniques

Evidence Guide

EVIDENCE GUIDE

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Client requirements

Client requirements may include:

- location and fit
- measurements and dimensions
- purpose
- materials and finishes
- structural features
- budget
- timing

Ancillary cabinetry

Ancillary cabinetry may include:

- built-in entertainment units
- built-in cupboards
- shelving
- external kitchen components
- bathroom cabinets

Design parameters

Design parameters may include:

- quality finish
- relationship with other features of the room
- structural and functional requirements and limitations
- colour, style and tone

Drawings

Drawings may include:

- computer-aided drawings
- manual drawings
- sketches

Options

Options may include:

- materials
- structural features
- options to reduce costs
- variety of ways to achieve client requirements

RANGE STATEMENT	
Structural features	Structural features may include: <ul style="list-style-type: none"> • doors, shelving, drawers and rails • openings • legs, plinths and kickboards
Components	Components may include: <ul style="list-style-type: none"> • handles, knobs and drawers • hinges and runners
Construction and installation requirements	Construction and installation requirements may include: <ul style="list-style-type: none"> • use of screws, fixtures and patented devices • use of adhesives, clips and fasteners • use of sealants • material requirements • manufacturing processes • on-site production requirements • special production requirements such as use of specialised equipment • removal of furnishings • waste removal

LMFKB4008A Determine layout for laundry components

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to design and document the layout for a laundry, including placement of components such as cabinets, appliances and required laundry facilities. It requires an application of design principles to spatial considerations for a laundry.
------------------------	--

Application of the Unit

Application of the unit	This unit of competency applies to residential laundry design and may include the positioning of services and appliances and desired locations for plumbing and electrical outlets. The unit does not include designing any changes to plumbing, electrical or waterproofing, other than the location of required service.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm and analyse the laundry design requirements	1.1. Communication is established with the client and information regarding the client needs and expectations is obtained 1.2. Key requirements for laundry are assessed and confirmed and constraints determined 1.3. Project parameters are confirmed 1.4. Site analysis is conducted to assess laundry design requirements and limitations 1.5. Spatial considerations are determined specific to the site and client requirements
2. Examine layout options	2.1. Location of current services are identified 2.2. Components for inclusion in laundry are identified 2.3. Range of layout options and traffic flow implications are examined 2.4. Suitability of layout options for space is analysed and limitations and benefits determined 2.5. Environmental implications of the layout are assessed and options reviewed to ensure maximum energy efficiency is achieved 2.6. Access issues relating the laundry are identified and addressed in layout options
3. Select and specify laundry layout	3.1. Layout options are discussed with client and preferences selected 3.2. Required changes to service outlets and waterproofing are identified 3.3. Regulatory requirements relating to laundries are assessed to determine compliance 3.4. Laundry layout and components are documented with specifications detailed 3.5. Cost estimate is calculated and provided for client 3.6. Proposal is communicated effectively to the client and alterations negotiated and confirmed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Accessing and interpreting workplace information
- Applying safety procedures
- Communicating with clients
- Generating ideas
- Analysing
- Measuring and calculating
- Costing and associated calculations
- Negotiation skills
- Drawing skills
- Accurately recording and maintaining information relating to the project

Required knowledge

- Features of laundry designs and components
- State or territory occupational health and safety (OHS) legislation, regulations, standards and codes of practice relevant to laundry designs
- Characteristics of storage, appliance and service options
- Spatial planning considerations for laundry designs
- Information resources
- Drawing protocols and symbols

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Work with the client to develop and confirm a laundry design brief • Apply spatial considerations to laundry design • Develop laundry layout to meet client brief • Apply regulatory considerations for laundry designs • Document laundry design in drawings and specifications
Context of and specific resources for assessment	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • work tools and equipment • work related information resources
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application • Assessment may be applied under project related

EVIDENCE GUIDE

	<p>conditions (real or simulated) and require evidence of process</p> <ul style="list-style-type: none">• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances• Assessment may be in conjunction with assessment of other units of competency
--	---

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Key requirements

Key requirements may include:

- functional requirements
- colour, style and form preferences
- inclusions
- budget
- timelines
- desired effects
- materials, component and finishes
- quality
- specific conditions

Project parameters

Project parameters may include:

- upper and lower budget limits
- range of options
- specific conditions
- scope of brief
- approval to make changes
- design effect required by client
- functionality (short and long term)
- established timelines

Site analysis

Site analysis may include:

- identifying current laundry features and services
- measuring laundry dimensions and features
- identifying structural conditions and features of current laundry layout or which require building or engineering advice in a new laundry design
- observing general house style
- observing current inclusions and appliances

Spatial considerations

Spatial considerations may include:

- location and capacity of services

RANGE STATEMENT	
	<ul style="list-style-type: none"> • requirements of laundry appliances • usage and traffic flows typical to a laundry • laundry storage requirements • specific ergonomic or access requirements
Components	<p>Components may include:</p> <ul style="list-style-type: none"> • washing machine, dryer, ironing facilities, laundry sink and hanging facilities • storage areas, cabinets and shelving • tiling, fixtures and fittings • shower, shower screen, toilet and basin
Access issues	<p>Access issues may include:</p> <ul style="list-style-type: none"> • access for wheelchair and walking support devices • railing and supports • ergonomics required for specific disability, aging, and/or health issues
Documentation	<p>Documentation may include:</p> <ul style="list-style-type: none"> • product information • client information • sketches, drawings - elevations, sections, plans and perspectives • photos • brochures • computer-aided design presentations
Specifications	<p>Specifications may include:</p> <ul style="list-style-type: none"> • measurements and dimensions • fixtures and fittings • product codes • materials • components • appliances

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design variations, tolerances, process, materials, finish and quantity 1.2. Fabrication and assembly sequence is planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Preparatory drawings/set-outs for tasks are confirmed 1.7. Materials are selected following work instructions 1.8. Tools and equipment suitable for fabrication are identified and checked for safe and effective operation
2. Complete fabrication	2.1. Material is prepared and set out according to work instructions and components are marked according to workplace procedures 2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications 2.3. Components are prepared and checked against set-out and job requirements 2.4. Components are fabricated using fastenings and adhesives 2.5. Assembly process is undertaken according to workplace procedures 2.6. Fabricated product is checked for compliance with specifications 2.7. Item is finished in accordance with work instructions
3. Finalise operation and maintain equipment	3.1. Work area is cleaned and hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures 3.2. Off-cuts and unused materials are collected and stored for reuse or disposed following workplace procedures 3.3. Waste and scrap materials are dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination with site supervisor, other workers and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate fabrication problems, avoid re-working and wastage
- use the limited workplace technology related to this fabrication, including tools, equipment, materials and measuring devices

Required knowledge

- the interpretation of production plans and drawings
- workflow in relation to mattress and base fabrication
- identification of hand and/or power tools, materials, equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work instructions and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - achieve required product quality
- Fabricate and finish at least one basic mattress and base product which requires the use of:
 - quilted fabric
 - mattress-making hand tools and equipment
 - springs or a spring unit
 - sewing machines
- Work effectively with others

Resource implications

Access to plans, tools, equipment, materials, a work area and a specified project.

Method of assessment

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be conducted in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances, dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work involves reading and interpreting plans, using hand and power tools, operating basic machinery, applying quality requirements and applying product finishing techniques and materials • Work is conducted under supervision and guidance
<p>Basic mattress product may include:</p>	<ul style="list-style-type: none"> • mini (dog) mattress • mattress cover • foot stool (inner spring) • headboard • mini (seat) mattress <p>Project is to be determined in consultation with supervisor/teacher.</p>
<p>Tools and equipment may include, but are not limited to:</p>	<ul style="list-style-type: none"> • measuring tapes or rules • cordless drills/screwdrivers • scissors • thread • needles • fabric cutter • foam cutter • staple lifters • hog ring pliers • files and rasps

RANGE STATEMENT	
	<ul style="list-style-type: none"> trimming knife
Machines may include, but are not limited to:	<ul style="list-style-type: none"> sewing machines
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> quilted fabric spring units foam springs timber manufactured board border wire hog rings thread needled felt stabilising springs
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> Workplace procedures relating to the use of tools and equipment Work instructions, including job sheets, plans, drawings and designs Workplace procedures relating to reporting and communication Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools	1.1.Types of hand and power tools and their functions identified 1.2.Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3.Sources of power supply recognised
2. Select hand tools	2.1.Hand tools selected are consistent with needs of the job 2.2.Selected hand tools are checked for serviceability and safety and any faults reported to supervisor 2.3.Equipment is selected to hold or support material for hand tools application where applicable
3. Use hand tools	3.1.Material is located and held in position for hand tool application 3.2.Hand tools are safely and effectively used according to their intended use 3.3.Hand tools are safely located when not in immediate use
4. Select power tools	4.1.Power tools are selected consistent with needs of the job in accordance with conventional work practice 4.2.Power tools are visually checked for serviceability/safety in accordance with OHS requirements and any faults reported to supervisor
5. Use power tools	5.1.Material is located and held in position for power tool application as applicable 5.2.Power tools are safely and effectively used in application processes 5.3.Power tools are safely located when not in use
6. Clean up work area and tools	6.1.Tools are cleaned, maintained and stored 6.2.Equipment is cleaned, maintained and stored 6.3.Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate other material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use workplace technology related to the operation and maintenance of hand and power tools

Required knowledge

- types, characteristics, uses, limitations and maintenance requirements of hand tools commonly used in mattress and base production
- types, characteristics, uses, limitations and maintenance requirements of power tools commonly used in mattress and base production
- workplace safety requirements and OHS legislation
- workflow procedures within the workplace

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate and apply relevant information related to hand and power tools
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Adopt and carry out correct procedures prior to and during use of hand and power tools
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

Mattress and base sector hand and power tools, materials used in the manufacturing and installation of furnishing products.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and should be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances, dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate skill, accuracy and dexterity in the application of tools to work tasks
<p>Hand tools for mattress and base making are to include:</p>	<ul style="list-style-type: none"> • scissors • screwdrivers • measuring and marking equipment • staple lifters • pliers • files and rasps • trimming knives • needles
<p>Hand tools for mattress and base making may also include:</p>	<ul style="list-style-type: none"> • hand saws • hammers • allen keys • spring benders
<p>Power tools for mattress and base making are to include:</p>	<ul style="list-style-type: none"> • staple gun • fabric cutter • foam cutter • lightening cutter • panel cutter • clip guns • glue guns • hog ring gun • long tom

RANGE STATEMENT	
	<ul style="list-style-type: none"> • sewing machines
Power tools for mattress and base may also include:	<ul style="list-style-type: none"> • nail guns • drill • jig saw • circular saw
Fault reporting	Reporting of faults in the operation of hand and power tools may be verbal or written to the appropriate person
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for base assembly	1.1. Specifications are used to determine job requirements, including design, tolerances, process, materials, finish and quantity 1.2. Assembly sequence is planned 1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.4. Procedures are determined for checking quality at each stage of the process 1.5. Fixing devices are selected in line with work instructions and type of materials to be joined 1.6. Components, hardware, fittings and attachments are collected 1.7. Tools and equipment suitable to the fixing method are selected and checked for safe operation 1.8. Appropriate jigs are selected
2. Assemble base components	2.1. Components are laid out and assembled using jigs and appropriate fastenings 2.2. Hand and/or power tools, equipment are used as required 2.3. Assembled base is checked for compliance with specifications 2.4. Spring grid/unit is attached to base 2.5. Fabric is upholstered to base according to specifications 2.6. Base is finished to eliminate all excess materials 2.7. Bases which do not meet quality specifications are repaired or tagged for further processing or recycling/disposal
3. Identify quality requirements	3.1. Process is monitored and conditions which may affect quality standards are noted 3.2. Variations to normal activities are reported within workplace procedures 3.3. Authorised changes in standard operating procedures and work order or instructions are implemented 3.4. Workplace required documentation is completed and stored following appropriate procedures
4. Clean work area/s and maintain	4.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace OH&S

ELEMENT	PERFORMANCE CRITERIA
equipment	procedures 4.2. Waste and scrap is removed following workplace procedures 4.3. Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures 4.4. Equipment and work area clean-up is maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- use pre-checking and inspection techniques to anticipate assembly problems, avoid re-working and avoid wastage
- use the limited workplace technology related to the assembly, including tools, equipment, materials and measuring devices

Required knowledge

- the interpretation of plan representation of base design
- identification of hand and/or power tools, materials, equipment, processes and procedures
- workflow in relation to base production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate relevant information
- Apply safe handling requirements for equipment and products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Assemble base components to construct at least one sprung base unit
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource implications

Access to plans, hand and/or power tools, equipment, materials, jigs, appropriate machinery, and a suitable work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope	This unit covers the assembly of components for the construction of bases for mattresses. It includes the use of timber platforms, stabilising spring, coil springs, grid wires, foam, padding and border wire
Unit context	<ul style="list-style-type: none"> • Work is carried out in accordance with statutory requirements, organisation insurance requirements, OHS legislation, environmental legislation, workplace procedures and relevant health regulations • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the assembly of bases for mattresses • Competency may be demonstrated in workplaces involved in the manufacture of mattresses, bases and furniture components
Personal protective equipment	<ul style="list-style-type: none"> • Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • measuring tapes or rules • scissors • staple gun • pincers • long-nose pliers • hammers • mallets • squares • bevels • chisels • plane • hand saws • power saws • power drills/screwdrivers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • clamps and screwdrivers
Materials to be used may include, but are not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • fabrics • grid wires • glues • screws • nails • dowels • coil springs • foam • padding • stabilising springs • border wire
Assembled base specification checks are to include:	<ul style="list-style-type: none"> • alignment and squareness • correct number and fitting of fasteners • hardware • fittings and attachments and conformity to work instruction and quality requirements
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work operations	1.1. Specifications concerning design, fabrics and finish are confirmed with designer/client, as required 1.2. Workplace health and safety requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 1.3. Suitable work area is selected, tidied and cleaned of any contaminants 1.4. Appropriate equipment and tools are selected and checked for the required fitting and assembly process
2. Select and inspect fabrics and components	2.1. Fabric panels are checked in terms of quantity, quality, contaminants, size, pattern and consistency 2.2. Grade of foam is selected and checked in accordance with work order 2.3. Appropriate padding and springs are selected and checked
3. Assemble components and fit fabric cover	3.1. Work pieces are laid out in sequence according to specifications, construction process and workplace procedures 3.2. Padding and underlay materials are attached to spring unit using appropriate enterprise techniques and equipment 3.3. Covering fabrics are applied to mattress ensuring: 3.4. Patterns, naps, sheens, direction of pattern, pattern repeat and finished side of the materials are positioned appropriate to the design 3.5. Fabric finish over the spring unit is smooth and consistent 3.6. Weaving lines are straight 3.7. Finish of applied fabric is checked against quality standards
4. Clean work area/s and maintain equipment	4.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace OHS procedures 4.2. Waste and scrap is removed following workplace procedures 4.3. Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures 4.4. Equipment and work area clean-up is maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, assembly plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- use pre-checking and inspection techniques to anticipate assembly problems, avoid re-working and wastage
- use the limited workplace technology related to the assembly, including tools, equipment, materials and measuring devices

Required knowledge

- work requirements, including workplace standards
- fabric types and characteristics, common faults and inspection procedures
- padding/underlay materials and spring units
- risks to health from repetitive actions and prevention strategies
- design features of the finished furnishing items

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and select materials used and any special handling requirements for those materials
- Assemble mattress components to construct at least the following:
 - one pillow top mattress
 - one standard sprung mattress
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate equipment and tools, plain and patterned fabrics, padding materials, spring units, fixing materials and tools, work order, workplace information, including work procedures and equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

This unit covers work involving the assembly of components to produce mattresses

Materials and components may include but are not limited to:

- spring units
- plain and patterned fabric
- padding materials
- foam

Unit context

- Work is carried out in accordance with statutory requirements, organisation insurance requirements, OHS legislation, environmental legislation, manual handling procedures and relevant health regulations
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the assembly of mattress components
- Work may be performed in workplaces which are involved in the manufacture or restoration of mattresses and base units

Tools and equipment may include, but are not limited to:

- glues
- staples
- buttons
- scissors
- measuring and marking equipment
- staple lifters
- pliers
- trimming knife
- needles
- spring benders
- clip guns
- staple guns
- glue guns
- long tom
- foam cutter
- fabric cutter

RANGE STATEMENT	
	<ul style="list-style-type: none"> • sewing machines
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operations of tools • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work operations	1.1. Specification sizes are read and interpreted to identify required fabrics, number of items to be cut and required equipment 1.2. Cutting requirements or other instructions are noted and required guides on the cutting table are identified 1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.4. Suitable work area is selected, tidied and cleaned of any contaminants 1.5. Appropriate equipment and tools are selected for the fabrics and type of materials 1.6. Scissors and any other cutting equipment appropriate for the fabric are selected and checked prior to use for sharpness, set operation and safe condition
2. Prepare materials for cutting	2.1. Fabrics are selected to suit application, inspected for flaws and appropriate finish 2.2. Naps, direction of pattern, pattern repeat and finished side of the materials are identified 2.3. Fabrics are laid out smooth and square ready for cutting 2.4. Patterns are laid out following work procedures and instructions using location marks on the pattern and other instructions to match specifications 2.5. Measurements are made and appropriate adjustments are made 2.6. Tools and equipment are checked for operation
3. Complete cutting operations	3.1. Required cutting operations are completed to cut out materials following work instructions 3.2. Cut fabrics are folded, protected and despatched to next process following workplace procedures 3.3. Unused materials are stored as required 3.4. Workplace required documentation is completed and stored following appropriate procedures 3.5. Work area is cleaned and damaged tools tagged as required 3.6. Waste is collected and bundled for recycling/reuse as required 3.7. Tools and equipment are cleaned, maintained and returned to storage area

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use workplace technology related to the layout out of pattern and cutting fabrics, including tools, equipment, materials and measuring devices

Required knowledge

- fabric types, common faults and inspection procedures
- design features of finished mattress and/or base items related to laying out patterns and cutting fabrics
- work requirements, including workplace standards
- risks to health from repetitive actions and prevention strategies

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling practices for equipment, products and materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify materials used and any special cutting requirements
- Measure accurately and cut fabrics to required size and accuracy covering at least three different fabric types or pattern styles
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate fabric cutters, scissors and tools, fabrics, work order, workplace information, including work procedures and equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work operations	1.1. Specifications for assembly of springs are confirmed, including: 1.2. number of springs for size of mattress 1.3. type of springs for application 1.4. layout of springs 1.5. assembly procedures 1.6. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.7. Suitable work area is selected, tidied and cleared of any contaminants 1.8. Appropriate equipment and tools are selected and checked for the required fitting and assembly process
2. Operate machinery to assemble spring units	2.1. Machine is checked for safe and effective operation. 2.2. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions 2.3. Machine start up procedures are carried out in accordance with manufacturer instructions 2.4. Machine is operated in accordance with its designated capacity and purpose, tooling requirements and to manufacturer recommendations 2.5. Springs are machine joined in accordance with manufacturer instructions, safe handling procedures and standard workplace operating procedures 2.6. Machine operation is monitored to ensure springs are assembled to job specifications and quality requirements 2.7. Problems with the required work and/or operation of the machine are identified and reported to the appropriate person
3. Clean up work area and maintain equipment	3.1. Items that do not meet quality requirements are recycled or discarded according to workplace procedures 3.2. Materials that can be reused are collected and stored 3.3. Waste and scrap is removed following workplace procedures 3.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures

ELEMENT	PERFORMANCE CRITERIA
	3.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures 3.6. Equipment and tooling is maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to assembling springs, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and avoid wastage
- use workplace technology related to the operation and maintenance of the spring coiling machine or spring assembly machine

Required knowledge

- work requirements, including workplace standards
- spring assembly procedures, common faults and inspection procedures
- spring assembly types and their application
- risks to health from repetitive actions and prevention strategies

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order, locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify and select materials used and any special handling requirements for those materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Produce and assemble a spring unit using border wire, stabilising springs and coil springs
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate equipment and tools, springs, work order, workplace information, including work procedures and equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work operations	1.1. Specifications for springs are confirmed, including: <ul style="list-style-type: none"> 1.1.1. type of spring required 1.1.2. spring tension 1.1.3. spring positioning 1.1.4. wire type and diameter 1.1.5. coil count 1.2. Workplace health and safety requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 1.3. Suitable work area is selected, tidied and cleaned of any contaminants 1.4. Appropriate equipment and tools are selected and checked for the required spring coiling process
2. Operate machinery to make springs	2.1. Machine is checked for safe and effective operation 2.2. Machine settings and adjustments are made in accordance with job requirements and, machine and tool manufacturer instructions 2.3. Machine start-up procedure is carried out in accordance with manufacturer instructions 2.4. Machine is operated in accordance with its designed capacity and purpose, tooling requirements and to manufacturer recommendations 2.5. Material is fed into machine in accordance with manufacturer instructions, safe handling procedures and standard workplace operating procedures 2.6. Machine operation is monitored to ensure springs are produced to job specifications and quality requirements 2.7. Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons
3. Clean up work area and maintain equipment	3.1. Items that do not meet quality requirements are recycled or discarded according to workplace procedures 3.2. Material that can be reused is collected and stored 3.3. Waste and scrap is removed following workplace procedures 3.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with

ELEMENT	PERFORMANCE CRITERIA
	workplace procedures 3.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures 3.6. Equipment and tooling is maintained in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to spring making, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use workplace technology related to the operation and maintenance of the spring coiling machine

Required knowledge

- work requirements, including workplace standards
- spring types and characteristics, common faults and inspection procedures
- types of wire and their application
- risks to health from repetitive actions and prevention strategies

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify and select materials used and any special handling requirements for those materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Produce one of the following three types of springs:
 - coil springs
 - spiral springs
 - stabilising springs
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate equipment and tools, including a coiling machine, wire, work order; workplace information, including work procedures and equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work operations	<p>1.1. Work instructions are used to determine job requirements, including quality, materials, equipment and quantities</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed through the work</p> <p>1.3. Material for processing is selected and inspected for quality</p> <p>1.4. Machine and the tape holder unit are identified and checked for safe and effective operation</p> <p>1.5. Procedures are determined for minimising waste material</p> <p>1.6. Procedures are identified for maximising energy efficiency while completing the job</p>
2. Set up machines	<p>2.1. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions</p> <p>2.2. Trial runs are conducted to check machine operation, accuracy and quality of finished work</p> <p>2.3. Necessary adjustments are made to machine settings</p>
3. Complete tape edging	<p>3.1. Machine start-up procedure is carried out in accordance with manufacturers' instructions</p> <p>3.2. Material is fed into machine in accordance with manufacturers' instructions, tooling requirements, safe handling procedures and standard workplace operating procedures</p> <p>3.3. Machine is operated in accordance with its designed capacity and purpose, and to manufacturer recommendations</p> <p>3.4. Machine operation, including inputs and outcomes, is monitored to ensure product quality and output</p> <p>3.5. Waste quantities are checked and minimised</p> <p>3.6. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures</p> <p>3.7. Problems with the required work or the operation of the machine are identified and reported to appropriate persons</p>
4. Clean up work area and maintain	<p>4.1. Material that can be re-used is collected and stored</p> <p>4.2. Waste and scrap is removed following workplace</p>

ELEMENT	PERFORMANCE CRITERIA
equipment	procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures 4.5. Operator maintenance is completed in accordance with manufacturer specifications and site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to tape edging, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate other material requirements
- use pre-checking and inspection techniques to anticipate set up, operating and maintenance problems, avoid re-working and wastage
- use workplace technology related to semi-automated or automated tape edging machines, including tooling, equipment and accuracy devices

Required knowledge

- the types, characteristics, uses and limitations of the machines
- characteristics, uses and limitations of fabric and edging tape
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up and operate a semi-automated or automated tape edging machine to complete the following:
 - the set up and application of at least one edge treatment material
 - the identification and correction of at least two real or simulated machining faults
- Conduct operator maintenance on the machine and equipment
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource implications

Access to a semi-automated or automated tape edging machine, including tooling equipment and accuracy devices.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate set up, operating and maintenance problems, avoid re-working and wastage
- use workplace technology related to semi-automated or automated quilting machines, including tooling, equipment and accuracy devices

Required knowledge

- the types, characteristics, uses and limitations of the machines
- characteristics, uses and limitations of thread, fabric, padding and foam
- workplace guidelines regarding acceptable tolerance levels
- workplace safety policies and procedures
- procedures for reporting machinery faults and material defects

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify, set up and operate a semi-automated or automated quilting machine to complete the following:
 - setting up and applying at least two different fabrics and padding/foam
 - identifying and correcting at least two real or simulated machining faults
 - one cam change
- Conduct operator maintenance on the machines and equipment
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource implications

Access to a semi-automated or automated quilting machine, including tooling equipment and accuracy devices.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other

EVIDENCE GUIDE	
	units of competency.
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	Work involves applying and processing foam/padding to the underside of plain or patterned fabric using a quilting design
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances, dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate judgement and problem solving skills in the set up and operation of machines • Work will be performed in workplaces which are involved in the manufacture or restoration of mattresses and bases
Quilting machines	<ul style="list-style-type: none"> • Automated quilting machines use semi-automated or automated processes to apply sewn patterns on fabric, foam and padding • Machines are to include either semi-automated or fully automated quilting machines
Material to be processed may include but is not limited to:	<ul style="list-style-type: none"> • plain or patterned fabrics • padding materials and foam
Operator maintenance includes:	<ul style="list-style-type: none"> • the cleaning and refurbishing of the quilting needle unit, thread guides, shuttles and loopers
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operations of tools

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for component assembly	1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to machine material are verified and complied with 1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i> 1.3. OHS policies and procedures relevant to the assembly of components are to be followed throughout the application of this competency 1.4. Work instructions are used to determine job requirements including design, tolerances, process, materials, finish and quality 1.5. Assembly sequence is planned 1.6. Procedures are determined for checking quality at each stage of the process
2. Prepare for component assembly	2.1. Fixing and joining devices are selected in line with work instructions and type of materials to be joined 2.2. Suitable work area is selected for the task 2.3. Components, hardware, fittings and attachments are collected 2.4. Tools and equipment suitable to the fixing method are selected and checked for safe operation 2.5. Required (if any) jigs are selected and checked for suitability for purpose
3. Assemble components	3.1. Components are laid out and joined using: jigs (if required), appropriate fastenings 3.2. Hand and/or power tools and equipment are used as required 3.3. Assembled instrument is checked for alignment and squareness, correct number and fittings of fasteners, hardware, fitting and attachments, conformity to work instruction and quality requirements 3.4. Components which do not meet quality specifications are repaired or tagged for further processing or recycling/disposal 3.5. Finished instruments are organised and stored in holding area ensuring there is no obstruction to traffic, products are not damaged in storage, incompatible items are not stored together, products are arranged to match the sequence of work
4. Finalise component	4.1. Faulty and/or defective equipment is tagged and

ELEMENT	PERFORMANCE CRITERIA
assembly	reported in accordance with workplace procedures 4.2. Waste and scrap is removed following workplace procedures 4.3. Tools and equipment used is cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures 4.4. Equipment and work area clean-up is maintained in accordance with workplace procedures and professional standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand timber technology and information related to musical instrument products
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to instrument assembly
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in timber and/or assembly components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of assembly techniques
- seek learning opportunities
- use the workplace technology related to the selection and assembly of components including calculators, measuring devices and assembly systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• characteristics of timber, timber products and defects• computer programs• cutting patterns and sequences• cutting tool condition assessment• industry standard cross-sections and lengths• storage systems and labelling• procedures for the recording, reporting and maintenance of workplace records and information• appropriate mathematical procedures for estimation and measurement |
|--|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a work/job specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures
- Communicate effectively and work safely with others in the work area
- Assessment must confirm appropriate knowledge and skills to:
 - safely perform component assembly functions
 - plan the assembly of components
 - prepare for the assembly of components
 - assemble components
 - finalise assembly of components

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the assembly of musical instrument components
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

EVIDENCE GUIDE

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Work order

- is used to determine job requirements including design, tolerances, process, materials, finish and quantity

Appropriate personnel

- may include but not be limited to supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> may include but are not limited to measuring tapes or rules, hammers, mallets, squares, bevels, chisels, planes, hand saws, power saws, power drills/screwdrivers, air compressor and hoses, clamps. screwdrivers, pincers
Workplace environment	<ul style="list-style-type: none"> may be a small, medium or large workplace may be involved in the manufacture or repair of violins, violas, cellos, mandolins, banjos, dulcimers, guitars and other musical instruments
Materials	<ul style="list-style-type: none"> may include but are not limited to timber, veneers, manufactured board, glues, screws, nails, dowels
Information and procedures may include:	<ul style="list-style-type: none"> workplace procedures relating to the use and operation of tools and equipment workplace instructions, including job sheets, plans, drawing and designs workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for work	<p>1.1. Applicable <i>OH&S</i>, <i>legislative</i> and <i>organisational</i> requirements relevant to machine material are verified and complied with</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. Occupational health and safety regulations, policies and procedures relevant to the construction and application of decorative treatments and finishes to musical instruments are to be followed throughout the application of this competency</p> <p>1.4. Work instructions are used to determine job requirements including: design, tolerances, process, materials, finish and quality</p> <p>1.5. Assembly sequence is planned</p> <p>1.6. Procedures are determined for checking quality at each stage of the process</p>
2. Prepare for work	<p>2.1. Equipment, tools and processes are identified and checked for safe and effective operation</p> <p>2.2. Suitable work area is selected for the task</p> <p>2.3. Materials are selected and checked for flaws following work instructions</p> <p>2.4. Design of item/s is laid out</p> <p>2.5. Suitable joining points are selected</p> <p>2.6. Material is prepared for cutting</p> <p>2.7. Hazards connected with the work are identified and precautions taken</p> <p>2.8. Required hand and/or power tools, equipment and materials are collected in the work area</p> <p>2.9. Machines and equipment are checked for availability</p>
3. Cut and fit items	<p>3.1. Material is cut to size and required thickness</p> <p>3.2. Materials are laid out in the required design</p> <p>3.3. Design of item/s is cut to requirements</p> <p>3.4. Joining process is undertaken according to workplace procedures or industry practice</p> <p>3.5. Adhesives are applied according to workplace procedures and/or manufacturers' instructions</p> <p>3.6. Work is fitted according to workplace instructions</p> <p>3.7. Dyes or stains for colouring (if required) are applied</p> <p>3.8. Work is checked against required quality standards</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.9. Any non-conformity with the required quality standards is rectified</p> <p>3.10. Machinery is used in accordance with workplace procedures including use of personal protective equipment</p>
4. Finalise operation	<p>4.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures</p> <p>4.2. Finishing of surfaces is completed by hand/machine to meet workplace requirements</p> <p>4.3. Item is inspected and any imperfections are rectified following workplace procedures</p> <p>4.4. Completed work is checked against required quality standard</p> <p>4.5. Work area is cleaned, hand and/or power tools, equipment is cleaned, maintained and stored in accordance with workplace procedures</p> <p>4.6. Machinery is cleaned and left in a safe mode</p> <p>4.7. Off-cuts and unusual materials are collected and stored for re-use or disposal following workplace procedures</p> <p>4.8. Waste and scrap materials are dealt with following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- using appropriate communication and interpersonal techniques with colleagues and others
- participating in a team environment to complete tasks
- identifying problems and equipment faults and demonstrate appropriate response procedures
- initiating new ideas or work methodologies
- accurately planning and organising work activities
- efficiently managing self responsibilities and timelines for completion of work
- using and maintain relevant tools, machinery and equipment
- complying with legislation, regulations, standards, codes of practice and established safe practices and procedures for machining material
- accurately recording and maintaining information relating to machining material
- efficiently and safely machining material

Required knowledge

- State or Territory OH&S legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of timber, timber products and defects
- set up and operation of equipment
- computer programs
- cutting patterns and sequences
- cutting tool condition assessment
- industry standard cross-sections and lengths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

- Read and interpret a work/job specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures
- Communicate effectively and work safely with others in the work area
- Assessment must confirm appropriate knowledge and skills to:
 - safely perform construction and application of treatments and finishes
 - plan construction and application
 - prepare for construction and application
 - complete construction and application
 - finalise construction and application

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for manufacturing	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to machine material are verified and complied with</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. Occupational health and safety regulations, policies and procedures relevant to the manufacture of acoustic guitars are to be followed throughout the application of this competency.</p> <p>1.4. Customer requirements are received, analysed and confirmed in accordance with enterprise procedures.</p> <p>1.5. Specifications are drawn up and required materials are identified in accordance with enterprise procedures.</p> <p>1.6. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency.</p>
2. Prepare for manufacturing	<p>2.1. Required materials for the manufacture of the acoustic guitar are acquired, inspected and tested in accordance with enterprise procedures.</p> <p>2.2. Required jigs and templates for the manufacture of the acoustic guitar are identified and acquired in accordance with enterprise procedures.</p> <p>2.3. Tools, test and measurement instruments, consumables and other equipment required for the manufacture of the acoustic guitar are identified, selected and obtained in accordance with enterprise procedures.</p>
3. Manufacture instruments	<p>3.1. Tools, jigs and templates are applied in the manufacturing process in accordance with professional standards and enterprise requirements.</p> <p>3.2. Materials are cut, formed, aligned and joined in accordance with professional standards and enterprise requirements.</p> <p>3.3. Advice and assistance is sought from others as required.</p> <p>3.4. Ongoing checks of the quality of the manufacturing process are undertaken in accordance with professional standards and practices and quality procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.5. Tests and observations are interpreted to confirm the acoustic guitar is compliant with the specifications and professional standards.
4. Finish surfaces	<p>4.1. Surface finish materials are prepared for application in accordance with manufacturer specifications and enterprise requirements.</p> <p>4.2. Acoustic guitar surface is prepared for finishing in accordance with customer specifications and enterprise requirements.</p> <p>4.3. Acoustic guitar surface is finished and refinished in accordance with customer specifications and enterprise requirements.</p> <p>4.4. Ongoing checks of the quality of the finishing process are undertaken in accordance with professional standards and practices and quality procedures.</p>
5. Finalise manufacturing processes	<p>5.1. Final checks and tests of the quality of the acoustic guitar are undertaken in accordance with customer's specifications, professional standards and practices and quality procedures.</p> <p>5.2. Production and other records are completed in accordance with enterprise requirements and standards.</p> <p>5.3. Housekeeping is conducted in accordance with enterprise requirements and professional standards.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand timber technology and information related to acoustic guitars
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to the manufacture of acoustic guitars
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in timber and/or guitar components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of manufacturing techniques
- seek learning opportunities
- use the workplace technology related to the selection and manufacture of components including computers, measuring devices and assembly systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics, capabilities and limitations of the timbers traditionally used in the manufacture of acoustic guitars
- characteristics of timber, timber products and defects
- properties of staining and finishing materials
- cutting patterns and sequences
- cutting tool condition assessment
- industry standard cross-sections and lengths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

- Read and interpret a work/job specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures
- Communicate effectively and work safely with others in the work area
- Assessment must confirm appropriate knowledge and skills to:
 - safely perform manufacturing functions
 - plan the manufacture of an acoustic guitar
 - prepare for the manufacture of an acoustic guitar
 - manufacture of acoustic guitar
 - apply the quality and professional standards required when manufacturing an acoustic guitar
 - surface finish an acoustic guitar
 - finalise the manufacturing process.

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the manufacture of acoustic guitars
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Work order

- is used to determine job requirements including design, tolerances, process, materials, finish and quantity

Appropriate personnel

- may include but not be limited to supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> • may include but are not limited to measuring tapes or rules, hammers, mallets, squares, bevels, chisels, planes, hand saws, power saws, power drills/screwdrivers, air compressor and hoses, clamps screwdrivers, pincers • may include special tools such as side moulds, blocks, cramps, cradles, contour and step gauges, arching and thickness plane.
Workplace environment	<ul style="list-style-type: none"> • may be a small, medium or large workplace • may be involved in the manufacture or repair of violins, violas, cellos, mandolins, banjos, dulcimers, guitars and other musical instruments
Materials	<ul style="list-style-type: none"> • may include but are not limited to timber, veneers, manufactured board, glues, screws, nails, dowels • may include various timbers that are traditionally used in these instruments • may include surface finish materials such as lacquers, shellac, wax, oil, stripper, spirit stains, water stains
Information and procedures may include:	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment. • Workplace instructions, including job sheets, plans, drawing and designs. • Workplace procedures relating to reporting and communication.

Co-requisite units

Co-requisite units		

LMFMI3004A Manufacture brass instruments

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the work involved in the manufacturing of brass instruments, including cornets, trumpets and other military brass instruments.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in furnishing operations of all sizes. The manufacture of brass instruments applies to a relevant workplace environment and involves application of skills and knowledge at a tradesperson/ level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for manufacturing	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to the manufacture of brass instruments are verified and complied with</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. Customer requirements are received, analysed and confirmed in accordance with enterprise procedures</p> <p>1.4. Specifications are drawn up and required materials are identified in accordance with enterprise procedures</p> <p>1.5. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency</p>
2. Prepare for manufacturing	<p>2.1. Required materials for the manufacture of the brass instrument are acquired, inspected and tested in accordance with enterprise procedures</p> <p>2.2. Required electroplating and soldering materials for the manufacture of the brass instrument are identified and acquired in accordance with enterprise procedures</p> <p>2.3. Tools, test and measurement instruments, consumables and other equipment required for the manufacture of the brass instrument are identified, selected and obtained in accordance with enterprise procedures</p>
3. Manufacture instruments	<p>3.1. Tools and equipment are applied in the manufacturing process in accordance with professional standards and enterprise requirements</p> <p>3.2. Materials are cut, formed, bent, aligned and soldered in accordance with professional standards and enterprise requirements</p> <p>3.3. Advice and assistance is sought from others as required</p> <p>3.4. Ongoing checks of the quality of the manufacturing process are undertaken in accordance with professional standards and practices and quality procedures.</p> <p>3.5. Tests and observations are interpreted to confirm the brass instrument is compliant with the specifications and professional standards</p>

ELEMENT	PERFORMANCE CRITERIA
4. Finish surfaces	<p>4.1. Surface finish materials are prepared for application in accordance with manufacturer specifications and enterprise requirements</p> <p>4.2. Brass instrument surface is prepared for finishing in accordance with customer specifications and enterprise requirements</p> <p>4.3. Brass instrument surface is electroplated in accordance with customer specifications and enterprise requirements</p> <p>4.4. Ongoing checks of the quality of the finishing process are undertaken in accordance with professional standards and practices and quality procedures</p>
5. Finalise manufacturing processes	<p>5.1. Final checks and tests of the quality of the brass instrument are undertaken in accordance with customer's specifications, professional standards and practices and quality procedures</p> <p>5.2. Production and other records are completed in accordance with enterprise requirements and standards</p> <p>5.3. Housekeeping is conducted in accordance with enterprise requirements and professional standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand brass instrument technology and information related to brass instrument products
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to instrument manufacture
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in metals and/or assembly components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of manufacturing techniques
- seek learning opportunities
- use the workplace technology related to the selection and assembly of components including computers, measuring devices and manufacturing systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics, capabilities and limitations of the metals traditionally used in the manufacture of brass instruments
- characteristics, capabilities and limitations of the brass instruments being manufactured
- properties of electroplating and soldering materials
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

- Read and interpret a work/job specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures
- Communicate effectively and work safely with others in the work area
- Assessment must confirm appropriate knowledge and skills to:
 - safely perform manufacturing functions
 - plan the manufacture of a brass instrument
 - prepare for the manufacture of a brass instrument
 - manufacture a brass instrument
 - apply the quality and professional standards required when manufacturing a brass instrument
 - surface finish a brass instrument
 - finalise the manufacturing process

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the manufacture of brass instruments
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for manufacturing	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to the manufacture of percussion instruments are verified and complied with</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. Customer requirements are received, analysed and confirmed in accordance with enterprise procedures</p> <p>1.4. Specifications are drawn up and required materials are identified in accordance with enterprise procedures</p> <p>1.5. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency</p>
2. Prepare for manufacturing	<p>2.1. Required materials for the manufacture of the percussion instrument are acquired, inspected and tested in accordance with enterprise procedures</p> <p>2.2. Required jigs and templates for the manufacture of the percussion instrument are identified and acquired in accordance with enterprise procedures</p> <p>2.3. Tools, test and measurement instruments, consumables and other equipment required for the manufacture of the percussion instrument are identified, selected and obtained in accordance with enterprise procedures</p>
3. Manufacture instruments	<p>3.1. Tools and equipment are applied in the manufacturing process in accordance with professional standards and enterprise requirements</p> <p>3.2. Materials are cut, bent, aligned and soldered in accordance with professional standards and enterprise requirements</p> <p>3.3. Advice and assistance is sought from others as required</p> <p>3.4. On going checks of the quality of the manufacturing process are undertaken in accordance with professional standards and practise and quality procedures</p> <p>3.5. Tests and observations are interpreted to confirm the percussion instrument is compliant with the specifications and professional standards</p>

ELEMENT	PERFORMANCE CRITERIA
4. Finish surfaces	<p>4.1. Surface finish materials are prepared for application in accordance with manufacturers' specifications and enterprise requirements</p> <p>4.2. Percussion instrument surface is prepared for finishing in accordance with customer's specifications and enterprise requirements</p> <p>4.3. Percussion instrument surface is electroplated and painted in accordance with customer's specifications and enterprise requirements</p> <p>4.4. Ongoing checks of the quality of the finishing process are undertaken in accordance with professional standards and practices and quality procedures</p>
5. Finalise manufacturing processes	<p>5.1. Final checks and tests of the quality of the percussion instrument are undertaken in accordance with customer's specifications, professional standards and practices and quality procedures</p> <p>5.2. Production and other records are completed in accordance with enterprise requirements and standards</p> <p>5.3. Housekeeping is conducted in accordance with enterprise requirements and professional standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand technology and information related to percussion instrument products
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to percussion instrument manufacturing
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in materials and/or instrument components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of manufacturing techniques
- seek learning opportunities
- use the workplace technology related to the selection and assembly of materials and components including computers, measuring devices and assembly systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics, capabilities and limitations of the materials traditionally used in the manufacture of percussion instruments
- characteristics, capabilities and limitations of the percussion instruments being manufactured
- properties of electroplating, painting and soldering materials
- identify and select the appropriate materials traditionally used in the manufacture of percussion instruments
- cutting patterns and sequences
- cutting tool condition assessment
- industry standard cross-sections and lengths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

- Read and interpret a work/job specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures
- Communicate effectively and work safely with others in the work area
- Assessment must confirm appropriate knowledge and skills to:
 - safely perform manufacturing functions
 - plan the manufacture of a percussion instrument
 - prepare for the manufacture of a percussion instrument
 - manufacture of a percussion instrument
 - apply the quality and professional standards required when manufacturing a percussion instrument
 - apply the final finish to a percussion instrument
 - finalise the manufacturing process

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the manufacture of percussion instruments
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment

EVIDENCE GUIDE

guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Work order	<ul style="list-style-type: none"> is used to determine job requirements including design, tolerances, process, materials, finish and quantity
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> • may include but are not limited to measuring tapes or rules, hammers, soldering irons, squares, bevels, chisels, planes, hand saws, power saws, power drills/ screwdrivers, air compressor and hoses, clamps screwdrivers, pincers,
Workplace environment	<ul style="list-style-type: none"> • may be a small, medium or large workplace • may be involved in the manufacture or repair of percussion and other musical instruments
Materials	<ul style="list-style-type: none"> • may include various metals, plastics, skins and timbers that are traditionally used in these instruments • may include those electroplating and soldering materials required for different metals that comprise the components of percussion instruments, including tension rings, drumhead, body, screws, stands
Information and procedures may include:	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawing and designs • Workplace procedures relating to reporting and communication

Co-requisite units

Co-requisite units		

LMFMI3007A Manufacture special stringed instruments

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the work involved in the manufacturing of special stringed instruments, specifically banjos, mandolins and dulcimers.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in furnishing operations of all sizes. The manufacture of special stringed instruments applies to a relevant workplace environment and involves application of skills and knowledge at a tradesperson/ level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for manufacturing	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to the manufacture of special stringed instruments are verified and complied with</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. Customer requirements are received, analysed and confirmed in accordance with enterprise procedures</p> <p>1.4. Specifications are drawn up and required materials are identified in accordance with enterprise procedures</p> <p>1.5. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency</p>
2. Prepare for manufacturing	<p>2.1. Required materials for the manufacture of the special stringed instrument are acquired, inspected and tested in accordance with enterprise procedures</p> <p>2.2. Required jigs and templates for the manufacture of the special stringed instrument are identified and acquired in accordance with enterprise procedures</p> <p>2.3. Tools, test and measurement instruments, consumables and other equipment required for the manufacture of the special stringed instrument are identified, selected and obtained in accordance with enterprise procedures</p>
3. Manufacture instruments	<p>3.1. Tools and equipment are applied in the manufacturing process in accordance with professional standards and enterprise requirements</p> <p>3.2. Materials are cut, formed, aligned and joined in accordance with professional standards and enterprise requirements</p> <p>3.3. Advice and assistance is sought from others as required</p> <p>3.4. On going checks of the quality of the manufacturing process are undertaken in accordance with professional standards and practise and quality procedures</p> <p>3.5. Tests and observations are interpreted to confirm the special stringed instrument is compliant with the specifications and professional standards</p>
4. Finish surfaces	4.1. Surface finish materials are prepared for application

ELEMENT	PERFORMANCE CRITERIA
	<p>in accordance with manufacturer specifications and enterprise requirements</p> <p>4.2. Special stringed instrument surface is prepared for finishing in accordance with customer specifications and enterprise requirements</p> <p>4.3. Special stringed instrument surface is finished and refinished in accordance with customer specifications and enterprise requirements</p> <p>4.4. Ongoing checks of the quality of the finishing process are undertaken in accordance with professional standards and practices and quality procedures</p>
5. Finalise manufacturing processes	<p>5.1. Final checks and tests of the quality of the special stringed instruments are undertaken in accordance with customer's specifications, professional standards and practices and quality procedures</p> <p>5.2. Production and other records are completed in accordance with enterprise requirements and standards</p> <p>5.3. Housekeeping is conducted in accordance with enterprise requirements and professional standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand timber technology and information related to special stringed instrument products
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to instrument manufacture
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in timber and/or instrument components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of assembly techniques
- seek learning opportunities
- use the workplace technology related to the selection and assembly of components including computers, measuring devices and assembly systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics, capabilities and limitations of the timbers traditionally used in the manufacture of special stringed instruments
- characteristics of timber, timber products and defects
- properties of staining and finishing materials
- cutting patterns and sequences
- cutting tool condition assessment
- industry standard cross-sections and lengths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

- Read and interpret a work/job specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures
- Communicate effectively and work safely with others in the work area
- Assessment must confirm appropriate knowledge and skills to:
 - safely perform manufacturing functions
 - plan the manufacture of a special stringed instrument
 - prepare for the manufacture of a special stringed instrument
 - manufacture of a special stringed instrument
 - apply the quality and professional standards required when manufacturing a special stringed instrument
 - apply the final finish to a special stringed instrument
 - finalise the manufacturing process

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the manufacture of special stringed instruments
 - specifications and work instructions

EVIDENCE GUIDE**Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Work order

- is used to determine job requirements including design, tolerances, process, materials, finish and quantity

Appropriate personnel

- may include but not be limited to supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> • may include but are not limited to measuring tapes or rules, hammers, mallets, squares, bevels, chisels, planes, hand saws, power saws, power drills/screwdrivers, air compressor and hoses, clamps screwdrivers, pincers • and may include special tools such as side moulds, blocks, cramps, cradles, contour and step gauges, arching and thickness plane.
Workplace environment	<ul style="list-style-type: none"> • may be a small, medium or large workplace • may be involved in the manufacture or repair of violins, violas, cellos, mandolins, banjos, dulcimers, guitars and other musical instruments
Materials	<ul style="list-style-type: none"> • may include but are not limited to timber, veneers, manufactured board, glues, screws, nails, dowels • may include various timbers that are traditionally used in these instruments • may include surface finish materials such as lacquers, shellac, wax, oil, stripper, spirit stains, water stains
Information and procedures may include:	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawing and designs • Workplace procedures relating to reporting and communication

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand technology and information related to percussion instrument products
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to percussion instrument manufacturing
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in materials and/or instrument components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of manufacturing techniques
- seek learning opportunities
- use the workplace technology related to the selection and assembly of materials and components including computers, measuring devices and assembly systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics, capabilities and limitations of the materials traditionally used in the manufacture of percussion instruments
- characteristics, capabilities and limitations of the percussion instruments being manufactured
- properties of electroplating, painting and soldering materials
- identify and select the appropriate materials traditionally used in the manufacture of percussion instruments
- cutting patterns and sequences
- cutting tool condition assessment
- industry standard cross-sections and lengths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Work order

- is used to determine job requirements including design, tolerances, process, materials, finish and quantity

Appropriate personnel

- may include but not be limited to supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> • may include but are not limited to measuring tapes or rules, hammers, mallets, squares, bevels, chisels, planes, hand saws, power saws, power drills/screwdrivers, air compressor and hoses, clamps screwdrivers, pincers,
Workplace environment	<ul style="list-style-type: none"> • may be a small, medium or large workplace • may be involved in the manufacture or repair of brass instruments
Materials	<ul style="list-style-type: none"> • may include various metals that are traditionally used in these instruments • may include electroplating and soldering materials required for different metals that comprise the components of brass instruments, including bell, valve, body, slides (trombone), mouthpiece, tuning slides, mutes, conical tubing
Information and procedures may include:	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment. • Workplace instructions, including job sheets, plans, drawing and designs. • Workplace procedures relating to reporting and communication.

Co-requisite units

Co-requisite units		

LMFMI3010A Repair percussion instruments

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the work involved in the repair of percussion instruments.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in furnishing operations of all sizes. The repair of percussion instruments applies to a relevant workplace environment and involves application of skills and knowledge at a tradesperson/ level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for repair	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to the repair of percussion instruments are verified and complied with</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. Customer requirements are received, analysed and confirmed in accordance with enterprise procedures</p> <p>1.4. Specifications are drawn up and required materials are identified in accordance with enterprise procedures</p> <p>1.5. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency</p>
2. Prepare for repair	<p>2.1. Percussion instrument is cleaned and examined and required repairs are determined in accordance with customer's and enterprise requirements</p> <p>2.2. Required materials for the repair of the percussion instrument are acquired, inspected and tested in accordance with enterprise procedures</p> <p>2.3. Required electroplating and soldering materials for the repair of the percussion instrument are identified and acquired in accordance with enterprise procedures</p> <p>2.4. Tools, test and measurement instruments, consumables and other equipment required for the repair of the percussion instrument are identified, selected and obtained in accordance with enterprise procedures</p>
3. Repair instruments	<p>3.1. Tools and equipment are applied in the repair process in accordance with professional standards and enterprise requirements</p> <p>3.2. Materials are cut, bent, aligned and soldered in accordance with professional standards and enterprise requirements</p> <p>3.3. Advice and assistance is sought from others as required</p> <p>3.4. On going checks of the quality of the repair process are undertaken in accordance with professional standards and practise and quality procedures</p> <p>3.5. Tests and observations are interpreted to confirm the</p>

ELEMENT	PERFORMANCE CRITERIA
	percussion instrument is compliant with the specifications and professional standards
4. Finish surfaces	<p>4.1. Surface finish materials are prepared for electroplating in accordance with manufacturer specifications and enterprise requirements</p> <p>4.2. Repaired percussion instrument surface is prepared for finishing in accordance with customer specifications and enterprise requirements</p> <p>4.3. Repaired percussion instrument surface is electroplated and painted in accordance with customer specifications and enterprise requirements</p> <p>4.4. On going checks of the quality of the finishing process are undertaken in accordance with professional standards and practices and quality procedures</p>
5. Finalise repair processes	<p>5.1. Final checks and tests of the quality of the repairs to the percussion instrument are undertaken in accordance with customer specifications, professional standards and practices and quality procedures</p> <p>5.2. Production and other records are completed in accordance with enterprise requirements and standards</p> <p>5.3. Housekeeping is conducted in accordance with enterprise requirements and professional standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to percussion instrument products
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to instrument repair
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in materials and/or repair components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of repair techniques
- seek learning opportunities
- use the workplace technology related to the selection and assembly of repair components including computers, measuring devices and assembly systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics, capabilities and limitations of the materials traditionally used in the repair of percussion instruments
- characteristics, capabilities and limitations of the percussion instruments being repaired
- properties of electroplating, painting and soldering materials
- identify and select the appropriate materials traditionally used in the manufacture and repair of percussion instruments
- cutting patterns and sequences
- cutting tool condition assessment
- industry standard cross-sections and lengths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

- Read and interpret a work/job specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures
- Communicate effectively and work safely with others in the work area
- Assessment must confirm appropriate knowledge and skills to:
 - safely perform repair functions
 - plan the repair of a percussion instrument
 - prepare for the repair of a percussion instrument
 - repair of a percussion instrument
 - apply the quality and professional standards required when repairing a percussion instrument
 - electroplate, paint and solder repaired components of a percussion instrument
 - finalise the repair process

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the repair of percussion instruments
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

EVIDENCE GUIDE

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Work order	<ul style="list-style-type: none"> is used to determine job requirements including design, tolerances, process, materials, finish and quantity
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> • may include but are not limited to measuring tapes or rules, hammers, soldering irons, squares, bevels, chisels, planes, hand saws, power saws, power drills/ screwdrivers, air compressor and hoses, clamps screwdrivers, pincers
Workplace environment	<ul style="list-style-type: none"> • may be a small, medium or large workplace • may be involved in the manufacture or repair of percussion and other musical instruments
Materials	<ul style="list-style-type: none"> • may include various metals, plastics, skins and timbers that are traditionally used in these instruments • may include those electroplating and soldering materials required for different metals that comprise the components of percussion instruments, including tension rings, drumhead, body, screws, stands
Information and procedures may include:	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawing and designs • Workplace procedures relating to reporting and communication

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to acoustic guitars
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to instrument repair
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in timber and/or repair components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of repair techniques
- seek learning opportunities
- use the workplace technology related to the selection and assembly of repair components including computers, measuring devices and assembly systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics of heritage or antique instruments
- characteristics, capabilities and limitations of the timbers traditionally used in the manufacture and repair of acoustic guitars
- characteristics of timber, timber products and defects
- properties of staining and finishing materials
- cutting patterns and sequences
- cutting tool condition assessment
- industry standard cross-sections and lengths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

- Read and interpret a work/job specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures
- Communicate effectively and work safely with others in the work area
- Assessment must confirm appropriate knowledge and skills to:
 - safely perform repair functions
 - plan the repair of an acoustic guitar
 - prepare for the repair of an acoustic guitar
 - repair of acoustic guitar
 - apply the quality and professional standards required when repairing an acoustic guitar
 - surface finish an acoustic guitar
 - finalise the manufacturing process.

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the repair of acoustic guitars
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
Assessment methods must confirm consistency and

Co-requisite units		

LMFMI4002A Repair electric guitars

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the work involved in repair of electric guitars.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in furnishing operations of all sizes. The repair of electric guitars applies to a relevant workplace environment and involves application of skills and knowledge at a tradesperson/ level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for repair	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to the repair of electric guitars are verified and complied with</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. Customer requirements are received, analysed and confirmed in accordance with enterprise procedures</p> <p>1.4. Specifications are drawn up and required materials are identified in accordance with enterprise procedures</p> <p>1.5. Communication with others involved with the work is established and maintained to ensure efficient workflow coordination, personnel cooperation and safety throughout the application of this competency</p>
2. Prepare for repair	<p>2.1. Electric guitar is cleaned and examined and required repairs are determined in accordance with customer's and enterprise requirements</p> <p>2.2. Required materials for the repair of the electric guitar are acquired inspected and tested in accordance with enterprise procedures</p> <p>2.3. Required jigs and templates for the repair of the electric guitar are identified and acquired in accordance with enterprise procedures</p> <p>2.4. Tools, test and measurement instruments, consumable and other equipment required for the repair of the electric guitar are identified, selected and obtained in accordance with enterprise procedure</p>
3. Repair instruments	<p>3.1. Tools, jigs and templates are applied in the manufacturing process in accordance with professional standards and enterprise requirements</p> <p>3.2. Materials are cut, formed, aligned and joined in accordance with professional standards and enterprise requirements</p> <p>3.3. Electronics are located, removed, replaced, connected and wired up in accordance with professional standards and enterprise requirements</p> <p>3.4. Advice and assistance is sought from others as required</p> <p>3.5. On going checks of the quality of the manufacturing process are undertaken in accordance with professional standards and practices and quality</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>procedures</p> <p>3.6. Tests and observations are interpreted to confirm the electric guitar is compliant with the specifications and professional standards</p>
4. Finish surfaces	<p>4.1. Surface finish materials are prepared for application in accordance with manufacturer specifications and enterprise requirements</p> <p>4.2. Repaired electric guitar surface is prepared for finishing in accordance with customer specifications and enterprise requirements</p> <p>4.3. Repaired electric guitar surface is finished and refinished in accordance with customer specifications and enterprise requirements</p> <p>4.4. On going checks of the quality of the finishing process are undertaken in accordance with professional standards and practices and quality procedures</p>
5. Finalise repair processes	<p>5.1. Final checks and tests of the quality of the electric guitar repairs are undertaken in accordance with customer specifications, professional standards and practices and quality procedures</p> <p>5.2. Repair and other records are completed in accordance with enterprise requirements and standards</p> <p>5.3. Housekeeping is conducted in accordance with enterprise requirements and professional standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to electric guitar products
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to instrument repair
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in materials and/or repair components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of repair techniques
- seek learning opportunities
- use the workplace technology related to the selection and assembly of repair components including computers, measuring devices and assembly systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics, capabilities and limitations of the materials traditionally used in the manufacture of electric guitars
- selecting testing and replacing the electronic components of an electric guitar
- characteristics, capabilities and limitations of the electric guitars being repaired
- properties of finishing materials
- cutting tool condition assessment
- industry standard cross-sections and lengths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

- Read and interpret a work/job specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures
- Communicate effectively and work safely with others in the work area
- Assessment must confirm appropriate knowledge and skills to:
 - safely perform repair functions
 - plan the repair of an electric guitar
 - prepare for the repair of an electric guitar
 - select, test and replace the electric components of an electric guitar
 - apply the quality and professional standards required when repairing an electric guitar
 - surface finish an electric guitar
 - finalise the repair process

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the manufacture of electric guitars
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

EVIDENCE GUIDE

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Work order

- is used to determine job requirements including design, tolerances, process, materials, finish and quantity

Appropriate personnel

- may include but not be limited to supervisors, suppliers, clients, colleagues and managers

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> • may include but are not limited to measuring tapes or rules, hammers, mallets, squares, bevels, chisels, planes, hand saws, power saws, power drills/screwdrivers, air compressor and hoses, clamps screwdrivers, pincers • and may include special tools such as side moulds, blocks, cramps, cradles, contour and step gauges, arching and thickness plane.
Workplace environment	<ul style="list-style-type: none"> • may be a small, medium or large workplace • may be involved in the manufacture or repair of violins, violas, cellos, mandolins, banjos, dulcimers, guitars and other musical instruments
Materials	<ul style="list-style-type: none"> • may include various timbers metals and other materials that are traditionally used in these instruments • may include surface finish materials such as lacquers, fillers, sealers, shellac, wax, oil stripper, spirit stains, water stains • may include electronic components such as pick ups, pick up selector, vibrato, volume and tone potentiometers, jack socket
Information and procedures may include:	<ul style="list-style-type: none"> • workplace procedures relating to the use and operation of tools and equipment • workplace instructions, including job sheets, plans, drawing and designs • workplace procedures relating to reporting and communication

	<p>enterprise requirements</p> <p>4.2.Special stringed instrument surface is prepared for finishing in accordance with customer's specifications and enterprise requirements</p> <p>4.3.Special stringed instrument surface is finished and refinished in accordance with customer's specifications and enterprise requirements</p> <p>4.4.Ongoing checks of the quality of the finishing process are undertaken in accordance with professional standards and practices and quality procedures</p>
5. Finalise repair processes	<p>5.1.Final checks and tests of the quality of the repaired special stringed instruments are undertaken in accordance with customer's specifications, professional standards and practices and quality procedures</p> <p>5.2.Repair and other records are completed in accordance with enterprise requirements and standards</p> <p>5.3.Housekeeping is conducted in accordance with enterprise requirements and professional standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand timber technology and information related to special stringed instrument products
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to instrument repair
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in timber and/or repair components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of repair techniques
- seek learning opportunities
- use the workplace technology related to the selection and assembly of repair components including computers, measuring devices and assembly systems

Required knowledge

- State or Territory OH&S legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for machining material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- characteristics, capabilities and limitations of the timbers traditionally used in the manufacture of special stringed instruments
- characteristics of heritage and antique instruments
- characteristics of timber, timber products and defects
- properties of staining and finishing materials
- cutting patterns and sequences
- cutting tool condition assessment
- industry standard cross-sections and lengths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

- Read and interpret a work/job specification
- Effectively conduct operator maintenance on tools and equipment
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures
- Communicate effectively and work safely with others in the work area
- Assessment must confirm appropriate knowledge and skills to:
 - safely perform repair functions
 - plan the repair of a special stringed instrument
 - prepare for the repair of a special stringed instrument
 - repair a special stringed instrument
 - apply the quality and professional standards required when repairing a special stringed instrument
 - apply the final finish to a special stringed instrument
 - finalise the repair process

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Design package	1.1. Artwork to be framed is identified and its qualities and framing requirements assessed 1.2. A provisional design package is developed 1.3. Design is modified as required and approved in accordance with workplace procedures 1.4. Work sequence is planned to suit the job
2. Cut and join mouldings	2.1. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 2.2. Tools, equipment and materials required for cutting and joining of mouldings are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety 2.3. Material is set out for cutting to length according to work instructions and workplace procedures 2.4. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications 2.5. Mouldings are cut to length and checked for quality and fit in accordance with workplace practices 2.6. Components are laid out and fixed in preparation for joining according to work instructions and workplace procedures 2.7. Components are joined and checked for quality, alignment and finish according to workplace practices
3. Cut mat board	3.1. Tools, equipment and materials required for cutting mat board are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety 3.2. Mat board material is set out for cutting according to work instructions and workplace procedures 3.3. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications 3.4. Mat boards are cut and checked for quality in accordance with workplace practices
4. Cut glass for framing	4.1. Tools, equipment and materials required for cutting glass are selected and checked prior to use to ensure that they are appropriate for the work in terms of

ELEMENT	PERFORMANCE CRITERIA
	<p>quality, serviceability and safety</p> <p>4.2. Glass is set out for cutting according to work instructions and workplace procedures</p> <p>4.3. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications</p> <p>4.4. Glass is cut and checked for quality in accordance with workplace practices</p>
5. Mount artwork	<p>5.1. Method of mounting is determined</p> <p>5.2. Mounting equipment is set up according to operating procedures and workplace practice</p> <p>5.3. Artwork is positioned on substrate according to job requirements and placed in mounting equipment</p> <p>5.4. Mounting equipment is operated in accordance with manufacturer instructions and workplace procedures</p> <p>5.5. Assembled artwork is removed from equipment, inspected for quality in accordance with workplace procedures</p>
6. Assemble artwork package	<p>6.1. Fabricated components are cleaned and laid out for assembly in accordance with workplace procedures</p> <p>6.2. Artwork is attached to backing material using the selected method</p> <p>6.3. Frame components are assembled, adjusted as required to fit and fixed</p> <p>6.4. Frame is fitted over package and the backing is fixed in accordance with workplace procedures</p> <p>6.5. Fittings, attachments and hanging aids are attached in accordance with workplace procedures</p> <p>6.6. Package is inspected for quality and processed in accordance with workplace procedures</p>
7. Complete work	<p>7.1. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures</p> <p>7.2. Off-cuts and unused materials are collected and stored for reuse or disposed following workplace procedures</p> <p>7.3. Waste and scrap materials are dealt with following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination with work supervisor, other workers and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate working problems, avoid re-working and wastage
- use the limited workplace technology related to the framing of simple artwork, including tools, equipment, materials and measuring devices

Required knowledge

- design requirements for simple artwork
- the preparation of plans/drawings/set-outs
- workflow and steps in relation to framing simple artwork
- identification of hand and basic picture framing processing tools, materials, equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work instructions and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - achieve required production output and product quality
- Adapt or vary glass and glazing designs
- As a minimum, design, prepare, fabricate and assemble at least one item of simple artwork
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Access to plans/designs, picture framing hand tools and/or basic processing machines, equipment, materials, a work area and a specified project.

Method of assessment

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be conducted in conjunction with assessment of the other sector specialist unit of competency where appropriate.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • Workplace health and safety requirements include OHS legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work involves reading and interpreting plans, developing set-outs, using hand and power tools, operating basic machinery, applying quality requirements and applying product finishing techniques and materials • Work is conducted under supervision and guidance
<p>Simple artwork</p>	<ul style="list-style-type: none"> • Simple artwork is flat paper-based artwork not requiring any conservation measures • Project and design is to be determined in consultation with supervisor/teacher
<p>Tools and equipment</p>	<p>Tools and equipment to be used under supervision and guidance may include, but is not limited to:</p> <ul style="list-style-type: none"> • guillotines, static mounted circular saws, drop saws, docking saws and mitre saws • underpinners (V-nailers), screwdrivers • hand-operated tools, including cutting blades, clamps, marking out tools • mat cutters • appropriate mounting tools and equipment • flat felt-covered cutting table, glass cutters, squares, tape measures, marking pens/pencils
<p>Materials to be used may include but not limited to:</p>	<ul style="list-style-type: none"> • timber, touch-up materials, glues, sandpaper • standard mat board material

RANGE STATEMENT	
	<ul style="list-style-type: none"> • appropriate mounting materials • glass
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • gloves • safety glasses • gauntlets • footwear • earmuffs • aprons and overalls

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools	1.1.Types of hand and power tools and their functions identified 1.2.Sources of, and access to power supply recognised 1.3.OHS requirements for using hand and power tools recognised and implemented
2. Select appropriate hand tools	2.1.Hand tools selected consistent with needs of job 2.2.Hand tools are checked for serviceability and safety and any faults reported to supervisor in accordance with enterprise procedures 2.3.Equipment selected to hold, position or support material for power tools application where applicable
3. Use appropriate hand tools	3.1.Material located and held in position for hand tool application 3.2.Hand tools safely and effectively used according to their intended use 3.3.Hand tools safely located when not in immediate use
4. Select appropriate power tools	4.1.Appropriate personal protective equipment selected, correctly fitted and used 4.2.Power tools selected consistent with needs of job in accordance with conventional work practice 4.3.Power tools visually checked for serviceability/safety in accordance with OHS requirements and any faults reported to supervisor in accordance with enterprise procedures 4.4.Equipment selected to hold, position or support materials for power tool application where applicable
5. Use appropriate power tools	5.1.Material located and held in position for power tool application where applicable 5.2.Power tools safely and effectively used in application processes 5.3.Power tools safely switched and located when not in use
6. Clean up work area and tools	6.1.All tools cleaned, maintained and stored 6.2.Equipment cleaned, maintained and stored 6.3.Documentation completed in accordance with enterprise procedures 6.4.Work area cleaned and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- correctly and safely select, use and maintain hand and power tools
- meet quality standards of finish
- communicate effectively with supervisors and other workers

Required knowledge

- workflow within the workplace
- workplace safety requirements and OHS legislation
- function and purpose of hand and power tools used in the workplace

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Demonstrate compliance with OHS regulations applicable to workplace operations
- Adopt and carry out correct procedures prior to, during and after use of hand and power tools
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Demonstrate the safe and effective use of the listed hand and power tools required by the picture framing sector in performing tasks for which they are to be used
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Indicate compliance with organisational policies and procedures, including quality assurance requirements

Resource implications

Picture framing sector hand and power tools, materials used in the manufacturing and/or processing of picture framing products, operating procedures, work area and workplace requirements.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which together form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- This unit covers work involving the use of hand and power tools in applications relating to the picture framing sector of the furnishing industry
- Work requires individuals to demonstrate skill, accuracy and dexterity in the application of tools to work tasks
- Work is carried out in accordance with statutory requirements, OHS legislation, environmental legislation, manual handling procedures, relevant health regulations and organisation insurance requirements

Workplace environment

- Work may be conducted in large, medium or small workplaces
- OHS requirements may include safe working practices, use of tools and equipment, use of power tools, safe handling and storage of materials in accordance with enterprise procedures
- Reporting of faults in the operation of hand and power tools may be verbal or written

Hand tools used in the picture framing sector are to include:

- hand saws
- chisels
- underpinners
- screwdrivers
- marking out tools
- pincers
- pliers (including stretching pliers)
- files
- glass cutters
- squares
- measures
- hammers
- spirit level

RANGE STATEMENT	
	<ul style="list-style-type: none"> • guillotine • cutting blades • clamps • needles • knives • scissors • plane • glass pliers • scoring tool • framer's points gun • ATG dispenser • nail punch <p>Hand tools include hand-operated mechanical tools such as the pneumatic V-nailer</p>
Power tools used in the picture framing sector are to include:	<ul style="list-style-type: none"> • power saws (circular drop docking and mitre) • power drills • guillotine • V-nailers • compressor and air guns (including tackers) • staplers • flexi point) • hand power saw and power screwdriver
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • gloves • safety glasses • ear protection • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Hand and power tool manufacturer specifications and operational procedures • Workplace procedures relating to OHS, tool handling and operation, reporting and communication • Work instructions, including job sheets, plans,

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	1.1. Patterns, work instructions and/or plans are read and interpreted to identify: <ul style="list-style-type: none"> 1.1.1. type of moulding to be cut 1.1.2. pattern or plan to be followed 1.1.3. process required to complete work tasks 1.1.4. number of items to be cut and holding area for completed items 1.1.5. equipment settings for the materials that are being cut 1.1.6. required cutting fluids 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. The process for obtaining materials/components and moving completed work to the next process is identified 1.4. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety 1.5. Cutting equipment components and controls, including emergency stops and guards, are identified 1.6. Work sequence is planned to suit the job
2. Conduct cutting operation	2.1. Equipment is operated and monitored to ensure correct cut quality, output and that wastage is within allowable limits 2.2. Problems occurring during work operations are identified and reported to appropriate persons 2.3. Authorised changes in working procedures are followed 2.4. Routine lubrication and adjustments for the equipment are completed 2.5. Items which do not meet quality requirements are repaired or discarded 2.6. Finished work is inspected for compliance with work order, workplace requirements and finish
3. Complete work	3.1. Scraps and off-cuts are removed for disposal/recycling as required by workplace procedures 3.2. Work area is cleaned and rubbish disposed of as

ELEMENT	PERFORMANCE CRITERIA
	<p>appropriate</p> <p>3.3. Workplace documentation is completed as required</p> <p>3.4. Tools, equipment and unused materials are cleaned and stored following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the limited workplace technology related to the cutting of frame mouldings, including drawing aids, tools, equipment, calculators and measuring devices

Required knowledge

- the type, characteristics, uses and limitations of moulding materials
- the types, characteristics and applications of cutting machines and devices
- the types, uses and operation of tools
- techniques for cutting frame mouldings
- workplace safety system requirements related to cutting frame mouldings
- workflow in relation to cutting frame mouldings

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify and operate equipment, including the use of safety cut outs and guards
- Identify materials, ensuring quality and aesthetics, to be used in the work process
- Interpret work order and locate and apply relevant information to set up, operate, adjust and monitor equipment used to cut picture frame mouldings
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Cut mouldings for a picture frame (up to 100 mm wide) of each of the following materials:
 - timber (multi-angle and 45 degrees)
 - aluminium (45 degrees)
 - synthetic (45 degrees)
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Guillotines, static mounted circular saws, docking saws and mitre saws fitted with appropriate blades, standard operating procedures, unprocessed materials and work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of

EVIDENCE GUIDE	
	competency which form a part of the job role.
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant frame moulding cutting machines /devices, framing materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up, operation, adjustment and monitoring of equipment used to cut picture frame mouldings • Work may be performed in workplaces which are involved in the framing of a wide range of items, including, but not limited to: <ul style="list-style-type: none"> • original artwork • reproductions • photographs • documents • three-dimensional items
<p>Cut mouldings</p>	<ul style="list-style-type: none"> • Addresses the work involved in the set up, operation, adjustment and monitoring of equipment used to cut picture frame mouldings • Mouldings are to include but are not limited to: solid timber, composites, metal and alloy extrusion and synthetics
<p>Machines may include, but are not limited to:</p>	<ul style="list-style-type: none"> • guillotines • static mounted circular saws • drop saws • docking saws and mitre saws
<p>Personal protection equipment</p>	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices</p>

RANGE STATEMENT	
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Patterns, work instructions and/or plans are read and interpreted to identify:</p> <ul style="list-style-type: none"> 1.1.1. size of the frames 1.1.2. types of attachments to be used 1.1.3. required materials and tools 1.1.4. quality requirements for the frames 1.1.5. assembly steps and sequence <p>1.2. Workplace health and safety requirements relevant to the operation of joining mouldings, including personal protection needs, are observed throughout the work</p> <p>1.3. The process for obtaining materials/components and moving completed work to the next process is identified</p> <p>1.4. Required components, attachments, tools and equipment are identified</p> <p>1.5. Work sequence is planned to suit the job</p>
2. Prepare for frame assembly	<p>2.1. Components of the frame are selected and checked against work instructions for:</p> <ul style="list-style-type: none"> 2.1.1. size 2.1.2. number 2.1.3. pattern and finish 2.1.4. profile <p>2.2. Fixing and joining devices are selected in line with work instructions and type of moulding to be joined</p> <p>2.3. Other tools, equipment (including jigs) and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety</p> <p>2.4. Shortages/defective items are notified in accordance with workplace practices</p>
3. Assemble frame	<p>3.1. Components are laid out and joined using:</p> <ul style="list-style-type: none"> 3.1.1. jig (if required) 3.1.2. appropriate fastenings 3.1.3. appropriate tools and equipment <p>3.2. Assembled frame is checked for:</p> <ul style="list-style-type: none"> 3.2.1. alignment 3.2.2. pattern matching (if appropriate)

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2.3. correct number and fitting of fasteners and other attachments</p> <p>3.2.4. conformity to work instruction and quality requirements</p> <p>3.3. Corners are finished in accordance with workplace requirements</p> <p>3.4. Joined frames are stored according to workplace requirements</p>
4. Complete work	<p>4.1. Completed frames are inspected for quality, with those not meeting specification being repaired or tagged for further processing or recycling/disposal</p> <p>4.2. Tools, equipment and unused materials are cleaned and stored following workplace procedures</p> <p>4.3. Equipment faults are identified, tagged and reported to appropriate personnel</p> <p>4.4. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.5. Workplace documentation is completed as required</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the limited workplace technology related to the joining of picture frame mouldings, including design aids, tools, equipment, calculators and measuring devices

Required knowledge

- the type, characteristics, uses and limitations of moulding materials
- workplace safety system requirements related to joining picture frame mouldings
- workflow in relation to frame production
- operation of tools and equipment used in the assembly process
- identification of equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Identify and assemble components, attachments, tools and materials required to join picture frames to specification and required pattern (including pattern matching)
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum demonstrate the ability to join each of the following frames (at least one of them being a multi-angle frame) up to a width of 100 mm:
 - synthetic
 - timber
 - aluminium
 - and each in the following profiles:
 - flat
 - traditional
 - reverse
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Timber, metal or synthetic mouldings, frame components, consumables, workplace procedures, appropriate work area, tools and equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

EVIDENCE GUIDE	
	<p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which together form a part of the job role.</p>
Context of assessment	<p>Assessment may occur on the job or in a workplace simulated facility with relevant frame joining equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	The work involved in the planning, preparation and assembly of picture frame mouldings to form frames
Unit context	<ul style="list-style-type: none"> • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the assembly of mouldings • OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work may be performed in workplaces which are involved in the manufacture and assembly of picture frame mouldings or in the framing of items, including, original and reproduction artwork, photographs and documents
Tools and equipment are to include:	<ul style="list-style-type: none"> • underpinners (pneumatic or power V-nailer) • V-nails • drill • nail punch • screwdrivers • touch-up material • glues and finishing tools • including files and sandpaper
Moulding materials include, but are not limited to:	<ul style="list-style-type: none"> • solid timber • composites • metal and alloy extrusion • synthetics • filler • putties

RANGE STATEMENT	
	<ul style="list-style-type: none"> • touch-up pens and paints/stains
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Machine and moulding manufacturer specifications • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Artwork is assessed to determine the most appropriate mounting process, including the composition of substrate and fixing materials</p> <p>1.2. Work requirements are identified from drawings/specifications/instructions and/or workplace practices</p> <p>1.3. Quality assurance requirements are identified and observed throughout the process in accordance with industry standards and workplace practices</p> <p>1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety</p> <p>1.6. Materials required are cut to size and assembled to industry standard and workplace procedures</p> <p>1.7. Fixing agents (adhesives/plastic film/tissue) are positioned in accordance with workplace procedures</p>
2. Dry mount artwork	<p>2.1. Mounting equipment is set up according to operating procedures and workplace practices</p> <p>2.2. Artwork is positioned on substrate according to job requirements and placed in mounting press</p> <p>2.3. Mounting press is operated in accordance with manufacturer instructions, ensuring correct mounting temperature and/or pressing period</p> <p>2.4. Assembled artwork is removed from press, inspected for quality and stored in accordance with workplace procedures</p>
3. Wet mount artwork	<p>3.1. Mounting equipment is set up according to operating procedures and workplace practices</p> <p>3.2. Selected adhesive is prepared and applied to the substrate with regard for the type and composition of artwork to be mounted</p> <p>3.3. Artwork is wet mounted to substrate according to job requirements and placed in vacuum press</p> <p>3.4. Mounting press is operated in accordance with manufacturer instructions, ensuring correct pressing period</p> <p>3.5. Assembled artwork is removed from press, inspected for quality and stored in accordance with workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures
4. Pressure roller mount artwork	4.1. Rolling equipment is set up according to manufacturer instructions and workplace practices 4.2. Artwork is laminated using cold film in accordance with job requirements and workplace practices 4.3. Assembled artwork is inspected for quality and stored in accordance with workplace procedures
5. Laminate artwork	5.1. Laminating equipment is set up according to manufacturer instructions and workplace practices 5.2. Artwork is laminated in accordance with job requirements and workplace practices 5.3. Laminated artwork is inspected for quality and stored in accordance with workplace procedures
6. Hinge artwork to substrate	6.1. Hinging paper/pre-made hinging tape is assessed for compliance with job requirements 6.2. Starch paste is mixed to correct consistency and applied in conformance with workplace practices 6.3. Hinging paper is torn and fixed to artwork and substrate in accordance with workplace procedures 6.4. Hinged artwork is inspected for quality and positioned for further processing in accordance with workplace procedures
7. Complete work	7.1. Defective work is reported in accordance with workplace procedures 7.2. Scraps and off-cuts are removed for disposal/recycling as required by workplace procedures 7.3. Equipment and work area are cleaned in accordance with workplace procedures 7.4. Workplace documentation is completed as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate mounting problems, avoid re-working and wastage
- use the limited workplace technology related to mounting artwork, including tools, equipment, calculators and measuring devices

Required knowledge

- the type, characteristics, uses and limitations of the various methods of mounting artwork
- the techniques, method, equipment and materials used to mount artwork
- types of artwork suitable for the various techniques of mounting artwork and the characteristics and interactions between the materials used
- quality and aesthetic requirements in mounting artwork
- workplace safety system requirements related to mounting artwork
- workflow in relation to mounting artwork
- awareness of the effect of this process on the artwork

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify, adjust and safely operate equipment
- Identify materials, ensuring quality and aesthetics, to be used in the work process
- Interpret work order and locate and apply relevant information to set up, operate, adjust and monitor equipment used to appropriately mount artwork
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to mount items of artwork in each form of mounting:
 - wet
 - dry
 - laminating
 - pressure roller
 - hinging
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate mounting and/or laminating equipment for the technique being assessed, artwork, consumables. standard operating procedures and work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be

EVIDENCE GUIDE	
	in conjunction with assessment of other units of competency which together form a part of the job role.
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant mounting equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the mounting of artwork
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures
- Work may be performed in workplaces which are involved in the framing of a wide range of items, including, but not limited to those:
 - for dry mounting original paper-based artwork, reproduction artwork, photographs, photographic reproductions, documents and posters
 - for wet mounting/laminating reproduction artwork and promotional materials

Mounting artwork

- Artwork may be mounted to selected substrates by:
- dry mounting paper-based artwork using heat press and cold press
 - wet mounting paper and canvas-based artwork using adhesives and vacuum press
 - laminating paper-based artwork using pressure roller or laminating equipment
 - hinging, prefabricated or custom made

Tools and equipment

- For dry mounting, tools and equipment are to include:
 - hard bed heat press
 - soft bed heat press
 - tacking iron
 - piercing tool

RANGE STATEMENT

	<ul style="list-style-type: none"> • cutting blades • measuring tapes and marking out tools • overlay effect sheets • silicone release paper • Teflon and foam plastic blankets • For wet mounting, tools and equipment are to include: <ul style="list-style-type: none"> • vacuum press • cutting blades • measuring tapes and marking out tools • scrapers • glue/adhesive applicators (rollers and spray guns) • For pressure mounting, tools and equipment are to include: <ul style="list-style-type: none"> • pressure rolling equipment, • cold film • cutting blades • measuring tapes and marking out tools • For laminating, tools and equipment are to include: <ul style="list-style-type: none"> • cold roller laminator • laminating equipment • cutting blades • measuring tapes and marking out tools • For hinging, tools and equipment are to include: <ul style="list-style-type: none"> • straight edge • thin brush • weight bags • mixing vessel and swizzle • steam generator • microwave oven
For dry mounting materials may include, but not limited to:	<ul style="list-style-type: none"> • medium density fibreboard (MDF) • foam core • screen board • mat board • heat and pressure sensitive films and tissues
For wet mounting materials	<ul style="list-style-type: none"> • medium density fibreboard (MDF)

RANGE STATEMENT	
may include, but not limited to:	<ul style="list-style-type: none"> • foam core • screen board and glues • adhesives
For laminating materials may include, but not limited to:	<ul style="list-style-type: none"> • plastic film
For hinging materials may include, but not limited to:	<ul style="list-style-type: none"> • hinging paper (mulberry paper and rice paper) • pre-made hinging tape • wheat starch • distilled water and methyl cellulose
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices. It may include overalls, boots and breathing protection.
Defects in artwork may include but not be limited to:	<ul style="list-style-type: none"> • lumps and bumps • adhesive migration • misalignment and use of incorrect adhesive
Adhesives are to include:	<ul style="list-style-type: none"> • ethyl vinyl adhesive (EVA) • poly vinyl adhesive (PVA) • starch paste • heat and pressure sensitive tissues and films
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Manufacturer instructions for the use of equipment and materials • Workplace procedures relating to OHS, reporting and communications • Work instructions, including job sheets, plans, drawings and designs

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cutting	<p>1.1. Patterns, dimensions, materials and quantities are identified from work/job instructions</p> <p>1.2. Workplace health and safety requirements relevant to the operation of cutting basic mat boards, including personal protection needs, are observed throughout the work</p> <p>1.3. The process for obtaining materials/components and moving completed work to the next process is identified</p> <p>1.4. Work area, tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety</p> <p>1.5. Appropriate mat cutting machines are selected for the required cut and suitable blades are selected, fitted and adjusted for angled, circular or oval cuts</p> <p>1.6. Cutting equipment components and controls are identified</p> <p>1.7. Board material is selected following work order or specification and laid out to meet requirements and minimise waste</p> <p>1.8. Work sequence is planned to suit the job</p>
2. Conduct cutting operation	<p>2.1. Equipment is operated and monitored to ensure correct cut quality, output and that wastage is within allowable limits</p> <p>2.2. Problems occurring during work operations are identified and reported to appropriate persons</p> <p>2.3. Routine equipment adjustments are completed</p> <p>2.4. Items which do not meet quality requirements are repaired or discarded</p> <p>2.5. Finished work is inspected for compliance against specification or work order, workplace requirements and finish</p>
3. Complete work	<p>3.1. Mat boards are marked for identification and stored following workplace procedures</p> <p>3.2. Scraps and off-cuts are removed for disposal/recycling as required by workplace procedures</p> <p>3.3. Work area is cleaned and rubbish disposed of as appropriate</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Workplace documentation is completed as required 3.5. Tools, equipment and unused materials are cleaned, stored and stock levels reported following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the limited workplace technology related to the cutting of mat boards, including drawing aids, tools, equipment, calculators and measuring devices

Required knowledge

- the type, characteristics, uses and limitations of mat board materials
- workflow in relation to the cutting and storing of mat boards
- the types, characteristics and operation of mat cutting machines
- identification of equipment, processes and procedures
- workplace safety system requirements related to cutting mat boards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information to set up, operate, adjust and monitor equipment used to cut mat boards
- Identify materials, ensuring quality and aesthetics, to be used in the work process
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - cut single and double ovals and squares
 - cut multiple hole and reverse bevels in each of 2 ply, 4 ply and 8 ply up to 1524 x 1017 mm
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Mat cutting equipment, mat boards, work orders, workplace procedures and appropriate work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant mat board cutting machines/devices, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up, operation, adjustment and monitoring of equipment used to cut basic mat boards • Work may be performed in workplaces which are involved in the construction and/or selection of picture frames, including the provision of customer advice, selection and application of mounting mediums and methods, and in the preservation and presentation of artwork, documents, photographs, etc.
<p>Cut mat boards</p>	<p>Addresses the work involved in the cutting of mat boards by hand or machine according to required shape in straight line or oval with bevel cuts for the mounting of artwork. It does not include CNC cutting of mat boards.</p>
<p>Machines may include, but are not limited to:</p>	<ul style="list-style-type: none"> • straight line mat cutters and circle/oval mat cutters which may be manual • wall-mounted or air-operated
<p>Tools and equipment are to include:</p>	<ul style="list-style-type: none"> • hand-operated tools, including cutting blades, clamps, marking out tools, application equipment • machinery, including mat cutters
<p>Materials include, but are not</p>	<ul style="list-style-type: none"> • mat boards and various forms of artwork. Mat boards may be of paper pulp

RANGE STATEMENT	
limited to:	<ul style="list-style-type: none"> rag/cotton pulp or alpha cellulose pulp board. Finish may be suede plain cotton or metallic
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> Workplace instructions, including job sheets, plans, drawings and designs Workplace procedures relating to OH&S, equipment operations, reporting and communication Equipment manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirement	<p>1.1. Work requirements, including materials, types of cuts and quantities required are identified from work instructions or job order in accordance with workplace procedures</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Cutting list and quality standards are determined and procedures identified in accordance with workplace requirements</p> <p>1.5. Glazing material to be cut is selected using information from the work order, including type, thickness, colour and dimensions</p> <p>1.6. Machines, equipment and settings required to perform the work are identified</p>
2. Prepare for work	<p>2.1. Sequence of work is planned to ensure cutting is conducted in a logical order</p> <p>2.2. Suitable cutting and lubrication methods are selected</p> <p>2.3. Cutting table is selected and work surface is cleared of debris and dust</p> <p>2.4. Work area is cleared of obstructions and potential hazards</p> <p>2.5. Glazing material is checked for imperfections and damage prior to handling</p> <p>2.6. Glazing material to be processed is located in the work area using correct manual handling procedures and any specialised handling techniques and precautions, observing any labelling instructions</p> <p>2.7. Glazing material is measured accurately to minimise waste and within specified tolerances according to workplace standards</p> <p>2.8. Components and controls of machines, including emergency stops and guards are identified and tested for working order</p>
3. Cut glazing materials	<p>3.1. Tools and equipment are operated and monitored in accordance with manufacturers' instructions and workplace procedures to ensure correct product</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>quality and output</p> <p>3.2. Glazing material is processed to required standard in accordance with job order, work instructions and procedures, including the performance of routine lubrication and adjustments of machines/equipment</p> <p>3.3. Problems occurring during work operations are identified and reported to appropriate persons</p> <p>3.4. Authorised changes in working procedures are followed</p>
4. Complete work	<p>4.1. Completed product is inspected for quality of work and repaired, reprocessed or discarded in accordance with workplace procedures</p> <p>4.2. Cut glazing material is labelled and stored following workplace procedures</p> <p>4.3. Scraps and off-cuts are removed for disposal/recycling as required</p> <p>4.4. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.5. Workplace documentation is completed as required</p> <p>4.6. Tools, equipment and unused materials are removed and stored appropriately</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate glazing material requirements and minimise waste
- use pre-checking and inspection techniques to anticipate processing problems, avoid re-working and wastage
- use the limited workplace technology related to the handling and cutting of glazing materials, including handling aids, tools, equipment, calculators and measuring devices

Required knowledge

- the qualities and characteristics of glazing materials, including the hazards and handling requirements
- identification of glazing material cutting equipment, functions and procedures
- the set up and operation of glazing material cutting equipment, including procedures for reporting product defects or equipment faults
- workplace safety system requirements related to the cutting of glazing materials
- workflow in relation to the cutting of glazing materials

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work orders and plan cutting operations
- Identify the materials, patterns/plans, processes, machines, equipment and settings to cut glazing materials
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Set up for and prepare to cut glazing materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - cut 3 pieces of glass to within .05 mm tolerance
 - cut 3 pieces of acrylic to within .05 mm tolerance
 - cut 2 pieces of oval glass to within 1.5 mm tolerance
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Glazing material, cutting equipment, table, work area, work orders, standard work procedures and appropriate safety and personal protection equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which together form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant glazing material cutting

EVIDENCE GUIDE

equipment, materials, work instructions and deadlines.

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for assembly	1.1. Packages to be assembled are identified from work orders/instructions/customer requirements 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Safe and suitable work areas are selected to assemble package 1.4. Specifications of artwork to be framed are identified, including any special requirements 1.5. Components, fittings and attachments required for the package, and their source, are identified 1.6. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety 1.7. Work sequence is planned to suit the job
2. Assemble package	2.1. Components of the package are inspected for flaws/faults and, if located, repaired or returned in accordance with industry standards and workplace procedures 2.2. Components are cleaned and laid out for assembly in accordance with workplace procedures 2.3. Artwork is attached to backing material using the selected method 2.4. Frame components are assembled, adjusted as required to fit and fixed 2.5. Frame is fitted over package and the backing is fixed in accordance with workplace procedures 2.6. Fittings, attachments and hanging aids are attached in accordance with workplace procedures 2.7. Package is inspected for quality and either labelled and stored or returned for reassembly in accordance with workplace procedures
3. Complete work	3.1. Work area is cleaned and rubbish disposed of as appropriate 3.2. Workplace documentation is completed as required 3.3. Tools, equipment and unused materials are cleaned and stored following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate assembly problems, avoid re-working and damage
- use the limited workplace technology related to the assembly of simple artwork packages

Required knowledge

- workflow in relation to assembly of artwork package
- identification of materials, components, equipment, processes and procedures appropriate for assembling artwork packages
- construction techniques and processes for the components of the artwork packages
- industry standards and workplace practices in the assembly of simple artwork packages
- be aware of the effect of this process on the artwork

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Interpret work order and identify the artwork to be framed and the required package components • Complete package assembly without damage to the object • Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • minimise the risk of injury to self and others • prevent damage to goods, equipment and products • maintain required production output and product quality • As a minimum, assemble three artwork packages given a range of components and specifications • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
<p>Resource implications</p>	<p>Components of artwork package, work instructions, work procedures, work area, tools and materials.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which together form a part of the job role.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- Identify artwork to be framed; gather and clean the package components; assemble them; fix fittings and attachments, form a framed artwork package
- At the basic level, artwork is simple, 2D, flat artwork requiring a simple single frame
- Artwork package may consist of, but not be limited to: artwork, mount, mat board, frame, glass, backing, fittings and attachments (including hanging attachments)

Unit context

- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the assembly of simple artwork packages
- OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- Work may be performed in workplaces which are involved in the framing of a wide range of items, including, but not limited to: original artwork, reproductions, photographs and documents

Tools and equipment are to include:

- staple guns
- screwdrivers
- air blower
- staple lifter

Materials to be used may include but are not limited to:

- timber
- metal/alloys
- paper
- cardboard

RANGE STATEMENT	
	<ul style="list-style-type: none"> • laminates • composites • adhesives • cleaning agents • nails • tacks and tapes
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Customer requirements • Workplace procedures relating to OHS, equipment operations, reporting and communication • Work instructions, including job sheets, plans, drawings and designs

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. The composition and finish of damaged framing materials is identified and viability/feasibility of effecting repair determined</p> <p>1.2. Repairs to be effected are identified from work/job instructions or as a result of inspection of framing materials</p> <p>1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.4. Repair requirements and procedures are identified from drawings/specifications and workplace procedures</p> <p>1.5. Work sequence is planned to suit the job</p> <p>1.6. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety</p>
2. Repair framing materials	<p>2.1. Fillers and abrasive agents are used to remove/fill holes and other blemishes in materials</p> <p>2.2. Other defects are repaired in accordance with workplace procedures</p> <p>2.3. Colours are matched to suit existing finish of materials</p> <p>2.4. Finishes are applied to materials in accordance with workplace procedures</p> <p>2.5. Problems occurring during repairs are identified and reported to appropriate persons</p> <p>2.6. Repaired material is inspected to ensure best possible match to existing finish and either stored, returned for further repair or scrapped in accordance with workplace procedures</p>
3. Complete work	<p>3.1. Work area is cleaned and rubbish disposed of as appropriate</p> <p>3.2. Workplace documentation is completed as required</p> <p>3.3. Tools, equipment and unused materials are cleaned and stored following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the limited workplace technology related to the repair of framing material finishes, including tools, equipment, calculators and measuring devices

Required knowledge

- the type, characteristics, uses and limitations of framing materials
- the nature of defects in the finish of framing materials and their method of repair
- the types, uses and operation of tools and equipment
- finishes to framing materials and colour matching
- workplace safety system requirements related to repairing finishes to framing materials
- workflow in relation to repair of framing material finishes

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify finishes
- Identify repairs required
- Identify materials, ensuring quality and aesthetics, to be used in the repair process
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, identify the finish and effect the repair of five different damaged items of picture framing materials
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Framing materials requiring repair, tools and equipment for repair, consumables for filling and finishing, work practices and an appropriate work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant frame moulding cutting machines/devices, framing materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the repair of framing materials • Work may be performed in workplaces which are involved in the framing of a wide range of items, including, but not limited to: original artwork, reproductions, photographs, documents and three-dimensional items
Framing materials include:	<ul style="list-style-type: none"> • picture frame mouldings • mat boards • perspex • glass • mirrors
Mouldings are to include but are not limited to:	<ul style="list-style-type: none"> • solid timber • composites • metal and alloy extrusions • and synthetics
Defects in framing materials may include, but not be limited to:	<ul style="list-style-type: none"> • nail/pin holes • splits and cracks • worn finishes and dents/bruises <p>Defects may occur in mouldings or existing frames.</p>
Finishes may include, but not be limited to:	<ul style="list-style-type: none"> • painted surfaces • schalag metal • gesso

RANGE STATEMENT	
	<ul style="list-style-type: none"> • gold leaf gilding • shellac and stained finish
Repair processes may include, but not limited to:	<ul style="list-style-type: none"> • filling • rectification of dents and bruises • replacement of damaged components and touch-up colour/finish <p>Repairs may be effected in new materials or existing frames.</p>
Tools and equipment are to include:	<ul style="list-style-type: none"> • hammers • planes • chisels • filler blades • brushes and clamps <p>Tools and equipment may include sanders.</p>
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • boots • safety glasses/goggles • ear protection and dust mask/respirator
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to identify: <ul style="list-style-type: none"> 1.1.1. reasons for de-framing the item 1.1.2. parts of the framed item or the original framing materials to be retained 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Frame is examined to identify: <ul style="list-style-type: none"> 1.3.1. its composition, condition and type of construction 1.3.2. production techniques 1.3.3. type of and the fixing and fasteners used 1.3.4. de-framing and restoration procedures 1.4. Tools and equipment are selected to match construction and fastener type and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety 1.5. Safe and suitable work area is selected/prepared to de-frame, sort and protect the items 1.6. Dismantling sequence and handling techniques are determined
2. De-frame artwork	2.1. Original frame assembly is dismantled to the extent required in the work instructions using appropriate tools and procedures 2.2. Labels, fasteners and attachments are removed and stored 2.3. Components are separated, protected, tagged and stored following workplace procedures 2.4. Condition of de-framed object is examined and noted for the work order 2.5. Relevant historical information is collated and filed
3. Clean work area and complete operations	3.1. Equipment is cleaned, inspected for serviceable condition and stored appropriately 3.2. Equipment faults are identified, tagged and reported to appropriate personnel 3.3. Work area is cleaned and rubbish disposed of as appropriate 3.4. Workplace documentation is completed as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the limited workplace technology related to the de-framing of artwork, including drawing aids, tools, equipment, calculators and measuring devices

Required knowledge

- workflow in relation to dismantling frames
- artwork conservation techniques
- identification of materials, equipment, processes and procedures appropriate for de-framing artwork
- frame construction techniques and processes for constructing frame packages
- the types, uses and operation of tools used to de-frame artwork
- workplace safety system requirements related to de-framing artwork
- understand the effect of this process on the artwork

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipments, products and materials, including use of personal protective equipment, safety and environmental protection equipment.
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, de-frame and document five items of 2 and/or 3 dimensional framed artwork of various media and era
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Artwork for dismantling, work instructions, tools, equipment, standard operating procedures and work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant dismantling equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the de-framing of framed objects • OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work may be performed in workplaces which are involved in the de-framing, repair, restoration and framing of a wide range of items, including, but not limited to: original artwork, reproductions, photographs, documents and three-dimensional items
De-frame artwork	<ul style="list-style-type: none"> • Addresses the work required to remove the frame from artwork • Artwork includes all items which may be framed, including three-dimensional objects, textiles, photographs, paper-based artwork and canvas artwork, for the purposes of repair, restoration or reframing
Mounting methods may include:	<ul style="list-style-type: none"> • hinging • lacing and direct mounting
Frame constructions may include but are not limited to:	<ul style="list-style-type: none"> • timber • metal/alloys extrusion • composite construction and other frame material • paper • cardboard • fabric • mat board • backing material and glass

RANGE STATEMENT	
Documentation	As frame is dissembled, relevant materials and their positioning are clearly recorded for reference.
Tools and equipment are to include:	<ul style="list-style-type: none"> • hand-operated tools • including cutting blades • screwdrivers • pincers • pliers and marking out tools
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • metal/alloys • paper • cardboard • laminates • composites • adhesives and artwork
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Equipment manufacturer specifications and operational procedures • Workplace procedures relating to OHS, equipment operations, reporting and communication • Work instructions, including job sheets, plans, drawings and designs

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Required work is identified from work order/instructions 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Tools and equipment are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety 1.4. Appropriate mat cutting machines are selected for specialty decorative cutting 1.5. Decorative inks, paints and application equipment are selected to match work order 1.6. Safe and suitable work area is selected/prepared 1.7. Board material is selected and laid out to meet work requirements and minimise waste
2. Decorate mat boards	2.1. Mat board is decorated following the requirements of the work order and to maximise the presentation of the artwork 2.2. Decoration is checked against specification or work order 2.3. Decorated boards are marked for identification and stored following workplace procedures
3. Complete work	3.1. Unused materials are stored or recycled as required 3.2. Tools and equipment are cleaned and stored following workplace procedures 3.3. Work area is cleaned and rubbish disposed of as appropriate 3.4. Workplace documentation is completed as required 3.5. Stock level of materials are reported or maintained following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the limited workplace technology related to the decorating of mat boards, including drawing aids, tools, equipment, calculators and measuring devices

Required knowledge

- the types, characteristics and applications of cutting machines and mat board decorating techniques
- operation of mat cutters, lettering and line drawing guides and colouring application
- identification of equipment, processes and procedures
- workflow in relation to the decoration and storing of mat boards
- workplace safety system requirements related to decorating mat boards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify materials, ensuring quality and aesthetics, to be used in the work process
- Develop mat decorations, including colour and design
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Demonstrate the following on any size mat boards:
 - cut V groove
 - cut mat with decorative corners
 - apply wash panels/lines
 - apply decorative transfers
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Mat cutting equipment, inks, paints and application equipment, mat boards, work orders, standard operating procedures and work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

EVIDENCE GUIDE	
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant cutting and decorating equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the hand decoration of mat boards • OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work may be performed in workplaces which are involved in the construction and/or selection of picture frames, including the provision of customer advice, selection and application of mounting mediums and methods, and in the preservation and presentation of artwork, documents, photographs etc
<p>Mat board decoration</p>	<ul style="list-style-type: none"> • Mat board decoration is the hand decoration of mat boards using decorative methods that may include specialty cutting, line inking, colour washing and marble papers
<p>Tools and equipment are to include:</p>	<ul style="list-style-type: none"> • hand-operated tools, including cutting blades, hand cutters, marking out tools, application equipment (pens and brushes) • machinery, including mat cutters
<p>Materials to be used may include but are not limited to:</p>	<ul style="list-style-type: none"> • mat board • inks • paints and paper
<p>Personal protection equipment</p>	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices</p>
<p>Information and procedures</p>	<ul style="list-style-type: none"> • Workplace procedures relating to the use and

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including; design, quality, materials, equipment and quantities 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Determine appropriate CNC program and settings 1.4. Material for machining is selected and inspected for appropriate quality 1.5. Machines, cutting tools and jigs are checked for safe and effective operation 1.6. Procedures are determined for minimising waste material and for maximising energy efficiency while completing the job 1.7. Safety equipment, including emergency stops, gauges, guards and controls are checked 1.8. Personal protective equipment is selected and used according to OHS procedures
2. Set up machines	2.1. CNC program is set to job requirements 2.2. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturers' instructions 2.3. Trial runs are conducted to check machine operation and quality of finished work 2.4. Final adjustments are made to CNC programs and equipment according to workplace procedures
3. Operate machine	3.1. Machines are operated and monitored to ensure product quality and output 3.2. Waste quantities are checked and minimised 3.3. Problems with the required work are identified and reported to appropriate persons 3.4. Any authorised changes in working procedures are followed 3.5. Daily routine lubrication and adjustments for the equipment are completed
4. Complete work and maintain equipment	4.1. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures 4.2. Material that can be reused is collected and stored

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Waste and scrap are removed following workplace procedures</p> <p>4.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</p> <p>4.5. Unserviceable equipment is tagged and faults identified in accordance with workplace</p> <p>4.6. Equipment and tooling are maintained in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the workplace technology related to the operation of CNC machines, including programs, development of computer applications within the industry and precision measuring devices

Required knowledge

- workflow in relation to the operation of CNC machines
- identification of machines, processes and procedures
- procedures for reporting materials, product or equipment faults
- characteristics of materials used and uses of products produced
- workplace safety system requirements related to the operation of CNC machines

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify and operate CNC machine, including the use of safety cut outs and guards
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Interpret work order and locate and apply relevant information to set up, operate, adjust and monitor equipment used to produce components for picture frames.
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, in flat, traditional and reverse profiles (all 3), set up and demonstrate the operation of EITHER:
 - CNC mat board cutter in cutting the following patterns:
 - single and double
 - regular, oval, custom/regular
 - multi-holed; AND/OR
 - CNC mitre saws and CNC V-nailers to cut and join the following frames (at least one of them being a multi-angle frame) up to a width of 100 mm
 - synthetic
 - timber
 - aluminium
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

CNC machines, standard operating procedures, unprocessed materials and appropriate work area.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<p>This unit covers work involved in the set up, operation, adjustment and monitoring of computer numerical controlled (CNC) machines used in the production of picture frame components such as mat boards and frame mouldings and the joining of frames.</p>
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines • Work may be performed in workplaces which are involved in the framing of a wide range of items, including, but not limited to: original artwork, reproductions, photographs, documents and three-dimensional items
CNC machines	<p>CNC machines used in the manufacture of picture frame components include, but are not limited to:</p> <ul style="list-style-type: none"> • CNC mat cutting machines • CNC mitre saws and CNC V-nailers
Material to be machined may include but is not limited to:	<ul style="list-style-type: none"> • mat boards • solid timber • composites • metal and alloy extrusion and synthetics
Personal protection equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and</p>

RANGE STATEMENT	
	enterprise policies and practices.
Information and procedures	<ul style="list-style-type: none"> • Machine and tooling manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, cutting lists, programs, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Type of fabric used in textile is identified and work requirements established</p> <p>1.2. Quality assurance requirements are identified and observed throughout the process in accordance with industry standards and workplace practice</p> <p>1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.4. Textile is analysed to ensure its compatibility with the mounting process, including the type of mounting and the composition of the substrate material</p> <p>1.5. Work requirements are confirmed from drawing/specifications/instructions and workplace procedures to ensure they are within workplace capability</p> <p>1.6. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety</p>
2. Lace textiles	<p>2.1. Textile is laced into position on compatible backing according to industry practice and workplace procedures to be free of creases and overstretching marks and showing correct proportioning of images</p> <p>2.2. Laced textile is inspected for quality and either stored or, if faulty, is reprocessed in accordance with work procedures</p>
3. Couch textiles	<p>3.1. Textile is couched into position on compatible backing/mounting fabric according to industry practice and workplace procedures to be free of creases and overstretching marks and showing correct proportioning of images</p> <p>3.2. Couched textile is inspected for quality and either stored or reprocessed in accordance with work procedures</p>
4. Stretch/strain textiles	<p>4.1. Stretching or straining frame selected appropriate for material being prepared</p> <p>4.2. Textile is stretched/strained into position according to industry practice and workplace procedures to be free of creases and overstretching marks and showing correct proportioning of images</p> <p>4.3. Stretched/strained textile is inspected for quality and</p>

ELEMENT	PERFORMANCE CRITERIA
	either stored or reprocessed in accordance with work procedures
5. Stitch textiles	<p>5.1. Textile is stitched into specified position onto compatible backing/mounting board according to workplace procedures</p> <p>5.2. Stitched textile is padded if required in accordance with workplace procedures</p> <p>5.3. Stitched textile is inspected for quality and either stored or reprocessed in accordance with work procedures</p>
6. Block textiles	<p>6.1. Blocking process is identified according to type, composition and condition of textile according to workplace procedures</p> <p>6.2. Blocking process is used to return textile back into required position prior to lacing, couching or stretching/straining</p> <p>6.3. Textile is inspected for quality and either stored or reprocessed in accordance with work procedures</p>
7. Complete work	<p>7.1. Defective work is reported in accordance with workplace procedures</p> <p>7.2. Scraps and off-cuts are removed for disposal/recycling as required by workplace procedures</p> <p>7.3. Equipment and work area are cleaned in accordance with workplace procedures</p> <p>7.4. Workplace documentation is completed as required</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate mounting problems, avoid re-working and wastage
- use the limited workplace technology related to preparing textiles for framing, including tools, equipment and emerging processes

Required knowledge

- the type, characteristics, uses and limitations of the various methods of preparing textiles for framing
- the techniques, method, equipment and materials used to prepare textiles for framing
- quality and aesthetic requirements in preparing textiles for framing
- workplace safety system requirements related to preparing textiles for framing
- workflow in relation to preparing textiles for framing
- understand the effect of this process on the artwork

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information to set up, operate, adjust and monitor equipment used to prepare textiles for framing
- Identify materials, ensuring quality and aesthetics, to be used in the work process
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, using the five preparation techniques, prepare representative items from each of the following textiles for framing:
 - canvas works, including paintings and tapestries
 - needle art, including cross stitch, applique, long stitch and embroidery,
 - items of clothing
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate textile mounting equipment for the technique being assessed, textiles for framing, consumables. standard operating procedures and work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of

EVIDENCE GUIDE	
	competency which form a part of the job role.
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant textile preparation equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in preparing textiles for framing
Textiles include, but are not limited to:	<ul style="list-style-type: none"> • painted canvas • weavings • tapestries • cross stitch • applique • silk work and clothing items
Types of fabric include:	<ul style="list-style-type: none"> • cotton • wool • nylon and silk
Tools and equipment must include:	<ul style="list-style-type: none"> • needle • stretching pliers • measuring tape and stapler
Materials may include:	<ul style="list-style-type: none"> • timber • compatible substrates • thread • foam core and composites
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Manufacturer instructions for the use of

RANGE STATEMENT

	equipment and materials <ul style="list-style-type: none"> • Workplace procedures relating to OHS, reporting and communications • Work instructions, including job sheets, plans, drawings and designs

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Recognise artwork	<p>1.1. Customer requirements relating to the artwork are determined</p> <p>1.2. Work area is cleaned and prepared to handle artwork in accordance with workplace standards</p> <p>1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.4. Workplace quality assurance requirements are recognised and adhered to throughout the work</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety</p> <p>1.6. Artwork is handled in accordance with industry recognised handling methods and workplace procedures</p> <p>1.7. Artwork is examined to identify:</p> <ul style="list-style-type: none"> 1.7.1. period of artwork 1.7.2. its composition 1.7.3. any historic, monetary or sentimental value <p>1.8. Category of artwork is recognised to inform the selection of appropriate framing techniques</p>
2. Identify restoration/conservation requirements	<p>2.1. Customer requirements relating to the artwork are confirmed</p> <p>2.2. Artwork is examined to identify:</p> <ul style="list-style-type: none"> 2.2.1. quality, value and appropriate handling techniques/requirements 2.2.2. its composition and production techniques 2.2.3. any restoration/conservation required 2.2.4. compatibility of mounting processes, including type of mounting and composition of substrate material <p>2.3. Method of restoration/conservation, including techniques and materials, is identified, including the need for any specialised expertise</p> <p>2.4. Artwork for restoration/conservation is stored to prevent loss or damage in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to the history and techniques of art and framing artwork, restoration/preservation techniques and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the workplace technology related to the recognition of artwork and its restoration/conservation

Required knowledge

- major categories of art media
- liabilities and obligations relating to framing artwork
- framing materials and techniques
- materials used in artworks
- chemical reactions between artworks and framing materials
- restoration/conservation techniques for artwork and frames
- operation requirements of equipment and work systems in work area
- understand the effect of this process on the artwork

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Recognise the basic categories of art and the medium used in their production
- Recognise frames and the medium used in their production
- Identify defects in artwork and frames and determine appropriate restoration/conservation techniques
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, from five items of artwork representing various media and era, recognise:
 - era
 - artwork medium and material
 - any historical/monetary/sentimental significance
 - handling and storage requirements
 - impact on techniques
 - materials to be used for framing
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Historical information, workplace procedures, work area and artwork for conservation framing.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be

EVIDENCE GUIDE	
	in conjunction with assessment of other units of competency which form a part of the job role.
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant framed artwork, equipment, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the recognition and handling of artwork, and in identifying restoration/conservation techniques • OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work may be performed in workplaces which are involved in the framing of artwork and documents of sufficient value to require the application of conservation framing techniques
<p>Recognise artwork</p>	<ul style="list-style-type: none"> • the identification of all forms of artwork in order to determine appropriate presentation and/or restoration/conservation techniques
<p>Artwork may include, but is not limited to:</p>	<ul style="list-style-type: none"> • original works of art (oil and watercolour) • original prints • reproductions • needlework • textiles • photographs • certificates and memorabilia (including 3D objects)
<p>Damage to artwork may be caused by but is not limited to:</p>	<ul style="list-style-type: none"> • light • temperature • humidity • physical damage • insects • pollution

RANGE STATEMENT	
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Customer requirements (sentimental value) • Historical and/or monetary value • Legal implications • Industry conservation standards and requirements • Work instructions, including job sheets, plans, drawings and designs • Literature relating to the history and conservation of artwork • Workplace procedures relating to reporting and communication

Artwork is assessed for colour qualities to identify:</p> <p>1.7.1. primary, secondary, tertiary, harmonic and contrasting colours by colour wheel</p> <p>1.7.2. aesthetic/mood evoking nature (warmth, lightness, brightness, etc.)</p> <p>1.8. Artwork is assessed against the elements and principles of design and their impact on preservation/restoration and framing selection determined</p>
2. Develop frame design	<p>2.1. Customer requirements for framing are identified</p> <p>2.2. Historical, sentimental or monetary value of artwork ascertained through examination, research and/or consultation with customer</p> <p>2.3. Artwork is assessed to identify any preservation/restoration work required and impact on frame design</p> <p>2.4. Compatibility of framing materials with the artwork is determined from manufacturers' and industry information</p> <p>2.5. Principles of colour design applied to select mat and framing materials to complement artwork</p> <p>2.6. Design package is developed for presentation and discussion with customer</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to the history and techniques of art and framing artwork, restoration/preservation techniques and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the workplace technology related to the design requirements for framing artwork and the restoration/preservation of objects

Required knowledge

- major categories of art media
- liabilities and obligations relating to framing artwork
- framing materials and techniques
- elements and principles of design
- principles and the qualities/influence of colour
- materials used in artworks
- chemical reactions between artworks and framing materials
- restoration/preservation techniques for artwork and frames
- operation requirements of equipment and work systems in work area
- understand the effect of this process on the artwork

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Recognise the basic categories of art and the medium used in their production
- Recognise frames and the medium used in their production
- Identify the elements and principles of design and apply them to artwork, designing an appropriate framing package
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, prepare the design requirements for the framing of five items of artwork of various media and era
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Historical information, manufacturer information, colour wheel, workplace procedures, work area and artwork requiring framing design.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace

EVIDENCE GUIDE	
	simulated facility with relevant artwork requiring framing, equipment, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- Work may be performed in workplaces which are involved in the framing of artwork and documents of sufficient value to require the application of framing design
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the recognition and handling of artwork, and in identifying design requirements for framing

Framing design

- Addresses the requirement to consider the elements and principles of design to maintain/enhance the aesthetic and historical significance of artwork
- Elements of design include: line, direction, shape, size, texture, value and colour
- Principles of design include: repetition, alteration, harmony, graduation, contrast (or opposition or conflict), dominance, unity and balance
- Influences on compatibility of frame design include:
 - frame package design to suit required level of preservation
 - framing style to match image quality and aesthetic value
 - mouldings, fittings and attachments to suit framing and hanging requirements

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Consideration of customer requirements must be included in developing design
Artwork may include, but is not limited to:	<ul style="list-style-type: none"> • original works of art • original prints • reproductions • needlework • textiles • photographs • certificates and memorabilia (including 3D objects)
Damage to artwork may be caused by but is not limited to:	<ul style="list-style-type: none"> • light • temperature • humidity • physical damage • insects • pollution
Mounting methods may include:	<ul style="list-style-type: none"> • hinging • supports • lacing • stretching and direct mounting
Frame constructions may include but are not limited to:	<ul style="list-style-type: none"> • timber • metal/alloys extrusion • composite construction and other framing material such as paper/cardboard/fabric mat board • backing materials • acrylic and glass
Tools and equipment are to include:	<ul style="list-style-type: none"> • material samples • measuring tools and layout table
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Customer requirements • Industry preservation standards and requirements, including legal implications • Work instructions, including job sheets, plans, drawings and designs • Literature relating to the history and preservation of artwork

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work to be completed is identified from work order/instruction 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. The process for obtaining materials/components and moving completed work to the next process is identified 1.4. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the finishing task in terms of quality, serviceability and safety 1.5. Appropriately ventilated area, including fume extraction system (if appropriate), is identified and prepared for use 1.6. Finishing materials are identified and prepared for the finishing task 1.7. Workplace information relating to the safe application of finishes is used to inform work practices 1.8. Processing and application techniques, time and safety requirements are identified and used plan process
2. Prepare for finishing	2.1. Frame surfaces are checked for contamination and correct preparation according to workplace procedures and standards 2.2. Frames with surface or other faults are identified and faults reported or repaired as appropriate 2.3. Techniques for application of materials identified and used according to workplace practices 2.4. Colour match and trial applications of finish are made to check equipment operation, materials consistency and required surface finish 2.5. Faults are identified and workplace procedures for rectification are followed
3. Apply surface finish	3.1. Apply surface finish according to job instructions and workplace procedures 3.2. Surface finish is checked in accordance with workplace requirements 3.3. Rectification of surface faults is made as required

ELEMENT	PERFORMANCE CRITERIA
	3.4. Products are inspected and approved for suitability for further processing 3.5. Defects are dealt with and/or reported in accordance with workplace procedures
4. Complete work	4.1. Tools and equipment are cleaned and inspected for serviceable condition and stored appropriately 4.2. Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 4.3. Work area is cleaned and returned to approved condition 4.4. Workplace documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate finishing problems, avoid re-working and damage
- use the limited workplace technology related to the finishing of picture frames, including tools, equipment and finishes

Required knowledge

- picture frame finishes
- methods, characteristics and problems of application
- workflow in relation to spraying operations
- identification of equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify frames to be finished, the finish to be applied and the means by which this is to be achieved
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the following to the given timber, timber/compound, plain, ornamental frames:
 - hand staining
 - hand finishing
 - washed finishing
 - mechanical finishing
 - faux finishing
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Finishing equipment, work area, finishes and frames to be finished.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

EVIDENCE GUIDE

	materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the application of finishes to frames • OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work may be performed in workplaces which are involved in the manufacture or repair of picture frames
Apply frame finishes	<ul style="list-style-type: none"> • Addresses the application of finishes to picture frames by mechanical means or by hand • Finishes may be paint, stain, powder, foil, lacquer, synthetic or faux • Picture frames may be of timber, metal/alloy or synthetic material
Tools and equipment are to include:	<ul style="list-style-type: none"> • air spray gun • airless spray gun • air compressor and hoses • paint and brushes • finish containers and scrapers
Tools and equipment may include:	<ul style="list-style-type: none"> • a custom spray booth and fume extraction/ventilation system
Materials may include but is not limited to:	<ul style="list-style-type: none"> • wood fillers • stains • waxes • oils • French polishes • varnish

RANGE STATEMENT	
	<ul style="list-style-type: none"> • paints • liming • cutting compounds • acrylics • enamels • polyurethane • methylated spirits • sand papers • cotton rags • hessian rags • steel wool • sandpaper • abrasive papers • rubbers
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include but is not limited to:</p> <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • footwear • gloves • respiratory masks • protective clothing
Information and procedures	<ul style="list-style-type: none"> • Manufacturer specifications and operational procedures • Workplace procedures relating to the setting up and applying frame finishes • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for assembly	1.1. Packages to be assembled are identified from work orders/instructions/customer requirements 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Safe and suitable work areas are selected to assemble package 1.4. Specifications of artwork to be framed are identified, including any special requirements 1.5. Components, fittings and attachments required for the package, and their source, are identified 1.6. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality, serviceability and safety 1.7. Work sequence is planned to suit the job
2. Assemble package	2.1. Components of the package are selected, inspected for flaws/faults and, if located, repaired or returned in accordance with industry standards and workplace procedures 2.2. Components are cleaned and laid out for assembly in accordance with workplace procedures 2.3. Artwork is mounted using the appropriate method 2.4. Frame components are assembled, adjusted as required to fit and fixed in place 2.5. Frame is fitted over package and the backing is fixed in accordance with workplace procedures 2.6. Fittings, attachments and hanging aids are attached in accordance with workplace procedures 2.7. Package is inspected for quality and either labelled and stored or returned for reassembly in accordance with workplace procedures
3. Complete work	3.1. Work area is cleaned and rubbish disposed of as appropriate 3.2. Workplace documentation is completed as required 3.3. Tools, equipment and unused materials are cleaned and stored following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to the artwork to be framed, work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate assembly problems, avoid re-working and damage
- use the limited workplace technology related to the assembly and preservation of complex artwork packages

Required knowledge

- workflow in relation to assembly of artwork package
- identification of materials, components, equipment, processes and procedures appropriate for assembling artwork packages
- construction techniques and processes for the components of the artwork packages
- industry standards and workplace practices in the assembly of complex artwork packages
- liabilities and obligations relating to framing artwork
- chemical reactions between artworks and framing materials
- preservation techniques for artwork and frames
- understand the effect of this process on the artwork

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and identify the artwork to be framed, the required package components and any special assembly requirements
- Complete assembly of the complex package without damage to the artwork
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to assemble:
 - an item of matted artwork
 - a multi-frame (and/or fillets) item of artwork
 - a memorabilia box frame at least 50 mm deep
 - a full conservation framed artwork
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Components of artwork package, work instructions, work procedures, work area, tools and materials.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which together form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

EVIDENCE GUIDE

materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the assembly of complex artwork packages
- OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- Work may be performed in workplaces which are involved in the framing of a wide range of items, including, but not limited to: original artwork, reproductions, photographs, documents and 3D objects

Assemble artwork package (Complex)

- Addresses the requirement to identify artwork to be framed, the gathering and preparing of the package components, their assembly and the fixing of fittings and attachments, forming a framed artwork package
- At this, the complex level, artwork may be 3D, requiring specialised framing, using mat boards, spacers and fillets and requiring preservation. The item could have artistic/historic significance, requiring specialist handling
- Artwork package consists of: artwork, mount, mat board, frame, glass, backing, fittings and attachments (including hanging attachments)

Tools and equipment are to include:

- hand-operated tools, including cutting blades, hammers, screwdrivers, drills, clamps, marking out tools, air stapler, tacker, flexi-point gun
- equipment, including staplers

RANGE STATEMENT	
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • metal/alloys • paper • cardboard • laminates • composites • adhesives • cleaning agents • nails • tacks and tapes
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Customer requirements • Workplace procedures relating to OHS, equipment operations, reporting and communication • Work instructions, including job sheets, plans, drawings and designs • Industry preservation standards and requirements, including legal implications • Literature relating to the history and preservation of artwork

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan installation	1.1. Work to be undertaken is identified from work/job/customer order 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Artwork to be installed is viewed to determine artistic and design characteristics and physical dimensions and shape 1.4. Site for installation is visited and location, wall composition, fittings, attachments, hanging/fixing devices and any display features determined 1.5. If necessary, a plan for installation is developed and necessary regulatory approvals for installation sought 1.6. Customer approval of plan is gained
2. Prepare for installation	2.1. Specifications and/or plans are read and interpreted 2.2. Attachments, fittings, hanging/fixing devices and display features are identified and ordered 2.3. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 2.4. Artwork to be installed is prepared for safe and secure transit to work site 2.5. Sequence of work is planned
3. Install artwork	3.1. Instructions and sequence for installation are followed 3.2. Attachments, fittings, hanging/fixing devices and display features are organised and installed in accordance with relevant industry and workplace requirements 3.3. Artwork is positioned in accordance with work requirement 3.4. Completed installation is checked to ensure it meets required specifications 3.5. Customer approval of installation is gained
4. Complete housekeeping	4.1. Unused materials are stored or recycled as required 4.2. Tools and equipment are cleaned and stored appropriately 4.3. Work area is cleaned and rubbish disposed of

ELEMENT	PERFORMANCE CRITERIA
	<p>appropriately</p> <p>4.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid errors, avoid wastage and improve process
- use the limited workplace technology related to the installation of artwork, including appropriate tools, equipment, calculators and measuring devices

Required knowledge

- the elements and principles of design
- the types and features of framed artwork, the composition and characteristics of frames
- the composition, load bearing ability and method of construction of walls and ceilings
- workplace safety system requirements related to the installation of artwork
- workflow in relation to the installation of artwork
- understand the effect of this process on the artwork

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - recognise the requirements to securely fix artwork to be displayed for each installation
 - install an item of artwork of up to 20 kg on brick, plaster sheet and lath and plaster walls
 - install a grouped set of artwork
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Framed artwork, tools and equipment, attachments, fittings, hanging/fixing devices and display features and area suitable for installation.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant artwork installation equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • The installation of framed artwork in the premises of a customer, domestic or commercial. • Artwork may be positioned singly or grouped in conjunction with other pieces of artwork or in an adjustable gallery system
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous substance and dangerous goods codes and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the installation of artwork
Tools and equipment are to include:	<ul style="list-style-type: none"> • ladders • work platform/trestles • power drill and fittings • hammer • pliers • screwdrivers • caulking gun • square • tape measure • plumb bob and spirit level
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • attachments • fittings • hanging/fixing devices and display features • nails • tacks

RANGE STATEMENT	
	<ul style="list-style-type: none"> • screws • staples • filler • adhesive and tapes
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Customer requirements • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials • Insurance cover

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify design requirements	<p>1.1. Customer requirements relating to the display of the artwork and frame features are determined</p> <p>1.2. Work area is cleaned and prepared to handle artwork in accordance with workplace standards</p> <p>1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.4. Workplace quality assurance requirements are recognised and adhered to throughout the work</p> <p>1.5. Artwork is handled in accordance with industry recognised handling methods and workplace procedures</p> <p>1.6. Artwork is assessed for colour qualities to identify:</p> <p>1.6.1. primary, secondary, tertiary, harmonic and contrasting colours by colour wheel</p> <p>1.6.2. aesthetic/mood evoking nature (warmth, lightness, brightness etc)</p> <p>1.7. Artwork is assessed against the elements and principles of design and their impact on preservation/restoration and framing selection determined</p> <p>1.8. A design concept is developed and confirmed with the customer</p>
2. Develop frame design	<p>2.1. Historic, sentimental or monetary value of artwork ascertained through examination, research and/or consultation with customer</p> <p>2.2. Artwork is assessed to identify any impact preservation/restoration will have on frame design</p> <p>2.3. Compatibility of framing materials with the artwork is determined from manufacturer and industry information</p> <p>2.4. Principles of colour design applied to select mat and framing materials to complement artwork</p> <p>2.5. A provisional design package is developed for presentation and discussion with customer</p> <p>2.6. Design package is revised to reflect customer requirements</p>
3. Construct ornamental frame	<p>3.1. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work in terms of quality,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>serviceability and safety</p> <p>3.2. Machinery is used in accordance with workplace procedures throughout the work, including use of personal protective equipment</p> <p>3.3. Material is cut to size and laid out in the required design</p> <p>3.4. Specialised/ornamental components are moulded/turned/carved/manufactured in accordance with workplace procedures</p> <p>3.5. Frame components are finished in compliance with the design specifications and assessed for fit and aesthetic appearance</p> <p>3.6. Frame is joined to comply with design in accordance with workplace procedures</p> <p>3.7. Finish to the frame and its fittings is applied to comply with design in accordance with workplace procedures</p> <p>3.8. Work is checked against required quality standards with any non-conformity being rectified</p> <p>3.9. Customer endorsement of finished frame is sought and any modifications identified and implemented</p>
4. Complete work	<p>4.1. Scraps and off-cuts are removed for disposal/recycling as required by workplace procedures</p> <p>4.2. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.3. Workplace documentation is completed as required</p> <p>4.4. Tools, equipment and unused materials are cleaned and stored following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to the history and techniques of art and framing artwork, restoration/preservation techniques and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and avoid wastage
- use the workplace technology related to the design and construction requirements of complex ornamental frames

Required knowledge

- major categories of art media
- liabilities and obligations relating to framing artwork
- framing materials and techniques of frame building
- elements and principles of design and the qualities/influence of colour
- materials used in artworks
- chemical reactions between artworks and framing materials
- restoration/preservation techniques
- operation requirements of equipment and work systems in work area
- understand the effect of this process on the artwork

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Recognise the basic categories of art and the medium used in their production
- Recognise frames and the medium used in their production
- Identify the elements and principles of design and apply them to designing an appropriate complex ornamental frame
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, design and construct a frame incorporating three types of materials, displaying techniques of moulded and carved finishes and including at least one alternate joining technique (such as fingers, biscuits, dowel, etc.)
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Customer/work requirement, design facilities, woodworking and joining tools and equipment, frame assembly and finishing requirements, workplace procedures and work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of

EVIDENCE GUIDE	
	competency which form a part of the job role.
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant artwork requiring framing, equipment, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the recognition and handling of artwork, and in identifying design requirements for framing
- OHS requirements may include legislation, standards, material safety management systems and local safe operating procedures
- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- Work may be performed in workplaces which are involved in the framing of artwork of sufficient value to require the application of framing design

Frame design

- Addresses the requirement to consider elements and principles of design to maintain/enhance the historic, sentimental or monetary value of artwork
- Elements of design include:
 - line
 - direction
 - shape
 - size
 - texture
 - value
 - colour
- Principles of design include:
 - repetition
 - alteration
 - harmony
 - graduation
 - contrast (or opposition or conflict)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • dominance • unity and balance • Influences on compatibility of frame design include: <ul style="list-style-type: none"> • frame package design to suit required level of preservation • framing style to match image quality and aesthetic value • mouldings, fittings and attachments to suit framing and hanging requirements
Ornamental frames	<ul style="list-style-type: none"> • Ornamental frames are those required for artwork where its aesthetics and/or value deem it necessary • Artwork may be 2 or 3D, and the frame fitted with ornate/elaborate embellishment
Construction technique includes:	<ul style="list-style-type: none"> • moulding of composite • creating moulds • frame preparation • application of composite to frame and carving/ornamentation/decoration as required
Tools and equipment are to include:	<ul style="list-style-type: none"> • saws (circular, drop, docking and mitre) • chisels • underpinners • screwdrivers • marking out tools • pincers • pliers • touch-up material • glues and finishing tools, including files and sandpaper
Frame constructions may include but are not limited to:	<ul style="list-style-type: none"> • timber • metal/alloys extrusion • synthetic and composite construction
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Customer requirements • Industry preservation standards and requirements, including legal implications • Work instructions, including job sheets, plans,

RANGE STATEMENT

	drawings and designs <ul style="list-style-type: none"> • Literature relating to the history and preservation of artwork • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work to be completed is identified from work instruction, customer request or artwork is assessed as requiring a gilded frame</p> <p>1.2. Frame requiring gilding is examined to identify whether new gilding, preservation or restoration techniques are required</p> <p>1.3. Gilding technique or techniques to be applied is determined</p> <p>1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the finishing task in terms of quality, serviceability and safety</p> <p>1.6. Gilding materials and any associated finishes required are identified and assembled for the gilding task</p> <p>1.7. Work sequence is planned to suit the job</p>
2. Prepare for gilding	<p>2.1. Frame surfaces are checked for contamination and correct preparation according to workplace procedures and standards</p> <p>2.2. Frames with surface or other faults are identified and faults reported or repaired as appropriate</p> <p>2.3. Techniques for application of materials identified and used according to industry standards and workplace practices</p> <p>2.4. Faults are identified and workplace procedures for rectification are followed</p> <p>2.5. Composition (Compo) work is completed as required to meet specifications in accordance with workplace procedures</p>
3. Apply gilding	<p>3.1. Apply gilding according to job instructions and workplace procedures, which may include:</p> <ul style="list-style-type: none"> 3.1.1. choice of substrate 3.1.2. surface preparation 3.1.3. selection of bole or poliment 3.1.4. selection and application of size 3.1.5. selection and application of leaf 3.1.6. patination of finish

ELEMENT	PERFORMANCE CRITERIA
	<p>3.1.7. sealing of leaf</p> <p>3.2. Final finish is checked in accordance with workplace requirements</p> <p>3.3. Rectification of surface faults are made as required</p> <p>3.4. Ornamentation is applied as required in accordance with job instructions and workplace procedures</p> <p>3.5. Products are inspected and approved for suitability for further processing with defective frames being handled in accordance with workplace procedures</p>
4. Complete work	<p>4.1. Tools and equipment are cleaned and inspected for serviceable condition and stored appropriately</p> <p>4.2. Unused material is returned to store in accordance with workplace procedures</p> <p>4.3. Work area is cleaned and returned to approved condition</p> <p>4.4. Workplace documentation is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate finishing problems, avoid re-working and damage
- use the workplace technology related to the application of gilding techniques to picture frames, including tools, equipment and finishes

Required knowledge

- the techniques and application of gilding
- methods, characteristics and problems of application
- workflow in relation to gilding operations
- identification of equipment, processes and procedures
- understand the effect of this process on the artwork

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify gilding to be performed, the technique to be used and the means by which this is to be achieved
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum:
 - determine gilding technique and refurbish an existing gilded frame
 - using differing techniques/materials, prepare and gild two new frames
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Gilding equipment, work area, metallic leaf, other finishing materials and frames to be gild finished.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant gilding equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Apply gilding techniques

- The application of metallic leaf to picture frames. Leaf may be gold, silver, platinum, etc. in varying alloys, shlagmetal (brass) in varying alloys, copper and aluminium
- Techniques may be new work (based on contemporary artwork contained or decorative furnishing needs) or existing frame (either restoration/preservation needs)
- Techniques for application may include:
 - oil
 - size
 - quick size (acrylic)
 - water gilding based on the reactivation of the glue in the bole layer
 - new techniques such as Kolnar gilding

Compo work

Compo work is concerned with the ornamentation of frames for gilding. It may involve:

- its manufacture
- taking of moulds from existing frames
- repair of broken/missing ornamentation

Gilding

Gilding may be accompanied by one or more other finishes. These may include:

- silver gilt
- distemper
- japanning
- bronze
- aluminium and other powders (as in wax and flash gilding)
- use of aniline dyes and pigments and casein and verre eglomise (gilding and black lacquer on glass)

Patination of finishes may be chemical, stained,

RANGE STATEMENT	
	<p>painted, varnished or distemper</p> <p>The maintenance of original finishes on historic pieces may require the removal of overpainting</p>
Frames	<ul style="list-style-type: none"> • Picture frames requiring gilding may be new or old, requiring repair and/or restoration • Gilded picture frames will normally be of timber with compo or carved (rare) ornamentation. Some ornamentation may be moulded (Italian), carton pierre or papier mache
Tools and equipment may include:	<ul style="list-style-type: none"> • gilder's cushion • gilder's knife • gilder's tip • brushes and agate burnishing stones
Materials may include but are not limited to:	<ul style="list-style-type: none"> • size (parchment or rabbit skin) • whiting (chalk) • bole (wet or dry) • ethanol and brandy) • gilding oil • gold leaf • shlagmetal Dutchmetal) • alloy and aluminium leaf • glue • rosin • turpentine • shellac and varnish colours and chemicals for patination such as potassium sulphide
Personal protection equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices. As many of the materials used in gilding are toxic, gloves, eye protection and protective clothing should be worn.</p>
Information and procedures	<ul style="list-style-type: none"> • Manufacturer specifications and operational procedures • Workplace procedures relating to the setting up and applying gilding techniques • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Describe historical development of keyboards to modern pianos	1.1. Original keyboard instruments are identified. 1.2. Evolutionary development of upright pianos is investigated. 1.3. Materials selected for use in pianos are investigated, with reasons for changes occurring examined.
2. Identify changes in design of pianos	2.1. Changes to design of pianos are investigated and explained. 2.2. Difference in playing mechanisms is explained.
3. Identify types of pianos	3.1. Modern piano types are identified. 3.2. Differences between pianos are investigated.
4. Identify basic piano components	4.1. Construction of piano infrastructure is identified. 4.2. Major systems are identified, with all parts and functions listed.
5. Describe role of Piano Technician	5.1. Role of technician is identified. 5.2. Changes to role identified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning and repair
- origin and types of pianos
- piano infrastructure including systems
- terms used to describe piano components and systems
- role of piano technicians
- established lines of communication and protocols

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the piano tuning and repair industry
- read and understand documentation
- work collaboratively with others to complete tasks in a timely manner
- identify and select practical solutions to problems using analytical skills
- show independence and initiative in making decisions
- collect and organize information for the purpose of:
 - planning tasks
 - planning use of resources
 - assessing and prioritizing tasks
 - managing time and resources
- manage own work performance to:
 - follow OHS and workplace practices
 - plan and organize work schedules and routines
 - maintain required production output
 - assess quality of own work
- locate, interpret and apply information on piano technology
- use workplace technology related to piano technology, including specified tools, equipment, calculators and measuring devices for piano tuning and repair

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Locate, interpret and apply information relevant to piano tuning and repair industry • Identify different pianos and their construction • Role of piano technician is identified and understood • Communicate and work with others in the work area • Apply safe handling practices and safe operating procedures for equipment, products and materials to: <ul style="list-style-type: none"> • minimise the risk of injury to self or others • prevent damage to goods, equipment and products
<p>Context of and specific resources for assessment</p>	<p>Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements</p> <p>Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> • upright and grand pianos • workplace location or simulated workplace
<p>Method of assessment</p>	<p>Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of skills and knowledge when:</p> <ul style="list-style-type: none"> • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • assessing operational readiness of tools and equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions <p>Assessment must include a variety of project or work activities that allow the candidate to demonstrate</p>

EVIDENCE GUIDE

	<p>knowledge of the piano industry</p> <p>Assessment should be by direct observation of tasks and include questioning on required knowledge and skills to ensure correct interpretation and application.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine materials requirements	<p>1.1. Types of materials may include <i>timber, metal, felt, synthetics</i> and <i>other materials</i> used in the construction and repair of pianos.</p> <p>1.2. <i>Characteristics of timber</i>, metal and synthetic materials used in piano construction are analysed according to <i>structural</i> and <i>aesthetic requirements</i> according to workplace documentation.</p> <p>1.3. Client requirements and desires are reviewed, confirmed and clarified</p>
2. Select and use fasteners	<p>2.1. Work instructions are used to determine job requirements for fasteners, including design, colour, finish process and quality</p> <p>2.2. <i>Fasteners</i> are applied according to workplace requirements.</p> <p>2.3. Work site is set up according to the task, including preparation of required material and selection of holding and supporting equipment.</p> <p>2.4. Work is placed and held or supported in position for fastener application.</p> <p>2.5. Tools are selected and used to attach fasteners, according to their safety and effecting intended purposes.</p> <p>2.6. Personal protective equipment is selected, correctly fitted and used.</p>
3. Select and use adhesives	<p>3.1. <i>Adhesives</i> are selected according to workplace requirement</p> <p>3.2. <i>Work site</i> is set up according to the task, including preparation of required materials and selection of <i>holding and supporting equipment</i></p> <p>3.3. Work is placed and held or supported in position for adhesive application</p> <p>3.4. <i>Personal protective equipment</i> is selected, correctly fitted and used</p> <p>3.5. <i>OHS requirements</i> that apply to the safe application of adhesives are identified and followed.</p> <p>3.6. Adhesives are applied using <i>clamping techniques</i>, as required.</p>
4. Identify surface coatings and finishes for pianos	<p>4.1. <i>Surface coatings</i> - used for both interior and exterior finishing on piano components are identified, with preparation, application and durability</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. Furniture <i>finishes</i> used are investigated for requirements
5. Identify hardware	5.1. Work requirements are used to determine <i>hardware</i> needs for piano construction and repair
6. Clean up work area	6.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location 6.2. Work area is cleared and waste removed 6.3. <i>Workplace documentation</i> is completed and filed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate with supervisor and customer to:
 - confirm work orders and instructions
 - identify problems
 - report outcomes of selecting and applying hardware and fixings
- work with others and in a team to select and apply hardware and fixings
- use pre-checking and inspection techniques to anticipate production problems, avoid reworking and wastage
- participate in establishing new ideas and work specifications for selecting and applying hardware and fixings
- plan and organise activities to avoid any backtracking, work flow interruptions, rework or wastage, including preparation and layout of the worksite and selection of tools, equipment and materials
- manage own work performance to:
 - follow OHS and workplace practices
 - plan and organise work schedules and routines
 - maintain required production output
 - assess quality of own work
- adapt to new skill requirements
- research and apply new ideas and techniques
- use workplace technology related to selecting and applying hardware and fixings including specified tools, equipment, calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for selecting and applying hardware and fixings
- organisational and site standards, requirements, policies and procedures for applying hardware and fixings
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano repair and manufacture
- types of tools and equipment used to apply hardware and fixings and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• characteristics of hardware and fixings and their use• problem identification and resolution• set up and operation of tools and equipment used for applying hardware and fixings• storage systems and labelling• procedures for the recording, reporting and maintenance of workplace records and information• appropriate mathematical procedures for estimation and measurement |
|--|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Locate, interpret and apply information relevant to selection and use of materials, fasteners, hardware and adhesives for piano repair and manufacture

- Identify, select and apply at least 3 types of fasteners and adhesives to appropriate materials
- Identify surface coatings and finishes used in piano repair and manufacture
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano repair
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the repair and manufacture of pianos
- materials used in the repair and manufacture of pianos
- safety and personal protective equipment
- holding and supporting equipment
- workplace location or simulated workplace

Method of assessment

Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of

EVIDENCE GUIDE

skills and knowledge when:

- organising work
- completing tasks according to instructions
- working systematically with attention to detail
- identifying improvements and avoiding damage
- using workplace practices
- using OHS practices
- assessing operational readiness of tools and equipment
- recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions

Assessment must include a variety of project or work activities that allow the candidate to demonstrate competency in the unit

Assessment should be by direct observation of tasks and include questioning on required knowledge and skills to ensure correct interpretation and application.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

The following examples are appropriate for this unit:

- direct observation of the candidate performing a variety of work tasks that involve the use of different hand and power tools, materials and equipment
- oral and written questions about the safe and effective use of fasteners, adhesives, surface coatings and finishes, and hardware, the appropriateness of various tools for particular jobs, and maintenance and storage of materials, tools and equipment
- review of portfolios of evidence and third party workplace reports of the candidate's on-the-job performance

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Timber may include:	<ul style="list-style-type: none"> spruce, ebony, beech, birch, hardwood, softwood, veneers, chipboard and MDF
Metal may include:	<ul style="list-style-type: none"> aluminium, steel, solders, cast iron, brass
Felts may include:	<ul style="list-style-type: none"> wool, synthetic
Synthetics may include:	<ul style="list-style-type: none"> plastic (keys, bushings, damper head, damper flanges, hammer butt, jack, jack flange, capstone)
Other materials may include:	<ul style="list-style-type: none"> ivory, leather
Characteristics of timber may include:	<ul style="list-style-type: none"> density, moisture content, grain, shrinkage, knots
Structural requirements may include:	<ul style="list-style-type: none"> hardness, density
Aesthetic requirements may include:	<ul style="list-style-type: none"> growth rings, veneers, medullary rays, colour, grain patterns
Fasteners may include:	<ul style="list-style-type: none"> screws (head, slot, machine and thread types), nails (panel pins)
Adhesives may include:	<ul style="list-style-type: none"> animal (horse, fish), PVA, contact, epoxy, casein, latex
Work site may include:	<ul style="list-style-type: none"> workshop or factory location or onsite at client's premises
Holding and supporting equipment may include:	<ul style="list-style-type: none"> portable workbench, clamps, vices, gripper mats
Personal protective equipment may include:	Safety glasses, goggles, hearing protection, safety footwear, protective clothing, gloves, respiratory protection.

RANGE STATEMENT	
OHS requirements may include:	<ul style="list-style-type: none"> relevant Federal, State or Territory OHS legislation, regulations, standards and codes of practice, and workplace policies and procedures including the use of personal protection equipment, hazard and risk control and manual handling.
Clamping techniques may include:	<ul style="list-style-type: none"> sash, 'G', spring, pipe
Surface coatings may include:	<ul style="list-style-type: none"> shellack, single pack, polyurethane (two pack), nitro-cellulose and pre-catalysed lacquers, woodgrain fillers, stains, oils, enamels, acrylics
Finishes may include:	<ul style="list-style-type: none"> high gloss, gloss, satin, matt, limed, pigmented
Hardware may include:	<ul style="list-style-type: none"> locks, hinges - butt, escutcheon inserts, sliding rollers/runners, knobs, handles, finger guards, castors
Workplace documentation may include:	Time sheets, customer cards, work orders including job sheets, cutting lists, plans, drawings and designs, tool maintenance records and schedules

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for repairing action, keys and pedals	<p>1.1. OHS requirements, legislative requirements and workplace practices relevant to repairing pianos are verified and complied with.</p> <p>1.2. Customer requirements are received, analysed and confirmed with appropriate personnel.</p> <p>1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel cooperation and safety throughout the application of this competency.</p> <p>1.4. Written instructions are followed.</p>
2. Prepare for repair	<p>2.1. Tools and equipment are selected consistent with the needs of the job.</p> <p>2.2. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices</p> <p>2.3. Personal protective equipment is correctly fitted and used</p> <p>2.4. Materials required for the repair of piano action, keys and pedals are selected</p>
3. Repair piano action, keys and pedals	<p>3.1. Correct posture for repairing is demonstrated which minimizes fatigue and promotes muscular control.</p> <p>3.2. Tools and equipment are applied in the repair process</p> <p>3.3. Action and keys are removed or dismantled, as required by the repairing process</p> <p>3.4. Faulty or damaged parts are removed from action, keys and pedals</p> <p>3.5. Action parts are re-centred, as required</p> <p>3.6. Materials for replacement felts and leathers are selected, cut and glued to action parts</p> <p>3.7. Faulty or damaged parts are replaced in accordance with manufacturer's recommendations and workplace practices</p> <p>3.8. Quality of the repair process is continuously monitored in accordance with workplace practice and quality procedures</p> <p>3.9. Piano action, keys and pedals are re-assembled according to workplace practices</p>
4. Clean up work area	<p>4.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. Work area is cleared and waste removed 4.3. <i>Workplace documentation</i> is completed and filed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to piano tuning and repair work orders, work plans and safety procedures
- complete standardized workplace information
- work with others and in a team to repair pianos
- use pre-checking and inspection techniques to anticipate problems and identify tools or equipment faults and take appropriate action
- participate in establishing new ideas and work specifications for repairing in pianos
- plan and organize activities to avoid any backtracking, workflow interruptions, rework or wastage, including preparation and layout of the worksite and selection of tools and equipment
- manage own work performance to:
 - follow OHS and workplace practices
 - plan and organize work schedules and routines
 - maintain required production output
 - assess quality of own work
- locate, interpret and apply information on piano technology and the use and maintenance of hand and power tools
- use hand and power tools to repair pianos
- use equipment to maintain and repair hand tools, power tools and holding and supporting equipment

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for repairing upright and grand piano actions, keys and pedals
- organisational and site standards, requirements, policies and procedures for repairing upright and grand piano actions, keys and pedals
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano repair and manufacture
- types of tools and equipment used to repair actions, keys and pedals and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for repairing actions, keys and

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to repair upright and grand piano actions, keys and pedals
- Identify tools and equipment used in repairing actions, keys and pedals
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Repair a minimum of two actions, keys and pedals in both upright and grand pianos
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano repair
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the repair and manufacture of pianos
- materials used in the repair and manufacture of pianos
- safety and personal protective equipment

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • holding and supporting equipment • workplace location or simulated workplace • upright and grand pianos

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for rebuilding action, keys and pedals	<p>1.1. OHS requirements, legislative requirements and workplace practices relevant to rebuilding pianos are verified and complied with.</p> <p>1.2. Customer requirements are received, analysed and confirmed with appropriate personnel.</p> <p>1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel cooperation and safety throughout the application of this competency.</p> <p>1.4. Written instructions are followed.</p>
2. Prepare to rebuild	<p>2.1. Tools and equipment are selected consistent with the needs of the job.</p> <p>2.2. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices</p> <p>2.3. Personal protective equipment is correctly fitted and used</p> <p>2.4. Materials required for the repair of piano action, keys and pedals are selected</p>
3. Dismantle action and keys	<p>3.1. Correct posture for rebuilding is demonstrated, which minimizes fatigue and promotes muscular control</p> <p>3.2. Action is dismantled and all parts are named and numbered.</p> <p>3.3. Keys are removed from keyboard and named and numbered.</p> <p>3.4. Pedals are removed.</p>
4. Rebuild parts	<p>4.1. Parts to be rebuilt or reconditioned are identified.</p> <p>4.2. Parts are measured and stripped of old materials in preparation for reconditioning.</p> <p>4.3. Parts are measured and reconfigured in preparation for rebuilding.</p> <p>4.4. Rebuilding or reconditioning of action, key and pedals is carried out as required.</p> <p>4.5. Quality of the rebuilding process is continuously monitored in accordance with workplace practice and quality procedures.</p> <p>4.6. Piano action, keys and pedals are re-assembled according to workplace practices</p>

ELEMENT	PERFORMANCE CRITERIA
5. Clean up work area	5.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location. 5.2. Work area is cleared and waste removed 5.3. <i>Workplace documentation</i> is completed and filed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements, plans and specifications, coordination of work with other workers and customer, and report of work outcomes and problems
- complete standardized workplace information
- work with others and in a team to rebuild pianos
- use pre-checking and inspection techniques to anticipate problems and identify tools or equipment faults and take appropriate action
- participate in establishing new ideas and work specifications for tuning pianos and repairing faults
- plan and organize activities to avoid any backtracking, workflow interruptions, rework or wastage, including preparation and layout of the worksite and selection of tools and equipment
- manage own work performance to:
 - follow OHS and workplace practices
 - plan and organize work schedules and routines
 - maintain required production output
 - assess quality of own work
- locate, interpret and apply information on piano technology and the use and maintenance of hand and power tools
- use workplace technology related to piano technology, including specified tools, equipment, calculators and measuring devices for piano rebuilding

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for rebuilding actions, keys and pedals on upright and grand pianos
- organisational and site standards, requirements, policies and procedures for rebuilding actions, keys and pedals on upright and grand pianos
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- terms used to describe components of an upright and grand piano
- types, characteristics, uses, limitations and preparation of materials and equipment used in rebuilding actions, keys and pedals on upright and grand pianos
- types of tools and equipment used to apply hardware and fixings and procedures for their safe use, operation and maintenance

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• characteristics of hardware and fixings and their use• problem identification and resolution• set up and operation of tools and equipment used for rebuilding actions, keys and pedals on upright and grand pianos• storage systems and labelling• procedures for the recording, reporting and maintenance of workplace records and information• appropriate mathematical procedures for estimation and measurement |

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to rebuild upright and grand piano actions, keys and pedals
- Identify tools and equipment used in rebuilding actions, keys and pedals
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Rebuild a minimum of two actions, keys and pedals in both upright and grand pianos
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano rebuilding
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the repair and manufacture of pianos
- materials used in the repair and manufacture of pianos
- safety and personal protective equipment

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • holding and supporting equipment • workplace location or simulated workplace • upright and grand pianos
Method of assessment	<p>Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of skills and knowledge when:</p> <ul style="list-style-type: none"> • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • assessing operational readiness of tools and equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions <p>Assessment must include a variety of project or work activities that allow the candidate to demonstrate competency in the unit</p> <p>Assessment should be by direct observation of tasks and include questioning on required knowledge and skills to ensure correct interpretation and application.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements may include:	Relevant Federal, State or Territory OHS legislation, regulations, standards and codes of practice, and workplace policies and procedures including the use of personal protection equipment, hazard and risk control and manual handling.
Legislative requirements may include:	Relevant Federal, State or Territory legislation including award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, industry codes of practice.
Workplace practices may include:	Site guidelines, policies and procedures relating to own role, quality assurance, procedural manuals, tool manufacturer's recommendations, ethical standards, recording and reporting, equipment use, maintenance and storage, environmental management (waste disposal, recycling, re-use).
Tools and equipment may include:	<ul style="list-style-type: none"> knives, guillotine, measuring equipment, centering equipment, glue brushes and sticks, glue pot
Personal protective equipment may include	Safety glasses, goggles, hearing protection, safety footwear, protective clothing, gloves, respiratory protection
Correct posture may include:	<ul style="list-style-type: none"> Standing or seating, according to type of piano and height of individual Even distribution of body weight between both feet while standing, to reduce fatigue Rest arm where available to aid control during tuning and reduce tiredness
Materials may include:	<ul style="list-style-type: none"> action felts and leathers, key bushings, key frame materials, springs, action components, key tops, pedal caps, pedal trap bushings,

RANGE STATEMENT	
	centre pins, hammer heads, bridle tapes
Rebuilding may include:	<ul style="list-style-type: none"> replacing the following with new components - hammer heads and assembly, wippen assembly, keys, action rails, pedals and trappings, springs, action brackets
Reconditioning may include:	<ul style="list-style-type: none"> repairing action components to an as new condition using existing parts with new materials
Workplace documentation may include:	Time sheets, customer cards, work orders including job sheets, cutting lists, plans, drawings and designs, tool maintenance records and schedules

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for re-stringing and re-pinning	1.1. OHS requirements, legislative requirements and workplace practices relevant to repairing pianos are verified and complied with 1.2. Customer requirements are received, analysed and confirmed with appropriate personnel 1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel cooperation and safety throughout the application of this competency 1.4. Written instructions are followed
2. Prepare for repair	2.1. Tools and equipment are selected consistent with the needs of the job. 2.2. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices 2.3. Personal protective equipment is correctly fitted and used 2.4. Materials required for the re-stringing and re-pinning of piano are selected
3. Assess piano	3.1. Correct posture for repairing is demonstrated which minimizes fatigue and promotes muscular control 3.2. Case parts are removed and stored 3.3. Measurements of all string sizes are taken throughout piano 3.4. Position of all pressure bars, duplex bars and under-stringing felts are noted 3.5. Inspect base strings for tone and quality, noting those needing replacement
4. Prepare piano for re-stringing	4.1. Length of strings are measured and recorded 4.2. Detune piano 4.3. Pressure bars / agraffes are removed 4.4. Strings are removed by unwinding in order 4.5. Bass strings are tagged for identification purposes using a wire guide to store until needed 4.6. Tuning pins are removed and assessed for reusability 4.7. Samples of tuning pins, felts and eye strings are retained 4.8. Size of new pins and drill holes are calculated for appropriate tension requirements

ELEMENT	PERFORMANCE CRITERIA
5. Re-pin and re-string piano 6.	6.1.Stringing scale is re-calculated 6.2.Agraffes are replaced in accurate position, as required. 6.3.Pins and treble strings are replaced in required order, with <i>under stringing felt</i> inserted. 6.4.Pins and base strings are replaced in required order 6.5.Pressure bars are replaced in accurate position
7. Chip Up	7.1.Establish <i>Pitch Standard</i> 7.2.Pluck and tune strings individually against Pitch Standard 7.3.Rub down strings and repeat process until strings stabilised
8. Re-assemble piano	8.1.Piano is re-assembled 8.2.Tools and equipment are maintained, cleaned and stored safely in designated location 8.3.Records are maintained in accordance with enterprise requirements or industry practice
9. Clean up work area	9.1.All tools, materials and other equipment are checked, cleaned and returned to their appropriate location. 9.2.Work area is cleared and waste removed 9.3. <i>Workplace documentation</i> is completed and filed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements, plans and specifications, coordination of work with other workers and customer, and report of work outcomes and problems
- work with others and in a team to assess tuning and repair requirements
- apply knowledge of tuning and repair processes to problem solving
- assess and take appropriate action to minimize risks
- collect and organize information for the purpose of:
 - planning tasks and identifying task outcomes
 - planning use of resources
 - assessing and prioritizing tasks
 - managing time and resources
- Manage own work performance to:
 - follow OHS and workplace practices
 - plan and organize work schedules and routines
 - maintain required production output
 - assess quality of own work
- apply mathematical applications for estimation and measurement
- use calculators and measuring devices to take measurements and estimate material requirements

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for restringing and re-pinning upright and grand pianos
- organisational and site standards, requirements, policies and procedures for restringing and re-pinning upright and grand piano
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano restringing and re-pinning
- types of tools and equipment used to restring and re-pin pianos and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for restringing and re-pinning

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to restring and re-pin a piano
- Identify tools and equipment used in restringing and re-pinning a piano
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Restring and re-pin a minimum of two upright and grand pianos
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano tuning and repair
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the repair and manufacture of pianos
- materials used in the repair and manufacture of pianos
- safety and personal protective equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for regulating action, keys and pedals	1.1. OHS requirements, legislative requirements and workplace practices relevant to regulating pianos are verified and complied with. 1.2. Customer requirements are received, analysed and confirmed with appropriate personnel. 1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel cooperation and safety throughout the application of this competency. 1.4. Written instructions are followed.
2. Prepare to regulate	2.1. Correct posture for regulating is demonstrated which minimizes fatigue and promotes muscular control 2.2. Tools and equipment are selected consistent with the needs of the job. 2.3. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices 2.4. Personal protective equipment is correctly fitted and used
3. Align action components	3.1. Alignment of action rail is checked and adjusted 3.2. Striking distance is adjusted to industry specifications 3.3. Hammer running alignment and angling is adjusted 3.4. Wippen alignment procedures are performed
4. Regulate keyboard	4.1. Keys are spaced according to industry specifications 4.2. Keys are levelled 4.3. Key depth is adjusted
5. Regulate action	5.1. Lost motion is adjusted 5.2. Set off is adjusted 5.3. Checking distance is adjusted 5.4. Dampers are regulated to industry specifications 5.5. Damper spoon bending is adjusted to half striking distance 5.6. Damper stop rail and jack stop rail are adjusted to industry specifications
6. Adjust pedals	6.1. Sustain pedal is adjusted to lift when the pedal is one third through its motion 6.2. Soft pedal is adjusted to an acceptable lost motion

ELEMENT	PERFORMANCE CRITERIA
	<p>6.3. Mute pedal is adjusted for hammers to clear felt in rest position but strike felt in lock down position</p> <p>6.4. Sostenuto pedal is adjusted so relevant dampers are locked in position when note is played</p>
7. Final check and inspection	<p>7.1. Upright piano is inspected for playability and performance</p> <p>7.2. Adjustments to action and pedals as required</p>
8. Clean up work area	<p>8.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location</p> <p>8.2. Work area is cleared and waste removed</p> <p>8.3. <i>Workplace documentation</i> is completed and filed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- identify team performance required to meet customer needs
- use pre-checking and inspection techniques to anticipate problems and identify tools or equipment faults and take appropriate action
- show independence and initiative in making decisions
- plan and organize activities to avoid any backtracking, workflow interruptions, re-work or wastage, including preparation and layout of the worksite and selection of tools and equipment
- prioritise own work to meet customer requirements regarding completion time
- adapt to new skill requirements
- use workplace technology related to piano technology, including specified tools, equipment, calculators and measuring devices for piano tuning and repair

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for regulating upright piano actions, keys and pedals
- organisational and site standards, requirements, policies and procedures for regulating upright piano actions, keys and pedals
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano regulating
- types of tools and equipment used to regulate actions, keys and pedals and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for regulating actions, keys and pedals
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to regulate upright piano actions, keys and pedals
- Identify tools and equipment used in regulating actions, keys and pedals
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Regulate a minimum of three actions, keys and pedals in upright pianos
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano regulation and repair
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the tuning and repair of pianos
- materials used in the tuning and repair of pianos
- safety and personal protective equipment
- holding and supporting equipment

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • workplace location or simulated workplace • upright pianos
Method of assessment	<p>Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of skills and knowledge when:</p> <ul style="list-style-type: none"> • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • assessing operational readiness of tools and equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions <p>Assessment must include a variety of project or work activities that allow the candidate to demonstrate competency in the unit</p> <p>Assessment should be by direct observation of tasks and include questioning on required knowledge and skills to ensure correct interpretation and application.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work	1.1. OHS requirements, legislative requirements and workplace practices relevant to repairing pianos are verified and complied with. 1.2. Customer requirements are received, analysed and confirmed with appropriate personnel. 1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, co-ordination, personnel co-operation and safety throughout the application of this competency. 1.4. Written instructions are followed.
2. Prepare, measure and assess	2.1. Correct posture for regulating is demonstrated which minimizes fatigue and promotes muscular control 2.2. Tools and equipment are selected consistent with the needs of the job. 2.3. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices 2.4. Personal protective equipment is correctly fitted and used 2.5. Set trial regulation standards to determine correct action operation 2.6. Check and re-adjust as required
3. Align action components	3.1. Alignment of action rail is checked and adjusted 3.2. Hammer running alignment and angling is adjusted 3.3. Wippen alignment procedures are performed 3.4. Bed action to key frame and key frame to key bed
4. Regulate keys	4.1. Keys are levelled, squared and spaced according to industry specifications 4.2. Key depth is adjusted
5. Regulate action	5.1. Jack to roller alignment and repetition lever height is adjusted 5.2. Striking distance is adjusted to industry specifications 5.3. Let off is adjusted 5.4. Checking distance is adjusted 5.5. Repetition spring adjusted 5.6. Hammer drop adjusted 5.7. Dampers are regulated to industry specifications

ELEMENT	PERFORMANCE CRITERIA
6. Regulate pedals	6.1.Sustain pedal adjusted with slight lost motion 6.2.Sostenuto pedal operations adjusted as per industry specification 6.3.Una-corda pedal adjusted to industry specification
7. Final check and inspection	7.1.Grand piano is inspected for playability and performance 7.2.Adjustments to action and pedals as required
8. Clean up	8.1.All tools, materials and other equipment are checked, cleaned and returned to their appropriate location 8.2.Work area is cleared and waste removed 8.3. Workplace documentation is completed and filed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- identify team performance required to meet customer needs
- use pre-checking and inspection techniques to anticipate problems and identify tools or equipment faults and take appropriate action
- show independence and initiative in making decisions
- plan and organize activities to avoid any backtracking, workflow interruptions, re-work or wastage, including preparation and layout of the worksite and selection of tools and equipment
- prioritise own work to meet customer requirements regarding completion time
- adapt to new skill requirements
- use workplace technology related to piano technology, including specified tools, equipment, calculators and measuring devices for piano tuning and repair

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for regulating grand piano actions, keys and pedals
- organisational and site standards, requirements, policies and procedures for regulating grand piano actions, keys and pedals
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano regulating
- types of tools and equipment used to regulate actions, keys and pedals and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for regulating actions, keys and pedals
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to regulate grand piano actions, keys and pedals
- Identify tools and equipment used in regulating actions, keys and pedals
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Regulate a minimum of three actions, keys and pedals in grand pianos
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano regulation and repair
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the tuning and repair of pianos
- materials used in the tuning and repair of pianos
- safety and personal protective equipment
- holding and supporting equipment

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> workplace location or simulated workplace grand pianos
Method of assessment	<p>Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of skills and knowledge when:</p> <ul style="list-style-type: none"> organising work completing tasks according to instructions working systematically with attention to detail identifying improvements and avoiding damage using workplace practices using OHS practices assessing operational readiness of tools and equipment recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions <p>Assessment must include a variety of project or work activities that allow the candidate to demonstrate competency in the unit</p> <p>Assessment should be by direct observation of tasks and include questioning on required knowledge and skills to ensure correct interpretation and application.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
OHS requirements may include:	Relevant Federal, State or Territory OHS legislation, regulations, standards and codes of practice, and workplace policies and procedures including the use of personal protection equipment, hazard and risk control and manual handling.
Legislative requirements may include:	Relevant Federal, State or Territory legislation including award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, industry codes of practice.
Workplace practices may include:	Site guidelines, policies and procedures relating to own role, quality assurance, procedural manuals, tool manufacturer recommendations, ethical standards, recording and reporting, equipment use, maintenance and storage, environmental management (waste disposal, recycling, re-use).
Correct posture may include:	<ul style="list-style-type: none"> • Standing or seating, according to type of piano and height of individual • Even distribution of body weight between both feet while standing, to reduce fatigue • Rest arm where available to aid control during tuning and reduce tiredness
Tools and equipment may include:	Capstan regulator, set off regulator, touch/dip block, rule, regulating buttons, drop screw driver, spring bender, casting lamp, hammer flange spacer, key easing pliers, wire bender, screw

RANGE STATEMENT	
	driver
Personal protective equipment may include:	Safety glasses, goggles, hearing protection, safety footwear, protective clothing, gloves, respiratory protection
Regulation of dampers may include:	<ul style="list-style-type: none"> • Damper lift • Damper stop rail • Damper travel • Alignment to strings • Damper spacing • Damper guide bushings
Workplace documentation may include:	Time sheets, customer cards, work orders, including job sheets, cutting lists, plans, drawings and designs, tool maintenance records and schedules

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Acquire knowledge of basic acoustics	1.1. Elements of <i>basic acoustics</i> are explained 1.2. Acoustical laws of sounding strings are explained
2. Acquire knowledge of piano tuning	2.1. Elements of <i>piano tuning theory</i> are explained 2.2. Affect of inharmonicity on piano tuning is explained
3. Acquire knowledge of musical scales	3.1. Elements of <i>musical scale theory</i> are explained 3.2. The behaviour of piano strings and their proper dimensions are explained 3.3. The <i>laws of strings</i> are explained 3.4. Musical scales are identified aurally

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- read and understand documentation
- ask questions to gain information
- collect, organize and understand information related to piano tuning
- work collaboratively with others to complete tasks in a timely manner
- apply knowledge of tuning and repair processes to problem solving
- show independence and initiative in making decisions
- collect and organize information for the purpose of:
 - planning tasks and identifying task outcomes
 - planning use of resources
 - assessing and prioritizing tasks
 - managing time and resources
- assess own skills and knowledge
- research and apply new ideas and techniques
- use IT to organize, report and record information

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to piano tuning
- understanding of basic acoustics
- understanding of piano tuning theory
- understanding of musical scale theory
- established lines of communication and protocols
- problem identification and resolution

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Locate, interpret and apply information relevant to piano tuning
- Basic acoustics are identified and understood
- Piano tuning theory is explained and understood
- Musical scale theory is explained and understood
- All notes on a piano are identified a minimum of two times
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products

Context of and specific resources for assessment

- Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements
- Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.
- The following resources should be made available:
 - upright or grand pianos
 - workplace location or simulated workplace

Method of assessment

Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of skills and knowledge when:

- organising work
- completing tasks according to instructions
- working systematically with attention to detail
- identifying improvements and avoiding damage
- using workplace practices
- using OHS practices
- assessing operational readiness of tools and equipment
- recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions

EVIDENCE GUIDE

Assessment must include a variety of project or work activities that allow the candidate to demonstrate competency in the unit

Assessment should be by direct observation of tasks and include questioning on required knowledge and skills to ensure correct interpretation and application.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

The following examples are appropriate for this unit:

oral and written questions about piano tuning theory, basic acoustics and musical scale theory and their application to piano tuning

practical demonstration of identifying piano notes aurally

review of portfolios of evidence and third party workplace reports of the candidate's on-the-job performance

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Basic acoustics may include	Sound waves, beats, frequencies, harmonics, cycles, partials, overtones, nodes, fundamentals, sine waves, intonation, transients, cents, commas, compound tones, inharmonicity.
Piano Tuning Theory may include:	<ul style="list-style-type: none"> • how wire vibrates • what happens when two or more wires vibrate simultaneously • how vibrations are organised into a tuning scale • how vibrations are related mathematically • pitch, beat rates, intervals, octave stretching.
Musical scale theory may include:	Diatonic scale, equal temperament and why, mean tone.
Laws of Strings may include:	First law, Third law, Combined law and Taylor's Formula, Need for wrapped strings

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for using tuning hammers	1.1. OHS requirements, legislative requirements and workplace practices relevant to tuning pianos are verified and complied with. 1.2. Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel co-operation and safety throughout the application of this competency. 1.3. Written instructions are followed.
2. Select tools and equipment	2.1. Tools and equipment are selected consistent with the needs of the job. 2.2. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices 2.3. Personal protective equipment is correctly fitted and used
3. Set pin in specified position	3.1. Correct posture for tuning is demonstrated which minimizes fatigue and promotes muscular control. 3.2. Pin is set at desired pitch utilising a pitch standard , within accuracy constraints, to + or - 0.5cents. 3.3. Key is struck using stabilising blows. 3.4. Coordinated motor and auditory reflexes are demonstrated throughout tuning. 3.5. Strings are tuned and stabilised using appropriate techniques .
4. Clean up work area	4.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location 4.2. Work area is cleared and waste removed 4.3. Workplace documentation is completed and filed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- complete standardized workplace information
- develop positive workplace relationships
- identify, diagnose and rectify faults, to determine if pitch is sharp or flat by using interval checks
- assess and take appropriate action to minimize risks
- collect and organize information for the purpose of:
 - planning tasks and identifying task outcomes
 - planning use of resources
 - assessing and prioritizing tasks
 - managing time and resources
- prioritise own work to meet customer's requirements regarding completion time
- developing skill in control of tuning hammer
- adapt to new skill requirements by using pitch standard and electronic tuning device

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for tuning pianos
- organisational and site standards, requirements, policies and procedures for tuning pianos
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- piano tuning process
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning
- types of tools and equipment used to tune pianos and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for tuning pianos
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to tune and stabilise strings using tuning hammers
- Identify tools and equipment used in tuning pianos
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Set pin and tune and stabilise strings on both upright and grand pianos a minimum of three times, using tuning
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano regulation and repair
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the tuning and repair of pianos
- materials used in the tuning and repair of pianos
- safety and personal protective equipment
- holding and supporting equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for pitch raising	1.1. OHS requirements, legislative requirements and workplace practices relevant to tuning pianos are verified and complied with. 1.2. Customer requirements are received, analysed and confirmed with appropriate personnel. 1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel cooperation and safety throughout the application of this competency. 1.4. Written instructions are followed.
2. Prepare to tune unisons	2.1. Tools and equipment are selected consistent with the needs of the job. 2.2. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices 2.3. Personal protective equipment is correctly fitted and used
3. Assess suitability of piano for pitch raise	3.1. Components used in pitch raising are assessed for suitability. 3.2. Distance from target pitch is determined. 3.3. Overpull/stretch required to achieve target pitch is calculated. 3.4. Pitch standard is established.
4. Pitch Raise Piano	4.1. Correct posture for tuning is demonstrated, which minimizes fatigue and promotes muscular control. 4.2. Tune strings according to required process 4.3. Pitch raise to achieve an accuracy of ± 5 cent per note. 4.4. Correct tuning hammer technique is used.
5. Clean up work area	5.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location. 5.2. Work area is cleared and waste removed. 5.3. Workplace documentation is completed and filed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements, plans and specifications, co-ordination of work with other workers and customer, and report of work outcomes and problems
- work collaboratively with others to complete tasks in a timely manner
- use pre-checking and inspection techniques to anticipate problems and identify tools or equipment faults and take appropriate action
- identify and select practical solutions to problems using analytical skills
- determine opportunities to improve processes
- plan and organize activities to avoid any backtracking, workflow interruptions, re-work or wastage, including preparation and layout of the worksite and selection of tools and equipment
- take responsibility and display confidence in own ideas
- apply mathematical applications for estimation and measurement
- use workplace technology related to piano technology, including specified tools, equipment, calculators and measuring devices for piano tuning

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for tuning pianos
- organisational and site standards, requirements, policies and procedures for tuning pianos
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning
- types of tools and equipment used to regulate actions, keys and pedals and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for tuning pianos
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to pitch raise upright, grand and player pianos
- Identify tools and equipment used in pitch raising
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Tune a minimum of three sets of strings on at least an upright and grand piano
- Pitch raise a minimum of three times on at least an upright and grand piano
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano regulation and repair
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the tuning and repair of pianos
- materials used in the tuning and repair of pianos
- safety and personal protective equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for tuning unisons aurally	<p>1.1. OHS requirements, legislative requirements and workplace practices relevant to repairing pianos are verified and complied with.</p> <p>1.2. Customer requirements are received, analysed and confirmed with appropriate personnel.</p> <p>1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel cooperation and safety throughout the application of this competency.</p> <p>1.4. Written instructions are followed.</p>
2. Prepare to tune unisons	<p>2.1. Tools and equipment are selected consistent with the needs of the job.</p> <p>2.2. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices</p> <p>2.3. Personal protective equipment is correctly fitted and used</p>
3. Set a string	<p>3.1. Correct posture for tuning is demonstrated, which minimizes fatigue and promotes muscular control.</p> <p>3.2. Tune the fundamental string aurally to a pitch standard</p> <p>3.3. Given an external pitch standard, match frequency of one string to that pitch to within $\pm .5$ cent.</p> <p>3.4. Tuned string is stabilised using correct hammer techniques</p>
4. Tune an adjacent string in unison to the fundamental string	<p>4.1. Adjust pitch of unison string to fundamental string, employing stabilisation techniques, to a beatless condition.</p> <p>4.2. Remaining strings are tuned according to above process.</p>
5. Clean up work area	<p>5.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location.</p> <p>5.2. Work area is cleared and waste removed</p> <p>5.3. Workplace documentation is completed and filed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- ask questions to gain information from customer on tuning requirements
- work with customer to determine tuning requirements
- identify, diagnose and rectify faults, particularly if false string or stability problems exist
- assess and take appropriate action to minimize risks
- plan work requirements for self and others to meet tuning schedules
- plan own time to achieve outcomes
- research and apply new techniques in aural tuning
- use pitch standard to set fundamental string

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for tuning pianos
- organisational and site standards, requirements, policies and procedures for tuning pianos
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning
- types of tools and equipment used to regulate actions, keys and pedals and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for tuning pianos
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to tune unisons aurally on upright and grand pianos
- Identify tools and equipment used in unison tuning
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Tune a minimum of two unisons aurally on both upright and grand pianos
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano regulation and repair
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the tuning and repair of pianos
- materials used in the tuning and repair of pianos
- safety and personal protective equipment
- holding and supporting equipment
- workplace location or simulated workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • upright and grand pianos
Method of assessment	<p>Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of skills and knowledge when:</p> <ul style="list-style-type: none"> • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • assessing operational readiness of tools and equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions <p>Assessment must include a variety of project or work activities that allow the candidate to demonstrate competency in the unit</p> <p>Assessment should be by direct observation of tasks and include questioning on required knowledge and skills to ensure correct interpretation and application.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
OHS requirements may include:	Relevant Federal, State or Territory OHS legislation, regulations, standards and codes of practice, and workplace policies and procedures including the use of personal protection equipment, hazard and risk control and manual handling.
Legislative requirements may include:	Relevant Federal, State or Territory legislation including award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, industry codes of practice.
Workplace practices may include:	Site guidelines, policies and procedures relating to own role, quality assurance, procedural manuals, tool manufacturer's recommendations, ethical standards, recording and reporting, equipment use, maintenance and storage, environmental management (waste disposal, recycling, re-use).
Tools and equipment may include:	<ul style="list-style-type: none"> • pitch standard • tuning lever/hammer • temperament strip • mutes and wedges • tip wrench • tuning tips and heads
Personal protective equipment may include:	Safety glasses, goggles, hearing protection, safety footwear, protective clothing, gloves, respiratory protection

RANGE STATEMENT	
Correct posture may include:	<ul style="list-style-type: none"> • Standing or seating, according to type of piano and height of individual • Even distribution of body weight between both feet while standing, to reduce fatigue • Rest arm where available to aid control during tuning and reduce tiredness
Definitions	<ul style="list-style-type: none"> • <i>Aurally</i> is the ability to hear differences in frequency between strings within $\hat{A}\pm .5$ cent without the aid of an electronic device where the fundamentals are matching with no audible interfering patterns • The <i>Fundamental String</i> is the first string of a given note that is tuned to an external pitch standard. • The <i>Adjacent String</i> is the string closest to fundamental string. • In a <i>Bicord</i>, the string selected can be either side of the Fundamental, while in a <i>Tricord</i>, three adjacent strings are tuned. • <i>Beatless Condition</i> is where two strings are at the same frequency.
Pitch standard may include:	<ul style="list-style-type: none"> • piano • electronic keyboard • electronic tuning device (etd) • tuning fork
Hammer techniques may include:	<ul style="list-style-type: none"> • selection of tuning tip and angle • jerking movements • positioning hammer on pin at correct angle to avoid bending of tuning pin
Stabilisation techniques may include:	<ul style="list-style-type: none"> • use of firm key blows in conjunction with placement of pin • calculation of string stretch
Workplace documentation may include:	Time sheets, customer cards, work orders including job sheets, cutting lists, plans, drawings and designs, tool maintenance records and schedules

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select tools and equipment	<p>1.1. OHS requirements, legislative requirements and workplace practices relevant to repairing pianos are verified and complied with.</p> <p>1.2. Customer requirements are received, analysed and confirmed with appropriate personnel.</p> <p>1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, co-ordination, personnel co-operation and safety throughout the application of this competency.</p> <p>1.4. Written instructions are followed.</p>
2. Prepare to tune octaves	<p>2.1. Tools and equipment are selected consistent with the needs of the job.</p> <p>2.2. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices</p> <p>2.3. Personal protective equipment is correctly fitted and used</p>
3. Tune the fundamental string aurally to a pitch standard	<p>3.1. Correct posture for tuning is demonstrated, which minimizes fatigue and promotes muscular control</p> <p>3.2. Given an external pitch standard, match frequency of one string to that pitch to within $\pm .5$ cent</p> <p>3.3. Tuned string is stabilised using hammer techniques</p>
4. Match frequency of a string 1 octave above or below pitch standard	<p>4.1. Pitch of string/octave is adjusted above or below pitch standard.</p> <p>4.2. Stabilisation techniques are utilised.</p> <p>4.3. 4th and 5th intervals are used to establish the highest or lowest beatless condition.</p> <p>4.4. Overtone of primary note must match fundamental octave up, or fundamental of primary note must match the 1st octave of one overtone lower.</p> <p>4.5. 10th, double octaves and minor 7th checks are used.</p> <p>4.6. Intervals going up and down are tested to ensure tuning meets industry standards</p> <p>4.7. Remaining octaves are tuned according to the above process.</p>
5. Clean up work area	<p>5.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location.</p> <p>5.2. Work area is cleared and waste removed</p> <p>5.3. Workplace documentation is completed and filed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- ask questions to gain information from customer on tuning requirements
- work with customer to determine tuning requirements
- reinterpret customer statements of problems into solution
- participate in activities to initiate new ideas and suggest improvements to work practices
- participate in continuous improvement processes
- manage own time to complete tuning and repair against set deadlines, especially where piano is required for performances
- apply reflective skills
- use technology relevant to tuning pianos

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for tuning pianos
- organisational and site standards, requirements, policies and procedures for tuning pianos
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning
- types of tools and equipment used to regulate actions, keys and pedals and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for tuning pianos
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to tune octaves aurally on upright and grand pianos
- Identify tools and equipment used in octave tuning
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Tune a minimum of two octaves aurally on both upright and grand pianos
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano regulation and repair
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the tuning and repair of pianos
- materials used in the tuning and repair of pianos
- safety and personal protective equipment
- holding and supporting equipment
- workplace location or simulated workplace

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for tuning temperaments	<p>1.1. OHS requirements, legislative requirements and workplace practices relevant to repairing pianos are verified and complied with.</p> <p>1.2. Customer requirements are received, analysed and confirmed with appropriate personnel.</p> <p>1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel cooperation and safety throughout the application of this competency.</p> <p>1.4. Written instructions are followed.</p>
2. Prepare to tune temperaments	<p>2.1. Tools and equipment are selected consistent with the needs of the job.</p> <p>2.2. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices.</p> <p>2.3. Personal protective equipment is correctly fitted and used.</p>
3. Tune temperament	<p>3.1. Correct posture for tuning is demonstrated, which minimizes fatigue and promotes muscular control.</p> <p>3.2. Start note in temperament octave is tuned from established pitch reference.</p> <p>3.3. Temperament octave is tuned using the 4th and 5th cycle, following a set order of notes.</p> <p>3.4. Correct positions are confirmed using the 3rd and 6th checks individually and chromatically.</p>
4. Clean up work area	<p>4.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location.</p> <p>4.2. Work area is cleared and waste removed</p> <p>4.3. Workplace documentation is completed and filed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- ask questions to gain information from customer on tuning requirements
- work with customer to determine tuning requirements
- re-interpret customer statements of problems into solution
- participate in activities to initiate new ideas and suggest improvements to work practices
- participate in continuous improvement processes
- manage own time to complete tuning and repair against set deadlines, especially where piano is required for performances
- apply reflective skills
- use technology relevant to tuning pianos

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for tuning pianos
- organisational and site standards, requirements, policies and procedures for tuning pianos
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning
- types of tools and equipment used to regulate actions, keys and pedals and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for tuning pianos
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to tune temperament octaves on upright and grand pianos
- Identify tools and equipment used in temperament octave tuning
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Tune a minimum of two temperament octaves to produce an equally tempered scale on both upright and grand pianos
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano regulation and repair
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the tuning of pianos
- materials used in the tuning of pianos
- safety and personal protective equipment
- holding and supporting equipment

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • workplace location or simulated workplace • upright and grand pianos
Method of assessment	<p>Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of skills and knowledge when:</p> <ul style="list-style-type: none"> • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • assessing operational readiness of tools and equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions <p>Assessment must include a variety of project or work activities that allow the candidate to demonstrate competency in the unit</p> <p>Assessment should be by direct observation of tasks and include questioning on required knowledge and skills to ensure correct interpretation and application.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
OHS requirements may include:	Relevant Federal, State or Territory OHS legislation, regulations, standards and codes of practice, and workplace policies and procedures including the use of personal protection equipment, hazard and risk control and manual handling.
Legislative requirements may include:	Relevant Federal, State or Territory legislation including award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, industry codes of practice.
Workplace practices may include:	Site guidelines, policies and procedures relating to own role, quality assurance, procedural manuals, tool manufacturer's recommendations, ethical standards, recording and reporting, equipment use, maintenance and storage, environmental management (waste disposal, recycling, re-use).
Tools and equipment may include	<ul style="list-style-type: none"> • pitch standard • tuning lever/hammer • temperament strip • mutes and wedges • tip wrench • tuning tips and heads
Personal protective equipment may include:	Safety glasses, goggles, hearing protection, safety footwear, protective clothing, gloves, respiratory protection

RANGE STATEMENT	
Correct posture may include	<ul style="list-style-type: none"> • Standing or seating, according to type of piano and height of individual • Even distribution of body weight between both feet while standing, to reduce fatigue • Rest arm where available to aid control during tuning and reduce tiredness
Start note may include	<ul style="list-style-type: none"> • the note in the temperament octave that corresponds to the note tuned from the pitch standard.
Pitch reference may refer to	<ul style="list-style-type: none"> • the first note tuned on piano from pitch standard generally accepted as being A49/C52 or corresponding notes one octave below, which are A37/C40.
Temperament octave may include	<ul style="list-style-type: none"> • notes F 33 through to F 45, with some temperaments spread over 1 ½ octaves.
Workplace documentation may include:	Time sheets, customer cards, work orders including job sheets, cutting lists, plans, drawings and designs, tool maintenance records and schedules

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for tuning a upright or grand piano	<p>1.1. OHS requirements, legislative requirements and workplace practices relevant to repairing pianos are verified and complied with.</p> <p>1.2. Customer requirements are received, analysed and confirmed with appropriate personnel.</p> <p>1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel cooperation and safety throughout the application of this competency.</p> <p>1.4. Written instructions are followed.</p>
2. Prepare to tune a upright or grand piano	<p>2.1. Tools and equipment are selected consistent with the needs of the job.</p> <p>2.2. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices</p> <p>2.3. Personal protective equipment is correctly fitted and used</p>
3. Dismantle piano	<p>3.1. Procedure for dismantling piano is determined.</p> <p>3.2. Piano is dismantled to allow access to internal components during the tuning process.</p> <p>3.3. Correct OHS procedures are followed throughout dismantling process.</p> <p>3.4. Safe storage of all piano parts while tuning is demonstrated.</p>
4. Tune piano	<p>4.1. Correct posture for tuning is demonstrated, which minimizes fatigue and promotes muscular control</p> <p>4.2. Start note is tuned accurately to a pitch standard.</p> <p>4.3. Temperament octave F33-F45 is tuned to desired standard.</p> <p>4.4. Octaves and unisons are tuned to desired standard in accordance with customer specifications.</p> <p>4.5. Interval checks are used to assess accuracy throughout tuning process</p> <p>4.6. Stable tuning is achieved in an industry acceptable timeframe without damage to the piano components</p>
5. Reassemble piano	<p>5.1. Case parts are identified and placed for reassembly.</p> <p>5.2. Case parts are reassembled according to workplace practices.</p> <p>5.3. Correct OHS practices are followed throughout</p>

ELEMENT	PERFORMANCE CRITERIA
	assembly process
6. Clean up work area	6.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location. 6.2. Work area is cleared and waste removed 6.3. <i>Workplace documentation</i> is completed and filed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- ask questions to gain information
- communicate ideas and information to enable confirmation of work requirements, plans and specifications, coordination of work with other workers and customer, and report of work outcomes and problems
- apply effective listening techniques
- complete written documents, job cards, forms, timesheets and quotations
- work with others and in a team to assess tuning requirements
- work with customer to determine their tuning requirements
- identify team performance required to meet customer needs
- reinterpret customer statements of problems into solution
- resolve conflict through negotiation to ensure customer is happy with sound of piano
- determine opportunities to improve processes
- plan and organize activities to avoid any backtracking, workflow interruptions, re-work or wastage, including preparation and layout of the worksite and selection of tools and equipment
- participate in continuous improvement processes
- manage own time to complete tuning and repair against set deadlines, especially where piano is required for performances
- use feedback from customer to improve work performance in tuning
- take responsibility and display confidence in own ideas
- prioritise own work to meet customer requirements regarding completion time
- manage own work performance to:
 - follow OHS and workplace practices
 - plan and organize work schedules and routines
 - maintain required production output
 - assess quality of own work
- assess own skills and knowledge
- be open to learning and accommodate change
- apply reflective skills
- use workplace technology related to piano technology, including specified tools, equipment, calculators and measuring devices for piano tuning
- use technology relevant to tuning pianos

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice

REQUIRED SKILLS AND KNOWLEDGE

- relevant to the full range of processes for tuning pianos
- organisational and site standards, requirements, policies and procedures for tuning pianos
- reading and interpreting workplace documents including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning
- types of tools and equipment used to tune pianos and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for tuning pianos
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to tune both upright and grand pianos aurally and/or electronically
- Identify tools and equipment used in piano tuning
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Tune a minimum of two pianos aurally and/or electronically within industry specified time and accuracy constraints, on both upright and grand pianos
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano tuning
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the tuning of pianos
- materials used in the tuning of pianos
- safety and personal protective equipment
- holding and supporting equipment

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • workplace location or simulated workplace • upright and grand pianos
Method of assessment	<p>Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of skills and knowledge when:</p> <ul style="list-style-type: none"> • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • assessing operational readiness of tools and equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions <p>Assessment must include a variety of project or work activities that allow the candidate to demonstrate competency in the unit</p> <p>Assessment should be by direct observation of tasks and include questioning on required knowledge and skills to ensure correct interpretation and application.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
OHS requirements may include:	Relevant Federal, State or Territory OHS legislation, regulations, standards and codes of practice, and workplace policies and procedures, including the use of personal protection equipment, hazard and risk control and manual handling
Legislative requirements may include:	Relevant Federal, State or Territory legislation, including award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, industry codes of practice.
Workplace practices may include:	Site guidelines, policies and procedures relating to own role, quality assurance, procedural manuals, tool manufacturer recommendations, ethical standards, recording and reporting, equipment use, maintenance and storage, environmental management (waste disposal, recycling, re-use).
Customer requirements may include	<ul style="list-style-type: none"> • level of playing required, such as <ul style="list-style-type: none"> • standard of pianist • time piano is used • environment • location of piano • pitch requirements • budget
Tools and equipment may include	<ul style="list-style-type: none"> • pitch standard • tuning lever/hammer • temperament strip

RANGE STATEMENT	
	<ul style="list-style-type: none"> • mutes and wedges • tip wrench • tuning tips and heads
Personal protective equipment may include:	Safety glasses, goggles, hearing protection, safety footwear, protective clothing, gloves, respiratory protection
Procedure for dismantling piano may be:	<ul style="list-style-type: none"> • Upright <ul style="list-style-type: none"> • removal of top front board and fall board • lift lid • Grand <ul style="list-style-type: none"> • removal of fall board and music disk • lift lid
Correct posture may include:	<ul style="list-style-type: none"> • Standing or seating, according to type of piano and height of individual • Even distribution of body weight between both feet while standing, to reduce fatigue • Rest arm where available to aid control during tuning and reduce tiredness
Start note may include:	<ul style="list-style-type: none"> • the note in the temperament octave that corresponds to the note tuned from the pitch standard. • the first note tuned on piano from pitch standard generally accepted as being A49/C52 or corresponding notes one octave below, which are A37/C40.
Pitch standard may include:	<ul style="list-style-type: none"> • piano • electronic keyboard • Electronic Tuning Device (ETD) • tuning Fork
Interval checks may include:	<ul style="list-style-type: none"> • thirds, fourths, fifths, sixths, sevenths and tenths
Industry acceptable timeframe may be:	<ul style="list-style-type: none"> • up to 2 hours.
Damage to the piano components may include:	<ul style="list-style-type: none"> • bent tuning pins • broken strings • elongated tuning pin holes • damaged bearings
OHS practices may include:	<ul style="list-style-type: none"> • hazard identification and control, risk assessment and implementation of risk

RANGE STATEMENT	
	<p>reduction measures specific to the tasks described by this unit, and may relate to:</p> <ul style="list-style-type: none"> • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • environmental practices
Workplace documentation may include:	Time sheets, customer cards, work orders including job sheets, cutting lists, plans, drawings and designs, tool maintenance records and schedules

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for voicing a piano	<p>1.1. OHS requirements, legislative requirements and workplace practices relevant to voicing pianos are verified and complied with.</p> <p>1.2. Customer requirements are received, analysed and confirmed with appropriate personnel.</p> <p>1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, coordination, personnel cooperation and safety throughout the application of this competency.</p>
2. Prepare for voicing a piano	<p>2.1. Tools, equipment and materials are selected consistent with the needs of the job.</p> <p>2.2. Selected tools and equipment are checked for service ability and safety and any faults repaired and reported according to workplace practices</p> <p>2.3. Personal protective equipment is correctly fitted and used</p> <p>2.4. Piano is tuned and regulated to industry standards and customer requirements before voicing is commenced</p>
3. Voice a piano	<p>3.1. Correct posture for tuning is demonstrated, which minimizes fatigue and promotes muscular control</p> <p>3.2. Undesirable tonal qualities are identified, using customer requirements</p> <p>3.3. Surface felt is reshaped to ensure a clean and square striking surface.</p> <p>3.4. Hammers are needled, as required, to achieve particular tonal effects and to balance tonal response.</p> <p>3.5. Hammers are reshaped after needling to ensure correct shape and surface texture</p> <p>3.6. Hammers are ironed or hardened as necessary</p> <p>3.7. Final tonal quality is assessed against customer requirements, and any adjustments made.</p>
4. Clean up work area	<p>4.1. All tools, materials and other equipment are checked, cleaned and returned to their appropriate location.</p> <p>4.2. Work area is cleared and waste removed</p> <p>4.3. Workplace documentation is completed and filed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communicate ideas and information to enable confirmation of work requirements, plans and specifications, coordination of work with other workers and customer, and report of work outcomes and problems
- work with customer to assess voicing requirements
- identify team performance required to meet customer needs
- re-interpret customer statements of problems into solution
- collect and monitor information to identify trends that may require remedial action
- plan and organize activities to avoid any backtracking, workflow interruptions, re-work or wastage, including preparation and layout of the worksite and selection of tools and equipment
- manage own work performance to:
 - follow OHS and workplace practices
 - plan and organize work schedules and routines
 - maintain required production output
 - assess quality of own work
- modify activities to cater for variations in workplace contexts and environment when tuning pianos
- use workplace technology related to piano technology, including specified tools, equipment, calculators and measuring devices for piano tuning

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for tuning and voicing pianos
- organisational and site standards, requirements, policies and procedures for tuning and voicing pianos
- reading and interpreting workplace documents, including work orders, work instructions and operator instructions
- environmental protection requirements relating to the disposal of waste material
- established lines of communication and protocols
- knowledge of piano tuning and regulation methodologies
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano tuning and voicing
- types of tools and equipment used to tune and voice pianos and procedures for their safe use, operation and maintenance
- problem identification and resolution
- set up and operation of tools and equipment used for tuning pianos
- storage systems and labelling

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order, locate materials and use information to complete tasks to voice both upright and grand pianos
- Identify tools and equipment used in piano voicing
- Select, set up and maintain equipment in accordance with manufacturer specifications and workplace practices
- Voice a minimum of two upright and grand pianos
- Modify activities to cater for variations in workplace contexts and environment
- Communicate and work with others in the work area
- Apply safe handling practices and safe operating procedures for equipment, products and materials to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
- Clean tools, equipment and work area
- Maintain and repair a range of hand and power tools used in piano voicing
- Apply OHS practices when using hand and power tools, holding and support equipment, products and materials, including use of personal protective equipment

Context of and specific resources for assessment

Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements

Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.

The following resources should be made available:

- hand and power tools used in the voicing of pianos
- materials used in the voicing of pianos
- safety and personal protective equipment
- holding and supporting equipment
- workplace location or simulated workplace
- upright and grand pianos

EVIDENCE GUIDE**Method of assessment**

Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of skills and knowledge when:

- organising work
- completing tasks according to instructions
- working systematically with attention to detail
- identifying improvements and avoiding damage
- using workplace practices
- using OHS practices
- assessing operational readiness of tools and equipment
- recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions

Assessment must include a variety of project or work activities that allow the candidate to demonstrate competency in the unit

Assessment should be by direct observation of tasks and include questioning on required knowledge and skills to ensure correct interpretation and application.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
OHS requirements may include:	Relevant Federal, State or Territory OHS legislation, regulations, standards and codes of practice, and workplace policies and procedures, including the use of personal protection equipment, hazard and risk control and manual handling
Legislative requirements may include:	Relevant Federal, State or Territory legislation, including award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, industry codes of practice.
Workplace practices may include:	Site guidelines, policies and procedures relating to own role, quality assurance, procedural manuals, tool manufacturer recommendations, ethical standards, recording and reporting, equipment use, maintenance and storage, environmental management (waste disposal, recycling, re-use).
Tools, equipment and materials may include:	<ul style="list-style-type: none"> screwdrivers, voicing needles, voicing tools and blocks, hammer iron, lacquer and brush, sandpaper, hammer lifting tool, tuning wedge, string level tool, string lifting tool
Personal Protective Equipment may include:	<ul style="list-style-type: none"> safety glasses, goggles, hearing protection, safety footwear, protective clothing, gloves, respiratory protection.
Correct posture may include:	<ul style="list-style-type: none"> standing or seating, according to type of piano and height of individual even distribution of body weight between both feet while standing, to reduce fatigue

RANGE STATEMENT	
	<ul style="list-style-type: none"> rest arm where available to aid control during tuning and reduce tiredness
Undesirable tonal qualities may include:	<ul style="list-style-type: none"> harsh/soft noise which may occur when you have a loose hammer head, loose centre pins or uneven level strings. string noises false strings - string has its own beat nasal or metallic sound due to hard hammers
Needling techniques may include:	<ul style="list-style-type: none"> correct method of supporting the hammers to avoid damage to action centres selecting the appropriate needling zones to achieve particular tonal effects
Hardening process may include:	<ul style="list-style-type: none"> lacquers, irons and collodian
Workplace documentation may include:	<ul style="list-style-type: none"> time sheets, customer cards, work orders including job sheets, cutting lists, plans, drawings and designs, tool maintenance records and schedules

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for work	<p>1.1. OHS requirements, legislative requirements and workplace practices relevant to tuning and repairing pianos are verified and complied with.</p> <p>1.2. Customer requirements regarding suitable time and date for appointment are received and confirmed with appropriate personnel.</p> <p>1.3. Communication with others involved with the work is established and maintained to ensure efficient workflow, co-ordination, personnel co-operation and safety throughout the application of this competency.</p> <p>1.4. Written instructions are followed.</p> <p>1.5. OHS practices are adhered to throughout the work</p>
2. Identify customer requirements	<p>2.1. Questioning and active listening techniques are used to clarify customer requirements.</p> <p>2.2. Feedback is provided to customer to ensure correct interpretation of requirements.</p>
3. Assess piano for faults and relevant repairs	<p>3.1. Piano case parts are removed and stored safely away from the instrument.</p> <p>3.2. Faults are identified and recorded according to workplace practices.</p> <p>3.3. Appropriate repairs required to rectify faults are determined.</p> <p>3.4. Piano case parts are reassembled according to workplace practices.</p> <p>3.5. Work area is cleared and waste removed.</p> <p>3.6. Workplace documentation is completed.</p>
4. Assess piano tuning requirements	<p>4.1. Frequency of tuning is determined, based on industry recommendations.</p> <p>4.2. Customer is advised on environmental conditions which may affect tuning stability.</p>
5. Provide customer with recommendations	<p>5.1. Customer is advised both verbally and in writing of recommendations regarding tuning and repair of piano.</p> <p>5.2. Customer is given options regarding priority of repairs, so they can give an informed decision.</p> <p>5.3. Options regarding materials used in repairs are explained to, and discussed with the customer to facilitate customer understanding of available</p>

ELEMENT	PERFORMANCE CRITERIA
	products and services.
6. Present quotation to customer	<p>6.1. <i>Quotation</i> is prepared for the tuning and repair of piano including all <i>costs</i>.</p> <p>6.2. Customer is presented with quotation, which includes a breakdown of costs for all options for tuning and repair.</p> <p>6.3. Benefits of each option are explained to the customer to facilitate informed decision making.</p> <p>6.4. Customer commitment to agreed repairs and tuning is gained in accordance with workplace practices.</p> <p>6.5. Customer is informed of rights and obligations regarding product or service.</p>
7. Finalise process	<p>7.1. Documentation is completed and submitted to appropriate personnel following workplace practices.</p> <p>7.2. Contact is maintained with customer throughout the tuning and repair process.</p>

Required Skills and Knowledge

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to repairing, rebuilding and tuning pianos
- organisational and site standards, requirements, policies and procedures for providing advice to customers
- options available to customers for tuning and repairing pianos
- types, characteristics, uses, limitations and preparation of materials and equipment used in piano repair and manufacture
- problem identification and resolution
- strategies for planning and monitoring activities
- consultation methods, techniques and protocols
- terms used to describe components of pianos
- terms used to describe the processes involved in tuning and repair
- procedures for the recording, reporting and maintenance of workplace records and information
- mathematical techniques for estimation and measurement of materials

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Identify products and materials used in piano tuning, repair and rebuilding • Conducting meetings with customer to determine piano requirements • Assessing and reporting on customer satisfaction • Analysing sales and product development data • Completing workplace documentation • Advise customer on at least three occasions involving tuning, repair and rebuilding options for an upright and grand piano • Communicate and work with others in the work area
<p>Context of and specific resources for assessment</p>	<p>Assessment may occur on the job or in a simulated workplace environment in accordance with work practices and safety requirements</p> <p>Assessment is to occur under standard work practices, and to comply with legislative and regulatory requirements.</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> • hand and power tools used in the repair and manufacture of pianos • materials used in the repair and manufacture of pianos • safety and personal protective equipment • holding and supporting equipment • workplace location or simulated workplace
<p>Method of assessment</p>	<p>Assessment must confirm consistency (over time and in a range of workplace relevant contexts) in application of skills and knowledge when:</p> <ul style="list-style-type: none"> • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • assessing operational readiness of tools and

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
OHS requirements may include:	Relevant Federal, State or Territory OHS legislation, regulations, standards and codes of practice, and workplace policies and procedures, including the use of personal protection equipment, hazard and risk control and manual handling.
Legislative requirements may include:	Relevant Federal, State or Territory legislation, including award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, the environment, equal opportunity, anti-discrimination, industry codes of practice.
Workplace practices may include:	Site guidelines, policies and procedures relating to own role, quality assurance, procedural manuals, tool manufacturer's recommendations, ethical standards, recording and reporting, equipment use, maintenance and storage, environmental management (waste disposal, recycling, re-use).
OHS practices may include:	<p>Hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may relate to:</p> <ul style="list-style-type: none"> • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces

RANGE STATEMENT	
	<ul style="list-style-type: none"> • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • environmental practices
Active listening may include:	<ul style="list-style-type: none"> • maintaining eye contact, asking questions to clarify meaning
Feedback may include:	<ul style="list-style-type: none"> • verbal or written response
Faults may include:	<ul style="list-style-type: none"> • worn, loose or broken action parts or keyboards • worn or broken pedal systems • tuning instability • cracks or delamination of bridges, ribs and soundboards • case faults
Workplace documentation may include:	Time sheets, customer cards, work orders, including job sheets, cutting lists, plans, drawings and designs, tool maintenance records and schedules
Frequency of piano tuning may vary according to:	<ul style="list-style-type: none"> • condition and age of piano • amount of use of the piano • quality of the piano • internal and external humidity changes
Environmental conditions may include:	<ul style="list-style-type: none"> • piano position in home or other location • air conditioning and heating • seasonal temperature and humidity changes
Quotation may include:	<ul style="list-style-type: none"> • progressive listing of repair points in an orderly format • all costs • statement of warranty terms • statement of payment terms, including deposit • estimation of the time the instrument will be out of service
Costs may include:	<ul style="list-style-type: none"> • material used in repair • labour • travel expenses (if applicable) • shipping of parts or piano

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	1.1. Job requirements are identified from work instructions and patterns 1.2. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 1.3. Pattern is interpreted to determine tool, equipment and material requirements 1.4. Instructions for sequencing of work and particular measurements or adjustments are interpreted 1.5. Work sequence is planned, including quality checkpoints
2. Prepare for work	2.1. Suitable work area is selected for the tasks 2.2. Materials are selected to match customer requirements, suitability for the purpose and work instructions 2.3. Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material 2.4. Required tools, equipment and materials are collected in the work area selected
3. Complete production	3.1. Soft furnishing accessories are produced following work instructions 3.2. Work is checked against patterns and work sheets at the identified checkpoints 3.3. Non-conformity with the required quality standards is rectified
4. Finalise operations	4.1. Completed work is checked against required quality standards 4.2. Documentation is completed following workplace procedures 4.3. Work area is cleaned, tools and equipment are returned to storage 4.4. Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid back tracking
- work with others and in a team by recognising dependencies and using co-operative approaches
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- use workplace technology related to the production task, including specified tools, equipment, calculators and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of basic soft furnishing materials
- the interpretation of patterns
- identification of equipment, processes and procedures
- workflow in relation to soft furnishing accessory production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials
- Identify materials used and any special sewing or handling requirements for those materials
- Interpret work order and locate and apply relevant information
- Interpret patterns and work instructions
- Produce at least one type of soft furniture accessory
- Select and use tools and equipment appropriate to the task
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Patterns, materials, tools and equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the reading and interpreting of patterns, plans and instructions. This may be demonstrated either individually or in a team environment.
Soft furnishing accessories may include:	<ul style="list-style-type: none"> • basic cushions • bolsters • soft tableware and slip-on covers
Tools and equipment may include:	<ul style="list-style-type: none"> • measuring and calculating equipment, including tapes, rulers, calculators, computers • fabric and general cutting and sewing tools, including scissors, saws, drills, staplers, sewing machines, hemming machines, overlockers, glue guns
Materials may include:	<ul style="list-style-type: none"> • plain and patterned fabric • velvet • vinyl • piping cords • wadding • foam • zips and fasteners
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and

RANGE STATEMENT	
	enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the production of soft furnishing items • Work instructions, including job sheets, patterns, plans, drawings and designs • Workplace procedures relating to reporting and communication
Pattern interpretation	Pattern interpretation is to result in the determination of type of material specified, required tools and equipment for the task, number and type of soft furnishing accessories to be produced, and quality requirements

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work operations	1.1. Required fabrics, number of items to be cut and required equipment are identified 1.2. Fabric sizes to be cut are identified from work order plus any required allowances 1.3. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work. 1.4. Suitable work area is selected, tidied and cleaned of any contaminants 1.5. Suitable scissors and or blades are selected and checked prior to use for appropriate sharpness, set, operation and safe condition 1.6. Fabrics are selected in accordance with work order and laid out smooth and square
2. Prepare materials for cutting	2.1. Fabrics are inspected for flaws and appropriate finish 2.2. Naps, direction, pattern matches and face of the materials are identified 2.3. Tools and equipment are checked for operation
3. Complete cutting operations	3.1. Cutting is completed with cut out materials identified/labelled where required 3.2. Any measurements for pleat lines, hems, headings and any special seam allowances are marked out using workplace approved methods 3.3. Where required, fabrics are hung using appropriate protective covers and care label information is attached 3.4. Cut lengths are dispatched to next process following workplace procedures 3.5. Unused materials are stored as required 3.6. Workplace required documentation is completed following appropriate procedures 3.7. Work area is cleaned and damaged tools tagged as required 3.8. Waste is collected and bundled for recycling/reuse as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate fabric requirements and other material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the limited workplace technology related to cutting, including tools, equipment, calculators and measuring devices.

Required knowledge

- work requirements, including workplace standards
- fabric types, common faults and inspection procedures
- design features of the finished items in relation to attractive use of fabric patterns
- cutting equipment and techniques
- the impact of cutting on fabrics

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling practices for equipment, products and materials
- Identify materials used and any special marking out requirements
- Measure accurately and cut fabric quantities to minimise waste and produce consistent quality items for at least five different types of material or product
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Work orders, fabrics, including linings and interlinings, calculator and where available other workplace calculating and cutting equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	This unit applies to soft furnishings and upholstered items cut from measurements and instructions. It does not apply to cutting from patterns.
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment
Workplace environment	Work may be performed in workplaces which are involved in the manufacture of soft furnishings and upholstered furniture and in the repair and restoration of furnishing products
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • cutting equipment • including scissors and cutting machines; measuring and calculating equipment • including tapes • rulers • calculators and computers
Products to be constructed may include, but are not limited to:	<ul style="list-style-type: none"> • curtains • drapes • swags • cushions and upholstered furniture components

RANGE STATEMENT	
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify sewing machine equipment controls and procedures	1.1. Job requirements are identified from work instructions 1.2. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 1.3. Equipment components, equipment condition and controls are identified 1.4. Operating procedures are checked to identify any approved adjustments 1.5. Equipment operations and production procedures are identified 1.6. The process for obtaining materials and moving products to the next process is identified
2. Prepare for work	2.1. Work order or sample is checked to identify sewing specifications 2.2. Required materials, tools and equipment are assembled 2.3. Materials and equipment are inspected and any faults are identified and reported 2.4. Work sequence is planned to suit job, and materials are laid out 2.5. If required, naps, pattern direction and face side of materials are identified 2.6. Components are matched and secured with tacking, pins or adhesives as required 2.7. Any required supplementary equipment is identified for routine lubrication and adjustments
3. Set up and control sewing machine operations	3.1. Sewing machine is set up and adjusted 3.2. Sewing operation is according to workplace procedures and material characteristics 3.3. Required product quality and outputs are maintained
4. Maintain quality requirements	4.1. Machining process is monitored and conditions which may affect work quality are reported 4.2. Authorised changes in operating procedures are implemented
5. Finish and dispatch work	5.1. Completed work is: <ul style="list-style-type: none"> 5.1.1. checked for required quality 5.1.2. finished as required 5.1.3. repaired (where applicable)

ELEMENT	PERFORMANCE CRITERIA
	5.1.4. moved to the next process 5.2. Material which is able to be reused is collected and stored 5.3. Equipment and work area clean up and waste management are completed following workplace procedures 5.4. Workplace records are completed as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate sewing problems, avoid re-working and wastage
- use the workplace technology related to the sewing of materials, including tools, equipment and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of sewing machines
- characteristics of materials used and finished products
- safety and environmental aspects of sewing machine operations
- quality systems and standards
- workflow requirements for sewing process
- operation of work systems and industrial sewing equipment
- causes of faults and repair methods
- procedure for reporting damaged or imperfect products or interruptions to workflow

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials, including personal protective equipment
- Identify and operate three types of industrial sewing machines as identified in the Range of Variables
- Set up sewing machine for operations and monitor quality of output
- Interpret work order and locate and apply relevant information
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Identify safe handling of equipment, products and materials

Resource implications

Appropriate industrial sewing machines, work orders, operating procedures, materials and threads.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment

Sewing specifications include:

- required materials
- threads and additional work features
- seam and stitch specifications
- any special stitch requirements and allowances
- shape characteristics and special requirements
- needles
- attachments and ancillary equipment and quality requirements

Sewing products include:

- top stitching
- gathering
- piping
- braid
- fringe
- flange cords
- straight fabric lengths
- padded material
- loose covers

Sewing processes may include:

- hemming
- seams

RANGE STATEMENT	
	<ul style="list-style-type: none"> • machine tacking • gathering • multiple-layer sewing and straight or zig zag sewing
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • single or multi-needle flat bed • overlocker • blind hemming • gathering • flange • bar tacking • tape edging
Sewing machine set up and adjustment includes:	<ul style="list-style-type: none"> • thread machine and wind bobbin as required • set required tensions • select required machine settings • and test operations for work order requirements
Materials to be machined may include but are not limited to:	<ul style="list-style-type: none"> • plain and patterned fabrics
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • The employee completes quality inspection of own work

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify sewing machine equipment controls and procedures	1.1. Job requirements are identified from work instructions 1.2. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 1.3. Equipment operations, components and controls are identified 1.4. Operating procedures are checked to identify approved procedures and adjustments 1.5. Inspection procedure for materials quality and equipment condition is identified 1.6. The process for obtaining materials and moving products to the next process is identified
2. Prepare for work	2.1. Work order or sample is checked to identify exact sewing specification 2.2. Materials are inspected before use and problems, including any materials or part constructed products which do not meet the job order requirements are identified and reported 2.3. Work pieces are laid out in sequence in accordance with specifications and workplace procedures 2.4. Any required supplementary equipment is identified for routine lubrication and adjustments
3. Adjust and control sewing machine operations	3.1. Sewing machine (including attachments as required) set up requirements and adjustments are identified and followed 3.2. Machine sewing maintains required product quality and outputs 3.3. Material which is able to be reused is collected and stored, and waste and scrap is removed in accordance with workplace procedures 3.4. Equipment and work area clean up are completed following workplace procedures
4. Maintain quality requirements	4.1. Sewing machine operations and fabrics are monitored and anything which may affect quality is reported 4.2. Finished products are: <ul style="list-style-type: none"> 4.2.1. checked for required quality 4.2.2. repaired (where applicable)

ELEMENT	PERFORMANCE CRITERIA
	4.2.3. moved to the next process 4.3. Authorised changes in operating procedures and work requirements are implemented
5. Dispatch completed work	5.1. Production records and/or packing slips are completed in accordance with workplace procedures 5.2. Completed work is directed to the next operation in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate sewing problems, avoid re-working and wastage
- use the workplace technology related to the sewing, including tools, equipment, and measuring devices

Required knowledge

- types, characteristics, uses and limitations of sewing machines
- characteristics of materials used and finished products
- safety and environmental aspects of sewing machine operations
- quality systems and standards
- workflow requirements for sewing process
- operation of work systems and sewing equipment
- causes of faults and repair methods
- procedure for reporting damaged or imperfect products or interruption to workflow
- workplace procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials
- To be assessed as competent in at least one of the following:
 - sewing decorative finishes (competence must be achieved in at least one finish)
 - sewing with specialised attachments (competence must be achieved in at least three attachments/processes)
 - sewing fasteners and attachments
 - operating an outline sewing machine
- Assessment must confirm appropriate knowledge and skills to:
 - identify and operate sewing machines
 - set up sewing machine for operations and monitor quality of output
 - interpret work order and locate and apply relevant information
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate sewing machine, work orders, operating procedures, materials and threads.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify materials and sewing requirements	1.1. Required materials are identified from work order 1.2. Special requirements for the stitching, including stitch type, length and end finishing requirements are identified from work order
2. Assemble and organise materials to be sewn	2.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Materials to be sewn are collected and inspected for appropriate quality 2.3. Naps, direction of pattern and face side of the materials are identified 2.4. Required shape or form of the finished item is made and secured using tacking stitches, pins, adhesives or fixtures to assist in sewing operations 2.5. Appropriate needle types are selected and threaded
3. Sew by hand	3.1. Materials are held to allow for sewing in the required direction 3.2. Hand sewing operations are completed to ensure finished components match work requirements
4. Finish work	4.1. Finished stitching, including sewn area, seam width, stitch length, end finishing, allowances, shape and finish are checked 4.2. Top stitching or other decorative features are checked for required finish 4.3. Where required, stitching or seams are eased and work is pressed for the next stage 4.4. Raw edges are trimmed and any loose or untrimmed threads are removed 4.5. Any part of the work which does not comply with work order is repaired 4.6. Problems are notified following workplace procedures
5. Complete work for next process	5.1. Finished work is folded, protected and dispatched to the next process following workplace procedures 5.2. Any required documentation is completed and stored following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate sewing problems, avoid re-working and wastage
- use the limited workplace technology related to the sewing, including tools, equipment and measuring devices

Required knowledge

- work requirements, including workplace standards
- identification of techniques and procedures for the sewing processes
- fabric types, common faults and inspection procedures
- methods to be used with different fabric types
- risks to health from repetitive actions and prevention strategies
- design features of the articles sewn in relation to the methods and stitches to be used

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials
- Identify materials used and any special sewing requirements for the materials to be sewn
- Hand sew at least five different soft furnishing products or using five different techniques
- Interpret work order, copy samples and locate and apply relevant information
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Appropriate sewing equipment, fabrics, work order, workplace information, including work procedures.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment
<p>Purposes of hand sewing include:</p>	<ul style="list-style-type: none"> • sewing and manipulation requirements for hand sewing a range of upholstery and other furnishing fabrics • the joining of all types of fabrics, single or multi thickness, partly constructed materials, heavy materials, including leather • hemming, seams, tacking, button attachment, hand finishing of trims and decorations
<p>Tools and equipment may include:</p>	<ul style="list-style-type: none"> • a range of needles and threads
<p>Materials to be sewn may include but are not limited to:</p>	<ul style="list-style-type: none"> • plain and patterned fabrics for a variety of curtains • drapes and cushions • attachments • lining • interlining • webbings or padding
<p>Sewing direction is determined</p>	<ul style="list-style-type: none"> • stitch type and location • personal right- or left-hand preference of the

RANGE STATEMENT	
by:	sewer <ul style="list-style-type: none"> manipulation requirements for the bulk and slipperiness of the materials
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Hand sewing work requirements must ensure that:	<ul style="list-style-type: none"> beginning and end of stitching are secure appropriate allowances (or hem and/or other allowance), stitch type, length and visibility are used sewn area or hems are flat and/or appropriately shaped finished components match work requirements

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	1.1. Work orders, care labels, and equipment instructions are used to identify work requirements 1.2. Equipment, components and processes used for materials preparation and pressing process are identified 1.3. Operating requirements for the steam pressing equipment are identified 1.4. Workplace quality requirements for the final product are identified
2. Plan steam pressing operations	2.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Temperatures and any particular precautions are identified from care labels and workplace instructions 2.3. Work sequence is planned to suit job 2.4. Equipment emergency stops, gauges, guards and controls are identified 2.5. Task sequences are planned
3. Set up steam pressing equipment	3.1. Equipment information, required specifications and operating instructions are identified 3.2. Temperatures are set and equipment adjustments are checked against work plan 3.3. Fabric panels are checked for quality prior to pressing 3.4. Damaged or incomplete items are reported
4. Press fabrics	4.1. Materials are lifted and held onto the press using appropriate techniques 4.2. Pressing operations are conducted following the planned sequence 4.3. Adjustments are made to press settings to improve quality of work 4.4. Required quantity and quality of work is maintained 4.5. Pressed items are protected from dust and other contaminants and placed in workplace approved holding areas 4.6. Equipment is cleaned up and lubrications, adjustments and waste management processes are completed in accordance with workplace procedures

ELEMENT	PERFORMANCE CRITERIA
5. Maintain work quality	5.1. Pressing process is monitored and materials and equipment operating conditions which may affect product quality are reported 5.2. Authorised changes in operating procedures and temperatures are implemented

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate steam pressing problems, avoid re-working and wastage
- use the workplace technology related to steam pressing, including pressing equipment and effects of pressing

Required knowledge

- the types, characteristics, uses and limitations of steam presses
- the operating controls and principles which effect the steam pressing equipment
- the effect of steam on the range of materials which may be pressed
- requirements for minimising damage to and maintaining contaminant-free pressed fabrics

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials
- Explain the impact of machine temperature and pressure on product quality and output
- Interpret work order and locate and apply relevant information
- Press at least five different types of materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Appropriate materials, steam pressing equipment, care labels and work orders.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<p>Steam pressing operations cover work involving the operation of steam pressing equipment, monitoring operations and work quality, maintaining personal safety and the safety of others</p>
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment
Task planning is to cover:	<ul style="list-style-type: none"> • required temperatures and warm up/cool down times • key parts of the materials to be pressed which require checks for quality of work • work area housekeeping requirements • safe and suitable work area
Materials to be pressed may include but are not limited to:	<ul style="list-style-type: none"> • plain and patterned fabrics • lining materials and leather used in the manufacture of soft furnishing items
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices</p>
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication
Material lifting and holding will be impacted on by:	<ul style="list-style-type: none"> • machine type • personal right- or left-hand preference of the operator • manipulation requirements for the materials • special pressing requirements for different parts of the pressed panels

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for calculations	1.1. Measuring and calculating equipment are collected 1.2. Mathematical processes and guide charts required are identified 1.3. Drape requirements, fabric types and lining/interlining requirements are noted from work order
2. Calculate drape fabric requirements	2.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Fabric repeats are measured for customer selected fabrics and recorded 2.3. Fabric width is checked taking note of any wider than usual selvages 2.4. Finished length of window covering is identified from order 2.5. Heading type is identified from order and fullness ratio is identified 2.6. Number of fabric drops per curtain is calculated 2.7. Length of each fabric drop is calculated based on finished length plus hem and heading allowances and pattern repeats 2.8. Allowances for seams, hems, headings, drape fullness or heading type are noted on the work order
3. Calculate lining and interlining quantities	3.1. Width of lining (and, where required, interlining fabrics) is noted 3.2. Number of lining/interlining widths is calculated based on required number of drape drops 3.3. Length of lining/interlining drops is calculated, including hem allowances 3.4. Amount of lining/interlining fabric is calculated and marked on work order 3.5. Procedures for minimising waste fabric are identified and used
4. Complete documentation	4.1. Work orders for cutting and machining are completed following workplace procedures 4.2. Documentation is forwarded to appropriate work areas and filed as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate calculation problems, avoid re-working and wastage
- use workplace technology related to the task, including calculators and measuring devices

Required knowledge

- fabric types, common faults and inspection procedures
- design features of the fabrics and finished curtains in relation to attractive draping requirements
- work requirements, including workplace standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify materials used and any special handling requirements for those materials
- Apply safe handling practices for equipment, products and materials
- Interpret work order and locate and apply relevant information
- Measure and accurately calculate fabric quantities to minimise waste and produce consistent quality drapes for at least five different types of window coverings
- Identify materials used and any special marking out requirements
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
 - minimise the risk of injury to self or others
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Work orders, fabrics, including linings and interlinings, calculator and, where available, workplace pleat calculating charts.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Elements describe the essential outcomes of a unit of competency.	1.1. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
2. Establish work requirements and prepare for work	2.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Work order requirements are checked and confirmed 2.3. Heading type is recognised to identify personal work requirements for measuring, calculating, sewing, folding and finishing 2.4. Correct side of fabric, naps, direction of pattern and pattern matches are identified 2.5. Drapery panels are checked for faults 2.6. Appropriate needle types for the fabric are selected and threaded
3. Lay out work to be sewn	3.1. Top fabric is folded bringing edges to be seamed together to match any pattern and to maintain an appropriate finished length following workplace quality requirements 3.2. Fabric is held together and, where required, supported with pins or other workplace approved methods
4. Stitch seams and form corners	4.1. Curtain fabrics are held to allow for personal right-hand or left-hand preference of the sewer, and manipulation requirements for the bulk and slipperiness of the materials 4.2. Machine sewing operations are completed correctly 4.3. Corners are folded and formed to match work order requirements, inserting any required weight bags 4.4. Hems are completed using any required weights, stitch type and appropriate sewing method 4.5. Corners are stitched and finished, trimming any threads
5. Construct curtain headings	5.1. Curtain heading tape is attached according to workplace approved method and job instructions 5.2. Sewn pleat spaces are kept uniform within drops

ELEMENT	PERFORMANCE CRITERIA
	5.3. Care labels are fixed to heading or hem of curtain according to workplace standards
6. Finish work	6.1. Finished curtain panels, including stitch length, end finishing and final length of finished curtain panels, are checked against work requirements 6.2. Work is pressed for the next work stage 6.3. Any parts of the work which do not comply with work order are repaired
7. Complete work for next process	7.1. Workplace required documentation is completed and stored following appropriate procedures 7.2. Finished work is folded, protected and dispatched to next process following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, avoid waste and estimate material requirements
- use pre-checking and inspection techniques to anticipate construction problems, avoid re-working and wastage
- use the limited workplace technology related to the construction tasks, including tools, equipment, calculators and measuring devices

Required knowledge

- identification of equipment, processes and procedures for the sewing operations
- fabric types, common faults and inspection procedures
- risks to health from repetitive actions and prevention strategies
- design features of the heading styles sewn in relation to work requirements
- work requirements, including workplace standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials
- Interpret work order to manufacture the required lined curtains
- Measure accurately
- Identify materials used and any special sewing requirements for those materials
- Construct at least four different types of pleated or gathered curtains/drapes
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Appropriate sewing machine, fabrics, work order, workplace information, including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<p>This unit covers the construction of unlined/coated curtains/drapes. This covers work involving sewing and manipulation requirements for machine sewing a range of curtain heading styles which are to include:</p> <ul style="list-style-type: none"> • gathered • slotted (rod pocket) • pencil pleat and pinch pleat and may include tab top • knife pleat • goblet pleat and cartridge
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • industrial sewing machines and pressing equipment
Tools and equipment may include:	<ul style="list-style-type: none"> • measuring and calculating equipment, including tapes, rulers, calculators, computers • fabric and general cutting and sewing tools, including scissors, sewing machines, hemming machines, overlockers, pleating machines
Materials to be machined may	<ul style="list-style-type: none"> • lining

RANGE STATEMENT	
include, but are not limited to:	<ul style="list-style-type: none"> • interlining and curtain fabrics • fasteners • threads
Work order requirements are to cover:	<ul style="list-style-type: none"> • widths and numbers of finished curtain panels, heading style, number and spacing of pleats • finishing and any filling of curtain headings
Marking out	Marking out is to cover returns, overlaps, pleats and spaces
Machine sewing operations must ensure:	<ul style="list-style-type: none"> • straight stitching along marked pleat line from the top of the heading to the lower edge of the stiffening material or vice versa • securing of beginning and end of threads of the stitching with even and appropriate seam stitch type, length, visibility • seams are flat • the inclusion of care labels and fibre content labels where required • finished components match work requirements
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 1.2. Work order requirements are checked and confirmed 1.3. Heading type is recognised to identify personal work requirements for measuring, calculating, sewing, folding and finishing 1.4. Correct side of fabric, naps, direction of pattern and pattern matches are identified 1.5. Lining attachment method is recognised to identify any attachments and fasteners, trims and sewing requirements 1.6. Drapery panels are checked for faults 1.7. Appropriate needle types for the fabric are selected and threaded
2. Lay out work to be sewn	2.1. Top fabric is folded bringing edges to be seamed together to match any pattern and to maintain an appropriate finished length following workplace quality requirements 2.2. Linings and any interlining materials are laid out and folded ready for sewing 2.3. Fabric is held together and, where required, supported with pins or other workplace approved methods
3. Stitch seams and form corners	3.1. Curtain fabrics are held to allow for personal right-hand or left-hand preference of the sewer, and manipulation requirements for the bulk and slipperiness of the materials 3.2. Linings to be bagged are sewn in place 3.3. Machine sewing operations are completed correctly 3.4. Corners are folded and formed to match work order requirements, inserting any required weight bags 3.5. Hems are completed using any required weights, stitch type and appropriate sewing method 3.6. Corners are stitched and finished, trimming any threads
4. Construct curtain headings	4.1. Curtain heading tape is attached according to workplace approved method and job instructions 4.2. Attached lining and interlinings are sewn into heading

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Sewn pleat spaces are kept uniform within drops</p> <p>4.4. Linings and interlinings are attached to curtain backs by sewing or using appropriate fasteners</p> <p>4.5. Care labels are fixed to heading or hem of curtain according to workplace standards</p> <p>4.6. Separate linings are sewn using appropriate heading tape and attached to curtain</p>
5. Finish work	<p>5.1. Finished curtain panels, including stitch length, end finishing and final length of finished curtain panels are checked against work requirements</p> <p>5.2. Work is pressed for the next work stage</p> <p>5.3. Any parts of the work which do not comply with work order are repaired</p>
6. Complete work for next process	<p>6.1. Workplace required documentation is completed and stored following appropriate procedures</p> <p>6.2. Finished work is folded, protected and dispatched to next process following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, avoid waste and estimate material requirements
- use pre-checking and inspection techniques to anticipate construction problems, avoid re-working and wastage
- use the limited workplace technology related to the construction tasks, including tools, equipment, calculators and measuring devices

Required knowledge

- identification of workplace standards, equipment and procedures for the sewing operations
- fabric types, lining and interlining materials, including common faults and inspection procedures
- prevention strategies for risks to health from lifting, stretching and repetitive actions
- how the design features of the curtains effect constructing the lined curtains

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Apply safe handling practices for equipment, products and materials • Interpret work order to manufacture the required lined curtains • Identify materials used and any special sewing requirements for those materials • Measure accurately • Construct at least two different types of lined curtains/drapes • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • minimise the risk of injury to self and others • prevent damage to goods, equipment and products • maintain required production output and product quality • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment • Report process or materials faults, damaged products or equipment
<p>Resource implications</p>	<p>Appropriate sewing machine, fabrics, work order, workplace information, including work procedures and/or equipment instructions.</p>

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify pelmet and padding materials to be used	1.1. Type of pelmet to be padded is identified 1.2. Components of the pelmet requiring padding and specifications for the work are identified from work instructions 1.3. Quality and quantity requirements are identified
2. Prepare for work	2.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Required tools and materials to complete the work are sourced, collected and checked for suitability 2.3. Fixing devices or adhesives are selected in line with specifications or type of padding and headboard 2.4. Required personal protection equipment is located 2.5. Work is planned to conform to quality requirements, minimise time, and economically use materials 2.6. Procedures are identified for checking the quality of the work
3. Cut timber and pad pelmet	3.1. Timber components are measured and cut to required specifications 3.2. Padding and other materials are laid out, components are assembled and attached using appropriate fastenings, tools and equipment 3.3. Tools and equipment are operated in compliance with workplace procedures and OHS requirements 3.4. Work is monitored to ensure quality of product, including correct finish, operation of any moving parts, and number and fitting of fasteners/brackets 3.5. Problems occurring during work operations are identified and reported following workplace procedures 3.6. Waste quantities are minimised, and reusable materials are collected and stored following workplace procedures 3.7. Routine maintenance of tools and equipment is carried out according to workplace and manufacturers' instructions 3.8. Waste is removed and work area is cleaned following workplace procedures
4. Prepare pelmet for next process	4.1. Completed pelmets are packaged following work requirements

ELEMENT	PERFORMANCE CRITERIA
	4.2. The package is secured, labelled and stored according to workplace procedures 4.3. Appropriate documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, avoid waste and estimate material requirements
- use pre-checking and inspection techniques to anticipate construction problems, avoid re-working and wastage
- use workplace technology related to the construction tasks, including tools, equipment, calculators and measuring devices

Required knowledge

- workplace standards and procedures related to the making up of padded pelmets
- identification of equipment, materials, processes and procedures
- operation of tools and equipment used in the padding process

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials
- Interpret work order and locate and apply relevant information
- Select and make up appropriate timber frame
- Select and attach appropriate padding, fabric and trims
- Construct at least three different types of padded pelmets
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Pelmets, padding materials, tools and equipment, appropriate quality specifications and work instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

This unit covers work involved in the attachment of padding, fabric and trimming to pelmets and where necessary, the packaging, labelling and storing of products

Unit context

- OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set-up and operation of machines. This may be demonstrated either individually or in a team environment
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

Tools and equipment may include:

- tapes
- rulers
- calculators
- computers
- scissors
- staplers
- sewing machines
- hammers
- staple guns
- jigsaws
- drop saws

Materials to be used may include:

- curtain fabric
- timber
- adhesives and padding material

RANGE STATEMENT	
Padding materials include:	<ul style="list-style-type: none"> • padding • fabric • linings and trims
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify products, fittings and attachments to be used	1.1. Type of tracks to be fitted and work order requirements are identified 1.2. Attachments, required components and tools are identified from work instructions 1.3. Quality and quantity requirements are identified
2. Prepare for work	2.1. OH&S requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Required tools and materials to complete the work are sourced, collected and checked for suitability 2.3. Cutting equipment is checked for correct setting and operation of safety cut-out and guards 2.4. Work is planned to conform to quality requirements, minimise time, and economically use materials 2.5. Procedures are identified for checking the quality of the work
3. Cut tracking to required length	3.1. Cutting equipment is operated in compliance with workplace procedures and OH&S requirements 3.2. Cutting is monitored to ensure quality of product 3.3. Problems occurring during work operations are identified and reported following workplace procedures 3.4. Waste quantities are minimised, and reusable materials are collected and stored following workplace procedures 3.5. Routine maintenance of the cutting equipment is carried out according to workplace and manufacturers' instructions 3.6. Waste is removed and work area is cleaned following workplace procedures
4. Assemble and package tracking components	4.1. Components required to complete the tracking are collected, assembled and checked for quality and quantity 4.2. Components are packaged following work requirements 4.3. The completed package is secured, labelled and stored according to workplace procedures 4.4. Appropriate documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, avoid wastage and estimate material requirements
- use pre-checking and inspection techniques to anticipate construction and assembly problems, avoid reworking and avoid wastage
- use the limited workplace technology related to construction and assembly tasks, including tools, equipment, calculators and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of tracks
- identification of equipment, materials, processes and procedures
- workplace standards and procedures related to the making up of tracks

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials
- Interpret work order and locate and apply relevant information
- Make up at least three different types of tracks
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
 - minimise the risk of injury to self or others
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Tracks and components, tools and equipment, appropriate quality specifications and work instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify products, fittings and attachments to be used	1.1.Type of tracks, rods or poles to be fitted and work order requirements are identified 1.2.Attachments, required materials and tools are identified from work instructions and, where necessary, site inspection 1.3.The effect of the fitting process on overall finished window is identified
2. Plan process for fitting attachments to products	2.1.OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2.Appropriate equipment is identified to minimise risks of damage to customers' premises or injuries to self 2.3.Manufacturers' information on products used is located and used to plan work 2.4.Attachment process is planned to conform to quality requirements, minimise time, economically use materials and maximise appearance of the finished work 2.5.Materials, tools and equipment are assembled and checked for suitability for purpose 2.6.Track/pole/rod width and projection is set up to correctly match work order requirements
3. Complete fitting operations	3.1.Work plan is followed ensuring compliance with workplace procedures and OH&S requirements 3.2.Tracks/rods/poles are installed and tested for correct operation
4. Clean work area and prepare products for the next process	4.1.Work site and any equipment used is cleaned and stored appropriately 4.2.Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 4.3.Completed work is inspected and compared to workplace quality requirements 4.4.Fittings which do not meet quality specifications are repaired on-site or returned to the workroom for repair 4.5.Appropriate documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, avoid wastage and estimate material requirements
- use pre-checking and inspection techniques to anticipate fitting and adjustment problems, avoid re-working and wastage
- use the limited workplace technology related to the fitting and adjusting tasks, including tools, equipment, calculators and measuring devices

Required knowledge

- workflow in relation to fitting, customising and adjusting curtain tracks, poles and other hardware, including bending of tracks
- identification of equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling practices for equipment, products and materials
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
 - minimise the risk of injury to self or others
- Fit and adjust at least five different types of window tracks, which must include at least one cord-drawn, one decorative pole and one conduit. This must include at least one ceiling fitted and one face fitted
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Tracks, rods, poles, conduit, tools and equipment, appropriate quality specifications and instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment
Curtain hardware may include:	<ul style="list-style-type: none"> • hand-drawn or cord-drawn tracks • decorative rods • poles • cord tensioners and conduit
Fitting and adjustment	<p>Fitting and adjustment covers work involved in the fitting, customising and adjustment of tracks, decorative rods, poles and conduit for window coverings that are hand-drawn, manually cord-drawn or fixed</p>
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • hand or power operated tools • including drills • hammers • screwdrivers
Width and projection set up	<p>Width and projection set up is to provide for stacking space, overlap, projection, return, and number of rings/hooks, guides/runners and other fittings</p>
Personal protective equipment	<p>Personal protective equipment is to include that</p>

RANGE STATEMENT	
	prescribed under legislation, regulation and enterprise policies and practices

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify products, fittings and attachments to be used	1.1.Type of blind to be fitted and work order requirements are identified 1.2.Attachments, required materials and tools are identified from work instructions and (where necessary) site inspection 1.3.The effect of the fitting process on overall finished window is identified
2. Plan process for fitting blinds	2.1.OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2.Appropriate equipment is identified to minimise risks of damage to customers premises or injuries to self 2.3.Manufacturer information on products used is located and used to plan work 2.4.Attachment process is planned to conform to quality requirements, maximise the appearance of the finished work and provide for the most economical use of materials and labour 2.5.Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 2.6.Blind operating mechanism is set up and checked against workplace requirements and work instructions
3. Complete fitting operations	3.1.Work plan is followed ensuring compliance with workplace procedures and OHS requirements 3.2.Blinds are fitted and tested for correct operation 3.3.Pelmets, cord brackets or pulleys are fitted using appropriate hardware and adjusted to suit blind operation
4. Clean work area	4.1.Work site and any equipment used are cleaned and stored appropriately 4.2.Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 4.3.Completed work is inspected and compared to workplace quality requirements 4.4.Blinds which do not meet quality specifications are repaired on-site or returned to the workroom for

ELEMENT	PERFORMANCE CRITERIA
	repair 4.5. Appropriate documentation is completed 4.6. Fittings and blinds which do not meet quality specifications are repaired on-site or returned to the workroom for repair 4.7. Appropriate documentation/reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, avoid waste and estimate material requirements
- use pre-checking and inspection techniques to anticipate fitting problems, avoid re-working and wastage
- use workplace technology related to fitting and adjustment tasks, including tools, equipment and measuring devices

Required knowledge

- types, uses, limitations and operating mechanisms of interior blinds
- identification of equipment, processes and procedures
- workflow in relation to fitting blinds

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials
- Interpret work order and locate and apply relevant information
- Fit and adjust at least five different types of interior blinds
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Blinds, tools and equipment, appropriate quality specifications and instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify window finishings to be installed	1.1.Type of window finishings to be fitted and work order requirements are identified 1.2.Materials and tools are identified from work instructions and, where necessary, site inspection 1.3.The effect of the fitting process on overall finished window is identified
2. Plan process for dressing window	2.1.OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2.Appropriate equipment is identified to minimise risks of damage to customers premises or injuries to self 2.3.Manufacturers' information on products used is located and used to plan work 2.4.Decorator's specifications (if any) are used to plan work 2.5.Attachment process is planned to conform to quality requirements, minimise time, economically use materials and maximise appearance of the finished work 2.6.Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
3. Complete fitting operations	3.1.Backing is attached, where appropriate, to the curtain using appropriate fittings 3.2.Required number of glides are identified, matched between window finishing and tracks and added or removed as required 3.3.Curtains are attached to tracks and checked for smooth and even operation and hanging 3.4.Curtain height and floor clearance is checked and compared to work order requirement 3.5.Pelmets, valances, swags, pull-backs or tie-back holders are fitted using appropriate hardware and adjusted for fall, neatness and appearance 3.6.Where required, pleats are folded and tied to maintain required pleating
4. Clean work area	4.1.Work site and any equipment used is cleaned and stored appropriately

ELEMENT	PERFORMANCE CRITERIA
	4.2. Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 4.3. Completed work is inspected and compared to workplace quality requirements 4.4. Fittings and curtains which do not meet quality specifications are repaired on-site or returned to the workroom for repair 4.5. Appropriate documentation or reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, avoid wastage and estimate material requirements
- use pre-checking and inspection techniques to anticipate window dressing problems, avoid re-working and wastage
- use workplace technology related to the dressing of windows, including tools, equipment, calculators and measuring devices

Required knowledge

- window dressing and fitting materials and techniques
- identification of equipment, processes and procedures
- workflow in relation to fitting curtains, valances, swags and other window treatments

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools	1.1.Types of hand and power tools and their functions are identified 1.2.Sources of power supply are recognised 1.3.OHS requirements for using power tools are recognised and adhered to
2. Select hand tools	2.1.Hand tools are selected consistent with the needs of the job 2.2.Tools are checked for serviceability and safety and any faults are corrected or processed for repair 2.3.Equipment is selected to hold or support material for hand tool application where applicable
3. Use hand tools	3.1.Material is located and held in position for hand tool application 3.2.Hand tools are safely and effectively used according to their intended use 3.3.Hand tools are safely located when not in immediate use
4. Select power tools	4.1.Appropriate personal protective equipment is selected, correctly fitted and used 4.2.Power tools are selected consistent with the needs of the job in accordance with conventional work practice 4.3.Power tools are visually checked for serviceability/safety in accordance with OHS requirements and any faults are corrected or processed for repair 4.4.Equipment is selected to hold or support materials for power tool application where applicable
5. Use power tools	5.1.Material is located and held in position for power tool application where applicable 5.2.Power tools are safely and effectively used in application processes 5.3.Power tools are safely located when not in use
6. Clean up work area and tools	6.1.All tools are cleaned, maintained and stored 6.2.Equipment is cleaned, maintained and stored 6.3.Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect and understand information related to the use and maintenance of hand and power tools
- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of faults and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of tools
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate tool handling problems, avoid re-working and wastage
- use workplace technology related to the use and operator maintenance of hand and power tools and associated materials

Required knowledge

- function, purpose and operator maintenance requirements of hand tools used in the workplace
- function, purpose and operator maintenance requirements of power tools used in the workplace
- workplace safety requirements and OHS legislation

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<p>Apply safe handling practices for equipment, products and materials</p> <ul style="list-style-type: none"> • Adopt and carry out correct procedures prior to and during use of the hand and power tools prescribed in the Range Statement • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • minimise the risk of injury to self and others • prevent damage to goods, equipment and products • maintain required production output and product quality • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment • Indicate compliance with organisational policies and procedures, including quality assurance requirements
<p>Resource implications</p>	<p>Soft furnishing sector hand and power tools, materials used in the manufacturing and/or installation of soft furnishing products.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate skill, accuracy and dexterity in the application of tools to work tasks
Hand tools are to include:	<ul style="list-style-type: none"> • scissors • cutting blades • tape measures • rulers • hammers • staple guns and screwdrivers
Power tools are to include:	<ul style="list-style-type: none"> • drills • screwdrivers • staple guns • pressing equipment • others as required by enterprises
Fault reporting	Reporting of faults in the operation of hand and power tools may be verbal or written
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Hand and power tool manufacturer specifications and operational procedures • Workplace procedures relating to OHS, tool handling and operation, reporting and

RANGE STATEMENT	
	communication <ul style="list-style-type: none"> • Work instructions, including job sheets, plans, drawings and designs

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify drop cutting machine controls, adjustments and work procedures	1.1. Job requirements are identified from workplace approved operating procedures 1.2. Equipment components, adjustment points and controls are identified 1.3. Operating procedures are checked to identify approved operating range and adjustments 1.4. Equipment operations and production procedures are identified 1.5. The process for obtaining materials and moving products to the next process is identified
2. Plan and prepare for work	2.1. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 2.2. Inspection procedure for materials quality and equipment condition is identified 2.3. Work sequence is planned to suit job 2.4. OH&S requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.5. Equipment emergency stops and guards are identified 2.6. Machine checking procedures are identified 2.7. Any required supplementary equipment is identified for routine lubrication and adjustments of the equipment
3. Set and operate drop cutting machine	3.1. Fabric length and angle of cut are set on the drop cutting machine following work order 3.2. Fabric is fixed to the machine using appropriate hooks or other fasteners 3.3. Fabric is checked for flaws prior to cutting 3.4. Fabric use minimises waste materials 3.5. Cutting operations provide the required product quality standards, work outputs and minimisation of waste 3.6. Problems are identified and reported following workplace procedures 3.7. Cut lengths are checked for required quality, and moved to the next process 3.8. Waste and scrap is dealt with following workplace

ELEMENT	PERFORMANCE CRITERIA
	procedures 3.9. Equipment and work area clean up are completed following workplace procedures
4. Identify quality requirements	4.1. Process is monitored and conditions which may affect quality standards are reported 4.2. Observed requirements for repairs or maintenance are identified and reported to appropriate personnel 4.3. Authorised changes to settings or operating procedures are implemented

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate drop cutting problems, avoid re-working and wastage
- use workplace technology related to drop cutting, including tools and equipment, power supply systems

Required knowledge

- types, characteristics, uses and limitations of drop cutting machines
- characteristics of materials used and products produced
- identification of equipment adjustment points, processes and procedures
- procedure for reporting faulty products or interruptions to workflow
- workflow requirements for process

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Apply safe handling practices for equipment, products and materials • Identify and operate machine controls and guards • Set depth and angle of cut to specification • Interpret work order and locate and apply relevant information • Operate drop cutting machine to cut at least five different types of material or fabric • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • minimise the risk of injury to self and others • prevent damage to goods, equipment and products • maintain required production output and product quality • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
<p>Resource implications</p>	<p>Drop cutting machines, work orders, equipment operating procedures, fabric for cutting.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.</p>

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify automated curtain pleating equipment controls and work procedures	1.1. Location and function of the equipment, including, equipment condition, components and controls are identified 1.2. Work procedures and documentation are checked to identify that settings are within approved operating range 1.3. Inspection procedure for quality requirements for hemmed and seamed curtain drops is identified 1.4. Heading type is recognised to identify personal work requirements for measuring, calculating, folding and finishing 1.5. The process for obtaining materials and moving products to the next process is identified
2. Prepare for work	2.1. Work order requirements are identified 2.2. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.3. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 2.4. Work sequence is planned to suit job 2.5. Equipment on/off switches and guards are identified 2.6. Pleated width for the curtain order is calculated 2.7. Adjustments to equipment settings to match work order heading requirements and finished curtain width are made following workplace approved procedures 2.8. Any required supplementary equipment is identified for routine cleaning, lubrication and adjustments
3. Operate automated curtain pleating equipment	3.1. Lubrications and adjustments are made to the machine 3.2. Curtains are spread on work area and clamped in the automated equipment ensuring a smooth and square alignment with the machine guides 3.3. Curtain pleating is completed, monitoring equipment conditions and drape quality 3.4. Finished width of each curtain drop is measured and checked against work order and pleat size is adjusted where required

ELEMENT	PERFORMANCE CRITERIA
	<p>3.5. Curtain headings are stapled or clipped within required heading area</p> <p>3.6. Problems are identified and reported following workplace procedures</p> <p>3.7. Finished work is dispatched to next process following workplace procedures</p> <p>3.8. Equipment and work area clean up are completed following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, avoid wastage and estimate material requirements
- use pre-checking and inspection techniques to anticipate pleating problems, avoid re-working and wastage
- use workplace technology related to pleating tasks, including tools, equipment and power supply systems

Required knowledge

- types, characteristics, uses and limitations of curtain pleating equipment
- characteristics of materials used and products produced
- identification of equipment adjustment points, processes and procedures
- procedure for reporting faulty products or interruptions to workflow
- workflow requirements for process

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials
- Set up automated curtain pleating equipment to produce the required headings
- Interpret work order and locate and apply relevant information
- Operate automated curtain pleating equipment to produce at least three different heading types
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Report process or materials faults, damaged curtains or equipment
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Automated pleating equipment, operating procedures, unpleated curtains.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	This unit covers work involving the set up and use of automated curtain pleating equipment following workplace operating procedures
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	1.1. Job requirements are identified from work instructions and patterns 1.2. Pattern is interpreted to determine detail or work requirements 1.3. Instructions for sequencing of work, particular measurements or adjustments are interpreted 1.4. Work sequence is planned, including quality checkpoints
2. Prepare for work	2.1. Suitable work area is selected for the tasks 2.2. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.3. Materials are selected to match customer requirements, suitability for the purpose and work instructions 2.4. Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material 2.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
3. Complete construction	3.1. Window toppings are constructed following work instructions 3.2. Work is checked against patterns and work sheets at the identified checkpoints 3.3. Non-conformity with the required quality standards is rectified
4. Finalise operations	4.1. Completed work is checked against required quality standards 4.2. Documentation or reporting is completed following workplace procedures 4.3. Work area is cleaned, tools and equipment are returned to storage 4.4. Unused materials are returned to storage and waste and scrap is dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and avoid wastage
- use workplace technology related to the production of window toppings, including tools, equipment, materials and measuring devices

Required knowledge

- the type, characteristics, uses and limitations of window toppings
- the process for interpretation of patterns
- identification of equipment, processes and procedures
- workflow in relation to window topping production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify materials used and any special sewing or handling requirements for those materials
- Apply safe handling practices for equipment, products and materials
- Interpret work order and patterns and locate and apply relevant information
- Produce at least one each of jabots, swags and tails and soft padded pelmets or bonded pelmets
- Select and use tools and equipment appropriate to the task
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Patterns, materials, tools and equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the reading and interpreting of patterns, plans and instructions. This may be demonstrated either individually or in a team environment

Window toppings may include:

- swags
- jabots
- falls/tails and accessories
- soft padded pelmets and bonded pelmets

Tools and equipment may include:

- measuring and calculating equipment, including:
 - tapes
 - rulers
 - calculators and computers
- fabric and general cutting and sewing tools, including:
 - scissors
 - saws
 - drills
 - staplers
 - sewing machines
 - hemming machines

RANGE STATEMENT	
	<ul style="list-style-type: none"> • overlockers • glue guns • swag templates
Materials may include:	<ul style="list-style-type: none"> • plain and patterned fabric • velvet and vinyl
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the production of window topping items • Work instructions, including job sheets, plans, patterns, drawings and designs • Workplace procedures relating to reporting and communication
Pattern interpretation	Pattern interpretation is to determine the type of material specified, type of material specified, required tools and equipment for the task, number and type of window toppings to be produced, and quality requirements

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 1.2. Work order requirements are checked and confirmed 1.3. Correct side of fabric, naps, direction of pattern and pattern matches are identified 1.4. Fabric is checked for flaws 1.5. Appropriate needle types for the fabric are selected and threaded
2. Lay out work to be sewn	2.1. Linings and interlining materials are laid out and folded ready for sewing 2.2. Lining materials patterns are matched and secured 2.3. Face fabric is folded bringing edges to be seamed together to check any pattern matching and to maintain an appropriate finished length 2.4. Pattern matches are kept uniform within drops and across matching sets of blinds 2.5. Measuring and marking out of fold or stitching lines for batten placement is even and matches the work order or workplace requirements 2.6. Fabric is held together and, where required, supported with pins or other workplace approved methods
3. Stitch seams and form corners	3.1. Fabrics are held to allow for the personal right-hand or left-hand preference of the sewer, and manipulation requirements for the bulk and slipperiness of the materials 3.2. Machine sewing operations are completed correctly 3.3. Linings and interlinings are attached to the back of blind 3.4. Finished length and width of each panel are measured and checked against work order and adjusted where required 3.5. Batten pockets are inserted and fixed following workplace procedures 3.6. Hems are completed using any required weights, stitch type and appropriate sewing method 3.7. Corners are stitched and finished and threads trimmed

ELEMENT	PERFORMANCE CRITERIA
4. Apply quality checks	<p>4.1. Finished blinds are checked ensuring stitch length, end finishing and final length of finished blinds match work requirements</p> <p>4.2. Work is pressed for the next work stage</p> <p>4.3. Rings are attached</p> <p>4.4. Parts of the work which do not comply with work order are repaired</p>
5. Complete work	<p>5.1. Headboard is painted, stained or covered with fabric fixed along the board length, corners are mitred and fixed, reducing bulk and ensuring a neat finish</p> <p>5.2. Blinds are fitted to headboard or track, threading completed and blind folded using appropriate methods</p> <p>5.3. Finished work is protected and dispatched to next process following workplace procedures</p> <p>5.4. Workplace documentation or reporting is completed</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate blind construction problems, avoid re-working and wastage
- use workplace technology related to the construction of roman blinds, including tools, equipment, materials and measuring devices

Required knowledge

- types, characteristics, uses and limitations of roman blinds
- design features of the roman blinds
- fabric types, common faults and inspection procedures
- identification of equipment, processes and procedures for making the blind style
- work requirements, including workplace standards
- risks to health from repetitive actions and prevention strategies

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order, locate, use information relevant to the tasks completed
- Apply safe handling practices for equipment, products and materials
- Measure accurately and construct blinds to required size and accuracy
- Construct at least two different types of roman blinds
- Identify materials used and any special sewing requirements for the roman blinds
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Appropriate sewing machine, fabrics, work order, workplace information, including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

This unit covers work involving sewing and manipulation requirements for machine sewing a range of tailored blind types, including:

- straight or relaxed
- bonded
- oriental
- cascade
- staggered and kooped

Unit context

- OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment

Machine sewing operations

Machine sewing operations are to ensure:

- straight stitching along seam lines from the top to the lower edge of the material or vice versa
- securing of beginning and end of threads of the stitching with even and appropriate seam stitch type, length and visibility
- seams are flat
- finished components match work requirements

Machines may include, but are not limited to:

- industrial sewing machines
- pressing equipment

RANGE STATEMENT	
	<ul style="list-style-type: none"> • staplers • drills • saws
Materials to be machined may include but are not limited to:	<ul style="list-style-type: none"> • lining • interlining and curtain fabrics • fasteners • threads • headboard or track
Work order requirements include but are not limited to:	<ul style="list-style-type: none"> • widths and numbers of finished blinds • seam allowances and types • number and widths of panels • mounting style • headboard or track requirements • lining and any interlining • required fasteners
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish work requirements and prepare for work	1.1. Work order requirements are checked and confirmed 1.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 1.3. Correct side of fabric, naps, direction of pattern and pattern matches are identified 1.4. Fabric is checked for flaws 1.5. Appropriate needle types for the fabric are selected and threaded
2. Lay out work to be sewn	2.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Linings and any interlining materials are laid out and folded ready for sewing 2.3. Lining materials are matched and secured 2.4. Face fabric is folded, bringing edges to be seamed together to match any pattern and to maintain an appropriate finished length 2.5. Pattern matches are kept uniform within drops and across matching sets of blinds 2.6. Fabric is held together and, where required, supported with pins or other workplace approved methods
3. Stitch seams and form corners	3.1. Curtain fabrics are held to allow for the personal right-hand or left-hand preference of the sewer, and manipulation requirements for the bulk and slipperiness of the materials 3.2. Machine sewing operations are completed correctly 3.3. Finished length and width of each panel is measured and checked against work order and adjusted where required 3.4. Linings and interlinings are attached to back of blind 3.5. Corners are folded and formed to match work order or workplace requirements 3.6. Hems are completed using the appropriate stitch type and sewing method 3.7. Corners are stitched and finished and threads trimmed 3.8. Ring placement positions are measured and marked

ELEMENT	PERFORMANCE CRITERIA
4. Sew gathering materials	<p>4.1. Headings and any stitching or slit along vertical gather lines are completed according to the work order</p> <p>4.2. Ends of stitching are secured and any required weights are attached</p>
5. Finish work	<p>5.1. Finished blinds are checked ensuring stitch length, end finishing and size blinds match work requirements</p> <p>5.2. Work is pressed</p> <p>5.3. Parts of the work which do not comply with work order are repaired</p> <p>5.4. Rings are attached</p> <p>5.5. Gather tapes and gathering lines are pulled up maintaining even fullness in gather and even tension in gathering lines</p> <p>5.6. Headboard is painted, stained or covered with fabric fixed along the board length, corners are mitred and fixed, reducing bulk and ensuring a neat finish</p> <p>5.7. Blinds are fitted to headboard or track and threading completed</p>
6. Complete work for next process	<p>6.1. Workplace required documentation or reporting is completed</p> <p>6.2. Finished work is folded, protected and dispatched following workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, and estimate material requirements
- use pre-checking and inspection techniques to anticipate construction problems, avoid re-working and wastage
- use workplace technology related to the construction of Austrian/festoon style blinds, including tools, equipment, materials and measuring devices

Required knowledge

- types, characteristics, uses and limitations of Austrian/festoon style blinds
- design features of the Austrian/festoon style blinds
- fabric types, common faults and inspection procedures
- identification of equipment, processes and procedures for making the particular blind style
- work requirements, including workplace standards
- risks to health from repetitive actions and prevention strategies

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify materials used and any special sewing requirements for the style of blinds
- Apply safe handling practices for equipment, products and materials
- Gather fabrics evenly to meet customer requirements and fabric type
- Construct at least two types of Austrian/festoon style blinds which may be Austrian, festoon, London, balloon and cloud
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Appropriate sewing machine, fabrics, work order, workplace information, including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment
<p>Blinds to be constructed may include:</p>	<ul style="list-style-type: none"> • Austrian • festoon • London • balloon • cloud and festoon-style curtain types including lace • fabric-lined and unlined blinds
<p>Tools and equipment may include, but are not limited to:</p>	<ul style="list-style-type: none"> • industrial sewing machines • measuring equipment • stapler • drill and saw
<p>Materials to be machined may include but are not limited to:</p>	<ul style="list-style-type: none"> • lining • interlining and curtain fabrics • fasteners • threads
<p>Personal protective equipment</p>	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices</p>

RANGE STATEMENT	
Work order requirements include:	<ul style="list-style-type: none"> • widths and numbers of finished blinds • seam allowances and types • number and widths of panels • lining and any interlining • contrasting edging • required fasteners and other materials • mounting style headboard or track requirements
Machine sewing operations	<p>Machine sewing operations are to ensure:</p> <ul style="list-style-type: none"> • straight stitching along seam lines from the face to the lower edge of the material, • securing of beginning and end of threads • stitching is even and appropriate seam stitch type, length, visibility, • seams are flat • finished components match work requirements
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the materials and process	1.1. The process and materials to be used are identified 1.2. The effect of the joining process on the materials is determined 1.3. The effect of the chemical reactions on the materials is determined 1.4. Allowances for joining overlaps are checked in workplace documentation and manufacturer instructions 1.5. Curing times are identified for the materials and the process
2. Plan the joining process	2.1. Manufacturer instructions and workplace procedures for the joining task are used in the planning process 2.2. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.3. Work sequence is planned noting appropriate curing/cooling times, efficient work sequence and quality requirements
3. Set up equipment and materials for the process	3.1. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition 3.2. Site is checked for appropriate ventilation, fume extraction, protection of other surfaces from contamination with screens and or covers 3.3. Adjustments and settings are made to suit materials, manufacturer instructions and workplace procedures 3.4. Appropriate personal protection equipment is selected and assembled
4. Follow workplace procedures to complete the joining process	4.1. Joining procedures are completed following the planned work sequence 4.2. Checks and tests of the process and the finished product are made 4.3. Appropriate adjustments are made to the process to maintain the quality of the finished product 4.4. Workplace documentation and records are completed as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate chemical joining problems, avoid re-working and wastage
- use workplace technology related to chemical joining of textiles, including tools, equipment, materials and measuring devices

Required knowledge

- types, strengths and limitations of chemical joining processes and techniques
- changes in materials during the chemical repair and joining of materials
- testing for potential damage, including dye fastness for the adhesive and materials
- requirements for ventilation and personal protection equipment for the adhesives
- personal health effects of fumes, heat and other radiations

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply information relevant to the chemicals, textiles and timber involved
- Apply safe handling practices for equipment, products and materials
- Select appropriate materials and joining process to match work requirements
- Maintain work area to meet environmental and safety regulations
- Conduct joining process within workplace quality parameters to chemically join at least three different types of textiles
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Textiles, timber and joining materials, job sheets.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Chemical joining	This unit covers work involved in the use of solvent and water-based chemicals to join or repair textiles and timber
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the use of chemicals. This may be demonstrated either individually or in a team environment.
Tools and equipment	Tools and equipment may include, but are not limited to glue guns
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work operations	1.1. Specifications, patterns and/or plans are read and interpreted to identify required fabrics, number of items to be cut and required equipment 1.2. Cutting requirements, including bias or other instructions are noted and required guides on the cutting table are identified 1.3. Suitable work area is selected, tidied and cleaned of any contaminants 1.4. Appropriate equipment and tools are selected for the fabrics and type of materials 1.5. Suitable scissors and/or blades are selected for the fabrics to be cut 1.6. Scissors and any other cutting equipment are checked prior to use for appropriate sharpness, set operation and safe condition 1.7. Fabrics are selected in accordance with work order and laid out smooth and square
2. Prepare materials for cutting	2.1. Fabrics are inspected for flaws and appropriate finish 2.2. Naps, direction of pattern, pattern repeat and finished side of the materials are identified 2.3. Fabrics are squared up to the edges or guide markings on the cutting table 2.4. Patterns are laid out following work procedures and instructions using registration points on the pattern and other instructions to match required fabric pattern 2.5. Measurements are made and appropriate adjustments are made 2.6. Tools and equipment are checked for operation
3. Complete cutting operations	3.1. Required cutting operations are completed to cut out materials following work instructions 3.2. Fabrics are wrapped using appropriate protective covers and care label information is attached 3.3. Unused materials are stored as required 3.4. Workplace required documentation is completed and stored following appropriate procedures 3.5. Cut fabrics are folded, protected and dispatched to next process following workplace procedures 3.6. Stock usage is reported as required by workplace procedures

ELEMENT	PERFORMANCE CRITERIA
	3.7. Work area is cleaned and damaged tools tagged as required 3.8. Waste is collected and bundled for recycling/reuse as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use workplace technology related to the layout out of pattern and cutting fabrics, including tools, equipment, materials and measuring devices

Required knowledge

- fabric types, common faults and inspection procedures
- design features of the finished furnishing items in relation to laying out the pattern and cutting the fabrics
- work requirements, including workplace standards
- risks to health from repetitive actions and prevention strategies

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify materials used and any special handling requirements for those materials
- Interpret work order and locate and apply relevant information
- Apply safe handling practices for equipment, products and materials
- Lay out patterns and cut out at least five different fabric types or pattern styles
- Identify materials used and any special cutting requirements
- Measure accurately and cut fabrics to required size and accuracy covering at least five different fabric types or pattern styles
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Appropriate scissors and tools, fabrics, work order, workplace information, including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

EVIDENCE GUIDE	
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<ul style="list-style-type: none"> • This unit covers work involving cutting single or double layer fabrics by hand or automatic method according to required shape or pattern • The unit applies to plain fabrics as well as those which involve matching stripes, checks and pattern repeats
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the cutting of material. This may be demonstrated either individually or in a team environment.
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • scissors • cutting blades • automatic cutting machines
Materials to be cut may include but are not limited to:	<ul style="list-style-type: none"> • plain and patterned fabric • vinyl and velvet
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices</p>
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, patterns, drawings and designs • Workplace procedures relating to reporting

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for calculations	1.1. Measuring and calculating equipment are collected 1.2. Mathematical processes and guide charts required are identified 1.3. Drape requirements, fabric types and lining/interlining requirements are noted from work order
2. Measure windows and calculate drape fabric requirements	2.1. Fabric repeats are noted from samples of customer selected fabrics and recorded 2.2. Fabric width and pattern repeat are noted for work order 2.3. Finished length of window covering is identified for order 2.4. Heading type is identified for order and fullness ratio is identified 2.5. Loose or attached lining preference is noted on work order 2.6. Finished width of tracking and window covering is measured and noted 2.7. Number of fabric drops per curtain is calculated 2.8. Length of each fabric drop is calculated based on finished length plus hem and heading allowances and pattern repeats 2.9. Allowances for seams, hems, headings, drape fullness or heading type are noted for the work order
3. Calculate lining and interlining quantities	3.1. Width of lining and interlining fabrics is noted 3.2. Number of lining/interlining widths or quantity of continuous lining is calculated based on required number of drape drops or continuous fabric 3.3. Length of lining/interlining drops is calculated, including hem allowances 3.4. Amount of lining/interlining fabric is calculated and noted for work order 3.5. Procedures for minimising waste fabric are identified
4. Complete documentation	4.1. Quotation is prepared for client according to workplace procedures 4.2. Documentation is forwarded to appropriate work area

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate measuring and calculation variables
- use workplace technology related to measuring and calculating

Required knowledge

- design features of the fabrics and finished curtains in relation to attractive draping requirements
- fabric types, common faults and inspection procedures
- work requirements, including workplace standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify materials to be used and any special handling requirements for those materials
- Apply safe handling practices for equipment, products and materials
- Measure up and accurately calculate fabric quantities for at least three different window covering types
- Prepare quotation and/or work order and locate and apply relevant information
- Identify materials to be used and any special requirements
- Follow work instructions to minimise the risk of injury to self or others
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Client quotations, work orders, measuring equipment, fabrics, including linings and interlinings, calculator, other relevant equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<p>This unit covers work involved in measuring up and calculations for fabric and lining quantities for all soft furnishings, including:</p> <ul style="list-style-type: none"> • curtains • Austrian • Roman • festoon and other blinds • swags, tails and jabots
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the measurement and calculation of fabric quantities
Tools and equipment may include:	<ul style="list-style-type: none"> • measuring and calculating equipment • including tapes • rulers • calculators and computers
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices</p>
The number of fabric drops per curtain is based on:	<ul style="list-style-type: none"> • useable drapery fabric width • fullness requirements for heading type • size of returns and overlaps • track width identified for customer order

RANGE STATEMENT	
Information and procedures	<ul style="list-style-type: none"> • Manufacturer specifications and operational procedures • Workplace procedures relating to measuring for soft furnishings • Preparation of client quotation, including drawings, plans and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	1.1. Job requirements are identified from work instructions and patterns 1.2. Pattern is interpreted to determine work specifications 1.3. Instructions for sequencing of work, particular measurements or adjustments are interpreted 1.4. Work sequence is planned, including quality checkpoints
2. Prepare for work	2.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Suitable work area is selected for the tasks 2.3. Materials are selected to match customer requirements, suitability for the purpose and the work instructions 2.4. Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material 2.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
3. Complete construction	3.1. Fabric quantities are calculated, allowing for seams, joining pleats, gathers, etc. 3.2. Fabric is marked out and cut to size 3.3. Bedspread is constructed following work instructions 3.4. Work is checked against patterns and work sheets at the identified checkpoints 3.5. Non-conformity with the required quality standards is rectified
4. Finalise operations	4.1. Completed work is checked against required quality standard 4.2. Documentation or reporting is completed following workplace procedures 4.3. Work area is cleaned, tools and equipment are returned to storage 4.4. Unused materials are returned to storage and waste and scrap is dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area, estimate bedspread material requirements and other material requirements
- use pre-checking and inspection techniques to anticipate manufacturing problems, avoid re-working and wastage
- use the limited workplace technology related to the manufacture of bedspreads, including tools, equipment, materials and measuring devices

Required knowledge

- basic bedspread styles and variations
- the standard range of bedspread sizes
- the range of fabrics and decorative finishes used in the making of bedspreads
- the interpretation of patterns
- identification of equipment, processes and procedures
- workflow in relation to bedspread production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify materials used in bedspread manufacture, and any special sewing or handling requirements for those materials
- Apply safe handling practices for equipment, products and materials
- Interpret work order and patterns and locate and apply relevant information
- Interpret patterns and work instructions
- Select and use tools and equipment appropriate to the task
- Manufacture at least three different styles of bedspread
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Patterns, materials, tools and equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	This unit covers work involving the production of bedspreads, including quilted, lined and unlined styles by reading and interpreting patterns, plans and work instructions
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the reading and interpreting of plans and instructions. This may be demonstrated either individually or in a team environment
Tools and equipment may include:	<ul style="list-style-type: none"> • measuring and calculating equipment, including tapes, rulers, calculators, computers • fabric cutting and sewing tools, including scissors, sewing machines, hemming machines, overlockers, etc.
Materials	Materials may include plain and patterned fabric and decorative trims
Pattern interpretation is to determine the following:	<ul style="list-style-type: none"> • type of materials specified • decorative finishes to be applied • required tools and equipment for the task • number and size of bedspreads to be produced • quality requirements
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulation and

RANGE STATEMENT	
	enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the production of bedspreads • Machine manufacturers' specifications and operational procedures • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	1.1. Job requirements are identified from work instructions and patterns 1.2. Patterns are interpreted to determine work specifications 1.3. Instructions for sequencing of work, particular measurements or adjustments are interpreted 1.4. Work sequence is planned, including quality checkpoints
2. Prepare for work	2.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Suitable work area is selected for the tasks 2.3. Materials are selected to match customer requirements, suitability for the purpose and the work instructions 2.4. Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material 2.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
3. Complete manufacture	3.1. Fabric quantities are calculated, allowing for seams, joining pleats and gathers 3.2. Fabric is marked out and cut to size 3.3. Bed linen and table cloths are manufactured following work instructions 3.4. Work is checked against patterns and work sheets at the identified checkpoints 3.5. Non-conformity with the required quality standards is rectified
4. Finalise operations	4.1. Completed work is checked against required quality standard 4.2. Documentation or reporting is completed following workplace procedures 4.3. Work area is cleaned, tools and equipment are returned to storage 4.4. Unused materials are returned to storage and waste and scrap is dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, and estimate material requirements
- use pre-checking and inspection techniques to anticipate manufacturing problems, avoid re-working and wastage
- use the limited workplace technology related to the manufacture of bed linen and table cloths, including tools, equipment, materials and measuring devices

Required knowledge

- the process for interpretation of patterns
- basic bed linen styles and variations
- basic table cloth styles and variations and table cloth sizes
- the standard range of bed linen sizes
- the range of fabrics and decorative finishes used in the making of bed linen and table cloths
- identification of equipment, processes and procedures
- workflow in relation to bed linen and table cloth production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify materials used in bed linen and table cloths manufacture, and any special sewing or handling requirements for those materials
- Apply safe handling practices for equipment, products and materials
- Interpret work order and locate and apply relevant information
- Interpret patterns and work instructions
- Select and use tools and equipment appropriate to the task
- Produce at least three different types of bed linen or table cloths which must include a duvet cover and a bed valance
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Patterns, materials, tools and equipment.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	1.1. Job requirements are identified from customer's initial instructions or enquiries and work instructions 1.2. Potential site problems or site specific requirements are identified 1.3. Work sequence is planned, including quality checkpoints
2. Prepare for work	2.1. A range of materials and products are selected to match customer requirements, suitability for the purpose and work instructions 2.2. Sample materials, products and visual aids are collected 2.3. An appointment is arranged with the customer and an appropriate time plan is agreed
3. Confirm customer requirements	3.1. Questioning and active listening techniques are used to clarify customer needs 3.2. Customer requirements are identified professionally, courteously, with tact and without presumptions 3.3. Customer requirements are fed back accurately in language that can be understood by the customer and enterprise staff 3.4. Customer requirements are documented in accordance with relevant industry, legal and/or enterprise standards and procedures
4. Provide advice on interior decoration options	4.1. Viable options for colour, fabric and design that are relevant to the customer's requirements are generated 4.2. Relevant suppliers are contacted to research alternative options, if required 4.3. Options for colour, fabric and design are explained to and discussed with the customer to facilitate customer understanding 4.4. Fabric or product samples and/or visual aids are made available to the customer, where appropriate, to facilitate customer understanding 4.5. Benefits and approximate costs of each option are explained to the customer to facilitate informed decision making
5. Agree selection with customer	5.1. Customer preferred option, including agreed delivery timeframe, is determined 5.2. Customer commitment to agreed option is gained, in accordance with workplace requirements

ELEMENT	PERFORMANCE CRITERIA
	5.3. Documentation is completed following workplace procedures, including any required specification sheets for products selected (eg colour, fabric, style, track type) and drawings 5.4. Assistance with any paperwork requiring completion by customer is provided where appropriate
6. Finalise process	6.1. Sample products are returned to storage as required 6.2. Contact is maintained with customer throughout manufacture and installation process, if required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, and current trends and styles in interior decoration
- communicate ideas and information to enable confirmation of requirements and specifications, coordination of ideas with customers, and the gaining of the customer's confidence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, advisory services
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- apply analytical techniques to many customer requirements with preferred options
- use workplace technology related to locating and analysing options for the client

Required knowledge

- interpretation of plans and work sheets
- colour coordination and matching
- fabric types and applications
- current trends in soft furnishing styles

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Identify products and materials used in interior decoration, and any special handling requirements for those materials • Interpret work order and locate and apply relevant information • Interpret plans and work instructions • Advise customers on at least three occasions involving both fabric and colour selections • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
<p>Resource implications</p>	<p>Sample fabrics and products, visual aids, tools and equipment.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.</p>

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify products, fittings and attachments to be used	1.1. Type of motorised curtain or blind to be installed is identified from work order 1.2. Required materials and tools are identified from work instructions and (where necessary) site inspection 1.3. Location of available power point is checked for suitability 1.4. Installation of power point in suitable location is arranged (if required)
2. Plan process for fitting	2.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Appropriate equipment is identified to minimise risks of damage to customers' premises or injuries to self 2.3. Manufacturers' information on products used is located and used to plan work 2.4. Attachment process is planned to conform to quality requirements, minimise time, economically use materials and maximise appearance of the finished work 2.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
3. Complete fitting operations	3.1. Work plan is followed ensuring compliance with workplace procedures and OH&S requirements 3.2. Tracks or blinds are installed and tested for correct operation 3.3. Curtains are attached to tracks and checked for smooth and even operation and hanging, including limits 3.4. Curtain or blind height and floor clearance is checked and compared to work order requirement
4. Clean work area	4.1. Work site and any equipment used is cleaned and stored appropriately 4.2. Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed 4.3. Completed work is inspected and compared to workplace quality requirements

ELEMENT	PERFORMANCE CRITERIA
	4.4. Fittings, curtains and blinds which do not meet quality specifications are repaired on-site or returned to the workroom for repair 4.5. Appropriate documentation or reporting is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate motor requirements and other material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid re-working and wastage
- use the limited workplace technology related to the installation of motorised systems, including tools, equipment, materials and measuring devices

Required knowledge

- basic low voltage motor theory
- types, characteristics, uses and limitations of motorised curtain systems
- identification of equipment, processes and procedures
- workflow in relation to fitting electric motors, curtains, blinds and tracks

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Interpret work order and locate and apply relevant information • Apply safe handling practices for equipment, products and materials • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • minimise the risk of injury to self and others • prevent damage to goods, equipment and products • maintain required production output and product quality • Install at least two different types of motorised curtains or blinds, including at least one curtain and one blind • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
<p>Resource implications</p>	<p>Motors, curtains, tracks, tools and equipment, appropriate quality specifications and instructions.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	1.1. Job requirements are identified from work instructions and patterns 1.2. Pattern is interpreted to determine work specifications 1.3. Instructions for sequencing of work, particular measurements or adjustments are interpreted 1.4. Work sequence is planned, including quality checkpoints
2. Prepare for work	2.1. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 2.2. Suitable work area is selected for the tasks 2.3. Materials are selected to match customer requirements, suitability for the purpose and the work instructions 2.4. Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material 2.5. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
3. Complete production	3.1. Soft furnishing accessories are produced following work instructions 3.2. Work is checked against patterns and work sheets at the identified checkpoints 3.3. Non-conformity with the required quality standards is rectified
4. Finalise operations	4.1. Completed work is checked against required quality standard 4.2. Documentation or reporting is completed following workplace procedures 4.3. Work area is cleaned, tools and equipment are returned to storage 4.4. Unused materials are returned to storage and waste and scrap is dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate production problems, avoid re-working and wastage
- use the limited workplace technology related to the production of accessories, including tools, equipment, materials and measuring devices

Required knowledge

- the types, characteristics and production requirements for soft furnishing accessories
- the process for the interpretation of patterns
- identification of equipment, processes and procedures
- workflow in relation to soft furnishing accessory production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Identify materials used and any special sewing or handling requirements for those materials
- Interpret work order and patterns and locate and apply relevant information
- Apply safe handling practices for equipment, products and materials
- Produce at least three different types of soft furniture accessories, which are to include a padded, piped and shaped tie back, a piped cushion and a bolster.
- Select and use tools and equipment appropriate to the task
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Report process or materials faults, damaged products or equipment

Resource implications

Patterns, materials, tools and equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit scope</p>	<ul style="list-style-type: none"> • This unit covers work involving the production of soft furnishing accessories by reading and interpreting patterns, plans and work instructions • Soft furnishings may include: <ul style="list-style-type: none"> • cushions • tie-backs • bolsters • soft tableware and slip-on covers
<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the reading and interpreting of patterns, plans and instructions. This may be demonstrated either individually or in a team environment
<p>Tools and equipment may include:</p>	<ul style="list-style-type: none"> • measuring and calculating equipment, including tapes, rulers, calculators, computers • fabric and general cutting and sewing tools, including scissors, saws, drills, staplers, sewing machines, hemming machines, overlockers, glue guns
<p>Materials may include:</p>	<ul style="list-style-type: none"> • plain and patterned fabric • velvet • vinyl

RANGE STATEMENT	
	<ul style="list-style-type: none"> • piping cords • wadding • foam • zips and fasteners
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the production of soft furnishing items • Work instructions, including job sheets, patterns, plans, drawings and designs • Workplace procedures relating to reporting and communication
Pattern interpretation is to identify or determine:	<ul style="list-style-type: none"> • type of material specified • required tools and equipment for the task • number and type of soft furnishing accessories to be produced • and quality requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify customer requirements	<p>1.1. Questioning techniques are applied to determine the nature of customer requirements</p> <p>1.2. Potential site problems or site specific requirements are identified</p>
2. Access and interpret information	<p>2.1. All available information relating to customer-specific requirements is gathered, recorded and confirmed with the customer</p> <p>2.2. Information on options that potentially meet the customer's requirements is accessed and interpreted</p>
3. Provide advice to customer	<p>3.1. Viable options relating to products, techniques or solutions that are relevant to the customer's requirements are generated</p> <p>3.2. Information on available options relating to products, techniques or solutions is provided to the customer</p> <p>3.3. Features, benefits, limitations and safety implications relating to available options are explained to the customer</p> <p>3.4. The customer is advised to seek specialist advice where warranted</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, and current trends and styles in interior decoration
- communicate ideas and information to enable confirmation of requirements and specifications, coordination of ideas with customers, and the gaining of the customer's confidence
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, advisory services
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- apply analytical techniques to many customer requirements with preferred options
- use workplace technology related to locating and analysing options for the client

Required knowledge

- interpretation of plans, drawings and work sheets
- interior design principles
- types of motorisation
- energy conservation methods
- types of wall and ceiling construction
- identification of equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Interpret work order and locate and apply relevant information • Interpret plans, drawings and work instructions • Select and use tools and equipment appropriate to the task • Provide advice to customers on three occasions with each involving a different central subject • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • complete required workplace documentation • gather and interpret information on customer requirements and needs • minimise the risk of injury to self and others • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment • Identify safe handling practices for equipment, products and materials
<p>Resource implications</p>	<p>Sample products, visual aids, tools and equipment.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	This unit covers work involving providing advice to customers in relation to technical issues that impact of soft furnishings, including wall structures, interior design, motorisation, energy conservation and architectural drawings
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate discretion, judgement and problem solving skills in determining customer and site requirements. This may be demonstrated either individually or in a team environment
Tools and equipment may include:	<ul style="list-style-type: none"> • measuring and calculating equipment, including tapes, rulers, calculators, computers
Materials may include:	<ul style="list-style-type: none"> • product and fabric samples • visual aids (photographs, magazines, trade brochures, sketches, etc.) • technical drawings
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to customer service • Product manufacturer specifications and operational procedures

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<p>1.1. Applicable OHS, legislative and organisational requirements relevant to the assembly of lead light and stained glass components are verified and complied with</p> <p>1.2. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement</p> <p>1.3. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use</p> <p>1.4. Workplace environment considerations are identified and measures to reduce noise, dust and obstacles are applied</p> <p>1.5. Assembly sequence is planned</p> <p>1.6. Fixing and joining devices are selected in line with work instructions and type of materials to be joined</p> <p>1.7. Jigs are selected and checked for suitability of purpose</p>
2. Assemble components	<p>2.1. Components are laid out and assembled using jigs and appropriate fastenings</p> <p>2.2. Hand and/or power tools, equipment are used as required</p> <p>2.3. Assembled work is checked for compliance with specifications</p> <p>2.4. Components are prepared, assembled and fitted as per specification</p> <p>2.5. Work which does not meet quality specifications is repaired or tagged for further processing or recycling/disposal</p> <p>2.6. Finished products are organised and stored in holding area</p>
3. Clean work area/s and maintain equipment	<p>3.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures</p> <p>3.2. Waste and scrap is removed following workplace procedures</p> <p>3.3. Tools and equipment used is cleaned; inspected for serviceable condition and stored appropriately in accordance with workplace procedures</p> <p>3.4. Equipment and work area clean-up is maintained in</p>

ELEMENT	PERFORMANCE CRITERIA
	accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to leadlight and stained glass components
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to leadlight and stained glass components
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in leadlight and stained glass components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate work and material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of leadlight and stained glass components
- seek learning opportunities
- use the workplace technology related to leadlight and stained glass components including computers, measuring devices and recording systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for manufacturing and installing security screens and grills
- organisational and site standards, requirements, policies and procedures for component assembly
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and

REQUIRED SKILLS AND KNOWLEDGE

maintenance

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Location, interpretation and application of relevant information, standards and specifications
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for component assembly
- Communicate effectively and work safely with others in the work area
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to components, equipment and products
 - maintain required production output and product quality
- Safe and effective operational use of tools and equipment
- Assemble a range of lead light and stained glass components

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to assembly of lead light and stained glass components
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Components	<ul style="list-style-type: none"> may include, but are not limited to panels, door inserts, frames and limited basic end items
Tools and equipment	<ul style="list-style-type: none"> may include benches, light boxes, glass grinders, lead knives, lead vice, lathekins,

RANGE STATEMENT	
	farriers nails, glass cutters, grozing and small running pliers, soldering irons and bits, suede, cleaning and polishing brushers and pickers
Materials	<ul style="list-style-type: none"> may include but are not limited to coloured/plain glass panels, patterns/templates, timber lathes, ornamental fittings, lead came, solder and fluxes

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and respond to glass and material properties	1.1. Applicable OHS, legislative and organisational requirements relevant to lead light and stained glass operations are verified and complied with 1.2. The types of glass and inherent characteristics are analysed to select the optimum glass for the product 1.3. The characteristics and properties of lead light and stained glass are identified and considered 1.4. The properties and impacts of metals are identified and considered
2. Apply visual evaluation techniques to glass products	2.1. Correct visual procedures using natural and artificial light are followed 2.2. Characteristics of the glass styles are explained 2.3. Glass is identified according to style 2.4. The quality and style of the glass are evaluated ensuring conditions for evaluation are as favourable as possible
3. Identify basic faults	3.1. Basic glass faults are recognised 3.2. Other faults are recognised
4. Respond to the impact of the glass properties	4.1. The cause and effects on the glass of age is considered and responded to 4.2. The cause and effects on the glass of structural insecurity is considered and responded to 4.3. The cause and effect of weather extremes are considered and responded to 4.4. Records are maintained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to leadlight and stained glass products
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to leadlight and stained glass operations
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in leadlight and stained glass components
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate glass requirements and estimate other material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of leadlight and stained glass techniques
- seek learning opportunities
- use the workplace technology related to the selection and assembly of leadlight and stained glass components, including computers, measuring devices and assembly systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for lead light and stained glass operations
- lead light and stained glass construction terminology and techniques
- lead light and stained glass operations repair terminology and techniques
- lead light and stained glass operations types, characteristics, production methods and faults
- organisational and site standards, requirements, policies and procedures for lead

REQUIRED SKILLS AND KNOWLEDGE

light and stained glass operations

- types of glass and other materials used in the lead light and stained glass industry, their characteristics, properties, uses and limitations
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a work/job specification
- Identify a range of lead light and stained glass types, and detail their uses and limitations
- Identify and explain the properties of lead light and stained glass
- Explain the likely effects of a range of faults on lead light and stained glass products
- Identify the likely impact of various environmental effects on lead light and stained glass products
- Demonstrate the application of product and material knowledge in two differing leadlight and stained glass operations
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for lead light and stained glass operations
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - examples of lead light and stained glass
 - samples of metals

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of

EVIDENCE GUIDE

underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify painting requirements	1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to lead light and stained glass operations are verified and complied with 1.2. Types and quantities of <i>patterns, designs</i> and <i>materials</i> required are identified from plans or work instructions 1.3. The process for painting patterns and designs onto glass is identified
2. Prepare to paint glass	2.1. Painting sequence is determined in a logical order to suit the job 2.2. <i>Tools, equipment</i> and materials are selected and checked prior to use to ensure that they are appropriate for the painting, serviceable and in a safe condition 2.3. Patterns and design templates are checked against specifications or job order 2.4. Paint colours are matched against the plan or work order 2.5. Glass is <i>prepared</i> for painting
3. Apply vitreous paint	3.1. Paint is applied to the glass surface in accordance with the pattern or design template 3.2. Problems occurring during the painting operation are identified and rectified
4. Finalise the installation	4.1. Painted glass is inspected for quality of work and repaired or discarded as required 4.2. Waste and scrap material is removed for disposal/recycling as required 4.3. Work area is cleaned and rubbish disposed of as appropriate 4.4. Tools, equipment and unused materials are cleaned and removed and stored appropriately 4.5. Workplace <i>records</i> are maintained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to the painting of glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to painting of glass
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in the painting of glass
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate work and material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of painting of glass
- seek learning opportunities
- use the workplace technology related to the painting of glass including computers, measuring devices and recording systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the painting of glass for lead light and stained glass operations
- glass painting terminology and techniques
- organisational and site standards, requirements, policies and procedures for the painting of glass
- types of glass and other materials used in the lead light and stained glass industry, their characteristics, properties, uses and limitations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify firing requirements	1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to lead light and stained glass operations are verified and complied with 1.2. Types and quantities of <i>materials</i> required are identified from plans or work instructions 1.3. The process for achieving <i>specific outcomes</i> through the firing of glass is identified
2. Prepare to fire glass	2.1. Firing sequence is determined in a logical order to suit the job 2.2. Kiln, <i>tools, equipment</i> and materials are selected and checked prior to use to ensure that they are appropriate for the firing, serviceable and in a safe condition 2.3. Kiln components and controls including emergency stops and guards are identified and checked for correct operation 2.4. Glass is <i>prepared</i> for firing
3. Conduct firing operations	3.1. Kiln equipment is operated, adjusted and monitored to ensure correct product quality and output 3.2. Problems occurring during the firing operation are identified and rectified
4. Finalise the installation	4.1. Fired glass is inspected for quality of work and repaired or discarded as required 4.2. Waste and scrap material is removed for disposal/recycling as required 4.3. Work area is cleaned and rubbish disposed of as appropriate 4.4. Tools, equipment and unused materials are cleaned and removed and stored appropriately 4.5. Workplace <i>records</i> are maintained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to the firing of glass
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to firing of glass
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in the firing of glass
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate work and material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of firing of glass
- seek learning opportunities
- use the workplace technology related to the firing of glass including computers, measuring devices and recording systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for lead light and stained glass firing operations
- glass firing terminology and techniques
- operation of glass firing kiln
- organisational and site standards, requirements, policies and procedures for the firing of glass
- types of glass and other materials used in the lead light and stained glass industry, their characteristics, properties, uses and limitations

REQUIRED SKILLS AND KNOWLEDGE

- characteristics and properties of semi-molten glass
- firing techniques to achieve specific outcomes
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a work/job specification
- Identify a range of glass suitable for firing, detailing their uses and limitations
- Identify and explain the properties and limitations of semi-molten glass
- Identify the likely impact of various environmental effects on fired glass
- Fire glass to achieve required outcomes
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the painting of glass with vitreous paints
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to firing glass
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning

EVIDENCE GUIDE

knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Materials

- may include but are not limited to clear, coloured and painted glass, bedding sand, marking and masking materials.

Specific outcomes

- may include glass staining and forming

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> • may include firing kiln, work benches and general hand tools
Preparation	<ul style="list-style-type: none"> • may include cleaning, marking and masking
Records	<ul style="list-style-type: none"> • may include but not be limited to the product type, size, inspection, inspection outcomes, quality outcomes and storage locations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify protection requirements	1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to lead light and stained glass operations are verified and complied with 1.2. The process for achieving <i>protection</i> of stained glass and lead lighting is identified 1.3. Types and quantities of <i>materials</i> required for the protection of stained glass and lead lighting are identified from plans or work instructions
2. Prepare to protect stained glass and lead lighting	2.1. Work sequence is determined in a logical order to suit the job 2.2. <i>Tools, equipment</i> and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
3. Install protection	3.1. Protection materials are cut shaped and formed to ensure correct size and application 3.2. Protection materials are installed or fitted 3.3. Problems occurring during the operation are identified and rectified
4. Finalise the installation	4.1. Protected glass is inspected for quality of work and repaired as required 4.2. Waste and scrap material is removed for disposal/recycling as required 4.3. Work area is cleaned and rubbish disposed of as appropriate 4.4. Tools, equipment and unused materials are cleaned and removed and stored appropriately 4.5. Workplace <i>records</i> are maintained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to the protection of leadlight and stained glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to the protection of leadlight and stained glass
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in the protection of leadlight and stained glass
- recognise and respond to circumstances outside instructions or personal competence

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a work/job specification
- Identify a range of protection methods, detailing their uses and limitations
- Identify and explain the properties and limitations of protection materials
- Identify the likely impact of various environmental effects on protected stained glass and lead lighting
- Protect stained glass and lead light to achieve required outcomes
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the painting of glass with vitreous paints
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to protecting stained glass and lead lighting
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

EVIDENCE GUIDE

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to fabricate and install	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to lead light and stained glass operations are verified and complied with</p> <p>1.2. The process for fabricating and installing lead light and stained glass <i>windows</i> and <i>doors</i> is identified</p> <p>1.3. Types and quantities of <i>materials</i> required are calculated from plans or work instructions or by measuring the fixture opening</p> <p>1.4. Cutting lists are prepared from plans, work instructions or measurements of opening to suit the window or door to be installed</p> <p>1.5. Fittings, fixings and joining devices or materials are selected</p> <p>1.6. <i>Tools and equipment</i> appropriate to the fixing method are identified</p>
2. Prepare to fabricate and install	<p>2.1. Work sequence is determined in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Components of the lead light and stained glass window or door are checked against specifications or job order</p>
3. Fabricate and install	<p>3.1. Materials are cut to cutting list requirements</p> <p>3.2. Components of lead light and stained glass window or door are assembled</p> <p>3.3. Fittings are installed to window or door in accordance with workplace procedures or industry practice</p> <p>3.4. Window or door is installed</p>
4. Finalise the installation	<p>4.1. Installed window or door is inspected for quality of work and repaired, re-fabricated or re-installed as required</p> <p>4.2. Waste and scrap material is removed for disposal/recycling as required</p> <p>4.3. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.4. Tools, equipment and unused materials are cleaned and removed and stored appropriately</p>

ELEMENT	PERFORMANCE CRITERIA
	4.5. Workplace <i>records</i> are maintained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to the fabrication and installation of residential lead light and stained glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to the fabrication and installation of residential lead light and stained glass
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in the fabrication and installation of residential lead light and stained glass
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate work and material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of the fabrication and installation of residential lead light and stained glass
- seek learning opportunities
- use the workplace technology related to the fabrication and installation of residential lead light and stained glass including computers, measuring devices and recording systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for lead light and stained glass operations
- lead light and stained glass windows and doors construction terminology and techniques
- organisational and site standards, requirements, policies and procedures for fabrication and installation of lead light and stained glass windows and doors

REQUIRED SKILLS AND KNOWLEDGE

- types of glass and other materials used in the lead light and stained glass industry, their characteristics, properties, uses and limitations
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to lead light and stained glass operations are verified and complied with</p> <p>1.2. Work requirements in the form of type of lead light and stained glass, frames and the method of fixing are identified confirmed and clarified with <i>appropriate personnel</i></p> <p>1.3. The process for preparing and installing <i>architecturally engineered lead light and stained glass</i> is identified</p>
2. Prepare to install	<p>2.1. Work sequence is determined in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Components of the lead light and stained glass are checked against specifications or job order</p> <p>2.4. Lead light and stained glass fixing method is selected</p> <p>2.5. Frame or opening is prepared to receive lead light and stained glass</p> <p>2.6. Fixing and sealing materials are prepared by mixing or cutting to length as appropriate</p>
3. Identify site conditions and restraints	<p>3.1. Site safety hazards are recognised and corrective action taken to reduce injury to self and others</p> <p>3.2. On-site difficulties are identified and addressed in accordance with regulations and enterprise agreements</p> <p>3.3. Special characteristics of the lead light and stained glass aperture are identified in relation to the effect of the fitting process on the finished job</p> <p>3.4. Covering material is applied where necessary to protect existing fixtures and fittings</p>
4. Fit lead light and stained glass	<p>4.1. Lead light and stained glass is fixed to the frame or opening using the selected method</p> <p>4.2. Solvents and sealants are applied</p> <p>4.3. Lead light and stained glass and/or frame are cleaned after fixing</p>
5. Finalise the	<p>5.1. Completed installation is checked to ensure</p>

ELEMENT	PERFORMANCE CRITERIA
installation	compliance 5.2. Waste and scrap material is removed for disposal/recycling as required 5.3. Work area is cleaned and rubbish disposed of as appropriate 5.4. Tools, equipment and unused materials are cleaned and removed and stored appropriately 5.5. Workplace <i>records</i> are maintained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to architectural engineered leadlight and stained glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to architectural engineered leadlight and stained glass
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in architectural engineered leadlight and stained glass
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate work and material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of architectural engineered leadlight and stained glass
- seek learning opportunities
- use the workplace technology related to the installation of architectural engineered leadlight and stained glass components, including computers, measuring devices and recording systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for lead light and stained glass operations
- architectural lead light and stained glass construction terminology and techniques
- organisational and site standards, requirements, policies and procedures for preparation and installation of architectural lead light and stained glass
- types of glass and other materials used in the lead light and stained glass industry,

REQUIRED SKILLS AND KNOWLEDGE

- their characteristics, properties, uses and limitations
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a work/job specification
- Identify a range of structural lead lighting and stained glass detailing their uses and limitations
- Identify and explain the properties of structural lead light and stained glass
- Identify the likely impact of various environmental effects on architectural lead light and stained glass
- Prepare and install an architecturally engineered lead light/stain glass installation
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for structural lead light and stained glass
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to installing structural lead light and stained glass
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of

EVIDENCE GUIDE

tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to architects, engineers supervisors, suppliers, clients, colleagues and managers
Architecturally engineered lead	<ul style="list-style-type: none"> may include the on site installation of lead light and stained glass for structural and other

RANGE STATEMENT	
light and stained glass	<p>architecturally engineered applications, including but not limited to curtain walls, infill and structural balustrade, suspended and overhead glass</p> <ul style="list-style-type: none"> may include toughened glass assemblies; aluminium systems including planar assemblies, curtain wall systems, spider assemblies, panel wall systems (hung and stacked and watertight glazing techniques including the use of silicone
Tools and equipment	<ul style="list-style-type: none"> may include assembly benches, drop and up-cut saws, pneumatic, hydraulic and manual presses, lifting equipment, frame tooling, copy routers, end millers, crimpers, electric and pneumatic powered drills and screwdrivers, pop rivet guns, glue guns and general hand tools
Materials	<ul style="list-style-type: none"> may include but are not limited to steel, fasteners, plastics, sealants, tapes, vinyl's, gaskets, timber reveals and flashings may include lead lighting or stained glass panels, annealed glass, safety glass, patterned glass, tinted, heat reflective and insulated glass units
Fixing method	<ul style="list-style-type: none"> will be dependent on technical specification, type of glass and frame, security requirements, sealing methods and relevant Australian Standards
Preparation	<ul style="list-style-type: none"> may include cleaning, surface preparation (if required) and checking size against specification
Records	<ul style="list-style-type: none"> may include but not be limited to the product type, size, inspection, inspection outcomes, quality outcomes and storage locations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify assessment requirements	1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to lead light and stained glass operations are verified and complied with 1.2. Purpose of the assessment is established confirmed and clarified with <i>appropriate personnel</i> 1.3. <i>Assessment outcomes</i> are identified and confirmed
2. Plan assessment processes	2.1. Location of the lead light and stained glass panels to be assessed is identified and observed 2.2. Assessment sequence is identified and a work plan is developed 2.3. <i>Tools and equipment</i> required for the assessment are identified 2.4. Approval of assessment plan is obtained as required by agreed procedures
3. Prepare for the assessment	3.1. Tools and equipment are assembled, positioned and checked prior to use to ensure that they are appropriate for the assessment, serviceable and in a safe condition 3.2. <i>Plans and other documents</i> are assembled and positioned to allow for confirmation of the panel structure and placement 3.3. Photographs are taken of the panel for documentation of condition and for later reference
4. Assess the panel	4.1. <i>Glass faults</i> are identified and noted 4.2. <i>Structural faults</i> or problems are identified and noted 4.3. <i>Environmental effects</i> are identified and noted 4.4. <i>Other problems</i> are identified and noted
5. Finalise and report on the assessment	5.1. Tools and equipment are removed cleaned and stored appropriately 5.2. Assessment area is cleaned and rubbish disposed of as appropriate 5.3. <i>Conservation requirements</i> resulting from the assessment are determined and confirmed with appropriate personnel 5.4. <i>Condition report</i> is prepared and provided as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to heritage leadlight and stained glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to heritage leadlight and stained glass
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in heritage leadlight and stained glass
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate work and material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of heritage leadlight and stained glass
- seek learning opportunities
- use the workplace technology related to the selection of heritage leadlight and stained glass components conservation, including computers, measuring devices and recording systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for lead light and stained glass operations
- lead light and stained glass panels construction and repair terminology and techniques
- the principles of the Burra Charter, the Australia ICOMOS Charter for Places of Cultural Significance
- organisational and site standards, requirements, policies and procedures for the assessment of lead light and stained glass panels

REQUIRED SKILLS AND KNOWLEDGE

- types of glass and other materials, historically used in the lead light and stained glass industry, their characteristics, properties, uses and limitations
- environmental effects on lead light and stained glass panels
- heritage requirements specific to lead light and stained glass
- established communication channels and protocols
- problem identification and resolution
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a work/job specification
- Identify and interpret heritage legislation as it applies to lead light and stained glass panels
- Identify historical lead light and stained glass panel construction methods
- Identify framing, structural and construction techniques relevant to lead light and stained glass panels
- Identify the outcomes of various environmental effects on lead light and stained glass panels
- Identify faults and problems with lead light and stained glass panels, and their remedial methods
- Inspect a minimum of two separate and differing lead light and stained glass installations and assess the conservation requirements
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the assessment of conservation requirements of lead light and stained glass panels
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory and Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the assessment of lead light and stained glass panels to meet conservation requirements
 - specifications and work instructions

EVIDENCE GUIDE**Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Appropriate personnel

- may include but not be limited to clients, architects, engineers construction supervisors, members of heritage committees, government agencies and where appropriate other specialist artisans, such as stonemasons.

RANGE STATEMENT	
Assessment outcomes	<ul style="list-style-type: none"> may include but is not limited to the requirement to conserve the lead light or stained glass panels, the cost of conservation, recommendations on future tasks
Tools and equipment	<ul style="list-style-type: none"> may include work benches, ladders and scaffolding, cameras, magnifying glasses, lights and general hand tools
Plans and other documents	<ul style="list-style-type: none"> may include original architectural plans, historical photographs, charcoal rubbings and sketches
Glass faults	<ul style="list-style-type: none"> may include but are not limited to cracking, crazing and missing sections, deterioration of glass paint, loose or flaking paint and corroding glass through water or chemical action
Structural faults	<ul style="list-style-type: none"> may include but are not limited to oxidation and rusting supports, panel frame deterioration, buckled and bowing panels, cracked comes and defective putty, faulty frames or frame settings, broken tie wires and support bars
Environmental effects	<ul style="list-style-type: none"> may include but is not limited to colour changes, surface etching, lead oxidation
Other problems	<ul style="list-style-type: none"> may include such aspects as building, wall and roof problems requiring specific remedial action, not directly related to the panel
Conservation requirements	<ul style="list-style-type: none"> Conservation as defined in the Australia ICOMOS Burra Charter as meaning all of the processes of looking after a place needed to retain cultural significance. It includes maintenance and may include preservation, restoration, reconstruction and adaptation dependent upon specific circumstances. It commonly involves a combination of more than one of these. It also requires that the stained glass conservator respects and understands the requirements of other specialist crafts and the role of other specialist artisans. Preservation is the process of maintaining the lead light and stained glass panel in its existing state and of retarding deterioration. Restoration means returning the lead light and

RANGE STATEMENT	
	<p>stained glass panel to a known earlier state by removing accretions or by reassembling existing components without the introduction of new material.</p> <ul style="list-style-type: none"> Reconstruction means returning the lead light and stained glass panel to a known earlier state and is distinguished by the introduction of new materials.
Condition report	<ul style="list-style-type: none"> would be in a format required by the client and may include such aspects as the extent of the problems, recommended solutions including methodologies, legislative requirements related to heritage lead light and stained glass and their affects on the recommendations and probable costings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify conservation requirements	1.1. Applicable OHS, legislative and organisational requirements relevant to lead light and stained glass operations are verified and complied with 1.2. Detailed inspections of the heritage lead light and stained glass are conducted to verify conservation requirements 1.3. Conservation requirements are identified confirmed and clarified with appropriate personnel
2. Plan conservation processes	2.1. Conservation sequence is identified and a work plan is developed 2.2. Tools and equipment required for the conservation are identified 2.3. Approval of conservation plan is obtained as required by agreed procedures
3. Prepare for the conservation process	3.1. Tools and equipment are positioned and checked prior to use to ensure that they are appropriate for the task, serviceable and in a safe condition 3.2. Plans and other documents are positioned to allow for confirmation of the panel structure 3.3. Outline charcoal rubbings are made to confirm design during the process 3.4. Photographs are taken of the panel for later reference
4. Conduct the conservation process	4.1. Panel is conserved and components are cleaned or disposed of. 4.2. Decisions on conservation methods are confirmed 4.3. Replacement materials are selected and prepared 4.4. Measurements and tests are conducted to confirm conservation plan 4.5. Panel is assembled and checked against the original data
5. Finalise and report on the assessment	5.1. Conserved lead light and stained glass panel is inspected for quality of work and problems are rectified 5.2. Tools and equipment are removed cleaned and stored appropriately 5.3. Conservation area is cleaned and rubbish disposed of as appropriate 5.4. Panel is packaged and stored prior to movement and installation.

ELEMENT	PERFORMANCE CRITERIA
	<i>5.5. Conservation report</i> is prepared and provided as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to heritage leadlight and stained glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to heritage leadlight and stained glass
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in heritage leadlight and stained glass
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate work and material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of heritage leadlight and stained glass
- seek learning opportunities
- use the workplace technology related to the conservation of heritage leadlight and stained glass components, including computers, measuring devices and recording systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for lead light and stained glass operations
- the principles of the Burra Charter, the Australia ICOMOS Charter for Places of Cultural Significance
- lead light and stained glass panels construction and repair terminology and techniques
- organisational and site standards, requirements, policies and procedures for the assessment of lead light and stained glass panels

REQUIRED SKILLS AND KNOWLEDGE

- types of glass and other materials, historically used in the lead light and stained glass industry, their characteristics, properties, uses and limitations
- preservation, restoration or reconstruction techniques and when to use them
- heritage requirements specific to lead light and stained glass
- established communication channels and protocols
- problem identification and resolution
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a work/job specification
- Identify and interpret heritage legislation as it applies to lead light and stained glass panels
- Identify historical lead light and stained glass panel construction methods
- Assess and make decisions on conservation methods
- Identify faults and problems with lead light and stained glass panels, and their remedial methods
- Conserve heritage leadlight and stain glass panels in accordance with industry best practice
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the assessment of conservation requirements of lead light and stained glass panels
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the conservation of heritage lead light and stained glass panels
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of

EVIDENCE GUIDE

	<p>underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>
--	---

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Conservation

- Conservation as defined in the Australia ICOMOS Burra Charter as meaning all of the processes of looking after a place needed to retain cultural significance. It includes maintenance and may include preservation,

RANGE STATEMENT	
	<p>restoration, reconstruction and adaptation dependent upon specific circumstances. It commonly involves a combination of more than one of these. It also requires that the stained glass conservator respects and understands the requirements of other specialist crafts and the role of other specialist artisans.</p> <ul style="list-style-type: none"> • Preservation is the process of maintaining the lead light and stained glass panel in its existing state and of retarding deterioration. • Restoration means returning the lead light and stained glass panel to a known earlier state by removing accretions or by reassembling existing components without the introduction of new material. • Reconstruction means returning the lead light and stained glass panel to a known earlier state and is distinguished by the introduction of new materials.
Appropriate personnel	<ul style="list-style-type: none"> • may include but not be limited to clients, architects, engineers construction supervisors, members of heritage committees, government agencies other specialist artisans, such as stonemasons
Tools and equipment	<ul style="list-style-type: none"> • may include work benches, light tables, glass grinders, lead knives, lead vice, lathekins, farriers nails, glass cutters, grozing and small running pliers, soldering irons and bits, suede, cleaning and polishing brushers and pickers and general hand tools
Plans and other documents	<ul style="list-style-type: none"> • may include original architectural plans, historical documents and photographs, charcoal rubbings and sketches
Replacement materials	<ul style="list-style-type: none"> • may include but is not limited to glass, comes, solder and putty
Preparation	<ul style="list-style-type: none"> • may include but is not limited to painting, cutting, rolling and soldering
Measurements	<ul style="list-style-type: none"> • may include comparisons with the original plans or other available data
Tests	<ul style="list-style-type: none"> • may include structural soundness testing and colour matching

RANGE STATEMENT	
Assembly	<ul style="list-style-type: none"> • may include the requirement to assemble sections in order to facilitate later installation
Conservation report	<ul style="list-style-type: none"> • would be in a format required by the client and other bodies and may include such aspects as the extent of the conservation methods applied, problems encountered and methods of dealing with them. • may also include details required by government bodies

LMFSL5004A Install heritage lead light and stained glass

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit addresses the knowledge and skills required to install heritage lead light and stained glass panels following the conservation of the panels.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in leadlight and stained glass operations. The requirement to install heritage lead light and stained glass panels applies to an on site environment and involves application of skills and knowledge at an artisan level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and plan installation requirements	1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to lead light and stained glass operations are verified and complied with 1.2. Location of the lead light and stained glass panel to be installed is established confirmed and clarified with <i>appropriate personnel</i> 1.3. Installation sequence is identified and a work plan is developed 1.4. <i>Tools and equipment</i> required for the installation are identified 1.5. Approval of installation plan is obtained as required by agreed procedures
2. Prepare for the installation	2.1. Tools and equipment are positioned and checked prior to use to ensure that they are appropriate for the installation, serviceable and in a safe condition 2.2. <i>Inspection</i> of the opening where the panel is to be installed is conducted 2.3. Lead light and stained glass panel is inspected to ensure its integrity while being installed 2.4. <i>Plans and other documents</i> are positioned to allow for confirmation of the panel structure and placement 2.5. Photographs are taken of the panel for later reference
3. Install the panel	3.1. Panel is <i>installed</i> and placed in position 3.2. <i>Supporting frames</i> are removed from the panel 3.3. Panel structural supports are installed and checked 3.4. Structural damage is identified and noted
4. Finalise and report on the installation	4.1. Installed panel is inspected and damage resulting from the installation is identified and rectified 4.2. Tools and equipment are removed cleaned and stored appropriately 4.3. Removal area is cleaned and rubbish disposed of as appropriate 4.4. <i>Installation report</i> is prepared and provided as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to heritage leadlight and stained glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to heritage leadlight and stained glass
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in heritage leadlight and stained glass
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate work and material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of heritage leadlight and stained glass
- seek learning opportunities
- use the workplace technology related to the installation of heritage leadlight and stained glass components, including computers, measuring devices and recording systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for lead light and stained glass operations
- lead light and stained glass panels construction and repair terminology and techniques
- the principles of the Burra Charter, the Australia ICOMOS Charter for Places of Cultural Significance
- organisational and site standards, requirements, policies and procedures for the installation of heritage lead light and stained glass panels

REQUIRED SKILLS AND KNOWLEDGE

- types of glass and other materials, historically used in the lead light and stained glass industry, their characteristics, properties, uses and limitations
- heritage requirements specific to lead light and stained glass
- engineering aspect of supporting lead light and stained glass panels during the installation process
- established communication channels and protocols
- problem identification and resolution
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a work/job specification
- Identify and interpret heritage legislation as it applies to lead light and stained glass panels
- Identify historical lead light and stained glass panel construction methods
- Identify framing, structural and construction techniques relevant to lead light and stained glass panels
- Identify installation methodologies
- Install heritage lead light and stained glass panels
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for the removal of heritage lead light and stained glass panels
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the installation of heritage lead light and stained glass panels following conservation work
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of

EVIDENCE GUIDE

	<p>underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Appropriate personnel

- may include but not be limited to clients, architects, engineers construction supervisors, members of heritage committees, government agencies other specialist artisans, such as stonemasons

RANGE STATEMENT	
Tools and equipment	<ul style="list-style-type: none"> may include work benches, ladders and scaffolding, cameras, magnifying glasses, lights, cranes, forklifts and general hand tools
Inspection	<ul style="list-style-type: none"> may include measuring to determine if the panel is the correct size and ensuring that the supporting infrastructure required for the panel is in place
Plans and other documents	<ul style="list-style-type: none"> may include original architectural plans, historical documents and photographs, contemporary photographs, charcoal rubbings and sketches
Installation	<ul style="list-style-type: none"> may include the requirement to dismantle the panel prior to installation to stop it from falling apart and assembling the panel in place
Supporting frames	<ul style="list-style-type: none"> may include wooden or metal frames that support the lead light and stained glass panels during its transportation and installation
Installation report	<ul style="list-style-type: none"> would be in a format required by the client and may include such aspects as the extent of any damage to the surrounding building or fixture, any damage to the panel and any recommendations as to future requirements

Competency field

Competency field	
-------------------------	--

Co-requisite units

Co-requisite units		

LMFSL5005A Apply innovation in contemporary lead light and stained glass

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit addresses the knowledge and skills required to apply innovative techniques in the development of leadlight or stained glass works that may include the adaptation of traditional techniques such as lead light and stained glass or other techniques such as kiln-formed and laminated glass. The unit includes the need for research and analysis of ideas. It outlines the way glass works may be produced through experimentation and subsequent refinement of ideas and techniques.
------------------------	---

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in leadlight and stained glass operations. The requirement to apply innovation in contemporary lead light and stained glass applies to a workshop and onsite environment and involves application of skills and knowledge at a tradesperson level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	Nil	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the potential or need for innovation	1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to lead light and stained glass operations are verified and complied with 1.2. Analyse design or production elements to determine areas where <i>research</i> and experimentation may be appropriate 1.3. Proactively assess the potential for the use of <i>new techniques</i> and <i>media</i> to maximise the effectiveness of lead light and stained glass
2. Conduct research	2.1. Undertake relevant research to identify the historical, cultural and other factors that might influence techniques or media 2.2. Research, adapt and use relevant ideas and approaches from other practitioners with consideration of <i>intellectual property, moral rights and copyright requirements</i> 2.3. Identify appropriate specialists who may be able to contribute to the overall realisation of innovative lead light and stained glass 2.4. Maintain references in an accessible form to allow for use by other colleagues as required 2.5. Use research material to adapt styles for integration into lead light and stained glass production
3. Experiment with techniques and media	3.1. Conduct trials to establish the best ways in which the desired scenic art effect can be achieved 3.2. Assess results of <i>experimentation</i> , balancing the need for creative effectiveness and cost practicality 3.3. Select, adapt or introduce new materials, tools, equipment or technology for the achievement of different effects 3.4. Liaise with colleagues to provide information on the results of experimentation and to make appropriate decisions on new techniques and media 3.5. Set-up or coordinate specific resource requirements which arise from the use of different techniques in accordance with workplace requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand materials technology and information related to innovative and contemporary leadlight and stained glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain quality records related to innovative and contemporary leadlight and stained glass
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- identify, anticipate and respond to faults in innovative and contemporary leadlight and stained glass
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and volume, estimate work and material requirements
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of innovative and contemporary leadlight and stained glass
- seek learning opportunities
- use the workplace technology related to innovative and contemporary leadlight and stained glass components, including computers, measuring devices and recording systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for lead light and stained glass operations
- contemporary lead light and stained glass construction terminology and techniques
- organisational and site standards, requirements, policies and procedures for preparation and installation of architectural lead light and stained glass
- types of glass and other materials used in the lead light and stained glass industry,

REQUIRED SKILLS AND KNOWLEDGE

- their characteristics, properties, uses and limitations
- appropriate innovative and experimental lead light and stained glass production techniques in 2-dimensional (2D) and 3-dimensional (3D)
- colour theory, line, dimension, chiaroscuro, depth and their application to lead light and stained glass
- painting and firing techniques
- the use and properties of a range of paints and media
- testing finished and unfinished materials,
- research skills and sources of information to inform research and experimentation on lead light and stained glass
- costs and costing processes for lead light and stained glass elements
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Read and interpret a design specification
- Identify and explain the properties of lead light and stained glass
- Conduct research into new and innovative applications of lead light and stained glass
- Apply in depth knowledge of a wide range of techniques and media that may be used and adapted for lead light and stained glass
- Create panels using differing innovative lead light and stained glass effects
- Identify the likely impact of various environmental effects on lead light and stained glass
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for lead light and stained glass
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory and Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to the production of innovative lead light and stained glass
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools	<p>1.1.Types of <i>hand and power tools</i> and their functions are identified</p> <p>1.2.Sources of <i>power supply</i> are recognised</p> <p>1.3.<i>OHS, legislative and organisational requirements</i> for using hand and power tools are recognised and adhered to.</p>
2. Select hand tools	<p>2.1.Hand tools are selected consistent with the needs of the job</p> <p>2.2.Appropriate personal protection equipment is selected, correctly fitted and used</p> <p>2.3.Selected tools are checked for serviceability and safety and any faults are rectified or reported</p> <p>2.4.Equipment is selected to hold or support <i>material</i> for hand tool application where applicable</p>
3. Use hand tools	<p>3.1.Material is located and held in position for hand tool application</p> <p>3.2.Hand tools are safely and effectively used in according to their intended use</p> <p>3.3.Hand tools are safely located when not in immediate use</p>
4. Select power tools	<p>4.1.Appropriate personal protective equipment is selected, correctly fitted and used</p> <p>4.2.Power tools are selected consistent with the needs of the job in accordance with conventional work practices</p> <p>4.3.Power tools are visually checked for serviceability/safety in accordance OHS requirements and any faults are rectified or reported</p> <p>4.4.Equipment is selected to hold or support materials for power tool application where applicable</p>
5. Use power tools	<p>5.1.Material is located and held in position for power tool application where applicable</p> <p>5.2.Power tools are safely and effectively used in application processes</p> <p>5.3.Power tools are safely located when not in use</p>
6. Clean up work area and maintain tools	<p>6.1.Faulty and/or defective equipment/tools are tagged and reported in accordance with workplace procedures</p> <p>6.2.All tools are cleaned, maintained and stored in</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>accordance with workplace procedures</p> <p>6.3. Equipment is cleaned, maintained and stored in accordance with workplace procedures</p> <p>6.4. Work area is cleaned and <i>waste</i> removed in accordance with workplace procedures</p> <p>6.5. <i>Records and reports</i> are completed to workplace requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities, including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- complying with legislation, regulations, standards, codes of practice and established safe practices and procedures for manufacturing/installing security screens and grills
- clarify and confirm work instructions
- plan own work within the given task parameters
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of security screens and grills, manufacturing and installation techniques
- seek learning opportunities
- use the workplace technology related to the selection, preparation and operator maintenance of security screens and grills hand and power tools including calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for manufacturing or installation tasks
- function, purpose and operator maintenance requirements of hand and/or power tools used in the workplace
- organisational and site standards, requirements, policies and procedures for

REQUIRED SKILLS AND KNOWLEDGE

- manufacturing/installing security screens and grills
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of steel and/or aluminium, steel and/or aluminium products and defects
- industry standard cross-sections and lengths
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Apply safe handling practices for equipment, products and materials
- Adopt and carry out correct procedures prior to and during use of hand and power tools prescribed in the Range Statement
- Comply with legislation, regulations, standards, codes of practice and establish safe practices and procedures for manufacturing/installation operations
- Follow work instructions, operating procedures and inspection practices to:
 - prevent damage to surrounds, goods, tools, equipment or products
 - maintain required production output and product quality
 - minimise the risk of injury to self or others
 - apply hand and power tools correctly and safely
 - complete operator maintenance on hand and power tools
 - store tools correctly
 - work effectively with others
 - modify activities to cater for variations in workplace contexts an environment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to manufacturing or fitting security screens and grills
 - specifications and work instructions
 - the full range of routinely used security screens

EVIDENCE GUIDE	
	and grills power and hand tools
Method of assessment	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hand and power tools	<ul style="list-style-type: none"> include, but are not limited to knives, sheers, assorted air tools, assorted electric tools, measuring devices, straight edge, square, assorted hammers, rollers, compressor, drop saw, circular saw, combination saw, rivet gun, metal press and dies
Power supply	<ul style="list-style-type: none"> may include electricity or compressed air for the operation of power tools.
OHS requirements	<ul style="list-style-type: none"> are to be in accordance with Commonwealth, State or Territory legislation and regulations, local government by-laws, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling, including lifting and carrying.
Legislative requirements	<ul style="list-style-type: none"> are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.
Organisational requirements	<ul style="list-style-type: none"> may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and

LMFSS2002A Rectify faults in product

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the rectification of faults in fabrication and assembly work.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in furnishing operations of all sizes. Rectify faults in product applies to a factory/onsite environment and involves application of skills and knowledge at a production worker level. These skills and knowledge are to be used within the scope of the individual's job and authority.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to rectifying <i>faults</i> in the manufacturing and installation of security screens and grills are verified and complied with</p> <p>1.2. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement</p> <p>1.3. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use</p> <p>1.4. Workplace environment considerations are identified and measures to reduce noise, dust and obstacles are applied</p>
2. Assess the fault to identify rectification issues	<p>2.1. The fault is identified and inspected to confirm the extent and nature of the fault</p> <p>2.2. Assess the fault to determine whether it is a defect in workmanship, process or material</p> <p>2.3. Provide a verbal and/or written report on the nature of the defect and probable cause</p> <p>2.4. Faults found are assessed for remedial solutions</p> <p>2.5. Solution to repair the fault is selected and planned</p>
3. Rectify faults	<p>3.1. Damage or defective area is prepared for repair</p> <p>3.2. Specialist instruments and repair tools are applied to rectify the fault</p> <p>3.3. Damage or defective area is finished to specification</p> <p>3.4. Documentation is completed outlining the nature of the fault, work conducted and outcome, in accordance with enterprise requirements</p> <p>3.5. Rectified parts are processed for inspection and returned to the production/installation sequence</p>
4. Clean up	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with enterprise requirements</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with enterprise requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use and avoid re-work and wastage
- identifying problems and equipment faults and demonstrate appropriate response procedures
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- complying with legislation, regulations, standards, codes of practice and established safe practices and procedures for manufacturing/installing security screens and grills
- clarify and confirm work instructions
- plan own work within the given task parameters
- apply systematic and effective time management
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of security screens and grills manufacturing and installation techniques
- seek learning opportunities
- use the workplace technology related to the selection, preparation and operator maintenance of security screens and grills hand and power tools, including calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for manufacturing and installing security

REQUIRED SKILLS AND KNOWLEDGE

screens and grills

- organisational and site standards, requirements, policies and procedures for manufacturing and installing security screens and grills
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of steel and aluminium products and defects
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Location, interpretation and application of relevant information, standards and specifications • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for fault rectification • Communicate effectively and work safely with others in the work area • Compliance with enterprise policies and procedures including quality requirements • Safe and effective operational use of tools and equipment • Inspection, assessment and rectification on a minimum of five separate and different faults to specifications and enterprise inspections requirements
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The candidate should be able to demonstrate the identification and rectification of three disparate faults • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to rectifying faults in the manufacturing and/or installing security screens and grills • specifications and work instructions
<p>Method of assessment</p>	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and</p>

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, First Aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Faults

- are defects in workmanship or materials that effect the look or functional quality of the finished product.

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify sample for testing	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to the certification process are verified and complied with</p> <p>1.2. A <i>sample</i> is identified in accordance with Standard requirements</p>
2. Prepare documentation	<p>2.1. Documentation is prepared in accordance with Australian Standards and organisational requirements</p> <p>2.2. Sample is packaged for transportation to a recognised testing facility in accordance with Australian Standard requirements</p>
3. Post test action	<p>3.1. Reports of tests are <i>actioned</i> in accordance with Australian Standard and organisational requirements</p> <p>3.2. Where samples fail a test element, reports are presented to management for remedial action</p> <p>3.3. Where samples pass, management ensure that product <i>Certification of Compliance</i> is prepared and an appropriate notice affixed to the product in accordance with Australian Standards and organisational requirements</p> <p>3.4. Records of all processes and actions are included in the organisation's quality system</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use and avoid re-work and wastage
- identifying problems and equipment faults and demonstrate appropriate response procedures
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- complying with legislation, regulations, standards, codes of practice and established safe practices and procedures for manufacturing/installing security screens and grills
- clarify and confirm work instructions
- plan own work within the given task parameters
- apply systematic and effective time management
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of tools and materials
- maintain current knowledge of security screens and grills manufacturing and installation techniques
- seek learning opportunities
- use the workplace technology related to the selection, preparation and operator maintenance of security screens and grills hand and power tools including calculators and measuring devices

Required knowledge

- organisational and site standards, requirements, policies and procedures for certification of products in accordance with the Australian Standards

REQUIRED SKILLS AND KNOWLEDGE

- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
- storage systems and labelling
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for seeking the certification of compliance of security screens and grills with Australian Standards
- Communicate effectively and work safely with others in the work area

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to identifying a sample
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

EVIDENCE GUIDE	
	Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Sample

- is the product in the form of a production model security screen or grill with ancillary fittings such as hinges and locks where applicable

RANGE STATEMENT	
Actioned	<ul style="list-style-type: none"> refers to bringing the report findings to the attention of the appropriate organisational appointees responsible for resolving or processing the report's findings
Certification of Compliance	<ul style="list-style-type: none"> refers to the marking/labelling able to be affixed to product once it has passed the appropriate test at an Australian Standards recognised testing facility.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check work requirements	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to <i>surface preparation</i> are verified and complied with</p> <p>1.2. <i>Instructions</i>, plans and/or work instructions are read and interpreted to identify processes and materials to complete work tasks</p> <p>1.3. <i>Tools, equipment</i> and <i>materials</i> are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>1.4. Where required, appropriate solvent and solvent application is selected to meet job specification</p>
2. Setup equipment	<p>2.1. Work site is prepared in accordance with surface cleaning activity</p> <p>2.2. Appropriate equipment and any required consumables assembled, set up and prepared in accordance with manufacturers' specifications and organisational procedures</p> <p>2.3. Recognise <i>hazards</i> and adopt steps required to ensure safety</p> <p>2.4. Identify and exclude sources of contamination</p>
3. Prepare surfaces using solvents as required	<p>3.1. Prepare surfaces for procedures</p> <p>3.2. Safe working environment for <i>solvent</i> use is established according to regulatory requirements and organisational procedures</p> <p>3.3. Solvents are applied</p> <p>3.4. The treated surface is neutralised and made safe to handle</p> <p>3.5. The area is made safe in accordance with organisational procedures</p>
4. Prepare surfaces using mechanical means	<p>4.1. Safe working environment for mechanical surface preparation is established according to regulatory requirements and organisational procedures</p> <p>4.2. Prepare surfaces to procedures using mechanical means</p> <p>4.3. Make adjustments as required to meet specifications</p> <p>4.4. Rectify surface preparation faults as required</p> <p>4.5. Equipment used is cleaned and checked for damage and operational faults in accordance with organisational procedures</p>

ELEMENT	PERFORMANCE CRITERIA
5. Ensure surfaces adequately prepared	5.1. Surface preparation is assessed for cleanliness and conformance with specification 5.2. Identify and take action to remedy faults in accordance with procedures 5.3. Report problems to designated person 5.4. Complete records and documentation in accordance with organisational procedures 5.5. Work area is restored and waste disposed of in accordance with organisational procedures

Required Skills and Knowledge

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for undertaking surface preparation
- Consistent safe performance and standards are demonstrated
- Material properties and qualities are understood and provided for
- Appropriate action is taken to resolve faults or report faults to appropriate personnel
- A minimum of two surfaces are prepared for powder coating or other finish without the need for further preparation
- Communicate effectively and work safely with others in the work area
- Work area housekeeping activities, including cleanup, are performed effectively and in accordance with organisational procedures

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - materials and equipment relevant to identifying a sample
 - specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning

EVIDENCE GUIDE

knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Surface preparation

- refers to the preparation of product material for finish coating, either powder coating or other finish paint type surface, through solvent or mechanical means. Mechanical means may be steel brush, file, etc.

RANGE STATEMENT	
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Production planning figures • Workplace instructions, including job sheets, plans, specifications, drawings and designs • Workplace procedures relating to reporting and communications • Manufacturer instructions for the use of equipment and materials
Tools and equipment	<ul style="list-style-type: none"> • are to include files, hand rasps, hand finishing tools, power tools, jigs and power sanders
Materials	<ul style="list-style-type: none"> • may include metal, aluminium or composite materials
Hazards	<ul style="list-style-type: none"> • may include acids, hydrocarbons and other solvents as both liquid or vapour, moving equipment and machinery and manual handling hazards.
Solvents	<ul style="list-style-type: none"> • may include a range of cleaning materials including acids, hydrocarbons etc. The application of solvents may be by brush, spraying, wiping, or dipping in a solvent bath

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	1.1. Applicable OHS, legislative and organisational requirements relevant to security screens and grill installation are verified and complied with 1.2. Work order is reviewed, confirmed and clarified with appropriate personnel 1.3. Security screens and grills are identified and checked against the work order and located ready for installation 1.4. Tools and equipment are selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturers recommendations
2. Prepare position for security screen or grill	2.1. Existing screens and grills are removed where necessary to make way for the security screens and grills 2.2. The jamb stiles are assessed for the installation of the security screen/grills frame and adjustments made as necessary 2.3. The frame is positioned and secured in place so that the head/sill is level and stiles plumb. 2.4. Additional preparation for the locking mechanism is made where necessary
3. Install security screens and grills	3.1. Security screen/grill is inserted in the frame and tested for operation of open and shut 3.2. Locking mechanism is installed and tested 3.3. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures 3.4. Installation completion and equipment faults are recorded and reported to the appropriate personnel
4. Clean work areas	4.1. Waste and scrap is removed following workplace procedures 4.2. Tools used are cleaned; inspected for serviceable condition and stored appropriately in accordance with workplace procedures 4.3. Records and reports are completed to workplace requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- collect, organise and understand detailed technical information related to the materials and the products used in and related to installation of security screens and grills
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain records related to product and materials quality
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use and to avoid re-work and wastage
- use checking and inspection techniques to ensure security screens and grills comply with specifications and that instances of non-compliance are remedied
- identify, anticipate and respond to the problems related to timber and material properties
- identify and analyse faults in security screens and grills
- select and apply the most appropriate maintenance and repair techniques
- identify, anticipate design issues associated with functionality and building codes in relation to the security screen or grill to be used
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage during the production cycle
- use mathematical ideas and techniques to correctly complete measurements, calculate area, and estimate other material requirements
- complying with legislation, regulations, standards, codes of practice and established safe practices and procedures for machining material
- clarify and confirm work instructions
- plan work within given task parameters
- apply systematic and effective time management
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of security screens and grills installation tools and

REQUIRED SKILLS AND KNOWLEDGE

materials

- maintain current knowledge of security screens and grills installation processes and techniques
- seek learning opportunities
- use the workplace technology related to the selection, preparation and use of security screens and grills products and materials including hand and power tools, calculators, measuring devices and technical support systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for the installation of security screens and grills
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Read and interpret a work order/job specification</p> <ul style="list-style-type: none"> • Effectively install security screens and grills • Effectively conduct operator maintenance on tools and equipment and report faults • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures • Communicate effectively and work safely with others in the work area
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to the installation of security screens and grills • specifications and work instructions
<p>Method of assessment</p>	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p> <p>Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of</p>

EVIDENCE GUIDE

	<p>process</p> <p>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment may be in conjunction with assessment of other units of competency</p>
--	--

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, State and local government building codes, fire codes, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Work order

- is to include instructions for the removal of existing screens and grills and the installation of security screens and grills including caveats on operational requirements where applicable.

RANGE STATEMENT	
	The Work Order is sometimes also known as a Job Sheet.
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to supervisors, suppliers, clients, colleagues and managers
Tools and equipment	<ul style="list-style-type: none"> may include but not be limited to hand and power tools used in installation of security screens and grills and scaffolding, ladders, safety barricades and so on.
Records and reports	<ul style="list-style-type: none"> may include but not be limited to the operating limitations or requirements, lock type and location of combination/keys (if applicable), inspection outcomes where undertaken, quality outcomes, hazards, incidents or equipment malfunctions
Waste	<ul style="list-style-type: none"> may include but not be limited to off-cuts, shavings and sawdust

Co-requisite units

Co-requisite units	

LMFSS3002A Apply patterns and designs to security screens and grills

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit involves the skill and knowledge required to produce repeatable designs to the security screens and grills through the use of patterns. It does not involve the formulation of the design though may require design adjustment to fit the particular job task.
------------------------	--

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge required for competent workplace performance in furnishing operations of all sizes. The application of patterns and designs to security screens and grills applies to a factory environment and involves application of skills and knowledge at a production worker/tradesperson level. These skills and knowledge are to be used within the scope of the individual's job and authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to machine material are verified and complied with 1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i> 1.3. <i>Design</i> is interpreted to determine work specifications 1.4. Instructions for sequencing of work, particular measurements or adjustments are interpreted 1.5. Work sequence is planned, including quality checkpoints
2. Prepare for work	2.1. Suitable work area is selected for the tasks 2.2. Materials are selected to match customer requirements, suitability for purpose and the work instructions 2.3. Potential hazards are identified from observation of the tools, equipment, materials and workplace reference material 2.4. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition
3. Complete construction	3.1. <i>Patterns</i> (where not already held of the design) are constructed following work instructions 3.2. Patterns are adjusted where specific variation to the work design is required 3.3. Work is checked against patterns and work sheets at the identified checkpoints 3.4. Non-conformity with the required quality standards is rectified
4. Finalise operations	4.1. Completed work is checked against required quality standard 4.2. Documentation or reporting is completed following workplace procedures 4.3. Work area is cleaned, tools and equipment are returned to storage 4.4. Unused materials are returned to storage and waste and scrap is dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- collect, organise and understand detailed technical information related to the materials and the products used in and related to installation of security screens and grills
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- maintain records related to product and materials quality
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use and to avoid re-work and wastage
- use checking and inspection techniques to ensure security screens and grills comply with specifications and that instances of non-compliance are remedied
- identify, anticipate and respond to the problems related to timber and material properties
- identify and analyse faults in security screens and grills
- select and apply the most appropriate maintenance and repair techniques
- identify, anticipate design issues associated with functionality and building codes in relation to the security screen or grill to be used
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage during the production cycle
- use mathematical ideas and techniques to correctly complete measurements, calculate area, and estimate other material requirements
- complying with legislation, regulations, standards, codes of practice and established safe practices and procedures for machining material
- clarify and confirm work instructions
- plan work within given task parameters
- apply systematic and effective time management
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of security screens and grills production tools and

REQUIRED SKILLS AND KNOWLEDGE

materials

- maintain current knowledge of security screens and grills design processes and techniques
- seek learning opportunities
- use the workplace technology related to the selection, preparation and use of security screens and grills products and materials including hand and power tools, calculators, measuring devices and technical support systems

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for machining material
- organisational and site standards, requirements, policies and procedures for welding material
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
- procedures for the recording, reporting and maintenance of workplace records and information
- appropriate mathematical procedures for estimation and measurement
- the process for the interpretation of patterns
- workflow in relation to screen design makeup

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Design is replicated effectively across all product
- Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for machining material using
- Communicate effectively and work safely with others in the work area
- Identify materials used and any handling requirements for those materials
- Apply safe handling practices for equipment, products and materials
- Interpret work order and patterns and locate and apply relevant information
- Select and use tools and equipment appropriate to the task follow work instructions, operating and inspection practices to:
 - prevent damage to goods, equipment or products
 - maintain required output and product quality
 - work effectively with others
 - modify activities to cater for variations in workplace contexts and environment
 - report process or material faults, damaged products or equipment

Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
 - workplace location or simulated workplace
 - specifications and work instructions
 - appropriate tools, materials and equipment

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package
Assessment methods must confirm consistency and

EVIDENCE GUIDE

accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Work order

- is to include instructions for the design, materials and security rating from the work site and may include pattern, type, size, length, angle and quantity

RANGE STATEMENT	
Appropriate personnel	<ul style="list-style-type: none"> may include but not be limited to supervisors, suppliers, clients, colleagues and managers
Design	<ul style="list-style-type: none"> is the outline, sketch or plan to be constructed and may include specifications of security rating, shape, length, width, height, material composition of the project
Patterns	<ul style="list-style-type: none"> is a model or form that can be used to guide the shape of the screen

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<p>1.1. Applicable <i>OHS, legislative</i> and <i>organisational</i> requirements relevant to <i>quality or compliance issues</i> in the manufacturing and installation of security screens and grills are verified and complied with</p> <p>1.2. <i>Instructions</i> and/or plans are read and interpreted to identify the process required to complete work tasks</p> <p>1.3. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement</p> <p>1.4. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use</p> <p>1.5. Workplace environment considerations are identified and measures to reduce noise, dust and obstacles are applied</p>
2. Identify quality and/or compliance issues	<p>2.1. Define and determine the issues to be investigated</p> <p>2.2. Assess the issues to determine whether it is a defect in workmanship, process or material</p> <p>2.3. Objectively identify and document current conditions of hardware, software, user or procedure</p> <p>2.4. Provide a verbal and/or written report in accordance with organisation policy on the nature of the problem and probable cause</p>
3. Recommend solutions to resolve issues identified	<p>3.1. Identify hardware, software, user or procedural quality and/or compliance area(s) to appropriate person in the organisation</p> <p>3.2. Identify and rank potential solutions to resolve the issue(s)</p> <p>3.3. Determine in accordance with organisational policy whether the issue can be resolved at current or higher level</p> <p>3.4. Select the solution to fix the issue or refer to appropriate person for decision</p> <p>3.5. The implementation of the recommended solution is planned together with an evaluations strategy to assess the solutions' effectiveness</p> <p>3.6. Verbal and/or written report is submitted in accordance with organisational requirements recommending action to be taken and/or advising</p>

ELEMENT	PERFORMANCE CRITERIA
	action taken and outcome
4. Clean up	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with organisational requirements 4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- use pre-checking and inspection techniques to ensure the tools are serviceable and ready to use and avoid re-work and wastage
- identifying quality problems and equipment faults and demonstrate appropriate response procedures
- recognise and respond to circumstances outside instructions or personal competence
- plan and organise activities including the preparation and layout of own worksite and the obtaining and use of tools and materials to avoid any backtracking, work flow interruptions or wastage
- initiate new ideas or work methodologies
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate other material requirements
- complying with legislation, regulations, standards, codes of practice and established safe practices and procedures for manufacturing/installing security screens and grills
- clarify and confirm work instructions
- plan own work within the given task parameters
- apply systematic and effective time management
- accept responsibility for given tasks
- set, monitor and satisfy personal work goals
- satisfy the competency requirements for the job
- maintain current knowledge of problem solving tools and materials
- maintain current knowledge of security screens and grills manufacturing and installation techniques
- seek learning opportunities
- use the workplace technology related to the selection, fabrication, preparation and operator maintenance of security screens and grills hand and power tools including calculators and measuring devices

Required knowledge

- State or Territory OHS legislation, regulations, standards and codes of practice

REQUIRED SKILLS AND KNOWLEDGE

relevant to the full range of processes for manufacturing and installing security screens and grills

- organisational and site standards, requirements, policies and procedures for manufacturing and installing security screens and grills
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- current industry practices
- types of tools and equipment and procedures for their safe use, operation and maintenance
- characteristics of steel and aluminium products and defects
- procedures for the recording, reporting and maintenance of workplace records and information

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<ul style="list-style-type: none"> • Location, interpretation and application of relevant information, standards and specifications • Comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for fault rectification • Communicate effectively and work safely with others in the work area • Compliance with enterprise policies and procedures including quality requirements • Inspect and assess of a minimum of three separate and different quality and two compliance issues and have recommendations accepted • Safe and effective operational use of tools and equipment
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • The application of competency is to be assessed in the workplace or realistically simulated workplace • Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints • Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context • Assessment is to comply with relevant regulatory or Australian Standards requirements • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials and equipment relevant to rectifying quality and compliance issues in the manufacturing and/or installation of security screens and grills • specifications, standards and work instructions
<p>Method of assessment</p>	<p>Assessment must satisfy the endorsed assessment guidelines of the Furnishing Industry Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge</p>

EVIDENCE GUIDE

Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

Assessment may be in conjunction with assessment of other units of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements

- are to be in accordance with Commonwealth, State or Territory legislation and regulations, organisational safety policies and procedures. Requirements may include but not be limited to the use of personal protective equipment and clothing, fire fighting equipment, first aid equipment, hazard and risk control and elimination of hazardous materials and substances, manual handling including lifting and carrying.

Legislative requirements

- are to be in accordance with applicable legislation from all levels of government that affect organisational operation. Requirements may include but not be limited to award and enterprise agreements, industrial relations, Australian Standards, confidentiality and privacy, OHS, the environment, equal opportunity, anti-discrimination, relevant industry codes of practice, duty of care and heritage.

Organisational requirements

- may include but not be limited to legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Quality or compliance issues

- may involve hardware, software, user and/or procedural quality or compliance issues that increase wastage, rework and/or increase production/installation time, and may also involve defective or inappropriate materials

RANGE STATEMENT	
	and/or equipment.
Instructions	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools and equipment • Workplace instructions, including job sheets, plans, specifications, legal compliance requirements, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer instructions for the use of equipment and materials

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements including design variations, tolerances, process, materials, finish and quantity 1.2. Work sequence is planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Preparatory drawings/templates for tasks are confirmed 1.7. Materials are selected following work instructions 1.8. Tools and equipment suitable for the work are selected and checked for safe and effective operation
2. Fit and finish product	2.1. Material is prepared and set out according to work instructions and components are marked according to workplace procedures 2.2. Tools and equipment are used in accordance with safety requirements and manufacturer specifications 2.3. Components are prepared, including any specified shapes, angles or curves, and checked against set-out and job requirements 2.4. Components are fitted to job requirements 2.5. Assembly process is undertaken according to workplace procedures 2.6. Product is checked for compliance with specifications 2.7. Product is finished in accordance with work instructions
3. Finalise operation and maintain equipment	3.1. Work area is cleaned and hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures 3.2. Unused materials are collected and stored for reuse 3.3. Waste and scrap materials are disposed of/recycled following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination with work supervisor, other workers and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate upholstery problems, avoid re-working and wastage
- use the limited workplace technology related to this upholstery product including tools, equipment, materials and measuring devices

Required knowledge

- the interpretation of plan representation of product design
- the preparation of drawings/templates
- workflow in relation to upholstery projects
- identification of upholstery hand and/or power tools, materials, equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work instructions and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - achieve required production output and product quality
- Adapt or vary upholstery product designs
- Prepare, fit and finish at least one basic upholstery product which:
 - requires the fitting of fabric/leather cover to a base
 - requires assembly and attachment of appropriate trim/fittings
 - requires the use of furniture upholstery hand and power tools
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Access to plans, hand and/or power/pneumatic tools, equipment, materials, a work area and a specified outcome.

Method of assessment

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be conducted in conjunction with assessment of the other sector specialist unit of competency where this is appropriate.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of job role.

EVIDENCE GUIDE	
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements include legislation, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work involves reading and interpreting plans, developing templates, using hand and power tools, operating basic machinery, applying quality requirements and applying product finishing techniques and materials
- Work is conducted under supervision and guidance

Basic upholstery product may include but are not be limited to:

- foot stool
- headboard
- seat top for chairs
- padded blanket box
- pin cushion top box
- pin board

Project to be determined in consultation with supervisor/ teacher

Tools and equipment may include, but are not limited to:

- measuring tapes or rulers
- hammers
- mallets
- squares
- hand saws
- cordless drills/screwdrivers
- fixing and joining devices
- clamps
- pincers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • staple gun • foam cutters • scissors • regulator • glue gun
Materials to be used may include but not limited to:	<ul style="list-style-type: none"> • timber • metal • plastics • fabric • webbing • plastic edging • foam • calico • hessian • glues • screws • nails and staples
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices. It could include safety goggles/glasses, hair net, ear muffs/plugs, gloves, footwear, protective clothing
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools	1.1.Types of hand and power tools and their functions are identified 1.2.Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3.Sources of and access to power supply are recognised
2. Select hand tools	2.1.Hand tools selected are consistent with needs of the job 2.2.Selected hand tools are checked for serviceability and safety and any faults reported to supervisor in accordance with enterprise procedures 2.3.Equipment is selected to hold or support material for hand tools application where applicable
3. Use hand tools	3.1.Material is located and held in position for hand tool application 3.2.Hand tools are safely and effectively used according to their intended use 3.3.Hand tools are safely located when not in immediate use
4. Select power tools	4.1.Power tools are selected consistent with needs of the job in accordance with conventional work practice 4.2.Power tools are visually checked for serviceability/safety in accordance with OHS requirements and any faults reported to supervisor in accordance with enterprise procedures 4.3.Equipment is selected to hold or support materials for power tool application as applicable
5. Use power tools	5.1.Material is located and held in position for power tool application as applicable 5.2.Power tools are safely and effectively used in application processes 5.3.Power tools are switched off and positioned safely when not in use
6. Clean up work area and tools	6.1.All tools are cleaned, maintained and stored 6.2.Equipment is cleaned, maintained and stored 6.3.Documentation is completed in accordance with enterprise procedures 6.4.Work area is cleared and waste removed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use workplace technology related to the operation and maintenance of hand and power tools

Required knowledge

- types, characteristics, uses, limitations and maintenance requirements of hand tools commonly used in furniture upholstery production
- types, characteristics, uses, limitations and maintenance requirements of power tools commonly used in furniture upholstery production
- workplace safety requirements and OHS legislation
- workflow within the workplace

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate and apply relevant information related to sector hand and power tools
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment before, during and after use of hand and power tools
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - identify each of the upholstery sector hand and power tools
 - indicate their applications and limitations
 - effectively and safely use them in their appropriate role in the workplace environment
 - maintain and safely store them
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Furniture upholstery sector hand and power tools and materials.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which together form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

EVIDENCE GUIDE

	materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Unit context</p>	<ul style="list-style-type: none"> • This unit covers work involving the use of hand and power tools in applications relating to the upholstery sector of the furnishing industry • OHS requirements include legislation, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate skill, accuracy and dexterity in the application of tools to work tasks
<p>Hand tools for furniture upholstery are to include:</p>	<ul style="list-style-type: none"> • shears/scissors • tape measure • rulers • staple remover • pincers • side cutters • pliers • hammer • screwdrivers and magnetic tack hammer
<p>Hand tools for furniture upholstery may also include:</p>	<ul style="list-style-type: none"> • button press and cutters • knife (retractable blade) • needles (bag • buttoning • regulator) • drills • web strainer • ripping chisel • web pliers • bolt cutters

RANGE STATEMENT

	<ul style="list-style-type: none"> • rotating hole punch • saws • hand planes • files and rasps • sockets • adjustable spanners • vices • clamps • wood chisels • nail punch • wire bender • seam stretcher • pipe/tube bender • stud press • pop rivet gun • no-sag spring benders (for shapes and ends) • hand ventilation setter • foam slicer • white rubber mallet • no-sag guillotine • soft tipped mallet • stuffing iron tack remover • cross pane hammer and tin snips
<p>Power tools - including pneumatic tools</p>	<p>Power tools for furniture upholstery include:</p> <ul style="list-style-type: none"> • spray adhesive system • staple gun • drills and screwdrivers • fabric cutter • nail gun • hot melt glue gun • buttoning machine • circular saw • drop saw • band saw • silicone cartridge gun • drill press • grinder • hot knife • electric iron • lacquer spray gun

RANGE STATEMENT	
	<ul style="list-style-type: none"> • knife fabric cutters (circular and straight) • electric/pneumatic foam cutter • planers and sanders
Fault reporting	Reporting of faults in the operation of hand and power tools may be verbal or written in conformance with workplace procedures
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • safety goggles/glasses • hair net • ear muffs/plugs • gloves • footwear • overalls/apron
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for component application	1.1. Work instructions are used determine job requirements including design variations, tolerances, process, materials, finish, and quality 1.2. Components to be fitted are identified 1.3. Fitting sequence is determined 1.4. Procedures are determined for checking the quality at each stage of the process 1.5. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.6. Fixing devices are selected in line with work instructions and the type of materials to be used 1.7. Suitable work area is selected for the task 1.8. Components, materials, fittings and attachments are collected 1.9. Tools and equipment suitable to the applicable fitting methods are selected and checked for safe operation
2. Fitting of components	2.1. Components are laid out and attached using appropriate fastenings 2.2. Hand and power tools and equipment are used as required 2.3. Attached components are checked for compliance with specifications 2.4. Products which do not meet quality specifications are repaired or tagged for further processing or recycling/disposal in accordance with workplace practices 2.5. Finished products are organised and stored in holding area to enterprise requirements
3. Complete work	3.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures 3.2. Waste and scraps are removed in accordance with workplace procedures 3.3. Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures 3.4. Equipment is maintained and work area cleaned in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use workplace technology related to the fitting of components to upholstered furniture

Required knowledge

- interpretation of plan representation for upholstered furniture items
- identification of hand and/or power tools, materials, components, equipment, processes and procedures
- workflow in relation to the assembly of upholstered furniture
- workplace procedures for problem and quality reporting

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate relevant information
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - achieve required production output and product quality
- As a minimum fit the upholstery components for three different items of upholstered furniture requiring assembly
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource implications

Access to work instruction/job sheets, hand and/or power tools, equipment, materials, basic machinery and work areas.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- This unit addresses the fitting and installing of components to an item of upholstered furniture.
- Upholstery components may be upholstered or un-upholstered fittings which when assembled form an item of upholstered furniture. They may include but are not limited to:
 - actions
 - arms
 - seats
 - backs
 - legs
 - facings
 - prefabricated polished timber components
 - metal components
 - plinths
 - glides
 - ceramic and plastic fittings

Unit context

- OHS requirements include legislation, material safety management system, hazardous substances and dangerous goods codes and safe operating procedures
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the fitting of upholstery components
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

Tools and equipment are to include:

- measuring tapes or rulers
- staple gun
- air driver
- air drill and accessories

RANGE STATEMENT	
	<ul style="list-style-type: none"> • scissors and mallets
Tools and equipment may include:	<ul style="list-style-type: none"> • air wrench • nail gun • clip gun • tack hammer • ripping chisels and staple removers
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • finished upholstery components • frames • glues • screws • nails and staples and other fixing devices
Component checking	<ul style="list-style-type: none"> • covers alignment and squareness, correct fastening, materials and attachment as per work instruction and conformity to work instructions and quality requirements
Storage area organisation	Storage area organisation is to ensure that there is no obstruction to traffic, products are not damaged in storage, incompatible items are not stored together and products are arranged to match the sequence of work
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • gloves • footwear • protective clothing
Information and procedures	<ul style="list-style-type: none"> • Manufacturer specifications and operational procedures • Work instruction, including job sheets, cutting lists, plans, drawing and designs • Workplace procedures relating to reporting and communication • Workplace procedures relating to use of tools and equipment

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work order or instructions are used to confirm type of contemporary furniture foundations to be applied 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Attaching methods are identified and fitting sequence is determined 1.4. Suitable work area is selected and prepared 1.5. Tools and hardware for the application of the foundation are selected and checked for safe operation 1.6. Contemporary foundation components are selected as required
2. Attach contemporary foundation	2.1. Mounting points are measured and marked on the frame, as required 2.2. Contemporary foundation is positioned and appropriate fasteners are used to secure it to the item 2.3. The applied foundation is inspected for fit, finish and quality with those requiring reworking/refitting being tagged for further reprocessing or recycling/disposal in accordance with workplace practices 2.4. Process is monitored and conditions which may affect quality standards are noted 2.5. Variations to normal activities are reported in accordance with workplace procedures 2.6. Authorised changes in standard operating procedures and work order or instructions are implemented
3. Complete work	3.1. Workplace documentation, including stock usage, is completed in accordance with workplace procedures 3.2. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures 3.3. Waste and scrap are removed in accordance with workplace procedures 3.4. Tools and equipment used are cleaned, inspected for serviceable condition and stored in accordance with workplace procedures 3.5. Equipment is maintained and work area is cleaned in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use workplace technology related to the application of contemporary foundations to upholstered furniture

Required knowledge

- workflow in relation to furniture production
- features of range of contemporary foundation types and fittings
- materials used in the application of contemporary foundations
- identification of equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Operate equipment associated with the preparation and application of furniture foundations
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, using contemporary foundation items (such as interlaced elastic webbing, no-sag springs and foam), assemble contemporary foundations for three items of furniture, one being a chair, requiring seat, back and arms
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Furniture frames and contemporary fittings such as webbing stock, no-sag springs, padding materials, tools and equipment, work order and procedures.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- Contemporary foundations are applied to contemporary upholstered furniture. Normally this is part of a production process and includes mass-produced items.
- Contemporary foundations may include but are not limited to:
 - elastic webbing
 - nylon webbing
 - no-sag springs
 - conical springs
 - pulma flex
 - plastic and styrene edging
 - foam and polyester fibre

Unit context

- OHS requirements include legislation, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the application of upholstered components to furniture items
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

Tools and equipment may include, but are not limited to:

- scissors
- upholstery hammer
- nail gun
- staple gun
- pincers
- long-nose pliers and tape measures

Materials to be applied may

- elastic webbing

RANGE STATEMENT	
include, but are not limited to:	<ul style="list-style-type: none"> • nylon webbing • coil springs • spiral springs • no-sag springs • pulma flex • plastic and styrene edging • foam • hessian and polyester fibre
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices for overhead lifting. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggle • hair nets • ear muffs/plugs • gloves • footwear and protective clothing
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Job requirements are identified from work instructions 1.2. Workplace health and safety requirements, including personal protection needs, are observed 1.3. Machines, materials, work method and sequence are determined 1.4. Equipment, including any supplementary equipment is identified and checked for safe operation, components and controls 1.5. Materials are identified and inspected and problems, including any materials or part constructed products which do not meet the job order requirements, are identified and reported in accordance with workplace procedures 1.6. Work pieces are laid out in sequence in accordance with specifications and workplace procedures
2. Control sewing operation	2.1. Sewing machine, including attachments, is set up and adjusted for the work requirements 2.2. Machine is operated to maintain required product quality and outputs 2.3. Finished products are checked for required quality, repaired, and moved to the next process
3. Complete work	3.1. Completed work is directed to the next operation in accordance with workplace procedures 3.2. Documentation, including production and/or stock records and/or packing slips, are completed in accordance with workplace procedures 3.3. Material which is able to be re-used is collected and stored, and waste and scrap are removed in accordance with workplace procedures 3.4. Equipment is maintained and work area is cleaned following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to machine sewing, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use workplace technology related to the basic machine sewing of upholstery final cover materials

Required knowledge

- procedure for reporting damaged or imperfect products or interruption to workflow
- workflow requirements for sewing process
- operation of work systems and sewing equipment
- characteristics of materials used and finished products
- causes of faults and repair methods
- identification of equipment, processes and procedures
- quality systems and standards
- workplace procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Interpret work order and locate and apply relevant information • Identify and operate sewing machines • Set up sewing machine for operations, monitor quality of output and adjust as necessary • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • minimise the risk of injury to self and others • prevent damage to goods, equipment and products • maintain required production output and product quality • As a minimum, demonstrate the ability to: <ul style="list-style-type: none"> • join final cover materials for fitting to two items of upholstered furniture • sew piping for an item of upholstered furniture • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
<p>Resource implications</p>	<p>Appropriate sewing machines, work orders, operating procedures, materials and threads.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.</p>

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop cutting plan	1.1. Required fabrics, number of items to be cut and required equipment are identified 1.2. Fabric sizes to be cut are identified from work order plus any required allowances 1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work. 1.4. Suitable work area is selected, prepared and cleaned of any contaminants 1.5. Work sequence is planned
2. Prepare materials for cutting	2.1. Suitable scissors, cutting machines, knives and/or blades are selected and checked prior to use for appropriate sharpness, set, operation and safe condition 2.2. Fabrics are selected in accordance with work order and laid out smooth and square 2.3. Fabrics are inspected for flaws and appropriate finish 2.4. Nap/pile direction, pattern matches and face of the materials are identified 2.5. Tools and equipment are checked for operation 2.6. Fabric is measured and marked, including registration points, in accordance with workplace practices 2.7. Cutting plan is developed in accordance with workplace procedures
3. Cut fabric	3.1. Fabric is cut in accordance with manufacturers' instructions and/or workplace procedures 3.2. Problems are notified following workplace procedures 3.3. Cut item is inspected against work requirement with unsatisfactory items being reprocessed in accordance with workplace procedures
4. Complete work	4.1. Cutting is completed with cut out materials top edge marked, wrapped, identified/labelled, handled and stored as required by workplace procedures 4.2. Workplace required documentation is completed in accordance with workplace procedures 4.3. Unused fabric and waste are collected for recycling/reuse in accordance with workplace

ELEMENT	PERFORMANCE CRITERIA
	procedures 4.4. Tools and equipment are maintained and work area is cleaned in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, estimate fabric requirements and estimate other material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the limited workplace technology related to planning and cutting upholstery fabric including tools, equipment, calculators and measuring devices.

Required knowledge

- work requirements including workplace standards
- workflow in relation to planning and cutting upholstery fabric
- fabric types, common faults and inspection procedures
- design features of the finished items in relation to attractive use of fabric patterns

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling practices for equipment, products and materials
- Identify materials used and any special marking out requirements
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Develop cutting plan, measure accurately, mark out and cut upholstery fabric quantities, minimising waste and producing consistent quality items for at least five different types of material or products (at least one of which should be patterned)
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Work orders, fabrics, tape measure, cutting table, cutting machines, cutting knives and blades, scissors and workplace procedures

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant resilient sheet installation equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- This unit applies to the cutting of upholstered fabrics from measurements and instructions. It does not apply to cutting from patterns.
- Fabrics may be plain or patterned and include, but are not limited to:
 - velour
 - velvet
 - tapestry
 - damask
 - linen
 - cotton

Unit context

- Workplace health and safety requirements may include OHS legislation, material safety management systems, hazardous and dangerous goods codes and safe operating procedures
- Work is carried out in accordance with statutory requirements, relevant health regulations, environmental legislation, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the planning and the cutting of upholstery fabric

Tools and equipment may include, but are not limited to:

- cutting equipment including scissors and cutting machines; knives and/or blades
- hot knife (for acrylics)
- measuring and calculating equipment including tapes
- rulers
- calculators
- computers and cutting table

RANGE STATEMENT	
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • glasses/goggles • hair net • ear muffs/plugs • gloves • footwear and protective clothing
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions. These include: <ul style="list-style-type: none"> • job sheets • cutting lists • plans • drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Item to be dismantled is inspected and components identified 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Work required, including the process/order for dismantling according to the workplace procedures, is identified 1.4. Tools and equipment are selected and checked for safe and effective operation for the task
2. Dismantle furniture	2.1. Items to be dismantled are identified 2.2. Items are dismantled to the extent required in the work instructions using appropriate tools and procedures 2.3. Any previous upholstery is noted for wear, condition and application techniques 2.4. Fasteners and attachments are removed and stored 2.5. Component parts are separated, tagged and stored following workplace procedures 2.6. Component parts dispatched to the next process according to workplace procedures
3. Reassemble furniture	3.1. Items to be reassembled are identified 3.2. Items are reassembled to the extent required in the work instructions using appropriate tools and procedures 3.3. Upholstered components are noted for the security and condition of the upholstered fittings 3.4. Fasteners and attachments are selected and used according to workplace procedures 3.5. Assembled piece is dispatched to the next process according to workplace procedures
4. Complete work	4.1. Equipment used is cleaned, inspected for serviceable condition and stored in accordance with workplace procedures 4.2. Equipment faults are identified, tagged and reported to appropriate personnel 4.3. Work area is cleaned and returned to operational condition

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, furniture construction methods, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with area supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate dismantling/reassembly problems, avoid re-working and wastage
- use the workplace technology related to dismantle/reassemble furniture including tools, equipment, materials and measuring devices

Required knowledge

- the types and characteristics of materials used in furniture/furnishings construction
- construction techniques and processes
- upholstery materials and processes
- identification of equipment, processes and procedures
- workflow in relation to dismantling and reassembling furniture

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials, including upholstery materials and techniques, used in the construction of the item being dismantled/re-assembled
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Dismantle and re-assemble at least four different items including an armchair and a sofa or equivalent
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Upholstered furniture for dismantling/re-assembling, work instructions, tools and equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and generally be in conjunction with assessment of other units of competency which together form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements include legislation, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills during the process of dismantling and reassembling furniture
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

Furniture and/or furnishings may include but are not limited to:

- chairs
- sofas
- settees
- footstools
- beds and their components

Work can involve dismantling and re-assembling of furniture for installing/refurbishing upholstery.

Tools and equipment may include, but are not limited to:

- measuring tapes or rulers
- hammers
- rubber mallet
- pincers
- screwdrivers
- shifting spanner
- spanners
- socket set
- hacksaw and blades
- clamps
- timber wedges
- wood chisels
- dowel drill

RANGE STATEMENT	
	<ul style="list-style-type: none"> • long-nose pliers • floor board lifter • bricklayer's bolster • power drill/screwdriver • air compressor and hoses
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • veneer • brass • adhesive • laminate • perspex • upholstered fittings and foundations
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices. It may include safety goggles/glasses, hair nets, ear muffs/plugs, gloves, footwear and protective clothing.
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan operation	<ul style="list-style-type: none"> 1.1. Work order or instructions are used to confirm type of traditional furniture foundations to be applied 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Attaching methods are identified and fitting sequence is determined 1.4. Suitable work area is selected and prepared 1.5. Tools and hardware for the application of the foundation are selected and checked for safe operation 1.6. Traditional foundation components are selected as required
2. Prepare and attach traditional foundation	<ul style="list-style-type: none"> 2.1. Mounting points are measured and marked on the frame, as required 2.2. Traditional foundation is positioned and appropriate fasteners are used to secure it to the item 2.3. Appropriate fasteners are used to secure the traditional foundation, as required 2.4. The applied foundation is inspected for fit, finish and quality with those requiring reworking/refitting being tagged for further reprocessing or recycling/disposal in accordance with workplace practices 2.5. Process is monitored and conditions which may affect quality standards are noted 2.6. Variations to normal activities are reported within workplace procedures 2.7. Authorised changes in standard operating procedures and work order or instructions are implemented
3. Complete work	<ul style="list-style-type: none"> 3.1. Workplace documentation, including stock usage, is completed in accordance with workplace procedures 3.2. Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures 3.3. Waste and scrap are removed in accordance with workplace procedures 3.4. Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures 3.5. Equipment is maintained and work area is cleaned in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise component and material sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the application of traditional foundations to upholstered furniture

Required knowledge

- workflow in relation to furniture production and refurbishment
- features of range of traditional foundation types and fittings
- materials and techniques used in the application of contemporary foundations to upholstered furniture
- materials used in the application of traditional foundations
- identification of equipment, processes and procedures required for the application of traditional foundations to upholstered furniture

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Operate tools and equipment associated with the preparation and application of furniture foundations
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, interlace and turn back jute webbing, tie off and lace up coil springs, fit hessian bridles (loose and/or deep), coconut fibre, wadding and a stitched edge (one blind, one top) in two items of traditional upholstered furniture
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Furniture frames and traditional fittings such as webbing stock, coil springs, padding materials, tools and equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which together form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- Traditional foundations are applied to traditional upholstered furniture, either during construction or refurbishment. Normally this involves the use of traditional materials and techniques, which may involve working by hand and application on a one-off basis.
- Traditional foundations include, but are not limited to:
 - jute webbing
 - coil springs
 - coconut fibre
 - flock
 - horse hair
 - wadding
 - linters
 - calico
 - hessian
 - jute twine

Unit context

- OHS requirements include legislation, material safety management system, hazardous substances and dangerous goods codes and safe operating procedures
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of machines
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

Tools and equipment may include, but are not limited to:

- tape measure
- web strainer
- scissors
- upholstery hammer

RANGE STATEMENT	
	<ul style="list-style-type: none"> • tack lifter • staple gun • pincers and long-nose pliers
Materials to be applied may include, but are not limited to:	<ul style="list-style-type: none"> • webbing • coil springs • flock • wadding • coconut fibre • bridle • bridle ties • solid timber base • padded frames • hard edge • hessian • calico • lacing twine and mattress twine
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • gloves • footwear and protective clothing
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operation of tools • Workflow in relation to the components of and assembly of upholstered furniture • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Specifications concerning design, fabrics, accessories and finish are confirmed with designer/customer/client, as required 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Materials, work method and sequence are determined 1.4. Suitable work area is selected, prepared and cleaned of any contaminants 1.5. Appropriate equipment and tools are selected and checked for safe operation 1.6. Furniture frames/foundations are checked for quality of construction, contaminants and appropriateness to specifications, and modified and/or repaired in accordance with workplace procedures 1.7. Material panels are checked in terms of quantity, quality, contaminants, size, pattern and consistency 1.8. Trims are selected and checked in terms of quantity, quality, contaminants, size, pattern and consistency
2. Fit and apply fabric	2.1. Work pieces are laid out in sequence according to specifications, construction process and workplace procedures 2.2. Materials are applied to furniture in accordance with enterprise and industry standards 2.3. Material is secured to the foundation, using appropriate fixing processes 2.4. Finish of applied material is checked against quality standards 2.5. Work pieces are laid out in sequence according to specifications and workplace procedures
3. Fit and apply fabric and trim	3.1. Trims are applied consistent with specifications and workplace procedures 3.2. Trims are checked against quality standards and reprocessed if required, in accordance with workplace procedures 3.3. Final adjustments are made to ensure finish meets required quality standards
4. Complete work	4.1. Finished product is packaged, protected and stored, as required, consistent with workplace procedures 4.2. Workplace documentation is completed in

ELEMENT	PERFORMANCE CRITERIA
	<p>accordance with procedures</p> <p>4.3. Waste and scrap are collected for disposal/recycling in accordance with workplace procedures</p> <p>4.4. Tools and equipment used are cleaned, inspected for serviceability and stored in accordance with workplace procedures</p> <p>4.5. Equipment is maintained and work area is cleaned in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use workplace technology related to the application of final cover materials to upholstered furniture

Required knowledge

- work requirements, including workplace standards
- workflow in relation to applying final material covers to furniture
- material types and characteristics, common faults and inspection procedures
- types of basic techniques and their application
- design features of the finished furnishing items

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify and select materials used and any special handling requirements for those materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum:
 - fit and apply a patterned fabric cover to a drop in seat
 - fit and apply a cover in a plain material other than fabric for a seat, back and arms of a chair
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate tools and equipment, cover materials, trims, furniture frames and foundations, fixing materials and tools, work order, workplace information including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which together form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Unit context</p>	<ul style="list-style-type: none"> • Workplace health and safety includes OHS legislation, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the application of covers to furniture foundations • Work is carried out in accordance with legislative obligations, relevant health regulations, environmental legislation, manual handling procedures and organisation insurance requirements
<p>Final cover materials include but are not limited to:</p>	<ul style="list-style-type: none"> • plain and patterned fabrics • vinyl and velvet
<p>Tools and equipment may include, but are not limited to:</p>	<ul style="list-style-type: none"> • sewing machine • needles • scissors • staple gun • hammer • tack hammer and glue gun
<p>Materials to be machined may include but are not limited to:</p>	<ul style="list-style-type: none"> • plain and patterned fabric • vinyl and velvet
<p>Other materials may include:</p>	<ul style="list-style-type: none"> • piping • double piping • cords • gimp • glues • staples • buttons • tacks • tingles and antique nails

RANGE STATEMENT	
Material application requirements	Material applications are to ensure that patterns, naps/pile, sheens, direction of pattern, pattern repeat and finished side of the materials are positioned appropriate to the design, the smooth and consistent finish of the material over the furniture foundation, and weaving lines are straight and square to each other
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • gloves • footwear and protective clothing
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operations of tools • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Customer/client requirements

Trims are selected and checked to in terms of quantity, quality, contaminants, size, pattern and consistency
2. Fit and apply material	<ul style="list-style-type: none"> 2.1. Work pieces are laid out in sequence according to specifications, construction process and workplace procedures 2.2. Fabrics are applied to furniture in accordance with enterprise and industry standards 2.3. Decorative features are applied to the materials, as required 2.4. Material is secured to the foundation, using appropriate fixing processes 2.5. Finish of applied material is checked against quality standards 2.6. Work pieces are laid out in sequence according to specifications and workplace procedures
3. Fit and apply trim and decorative features	<ul style="list-style-type: none"> 3.1. Trims and decorative finishes are applied consistent with specifications and workplace procedures 3.2. Trims and decorative finishes are checked against quality standards and modified and or repaired, as required 3.3. Final adjustment are made, as required, to ensure finish meets required quality standards

ELEMENT	PERFORMANCE CRITERIA
4. Complete work	4.1. Finished product is packaged, protected and stored, in accordance with workplace procedures 4.2. Workplace documentation is completed in accordance with procedures 4.3. Waste and scrap are collected for disposal/recycling in accordance with workplace procedures 4.4. Tools and equipment used are cleaned, inspected for serviceability and stored in accordance with workplace procedures 4.5. Equipment is maintained and work area is cleaned in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise component and material sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the application of final material covers to upholstered furniture using decorative techniques

Required knowledge

- work requirements including workplace standards
- workflow in relation to applying final material covers to upholstered furniture using decorative techniques
- cover material types and characteristics, common faults and inspection procedures
- types of decorative techniques and their application
- design features of the finished furnishing items

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify and select materials used and any special handling requirements for those materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, fit and apply a final material cover for:
 - a bedhead using diamond buttoning
 - a chair using other decorative finishes
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate tools and equipment, plain and patterned fabrics, trims, furniture frames and foundations, fixing materials and tools, work order, workplace information including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Unit context</p>	<ul style="list-style-type: none"> • OHS requirements include legislation, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the application of fabrics to furniture foundations
<p>Legislative/regulatory requirements</p>	<p>Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements</p>
<p>Final cover materials include but are not limited to:</p>	<ul style="list-style-type: none"> • plain and patterned fabrics • vinyl and velvet
<p>Decorative techniques include, but are not limited to:</p>	<ul style="list-style-type: none"> • pleating • fluting • stab and deep buttoning (bun • diamond and elongated)
<p>Tools and equipment may include, but are not limited to:</p>	<ul style="list-style-type: none"> • sewing machine • scissors • staple gun • hammer • tack hammer • glue gun • regulator • buttoning needles and spring wire bender
<p>Sewing machines include but are not limited to:</p>	<ul style="list-style-type: none"> • overlocking machine and twin needle machine
<p>Materials/fabrics to be machined may include but are not limited to:</p>	<ul style="list-style-type: none"> • vinyl • plain and patterned fabric • velvet

RANGE STATEMENT	
Other materials may include:	<ul style="list-style-type: none"> • piping • cords • buttons • pleats • glues • staples • buttons • tacks • tingles • antique nails
Fabric application requirements	Fabric applications are to ensure that patterns, naps, sheens, direction of pattern, pattern repeat and finished side of the materials are positioned appropriate to the design, the smooth and consistent finish of the fabric over the furniture foundation, and weaving lines are straight and square to each other.
Personal protective equipment:	<ul style="list-style-type: none"> • Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include: <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • gloves • footwear and protective clothing
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use and operations of tools • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Customer/client requirements

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Specifications, patterns and/or plans are read and interpreted to identify required colour and quality of materials, number of items to be cut and tools and equipment required</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Suitable work area is selected, prepared and cleaned of any contaminants</p> <p>1.4. Pattern pieces are identified to match shapes to final wear characteristics of the furnishing component</p> <p>1.5. Suitable scissors and/or blades are selected for the leather to be cut</p> <p>1.6. Scissors and any other tools and equipment are checked prior to use for appropriate sharpness, operation and safe condition</p> <p>1.7. Hide is selected, spread out and inspected to identify flaws and harder and softer wearing parts</p> <p>1.8. Direction of natural markings and finished side of the leather are identified</p>
2. Lay out pattern	<p>2.1. Patterns are laid out following workplace procedures and instructions using low wear parts of the hide on the less heavily used furniture components</p> <p>2.2. Patterns are laid out to maximise use of the hide for the furniture design</p> <p>2.3. Any registration points on the pattern and other instructions to match required pattern components are marked</p> <p>2.4. Any required measurements are made and appropriate adjustments made</p>
3. Cut leather	<p>3.1. Required cutting operations are completed with cut out leather components identified in accordance with work instructions and procedures</p> <p>3.2. Cut work is inspected, any faults identified and appropriate action taken in accordance with workplace procedures to ensure cut pieces meet the required quality standards</p> <p>3.3. The performance of the cutting equipment is regularly checked for signs of faulty operation, including evidence from the inspection of cut pieces</p> <p>3.4. Where required, cut out components are wrapped</p>

ELEMENT	PERFORMANCE CRITERIA
	using appropriate protective covers and care label information is attached
4. Complete work	4.1. Unused materials are stored as required 4.2. Cut components are folded, protected and despatched to next process following workplace procedures 4.3. Work area is cleaned and damaged tools tagged as required 4.4. Waste is collected and bundled for recycling/reuse as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use the limited workplace technology related to cutting leather

Required knowledge

- work requirements including workplace standards and inspection procedures
- leather types, common faults, wear capability of different parts of the hide
- workflow in relation to cutting leather
- design features of the finished furnishing items in relation to laying out the pattern and cutting the leather

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify and select leathers and any special laying out and cutting requirements for different hide parts
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, given hides and patterns:
 - identify and select leather for a leather armchair
 - measure and cut selected leather to match these patterns
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate scissors and cutting blades, leather, patterns, work order, workplace information, including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	This unit addresses the selection, laying out and cutting of leather hides into components for upholstered furniture
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, material safety management system, hazardous substances and dangerous goods codes and safe operating procedures • Work requires individuals to demonstrate discretion, judgement and problem solving skills in identifying the qualities and in the cutting of leather to patterns provided • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Leather hide	<ul style="list-style-type: none"> • Leather hide for leather upholstered furniture must be of a suitable thickness and quality. It may be a full hide or partial. • Leather characteristics/qualities include: <ul style="list-style-type: none"> • natural markings • finished and unfinished sides • high and low wear • direction of markings • flaws and blemishes • colour variation between hides • flexibility
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • scissors • cutting blades and electric shears
Materials	Leather hides of upholstery quality, patterns
Personal protective equipment:	Personal protective equipment is to include that prescribed under legislation, regulations and

RANGE STATEMENT	
	<p>enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • gloves • footwear and protective clothing
Information and procedures	<ul style="list-style-type: none"> • Workflow in relation to the selection and cutting of leather • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Knowledge of features and use of the finished upholstered item

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Job requirements are identified from work instructions 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Machines, attachments, materials, work method and sequence are determined 1.4. Equipment, including any supplementary equipment, is identified and checked for safe operation, components and controls 1.5. Materials are identified and inspected and problems, including any materials or part-constructed products which do not meet the job order requirements, are identified and reported in accordance with workplace procedures 1.6. Work pieces are laid out in sequence in accordance with specifications and workplace procedures
2. Conduct sewing operation	2.1. Sewing machine, including attachments, is set up and adjusted for the work requirements 2.2. Machine is operated to maintain required product quality and outputs 2.3. Finished products are checked for required quality, repaired, and moved to the next process
3. Complete work	3.1. Completed work is directed to the next operation in accordance with workplace procedures 3.2. Documentation, including production and/or stock records and/or packing slips are completed in accordance with workplace procedures 3.3. Material which is able to be reused is collected and stored, waste and scrap are removed in accordance with workplace procedures 3.4. Equipment maintenance and work area clean up are completed following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise component and material sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to the complex machine sewing of upholstery final cover materials

Required knowledge

- procedure for reporting damaged or imperfect products or interruption to workflow
- workflow requirements for sewing process
- operation of work systems and sewing equipment
- characteristics of materials used and finished products
- causes of faults, and repair methods
- identification of equipment, processes and procedures
- quality systems and standards
- workplace procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify and select materials used and any special handling requirements for those materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, complete a double sided square stool top with double stitched quartering of different materials
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate sewing machines, work orders, operating procedures, materials and threads.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- Complex sewing involves the operation of industrial sewing machines to produce specialised products in the application of upholstery to furniture. It embraces a range of decorative methods and finishes
- Specific and specialised techniques and products include:
 - sewing twin needle decorative finishes, including: single and double piping, blind hemming, balloon seam and gathering
 - sewing with specialised attachments, including: gathering
 - sewing fasteners and attachments, including sewing of: zips, velcro

Unit context

- Workplace health and safety includes OHS legislation, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of specialised sewing machines
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

Job requirements include:

- required materials
- threads
- additional work features
- shape and special requirements for the finished item
- and any required workplace documentation to be completed

RANGE STATEMENT	
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • flat bed • walking foot • overlocker • post and/or flatbed twin needle
Sewing machine set up and adjustments include:	<ul style="list-style-type: none"> • threading machine and winding bobbin • setting required tensions • selecting required machine settings • lubricating and adjusting the machine • and testing operations for work order requirements
Materials to be machined may include but are not limited to:	<ul style="list-style-type: none"> • fabrics • vinyl • canvas • acrylics and leather
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • gloves • footwear and protective clothing
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of sewing machines • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Specifications concerning design, leather coverings, accessories and finish are confirmed with designer/customer/client, as required</p> <p>1.2. Workplace health and safety requirements, including personal protective needs, are observed throughout the work</p> <p>1.3. Materials, work method and sequence are determined</p> <p>1.4. Suitable work area is selected, prepared and cleaned of any contaminants</p> <p>1.5. Appropriate equipment and tools are selected and checked for safe operation</p> <p>1.6. Furniture frames/foundations are checked for quality of construction, contaminants and appropriateness to specifications, and modified and/or repaired in accordance with workplace practices</p> <p>1.7. Leather panels are checked in terms of quantity, quality, grain, contaminants, size and wear stress</p> <p>1.8. Trims are selected and checked in terms of quantity, quality, contaminants, size, pattern and consistency</p>
2. Fit and apply leather	<p>2.1. Work pieces are laid out in sequence according to specifications, construction process and workplace procedures</p> <p>2.2. Leather pieces are applied to furniture ensuring that appropriate leather is fitted to high wear areas and a smooth and consistent finish of the leather over the furniture foundation</p> <p>2.3. Decorative features, including pleats are applied to the leather, before fitting as required</p> <p>2.4. Leather is secured to the foundation, using appropriate fixing processes</p> <p>2.5. Finish of applied leather is checked against quality standards</p>
3. Apply trim	<p>3.1. Work pieces are laid out in sequence according to specifications and workplace procedures</p> <p>3.2. Trims and decorative finishes are applied to the item consistent with specifications and workplace procedures</p> <p>3.3. Trims and decorative finishes are checked against quality standards and modified and or repaired, as required</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Final adjustments are made, as required, to ensure finish of completed item meets required quality standards
4. Complete work	4.1. Finished product is packaged, protected and stored, in accordance with workplace procedures 4.2. Workplace documentation is completed in accordance with procedures 4.3. Waste and scrap are collected for disposal/recycling in accordance with workplace procedures 4.4. Tools and equipment used are cleaned, inspected for serviceability and stored in accordance with workplace procedures 4.5. Equipment is maintained and work area is cleaned in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area to avoid any back tracking, workflow interruptions or wastage
- work with others in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use the limited workplace technology related to the fitting and application of leather to furniture

Required knowledge

- work requirements including workplace standards
- workflow in relation to applying leather to furniture
- leather types and their characteristics, common faults and inspection procedures
- appropriate quality and fit of finished product
- design features of the finished furnishing items

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify and select materials used and any special handling requirements for those materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, given cut leather pieces, fit and apply leather to a chair
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate tools and equipment, leather panels, trims, furniture frames and foundations, work order, workplace information including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	This unit addresses the fitting and application of leather, pre-cut to pattern, to an upholstered item of furniture
Unit context	<ul style="list-style-type: none"> • Workplace health and safety includes OHS legislation, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the application of leather to furniture foundations • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Leather	<ul style="list-style-type: none"> • Leather is an upholstery cover material with unique characteristics which must be considered during preparation and fitting to ensure it is effectively applied to the furniture item. • Leather characteristics/qualities include: <ul style="list-style-type: none"> • natural markings • finished and unfinished sides • high and low wear • direction of markings • flaws and blemishes • colour variation between hides • flexibility
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • scissors • single or multi-needle flat bed sewing machine • heat gun • hammer

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Specifications concerning design, fabrics, accessories and finish are confirmed with designer/customer/client, as required 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Materials, work method and sequence are determined 1.4. Suitable work area is selected, prepared and cleaned of any contaminants 1.5. Appropriate equipment and tools are selected and checked for safe operation
2. Develop patterns	2.1. 3D templates are developed from the surface of the existing furniture, without undue distortion 2.2. Component shapes are marked out and/or cut out using appropriate technique 2.3. Standard 2D patterns are produced in accordance with specifications and to accepted standards and construction tolerances 2.4. Patterns are reviewed against client specifications and production requirements 2.5. Consultation and clarification with client is undertaken, as required
3. Select and cut fabric	3.1. Fabrics are selected and inspected in accordance with work order and laid out smooth and square 3.2. Nap/pile, direction of pattern, pattern repeat and finished side of the materials are identified 3.3. Fabrics are squared up to the edges or guide markings on the cutting table 3.4. Patterns are laid out using registration points on the pattern and other instructions to match required fabric pattern, ensuring maximum use of the fabric 3.5. Fabric is cut and cut components are inspected in accordance with workplace procedures
4. Sew panels	4.1. Sewing machine set up requirements and adjustments are identified and followed 4.2. Machine sewing maintains required product quality and outputs 4.3. Finished loose covers are checked for required quality and reprocessed in accordance with workplace procedures

ELEMENT	PERFORMANCE CRITERIA
5. Fit and finish cover	5.1. Loose cover is applied to the upholstered furniture and checked for fit 5.2. Decorative accessories are applied as required 5.3. Adjustments are made, as required, to ensure fit meets required quality standards and specifications
6. Complete work	6.1. Workplace documentation is completed in accordance with procedures 6.2. Waste and scrap are collected and disposed of/recycled in accordance with workplace procedures 6.3. Tools and equipment used are cleaned, inspected for serviceability and stored in accordance with workplace procedures 6.4. Equipment is maintained and work area is cleaned in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to hand and power tools, work orders, maintenance systems and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area to avoid any back tracking, workflow interruptions or wastage
- work with others in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate problems, avoid re-working and wastage
- use the limited workplace technology related to the manufacture and fitting of loose covers to upholstered furniture

Required knowledge

- work requirements including workplace standards and workflow
- fabric types and characteristics, common faults and inspection procedures
- design features of the finished furnishing items in relation to laying out the pattern and cutting the fabrics

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify and select materials used and any special handling requirements for those materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum:
 - develop two patterns for loose covers for given items of furniture (one plain and one patterned)
 - measure and cut fabrics to required size and accuracy, matching any patterns
 - sew fabric and fit to items of furniture
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate tools and equipment, plain and patterned fabrics, sewing machines, furniture to be upholstered, work order, workplace information including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Job requirement is identified from work order or other instructions which will include any special requirements for finishing 1.2. Required materials, upholstered components to be finished and appropriate tools and equipment are identified from work order 1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.4. Items to be finished are assembled in an appropriate work area and inspected for appropriate quality 1.5. Appropriate tools, equipment and finishing materials and hardware are selected
2. Apply finishing techniques	2.1. Finishing techniques are applied in accordance with workplace procedures 2.2. Problems are notified following workplace procedures 2.3. Finished upholstered item is inspected against work requirement with unsatisfactory finish being redirected for reworking
3. Complete work	3.1. Finished work is package/stored/tagged and despatched to the next process following workplace procedures 3.2. Any required documentation is completed and processed following workplace procedures 3.3. Tools and equipment used are cleaned, maintained as required and stored in accordance with workplace procedures 3.4. Work area is cleaned with waste and scrap being removed/recycled in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate sewing problems, avoid re-working and wastage
- use the limited workplace technology related to the finishing of upholstered furniture

Required knowledge

- work requirements including workplace standards
- identification of techniques and procedures for the finishing processes
- fabric types, common faults and inspection procedures
- methods to be used with different fabric types
- design features of the upholstered items in relation to the finishing techniques to be used

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials
- Identify materials used and any special sewing requirements for the materials to be sewn
- Interpret work order, copy samples and locate and apply relevant information
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum:
 - hand sew at least two different items of upholstered furniture using differing sewing techniques, such as cushion mouth and outback
 - apply two other finishing techniques to items of upholstered furniture, one concealed and one decorative
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate sewing equipment, hardware, fabrics, work order, workplace information including work procedures.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which together form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Workplace health and safety requirements may include OHS legislation, material safety management systems, hazardous and dangerous goods codes and safe operating procedures
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the finishing of upholstered furniture
- Work is carried out in accordance with legislative obligations, relevant health regulations, manual handling procedures and organisation insurance requirements

Finishing techniques

Finishing techniques may be:

- decorative techniques which include, but are not limited to:
 - braiding
 - gimping
 - close and open studding
 - single and double piping and banding
- concealed techniques which include, but are not limited to:
 - straight edge
 - shark's teeth
- hand sewing techniques, which may be used in both decorative and concealed finishing. These include, but are not limited to:
 - flange cord
 - cord and ruching
 - the closure of items such as cushions
 - external backs of upholstered furnishings

Tools and equipment may include:

- a range of needles and threads
- tack hammers
- hammers and hot melt glue gun

RANGE STATEMENT	
Materials to be used in finishing items may include but are not limited to:	<ul style="list-style-type: none"> • fabrics • leather • upholstery nails • gimping • metal trim • piping and vinyl
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggles, • hair nets, • ear muffs/plugs, • gloves • footwear and protective clothing
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the setting and operation of machinery and use of tools and equipment • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Specifications, patterns and/or plans are read and interpreted to identify required fabrics, number and nature of items to be cut and required equipment</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Fabrics, work method and sequence are determined</p> <p>1.4. Suitable work area is selected, prepared and cleaned of any contaminants</p> <p>1.5. Appropriate equipment and tools (including scissors and blades) are selected for the fabrics to be cut and checked for safe operation</p> <p>1.6. Fabric is selected and checked in terms of quantity, quality, contaminants, size, pattern and consistency in accordance with workplace procedures</p> <p>1.7. Scissors and any other cutting equipment are checked prior to use for appropriate sharpness, set operation and safe condition</p>
2. Develop cutting list and cutting plan	<p>2.1. Cutting requirements including bias or other instructions are noted</p> <p>2.2. Measurements for upholstered items are taken and listed</p> <p>2.3. Cutting list is developed using appropriate format, abbreviations and terminology for cut sizes, names and number of pieces in accordance with workplace procedures</p> <p>2.4. Cutting plan is developed in accordance with workplace procedures, noting if fabric is railroaded</p>
3. Prepare materials for cutting	<p>3.1. Fabrics are selected in accordance with work order and laid out and inspected for flaws and appropriate finish</p> <p>3.2. Nap/pile direction, direction of pattern, pattern repeat and finished side of the materials are identified</p> <p>3.3. Fabrics are squared up to the edges or guide markings on the cutting table</p> <p>3.4. Patterns are laid out following work procedures and instructions using registration points on the pattern and other instructions to match required fabric pattern</p>
4. Cut material	4.1. Measurements are confirmed and appropriate

ELEMENT	PERFORMANCE CRITERIA
	<p>adjustments to the positioning of fabric are made</p> <p>4.2. Tools and equipment are checked for operation</p> <p>4.3. Required cutting operations are completed to cut out fabrics following work instructions</p> <p>4.4. Cut fabric is inspected for quality and unsatisfactory items are processed in accordance with workplace instructions</p> <p>4.5. Fabrics are folded, wrapped using appropriate protective covers and care label information attached prior to despatch to next process following workplace procedures</p>
5. Complete work	<p>5.1. Unused materials are stored as required</p> <p>5.2. Workplace required documentation, including stock usage, is completed and processed following procedures</p> <p>5.3. Work area is cleaned and damaged tools and equipment tagged as required</p> <p>5.4. Waste is collected for recycling/reuse as required by workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use workplace technology related to the development of cutting plans and cutting fabrics, including tools, equipment, materials and measuring devices

Required knowledge

- fabric types, common faults and inspection procedures
- design features of the finished furnishing items in relation to developing the cutting plan, laying out and cutting the fabrics
- work requirements including workplace standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify materials used and any special cutting requirements for those materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, measure, develop cutting plan, lay out and cut out at least five layers of fabric for an item of upholstered furniture
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate scissors and tools, fabrics, work order, workplace information including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- This unit covers work involving developing a cutting plan and cutting multiple layer upholstery fabrics by hand or automatic method
- A cutting plan is developed to ensure fabric is laid correctly to indicate run for each panel, the dimensions for each component part and to minimise fabric waste

Unit context

- Workplace health and safety requirements may include OHS legislation, material safety management systems, hazardous and dangerous goods codes and safe operating procedures
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the development of cutting plans and the cutting of material. This may be demonstrated either individually or in a team environment
- Work is carried out in accordance with statutory requirements, relevant health regulations, environmental legislation, manual handling procedures and organisation insurance requirements

Tools and equipment may include, but are not limited to:

- cutting table
- tape measures
- scissors
- cutting blades
- round knife cutter
- straight knife
- automatic cutting machines and cloth cutting machine

Materials to be cut may include but are not limited to:

- velvet
- vinyl and plain and patterned fabric

RANGE STATEMENT	
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • gloves • footwear and protective clothing
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the setting and operation of machinery • Workplace procedures relating to the development of cutting plans • Work instructions, including job sheets, patterns, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work operations	1.1. Specifications concerning design, fabrics, accessories and finish for the skirts are confirmed with designer/customer/client, as required 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Fabrics, work method and sequence are determined 1.4. Suitable work area is selected, prepared and cleaned of any contaminants 1.5. Appropriate equipment and tools are selected and checked for safe operation 1.6. Fabric is selected and checked in terms of quantity, quality, contaminants, size, pattern and consistency
2. Measure and mark out pattern/template	2.1. Measurements are taken from furniture item to be fitted or from job sheet/specification 2.2. Pattern/template is developed from measurements 2.3. Fabric is laid out and pattern/template located to conform with pattern/nap/direction of the fabric and to minimise wastage 2.4. Any registration points on the pattern and other instructions to match required pattern components are marked 2.5. Fabric is marked in accordance with workplace procedures
3. Cut and sew skirts	3.1. Fabric is squared up to the edges or guide markings on the cutting table 3.2. Fabric is cut and work inspected to ensure accuracy/tolerance in accordance with workplace procedures 3.3. Sewing machine set up requirements and adjustments are identified and followed 3.4. Machine maintains required product quality and output 3.5. Finished skirts are checked for required quality and reprocessed if required
4. Complete work	4.1. Workplace documentation is completed in accordance with procedures 4.2. Waste and scrap are removed in accordance with workplace procedures 4.3. Machines and tools used are cleaned, inspected for

ELEMENT	PERFORMANCE CRITERIA
	<p>serviceability and stored in accordance with workplace procedures</p> <p>4.4. Equipment is maintained and work area is cleaned in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise component and material sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to the fabrication of skirts for upholstered furniture

Required knowledge

- work requirements including workplace standards and inspection procedures
- workflow in relation to the fabrication of skirts
- fabric types and characteristics, common faults and inspection procedures
- design features of the finished furnishing items in relation to laying out the pattern and cutting the fabric

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify and select fabric, matching pattern/nap/direction
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, measure, mark out, cut and sew the following types of skirts, two of which are to be lined and one of which is to be fitted to a footstool or chair:
 - knife skirt
 - box skirt
 - mock box
 - inverted
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Tape measures, scissors, cutting table, fabric, sewing machines, work order/furniture to be fitted, workplace information including work procedures and/or equipment instructions.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which together form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Job requirements are identified from work instructions 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Machines, attachments, materials, work method and sequence are determined 1.4. Equipment, including any supplementary equipment, is identified and checked for safe operation, components and controls 1.5. Materials are identified and inspected and problems, including any materials or part constructed products which do not meet the job order requirements, are identified and reported in accordance with workplace procedures 1.6. Work pieces are laid out in sequence in accordance with specifications and workplace procedures
2. Conduct sewing operation	2.1. Sewing machine (including attachments as required), set up requirements and adjustments are observed in accordance with workplace procedures 2.2. Appropriate thread type and size is fitted to machine 2.3. Machine is operated to maintain required product quality and outputs 2.4. Reinforcing/protective measures, fittings/attachments and fixing devices are attached in accordance with workplace procedures 2.5. Finished products are inspected for quality with unacceptable items being reprocessed in accordance with workplace instructions
3. Complete work	3.1. Unused materials are stored as required 3.2. Workplace required documentation, including stock usage, is completed and processed following workplace procedures 3.3. Work area is cleaned and damaged tools and equipment tagged as required 3.4. Waste is collected and bundled for recycling/reuse as required by workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise component and material sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to the application of marine sewing and application techniques

Required knowledge

- procedure for reporting damaged or imperfect products or interruption to workflow
- workflow requirements for sewing process
- operation of work systems and sewing equipment
- characteristics of materials used and application and requirements of the finished products
- causes of faults and repair methods
- identification of equipment, processes and procedures
- quality systems and standards
- workplace procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify and select materials used and any special handling requirements for those materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum:
 - prepare and install a minimum of 3 square metres of cover to at least 3 vertical or horizontal surfaces
 - sew at least three covers
 - sew appropriate fasteners and attachments to covers sewn
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate sewing machine, work orders, operating procedures, materials, fittings and threads.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope	<ul style="list-style-type: none"> • This unit addresses the sewing techniques used to sew materials used in marine application and to fit the required attachments and fixing devices • Fittings/attachments and fixing devices include: clips, press studs, buckles, eyelets, shackles, zips, reinforcing patches, straps • Suitable installation methods are used with consideration to suitability or products used in the process
Unit context	<ul style="list-style-type: none"> • Workplace health and safety includes OHS legislation, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the application of marine sewing techniques • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Job requirements may include:	<ul style="list-style-type: none"> • required materials • threads • additional work features • shape and special requirements for the item • any required workplace documentation to be competed
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • overlocker • flat bed • twin needle and walking foot
Tools and equipment may include:	<ul style="list-style-type: none"> • measuring tape • scissors

RANGE STATEMENT	
	<ul style="list-style-type: none"> • cutting blades • knives and thread
Materials to be sewn may include but are not limited to:	<ul style="list-style-type: none"> • canvas • sail materials • leather • foam-backed vinyl and upholstery fabrics
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • gloves • footwear • protective clothing and breathing apparatus
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machines • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Specifications, patterns and/or plans are read and interpreted to identify required material, number and nature of items to be cut and the equipment to be used</p> <p>1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work</p> <p>1.3. Machines, attachments, tools (including scissors and blades), materials, work method and sequence are determined</p> <p>1.4. Suitable work area is selected, prepared and cleaned of any contaminants</p> <p>1.5. Equipment, including any supplementary equipment, is identified and checked for safe operation, components and controls</p> <p>1.6. Scissors and any other cutting equipment, such as a hot knife, are selected for the material to be cut and checked for appropriate sharpness, operation and safe condition</p> <p>1.7. Materials to be cut and sewn are identified and inspected and problems, including any materials which do not meet the job order requirements, are identified and reported in accordance with workplace procedures</p>
2. Develop cutting plan	<p>2.1. Cutting requirements are identified</p> <p>2.2. Measurements for item are confirmed, noting locations of high wear/chafing, fittings/attachments and fixing devices</p> <p>2.3. If appropriate, cutting list is developed using appropriate format, abbreviations and terminology for cut sizes and number of pieces in accordance with workplace procedures</p> <p>2.4. Cutting plan is developed in accordance with workplace procedures</p>
3. Prepare materials for cutting	<p>3.1. Material is selected in accordance with work order and laid out and inspected for flaws</p> <p>3.2. Finished side of the materials is identified and positioned on cutting table for marking/pattern lay out</p> <p>3.3. Material is marked out/patterns are laid out following work procedures and instructions</p>
4. Cut material	<p>4.1. Measurements are confirmed and appropriate</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>adjustments to the positioning of fabric are made</p> <p>4.2. Tools and equipment are checked for operation</p> <p>4.3. Required cutting operations are completed to cut material following work instructions</p> <p>4.4. Cut material is inspected for quality and unsatisfactory items are processed in accordance with workplace instructions</p> <p>4.5. Cut materials are labelled and despatched to next process in accordance with workplace procedures</p>
5. Conduct sewing operation	<p>5.1. Items to be sewn are inspected for quality and dimensions</p> <p>5.2. Sewing machine (including attachments as required) is set up in accordance with workplace instructions</p> <p>5.3. Machine is operated in accordance with manufacturers' instructions and workplace procedures to maintain required product quality and output</p> <p>5.4. Reinforcing/protective measures, fittings/attachments and fixing devices are attached in accordance with workplace procedures</p> <p>5.5. Finished items are inspected for quality with unacceptable items being reprocessed in accordance with workplace procedures</p>
6. Complete work	<p>6.1. Workplace documentation, including stock usage, is completed and processed following workplace procedures</p> <p>6.2. Equipment maintenance and work area clean up are completed following workplace procedures</p> <p>6.3. Waste is collected and bundled for recycling/reuse as required by workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise component and material sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to the measuring, cutting and sewing of canvas and acrylics

Required knowledge

- procedure for reporting damaged or imperfect products or interruption to workflow
- workflow requirements for cutting and sewing process
- operation of work systems and cutting and sewing equipment
- characteristics of the materials used and the application of the finished products
- causes of faults and repair methods
- identification of equipment, processes and procedures
- quality systems and standards
- workplace procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects of evidence</p>	<ul style="list-style-type: none"> • Interpret work order and locate and apply relevant information • Identify and select materials used and any special handling requirements for those materials • Follow work instructions, operating procedures and inspection practices to: <ul style="list-style-type: none"> • minimise the risk of injury to self and others • prevent damage to goods, equipment and products • maintain required production output and product quality • As a minimum,: <ul style="list-style-type: none"> • measure, cut and sew one canvas product and one acrylic product • apply binding as an edge finish to a curve and three corners, 2 metres in length • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
<p>Resource implications</p>	<p>Appropriate measuring tapes, cutting table, scissors, blades and cutting machines, sewing machine, work orders, operating procedures, materials and threads.</p>
<p>Method of assessment</p>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.</p>
<p>Context of assessment</p>	<p>Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope

- This unit addresses the measuring, cutting and sewing of canvas and acrylic materials for upholstery application and for other uses such as automotive and marine application
- Materials include but are not limited to:
 - cloths
 - canvases
 - acrylics
 - carpets
 - foam-backed fusion bonded and needle punched materials
- Fittings/attachments and fixing devices include:
 - clips
 - press studs
 - buckles
 - eyelets
 - shackles
 - zips
 - reinforcing patches
 - straps

Unit context

- Workplace health and safety includes OHS legislation, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the set up and operation of machines
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

RANGE STATEMENT	
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • overlocker • flat bed • walking foot
Materials to be machined may include but are not limited to:	<ul style="list-style-type: none"> • fabrics • cotton canvas • acrylics and thread
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • gloves • footwear and protective clothing
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machine s • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements including design, quality, materials, equipment and quantities 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Determine appropriate CNC cutting program and settings 1.4. Material for cutting is selected and inspected for appropriate quality 1.5. Machines, cutting tools and jigs are checked for safe and effective operation 1.6. Procedures are determined for minimising waste material and for maximising energy efficiency while completing the job 1.7. Safety equipment, including emergency stops, gauges, guards and controls are checked
2. Set up machines	2.1. CNC cutting program is set to job requirements 2.2. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions 2.3. Trial runs are conducted to check machine operation and quality of finished work 2.4. Final adjustments are made to CNC programs and equipment according to workplace procedures
3. Operate CNC cutting machine	3.1. Machines are operated and monitored to ensure product quality and output 3.2. Waste quantities are checked and minimised 3.3. Problems with the required work, including machine operation/production, are identified and reported in accordance with workplace procedures 3.4. Any authorised changes in working procedures are followed 3.5. Daily routine lubrication and adjustments for the equipment are completed
4. Complete work and maintain equipment	4.1. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures 4.2. Material that can be reused is collected and stored 4.3. Waste and scrap are removed following workplace

ELEMENT	PERFORMANCE CRITERIA
	<p>procedures</p> <p>4.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</p> <p>4.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</p> <p>4.6. Operator maintenance is performed on equipment and tooling is maintained in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate quantities and estimate material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the workplace technology related to the operation of CNC cutting machines including programs, development of computer applications within the industry and precision measuring devices

Required knowledge

- workflow in relation to the operation of CNC machines
- identification of machines, processes and procedures, including maintenance requirements
- procedures for reporting materials, product or equipment faults
- quality requirements of components produced
- characteristics of materials used and uses of products produced
- workplace safety system requirements related to the operation of CNC machines

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information to set up, operate, adjust, monitor and maintain equipment used to produce components for upholstered furniture
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment, safety and environmental protection equipment
- Identify and operate CNC cutting machines including the use of safety cut outs and guards
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum:
 - set up and program machine for the cutting task
 - load fabric
 - operate machine to cut components for a chair
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

CNC cutting machines, standard operating procedures, unprocessed materials and appropriate work area.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and generally be in conjunction with assessment of other units of competency which together form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant CNC equipment,

EVIDENCE GUIDE

materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Advise on resource requirements	1.1. Calculate estimates of future and present business resource needs in accordance with organisational requirements 1.2. Ensure advice is clear, concise and relevant to achievement of organisational requirements 1.3. Provide information on the most economical and effective choice of equipment, materials and suppliers 1.4. Identify resource shortages and possible impact on operations
2. Monitor resource usage and maintenance	2.1. Ensure resource handling is in accordance with established organisational requirements including occupational health and safety requirements 2.2. Use business technology to monitor and identify the effective use of resources 2.3. Use consultation with individuals and teams to facilitate effective decision making on the appropriate allocation of resources 2.4. Identify and adhere to relevant policies regarding resource use in the performance of operational tasks 2.5. Routinely monitor and compare resource usage with estimated requirements in budget plans
3. Acquire resources	3.1. Ensure acquisition and storage of resources is in accordance with organisational requirements, is cost effective and consistent with organisational timelines 3.2. Acquire resources within available time lines to meet identified requirements 3.3. Review resource acquisition processes to identify improvements in future resource acquisitions

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read and understand organisation's policies and procedures; to write simple instructions for a particular routine task
- evaluation skills to diagnose faults and to monitor resource usage
- problem-solving skills to determine appropriate fault repair actions
- numeracy skills to calculate resource expenditure
- technology skills to select and use technology appropriate to a task.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety (OHS)
- organisational resource acquisition policies, plans and procedures
- functions of a range of business equipment
- organisational procedures for record keeping/filing systems, security and safe recording practices.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> collecting and recording data on resource use observing resource use over defined and operational timeframes carrying out routine maintenance knowledge of organisational resource acquisition policies, plans and procedures.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to an actual workplace or simulated environment access to office equipment and resources.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate review of documentation estimating future and present business resource needs analysis of responses to case studies and scenarios demonstration of techniques oral or written questioning to assess knowledge of equipment maintenance procedures review of information provided on the most economical and effective choice of equipment, materials and suppliers evaluation of documentation reviewing resource acquisition processes.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> other general administration units.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. BSBADV512A Develop an advertising strategy and brief

Modification History

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop an advertising brief, advertising strategy and creative brief which reflects advertiser needs and preferences.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

This unit describes the performance outcomes, skills and knowledge required to develop an advertising brief, advertising strategy and creative brief which reflects advertiser needs and preferences.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit

This unit applies to individuals working in a supervisory or management advertising role within an advertising team or media organisation.

This unit applies to individuals working in a supervisory or management advertising role within an advertising team or media organisation.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

This unit contains employability skills.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Determine advertiser requirements	1.1 Confirm the advertising purpose and objectives with the advertiser
	1.2 Obtain comprehensive client and product information
	1.3 Review the outcomes of previous advertising with the client
	1.4 Confirm budget allocation with the client
2 Develop an advertising brief	2.1 Ensure the brief contains a client profile, purpose statement and objectives that reflect advertiser needs
	2.2 State advertising objectives in measurable terms and provide specific guidelines on what is to be accomplished by the advertising
	2.3 Define key characteristics, competitive factors and the market situation facing the product or service in the advertising brief
	2.4 Include a summary of information on the target audience , and legal and ethical constraints in the advertising brief
	2.5 Ensure the brief contains a budget allocation and schedule of activities which comply with the

- advertiser's requirements
- 3 Develop an advertising strategy
 - 3.1 Establish **key consumer insight**
 - 3.2 Develop **advertising objectives**
 - 3.3 Describe audience to be targeted according to **demographic, psychographic and behaviouristic characteristics**
 - 3.4 Develop a positioning statement
 - 3.5 Create a unique selling proposition and support statement
 - 3.6 Develop **desired consumer response**
 - 3.7 Establish brand personality
 - 3.8 Suggest media leveraging opportunities
 - 3.9 Confirm **advertiser's mandatory requirements**
 - 4 Develop a creative brief
 - 4.1 Identify **advertising content** using consumer language in the advertising brief
 - 4.2 Identify a **pitch or appeal** for the product in the advertising brief that meets the advertiser's requirements
 - 4.3 Identify **supporting information** required for consumer understanding of the product or service in the advertising brief
 - 4.4 Ensure a budget for creative work that is consistent with the overall advertising budget is contained in the advertising brief
 - 4.5 Incorporate a deadline for creative work that is consistent with the overall advertising schedule in the advertising brief

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

communication skills to question, clarify and report when creating an advertising brief

literacy skills to write in a range of styles for different audiences and to interpret legal requirements, company policies and procedures

numeracy skills to develop budgets

organisational and time management skills to plan projects, meet deadlines and allocate tasks

technology skills to use a wide range of office equipment and software to create an advertising brief.

Required knowledge

industry, services/products and organisation

legal and ethical requirements relating to the advertising industry

organisational products or services

principles and purposes of advertising

principles of consumer behaviour and influences on buyer behaviour

range of available advertising approaches for different markets

identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:

anti-discrimination legislation

consumer protection laws

copyright legislation

ethical principles

fair trading laws

privacy laws

Trades Practices Act

requirements for advertising timelines, budget, central idea, resources as specified in the advertising brief.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
development of at least one advertising brief which meets the advertiser's requirements, needs and preferences.

Context of and specific resources for assessment

Assessment must ensure:
access to an actual workplace or simulated environment
access to office equipment documentation and resources.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports/examples of advertising briefs
- demonstration of techniques used to create advertising briefs
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of principles and purposes of advertising
- review of creative brief and advertising strategy.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

other advertising units.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Advertising purpose may include:	communicating a message to a particular audience differentiating features or benefits promoting image providing information recruiting staff retaining customers stimulating demand for a product or service
Client and product information may include:	distribution channels existing customers and target market packaging design past advertising for the product price, if any problems and opportunities facing the product product name and characteristics the company, its business policies and practices the company's promotional ethos the competition
Advertising objectives may include:	the launch or re-launch of a product or service to improve sales performance and/or profit to maintain or improve market share to maintain or increase awareness of a product or service to test a product or service
Information on the target audience may include:	attitudes cultural factors

demographics
existing product usage
lifestyle
social factors
values

Legal and ethical constraints may include: codes of practice such as those issued by:
Advertising Federation of Australia
Australian Communications and Media Authority
Australian Competition and Consumer Commission
Australian Performing Right Association
Commercial Radio Australia
Free TV Australia

cultural expectations and influences
ethical principles
legislation
policies and guidelines
regulations
social responsibilities such as protection of children, environmental issues
societal expectations

Key consumer insight may include: opportunities for extension
opportunities for new use of product
problems within product category

Advertising objectives may include: to inform
to persuade
to remind

Demographic characteristics may include: age
education
gender
income

marital status
number of children
nationality
occupation

Psychographic characteristics may include: activities
attitudes
interests
lifestyle
opinions
values

Behaviouristic characteristics may include: benefits sought by buyer
loyalty status of buyer
readiness stage of buyer
user status of buyer

Desired consumer response may include: behavioural outcomes
emotions and feelings
rational thought

Advertiser's mandatory requirements may include: previous tag lines
specific media placements
specified personality
specified spokesperson

Advertising content may include: information to be communicated to the audience such as:
brand or image factors
colour
competitive advantages
features of the product/service
price
where the product/service may be obtained

Pitch or appeal may include: the key benefits promised to the audience by the advertiser, which may be:
emotional

need-arousing
need-satisfying
negative
positive
rational

Supporting information may include:

a requirement to specify the target audience
evidence to support the claimed benefit
purchasing information
reassurances for existing users

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify customer needs	1.1. Question customers in detail and listen actively to determine product/service requirements 1.2. Verify and agree customer needs with the customer 1.3. Access existing customer records 1.4. Offer technical/specialist advice to customer where such advice is considered beneficial to the closing of the sale and customer understanding and decision making 1.5. Identify customer's financial limitations 1.6. Discuss estimates and quotes with specialist staff if necessary, prior to submission to customer 1.7. Prepare, present and discuss estimates/quotes with customer, as the role permits 1.8. Explain fully, benefits of the various options 1.9. Explain fully, pricing structures to the customer 1.10. Give customers the opportunity to question options/quotes provided 1.11. Promote advantages of dealing with the enterprise 1.12. Manage customer objections effectively by promotion of specific benefits
2. Close sales	2.1. Agree on product/service to be purchased with the customer 2.2. Clearly establish customer's preferred purchase/payment arrangements 2.3. Accurately finalise documentation relating to sale and forward to customer for agreement and signature 2.4. Negotiate and arrange payment method with customer 2.5. Conduct appropriate credit checks 2.6. Clearly record delivery/installation arrangements as agreed with customer 2.7. Comply with relevant legislation, codes, regulations and standards during the contact and sale
3. Input sales records	3.1. Fully record details of sale 3.2. Amend existing customer records where appropriate 3.3. Initiate invoices in accordance with enterprise policy 3.4. Organise delivery/installation in accordance with enterprise policy

ELEMENT	PERFORMANCE CRITERIA
4. Provide sales support where required	4.1. Verify customer satisfaction after delivery/installation 4.2. Identify additional action to satisfy customer needs 4.3. Initiate action in an efficient and timely manner

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to effectively communicate with internal and external customers
- communication skills to relate to people from diverse backgrounds and people with diverse abilities
- customer service and sales skills to effectively and efficiently operate within sales environment
- literacy skills to clearly articulate information and advice
- negotiating skills to successfully work through the sales process and difficult contacts or situations
- numeracy skills to accurately analyse and validate data
- organisational skills to manage own tasks within timeframes
- problem-solving skills to apply a range of problem-solving strategies
- self-management skills to consistently evaluate and monitor own performance and to have confidence in own ideas and vision.

Required knowledge

- enterprise pricing policies
- enterprise protocols associated with customer service and sales
- estimate/quote procedures
- marketing principles and practice
- sales principles
- statutory, regulatory and legislative requirements.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • Clear and precise understanding of customer needs • Matching of product/service to customer need • Prices relating to product/service offered are clearly explained and understood by the customer • Application of appropriate credit check • Arrangement of customer payment • Agreement with customer as to payment and delivery arrangements • Accurate recording of sales, payment and delivery arrangements
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant standards, guidelines and/or legislation • access to workplace information and data • access to relevant resources • access to work environment or simulated customer contact centre to observe interaction with customers
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • direct observation of interaction with customers • review record of sale and customer satisfaction • review agreed payment methods and credit checks • oral and/or written questioning to assess knowledge of systems and organisational requirements (security and operational).

EVIDENCE GUIDE

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Respond to complaints	1.1. Process <i>customer complaints</i> using <i>effective communication</i> in accordance with organisational procedures established under organisational policies, legislation or codes of practice 1.2. Obtain, <i>document</i> and review necessary reports relating to customer complaints 1.3. Make decisions about customer complaints, taking into account applicable legislation, organisational policies and codes 1.4. Negotiate resolution of the complaint and obtain agreement where possible 1.5. Maintain a register of complaints/disputes 1.6. Inform customer of the outcome of the investigation
2. Refer complaints	2.1. Identify complaints that require referral to other personnel or external bodies 2.2. Make <i>referrals</i> to appropriate personnel for follow-up in accordance with individual level of responsibility 2.3. Forward all documents and investigation reports 2.4. Follow-up appropriate personnel to gain prompt decisions
3. Exercise judgement to resolve customer service issues	3.1. Identify implications of issues for customer and organisation 3.2. Analyse, explain and negotiate appropriate options for resolution with customer 3.3. Propose viable options in accordance with appropriate legislative requirements and enterprise policies 3.4. Ensure matters for which a solution cannot be negotiated are referred to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to interpret customer complaints, and to monitor and advise on customer service strategies and resolutions
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- literacy skills to read and understand a variety of texts; to prepare general information and papers according to target audience; and to edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
- problem-solving skills to deal with customer enquiries or complaints, to apply organisational procedures to a range of situations and to exercise judgement in this application.

Required knowledge

- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety (OHS)
- importance of good communication skills and the individual's role in processing customer complaints
- organisational procedures and standards for processing complaints and recommending appropriate action.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • applying judgement in the application of industry and/or organisational procedures • working with customer complaints • knowledge of organisational procedures and standards for processing complaints.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • examples of customer complaints • examples of documents relating to customer complaints policies and procedures.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • analysis of responses to case studies and scenarios • demonstration of techniques • observation of presentations • oral or written questioning to assess knowledge of individual's role in processing customer complaints • review of documentation outlining necessary reports relating to customer complaints • review of complaints/disputes register.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • customer service units • other general administration units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Customers</i> may include:	<ul style="list-style-type: none"> • customers with routine or specific requests • internal or external customers • people from a range of social, cultural or ethnic backgrounds • people who may be unwell, drug affected or emotionally distressed • people with varying physical and mental abilities • regular and new customers
<i>Complaints</i> may include:	<ul style="list-style-type: none"> • different types of severity, formality and sources • scenarios where external bodies such as police are required • straightforward customer dissatisfaction • level of documentation required
<i>Effective communication</i> may include:	<ul style="list-style-type: none"> • giving customers full attention • maintaining eye contact (for face-to-face interactions), except where eye contact may be culturally inappropriate • speaking clearly and concisely • using appropriate language and tone of voice • using clear written information/communication • using non-verbal communication e.g. body language, personal presentation (for face-to-face interactions)
<i>Documenting</i> reports relating to customer complaints may include:	<ul style="list-style-type: none"> • completed forms and written reports • using audio-visual tapes • using computer-based systems
<i>Referrals</i> may include:	<ul style="list-style-type: none"> • external bodies e.g. Ombudsman, Independent Commission Against Corruption (ICAC), police • relevant superiors in the organisational hierarchy

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse ideas for communication to others	1.1. Distil key themes, messages and positions to aid in clarity of thought and presentation 1.2. Reflect on different ways of communicating ideas for different purposes and to different people 1.3. Identify the enabling skills and attributes of individuals who can effectively participate in discussions about ideas
2. Provoke response and reaction	2.1. Explore and use different techniques to engage, fascinate and involve others in the process of communication and exchange 2.2. Explore the ways that storytelling can be used to communicate ideas 2.3. Create innovative approaches to different communication challenges 2.4. Be prepared to take risks in the way ideas are presented 2.5. Identify specific ways to provoke and encourage response in particular individuals or groups
3. Debate and discuss ideas	3.1. Present and argue substantiated positions on ideas 3.2. Be open to critical analysis of own ideas and to the ideas of others 3.3. Identify and participate in conversations that challenge and explore different concepts and approaches, and generate new ideas 3.4. Respond to questions about ideas with confidence and relevant information 3.5. Reflect on and appraise the views of others, and use to refine ideas and to embrace new ideas

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to present ideas in ways that engage and provoke response, and to debate and discuss potentially complex concepts
- creative thinking skills to develop responses and new ideas in response to feedback
- learning and self-management skills to actively seek feedback and to learn from others
- literacy skills to develop and interpret information dealing with complex ideas.

Required knowledge

- creative and different ways of expressing and communicating ideas, and of making an opportunity pitch
- different ways in which individuals receive and respond to ideas and information, and what influences their response
- nature and role of risk taking in the presentation and debate of ideas
- role of storytelling in communicating ideas and key storytelling techniques
- techniques to tailor comments to particular audiences.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • creative and articulate presentations that provoke interest and response • active and confident participation in critical debate and discussion of ideas.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • presentations to others about ideas • discussion and debate with others about ideas.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • direct observation of candidate participation in presentations and debates • evaluation of candidate's skills in responding to new and different communication situations • evaluation of candidate telling a story, making a pitch or presenting ideas to complete strangers in 'different' environments (e.g. in a restaurant, in the corridor, on a bus, in a lift).
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Key themes, messages and positions</i> may relate to:</p>	<ul style="list-style-type: none"> • essence of the idea • influences on the idea • relationship of idea to established tradition or practice • relationship of idea to new and emerging technology • problems and challenges with the idea • reasons why the idea should be supported • selling a creative team • selling creative ideas • selling self as a creative person • way the idea was developed • who had developed the idea and why
<p><i>Different ways of communicating ideas</i> may be:</p>	<ul style="list-style-type: none"> • aural • group presentation/pitch • in a forum • in elevators • one-on-one discussion • on planes • oral • remote (e.g. video conferencing) • visual
<p><i>Individuals</i> may be:</p>	<ul style="list-style-type: none"> • colleagues • community members • friends • gallery owners • interviewers (media) • investors • mentors • panels • peers • students • supervisors or managers

RANGE STATEMENT	
<i>Different techniques to engage, fascinate and involve others</i> may include:	<ul style="list-style-type: none"> • blogging • media releases • multimedia presentations • music • photography • storytelling • viral marketing • visual depictions
<i>Innovative approaches to communication challenges</i> may involve ability to:	<ul style="list-style-type: none"> • get across all key messages in a short time • present on unfamiliar topic • respond to impromptu situations • structure information quickly and effectively
<i>Specific ways to provoke and encourage response</i> may include:	<ul style="list-style-type: none"> • use of engaging objects to explain idea
<i>Risks</i> may involve:	<ul style="list-style-type: none"> • acknowledging own limits and difficulties • asking for help • breaking out of accepted norms • divulging personal information or vulnerabilities • failing and learning from it • incorporating humour • taking a fun approach with a potentially serious audience
<i>Substantiated positions</i> may be positions which are:	<ul style="list-style-type: none"> • grounded in appropriate research • result of rational and logical thought • subjected to the analysis of others (e.g. peer review) • supported by relevant information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Enter into a collaborative creative process	1.1. Adopt a <i>personal philosophy of trustworthy and ethical behaviour</i> 1.2. Maximise the possibilities of sustaining creative partnerships through trustworthy and ethical behaviour 1.3. Use <i>professional discretion and judgement</i> in dealing with others 1.4. Acknowledge and respect the <i>different ways that different people may contribute</i> to the creative process 1.5. Acknowledge and work within the legal framework that applies to creative content as part of individual commitment to an ethical approach 1.6. Respect collaborative efforts by relinquishing individual ownership of ideas
2. Engage in a collaborative creative process	2.1. Maintain a <i>belief in personal ideas</i> , combined with a willingness to move on as ideas are discarded and others evolve 2.2. Be prepared to let go of own vanity and ego to allow new ideas to emerge 2.3. Use <i>language</i> and adopt a <i>demeanour</i> that demonstrates respect and trust for others 2.4. Listen to, value, respect and trust the contributions of others as material to work with rather than positions to argue against 2.5. Challenge, test and share ideas in a supportive way as part of the creative process 2.6. Move on from initial positions and preconceptions to accept and embrace new and unpredictable ideas as they emerge during the creative process 2.7. Play a role that encourages the <i>movement and shift of ideas</i> within the group towards a well-conceived solution
3. Reflect on own role in the collaborative creative process	3.1. Reflect on own level of participation, relationships with others and personal behaviour in the collaborative process 3.2. Identify ways to do better next time and follow up on any issues that need to be resolved 3.3. Identify and seek opportunities to refine and expand own skills and knowledge, including learning from

ELEMENT	PERFORMANCE CRITERIA
	failing

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to nurture trust, to model open and supportive communication, and to articulate potentially complex ideas
- creative thinking skills to generate and explore ideas
- learning and self-management skills to reflect on and enhance own ability to contribute effectively to a collaborative creative process
- problem-solving skills to continually be evaluating and challenging ideas and moving them forward towards solutions.

Required knowledge

- concept of shared intellectual property from collaborative creativity
- concepts of trust and ethical behaviour in the context of creative endeavour
- different roles people may play in a collaborative creative process and how this contributes to the overall effort
- how the creative process works in different situations (e.g. as an individual, as part of a group)
- how the potential for creativity can be maximised within a team
- legal framework that affects copyright, moral rights and intellectual property issues
- what stops creativity in a group environment.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • positive and full participation in a collaborative creative process that generates, expands and develops ideas into a well-conceived solution • communication and creative-thinking skills that make a positive contribution to the collaborative effort • knowledge and understanding of the ethical framework in which any type of creative endeavour operates.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • involvement of a team of people in the collaborative creative process.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • direct observation of the candidate participating in collaborative creative activity • interviews with others participating in the process to determine the nature and quality of the candidate's participation and interactions • evaluation of candidate presentation (verbal or written) on the collaborative process, including challenges, benefits and key learning for the future • oral or written questioning to assess knowledge of concepts of trust and ethical behaviour in the context of creative endeavour.
Guidance information for assessment	A collaborative creative effort always occurs in a specific context. Therefore holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended. Assessors must, however, retain a strong focus on the key aspects of collaboration and

EVIDENCE GUIDE

creativity detailed in this unit. Combined assessment with the following unit would also be appropriate:

- BSBCRT301A Develop and extend critical and creative thinking skills.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Personal philosophy of trustworthy and ethical behaviour</i> may relate to:</p>	<ul style="list-style-type: none"> • acknowledging discomfort or anger • being prepared to fully participate • communicating in an open way • honesty • honouring commitments • sensitivity to social, cultural, personal situations and dynamics • showing respect • understanding of the consequences of actions
<p><i>Professional discretion and judgement</i> may relate to:</p>	<ul style="list-style-type: none"> • assessing when to keep quiet • being aware of and responding to different personality types • knowing when it is appropriate or inappropriate to share information • knowing with whom information should be shared
<p><i>Different ways that different people may contribute</i> may relate to:</p>	<ul style="list-style-type: none"> • different approaches to expressing opinions or ideas • inclinations to lead or follow • influence with others • interpersonal skills • networks • past experience • technical skills and expertise
<p><i>Belief in personal ideas</i> may be demonstrated by:</p>	<ul style="list-style-type: none"> • backing ideas up with information and rationale • being prepared to argue for own ideas • confidence in own ability to create many ideas • confidence to share ideas • confident articulation of ideas • spending time developing and refining own ideas
<p><i>Language</i> that demonstrates</p>	<ul style="list-style-type: none"> • acknowledging new ideas and effort

RANGE STATEMENT	
respect for others may involve:	<ul style="list-style-type: none"> • avoiding negative words • avoiding personal negatives like 'you cannot' or 'you should not' • choosing words wisely • listening • making differentiations between ideas and people • managing tone • speaking at a level appropriate to the listener
<i>Demeanour</i> that demonstrates respect for others may relate to:	<ul style="list-style-type: none"> • avoiding intellectual bullying • encouraging others to express ideas • facial expression • keeping a positive mindset • listening before speaking • physical position • refraining from blame or accusation • other non-verbal behaviour • understanding the balance between constructive comment and attention seeking
<i>Movement and shift of ideas</i> may involve:	<ul style="list-style-type: none"> • building in 'what if' scenarios • encouraging a stocktake before moving forward • making connections between seemingly disparate ideas • refining ideas that seem positive • returning to earlier ideas • returning to key objectives • suggesting new processes • turning ideas 'on their head' to resolve blockages

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate the history of creativity	1.1. Identify relevant <i>sources of information</i> on the history of creativity 1.2. Investigate and review different definitions of creativity and how these relate in an historical context 1.3. Assess the ways that individuals and collaborative groups have demonstrated creativity 1.4. Explore the relationship between creativity and different cultures and relate these to current contexts
2. Assess the impacts of creativity	2.1. Explore the <i>impacts of creativity</i> on the ways that people live and work 2.2. Explore the ways in which creativity has occurred in <i>different fields of human endeavour</i> 2.3. Determine and evaluate the <i>factors that affect the presence or extent of creativity</i> in a given situation
3. Evaluate the potential for enhancing creativity in own life	3.1. Extract key information and ideas from the history of creativity for possible relevance to own life and work 3.2. Discuss and explore ideas with others 3.3. Reflect on how creativity or creative thinking might be integrated into own life and work 3.4. Identify and access <i>opportunities to build own creative thinking skills</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to discuss and explore ideas about creativity with others
- comprehension skills to interpret information dealing with potentially complex ideas.

Required knowledge

- impact of creativity at different points in history, including contemporary perspectives
- potential links between the history of creativity and current individuals and communities
- sources of information on the history and social impact of creativity
- ways in which different factors impact on creativity and how it is demonstrated in various cultural contexts.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> knowledge and understanding of the history and social impact of creativity, including its contemporary relevance to individuals and communities.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to sources of information on the history of creativity.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate evaluation of candidate's exploration of creativity and its impact, demonstrated through oral or written presentation oral or written questioning to assess knowledge of creativity in an historical and contemporary context review of identification of opportunities to build own creative thinking skills.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Sources of information</i> may include:</p>	<ul style="list-style-type: none"> • artistic works (visual, aural, oral) • arts co-operatives • clubs • friends and family • internet • printed references and texts • production teams
<p><i>Impacts of creativity</i> may include:</p>	<ul style="list-style-type: none"> • archaeological discoveries • botanical/anthropological discoveries • change in nature of communication between individuals and communities • changed relationships between gender and generations • changes in style • conservative versus adventurous culture and social mindset • improvement in living conditions • new products and services • reduced costs • scientific discoveries • sudden or gradual political change • totally new ways of undertaking tasks
<p><i>Different fields of human endeavour</i> may be:</p>	<ul style="list-style-type: none"> • agriculture • arts • science • subsistence - primitive societies • technology
<p><i>Factors that affect the presence or extent of creativity</i> may include:</p>	<ul style="list-style-type: none"> • culture • economic • environmental • family • friends • political

RANGE STATEMENT	
	<ul style="list-style-type: none"> • right time and place • social
<i>Opportunities to build own creative thinking skills</i> may include:	<ul style="list-style-type: none"> • attendance at seminars • participation in creative activities • reviewing and adapting own communication skills • using new approaches to work • working in creative communities

BSBCRT501A Originate and develop concepts

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to originate and develop concepts for products, programs, processes or services to an operational level. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.
------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>This unit applies to individuals who originate and develop concepts of some complexity and progress that concept to the point where it can be implemented. Individuals may be employed by organisations, be sub contractors or consultants brought in by companies to work on specific projects, or be individuals or part of a team working independently.</p> <p>Concepts could be developed for any business or community activity or process such as marketing campaigns, staff development programs, information technology and communication systems. This unit is also highly relevant to practitioners in the creative industries who develop products such advertising campaigns, radio and television programs, entertainment events, films, exhibitions and digital media products.</p> <p>A person undertaking this role would operate with a high degree of autonomy and at a senior level if working within an organisation. However, the process of generating concepts and ideas is collaborative in nature.</p> <p>Skills associated with writing proposals to support concept development are covered in BSBWRT401A Write complex documents.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate and explore needs and opportunities	<p>1.1. Research and evaluate <i>existing information that informs new concept development</i></p> <p>1.2. Where appropriate, identify and use gaps in current range of <i>products, programs, processes or services</i> as the catalyst for generating new ideas or concepts</p> <p>1.3. Expand the potential of new ideas through <i>exploration of opportunities beyond the obvious</i></p> <p>1.4. Identify <i>factors</i> that could have an impact on ideas or concepts to be developed, including potential for commercialisation</p> <p>1.5. Determine whether other players are filling identified gaps or investigating similar opportunities</p> <p>1.6. Develop preliminary ideas on innovative and different ways to address needs and opportunities</p> <p>1.7. In consultation with <i>relevant stakeholders</i>, agree on broad parameters for developing ideas and concepts to meet market requirements</p>
2. Develop a range of creative approaches	<p>2.1. Use a range of <i>creative thinking techniques</i> to generate innovative and creative concepts to address identified needs</p> <p>2.2. Challenge, test and experiment with different concepts and ideas as part of a collaborative process</p> <p>2.3. Evaluate concepts in terms of their suitability for the target audience or purpose, their feasibility and their commercial potential</p> <p>2.4. Take account of social, ethical and environmental issues as concepts and ideas are generated and discussed</p> <p>2.5. Identify <i>resources</i> required to achieve desired creative and innovative outcomes</p> <p>2.6. Evaluate the effectiveness of different strategies for achieving desired outcomes</p> <p>2.7. Select concepts or approaches that achieve required outcomes in an innovative and feasible way</p> <p>2.8. Present proposed concepts or approaches in an appropriate <i>format</i></p>
3. Refine concepts	<p>3.1. Ensure concept development process is open to ongoing refinement and testing</p> <p>3.2. Seek input and feedback on concepts from relevant stakeholders</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Seek specialist advice on creative and technical aspects of proposals as required</p> <p>3.4. Compare concepts with best practice examples of similar products, programs, processes or services</p> <p>3.5. Use a range of <i>creative and practical criteria</i> to determine the advantages and disadvantages of different concepts</p> <p>3.6. Evaluate <i>constraints</i> on the realisation of concepts or ideas</p> <p>3.7. Refine proposals based on analysis and feedback</p>
4. Develop concepts to an operational level	<p>4.1. Use refined concepts as the basis for developing detailed <i>implementation specifications</i></p> <p>4.2. Present specifications to relevant parties for approval, funding or endorsement</p> <p>4.3. Reflect on methodology used to generate concepts and ideas and note ways of improving this in the future</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and teamwork skills to work collaboratively on ideas and to articulate the rationale for concepts in ways that promote constructive discussion with others
- creative thinking skills to generate a range of innovative concepts and ideas, to use lateral thinking and to take a visionary approach to developing concepts and ideas
- initiative and enterprise skills to pro-actively identify market requirements
- planning and organising skills to take account of practical issues for concept implementation
- self-management skills to meet deadlines.

Required knowledge

- broad context in which concepts are being developed
- cultural, social and environmental issues and impacts to be considered in developing new concepts
- issues and requirements to commercialise the concept
- legal requirements that affect work in a given industry context
- practical and operational issues to be considered in a specific work or community context
- range of broad practical and operational issues that determine whether a concept can be implemented (in any context)
- techniques for generating creative ideas and solutions, and for translating these ideas into workable concepts.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • development of at least two concepts, substantiated and supported with sufficient information to allow for implementation to occur • generation of concepts and ideas that provide innovative solutions to identified issues • knowledge of legal requirements that affect work in a given industry context.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to the full range of background information required to evaluate the operational factors that will affect the implementation of concepts • interaction with others to reflect the collaborative nature of the concept development process.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of concepts generated by the candidate, of the processes used to generate and test the ideas and the material developed to support the concept • debate and discussion with the candidate to assess knowledge of the operational context and the broader factors that impact on concept development • evaluation of presentation or 'pitch' made by the candidate in relation to a particular concept • oral or written questioning to assess knowledge of cultural, social and environmental issues and impacts to be considered in developing new concepts.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Existing information that informs new concept development</i> may include:	<ul style="list-style-type: none"> • creative brief • market research • organisational vision • personal vision and creative aspiration
<i>Products, programs, processes or services</i> may include:	<ul style="list-style-type: none"> • art and craft works • advertising campaigns • business services and processes • designs • festivals • films • interactive digital media products • live entertainment productions or events • manufactured products • marketing and promotional campaigns • museum and gallery exhibitions • photoimaging services • radio or television programs
<i>Exploration of opportunities beyond the obvious</i> may involve:	<ul style="list-style-type: none"> • challenging existing assumptions and preconceptions • considering radical change to the way things are done • exploring practice in a totally different industry context • investigating the use of new media • making connections between seemingly unrelated activities
<i>Factors</i> may include:	<ul style="list-style-type: none"> • codes of practice • content • cost effectiveness • features of interactive digital media products: <ul style="list-style-type: none"> • delivery platform • level of interactivity

RANGE STATEMENT	
	<ul style="list-style-type: none"> • look and feel • navigation • Indigenous laws and protocols • length of program or film • level of skill and understanding required for implementation • nature and size of target audience • organisational charter and policies • purpose: <ul style="list-style-type: none"> • advertising or marketing • commercial • educational • entertainment • game • information • relevant legislation, such as: <ul style="list-style-type: none"> • copyright and intellectual property • privacy • results of market research • revenue raised by existing market share • technical feasibility
<i>Relevant stakeholders</i> may include:	<ul style="list-style-type: none"> • administrative staff • clients/customers • designers and other creative personnel • directors • external suppliers • information technology personnel • management • program producers • technical specialists • writers
<i>Creative thinking techniques</i> may include:	<ul style="list-style-type: none"> • brainstorming: <ul style="list-style-type: none"> • bulletin board • buzz session • computer-aided • sequencing • stop and go • Edward de Bono's six thinking hats • ego alter or heroes

RANGE STATEMENT	
	<ul style="list-style-type: none"> • graphic organisers: <ul style="list-style-type: none"> • concept fans • visual maps • webbing • lateral thinking games • making associations • mind mapping • morphological analysis • sub-culture surfing • trigger words • use of metaphors and analogies • vision circles • word salads • visualisation
Resources may include:	<ul style="list-style-type: none"> • computer hardware and software • facilities • printed material • specialist equipment • specialist staff • training
Formats may include:	<ul style="list-style-type: none"> • application forms to funding bodies or sponsors • briefs for consultants • concept maps • electronic presentations to promote the concept • in-house proposal forms
Creative and practical criteria may include:	<ul style="list-style-type: none"> • cost-effectiveness • evaluation against competing priorities • fit with personal vision and aspirations • fit with strategic directions of organisation • fit with target market needs • how innovative the concept is • level of risk • potential benefits • technical feasibility • time to realise the concept
Constraints may include:	<ul style="list-style-type: none"> • availability of resources and equipment • availability of skilled experts and personnel • cost

RANGE STATEMENT	
	<ul style="list-style-type: none"> • level of technical difficulty • limited funding sources • limited potential for commercialisation • time
<i>Implementation specifications</i> may include:	<ul style="list-style-type: none"> • briefs for work • detailed specification of concept including purpose and content • operational plan with responsibilities and time lines • resources breakdown (financial, human and physical)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research concepts and theories of creativity	1.1. Use a range of <i>research techniques</i> to source information about creativity 1.2. Identify and explore potential <i>new, emerging and alternative sources of ideas and thinking</i> about creativity 1.3. Expand own knowledge and understanding of creativity through review and <i>critical analysis</i> of information 1.4. Analyse, compare and contrast a <i>range of theoretical perspectives and thinking</i> on creativity 1.5. Identify and explore the transmigration of creative thought to innovative output
2. Apply theories of creativity to practice	2.1. Evaluate the relevance and application of different theories and practices of creativity based on analysis of <i>own work and life experience</i> 2.2. Analyse the ways in which different aspects of history, theory and other influences are applied, adapted or challenged in practice 2.3. Assess the ways in which theories, thinking and practices about creativity may be applied that provide <i>benefits to individuals, businesses and the community</i>
3. Develop, articulate and debate own perspectives theories and practices of creativity	3.1. Take a critical approach to different theories and reflect on own ideas and responses 3.2. Develop own <i>substantiated positions</i> in response to research and analysis 3.3. Articulate own positions in a manner which demonstrates <i>clarity of thought and conceptual understanding</i> of different theories and thinking 3.4. Debate own positions on creativity showing belief in own ideas and a willingness to remain open to new perspectives

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- critical thinking skills to analyse complex information and to develop and substantiate own positions and responses to theories and thinking around creativity
- communication skills to articulate and debate complex concepts
- literacy and problem solving skills to research information dealing with complex concepts and theories of creativity
- self-management skills to develop and substantiate own views and ideas.

Required knowledge

- different theories and concepts of creativity, including different historical perspectives and current and emerging thinking
- potential and actual benefits of creativity for individuals, businesses and communities
- relationship between theories of creativity and creativity in practice (in a particular work or broader social context).

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • conduct of at least one research project into past, current and emerging theories of creativity • development of substantiated positions on creativity and its application in response to own analysis and research • knowledge of different theories and thinking on creativity and its application in different social and work contexts.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • use of current and emerging sources of information and thinking on creativity.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of research undertaken by the candidate into theories and application of creativity • observation of the candidate participating in discourse and debate on theories of creativity and on the candidate's own positions and ideas.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Research techniques</i> may include:</p>	<ul style="list-style-type: none"> • analysis of consumer trends • desk research • finding style leaders • informal discussions • internet search • interviews • literature reviews • observation of creative workers processes and behaviours • personal experience • tracking trendsetters
<p><i>New, emerging and alternative sources of ideas and thinking</i> may include:</p>	<ul style="list-style-type: none"> • component resourcing • consumer trends • current business theories • emerging government policy • emerging research • fashion/design trends • grazing hardware, electronics, junk, second hand goods etc. • individuals in any fields of endeavour • innovative organisations • international trends • new products and sub assembly components • social trends
<p><i>Critical analysis</i> may involve:</p>	<ul style="list-style-type: none"> • adapting • analysing and evaluating actions and policies • challenging • clarifying issues, values and standards • comparing analogous situations • comparing and contrasting ideals with practice • comparing and evaluating beliefs, interpretations and theories • critical path process

RANGE STATEMENT	
	<ul style="list-style-type: none"> • debate and discussion • developing criteria for evaluation • distinguishing relevant from irrelevant facts • examining and evaluating assumptions • exploring implications and consequences • generating and assessing solutions • ideational connecting of unrelated information • judging • leap of faith • making interdisciplinary connections • making plausible inferences and predictions • noting significant similarities and differences • obtuse connections • openness • questioning • reading and listening critically • reflecting
<i>Range of theoretical perspectives and thinking</i> may be:	<ul style="list-style-type: none"> • economic • environmental • geographic • heritage • historical • local, national, international • political • philosophical • social/cultural • style/design
<i>Own work and life experience</i> may include:	<ul style="list-style-type: none"> • evaluation of contexts in which creativity has flourished • observation of nature • observation of the man-made environment • observations of the ways people interrelate • reflection on own creative thinking and endeavours • reflection on own experience with any type of creative endeavour or creative thinking • workplace experience
<i>Benefits to individuals, businesses and the community</i> may include:	<ul style="list-style-type: none"> • adaptability • better individual and business relationships • capacity for innovation and invention

RANGE STATEMENT	
	<ul style="list-style-type: none"> • curiosity • environmentally sustainable practices • greater social cohesion • high degree of value adding • improved productivity and profit • nimbleness of thought • psychological wellbeing of individuals and communities
<i>Substantiated positions</i> may be positions which are:	<ul style="list-style-type: none"> • grounded in appropriate research • result of rational and logical thought • supported by relevant information • subjected to the analysis of others (e.g. peer review)
<i>Clarity of thought and conceptual understanding</i> may be demonstrated by:	<ul style="list-style-type: none"> • ability to exchange and debate ideas with others • appropriate distillation of ideas to suit the required purpose • audience understanding • clear articulation of ideas

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish contact with customers	1.1. Acknowledge and greet customer in a professional, courteous and concise manner according to organisational requirements 1.2. Maintain personal dress and presentation in line with organisational requirements 1.3. Communicate using appropriate interpersonal skills to facilitate accurate and relevant exchange of information 1.4. Maintain sensitivity to customer specific needs and any cultural, family and individual differences 1.5. Establish rapport/relationship with customer and express a genuine interest in customer needs/requirements
2. Identify customer needs	2.1. Use appropriate questioning and active listening to determine customer needs 2.2. Assess customer needs for urgency to identify priorities for service delivery 2.3. Provide customer with information about available options for meeting customer needs and assist customer to identify preferred option/s 2.4. Identify personal limitations in addressing customer needs and seek assistance from designated persons where required
3. Deliver service to customers	3.1. Provide prompt customer service to meet identified needs according to organisational requirements 3.2. Provide information regarding problems and delays, and follow-up within appropriate timeframes as necessary 3.3. Communicate with customers in a clear, concise and courteous manner 3.4. Identify opportunities to enhance the quality of service and products, and take action to improve the service whenever possible
4. Process customer feedback	4.1. Promptly recognise customer feedback and handle sensitively according to organisational requirements 4.2. Accurately record any feedback and communication between customers and the organisation according to organisational standards, policies and procedures 4.3. Identify any unmet customer needs and discuss suitability of other products/services

ELEMENT	PERFORMANCE CRITERIA
	4.4. Support customers to make contact with other services according to organisational policies and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to convey meaning clearly, concisely and coherently
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- literacy skills to communicate with customers and to develop required product knowledge
- numeracy skills to interpret customer requirements and to meet customer needs
- problem-solving skills to deal with customer enquiries or complaints.

Required knowledge

- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety (OHS)
- organisational policies and procedures relating to customer service and the customer service process.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • demonstrating all stages of customer service interactions • responding to customer feedback • demonstrating a range of interpersonal skills • knowledge of relevant legislation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • examples of customer complaints and policies relating to customer service.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • analysis of responses to case studies and scenarios • demonstration of techniques • observation of presentations • oral or written questioning to assess knowledge of customer service and communication techniques • review of information provided to customers about problems and delays, and customer follow-up • review of documentation recording feedback and communication between customers and the organisation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • sales units • other customer service units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Customers</i> may include:	<ul style="list-style-type: none"> • contacts from other organisations • external customers • internal customers • members of the public • patients • service users
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • access and equity principles and practice • anti-discrimination and related policy • following OHS procedures for dealing with customers • legal and organisational policies, guidelines and requirements • quality and continuous improvement processes and standards • quality assurance and/or procedures manual
<i>Interpersonal skills</i> may include:	<ul style="list-style-type: none"> • listening actively to what the customer is communicating • providing an opportunity for the customer to confirm their request • questioning to clarify and confirm customer needs • seeking feedback from the customer to confirm understanding of needs • summarising and paraphrasing to check understanding of customer's message • using appropriate body language
<i>Designated persons</i> may include:	<ul style="list-style-type: none"> • manager, supervisor or team leader • more experienced personnel with specific knowledge or information • staff from other work areas with particular product or service knowledge
<i>Opportunities</i> may include:	<ul style="list-style-type: none"> • advice about warranties, guarantees or support services

RANGE STATEMENT	
	<ul style="list-style-type: none"> • packaging options • pricing options • procedures for delivery of goods or service • provision of product knowledge • systems for recording complaints
<i>Customer feedback</i> may be about:	<ul style="list-style-type: none"> • damaged goods or delivery problems • delays • invoicing errors • quality of customer service • quality of service provision

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify customer needs	1.1. Use <i>appropriate interpersonal skills</i> to accurately identify and clarify <i>customer needs and expectations</i> 1.2. Assess customer needs for urgency to determine priorities for service delivery in accordance with <i>organisational requirements</i> 1.3. Use <i>effective communication</i> to inform customers about available choices for meeting their needs and assist in the selection of preferred options 1.4. Identify limitations in addressing customer needs and seek appropriate assistance from <i>designated individuals</i>
2. Deliver a service to customers	2.1. Provide prompt service to customers to meet identified needs in accordance with organisational requirements 2.2. Establish and maintain appropriate rapport with customers to ensure completion of quality service delivery 2.3. Sensitively and courteously handle <i>customer complaints</i> in accordance with organisational requirements 2.4. Provide assistance or respond to customers with <i>specific needs</i> in accordance with organisational requirements 2.5. Identify and use available <i>opportunities</i> to promote and enhance services and products to customers
3. Monitor and report on service delivery	3.1. Regularly review customer satisfaction with service delivery using <i>verifiable evidence</i> in accordance with organisational requirements 3.2. Identify opportunities to enhance the quality of service and products, and pursue within organisational requirements 3.3. Monitor procedural aspects of service delivery for effectiveness and suitability to customer requirements 3.4. Regularly seek customer feedback and use to improve the provision of products and services 3.5. Incorporate evidence of customer satisfaction in decisions to modify products or services, ensuring they are within organisational requirements 3.6. Ensure reports are clear, detailed and contain recommendations focused on critical aspects of

ELEMENT	PERFORMANCE CRITERIA
	service delivery

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read and understand a variety of texts; to prepare general information and papers according to target audience; and to edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
- technology skills to select and use technology appropriate to a task
- communication skills to monitor and advise on customer service strategies
- problem-solving skills to deal with customer enquiries or complaints
- analytical skills to identify trends and positions of products and services.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - financial legislation
 - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • identifying needs and priorities of customers • distinguishing between different levels of customer satisfaction • treating customers with courtesy and respect • responding to and reporting on, customer feedback • knowledge of organisational policy and procedures for customer service.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • examples of customer complaints • examples of documents relating to customer service standards and policies.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of reports on customer service delivery • analysis of responses to case studies and scenarios • demonstration of techniques • oral or written questioning to assess knowledge of customer service strategies.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • sales units • other customer service units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Appropriate interpersonal skills</i> may include:</p>	<ul style="list-style-type: none"> • listening actively to what the customer is communicating • providing an opportunity for the customer to confirm their request • questioning to clarify and confirm customer needs • seeking feedback from the customer to confirm understanding of needs • summarising and paraphrasing to check understanding of customer message • using appropriate body language
<p><i>Customers</i> may include:</p>	<ul style="list-style-type: none"> • corporate customers • individual members of the organisation • individual members of the public • internal or external • other agencies
<p><i>Customer needs and expectations</i> may include:</p>	<ul style="list-style-type: none"> • accuracy of information • advice or general information • complaints • fairness/politeness • further information • making an appointment • prices/value • purchasing organisation's products and services • returning organisation's products and services • specific information
<p><i>Organisational requirements</i> may include:</p>	<ul style="list-style-type: none"> • access and equity principles and practice • anti-discrimination and related policy • defined resource parameters • goals, objectives, plans, systems and processes • legal and organisational policies, guidelines and requirements • OHS policies, procedures and programs

RANGE STATEMENT	
	<ul style="list-style-type: none"> • payment and delivery options • pricing and discount policies • quality and continuous improvement processes and standards • quality assurance and/or procedures manuals • replacement and refund policy and procedures • who is responsible for products or services
<i>Effective communication</i> may include:	<ul style="list-style-type: none"> • giving customers full attention • maintaining eye contact, except where eye contact may be culturally inappropriate • speaking clearly and concisely • using active listening techniques • using appropriate language and tone of voice • using clear written information/communication • using non-verbal communication e.g. body language, personal presentation (for face-to-face interactions) • using open and/or closed questions
<i>Designated individuals</i> may include:	<ul style="list-style-type: none"> • colleagues • customers • line management • supervisor
<i>Customer complaints</i> may include:	<ul style="list-style-type: none"> • administrative errors such as incorrect invoices or prices • customer satisfaction with service quality • damaged goods or goods not delivered • delivery errors • product not delivered on time • service errors • warehouse or store room errors such as incorrect product delivered
<i>Specific needs</i> of customers may relate to:	<ul style="list-style-type: none"> • age • beliefs/values • culture • disability • gender • language • religious/spiritual observances
<i>Opportunities</i> to promote and enhance services and products	<ul style="list-style-type: none"> • extending time lines • packaging procedures

RANGE STATEMENT	
may include:	<ul style="list-style-type: none"> • procedures for delivery of goods • returns policy • system for recording complaints • updating customer service charter
<i>Verifiable evidence</i> may include:	<ul style="list-style-type: none"> • customer satisfaction questionnaires • audit documentation and reports • quality assurance data • returned goods • lapsed customers • service calls • complaints

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist customer to articulate needs	1.1. Ensure <i>customer</i> needs are fully explored, understood and agreed 1.2. Explain and match available services and products to customer needs 1.3. Identify and communicate <i>rights and responsibilities of customers</i> to the customer as appropriate
2. Satisfy complex customer needs	2.1. Explain possibilities for meeting customer needs 2.2. Assist customers to evaluate service and/or product options to satisfy their needs 2.3. Determine and prioritise preferred actions 2.4. Identify potential areas of difficulty in customer service delivery and take appropriate actions in a positive manner
3. Manage networks to ensure customer needs are addressed	3.1. Establish <i>effective regular communication</i> with customers 3.2. Establish, maintain and expand relevant networks to ensure appropriate referral of customers to products and services from within and outside the organisation 3.3. Ensure procedures are in place to ensure that decisions about targeting of customer services are based on up-to-date information about the customer, and the products and services available 3.4. Ensure procedures are put in place to ensure that referrals are based on the matching of the assessment of customer needs and availability of products and services 3.5. Maintain records of customer interaction in accordance with <i>organisational procedures</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read a variety of texts, to prepare general information and papers, and to write formal and informal letters according to target audience
- numeracy skills to analyse data, and to compare time lines and promotional costs against budgets
- problem-solving skills to develop solutions unique to a customer
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety
- organisational procedures and standards for customer service relationships
- detailed product knowledge which may be of significant breadth (so as to propose alternative products and services), or of significant depth (so as to propose variations within a limited product and service range).

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • assisting customers to articulate their needs • documenting processes used and customer satisfaction with the products/services offered • assisting customers to address their needs.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • examples of products/services and promotional strategies.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of documentation prioritising preferred actions • analysis of responses to case studies and scenarios • demonstration of techniques • observation of presentations • assessment of written reports • evaluation of communication established with customers • review of customer interaction records.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • general administration units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Customers</i> may include:</p>	<ul style="list-style-type: none"> • customers with routine or specific requests • in person, computer-based and telephone customers • internal and external customers • people from a range of social, cultural or ethnic backgrounds • people who may be unwell, drug affected or emotionally distressed • people with varying physical and mental abilities • regular and new customers
<p><i>Rights and responsibilities of customers</i> may include:</p>	<ul style="list-style-type: none"> • fulfilment of external obligations • informed consent
<p><i>Effective regular communication</i> may include:</p>	<ul style="list-style-type: none"> • giving customers full attention • handling sensitive and confidential issues • maintaining eye-contact (for face-to-face interactions), except where eye-contact may be culturally inappropriate • speaking clearly and concisely • using active listening techniques • using appropriate language and tone of voice • using clearly written information/communication • using non-verbal communication e.g. body language, personal presentation (for face-to-face interactions) • using open and/or closed questions
<p><i>Organisational procedures</i> may include:</p>	<ul style="list-style-type: none"> • procedural manuals • quality systems, standards and guidelines

Co-requisite units		

BSBDES201A Follow a design process

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to follow a design process at a basic level.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to any individual who follows a design process to respond to specific issues or challenges, including product and service requirements arising from particular business or community needs.</p> <p>The unit acknowledges the need to encourage the development of skills, which are sometimes called 'design thinking' or 'design consciousness'. In essence, the unit is about purposeful problem solving - defining the challenge, coming up with ideas, working with others to develop ideas, reflecting on progress, presenting an idea so it can be implemented and, of course, evaluating whether an idea has met the original challenge.</p> <p>Designers use the processes described in this unit but at a much more sophisticated and complex level. This unit is not about being a designer.</p>
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Clarify the challenge	1.1. Confirm the <i>nature and scope of the challenge</i> with <i>stakeholders</i> 1.2. Agree on specific objectives with <i>stakeholders</i> 1.3. Identify any <i>constraints</i> that may impact on the design process 1.4. Identify and source <i>relevant supporting information and assistance</i>
2. Explore different ideas and solutions	2.1. Generate a range of ideas to respond to the challenge 2.2. Explore <i>different options and ideas</i> for meeting objectives 2.3. Involve others in the process of developing ideas and solutions
3. Select and present a solution	3.1. Reflect on different ideas and feedback, and select a preferred solution 3.2. Summarise the key ideas in the solution and present to stakeholders in <i>appropriate format</i> 3.3. Obtain any required approvals to take the solution to the next stage
4. Implement the solution	4.1. Schedule key tasks and organise <i>resources to support implementation</i> 4.2. Carry out <i>testing, prototyping or trialling</i> of the proposed solution 4.3. Maintain any required <i>documentation</i> 4.4. Identify problems and seek <i>advice and guidance</i> from others
5. Evaluate the solution	5.1. Check the success of the solution based on original objectives 5.2. Seek feedback from appropriate stakeholders 5.3. Review both the solution and the process undertaken to develop the solution as part of an ongoing learning process

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with others, to share ideas, and to present information and ideas clearly and concisely
- creative thinking skills to generate ideas in response to a defined problem or need in a familiar context
- literacy skills to analyse and interpret information dealing with concepts and ideas from own area of work
- problem-solving skills to identify problems and to work with others to develop solutions
- self-management skills to take responsibility for own work as part of an overall collaborative process.

Required knowledge

- context for the challenge, including any specific factors that impact on work
- creative thinking techniques that can be used to generate ideas in any context
- key features and steps in the design process as a way of thinking and solving problems
- legal framework that impacts on activities in a particular context
- potential sources of information for new ideas, relevant to the specific context.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • active participation in a project which uses the design process to develop solutions to a given challenge • effective communication skills to be a member of a collaborative team • knowledge of the design process, and how it can be used in developing solutions to different issues and challenges.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to materials, tools and equipment required to implement solutions in the given work context • interaction with others to reflect the collaborative nature of the design process.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • direct observation of the candidate participating in collaborative processes • evaluation of documentation maintained by the candidate to support different ideas • evaluation of a presentation made by the candidate outlining proposed solutions and processes used to develop those solutions • oral or written questioning to assess knowledge of parameters and context for work in a given industry context.
Guidance information for assessment	<p>The design process does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other technical or specialist units from particular

EVIDENCE GUIDE

	areas of work.
--	----------------

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Nature and scope of the challenge</i> could be very varied, and may relate to new or improved:</p>	<ul style="list-style-type: none"> • applications of materials or equipment • processes • products or services • systems • uses of technology
<p><i>Stakeholders</i> may include:</p>	<ul style="list-style-type: none"> • client • end users • friends and family • supervisor or manager • work colleagues (working in the same or different areas)
<p><i>Constraints</i> may relate to:</p>	<ul style="list-style-type: none"> • availability of materials, equipment or tools • boundaries about what can and cannot be changed • legal restrictions • time and budget
<p><i>Relevant supporting information and assistance</i> may include:</p>	<ul style="list-style-type: none"> • drawings, specifications or other technical data • ideas from colleagues • industry associations or organisations • personal experience • policy and procedures manuals • print or electronic media (including internet) • reference manuals • technical experts
<p><i>Different options and ideas</i> may be generated by:</p>	<ul style="list-style-type: none"> • brainstorming: <ul style="list-style-type: none"> • stop and go • sequencing • buzz session • bulletin board • computer-aided • daydreaming and mental wandering • Edward de Bono's six thinking hats

RANGE STATEMENT	
	<ul style="list-style-type: none"> • ego alter or heroes • graphic organisers: <ul style="list-style-type: none"> • visual maps • webbing • concept fans • lateral thinking games • making associations • mind mapping • morphological analysis • storytelling • sub-culture surfing • trigger words • use of metaphors and analogies • vision circles • visualisation • wishful thinking • word salads
<i>Appropriate format</i> may be:	<ul style="list-style-type: none"> • checklists • digital presentation • drawings/sketches • models • plans • verbal presentation
<i>Resources to support implementation</i> may include:	<ul style="list-style-type: none"> • equipment • financial resources • human resources • information technology support • materials • tools
<i>Testing, prototyping or trialling</i> may involve:	<ul style="list-style-type: none"> • creating a physical model or sample • testing the solution against different scenarios • using a small group to test the solution
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • diary showing progress of work • progress reports • records of communication (e.g. emails) • working drawings
<i>Advice and guidance</i> may involve:	<ul style="list-style-type: none"> • facilitating access to networks or contacts • facilitating access to resources • providing technical expertise

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Source information on design in a given industry context	1.1. Investigate the <i>nature, history, role and importance of design</i> in the industry 1.2. Evaluate the roles played by designers and <i>other contributors</i> in the design process 1.3. Source information on the <i>impacts of technology</i> on design in the industry
2. Examine links between design and own work	2.1. Investigate <i>impacts of design on own work</i> 2.2. Consider <i>role of individual workers</i> across the industry in affecting future design directions
3. Keep up to date with industry design trends	3.1. Identify and access <i>opportunities to maintain currency of knowledge</i> about industry design trends 3.2. Evaluate how design trends affect the overall industry and the way it operates 3.3. Share information and pro-actively discuss emerging trends with work colleagues 3.4. Identify trends that will impact on own work and seek opportunities to develop appropriate skills

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to discuss design in a particular industry context with others
- research and literacy skills to source and interpret a wide range of information sources on design in a particular industry context
- self-management and learning skills to take responsibility for identifying and accessing professional development opportunities.

Required knowledge

- consumer/end-user expectations
- current and emerging technologies and their effects on design in the industry
- current and past designers of influence in the industry
- current trends in use of design in a given industry context
- different definitions of design, and the differences and similarities between design and product development
- major design trends in the industry
- role of design in a given industry context.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • sourcing and interpreting a range of information sources on design and applying concepts to own work situation • knowledge of design in a specific industry context, and its impact on individual work practice.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to sources of information on design in a specific industry context.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Source information on colour and colour theory	1.1. Identify and access <i>sources of information on colour and colour theory</i> 1.2. Evaluate and collate information to build a knowledge of colour and its application in different contexts
2. Experiment with colour	2.1. Test different colours and colour combinations through <i>experimentation</i> 2.2. Use own ideas as a way of testing, challenging or confirming colour theory 2.3. Ensure safe use of <i>materials, tools and equipment</i> during experimentation with colour
3. Communicate concepts and ideas through use of colour	3.1. Investigate how colour might be used to communicate a particular <i>idea or concept</i> 3.2. Select materials, tools and equipment relevant to the idea or concept 3.3. Apply colour in a way that communicates the concept or idea based on own knowledge of colour and colour theory 3.4. Review and reflect on own use of colour and what it communicates 3.5. Seek and obtain feedback from others about the way colour has been used and its success in communicating the concept or idea 3.6. Present and store work any <i>samples</i> in a way which takes account of the need for professional presentation and potential relevance for future work

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read and interpret information about colour and colour theory
- numeracy skills to calculate quantities and proportions of different colours
- visual literacy skills to make judgements about the way that different colours work together and in conjunction with other elements.

Required knowledge

- colour attributes and colour relationships
- different colour theories and their applications to different contexts
- emotional, cultural and situational aspects of colour
- individual interpretation and choice in relation to the use of colour, and the potential limitations of theory
- materials, tools and equipment required to experiment with colour in relevant contexts
- ways in which other practitioners use colour in their work.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • effective use of colour to communicate a concept or idea • knowledge of colour theory, the effects of colour and its potential use in different contexts.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to materials, resources and equipment needed to apply colour in the relevant work context.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of colour samples produced by the candidate to communicate a concept or idea • oral or written questioning to assess knowledge of colour theory and use of colour by different practitioners.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Sources of information on colour and colour theory</i> may include:</p>	<ul style="list-style-type: none"> • anecdotal sources, personal observation • art and design work • books and magazines • characteristics of materials, for example paints, pigments • scientific texts • web-based resources
<p><i>Experimentation</i> may involve playing with:</p>	<ul style="list-style-type: none"> • application of light, for example in a theatrical context • colour attributes in hue, chroma, value • colour grading • colour models (emotional, physical and psychological effects of colour) • colour scales • colour schemes • effective colour relationships, for example harmonies and discords
<p><i>Materials, tools and equipment</i> may include:</p>	<ul style="list-style-type: none"> • air brushes • brushes • cardboard • digital equipment • fabrics/textiles/plastics • glue • gouache, watercolour, acrylic • hand tools • light sources/equipment • lighting gels • measuring tools • pastels, colour pencils, crayons • range of papers • receptacles • rulers • software

RANGE STATEMENT	
	<ul style="list-style-type: none"> • sponges • spray gun
<i>Idea or concept</i> to be communicated may relate to a huge range of activities such as:	<ul style="list-style-type: none"> • advertising and promotion • artistic works • exhibitions or events • fashion designs • interactive digital media products • interior designs • jewellery design • lighting designs • object or product design • sign making • theatrical props, sets or scenic art
<i>Samples</i> may be:	<ul style="list-style-type: none"> • colour wheels • colour swatches • constructed • digital output • drawn, painted, printed • photographs • sample boards • transitory, for example natural and artificial lighting effects

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Source information on 2-dimensional design	1.1. Identify and access relevant <i>sources of information</i> on 2-dimensional design 1.2. Evaluate and collate information to build a knowledge of 2-dimensional design
2. Explore the creative design process for 2-dimensional forms	2.1. Use <i>creative thinking techniques</i> to generate a range of ideas and options 2.2. Use <i>experimentation</i> to explore and challenge a range of different ideas 2.3. Challenge assumptions, reflect on ideas and refine approaches 2.4. Consciously change perspective, and evaluate ideas and situations in new ways
3. Communicate concepts or ideas through application of design processes to 2-dimensional forms	3.1. Investigate and reflect on how a particular <i>concept or idea</i> might be communicated in a 2-dimensional form 3.2. Select <i>materials, tools and equipment</i> relevant to the realisation of the concept or idea 3.3. Apply a creative design process to produce a range of 2-dimensional concept realisations 3.4. Reflect on own application of design process and success in communicating the concept or idea 3.5. Seek and obtain feedback from others about the 2-dimensional form and its success in communicating the concept or idea 3.6. Present and store <i>concept realisations or samples</i> in a format which takes account of the need for professional presentation and potential value for future work

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to explain ideas and to have discussions about design concepts with others
- literacy skills to read and interpret information about 2-dimensional design
- visual literacy skills to make judgements about the application of the design process to 2-dimensional forms.

Required knowledge

- copyright, moral rights, intellectual property issues and legislation, and their impact on aspects of design
- creative thinking techniques that can be used as part of the design process
- elements and principles of design as applied to 2-dimensional forms
- materials, tools and equipment required for the design of 2-dimensional forms in the relevant work context
- notion of individual interpretation and choice within the design process
- particular challenges and issues in the design of 2-dimensional forms.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • production of a range of samples or concept realisations which show the creative application of processes to 2-dimensional forms • knowledge of the design process as it applies to 2-dimensional work.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to the materials resources and equipment needed to apply design processes to 2-dimensional forms.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of samples or concept realisations produced by the candidate and interrogation of the creative process used • oral or written questioning to assess knowledge of 2-dimensional design.
Guidance information for assessment	The design process does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Sources of information may include:

- anecdotal sources, personal observation
- art and design work
- books and magazines
- natural and manufactured forms, objects and/or structures
- optics, including single and multiple vanishing points
- scientific texts
- web-based resources

Creative thinking techniques may include:

- brainstorming:
 - bulletin board
 - buzz session
 - computer-aided
 - sequencing
 - stop and go
- daydreaming and mental wandering
- Edward de Bono's six thinking hats
- ego alter or heroes
- graphic organisers:
 - concept fans
 - visual maps
 - webbing
- lateral thinking games
- making associations
- mind mapping
- morphological analysis
- storytelling
- sub-culture surfing
- trigger words
- use of metaphors and analogies
- vision circles
- visualisation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • wishful thinking • word salads
<i>Experimentation</i> may involve consideration of:	<ul style="list-style-type: none"> • contrast • direction • exploring tonal range to produce illusion of 3-dimensionality • harmony • linear perspective • mark making • modelling volume through marks and tone • pattern • positive and negative shape • proportion • rhythm • shape • size • texture • tone
<i>Concept or idea</i> to be communicated may relate to a range of activities such as:	<ul style="list-style-type: none"> • advertising and promotion • artistic works • exhibitions or events • fashion designs • interactive digital media products • interior designs • sign making
<i>Materials, tools and equipment</i> may include:	<ul style="list-style-type: none"> • cardboard • air brushes • cutting blades • digital equipment • found materials • glue • inks and washes • markers • measuring tools • pencils • pens and nibs • range of brushes • range of papers • receptacles • relevant and current software

RANGE STATEMENT	
	<ul style="list-style-type: none"> • rulers • scissors • spatulas • sponges • spray guns
<i>Concept realisations or samples</i> may be:	<ul style="list-style-type: none"> • digital output • drawn, painted, printed, collaged • photographs

Present and store <i>concept realisations or samples</i> in a format which takes account of the need for professional presentation and potential value for future work

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to explain ideas and to have discussions about design concepts with others
- literacy skills sufficient to read and interpret information about 3-dimensional design
- visual literacy skills to make judgements about the application of the design process to 3-dimensional forms.

Required knowledge

- copyright, moral rights, intellectual property issues and legislation, and their impact on aspects of design
- creative thinking techniques that can be used as part of the design process
- elements and principles of design as applied to 3-dimensional forms
- materials, tools and equipment required for the design of 3-dimensional forms in the relevant work context
- notion of individual interpretation and choice within the design process
- particular challenges and issues in the design of 3-dimensional forms
- relationships between form and space.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • production of a range of samples or concept realisations which show the creative application of the processes to 3-dimensional forms • knowledge of the design process as it applies to 3-dimensional work.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to the materials resources and equipment needed to apply design processes to 3-dimensional forms.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of samples or concept realisations produced by the candidate and interrogation of the creative process used • oral or written questioning to assess knowledge of 3-dimensional design.
Guidance information for assessment	The design process does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Source and apply information on the structure and operation of the design industry	1.1. Identify and access <i>information on the design industry</i> and professional design practice 1.2. Use and analyse knowledge of the design industry appropriately, to inform own design practice and work
2. Source and apply knowledge on employment obligations and opportunities that impact on designers	2.1. Obtain information on <i>employment obligations and opportunities</i> in the design industry 2.2. Apply knowledge of employment obligations and opportunities appropriately, within day-to-day work activities
3. Seek information on new design technology	3.1. Correctly identify sources of <i>information on new technology</i> affecting different areas of design practice 3.2. Investigate relevant technologies to assist effective work performance
4. Update industry knowledge	4.1. Identify and use a range of <i>opportunities to update knowledge of the design industry</i> and monitor current <i>issues of concern</i> to the industry 4.2. Share updated knowledge with colleagues and peer group as appropriate, and incorporate into day-to-day work activities
5. Apply information on ethical and legal work practices	5.1. Source <i>information on ethical and legal work practices</i> in the context of design 5.2. Share updated knowledge on ethical and legal work practice in day-to-day work activities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to share industry information in day-to-day activities
- learning and self-management skills to take responsibility for ongoing learning and development
- research and literacy skills to source and interpret industry information.

Required knowledge

- concept of a design industry, what it means, the typical questions and issues about whether a design industry exists, and how a design industry relates to other industries
- copyright, moral rights and intellectual property issues and legislation, and their impact on the design industry
- current and emerging technologies used within the design industry
- design industry including different sectors and their interrelationships, plus the historical development of the industry
- etiquette and ethics as they apply to key design disciplines within the industry
- global nature of design activity
- impact of convergence in the design industry
- key design disciplines, how they interrelate and key roles and responsibilities
- key design industry terminology
- nature, role and functions of unions and employer associations, including rights and responsibilities of employers and employees
- obligations of employees, including attendance, ethical behaviour, taking directions, confidentiality, work performance, safety and care
- obligations of employers, including safe system of work and non-discrimination
- sources of information on the design industry and ways of maintaining current industry knowledge.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • knowledge of the design industry, design as a profession and the relationship between design and other industries • application of industry knowledge to work activities, maximising effective performance • knowledge of ways to maintain currency in design industry trends and practice.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to sources of information on the design industry.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • oral or written questioning to assess knowledge of different aspects of the design industry.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect information on history and theory of design	1.1. Identify and access relevant <i>sources of information</i> on design history and theory 1.2. <i>Organise research material</i> and findings for current or future use in design practice, in a manner which facilitates easy access and cross-referencing
2. Apply information to own area of work	2.1. <i>Evaluate information</i> in the context of current design practice 2.2. Assess ways in which aspects of information on design history and theory could be used or adapted to inform current practice 2.3. Use relevant information in a culturally appropriate way to develop an understanding of own area of work
3. Update and maintain knowledge of design trends	3.1. Identify and use opportunities to update and expand knowledge of design trends and developments 3.2. Incorporate and integrate knowledge into design activities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

The following skills must be assessed as part of this unit:

- research and comprehension skills to source, understand and apply information on design history and theory
- research skills to source readily available information on design history and theory.

Required knowledge

- copyright, moral rights, intellectual property issues and legislation as it relates to using information in own work
- current trends in design
- evolution of design
- organisational information practices and their application
- sources of information on design history and theory relevant to own design work.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • knowledge of the history and theory of design and how this may be applied in design practice • application of research and evaluation skills.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to information sources on design history and theory.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of how history and theory have been integrated into a design project undertaken by the candidate • evaluation of a presentation made by the candidate about how design history or theory has influenced work • oral or written questioning to assess knowledge of design history, trends and theory.
